the two orbits. **cephalorhachidian i.** Same as *cerebrospinal i.* **cerebral i.**, the ratio of the greatest transverse to the greatest anteroposterior diameter of the cranial cavity. **cerebrospinal i.**, the figure obtained by multiplying the final cerebrospinal pressure by the quantity of fluid withdrawn in spinal puncture and then dividing by the initial pressure. **color i.**, the relative amount of hemoglobin contained in a red blood corpuscle. **coronofrontal i.**, the ratio of the greatest frontal to the greatest coronal breadth of the head. **cranial i.** Same as *cephalic i.* **cumulative i.** See *Quarterly Cumulative I. Medicus*. **cytophagic i.**, the relative phagocytic power of leukocytes from a given source, as compared with that of leukocytes from a different source used as a standard. **dental i.**, the result obtained by multiplying the dental length by 100 and dividing by the length of the basinal line. **empathic i.**, the degree of empathy felt by one person toward another. **endemic i.**, the percentage of children in any locality affected with an endemic disease. **facial i.**, the relation of the length of the face to its width, obtained by multiplying by 100 the bizygomatic width and dividing the product by the distance from the opryon to the alveolar point. **Flower's i.**, dental index. **Fourmentin's thoracic i.**, the number obtained by multiplying the transverse diameter of the thorax by 100 and dividing by the anteroposterior diameter. **gnathic i.** See *alveolar i.* **gono-opsonic i.**, the opsonic index in relation with gonococcus infection. **hematopneic i.**, a figure denoting the intensity of blood oxygenation. **hemophagocytic i.**, the relative phagocytic power of the entire blood, including both leukocytes and serum. Called also *opsonocytophagic i.* **hemorenal i.**, the ratio of the amount of inorganic salts in the urine to that in the blood. It is obtained by dividing the electric resistance of the blood by that of the urine. The quotient obtained by dividing the former by the latter is the hemorenal index. **icteric i.**, **icterus i.**, a term denoting the amount of bilirubin in the blood: used as a test of liver function. **length-breadth i.**, the breadth of the skull expressed as a percentage of its length. **length-height i.**, the height of the skull expressed as a percentage of its length. **Lennhoff's i.**, the relation of the distance between the sternal notch and the pubic symphysis to the greatest circumference of the abdomen. **McLean's i.** See *McLean's formula*, under *formula*. **i. medicus**. See *Quarterly Cumulative I. Medicus*. **i. movement**, a compulsory movement in which an animal turns round and round. **nasal i.**, the number obtained by multiplying the nasal width by 100 and dividing by the nasal height. **opsonic i.**, the opsonic power of the blood of a patient for any particular microorganism compared with the normal as measured by in vitro phagocytosis. **opsonocytophagic i.** See *hemophagocytic i.* **orbital i.**, the relation of the height of the orbit to its width. **palatal i.**, **palatine i.**, **palatomaxillary i.**, the number obtained by multiplying the palatomaxillary width by 100 and dividing by the palatomaxillary length. **pelvic i.**, the ratio of the conjugate and transverse diameters of the pelvis. **percentage i.**, the percentage of leukocytes in the blood which are phagocytic. **phagocytic i.** 1. The average number of bacteria ingested per leukocyte of a patient's blood. 2. (Of *Arneith*.) The proportion in the blood of multinuclear neutrophile leukocytes with nuclei having three or more lobes. **Quarterly Cumulative I. Medicus**, a periodical published quarterly by the American Medical Association in which are indexed practically all the medical periodicals published in the world. A volume is published each three months, the permanent volumes published at the end of six months cumulating the material contained in the previous three months' issue. **refractive i.**, the coefficient of refraction. **sacral i.**, the number

obtained by multiplying the breadth of the sacrum by 100 and dividing by the length. **saturat-ion i.**, a number indicating the hemoglobin content of a person's red blood cells as compared to the normal. It is the quotient obtained by dividing the percentage of hemoglobin by the percentage by volume of the cells. **splanchnop-totic i.**, the distance of the jugulum from the upper margin of the pubic symphysis divided by the minimal circumference of the abdomen, and the quotient being multiplied by 100. **staphy-lo-opsonic i.**, the opsonic index in staphylococcal infection. **stephanozygomatic i.**, the relation of the interstephanic and bizygomatic diameters. **thoracic i.**, the ratio of the antero-posterior diameter of the thorax to the transverse diameter. **tibiofemoral i.**, the ratio of the length of the tibia to that of the femur. **tuber-culo-opsonic i.**, the opsonic index in tuberculous infection. **urea i.** See *Ambard's formula* and *McLean's formula*, under *formula*. **ureo-secretory i.** Same as *Ambard's formula*. See under *formula*. **uricolytic i.**, the percentage of uric acid which is oxidized to allantoin before being secreted. **vertical i.**, the number obtained by multiplying the height of the skull by 100 and dividing by the length. **vital i.**, the ratio of births to deaths within a given time in a population; called also *birth-death ratio*. **volume i.**, the index indicating the size of an erythrocyte as compared with the normal. It is the quotient obtained by dividing the volume of red corpuscles (expressed in percentage of the normal) by the number of red corpuscles (expressed in percentage of the normal). **zygomatiko-auricular i.**, the ratio between the zygomatic and auricular diameters of the skull.

Indian hemp (in'de-an hemp). See *Cannabis* and *Apocynum*.

Indian tobacco (in'de-an). See *Lobelia*.

India rubber (in'de-ah rub'er). See *caoutchouc*.

indican (in'dik-an). 1. A yellow glucoside, $C_{14}H_{17}O_6N$, from the plants that yield indigo. On hydrolysis it yields dextrose and indoxyl. 2. Potassium indoxyl sulphate, $C_8H_4.NH.CH.CO.SO_2.OK$, formed by decomposition of tryptophan in the intestines and found in the urine.

indicanemia (in-dik-an-e'me-ah) [*indican* + *aiμα* blood]. The presence of indican in the blood.

indicanhidrosis, indicanidrosis (in-dik-an-id-ro'sis) [*indican* + *ῥῖσις* water or *ἰδρῶς* sweat]. Blue sweat.

indicanmeter (in'dik-an-me-ter). An instrument for estimating the amount of indican in the urine.

indicant (in'dik-ant). 1. Indicating. 2. A symptom which indicates the true diagnosis or treatment.

indicanuria (in'dik-an-u're-ah) [*indican* + *οὐρον* urine]. The presence in the urine of indican in excessive quantity. It occurs in chronic constipation, intestinal indigestion, epilepsy, and neurasthenia.

indicatio (in-dik-a'she-o) [L.]. Same as *indication*. 1. **causalis**, an indication as to the treatment of a disease afforded by its cause. 1. **morbi**, an indication as to treatment afforded by the nature of the morbid processes observed. 1. **symptomática**, an indication as to disease afforded by the symptoms that may arise.

indication (in-dik-a'shun) [L. *indica'tio*]. A sign or circumstance which points to or shows the cause, pathology, treatment, or issue of an attack of disease; that which points out; that which serves as a guide or warning.

indicator (in'dik-a-tor) [L.]. 1. The forefinger; index finger. 2. The extensor indicis muscle. 3. Any substance which, when added in small quantities, shows the appearance or disappearance of a chemical individual by a conspicuous change of color or other readily detected change in appear-

ance. **anaerobic i.**, a dilute solution of methylene blue is decolorized in the absence of oxygen. **Audrade's i.**, a solution of acid fuchsin, 0.5 Gm. in 100 cc. of water, which is decolorized to a yellow color by sodium hydrate solution. This is added to sugar bouillon culture medium. An acid-producing organism cultivated on this bouillon turns the medium magenta red. **complex i.**, in psychoanalysis, anything that discloses or indicates the working of a complex.

TABLE OF INDICATORS
(After Beaumont and Dods.)

Indicator.	pH	Acid.	Color.
Hematoxylin	0-0-1-0	Pink	—
Phenol-tetra-brom.			Alkaline. Greenish.
phthalein	0-3-8-0	Colourless	Violet.
Iodo-Eosin	0-3-14-0	Green-Yellow	Pink.
m-Cresol Purple	0-5-2-5	Red	Yellow.
Metanil Yellow	1-2-2-3	Red	Yellow.
Thymol-Blue	1-2-2-8	Red	Yellow.
Tropaeolin O (Orange IV.)	1-4-2-6	Pink	Yellow.
Brom-Phenol-Blue	2-8-6-8	Yellow	Blue.
Methyl-Orange	2-9-4-0	Red	Yellow.
Di-methyl-amino-azo.	2-9-4-0	Red	Yellow.
benzene	2-9-4-0	Crimson	Yellow.
Congo-Red	3-0-5-0	Blue	Scarlet.
Benzene-azo-naphthylamine	3-7-8-0	Pink	Yellow.
Brom-Cresol Green	4-0-6-5	Yellow	Blue-Green.
Alizarin Red S.	4-0-6-0	Yellow-Green	Red.
Lacmoid	4-0-6-0	Pink	Violet-Blue.
a-Naphthylamine-azo.			
benzene-p-sulphonic acid	4-2-5-8	Pink	Yellow.
Methyl Red	4-4-6-0	Red	Yellow.
Diethyl Red	4-5-6-5	Pink	Yellow.
Propyl Red	4-5-6-5	Pink	Yellow.
Phenacetin	5-0-6-0	Brown-Red	Pink.
Cochineal	5-0-6-0	Brown-Pink	Lilac.
p-Nitro-phenol	5-0-7-0	Colourless	Yellow.
Azo-Litmin	5-0-8-0	Red	Blue.
Brom-Cresol Purple	5-2-6-8	Yellow	Purple.
Brom-Thymol Blue	6-0-7-4	Yellow	Blue.
Brilliant Yellow	6-4-9-4	Yellow	Orange.
Neutral Red	6-8-8-0	Red	Yellow.
Phenol Red	6-8-8-4	Yellow	Red.
Rosolic Acid	6-9-8-0	Brown	Red.
Tropaeolin OOO	7-0-8-9	Yellow	Pink.
Cresol Red	7-2-8-8	Yellow	Red.
a-Naphthol-sulphone.			
phthalein	7-5-9-0	Yellow	Blue.
m-Cresol Purple	7-6-9-2	Yellow	Purple.
a-Naphthol phthalein	7-3-8-7	Red	Blue.
Thymol-Blue	8-0-9-6	Yellow	Blue.
Phenol-tetra-chlor-phthalein	8-2-9-4	Colourless	Violet.
a-Cresol-phthalein	8-2-9-8	Yellow	Violet.
Phenol-thymol phthalein	8-3-11-0	Colourless	Violet.
Phenol phthalein	8-3-10-0	Colourless	Pink.
Alizarin Blue S.	9-0-13-0	Green	Blue.
Thymol Phthalein	9-3-10-6	Colourless	Blue.
Phenol Yellow G	10-12-12-1	Yellow	Red.
Alizarin	11-0-13-0	Lilac	Blue.
Poirier's Blue	11-0-13-0	Blue	Red.
Tropaeolin O (Resorcin			
Yellow	11-1-12-7	Yellow	Red-Orange.

indicophose (in'dik-o-fōz). An indigo-colored phase.

Indiella (in-de-el'ah). A genus of fungi several species of which (*I. mansoni*, *I. regnierii*) cause white mycetoma.

indifferent (in-dif'er-ent) [L. *indif'ferens*]. Not tending one way or another; neutral; having no preponderating affinity.

indigenous (in-dij'en-us) [L. *indig'enus*]. Native, or not exotic; native to a particular place or country.

indigestible (in-dij-es'tib-l) [*in-* neg. + *digest-ible*]. Not susceptible of being digested.

indigestion (in-dij-es'tshun). Lack or failure of digestion. **acid i.**, hyperchlorhydria. **gastric i.** See *dyspepsia*. **intestinal i.**, imperfect performance of the digestive function of the intestine. **nervous i.**, nervous dyspepsia. See under *dyspepsia*. **psychic i.**, digestive disturbance due to psychic or mental disquietude.

indigation (in-dij-it-a'shun) [L. *in* into + *dig'itus* finger]. Intussusception or invagination.

indiglucin (in-di-glu'sin). A sugar formed together with indigo on the decomposition of indican.

indigo (in'dig-o) [*ινδικο* Indian dye]. A blue dyeing material, $[C_8H_4.CO(NH)C]_2$, from various leguminous and other plants, as *Indigofera tinctoria*, etc.; also made synthetically. It is found in the sweat and the urine, being derived from the indican. It has been used for epilepsy, etc. Dose,

20-60 grains (1.333-4 Gm.). **i. blue.** See *indogotin*. **i. red.** See *indoxyl red*. **red i.** See *cudbear*. **wild i.** See *Baptisia tinctoria*.

indigo carmine (in'dig-o kar'min). Potassium and sodium salts of indogotin-disulphonic acid, $[\text{C}(\text{NH})\text{CO}\cdot\text{C}_6\text{H}_3\cdot\text{SO}_3\text{ONa}]_2$; used as a histologic stain and as a test for sugar.

indigen (in'dig-o-jen). A crystalline principle from indigo.

indigopurpurine (in'dig-o-pur'pu-rin). A purple pigment occasionally found in the urine.

indogotin (in-dig-o'tin). A blue pigment, $\text{C}_{16}\text{H}_{10}\text{N}_2\text{O}_2$, the principal ingredient of commercial indigo. Called also *indigo blue*.

indigouria, indiguria (in-dig-o-u're-ah, in-dig-u're-ah) [*indigo* + *ούρον* urine]. The presence of indigo in the urine.

indirect (in-dir-ekt') [L. *indirectus*]. 1. Not immediate or straight. 2. Acting through an intermediary agent.

indirubin (in-di-ru'bin). A red pigment occasionally found in the urine.

indirubinuria (in-di-ru-bin-u're-ah). The presence of indirubin in the urine.

indiscriminate (in-dis-krim'in-āt) [L. *in* not + *discrimen* distinction]. Affecting various parts; as, *indiscriminate* lesions.

indisposition (in'dis-po-zish'un). The condition of being slightly ill; a slight illness.

indium (in'de-um) [L. *indicum* indigo]. A rare soft metal resembling lead; atomic weight, 114.8; symbol, In; named from its blue line in the spectrum. Its use in medicine is mainly homeopathic.

indococcus (in-do-kok'us). A micrococcus occurring in the mouth. It gives a blue color with iodine.

indoform (in'do-form). A white powder, salicylic acid methylene acetate, formed by the action of formaldehyde on acetylsalicylic acid.

indole (in'dol). A crystallizable body, $\text{C}_8\text{H}_7\text{N}$, from indigo, and from the decomposition of tryptophan, in the intestines; it is also found in cultures of the spirillum of cholera and other bacteria. It gives part of their peculiar odor to the feces, and in intestinal obstruction causes an accumulation of indole in the intestine; it is found in large quantities in the urine.

indolaceturia (in'do-las-e-tu're-ah). The presence of indolacetic acid in the urine. It is usually associated with pathologic conditions of the intestinal tract.

indolent (in'do-lent) [L. *in* not + *do lens* painful]. Causing little pain, as, an *indolent* tumor.

indologous (in-do-loj'en-us) [*indole* + *γεν* to produce]. Causing the formation of indole.

indophenol-oxydase (in-do-fe'nol-oks'id-ās). An oxidizing ferment occurring in the pancreas, salivary glands, spleen, bone marrow, and thymus, whose action is to influence the formation of indophenol in the body.

indoxyl (in-doks'il) [*ινδικόν* indigo + *ὀξύς* sharp]. An oily substance, oxyindole, $\text{C}_8\text{H}_7\text{NO}$, soluble in water, existing normally in the urine of some persons, and formed by decomposition of tryptophan. **i. red**, a red coloring matter formed by heating to 130 C. an aqueous solution of indoxyl. Called also *indigo red*.

indoxyl-sulphates (in-doks'il-sul'fāts). Compounds found in the urine in some cases where great putrefactive changes are occurring in the intestine.

indoxyluria (in'doks-il-u're-ah) [*indoxyl* + *ούρον* urine]. The presence of an excess of indoxyl in the urine.

induced (in-dust') [L. *inducere* to lead in]. 1. Produced artificially. 2. Produced by induction.

inductance (in-duk'tans). That property of a circuit by virtue of which a magnetic field is associated with the circuit when the circuit is carrying current. The unit of inductance, or "self-induction," is the henry.

induction (in-duk'shun) [L. *induc'tio*]. 1. The act or process of inducing or causing to occur. 2. The generation of electrical phenomena in a body by the influence of an electrified body near it.

inductogram (in-duk'to-gram). Same as *roentgenogram*.

inductorium (in-duk-to're-um). An apparatus for generating currents of induced electricity.

indulin (in'du-lin). A coal tar dye, used as a histologic stain.

indulinophil (in-du-lin'o-fil) [*indulin* + *φιλεῖν* to love]. Stainable with indulin.

indurated (in'du-ra-ted) [L. *in* not + *durus* hard]. Hardened; rendered hard.

induration (in-du-ra'shun) [L. *indura'tio*]. 1. The quality of being hard; the process of hardening. 2. An abnormally hard spot or place. **black i.**, the hardening and pigmentation of lung tissue seen in pneumonia. **brown i.** 1. A deposit of altered blood pigment in the lung in pneumonia. 2. Marked increase of the connective tissue of the lung and excessive pigmentation, due to long-continued congestion from valvular heart disease or to anthracosis. **cyanotic i.**, a congested, dense, and purple state of the kidney in which the blood current is slowed and the transudation of fluid through the glomeruli is impeded. **fibroid i.**, cirrhosis. **Froepie's i.**, myositis fibrosa. **granular i.**, cirrhosis. **gray i.**, an induration of lung tissue in or after pneumonia, without pigmentation. **lamine i.**, a thin layer of round-cell infiltration of the corium in chancre. **parchment i.** Same as *lamine i.*

red i., interstitial pneumonia in which the lung is red and congested.

indurative (in'du-ra-tiv). Pertaining to or marked by induration.

indusium gris'eum (in-du'ze-um). The thin layer of gray matter above the corpus callosum, seen on horizontal transection of the cerebrum.

inebriant (in-e'bre-ant) [L. *ine'brius* drunken]. 1. Causing intoxication. 2. An intoxicating agent.

inebriation (in-e-bre-a'shun) [L. *inebria'tio*]. The condition of being drunk.

inebriety (in-e-bri'et-e) [L. *in* intensive + *ebri'etas* drunkenness]. Habitual drunkenness.

inemia, inaemia (in-e-me-ah) [*ἵς* fiber + *αἷμα* blood]. The presence of fibrin in the blood.

inert (in-ert'). Having no action.

inertia (in-er'she-ah) [L.]. Inactivity; inability to move spontaneously. **i. u'teri**, sluggishness of the uterine contractions during labor.

in extremis (in ex-tre'mis) [L.]. At the very point of death.

Inf. Abbreviation for L. *infundere*, pour in.

infant (in'fant) [L. *in'fans*]. A babe or young child.

infanticide (in-fan'tis-id) [L. *in'fans* infant + *caedere* to kill]. The murder or the murderer of an infant.

infantile (in'fan-til) [L. *in'fan'tilis*]. Pertaining to an infant or to infancy.

infantilism (in-fant'il-izm). A condition in which the characters of childhood persist in adult life. It is marked by mental retardation, underdevelopment of the sexual organs, and often, but not always, by dwarfism of stature. Cf. *atetosis* and *progeria*.

angioplastic i., infantilism attributed to defective development of the vascular system.

Brissaud's i., infantile myxedema. **cachectic i.**, infantilism due to chronic infection or poisoning. **celiac i.**, infantilism resulting from celiac disease. **dysthyroidal i.**, infantilism due

to defective thyroid activity. **hepatic i.**, infantilism associated with hepatic cirrhosis. **Herter's i.**, intestinal infantilism. **idiopathic i.**, a form of arrested development of unknown causation. **intestinal i.**, infantilism due to chronic intestinal disorder; a condition in children of arrested development, the child being well formed, but not growing or gaining in weight. The appetite is good, the stools are large and fatty, and there are frequent attacks of diarrhea. The urine shows an excess of putrefactive products of intestinal origin, and the flora of the intestine consist of gram-positive organisms. **lymphatic i.**, infantilism associated with lymphatism. **myxedematous i.**, cretinism. **pancreatic i.**, infantilism that is marked by defective pancreatic action. **partial i.**, arrested development of a single part or tissue. **renal i.**, infantilism due to disorder of the renal function. Many cases show extensive bone changes and this condition is called *renal rickets*. **reversible i.**, infantilism beginning after bodily growth has been completed. **symptomatic i.**, infantilism due to general defective development of tissues. **tardy i.**, reversible infantilism. **toxemic i.**, intestinal infantilism. **universal i.**, general dwarfishness in stature with absence of the secondary sexual characteristics.

infantorium (in-fan-to're-um). A hospital for the new-born and young infants.

infarct (in'farkt) [L. *infarc'tus*]. An area of coagulation necrosis in a tissue due to local anemia resulting from obstruction of circulation to the area. **anemic i.**, an area of necrosis in a tissue produced by sudden arrest of circulation in a vessel; called also *pale i.* and *white i.* **calcareous**

Diagram of a hemorrhagic infarct: *a*, Artery obliterated by an embolus (*e*); *b*, vein filled with a secondary thrombus (*th*); *c*, center of infarct, which is becoming disintegrated; *d*, area of extravasation; *e*, area of collateral hyperemia. (O. Weber.)

i., a deposit of calcium salt in the tissues. **hemorrhagic i.**, an infarct which is red in color owing to the oozing of red corpuscles into the dead area; called also *red i.* **pale i.** Same as *anemic i.* **red i.** See *hemorrhagic i.* **uric acid i.**, a deposit of uric acid crystals in the renal tubules of the new-born. **white i.** Same as *anemic i.*

infarction (in-fark'shun) [L. *infarci're* to stuff in]. The formation of an infarct; also the infarct itself. **anemic i.**, that in which there is no hemorrhage, and the necrosed tissue is of a light color. Called also *white i.* **calcareous i.**, the deposit of calcium phosphate or carbonate in the connective tissue of an organ, as the kidney. **embolic i.**, a necrosed spot in the region of the distribution of an end artery, due to its obstruction by an embolus. **hemorrhagic i.**, one in which the tissues are reddened by hemorrhage.

infectible (in-fek'tib-l). Capable of being infected.

infecting (in-fek'ting). Causing infection.

infection (in-fek'shun). Invasion of the tissues of the body by pathogenic organisms in such a way as to favor their growth and permit their toxins

to injure the tissues. **aerial i.**, infection through the air by means of dust particles carrying infection. **agonal i.**, terminal infection. **apical i.**, infection situated at the apex of the root of a tooth. **i. atrium**, the point of entrance of an infection. **coli i.**, infection with *Bacterium coli-communis*. **consecutive i.**, septic infection implanted upon a morbid process already established. **contact i.** See *direct i.* **cryptogenic i.**, bacterial infection without discoverable wound for the entrance of an infective agent. **direct i.**, infection produced by contact with another person. **droplet i.**, infection by means of small droplets of sputum which have been thrown into the air during talking or by coughing and sneezing and which remain suspended for some time. **dust i.**, infection by bacteria which have become affixed to particles of dust. **endogenous i.**, infection by the normal bacterial flora of the intestines which have become pathogenic. **focal i.**, infection in which bacteria exist in circumscribed confined colonies in certain tissues, and from there are sent out into the blood stream. The favorite sites of focal infection are the tonsils, peridental tissue, nasal sinuses, fallopian tubes, and prostate gland. **gas gangrene i.**, infection of wounds by bacteria producing or tending to produce gas gangrene. **germinal i.**, transmission of infection to the child by means of the egg cell or sperm cell of the parent. **hand-borne i.**, infection carried on a person's hands. **indirect i.**, infection transmitted by water, food, or other means of conveyance. **latent i.**, a condition in which bacteria, though they have ceased to multiply, remain alive in secluded parts of the body. **mixed i.**, infection with more than one organism at the same time. **obasional i.**, an infection occurring in trench warfare (Sacquépée, 1917). **pyogenic i.**, any one of a group of local or general infections caused by the different pus-producing organisms. **secondary i.**, infection by a bacterium following an infection by a bacterium of another kind. **septic i.**, true septicemia. **silent i.**, an infection which shows few, if any, symptoms. **simple i.**, infection by a single variety of microbe. **terminal i.**, an acute infection occurring near the end of a disease and frequently causing death. **Vincent's i.** See *Vincent's angina*, under *angina*. **water-borne i.**, infection transmitted by means of drinking water.

infectiosity (in-fek-she-os'it-e). The degree of infectiousness of a microbe.

infectious (in-fek'shus). Liable to be communicated by infection. An infectious disease is one caused by parasites, such as bacteria, protozoa, or fungi, and it may or may not be contagious.

infective (in-fek'tiv) [L. *infectivus*]. Of the nature of an infection; infectious.

infecundity (in-fe-kun'dit-e) [L. *infecunditas*]. Sterility or barrenness.

inferent (in'fer-ent). Same as *afferent*.

inferior (in-fe're-or) [L. "lower"; neut. *inferius*]. Situated or directed below.

inferolateral (in'fer-o-lat'er-al) [L. *inferus* low + *latus* side]. Situated below and to one side.

inferomedian (in'fer-o-me'de-an) [L. *inferus* low + *medius* middle]. Situated in the middle of the under side.

inferoposterior (in'fer-o-pos-te're-or). Situated below and behind.

infertilitas (in-fer-til'it-as). Infertility or barrenness. **i. fem'inis**, barrenness.

infestation, infestment (in-fes-ta'shun, infest'ment). An invasion by animal parasites.

infibulation (in-fib-u-la'shun) [L. *in* into + *fibula* clasp]. The fastening of the prepuce or labia majora with clasps or stitches to prevent copulation.

infiltrate (in-fil'trat). Material deposited by infiltration.

infiltration (in-fil-tra'shun) [L. *in* into + *filtration*].
1. The accumulation in a tissue of substances

not normal to it. 2. Any morbid condition of a tissue due to the presence of a substance not normal to it. **adipose i.**, fatty infiltration; the abnormal diffusion of fat globules and molecular fat throughout a tissue. **albuminous i.**, **amyloid i.**, infiltration with amyloid substance. **calcareous i.**, a deposit of lime and magnesium salts in the tissues. **calcium i.**, a deposit of calcium salts within the tissues of the body. **cellular i.**, an infiltration of round cells within the tissues. **circumferential i.**, the formation of a wall of anesthetizing edema around an area to be operated upon. **epituberculous i.**, a collateral hyperemia and inflammatory infiltration surrounding a tuberculous focus: called also *epituberculosis*. **fatty i.**, a deposit of fat in the tissues; also the presence of fat globules or oil in the cells. **gelatinous i.** Same as *gray i.* **glycogenic i.**, the deposition of granules of glycogen in the cells. **gray i.**, a condition of the lungs in acute tuberculosis in which, after death, they assume a gray appearance. **inflammatory i.**, that which is formed by an inflammatory exudation penetrating the interstices of a tissue. **paraneural i.**, paraneural anesthesia. See *anesthesia*. **pigmentary i.**, an abnormal deposit of pigment in a tissue. **purulent i.**, the presence of pus in the tissues, as in diffuse abscess. **saline i.**, the deposit of mineral salts in a living tissue. **sanguineous i.**, infiltration with extravasated blood. **serous i.**, the abnormal presence of lymph in a tissue. **tuberculous i.**, the formation of a group or of groups of tuberculous cells and bacilli in a tissue. **urinous i.**, an extravasation of urine into a tissue. **waxy i.**, the deposition of an amyloid substance in the tissues.

infinite distance (in-'fin-it). In ophthalmology, a distance of twenty feet or more: so called because rays entering the eye from an object at that distance are practically as parallel as if they came from a point at infinite distance.

infinity (in-'fin-'it-e). Same as *infinite distance*.

infirm (in-'firm) [L. *infirmus*; in not + *firmus* strong]. Weak; feeble, as from disease or old age.

infirmary (in-'fir-'ma-re) [L. *infirmarium*]. A hospital or institution where sick or infirm persons are maintained or treated. **camp i.**, a mobile military unit, officered by a sergeant of the hospital corps, designed to furnish dispensary facilities during field service or to become the nucleus of an immobile camp hospital when necessary.

infirmity (in-'fir-'mit-e) [L. *infirmitas*]. 1. A feeble or weak state of the body or mind. 2. A disease or condition producing weakness.

inflammation (in-flam-'a-shun) [L. *inflammatio*; *inflammare* to set on fire]. The condition into which tissues enter as a reaction to irritation (Adami). Inflammation is characterized by pain, heat, redness, and swelling, and histologically by hyperemia, stasis, changes in the blood and walls of the small vessels, and by various exudations. **acute i.**, one in which the processes are active. **adhesive i.**, that which promotes the union of cut surfaces. **atrophic i.**, a form which results in an organized exudate that contracts and leads to atrophy and deformity. Called also *cirrhotic i.*, *fibroid i.*, *sclerosing i.* **catarrhal i.**, one which affects principally a mucous surface, and which is marked by a discharge of mucus and epithelial debris. **chronic i.**, inflammation of slow progress and marked by the formation of new connective tissue. **cirrhotic i.** See *atrophic i.* **croupous i.**, a fibrinous inflammation that leads to the formation of a false membrane, which is not diphtheritic and is not known to be of a specific nature. **diffuse i.**, one that is both interstitial and parenchymatous: also one that is spread over a large area. **disseminated i.**, one that has a number of distinct foci. **exudative i.**, that in which the prominent feature is an exudate. **fibrinous i.**, one that produces an exudate of coag-

ulated fibrin. **fibroid i.** See *atrophic i.* **focal i.**, one that is confined to a single spot or to a set of limited spots. **follicular i.**, a catarrhal inflammation which involves the follicles. **gouty i.**, inflammation due to gout. **granulomatous i.**, chronic inflammation in which there is a formation of granulation tissue, breaking down into small abscesses, with formation of a fistulous tract. **hyperplastic i.**, one which leads to the formation of new connective tissue fibers. Called also *plastic i.*, *productive i.*, *proliferous i.* **hypertrophic i.**, catarrhal inflammation which is marked by thickening of the submucous tissue. **interstitial i.**, that which affects primarily the materials between the essential structural elements. **irritable i.**, one attended by great irritation. **leukocytal i.**, a condition of the spinal cord said to precede general myelitis. **metastatic i.**, one that is reproduced in a distant part by the conveyance of septic matter through the blood vessels and lymph organs. **necrotic i.**, inflammation attended by death of the affected tissue. **obliterative i.**, inflammation of the lining membrane of a cavity, producing adhesions between the surfaces and consequent obliteration of the cavity. **parenchymatous i.**, one that primarily affects the essential tissue elements. **plastic i.**, **productive i.**, **proliferous i.** See *hyperplastic i.* **reactive i.**, that which occurs around a foreign body of a focus of degeneration. **rheumatic i.**, one that is due to exposure, etc. **sclerosing i.** See *atrophic i.* **seroplastic i.**, that which is accompanied by both serous and plastic exudation. **serous i.**, one which produces an exudation of serum. **simple i.**, that in which there is no flow of pus or other product of inflammation. **specific i.**, one that is due to a special micro-organism. **suppurative i.**, one that is characterized by the formation of pus. **toxic i.**, one that is caused by a poison, such as a leukomain or a bacterial product. **traumatic i.**, one that is caused by an injury. **unhealthy i.**, one marked by a tendency to disorganization.

inflammatory (in-flam-'at-o-re). Pertaining to, or characterized by, inflammation.

inflation (in-fla-'shun) [L. *in* into + *fla're* to blow]. 1. Distention with air, gas, or a fluid. 2. The act of distending with air or with a gas.

inflator (in-fla-'tor). An instrument for inflating any organ for therapeutic or diagnostical purposes.

infection, inflexion (in-flek-'shun) [L. *inflexio*; *in* in + *flectere* to bend]. The act of bending inward or state of being bent inward.

inflorescence (in-flo-'res-ens). The structure or arrangement of the flowers of a plant.

influenza (in-fiu-en-'zah) [Ital. "influence"]. An acute infectious, epidemic disease marked by depression, distressing fever, acute catarrhal inflammation of the nose, larynx, and bronchi, neuralgic and muscular pains, gastro-intestinal disorder and nervous disturbances, such as headache, insomnia, convulsions, and delirium. The disease is probably due to the *Bacillus (Hemophilus) influenzae*, and its duration is from a few days to one or two weeks; relapses frequently occur, the patient being left weak for a long time and subject to colds, etc. According to the organs chiefly affected the disease is said to be respiratory, nervous, or gastro-intestinal in form. Complications are frequent, the chief ones being pneumonia and various affections of the ear and eye. The disease occurs in extensive epidemics or pandemics. Recently (1923) a micro-organism, *Bacterium pneumosintes*, has been announced as the causative agent. The disease is also known as *la grippe* and *grip*. **abdominal i.**, influenza marked especially by abdominal symptoms, such as tympanites, diarrhea, or symptoms resembling those of typhoid fever. **endemic i.**, a disease resembling epidemic influenza, but less severe in character, occurring during the winter season; called also *influenza nostras*, *acute catarrhal fever*, and *winter*

- grip.** **laryngeal i.**, influenza in horses in which sore throat is the chief symptom. **i. nos'tras**, endemic influenza. **Spanish i.**, a name given to the pandemic of an acute influenza-like disease which passed over Europe and America during the summer and autumn of 1918.
- influenzal** (in-flu-en'zal). Pertaining to influenza.
- influenzin** (in-flu-en'zin). A proprietary compound of acetphenetidin, quinine salicylate, caffeine, and sodium chloride: used in treating influenza.
- infolding** (in-fol'ding). The operation of enclosing an ulcer (as of the stomach) by suturing together the walls of the organ on either side of it.
- infooted** (in'foot-ed). Turning in the toes.
- infra-** [L. *in'fra* beneath]. A prefix denoting situation or occurrence beneath some special part or organ.
- infra-axillary** (in-frah-aks'il-a-re). Situated below the axilla.
- infraclavicular** (in'frah-klav-ik'u-lar). Situated beneath a clavicle.
- infracommissure** (in-frah-kom'is-ür). The inferior commissure.
- infracoricator** (in-fra-kon-strik'tor). The inferior constrictor of the pharynx.
- infracortical** (in-frah-kor'tik-al). Situated or occurring beneath the cortex, as of the brain.
- infracostal** (in-frah-kos'tal) [L. *in'fra* below + *cos'ta* rib]. Situated below a rib or below the ribs.
- infracotyloid** (in-frah-kot'il-oid). Beneath the cotyloid cavity or acetabulum.
- infracrion** (in-frah'shun) [L. *in* into + *frac'tio* break]. Incomplete fracture of a bone without displacement of the fragments.
- infradiaphragmatic** (in'frah-di-af-rag-mat'ik). Below the diaphragm.
- infraduction** (in-frah-duk'shun). The turning downward of a part, especially of the eye.
- infraglenoid** (in-frah-gle'noid). Below the fossa of the glenoid cavity.
- infraglottic** (in-frah-glott'ik). Situated beneath the glottis.
- infrahyoid** (in-frah-hi'oid). Situated below the hyoid bone.
- inframammary** (in-frah-mam'a-re). Situated or occurring below the mammary gland.
- inframamillary** (in-frah-mam'il-a-re). Below the nipple.
- inframandibular** (in'frah-man-dib'u-lar). Beneath the lower jaw.
- inframarginal** (in-frah-mar'jin-al). Situated below a margin or border, as of the fissure of Sylvius.
- inframaxillary** (in-frah-maks'il-a-re). Situated beneath the jaw.
- infrancuclear** (in-frah-nu'kle-ar). Below the nucleus.
- infra-occlusion** (in'frah-ok-lu'zhun). The position of a tooth when it is not sufficiently elevated in its socket to occupy its place in normal occlusion.
- infra-orbital** (in-frah-or'bit-al). Lying under or on the floor of the orbit.
- infrapatellar** (in-frah-pat-el'ar). Below the patella.
- infraplacement** (in'frah-pläs-ment). Displacement of a tooth downward.
- infrapsychic** (in-frah-si'kik). Below the psychic level; automatic.
- infra-red** (in-frah-red'). Noting rays of energy beyond the limit of vision and below the red rays. See under *ray*.
- infrascapular** (in-frah-skap'u-lar). Situated beneath the shoulder blade.
- infraspinus** (in'frah-spi-na'tus). See *muscles*, table of.
- infraspinous** (in-frah-spi'nus). Situated beneath the spine of the scapula.
- infrasternal** (in-frah-ster'nal). Situated below the sternum.
- infratemporal** (in-frah-tem'po-ral). Below the temporal fossa.
- infratonsillar** (in-frah-ton'sil-ar). Below the faucial tonsil.
- infratracheal** (in-frah-tra'ke-al). Beneath or below the trachea.
- infratrochlear** (in-frah-trok'le-ar). Situated beneath the trochlea.
- infratubal** (in-frah-tu'bal). Beneath a tube.
- infratubinal** (in-frah-tur'bin-al). The inferior turbinate bone.
- infra-umbilical** (in'frah-um-bil'ik-al). Situated beneath the umbilicus.
- infriction** (in-frik'shun) [L. *in* on + *fric'tio* rubbing]. The rubbing of medicaments upon the skin.
- infundibular** (in-fun-dib'u-lar). Of the nature of or resembling an infundibulum.
- infundibuliform** (in-fun-dib'u-lif-orm) [L. *infundibulum* funnel + *forma* form]. Shaped like a funnel.
- infundibulin** (in-fun-dib'u-lin). An extract of the posterior lobe of the pituitary body.
- infundibulopelvic** (in-fun-dib'u-lo-pel'vik). Pertaining to an infundibulum and a pelvis, either of the kidney or elsewhere.
- infundibulum** (in-fun-dib'u-lum) [L. "funnel"]. 1. Any funnel-shaped passage. 2. A funnel-shaped extension of the third ventricle extending through the hypothalamus to the end in the pituitary body. 3. Any one of the divisions of the pelvis of a kidney. 4. A passage between the nasal meatus and the ethmoid cells. 5. The cavity of the fimbriae of an oviduct. 6. Any one of the ultimate expansions of a bronchiole. 7. A cavity at the upper end of the cochlear canal. 8. The conus arteriosus. **i. ethmoidale oss'is ethmoidalis** [B N A], a passage between the nasal meatus and the anterior ethmoid cells. **i. ethmoidale ca'vi na'si** [B N A], a passage from the nose to the frontal sinus. **i. hypophalam'ium** [B N A], the stalk of the hypophysis (pituitary body). **i. tu'bæ uteri'nae** [B N A], the cavity of the fimbriae of the oviduct.
- infundin** (in-fun'din). A proprietary extract of the posterior lobe of the pituitary gland.
- infusible** (in-fu'zib-l). Incapable of being melted.
- infusin** (in-fu'zin). A proprietary ready-made isotonic solution for infusion and injection.
- infusion** (in-fu'zhun). 1. [L. *infusio*; from *in* into + *fundere* to pour]. The steeping of a substance in water for obtaining its proximate principles. 2. [L. *infusum*, gen. *infusi*.] The product of the process of steeping a drug for the extraction of its medicinal principles. 3. The therapeutical introduction of a fluid, as saline solution, into a vein. **cold i.**, the product of steeping a drug in cold water. **meat i.** (for bacteriological use), 500 Gm. of fresh lean meat free from fat are ground and extracted with a liter of water. The mixture is infused over night in the icebox, gradually raised to the boiling point, and filtered. **saline i.**, an injection, either subcutaneous or intravenous, of saline solution.
- infusodecoction** (in-fu'so-de-kok'shun). A mixture of the infusion and the decoction of a substance.
- Infusoria** (in-fu-so're-ah) [L. pl. So called because found in *infusions*, after exposure to air]. A class of Protozoa characterized by the presence of cilia.
- infusoriotoxin** (in-fu-so're-o-tok'sin). A toxin destructive to infusoria.
- infusum** (in-fu'sum). Latin for *infusion* (2). **i. anthem'idis**, infusion of chamomile. Dose, 1-2

fl.oz. (30-60 cc.). **i. cincho'nae**, infusion of cinchona. Dose, 1-2 fl.oz. (30-60 cc.). **i. digi'talis** (U. S. P.), infusion of digitalis. Dose, 1-4 fluidrachms (4-16 cc.). **i. pru'ni virginia'nae**, infusion of wild cherry. Dose, 1-2 fl.oz. (30-60 cc.). **i. sen'nae compos'itum**, the compound infusion of senna; black draft. Dose, 1-4 fl.oz. (30-120 c.c.).

ingesta (in-jes'tah) [L. pl., *in* into + *ger'ere* to carry]. Food and drink taken into the stomach.

ingestion (in-jes'tshun). The act of taking food, medicines, etc., into the body.

ingestive (in-jes'tiv). Pertaining to or effecting an ingestion.

ingestol (in-jes'tol). A proprietary compound of fifteen ingredients, for use in gastric and intestinal diseases.

ingluveosis (in-glu-ve-o'sis) [L. *inglu'vies* gizzard]. Same as *cardiospasm*.

ingluvies (in-glu've-ēz) [L.]. 1. The craw or crop of birds. 2. The first stomach of ruminant animals.

ingluvin (in-glu'vin) [L. *inglu'vies* gizzard]. A ferment prepared from the gizzards of chickens: used like pepsin. Dose, 10-20 grains (0.666-1.333 Gm.). A similar product is obtained from the gizzards of ostriches and pigeons.

Ingrassias, process of (in-gras'e-as) [Giovanni Filippo *Ingrassias*, Italian anatomist, 1510-1580]. See *process*.

ingravescent (in-grav-es'ent) [L. *in* upon + *graves'ci* to grow heavy]. Gradually increasing in severity.

ingen (in'gwen) [L. for "groin"]. The groin.

inguinal (in'gwin-al) [L. *inguina'lis*]. Pertaining to the groin.

inguino-abdominal (in'gwin-o-ab-dom'in-al). Pertaining to the groin and the abdomen.

inguinocrural (in'gwin-o-kru'ral). Pertaining to the groin and the thigh.

inguinodynia (in'gwin-o-din'e-ah) [L. *in'guen* groin + *δύσπν* pain]. Pain in the groin: a common symptom of hysteria.

inguinolabial (in'gwin-o-la-be-al). Pertaining to the groin and a labium.

inguinoproperitoneal hernia (in'gwin-o-proper-it-o-ne'al). See *hernia*.

inguinoscrotal (in'gwin-o-skro'tal). Pertaining to the groin and the scrotum.

inhalant (in-ha'lant). A medicine to be inhaled.

inhalation (in-hal-a'shun) [L. *inhalat'io*]. 1. The drawing of air or other vapor into the lungs. 2. A substance to be inhaled as a vapor.

inhalatorium (in-hal-at-o're-um). An institution for treating disease by inhalation methods.

inhale (in-hāl') [L. *inhalat're*]. To take into the lungs by breathing.

inhaler (in-ha'ler). 1. An apparatus for administering vapor or volatilized remedies by inhalation. 2. An apparatus to prevent dust, smoke, or the like from entering the lungs, or to enable a person with affected lungs to breathe cold or damp air with less danger and discomfort. **Allis' i.**, an apparatus for administering ether by the drop method. **ether i.**, a form of apparatus for administering the vapor of ether as an anesthetic.

inherent (in-he'rent) [L. *inhae'rens* sticking fast]. Implanting by nature; intrinsic; innate.

inheritance (in-her'it-ans). The act of inheriting or the thing inherited. **alternative i.**, inheritance in which all the characters are inherited from one parent. **amphigenous i.**, inheritance of characteristics from both parents. **blending i.**, inheritance in which the characters of mother and father are blended in the offspring. **crisscross i.**, inheritance of the maternal characters by the sons and the paternal characters by the daughters. **homochronous i.**, inheritance of characteristics

which appear in the offspring at the same age as they appeared in the parent. **homotropic i.**, the inheritance of acquired characteristics. **mendelian i.** See *Mendel's law*, under *law*. **mosaic i.**, inheritance in which the paternal influence is dominant in one group of cells and the maternal in another, as the inheritance of a streaked coloration where the parents are of different color. **particulate i.**, inheritance in which some characters come from one parent and others from the other.

inhibition (in-hib-ish'un) [L. *inhibe're* to restrain; *in* in + *habere* to have]. Arrest or restraint of a process effected by nervous influence. 1. of **complement**, complement is inhibited by 15 to 25 per cent salt solution and can be thus kept in the refrigerator for weeks, resuming its activity when diluted to isotonicity with distilled water. **specific i.**, a condition in which a precipitoid is combined with all the available precipitinogen, so that when fresh precipitin is added no precipitate will occur.

inhibitive (in-hib'it-iv). Inhibitory.

inhibitor (in-hib'it-or). 1. Any substance which interferes with a chemical reaction. 2. A mechanical device for curing mouth breathing.

inhibitory (in-hib'it-or-e) [L. *inhibe're* to restrain]. Restraining or arresting any process: effecting a stay or arrest, partial or complete.

inhibitrope (in-hib'it-rōp) [L. *inhibere* to check]. One in whom certain stimuli tend to produce arrest of function.

inhomogeneity (in-ho-mo-jen-e'it-e). Lack of homogeneity; especially variability in the leukocyte count of blood taken from different parts of the circulation at about the same time.

inial (in'e-ak, in'e-al). Pertaining to the inion.

inial (in'e-ad). Toward the inion.

iniencephalus (in'e-en-sef'al-us) [*lvlov* occiput + *ἐγκέφαλος* brain]. A fetus with a fissured occiput and protruding brain.

iniencephaly (in'e-en-sef'al-e). The condition of an iniencephalus.

inion (in'e-on) [*lvlov* occiput]. The external occipital protuberance.

iniops (in'e-ops) [*lvlov* occiput + *ὤψ* eye]. A double-faced monster with the posterior face incomplete.

initial (in-ish'al) [L. *initia'lis*, from *init'ium* beginning]. Pertaining to the very first stage of any process.

initis (in-i'tis) [*itis*, *lvbs* fiber]. Inflammation of the substance of a muscle.

Inj. Abbreviation for *injection*.

injected (in-jek'ted). 1. Filled by injection. 2. Thrown in by injection. 3. Congested.

injection (in-jek'she-o), pl. *injection'es*. Latin for *injection*. 1. **apomor'phinae hypoder'mica**, a 2 per cent solution of apomorphine hydrochloride for injection. 2. **ergot'ini hypoder'mica**, a hypodermic injection of ergotine. 3. **hypoder'mica**, a hypodermic injection. 4. **mor'phinae hypoder'mica**, a hypodermic injection of morphine.

injection (in-jek'shun) [L. *injec'tio*, from *in* into + *jac'ere* to throw]. 1. The act of throwing a liquid into a part, such as the rectum or a blood vessel. 2. A substance thrown into a part or organ; an enema. 3. The condition of being injected; congestion. **anatomical i.**, an injection into the vessels or organs of the cadaver, designed to facilitate dissection or demonstration. **coarse i.**, an anatomical injection that serves to fill only the larger vessels. **epifascial i.**, an injection made upon the surface of a fascia; particularly the injection of arsenamine upon the fascia lata. **exciting i.**, sensitizing injection. **fine i.**, an anatomical injection that fills even the

- smallest vessels. **gaseous i.**, an injection of gas or air to aid in an anatomical demonstration. **gelatin i.**, a preservative injection of which gelatin is the base. **hypodermatic i.**, **hypodermic i.**, an injection made into the subcutaneous tissues; called also *subcutaneous i.* **intracardiac i.**, an injection into the cavity of the heart. **intradermic i.**, an injection into the substance of the skin. **intramuscular i.**, an injection into the substance of the muscles. **intravascular i.**, an injection thrown into a vessel. **intravenous i.**, an injection made into a vein. **parenchymatous i.**, one made into the substance of an organ. **plaster i.**, a coarse injection of a thin paste of calcined gypsum and water, which becomes hardened in the vessels. **preservative i.**, an injection that serves to protect a cadaver or specimen from decay. **saline i.**, an injection of saline solution. **sensitizing i.**, sensitizing dose; the first injection of protein or other sensitizing antigen. **subcutaneous i.** See *hypodermic i.*
- injector** (in-jek'tor) [L. *injic'ere* to inject]. An instrument used in making injections.
- Inj. enem.** Abbreviation for L. *injicia'tur en'ema*, let an enema be injected.
- injury** (in'ju-re) [L. *injuria*; *in* not + *jus* right]. Harm or hurt; a wound or maim.
- inlay** (in'la). In dentistry, a filling that is first made and then cemented into a cavity. **Ames i.**, the insertion of a gold or platinum matrix into a cavity into which is then fused gold plate or alloy until the proper contour is secured. **epithelial i.**, a method of securing epithelialization of a wound cavity. A mold of the cavity is taken, and this is covered with a Thiersch graft of epidermis, the whole being inserted into the wound cavity, the edges being approximated with sutures. The mold is removed after ten days, leaving the cavity completely epithelialized.
- inlet** (in'let). The upper limit of the pelvic cavity.
- Inman's disease** (in'manz) [Thomas Inman, English physician, 1820-1876]. See *myalgia*.
- innate** (in'at) [L. *in* in + *nas'ci* to be born]. Inborn; hereditary; congenital.
- innervation** (in-er-va'shun) [L. *in* into + *ner'vus* nerve]. 1. The distribution or supply of nerves to a part. 2. The supply of nervous energy or of nerve stimulus sent to a part. **reciprocal i.**, the innervation of muscles around the joints, where the motor centers are so connected in pairs that when one is excited the center of the corresponding antagonist is inhibited.
- innidiation** (in-id-e-a'shun) [L. *in* into + *ni'dus* nest]. The development of cells in a part to which they have been carried by metastasis; called also *colonization* and *indenzation*.
- innocent** (in'o-sent) [L. *innocens*; *in* not + *noc'e're* to harm]. Not malignant; benign; not tending of its own nature to a fatal issue.
- innocuous** (in-ok'u-us). Harmless.
- innominatal** (in-om-in-a'tal). Pertaining to the innominate artery or to the innominate bone.
- innominate** (in-om-in-at) [L. *innomina'tus* nameless; *in* not + *no'men* name]. Not having a name; nameless. 1. **artery**. See *arteries*, table of. 1. **bone**. See under *bone*.
- innocuous** (in-oks'e-us) [L. *in* not + *nox'ius* harmful]. Not injurious; not hurtful.
- innutrition** (in-nu-trish'un). Want of nutrition.
- inoblast** (i'no-blast) [L. *in* + *βλαστ'os* germ]. Any connective tissue cell in the formative stage.
- inoccipitia** (in'ok-sip-it'e-ah). Absence or deficiency of the occipital lobe of the brain.
- inochondritis** (in'o-kon-dri'tis) [L. *in* fiber + *χόνδρος* cartilage + *-itis* inflammation]. Inflammation of a fibrocartilage.
- inochondroma** (in'o-kon-dro'mah) [L. *in* fiber + *χόνδρος* cartilage + *-ωμα* tumor]. A fibrochondroma.
- inoculability** (in-ok'u-la-bil'it-e). Susceptibility or transmission by inoculation.
- inoculable** (in-ok'u-la-bl). 1. Susceptible of being inoculated; transmissible by inoculation. 2. Not immune against a disease transmissible by inoculation.
- inoculation** (in-ok-u-la'shun) [L. *inocula'tio*, from *in* into + *oculus* bud]. The insertion of a virus into a wound or abrasion in the skin in order to communicate a disease. **curative i.**, the injection of an antiserum for curative purposes. **protective i.**, the injection of an antiserum to protect against a disease; vaccination against a disease.
- inoculum** (in-ok'u-lum). The substance used in inoculation.
- inocystoma** (in'o-sis-to'mah) [L. *in* fiber + *κύστις* cyst + *-ωμα* tumor]. A fibrous tumor affected with cystic degeneration.
- inocyte** (in'o-sit) [L. *in* fiber + *κύτος* cell]. A cell of fibrous tissue.
- ino-epithelioma** (in'o-ep-ith-e-le-o'mah). Epithelioma with fibrous elements.
- inogen** (in'o-jen) [L. *in* fiber + *γεννᾶν* to produce]. A hypothetical substance of the muscular tissue, the sudden breaking up of which is supposed to cause muscular contraction.
- inogenesis** (in-o-jen'es-is) [see *inogen*]. The formation of fibrous tissue.
- inogenous** (in-oj-en-us). Produced from tissue or producing tissue.
- inoglia** (in-og'le-ah) [L. *in* fiber + *γλῆα* glue]. Same as *fibroglia*.
- inohymenitis** (in'o-hi-men-i'tis) [L. *in* fiber + *ὕμην* membrane + *-itis* inflammation]. Inflammation of any fibrous membrane.
- inoleiomyoma** (in'o-li-o-mi-o'mah) [L. *in* fiber + *λεῖος* smooth + *μῦς* muscle + *-ωμα* tumor]. A tumor composed of unstriated muscular tissue.
- inolith** (in'o-lith) [L. *in* fiber + *λίθος* stone]. A fibrous concretion.
- inoma** (in'o-mah) [L. *in* fiber + *-ωμα* tumor]. Same as *fibroma*.
- inomyoma** (in'o-mi-o'mah) [L. *in* tissue + *μῦς* muscle + *-ωμα* tumor]. Fibromyoma.
- inomyositis** (in'o-mi-o-si'tis) [L. *in* fiber + *μῦς* muscle + *-itis* inflammation]. Fibromyositis.
- inomyxoma** (in'o-mik-so'mah) [L. *in* fiber + *μυξ-ομα*]. Fibromyxoma.
- inoneuroma** (in'o-nu-ro'mah). Fibroneuroma.
- inoperable** (in-op'er-ab-l). Not suitable to be operated upon.
- inopexia** (in-o-pek'se-ah) [L. *in* fiber + *πῆξις* fixation]. A tendency toward spontaneous coagulation of the blood.
- inorganic** (in-or-gan'ik) [*in*-not + *organic*]. 1. Having no organs. 2. Not of organic origin. 3. Pertaining to substances not of organic origin.
- inorgoxydants** (in-or-gok'se-dants). Bacteria which live in and obtain their energy from the oxidation of inorganic materials. The group includes the sulphur, the nitrite, the nitrate, and perhaps also the iron bacteria.
- inosclerosis** (in-o-skle-ro'sis) [L. *in* fiber + *σκληρός* hard]. Fibrous induration.
- inoscopy** (in-os'ko-pe) [L. *in* fiber + *σκοπεῖν* to view]. The diagnosis of disease by artificial digestion and examination of the fibers or fibrinous matter of the sputum, blood, effusions, etc.
- inosculate** (in-os'ku-lāt) [L. *in* into + *os'culum* little mouth]. To unite or communicate by means of small openings or anastomoses.
- inosculation** (in-os-ku-la'shun). The junction or interunion of arterial or venous branches with each other by means of anastomoses or by direct union.
- inose** (in'ös). Muscle sugar; inositol.

inosemia (in-o-se'me-ah) [*Is*, *lvós* fiber + *αἷμα* blood]. An excess of fibrin in the blood.

inosin (in'o-sin). A nucleoside resulting from the decomposition of inosinic acid. It is a compound of hypoxanthine and ribose. **i. hydrolase**, an enzyme which converts inosin into hypoxanthine and sugar.

inosinate (in'o-sin-ät). A salt of inosinic acid.

inosite (in'o-sit) [*Is*, *lvós* fiber]. Hexahydroxybenzene: a crystallizable substance, $C_6H_6(OH)_6$, of the aromatic series, found in muscle, urine, the viscera, and various plant substances.

inositis (in-o-si'tis) [*Is* fiber + *-itis* inflammation]. Inflammation of fibrous tissue.

inositol (in-o-si'tol). See *inosite*.

inosituria (in'o-si-tu're-ah) [*inosite* + *οὐρον* urine]. The occurrence of muscle sugar, or inosite, in the urine.

inosteoma (in'o-ste-at-o'mah) [*Is*, *lvós* fiber + *στέαρ* fat + *-ωμα* tumor]. A fatty tumor containing fibrous elements.

inostosis (in-os-to'sis) [L. *in* again + *δοτεον* bone]. The re-formation of bony tissue to replace such tissue which has been destroyed.

inouria (in-o-su're-ah). Same as *inosituria*.

inotagma (in-o-tag'mah) [*Is* fiber + *τάγμα* arrangement]. A linear arrangement of the contractile structural elements of a muscle cell.

inotropic (in-o-trop'ik) [*Is* fiber + *τρέμειν* to turn or influence]. Affecting the force or energy of muscular contractions: said of certain nerve fibers. **negatively i.**, weakening the force of muscular action. **positively i.**, increasing the strength of muscular contraction.

inotropism (in-o'tro-pizm) [see *inotropic*]. Interference with the contractility of muscle.

In. pulm. Abbreviation for L. *in pulmon'to*, in gruel.

inquest (in'kwest) [L. *in* into + *quaerere* to seek]. Inquiry before a coroner into the manner of a death.

inquiline (in'kwil-in) [L. *in'colus* inhabitant]. A parasite which lives within another, but does not derive its food from its host.

inquisition (in-kwiz-ish'un) [L. *inquisitio*; *in* into + *quaerere* to seek]. An investigation.

insalivation (in'sal-iv-a'shun) [L. *in* in + *saliva* spittle]. The saturation of the food with saliva in mastication.

insalubrious (in-sal-u'bre-us). Not salubrious; not conducive to health.

insane (in-sän') [L. *in* not + *sa'nus* sound]. Affected with insanity; not of sound mind.

insanitary (in-san'it-a-re). Not in a good sanitary condition.

insanity (in-san'it-e) [L. *insan'itas*, from *in* not + *sa'nus* sound]. Disorder of the mental faculties, more or less permanent in character, but without loss of consciousness and will. It is marked by delusions, illusions, and hallucinations, by changes in character and habits, and by unreasonable and purposeless actions and language. **acquired i.**, insanity arising after a long period of mental soundness. **adolescent i.** See *dementia praecox*. **affective i.** Same as *emotional i.* **alcoholic i.**, that which is due to alcoholism. **alternating i.**, insanity characterized by alternating phases of mania and depression, each followed by a quiescent period. **anticipatory i.**, that which appears in a patient at an earlier age than that at which it attacked the parent. **arthritic i.**, insanity due to gout or rheumatism. **choreic i.**, chorea insaniens. **circular i.**, **cyclic i.**, manic-depressive insanity characterized by alternating manic and depressive phases without any quiescent intervals. **climacteric i.**, that which is associated with the menopause. **communicated i.**, that which is transmitted from one

person to another. **compound i.**, the concurrence of two or more forms of insanity. **compulsive i.**, insanity in which the patient is completely dominated by impulse or obsessions. **confusional i.**, acute temporary insanity following a severe disease or nervous shock, and marked by mental confusion of varying degrees of intensity. **consecutive i.**, that which follows some neurosis or other disease. **cyclic i.** See *circular i.* **degenerative i.**, **delusional i.**, insanity marked by delusions; paranoia. **dissimilar i.**, that which is inherited, but not identical with that of the parent. **doubling i.**, insanity characterized by morbid doubt, suspicion, and indecision. **drug i.**, insanity due to the excessive use of some drug. **emotional i.**, that which is characterized by emotional depression or exaltation. **epidemic i.**, a form that sometimes affects many persons in a community. **hereditary i.**, that which is inherited from a parent or grandparent. **homicidal i.**, insanity marked by a desire to take human life. **homochronous i.**, that which appears in the patient at the same age at which it appeared in the patient's father or mother. **homologous i.**, that which is identical with that of the parent. **hysteric i.**, insanity characterized by sudden and short emotional outbreaks. **ideational i.**, insanity with perverted ideation. **ideophrenic i.**, insanity with perverted ideation; ideational insanity. **idiophrenic i.**, insanity due to disease of the brain itself. **imposed i.**, folie à deux. **impulsive i.**, an insane tendency to acts of violence. **induced i.**, compulsive insanity. **intellectual i.** Same as *ideational i.* **iodoform i.**, a condition of mental depression, followed by delirium and acute dementia, due to the excessive use of iodoform. **manic-depressive i.**, insanity in which mania and melancholia alternate. The term includes simple mania and melancholia, recurrent mania and melancholia, periodic mania and melancholia, and circular insanity. **menstrual i.**, that which recurs at the menstrual period. **moral i.**, that which is marked by impairment of the moral sense. **perceptual i.**, a form marked by hallucinations and illusions. **periodic i.**, that which recurs at regular intervals. **polyneuritic i.**, Korsakoff's syndrome. **primary i.**, any insanity not known to be consequent upon some previous attack or disease. **progressive i.**, that which is intensified by transmission to the offspring. **puerperal i.**, the insanity coming on after delivery; also the delirium of childbirth. **recurrent i.**, mental aberration with lucid intervals. **regressive i.**, that which is inherited, but is milder in the offspring than in the parent. **religious i.**, that associated with perverted and exalted religious emotions. **senile i.**, a form due to senile degeneration. **simultaneous i.**, insanity appearing at the same time in two or more persons who live together. **stuporous i.**, primary acute dementia with more or less continuous stupor. **surgical i.**, a form that follows surgical operations. **toxic i.**, acute insanity from poisoning of the system by certain drugs. **volitional i.**, insanity marked by perversion of the will.

insanoid (in-sa'noid). Resembling insanity; nearly insane.

inscriptio tendinea (in-skip'she-o ten-din'e-ah). [BNA] A fibrous band which crosses the belly of a muscle and more or less completely divides it into two parts.

inscription (in-skip'shun) [L. *inscriptio*; *in* upon + *scribere* to write]. That part of a prescription which contains the names and amounts of the ingredients.

Insecta (in-sek'tah) [L. from *in* in + *sectum* cut]. A class of the Arthropoda characterized by division into three parts, head, thorax, and abdomen; there are three orders: Hemiptera, Diptera, and Siphonaptera of medical interest.

insecticide (in-sek'tis-id) [L. *insectum* insect +

cae'dere to kill]. 1. Destructive to insects. 2. Any substance poisonous to insects.

insemination (in-sem-in-a'shun) [L. *in* into + *se'men* seed]. The fertilization of the ovum.

insenscence (in-sen-es'ens). The process of growing old.

insensible (in-sen'sib-l) [L. *in* not + *sensib'ilis* appreciable]. 1. Not appreciable by or perceptible to the senses. 2. Devoid of consciousness or of sensibility.

insertion (in-ser'shun) [L. *inser'tio*; from *in* into + *ser're* to plant]. 1. The act of implanting, or the condition of being implanted. 2. The place of attachment of a muscle to the bone which it moves. **parasol i.**, insertion of the umbilical cord in the placenta, in which the vessels of the cord separate before they join the placenta and resemble the ribs of a parasol. **velamentous i.** See *velamentous placenta*, under *placenta*.

insheathed (in-shēth'd). Same as *encysted*.

insidious (in-sid'e-us) [L. *insidi'us*; *insid'iae* ambush]. Coming on in a stealthy manner.

insink (in'sink). To become folded in or invaginated.

insipine (in-sip'in). Quinindiglycol sulphate, $O\text{-}[\text{CH}_2\text{.CO.}(\text{C}_{20}\text{H}_{23}\text{O}_2\text{N}_2)_2\text{.H}_2\text{SO}_4\text{.3H}_2\text{O}]$, a white tasteless powder; a tasteless quinine. Dose, 3 grains (0.2 Gm.).

in situ (in si'tu) [L.]. In the natural or normal place.

insolation (in-so-la'shun) [L. *insola're* to expose to the sun; *in* in + *sol* sun]. 1. Treatment by exposure to the sun's rays; the sun bath. 2. Sunstroke; thermic fever due to exposure to the sun's rays. **asphyxial i.**, sunstroke with low temperature, cold skin, and feeble pulse. **hyperpyrexial i.**, thermic fever with very high temperature, coma, and congested skin.

insoluble (in-sol'u-bl) [L. *insolu'bilis*, from *in* not + *sol'vere* to dissolve]. Not susceptible of being dissolved.

insomnia (in-som'ne-ah) [L. *in* not + *som'nus* sleep]. Inability to sleep; abnormal wakefulness.

inspection (in-spek'shun) [L. *inspec'tio*, *inspic'ere* to behold]. Examination by the eye.

inspersion (in-sper'zhun) [L. *insper'tio*; *in* upon + *spar'gere* to sprinkle]. The act of sprinkling, as with a powder.

inspiration (in-spi-ra'shun) [L. *inspira're*, from *in* in + *spira're* to breathe]. The act of drawing air into the lungs.

inspirator (in'spir-a-tor) [L.]. A form of inhaler or respirator.

inspiratory (in'spir-a-to-re). Pertaining to or subserving inspiration.

inspirium (in-spir'e-um). An inspiration.

inspirometer (in-spi-rom'et-er) [*inspire* + *μέτρον* measure]. An apparatus for measuring the amount of air inspired.

inspissated (in-spis-a-ted) [L. *inspissa'tus*, from *in* intensive + *spissa're* to thicken]. To thicken, dry, or render less fluid.

inspissation (in-spis-a'shun) [L. *inspissatio*]. 1. The act or process of rendering dry or thick by the evaporation of readily vaporizable parts. 2. The condition of being rendered less thin by evaporation.

inspissator (in-spis'a-tor). An apparatus for inspissating fluids, such as blood serum.

instep (in'step). The dorsal part of the arch of the foot.

instillation (in-stil-a'shun) [L. *instilla'tio*, from *in* into + *stilla're* to drop]. The act or process of dropping a liquid into a cavity, such as that of the eye.

instillator (in'stil-a-tor). An instrument for performing instillations.

instinct (in'stinkt) [L. *instinc'tus*; *in* on + *sting'ere* to prick]. A propensity that urges an animal or human being, without the exercise of reason, to the performance of actions which are for the most part normally useful or beneficial.

instinctive (in-stink'tiv). Of the nature of an instinct; performed apparently without the exercise of the reason.

institutes (in'stit-üts) [L. *institu'tum* established regulation]. Established or fundamental principles. 1. **of medicine**, the fundamental principles of medical science; especially physiology, pathology, and the kindred branches of medical education.

instrol (in'strol). A proprietary bactericide solution for sterilizing instruments.

instrument (in'stru-ment) [L. *instrumen'tum*; *instru'ere* to furnish]. Any mechanical tool, appliance, or apparatus.

instrumental (in-stru-men'tal). Pertaining to or performed by instruments.

instrumentation (in'stru-men-ta'shun). The use of instruments; work performed with instruments.

insuccation (in-suk-a'shun) [L. *insucca're* to soak in; *in* into + *suc'cus* juice]. The thorough soaking of a drug before preparing an extract from it.

insufficiency (in-suf-ish'en-se) [L. *insufficien'tia*, from *in* not + *suffic'iens* sufficient]. The condition of being insufficient or inadequate for the performance of the allotted duty. **active i.**, the inability of a muscle to act owing to the abnormal (or other) approximation of its insertion to its origin. **aortic i.**, incomplete closure of the aortic valve, permitting the regurgitation of blood into the left ventricle at each diastole. **cardiac i.**, inability of the heart to perform its function properly. 1. **of the externi**, insufficient power in the externi muscles of the eye, so that they are overbalanced by the interni, producing esophoria. 1. **of the eyelids**, a condition in which the eyes are closed only by a conscious effort. **gastric i.**, **gastromotor i.**, inability of the stomach to empty itself, although it is not dilated. **hepatic i.**, inability of the liver properly to perform its functions. 1. **of the interni**, deficient power in the interni of the eye, resulting in exophoria. **mitral i.** See *i. of the valves*. **muscular i.**, the inability of a muscle to do its normal work by a normal contraction. **myocardial i.**, insufficiency or breakdown of the heart muscle. **myovascular i.**, insufficiency of the heart with increased arterial tension. **ocular i.** See *i. of externi* and *i. of interni*. **proteopexic i.** See *hemoclastic crisis*, under *crisis*. **pseudo-aortic i.**, a condition marked by some of the symptoms of aortic insufficiency, but due to arteriosclerosis. **pulmonary i.** See *i. of the valves*. **pyloric i.**, defective closure of the pylorus, producing inability of the stomach to prevent the too rapid escape of the food into the bowel. **renal i.**, a state in which the kidneys are unable to remove a sufficient proportion of the effete matter of the blood. **thyroid i.**, hypothyroidism. **tricuspid i.** See *i. of the valves*. **uterine i.**, weakness of the contractile power of the uterus, due to muscular atony. 1. **of the valves**, **valvular i.**, a condition in which the valves do not close perfectly, so that the blood passes through the orifices; named, according to the valve affected, *aortic*, *mitral*, *pulmonary*, or *tricuspid*.

insufficien'tia ver'tebrae. Functional neurosis based on spinal injury which does not produce organic disease of the spine.

insufflation (in-suf-la'shun) [L. *in* into + *sub* under + *fla're* to blow]. The act of blowing a powder, vapor, gas, or air into a cavity, as into the lungs. **intratracheal i.**, the operation of blowing air into the trachea through a tube introduced into the larynx; employed to avoid collapse of the lung in intrathoracic operations. 1. **of the**

lungs, the act of blowing air into the lungs for the purpose of artificial respiration.

insufflator (in-suf'-la-tor). An instrument used in performing insufflation.

insula (in'su-lah) [L. "island"]. [BNA] A triangular area of the cerebral cortex which forms the floor of the lateral cerebral fossa. It is covered over and hidden from view by the juxtaposition of the opercula which thus forms the lateral cerebral fissure. Called also *island of Reil* and *central lobe*.

insular (ins'-u-lar). Pertaining to an island, especially the insula.

insulation (ins-u-la'shun) [L. *insula're* to make an island of]. The state in which the communication of electricity to other bodies is prevented by the interposition of a nonconductor; also, the material or substance which insulates. The electrical resistance of an insulator is for convenience expressed in megohms, a unit representing a million ohms.

insulator (in'su-la-tor). An appliance made of some nonconducting material used in preventing the escape of electricity.

insulin (in'su-lin) [L. *in'sula* island (of the pancreas)]. A clear, colorless aqueous extract of the active principle of the internal secretion of the islands of Langerhans of the pancreas of slaughterhouse animals. It is employed in the treatment of diabetes, as it raises the body's power to metabolize carbohydrate, reducing the blood and urinary sugar to normal, causing diminution of the acetone bodies in the urine, and relieving all the clinical symptoms of the disease. It is marketed in sterile vials of 5 cc. capacity, each cubic centimeter containing a stated number of units. One unit of insulin when injected subcutaneously into a diabetic patient will enable him to utilize 1.5 to 2 Gm. of dextrose. Called also *letin*. **i. shock**. See under *shock*. **vegetable i.** See *glucokinin*.

insuline (in'su-lin) [see *insulin*]. Shaffer's name for the hormone of the islands of Langerhans of the pancreas.

insulinization (in'su-lin-iz-a'shun). Treatment with insulin.

insulinoid (in'su-lin-oid). Resembling insulin; any substance with hypoglycemic properties like those of insulin.

insulol (in'su-lol). Rectal suppositories stated to contain insulin.

insuloma (in-su-lo'mah) [L. *in'sula* island (of Langerhans) + *-oma* tumor]. An adenoma of the islands of Langerhans of the pancreas; called also *langerhansian adenoma*.

insulopathic (in'su-lo-path'ik). Pertaining to, or due to, abnormal insulin secretion.

insultus (in-sul'tus) [L.]. An attack. **i. hyster'icus**, the actual hysteric attack.

insusceptibility (in-sus-sep-tib-il'it-e). Same as *immunity*.

intarvin (in'tar-vin). A synthetic fat made from fatty acids having an odd number (17) of carbon atoms. It is composed of the glyceryl ester of margaric acid (glyceryl trimargarate) admixed with 10 per cent of liquid petrolatum: recommended for use in the diet of diabetes because of its antiketogenic effect.

integration (in-te-gra'shun). 1. Assimilation; anabolic action or activity. 2. The combination of different acts so that they cooperate toward a common end.

integrator (in-te-gra-tor). An instrument for measuring body surfaces.

integument (in-teg-u-ment) [L. *integumen'tum*, from *in* on + *teg'ere* to cover]. The covering of the body; the skin.

integumentary (in-teg-u-men'ta-re). 1. Pertaining to or composed of skin. 2. Serving as a covering, like the skin.

integumen'tum commu'ne [BNA] [L. "common integument"]. The skin. See *skin*.

intellect (in'tel-ekt) [L. *intellect'us*, from *intellig'ere* to understand]. The mind, thinking faculty, or understanding.

intemperance (in-tem'per-ans) [L. *in* not + *tempera're* to moderate]. Excess or lack of self-control in respect of food and drink; immoderate indulgence in the use of alcoholic drinks.

intemperant (in-tem'per-ant). A person addicted to the intemperate use of alcoholic stimulants.

intensification (in-ten'sif-ik-a'shun) [L. *inten'sus* intense + *fac'ere* to make]. 1. The act of making anything intense. 2. The process of becoming intense.

intensimeter (in-ten-sim'et-er). Fürstenau's device for measuring the intensity of roentgen rays; it is based on the variation of electric resistance of a selenium cell under influence of irradiation at different intensities.

intensionometer (in-ten-se-o-nom'et-er). An inometric instrument for measuring the intensity of roentgen rays. Two series of plates, separated by an air gap that serves as the dielectric, are connected to opposite terminals in a closed chamber. An electric circuit is completed when the air becomes ionized by the roentgen rays, and the difference in electric potential is registered by deflection of a galvanometer needle.

intensity (in-ten'sit-e) [L. *inten'sus* intense; *in* on + *ten'dere* to stretch]. The condition or quality of being intense; a high degree of tension, activity, or energy. **luminous i.**, the light-giving power of a source of light. Cf. *candle power*.

intensive (in-ten'siv) [L. *in* on + *ten'dere* to stretch]. Of increasing force or intensity.

intention (in-ten'shun) [L. *inten'tio*, from *in* upon + *ten'dere* to stretch]. A natural or other process; a process of healing. See under *healing*.

inter- [L. *in'ter* between]. A prefix signifying between.

interacinar, interacinous (in-ter-as'in-ar, in-ter-as'in-us). Situated between acini.

interagglutination (in'ter-ag-lu-tin-a'shun). Agglutination of one kind of cells by the agglutinins of a nearly related kind.

intervalveolar (in-ter-al-ve'o-lar). Between alveoli.

interangular (in-ter-ang'u-lar). Situated or occurring between two or more angles.

interannular (in-ter-an'u-lar) [L. *in'ter* between + *annulus* ring]. Situated between two rings or constrictions, or between two of the nodes of Ranvier.

interarticular (in'ter-ar-tik'u-lar) [L. *in'ter* between + *artic'ulus* joint]. Situated between articular surfaces.

interarytenoid (in-ter-ar-i'ten-oid). Between the arytenoid cartilages.

interatrial (in-ter-at're-al). Between the atria of the heart.

interauricular (in'ter-aw-rik'u-lar) [L. *in'ter* between + *auric'ula* auricle]. Situated between the auricles.

interbody (in'ter-bod-e). An amboceptor.

interbrain (in'ter-brän). See *thalamencephalon*.

intercadence (in-ter-ka'dens) [L. *in'ter* between + *cad'ere* to fall]. An additional or supernumerary beat occurring between two full beats of the pulse; also the occurrence of such a beat.

intercalary (in-ter'kal-a-re) [L. *intercala'rius*; *in'ter* between + *cala're* to call]. Inserted or placed between; interposed.

intercalated (in-ter'kal-ät-ed) [L. *intercala'tus*]. See *intercalary*.

intercalatum (in'ter-ka-la'tum). The substantia nigra of the brain.

intercanalicular (in'ter-kan-al-ik'u-lar). Between canaliculi.

intercapillary (in-ter-kap'il-a-re). Among or between capillaries.

intercarotic, intercarotid (in'ter-ka-rot'ik, in'ter-ka-rot'id). Situated between the carotid arteries.

intercarpal (in-ter-kar'pal). Between the carpal bones.

intercartilaginous (in'ter-kar-til-aj'in-us). Between cartilages.

intercavernous (in-ter-kav'er-nus). Between two cavities.

intercellular (in-ter-sel'u-lar). Situated between the cells of any structure.

intercentral (in-ter-sen'tral). Situated between or connecting two or more nerve centers.

intercerebral (in-ter-ser'e-bral). Between two cerebral hemispheres.

interchondral (in-ter-kon'dral) [L. *in'ter* between + *χόνδρος* cartilage]. Connecting or situated between two or more cartilages.

intercilium (in-ter-sil'e-um) [L. *in'ter* between + *cilium* eyelash]. The space between the eyebrows.

interclavicular (in'ter-klav-ik'u-lar) [L. *in'ter* between + *clavicula* clavicle]. Situated between the clavicles.

interclinoid (in-ter-kli'noid). Pertaining to, or passing between, the clinoid processes.

intercoccygeal (in'ter-kok-sij'e-al). Situated between the pieces of the coccyx.

intercolumnar (in'ter-kol-um'nar) [L. *in'ter* between + *columna* column]. Situated between columns or pillars.

intercondylar, intercondyloid, intercondylous (in'ter-kon'dil-ar, in'ter-kon'dil-oid, in'ter-kon'dil-us). Situated between two condyles.

intercostal (in-ter-kos'tal) [L. *in'ter* between + *costa* rib]. Situated between the ribs.

intercostohumeral (in'ter-kos-to-hu'mer-al). Pertaining to an intercostal space and the humerus.

intercostohumeralis (in'ter-kos'to-hu-mer-a'lis) [L.]. The lateral cutaneous branch of the second intercostal nerve going to the skin of the arm.

intercricothyrotomy (in-ter-kri'th-ro'to-me) [L. *inter* between + *cricothyroid* + *τομή* cut]. The operation of opening the larynx through the cricothyroid membrane; laryngotomy.

intercristal (in-ter-kris'tal). Between two crests.

intercrural (in-ter-kru'ral). Between two crura.

intercurrent (in-ter-kur'ent) [L. *intercurrens*, from *in'ter* between + *currere* to run]. Breaking into and modifying the course of an already existing disease.

intercusping (in-ter-kus'ping). The correct occlusion of the cusps of the teeth of one jaw with the corresponding depression in the occlusal surfaces of the teeth of the opposite jaw.

intercutaneomucous (in'ter-ku-ta'ne-o-mu'kus). Occurring or situated between the skin and mucous membrane.

interdeferential (in'ter-def-er-en'shal). Between two vasa deferentia.

interdental (in-ter-den'tal) [L. *in'ter* between + *dens* tooth]. Situated between the teeth; situated between two approximating teeth.

interdentium (in-ter-dea'she-um) [see *interdental*]. The space between two contiguous teeth.

interdigit (in-ter-dij'it) [see *interdigital*]. The space between any two contiguous fingers or toes.

interdigital (in-ter-dij'it-al) [L. *in'ter* between + *digitus* finger]. Situated between two adjacent fingers or toes.

interdigitation (in'ter-dij-it-a'shun) [L. *in'ter* between + *digitus* digit]. 1. An interlocking of

parts by finger-like processes. 2. Any one of a set of finger-like processes. Same as *intercusping*.

interfascicular (in'ter-fas-ik'u-lar) [L. *in'ter* between + *fasciculus* bundle]. Situated between fasciculi.

interfeminium (in'ter-fe-min'e-um) [L.]. The space between the thighs, or the inside of the thighs.

interfemoral (in-ter-fem'o-ral). Between the thighs.

interfemus (in-ter-fe'mus) [L.]. The space between the thighs.

interference (in-ter-fe'rens) [L. *in'ter* between + *ferire* to strike]. A conflict between two waves of light or of sound, producing in the first instance darkness, in the other, silence.

interferometer (in-ter-fēr-om'et-er). An instrument for measuring lengths or movements by means of the phenomena caused by the interference of two rays of light.

interferometry (in-ter-fēr-om'et-re). The use of the interferometer for minute distances or movements.

interfibrillar, interfibrillary (in'ter-fi-bril'ar, in-ter-fi-bril-a-re) [L. *in'ter* between + *fibrilla* small fiber]. Between or among fibrils.

interfibrous (in-ter-fi'brus). Between fibers.

interfilamentous (in'ter-fil-am-en'tus). Between filaments.

interfilar (in-ter-fi'lar) [L. *in'ter* between + *filum* thread]. Situated among the fibrils of a reticulum.

interfrontal (in-ter-fron'tal). Between the halves of the frontal bone.

interganglionic (in'ter-gang-le-on'ik) [L. *in'ter* between + *ganglion*]. Situated between or connecting ganglia.

intergemmal (in-ter-jem'al) [L. *in'ter* between + *gemma* bud]. Situated between taste buds or other buds.

interglobular (in-ter-glob'u-lar) [L. *in'ter* between + *globulus* globule]. Situated between or among globules, as of the dentin.

intergluteal (in-ter-glu'te-al). Between the buttocks.

intergonial (in-ter-go'ne-al). Between two gonias.

intergrade (in'ter-grād) [L. *in'ter* between + *gradus* a step]. A step or stage between two other stages. **sex i.**, an individual showing characteristics between the typical male and female condition. Called also *intersex*.

intergranular (in-ter-gran'u-lar). Between the granule cells of the brain.

intergyral (in-ter-jī'ral). Between cerebral gyri or convolutions.

interhemicerebral (in'ter-hem-e-ser'e-bral). Between cerebral hemispheres.

interhemispheric (in'ter-hem-is-fer'ik). Between the cerebral hemispheres.

interior (in-te're-or) [L., Latin neuter *intērius*]. 1. Situated inside; inward. 2. An inner part or cavity.

interschiadic (in'ter-is-ke-ad'ik). Between the two ischia.

interlabial (in-ter-la'be-al) [L. *in'ter* between + *labium* lip]. Between the lips, or between two labia.

interlamellar (in'ter-lam-el'ar) [L. *in'ter* between + *lamella* layer]. Situated between lamellae.

interligamentary, interligamentous (in'ter-lig-am-en'tar-e, -en'tus). Between or among ligaments.

interlobar (in-ter-lo'bar) [L. *in'ter* between + *lobus* lobe]. Situated or occurring between lobes.

interlobitis (in-ter-lo-bi'tis). Inflammation of the pleura which lies between the two lobes of the lung.

interlobular (in-ter-lob'u-lar) [L. *in'ter* between + *lob'ulus* lobule]. Situated or occurring between lobules.

intermalleolar (in-ter-male'e-o-lar). Between the malleoli.

intermammary (in-ter-mam'ar-e). Between the breasts.

intermamillary (in-ter-mam'il-a-re). Between the nipples.

intermarriage (in-ter-mar'ij) [L. *in'ter* between + *marita're* to wed]. 1. The marriage of persons related by blood or consanguinity. 2. The marriage of persons of different races.

intermaxilla (in-ter-mak-sil'ah). The intermaxillary bone.

intermaxillary (in-ter-maks'il-a-re). 1. Situated between the jaws, or maxillae. 2. Situated between the rami of a jaw bone.

intermediary (in-ter-me'de-a-re) [L. *in'ter* between + *media're* to divide]. Performed or occurring in a median stage; neither early nor late. 1. **body**. See *Ehrlich's side-chain theory*, under *theory*.

intermediate (in-ter-me'de-at) [L. *in'ter* between + *media'tus* middle]. Placed between; intervening.

intermediolateral (in'ter-me-de-o-lat'er-al). Both intermediate and lateral.

intermedius (in-ter-me'de-us) [B N A]. A part or organ intermediate in position between medial and lateral.

intermembranous (in-ter-mem'bran-us). Situated or occurring between membranes.

intermeningeal (in'ter-men-in'je-al). Situated or occurring between the meninges.

intermenstrual (in-ter-men'stru-al) [L. *in'ter* between + *menstrual*]. Occurring between the menstrual periods.

intermetacarpal (in'ter-met-ak-ar'pal) [L. *in'ter* between + *metacarpal*]. Situated between the metacarpal bones.

intermetameric (in'ter-met-am-er'ik). Between two metameres.

intermetatarsal (in'ter-met-at-ar'sal). Situated or occurring between the metatarsal bones.

intermission (in-ter-mish'un) [L. *intermis'sio*; *in'ter* between + *mit'tere* to send]. An interval; temporary cessation or period between two recurrences or paroxysms.

intermittent (in-ter-mit'ent) [L. *intermit'tens*; *in'ter* between + *mit'tere* to send]. 1. Having periods of cessation of activity. 2. An intermittent fever. **postponing i.**, intermittent fever in which the paroxysms come on at a later hour each day.

intermuscular (in-ter-mus'ku-lar). Situated between muscles.

intern (in-tern') [Fr. *interne*]. A resident, or indoor, physician or surgeon in a hospital.

internal (in-ter'nal) [L. *inter'nus*]. Situated or occurring within or on the inside.

internarial (in-ter-na're-al) [L. *in'ter* between + *na'res* nostrils]. Situated between the nostrils.

internasal (in-ter-na'zal). Situated between the nasal bones or passages; internarial.

international candle. See under *candle*.

interne (in-tern') [Fr.]. See *intern*.

internist (in-ter'nist). A physician who treats diseases of the internal organs.

internodal (in-ter-no'dal). Situated between two nodes.

internode (in'ter-nöd) [L. *in'ter* between + *no'dus* knot]. A space between two nodes; the interannular segment of a nerve fiber. 1. **of Ranvier**, the part of a nerve fiber between two nodes of Ranvier.

internodular (in-ter-nod'u-lar). Between two nodes.

internal (in-ter'nol). A proprietary liquid paraffin preparation for use as a laxative.

internuclear (in-ter-nu'kle-ar). 1. Situated between or among nuclei. 2. Between the nuclear layers of the retina.

internuncial (in-ter-nun'she-al) [L. *in'ter* between + *nun'cius* messenger]. Serving as a medium of communication between nerve centers. 1. **pathways**, correlation tracts connecting different centers or nuclei within the central nervous system.

internus (in-ter'nus) [L. "internal"]. The internal rectus muscle of the eye.

interoceptive (in'ter-o-sep'tiv). Sherrington's term for the internal surface field of distribution of receptor organs. See *receptor*, *exteroceptive*, and *proprioceptive*.

interoceptor (in'ter-o-sep'tor). A sense organ located in the linings of the digestive tract, excited by stimuli arising within the viscera; one of the end organs of visceral sensibility.

intero-inferiorly (in'ter-o-in-fe're-or-le). Inwardly and in a downward position or direction.

interol (in-ter-ol). A proprietary form of liquid petrolatum for use in constipation.

interolivary (in-ter-ol'iv-a-re). Situated between the olivary bodies.

interorbital (in-ter-or'bit-al) [L. *in'ter* between + *or'bita* orbit]. Situated between the orbits.

interosculate (in-ter-os'ku-lät) [L. *in'ter* between + *os'culum* opening]. To form a communication between two structures.

interosseal (in-ter-os'e-al) [L. *in'ter* between + *os* bone]. 1. Situated between bones. 2. Pertaining to the interosseal muscles.

interosseous (in-ter-os'e-us) [L. *interos'seus*; *in'ter* between + *os* bone]. Situated or occurring between bones.

interosseus (in-ter-os'e-us), pl. *interos'sci* [L.]. See *muscles*, table of.

interpallebral (in-ter-pal'pe-bral). Between the eyelids.

interparietal (in'ter-par-i'et-al) [L. *in'ter* between + *pa'ries* wall]. Situated between the parietal bones.

interparoxysmal (in'ter-par-oks-iz'mal). Occurring between paroxysms.

interpeduncular (in'ter-pe-dunk'u-lar) [L. *in'ter* between + *pedun'culus* peduncle]. Situated between two peduncles.

interphalangeal (in'ter-fal-an'je-al) [*inter* + *phalangeal*]. Situated in a joint between two phalanges.

interphyletic (in'ter-fi-let'ik) [L. *in'ter* between + *phyletic*]. Intermediate in form between two types of cell.

interpia (in-ter-pi'al). Situated between the two layers of the pia.

interpleural (in-ter-plu'al). Between two pleurae.

interpolar (in-ter-po'lar) [L. *in'ter* between + *po'lus* pole]. Situated between two poles. 1. **effect**, the effect of the electric current which acts throughout the whole region of the body between the two poles: contrasted with the *polar effect*, which takes place at the point of application of the electrode, as, for instance, cauterization.

interpolation (in-ter-po-la'shun). Surgical transplantation of tissue.

interpositum (in-ter-poz'it-um). Same as *velum interpositum*.

interprotometamere (in'ter-pro-to-met'am-er) [L. *in'ter* between + *πρῶτος* first + *μετά* across + *μέρος* part]. The structure between the primary segments of the embryo.

interproximal, interproximate (in-ter-prok'-sim-al, -ät). Situated between adjoining surfaces.

interpubic (in-ter-pu'bik) [L. *in'ter* between + *pubes*]. Situated between the pubic bones.

interradial (in-ter-ra'de-al). Situated between rays.

interrenal (in-ter-re'nal) [*inter-* + *renal*]. Situated between the kidneys. **i. system**, the cortex of the suprarenal gland.

interrenalism (in-ter-re'nal-izm). A condition of virilism due to hyperplasia of the tissue of the suprarenal cortex.

interrenalopathy (in-ter-re-nal-op'ath-e) [*inter-* + *renal* + *pathos* disease]. Any disorder of the function of the cortex of the suprarenal gland.

interrenin (in-ter-ren'in). A suprarenal cortical hormone prepared by Goldzieher.

interrupted (in-ter-up'ted) [L. *interrup'tus*; *in'ter* between + *rup'tus* broken]. Not continuous; marked by intermissions or breaches of continuity.

interrupter (in-ter-up'ter). A device for breaking the electric circuit at regular intervals.

interscapillum (in'ter-skap-il'e-um) [L.]. The space between the shoulders.

interscapular (in-ter-skap'u-lar) [L. *in'ter* between + *scap'ula* shoulder blade]. Situated between the shoulder blades.

interscapulum (in-ter-skap'u-lum). The interscapillum.

ischiatric (in'ter-si-at'ik). Between the two ischia.

intersegment (in-ter-seg'ment). Any one of a series of segments, like the angiotomes, etc.; a metamer.

intersegmental (in'ter-seg-men'tal). Between segments.

interseptal (in-ter-sep'tal). Between two septums.

interseptum (in-ter-sep'tum) [L.]. The diaphragm.

intersex (in'ter-sex) [L. *in'ter* between + *sex*]. See *sex intergrade*, under *intergrade*.

intersexual (in-ter-sex'u-al). Between the sexes. Cf. *sex intergrade*, under *intergrade*.

intersexuality (in-ter-sex-u-al'it-e). A state between the definite sexes, as in *sex intergrade* and *hermaphroditism*.

interspace (in'ter-späs). A space between two similar structures. **dimeric i.**, the surface between two liquid phases.

interspinal, interspinous (in-ter-spi'nal, -nus). Situated between two spinous processes.

interspinalis (in'ter-spi-na'lis) [L.]. See *muscles*, table of.

intersternal (in-ter-ster'nal). Between parts of the sternum.

interstice (in-ter'stis) [L. *intersti'tium*]. A small interval, space, or gap in a tissue or structure.

interstitial (in-ter-stish'al) [L. *interstitia'lis*; *in'ter* between + *sis'tere* to set]. Pertaining to or situated in the interstices or interspaces of a tissue.

interstitialoma (in-ter-stish'e-al-o-ma). A tumor or mass of interstitial tissue.

intersystole (in-ter-sis'to-le). The interval which exists between the end of the auricular and the beginning of the ventricular systole.

intertarsal (in-ter-tar'sal). Situated between the tarsal bones.

intertinctus (in-ter-tink'tus). Colored differentially.

intertragicus (in-ter-traj'ik-us) [L.]. See *muscles*, table of.

intertransversalis (in'ter-trans-ver-sa'lis). See *muscles*, table of.

intertransverse (in'ter-trans-vers') [L. *in'ter* between + *transversus* turned across]. Situated between or connecting the transverse processes of the vertebrae.

intertrigo (in-ter-tre'go) [L. *in'ter* between + *ter'ere* to rub]. A chafe or chafed patch of the skin; also the erythema or eczema that may result from a chafe of the skin.

intertrochanteric (in'ter-tro-kan-ter'ik) [*inter-* + *trochanter*]. Situated between the great and lesser trochanters.

intertubercular (in'ter-tu-ber'ku-lar). Between tubercles.

intertubular (in-ter-tu'bu-lar) [L. *in'ter* between + *tu'bulus* tubule]. Situated between or among tubules.

interureteral (in'ter-u-re'ter-al). Same as *interureteric*.

interureteric (in'ter-u-re-ter'ik) [*inter-* + *ureter*]. Situated between the ureters.

interval (in'ter-val) [L. *in'ter* between + *val'lum* rampart]. The space between two objects or parts; the lapse of time between two recurrences or paroxysms. **a.-c. i.**, the interval between the auricular and carotid waves in the tracing of the jugular pulse. **atriocarotid i.**, **auriculo-carotid i.**, the time between the beginning of the auricular and the beginning of the carotid waves in a jugular pulse tracing. Called *intersystolic period*. **c.-a. i.**, the cardio-arterial interval. **cardio-arterial i.**, the time between the apex beat and arterial pulsation. **focal i.**, the distance from the anterior to the posterior focal point. **passive i.**, the time when neither the auricles nor ventricles of the heart are expanding or contracting. **post-sphygmie i.**, the time between the beginning of dilatation of the ventricle of the heart and the opening of the auriculoventricular valves. **pre-sphygmie i.**, the time between the beginning of contraction of the ventricles of the heart and the raising of the arterial valves. **Q. R. S. T. i.**, the ventricular complex of the electrocardiogram. See *electrocardiogram*. **Sturm's i.** Same as *focal i.*

intervalvular (in-ter-val'vu-lar). Between valves.

intervascular (in-ter-vas'ku-lar). Between blood vessels.

interventricular (in'ter-ven-trik'u-lar) [L. *in'ter* between + *ventricul'um* ventricle]. Situated between ventricles.

intervertebral (in-ter-ver'te-bral) [L. *in'ter* between + *vertebra*]. Situated between two contiguous vertebrae.

intervillous (in-ter-vil'us) [L. *in'ter* between + *vill'us* tuft]. Situated between or among villi.

intestin (in-tes'tin). Naphthalin-benzoate of bismuth: an intestinal antiseptic. Dose, 7½–15 grains (0.5–1 Gm.).

intestinal (in-tes'tin-al) [L. *intestina'lis*]. Pertaining to the intestine.

intestine (in-tes'tin) [L. *intesti'num*, from *in'tus* within]. The membranous tube that extends from the stomach to the anus. The first portion (**small i.**), which is smaller in caliber, is about twenty feet long, and extends from the pylorus to its junction with the large intestine at the cecum: it includes the duodenum, jejunum, and ileum. The **large i.**, in about five feet long, and includes the cecum, colon, and rectum. **iced i.** See *peritonitis chronica fibrosa incapsulans*.

intestinotoxin (in-tes'tin-o-tok'sin). Enterotoxin. **intestinum** (in-tes-ti'num), pl. *intesti'na*. Latin for *intestine*. **i. cae'cum** [B N A], the cecum. **i. cras'sum** [B N A], the large intestine. **i. il'eum** [B N A], the ileum. **i. jeju'num** [B N A], the jejunum. **i. rec'tum** [B N A], the rectum. **i. ten'ue** [B N A], the small intestine. **i. ten'ue mesenteria'le**, the portion of the small intestine which has a mesentery: it comprises the jejunum and ileum.

intima (in'tim-ah) [L. for *innermost*]. The innermost of the three coats of an artery; the tunica intima.

intimal (in'tim-al). Pertaining to the intima.

intima-pia (in'tim-ah-pi'ah). The combined intima of blood vessels and pia mater which surrounds the arteries of the brain.

intimitis (in-tim-i'tis). Inflammation of an intima.

intoe (in'tō). Hallux valgus.

intolerance (in-tol'er-ans) [L. *in* not + *tolera're* to bear]. Inability to endure or withstand.

intolin (in-tol'in). A proprietary preparation of beer yeast in powder form.

intorsion (in-tor'shun) [L. *in* inward + *torque're* to twist]. An inward rotation of the vertical corneal meridians.

intorter (in'tor-ter). An internal rotator.

intoxation (in-tok-sa'shun). Poisoning.

intoxication (in-toks-ik-a'shun) [L. *in* intensive + *τοξικόν* poison]. 1. Poisoning; the state of being poisoned. 2. The condition produced by excessive use of alcoholic stimulants. **acid i.**, acidosis of a severe grade. **anaphylactic i.**, the train of symptoms which follows the second injection of protein in anaphylaxis. **roentgen i.**, a condition sometimes produced by intensive irradiation with roentgen rays. It is marked by uneasiness, vertigo, nausea, and vomiting. Called also *roentgenkaters*. **septic i.**, sepremia. **serum i.**, a condition of temporary intoxication which sometimes follows the injection of serum.

intra- [L. *in'tra* within]. A prefix meaning within.

intra-abdominal (in'trah-ab-dom'in-al). Situated or occurring within the abdomen.

intra-acinous (in-trah-as'in-us). Occurring or situated within an acinus.

intra-appendicular (in'trah-ap-en-dik'u-lar). Within the appendix.

intra-arachnoid (in'trah-ar-ak'noid). Within or underneath the arachnoid.

intra-arterial (in'trah-ar-te're-al). Situated within an artery or arteries.

intra-articular (in'trah-ar-tik'u-lar) [L. *in'tra* within + *articulus* joint]. Situated within a joint.

intra-atomic (in'trah-at-om'ik). Within the atom.

intra-atrial (in-trah-a'tre-al). Intra-auricular.

intra-aural (in-trah-aw'ral). Inside of the ear.

intra-auricular (in'trah-aw-rik'u-lar). Within an auricle.

intra-bronchial (in-trah-brong'ke-al). Situated or occurring within a bronchus.

intra-buccal (in-trah-buk'al). Within the mouth or within the cheek.

intracanalicular (in'trah-kan-al-ik'u-lar). Occurring within canaliculi.

intracapsular (in-trah-kap'su-lar). Situated within a capsule.

intracardiac (in-trah-kar'de-ak). Within the heart.

intracarpal (in-trah-kar'pal). Within the wrist.

intracartilaginous (in'trah-kar-til-aj'in-us). Situated, formed, or occurring within a cartilage.

intracelial (in-trah-se'le-al). Within one of the body cavities.

intracellular (in-trah-sel'u-lar) [L. *in'tra* within + *cellula* cell]. Situated or occurring within a cell or cells.

intracerebellar (in'trah-ser-eb-el'ar). Situated within the cerebellum.

intracerebral (in'trah-ser'eb-ra). Situated within the cerebrum.

intracervical (in-trah-ser'vik-al). Situated within a cervical canal.

intrachordal (in-trah-kor'dal). Within the notochord.

intracistern (in-trah-sis'tern). Within a cistern, especially the cisterna magna.

intracolic (in-trah-kol'ik). Within the colon.

intracordal (in-trah-kor'dal) [L. *intra* within + *cor* heart]. Within the heart.

intracorporeal (in'trah-kor-po're-al). Within the body or within any body.

intracorpuscular (in'trah-kor-pus'ku-lar). Occurring within corpuscles.

intracostal (in-trah-kos'tal). On the inner surface of the rib.

intracranial (in-trah-kra'ne-al) [L. *in'tra* within + *cranium*]. Situated within the cranium.

intracureus (in'trah-kru-re'us). The internal part of the crureus.

intracutaneous (in'trah-ku-ta'ne-us). Within the substance of the skin.

intracystic (in-trah-sis'tik). Situated within a cyst.

intrad (in'trad) [Old Lat.]. Within; inward in situation or direction.

intra-dermal, intradermic (in-trah-der'mal, in-trah-der'mik). Situated or applied within the skin.

intra-duodenal (in'trah-du-o-de'nal). Within the duodenum.

intradural (in-trah-du'ral). Situated or occurring within the dura.

intra-epiphysial (in'trah-ep-e-fiz'e-al). Within an epiphysis.

intra-epithelial (in'trah-ep-e-the'le-al). Situated among the cells of the epithelium.

intrafaradization (in'trah-far-ad-i-za'shun). The faradization of the inner surface of the stomach or other viscus.

intrafascicular (in'trah-fas-ik'u-lar). Situated or occurring within a fascicle.

intrafebrile (in-trah-feb'ril). During the febrile stage.

intrafilar (in-trah-fi'lar) [L. *in'tra* within + *filum* thread]. Situated within a reticulum.

intrafissural (in-trah-fish'u-lar). Within a cerebral fissure.

intrafistular (in-trah-fis'tu-lar). Within a fistula.

intrafusul (in-trah-fu'zal) [L. *in'tra* within + *fu'sus* spindle]. Pertaining to the striated fibers within a muscle spindle.

intragalvanization (in'trah-gal-van-iz-a'shun). The galvanization of the inner surface of any organ.

intra- gastric (in-trah-gas'trik). Situated or occurring within the stomach.

intra-gemmal (in-trah-jem'al) [L. *in'tra* within + *gem'ma* bud]. Situated within a taste bud or other bud.

intra-glandular (in-trah-glan'du-lar). Within a gland.

intra-globular (in-trah-glob'u-lar). Within a blood corpuscle.

intragyrus (in-trah-ji'ral). Within a cerebral gyrus.

intrahepatic (in'trah-hep-at'ik). Within the liver.

intrahyoid (in-trah-hi'oid). Within the hyoid bone.

intrait de Gui. A 2 per cent solution of the dry extract of mistletoe, *Viscum album*: tried as a vasodilator in hypertension.

intra-jugular (in-trah-ju'gu-lar). Internal to the jugular foramen, process, or vein.

intralamellar (in-trah-lam-el'ar). Within the lamellae.

intralaryngeal (in-trah-lar-in'je-al). Within the larynx.

intra-leukocytic (in'trah-lu-ko-si'tik). Taking place within a leukocyte.

intra-ligamentous (in'trah-lig-am-en'tus). Situated within a ligament.

intra-lingual (in-trah-ling'wal). Within the tongue.

- intralobar** (in-trah-lo'bar). Within a lobe.
- intralobular** (in-trah-lob'u-lar). Situated or occurring within a lobule.
- intralocular** (in-trah-lok'u-lar). Within the loculi of a stricture.
- intralumbal** (in-trah-lum'bar). Same as *endolumbar*.
- intramammary** (in-trah-mam'ar-e). Within the breast.
- intramarginal** (in-trah-mar'jin-al). Within a margin.
- intramastoiditis** (in'trah-mas-toid-i'tis). Inflammation of the antrum and cells of the mastoid process.
- intramatrix** (in-trah-mat'rik-al). Within a matrix.
- intramedullary** (in-trah-med'ul-a-re). Situated within the medulla oblongata.
- intramembranous** (in-trah-mem'bran-us). Situated, occurring, or formed within, a membrane.
- intrameningeal** (in'trah-men-in'je-al). Situated or occurring within the meninges.
- intramin, intramine** (in'tram-in). A proprietary preparation, diortho-amino-thiobenzene: used for syphilis (J. E. R. McDonagh, 1916).
- intramolecular** (in'trah-mo-lek'u-lar). Situated within the molecules.
- intramural** (in-trah-mu'ral) [L. *in'tra* within + *mu'rus* wall]. Situated or occurring within the wall of an organ.
- intramuscular** (in-trah-mus'ku-lar) [L. *in'tra* within + *musculus* muscle]. Situated in the substance of a muscle.
- intramyocardial** (in-trah-mi-o-kar'de-al). Within the myocardium.
- intranarial** (in-trah-na're-al). Within the nostrils.
- intranasal** (in-trah-na'zal) [L. *in'tra* within + *na'sus* nose]. Situated within the nose.
- intranatal** (in-trah-na'tal). Occurring during birth.
- intraneural** (in-trah-nu'ral). Within or into a nerve.
- intranidal** (in-trah-ni'dal). Occurring during birth.
- intranuclear** (in-trah-nu'kle-ar). Within a nucleus.
- intra-ocular** (in-trah-ok'u-lar) [L. *in'tra* within + *oculus* eye]. Situated within the eye.
- intra-oral** (in-trah-o'ral). Within the mouth.
- intra-orbital** (in-trah-or'bit-al) [L. *in'tra* within + *orbita* orbit]. Situated within the orbit.
- intra-ossal, intra-osseous, intra-osteal** (in'trah-os'al, -os'e-us, -os'te-al). Within a bone.
- intra-ovarian** (in'trah-o-va're-an). Within the ovary.
- intraparenchymatous** (in'trah-par-en-kim'at-us). Within the parenchyma of an organ.
- intraparietal** (in'trah-pa-ri'et-al) [L. *in'tra* within + *paries* wall]. 1. Situated within the substance of a wall; intramural. 2. Situated in the parietal region of the brain.
- intra partum** (in'trah par'tum) [L.]. Occurring during birth or delivery.
- intrapelvic** (in-trah-pel'vik) [L. *in'tra* within + *pelvis* basin]. Situated within the pelvis.
- intrapericardial** (in-trah-per-e-kar'de-al). Within the pericardium.
- intrapерineal** (in-trah-per-in-e'al). Within the perineal tissues.
- intrapерitoneal** (in'trah-per-it-o-ne'al) [L. *in'tra* within + *peritoneum*]. Situated within the peritoneal cavity.
- intrapyletic** (in'trah-fi-let'ik). Occurring during the development of a cell.
- intrapial** (in-trah-pe'al). Within the pia mater.
- intraplacental** (in'trah-pla-sen'tal). Within the placenta.
- intrapleural** (in-trah-plu'ral) [*intra-* + *pleura*]. Situated within the pleura.
- intrapolar** (in-trah-po'lar). Within the space between the two poles.
- intrapontine** (in-trah-pon'tin) [L. *in'tra* within + *pons*]. Situated within the substance of the pons.
- intraprostatic** (in'trah-pros-tat'ik). Within the prostate gland.
- intraprotoplasmic** (in'trah-pro-to-plaz'mik). Within the protoplasm.
- intraprostatic ataxia** (in-trah-si'kik). See under *ataxia*.
- intrapulmonary** (in-trah-pul-mon-a-re). Situated in the substance of the lung.
- intrapyloric** (in'trah-pi-ret'ik) [*intra-* + *pyloros* fever]. Occurring or performed during the stage of fever.
- intrarachidian** (in'trah-rak-id'e-an) [L. *in'tra* within + *rachis* spine]. Intraspinous.
- intrarectal** (in-trah-rek'tal). Within the rectum.
- intrarenal** (in-trah-re'nal). Situated within the kidney.
- intraretinal** (in-trah-ret'in-al). Within the retina.
- intrarachidian** (in'trah-rak-id'e-an). Same as *intraspinous*.
- intrascrotal** (in-trah-skro'tal). Within the scrotum.
- intrasellar** (in-trah-sel'ar). Within the sella turcica.
- intraserosus** (in-trah-se'rus). Within the blood serum.
- intraspinous** (in-trah-spi'nal) [L. *in'tra* within + *spina* spine]. Situated in the substance of the spinal column.
- intrastitial** (in-trah-stish'al). Within the cells or fibers of a tissue.
- intraströmial** (in-trah-stro'mal). Within the stroma of an organ.
- intrasynovial** (in'trah-si-no've-al). Within the synovial cavity of a joint.
- intratarsal** (in-trah-tar'sal). Within or on the inner side of the tarsus.
- intratesticular** (in'trah-tes-tik'u-lar). Within the testicle.
- intrathecal** (in-trah-the'kal) [*intra-* + *θήκη* sheath]. Within or into a sheath.
- intrathenar** (in-trah-the'nar). Situated between the thenar and hypothenar eminences.
- intrathoracic** (in'thra-tho-ras'ik). Situated within the thorax.
- intra tonsillar** (in-trah-ton'sil-ar). Situated within the tonsil.
- intra trabecular** (in'trah-tra-bek'u-lar). Within the trabeculae.
- intra tracheal** (in-trah-tra'ke-al). Within the trachea.
- intra tubal** (in-trah-tu'bal). Situated within a fallopian tube.
- intra tubular** (in-trah-tu'bu-lar). Occurring within the tubules or tubes of an organ.
- intra tympanic** (in'trah-tim-pan'ik) [L. *in'tra* within + *tympanum*]. Situated in the tympanic cavity.
- intra-urethral** (in'trah-u-re'thral). Within the urethra.
- intra-uterine** (in-trah-u'ter-in). Situated or occurring within the uterus.
- intra vaginal** (in-trah-vaj'in-al). Within the vagina.
- intravasation** (in-trav-az-a'shun). The entrance of foreign matter into a blood vessel.
- intra vascular** (in-trah-vas'ku-lar) [L. *in'tra* within + *vasculum* vessel]. Situated or occurring within a vessel or vessels.
- intravenous** (in-trah-ve'nus). In, into, or from within a vein or veins.

intraventricular (in-'trah-ven-trik'u-lar). Situated or occurring within a ventricle.

intravertebral (in-trah-ver'te-bral). Intraspinal.

intravesical (in-trah-ves'ik-al) [L. *in'tra* within + *vesi'ca* bladder]. Situated within the bladder.

intravillous (in-trah-vil'us). Situated within a villus.

intravital (in-trah-vi'tal). During life.

intra vitam (in'trah vi'tam). During life.

intravitelline (in-'trah-vi-tel'in). Within the vitellus or yolk.

intravitreous (in-trah-vit're-us). Into or within the vitreous.

intrinsic (in-trin'sik) [L. *in'trin'secus* situated on the inside]. Situated entirely within or pertaining exclusively to a part.

introducer (in-tro-du'ser). An intubator.

introflexion (in-tro-flek'shun). A bending inward.

introgastic (in-tro-gas'trik) [L. *in'tro* within + *gastro* stomach]. Conveyed into the stomach.

introitus (in-tro-it-us) [L. *in'tro* within + *ire* to go]. The entrance to any cavity or space. **i. oesoph'agi**, the entrance of the esophagus into the stomach. **i. vagi'nae**, the entrance to the vagina.

introejection (in-tro-jek'shun) [L. *intro* within + *ja'cere* to throw]. A mental operation by which a person appropriates an occurrence and makes it a part of himself.

intromission (in-tro-mish'un) [L. *in'tro* within + *mit'tere* to send]. The insertion of one part or thing into another.

introspection (in-tro-spek'shun) [L. *in'tro* within + *spi'cere* to look]. The contemplation or observation of one's own thoughts and feelings.

introsusception (in'tro-sus-ep'shun) [L. *in'tro* within + *suscip'ere* to receive]. See *intussusception*.

introversion (in-tro-ver'shun) [L. *in'tro* within + *ver'sio* a turning]. 1. The turning inside out, more or less completely, of an organ. 2. A turning inward of the libido, so that interest does not move toward an object, but turns inward to the self.

invert (in-tro-vert'). 1. To invaginate. 2. A person given to introspection.

introversion (in-tro-vizh'un). Contemplation of one's own feelings.

intrude (in'trud). To project inward.

intrusion (in-tru'zhun). Inward projection.

intubate (in'tu-bat). To treat by intubation.

intubation (in-tu-ba'shun) [L. *in* into + *tu'ba* tube]. The insertion of a tube; especially the introduction of a tube into the larynx through the glottis, performed in diphtheria and edema of the glottis for the introduction of air.

intubationist (in-tu-ba'shun-ist). One who performs an intubation.

intubator (in'tu-ba-tor). An instrument used in intubation.

intumesce (in-tu-mies'). To swell up.

intumescence (in-tu-mes'ens) [L. *intumescen'tia*]. 1. A swelling, normal or abnormal. 2. The process of swelling.

intumescent (in-tu-mes'ent) [L. *intumes'cens*]. Swelling or becoming swollen.

intumescencia (in-tu-mes-en'she-ah) [L.]. A swelling. **i. cervica'lis** [B N A], the cervical enlargement of the spinal cord; from it the nerves of the arm arise. **i. ganglior'fimis**, the geniculate ganglion. **i. lumba'lis** [B N A], the lumbar enlargement of the spinal cord; from it the nerves of the leg arise. **i. tympan'ica** [B N A], a non-ganglionic swelling on the tympanic branch of the glossopharyngeal nerve. Called also *tympanic swelling*.

intussusception (in'tus-us-ep'shun) [L. *in'tus* within + *suscip'ere* to receive]. A receiving within: specifically, (1) The invagination or indigitation of a portion of the intestine into an adjacent

portion (John Hunter, 1789). There are four varieties: *ileocecal*, in which the ileum and the ileocecal valve pass into the cecum and colon; *colic*, in which the large intestine is prolapsed into itself; *ileal*, in which the small intestine is invaginated into itself; and *ileocolic*, in which the ileum passes into the ileocecal valve. The symptoms of the condition are a frequent desire to evacuate the bowels, pain, tenesmus, with the passage of small bloody or mucous stools, vomiting, the development of a sausage-shaped swelling in the abdominal region, with the accumulation of a mass of soft feces. (2) In physiology, the reception into an organism of matter, such as food and its transformation into living tissue. **agonic i.**, **post-mortem i.**, intussusception occurring in the death agony. **retrograde i.**, the invagination of a lower part of the bowel into the higher.

intussusceptum (in'tus-sus-ep'tum) [L.]. A portion of intestine that has been invaginated within another part.

intussusciptiens (in'tus-u-sip'e-ens) [L.]. The portion of an intestine containing an intussusceptum.

Inula (in'u-lah) [L. gen. *in'ulae*]. 1. A genus of composite-flowered plants. 2. The root of *I. helé'nium*. See *elecampane*.

inulain (in'u-la'in). A powdered concentration from the root of *In'ula helé'nium*. Dose, 2-5 grains (0.13-0.333 Gm.).

inulase (in'u-las). A ferment occurring in *Aspergillus* *nis'ger* and *Penicillium glau'cum*. It changes inulin into levulose.

inulin (in'u-lin). 1. A polysaccharide found in Inula, Dahlia, and other plants. It yields levulose on hydrolysis. 2. A concentration or resinoid from elecampane root: an aromatic and tonic expectorant. Dose, 1-3 grains (0.066-0.195 Gm.).

inulinase (in'u-lin-as). Same as *inulase*.

inuloid (in'u-loid). A colorless compound, C₆H₁₀O₆, resembling inulin, but more soluble.

inulol (in'u-lol). Same as *alantol*.

inunction (in-unk'shun) [L. *in* into + *un'guere* to anoint]. 1. The act of anointing or of applying an ointment with friction. 2. An ointment made with lanolin as a menstruum.

inunctum (in-unk'tum). Inunction, 2d def.

inustion (in-us'tshun) [L. *in* into + *u'rere* to burn]. The application of the actual cautery.

in utero (in u'ter-o) [L.]. Within the uterus.

invaccination (in-vak-sin-a'shun). Inoculation with some other disease during vaccination.

invaginate (in-vaj'in-at). To insert one portion within another portion of the same thing.

invaginated (in-vag'in-a-ted). Thrust inward so as to have become insheathed.

invagination (in-vaj-in-a'shun) [L. *invagina'tio*; *in* within + *vagi'na* sheath]. 1. The same as *intussusception*. 2. An obliterative operation for the cure of hernia.

invaginator (in-vaj'in-a-tor). An instrument for turning in the tissues in hernia operation.

invalid (in-val'id) [L. *inval'idus*; *in* not + *val'idus* strong]. 1. Not well and strong. 2. One who is disabled by illness or infirmity.

invasion (in-va'zhun) [L. *inva'sio*; *in* into + *va'dere* to go]. 1. The attack or onset of a disease. 2. The simple harmless entrance of bacteria into the body or their deposition in the tissues, as distinguished from infection.

invermination (in-ver-min-a'shun) [L. *in* within + *vermina're* to be wormy]. A disease condition due to endoparasitic worms; helminthiasis.

inversion (in-ver'shun) [L. *inver'sio*; *in* into + *ver'tere* to turn]. A turning inward, inside out, upside down, or other reversal of the normal relation of a part. **thermic i.**, the state in which a patient's temperature is highest in the morning.

- invert** (in'vert). A person whose sexual tastes are homosexual.
- invertase** (in-ver'tās). Same as *invertin*.
- Invertebrata** (in-ver-teb-ra'tah). A division of the animal kingdom, including all forms that have no spinal column.
- invertebrate** (in-ver'te-brāt). 1. One of the *Invertebrata*. 2. Having no spinal column.
- invertin** (in-ver'tin). A ferment produced by various yeast plants which convert cane sugar into invert sugar. It is found in the intestinal juice.
- invertor** (in-ver'tor). A muscle which turns in a part.
- invertose** (in-ver'tōs). Invert sugar.
- invert sugar** (in'vert). See under *sugar*.
- inveterate** (in-vet'er-āt) [L. *inveteratus*; in intensive + *vetus* old]. Chronic and confirmed; long established and of difficult cure.
- inviscation** (in-vis-ka'shun) [L. *in* among + *viscum* slime]. The mixing of the food with the mucous secretion of the mouth in mastication.
- in vitro** (in vit'ro) [L. "in a glass"]. Within a glass; observable in a test tube.
- in vivo** (in vi'vo) [L.]. Within the living body.
- involucre** (in'vo-lu-ker). An involucre.
- involucrum** (in-vo-lu'krum), pl. *involu'cra* [L. *in* in + *volvere* to wrap]. A covering or sheath, such as contains the sequestrum of a necrosed bone.
- involuntary** (in-vol'un-ta-re) [L. *involuntarius*; in against + *voluntas* will]. Performed independently of the will.
- involuntomotory** (in-vol'un-to-mo'tor-e). Pertaining to motion that is not voluntary.
- involution** (in-vo-lu'shun) [L. *involutio*; in into + *volvere* to roll]. 1. A rolling or turning inward. 2. The return of the uterus to its normal size after parturition. 3. A retrograde change: the reverse of evolution. **i. forms**, forms of micro-organisms that have become degenerated from unfavorable surroundings. **senile i.**, the shriveling of an organ in aged people.
- iocamfen** (i-o-kam'fen). A proprietary preparation of iodine, camphor, and phenol, containing about 7.25 per cent of free iodine: used as a dressing for wounds.
- iocacetanilid** (i'o-o-das-et-an'il'id). An insoluble crystalline powder, $C_6H_4I.NH(C_2H_5O)$, used as an antipyretic. Called also *iodanilifebrin*.
- iocacethone** (i-o-das'e-tōn). A mild caustic, $CH_2I.CO.CH_3$.
- iodagol** (i-o-da'gol). A proprietary iodine preparation, used in urethritis and cystitis.
- iodal** (i'o-dal). A hypnotic substance, $CI_3.CHO$, resembling chloral.
- iodalbacid** (i-o-dal-bas'id). An iodine and albumin compound: used for myxedema and goiter and for syphilis. Dose. 15 grains (1 Gm.).
- iodalbin** (i-o-dal'bin). A compound of iodine and blood albumin containing 21.5 per cent of iodine: used like iodides. Dose, 5-10 grains (0.3-0.6 Gm.).
- iodalgin** (i-od-al'jin). A proprietary substitute for iodoform, soluble in water.
- iodalia** (i-o-da-le-ah). A saccharated organic iodine compound for children.
- iodalose** (i-o-dal'ōs). A proprietary preparation of iodine with peptone.
- Iodamoe'ba buetsch'lii** or **wil'liamsi**. A non-pathogenic ameba found in the intestinal tract. It has a relatively large karyosome in the nucleus and a row of granules between the karyosome and the nuclear membrane. Its cysts (formerly called iodine cysts or I-cysts) usually contain a large glycogen mass which stains intensely with iodine. It has been called also *Endolimax williamsi*, *Entamoeba bütschlii*, *E. williamsi*, and *iodine cysts*.
- iodamylformol** (i-o'dam-il-for'mol). An antiseptic preparation of iodine, thymol, starch, and formaldehyde.
- iodamylum** (i-o-dam'il-um). An iodized preparation of starch: a surgical antiseptic.
- iodan** (i'o-dan). A proprietary preparation of iodine in goose grease.
- iodanisol** (i-o-dan'is-ol). A yellow-red, crystalline substance, $C_6H_4(OCH_3)I$: antiseptic and rubefacient.
- iodanthrak** (i-o-dan'thrak). An absorption product of iodine and animal charcoal: used like the iodides and externally as a dusting powder for wounds.
- iodantifebrin** (i'o-o-dan-te-feb'rin). See *iodacetanilid*.
- iodantipyrene, iodopyrene** (i'o-o-dan-tip-i'rin, i'o-do-pi'rin). An anodyne, alterative, and antiseptic substance, $C_{11}H_{11}I.N_2O$, or antipyrene in which iodine takes the place of hydrogen. Dose, 5-20 grains (0.333-1.333 Gm.).
- iodargol** (i-o-dar'gol). A proprietary iodine preparation for the treatment of gonorrhea, urethritis, and cystitis.
- iodargyr** (i-o-dar'jir). An organic iodine and silver preparation for the treatment of wounds and ulcers.
- iodarsyl** (i-o-dar'sil). A solution of sodium iodide and sodium paramidophenyl-arsenate: used for intravenous injection.
- iodate** (i'o-dāt). Any salt of iodic acid.
- iodbenezine** (i-od-ben'zin). A preparation of iodine, benzene, and liquid petrolatum, used as a disinfectant.
- iodecasein** (i-od-ka'se-in). A preparation of iodine and casein: used like iodoform.
- iodechloroform** (i-od-klo-ro'form). A solution of iodine in chloroform, used as a local hemostatic.
- iodeikon** (i-o-di'kon). A proprietary brand of tetraiodophthalein sodium: used in cholecystography.
- iodelarson** (i-o-del-ar'son). A proprietary combination of elarson and potassium iodide.
- iodelol** (i-o-del'ol). A proprietary iodine preparation used by inunction.
- iodeol** (i-o-de'ol). A proprietary iodine preparation: used like the iodides.
- iodeosin** (i-o-de'o-sin). See *erythrosin*.
- iodex** (i'o-de'ks). A proprietary iodine ointment.
- iodglidine** (i-od-gli'din). Iodoglidine.
- iodia** (i'o-de-ah). A combination of active principles from the green roots of *Stillingia*, *Helonias*, *Saxifraga*, *Menispermum*, and aromatics: used for syphilitic and cutaneous diseases and for uterine debility.
- iodic acid** (i-od'ik). See *acid*.
- iodide** (i'o-did). Any binary compound of iodine: a compound of iodine with an element or radical.
- iodile** (i'o-dil). A crystalline organic compound of iodine: used hypodermically in syphilis, goiter, and tuberculosis.
- iodimetry** (i-o-dim'et-re) [*iodine* + *μέτρον* measure]. The estimation of the quantity of iodine in a mixture or compound.
- iodine** (i'o-din) [L. *io'dum*, from *ιώδης* violet hued]. A halogen element of a peculiar odor and acrid taste; symbol, I; atomic weight, 126.92. It is a nonmetallic element, occurring in bluish-black scales: it is soluble in alcohol and in solutions of the iodides, and at ordinary temperatures it volatilizes, giving off a purplish vapor. It is an irritant, and when taken in excess or for a long time, as in the form of iodide or another iodine-containing compound, produces *iodism*. It is used as an alterative and absorbent in rickets, scrofula, hypertrophic glands and mucous membranes, exudates, and effusions: it is sometimes injected for the purpose of producing plastic inflammation in hydrocele, hernia, etc. Dose of compound solution (*liquor iodi compositus*, Lugol's solution), 1-10 minims (0.066-0.666 cc.); of tincture, 1-5 minims (0.066-0.333 cc.). **i. bromide**, iodine

pentabromide. **i. chloride**, iodine trichloride. **i. pentabromide**, a reddish-brown liquid, IBr_5 ; used locally in diphtheria. **i. petrogen**, a proprietary solution of iodine in petrogen. **i. tri-bromide**, a dark-brown fluid, IBr_3 ; used in sprays for diphtheritic sore throat. **i. trichloride**, a binary compound, ICl_3 , in orange-yellow needles; antiseptic and disinfectant and used as an alternative in doses of $\frac{1}{2}$ – $\frac{1}{4}$ grain (0.005–0.01 Gm.).

iodinol (i-o'-din-ol). An iodized sesame oil used in place of the alkaline iodides.

iodinophil (i-o-din'-o-fil) [*iodine* + *φιλέω* to love]. 1. Stainable with iodine. 2. Any cell or other element readily stainable with iodine.

iodinophilous (i'o'-din-of'il-us). Stainable with iodine.

iodipalin (i-o-dip'al-in). A proprietary preparation of iodine and a fixed oil.

iodipero (i-o-di'-per-ol). An antiseptic solution for preventing wound infection.

iodipin (i-o-dip'in). An iodine addition product of sesame oil, said to contain 10 per cent of iodine. It is a yellow liquid; used in asthmatic conditions, bronchitis, etc., also subcutaneously in tertiary syphilis. Dose, 15–60 minims (1–4 cc.).

iodipsol (i-o-dip'sol). A proprietary compound of iodine, oxymethylene, and cresol; used in intestinal disease and externally as a dusting powder.

iodism (i'o'-dizm). Ill health resulting from injudicious use of iodine or iodine compounds. It is marked by atrophy of the glands and glandular organs, coryza, ptialism, frontal headache, emaciation, weakness, and eruptions on the skin.

iodial (i-o-di'val). Alphamonoiodoisovaleryl urea, $(\text{CH}_3)_2\text{CH}.\text{CH}.\text{CO}.\text{NH}.\text{NH}_2$; used in syphilis, scrofula, arteriosclerosis, etc.

iodize (i'o'-diz). To impregnate with iodine or to put under its influence.

iodized (i'o'-dizd). Treated with or containing iodine.

iodo-acetanilid (i'o'-do-as-et-an'il-id). A colorless, crystalline compound formed by heating acetic acid and para-iodoaniline. It is soluble in alcohol and slightly in water, and is used as an antipyretic and analgesic. Dose, 1–5 grains (0.066–0.33 Gm.). Called also *iodantifebrin*.

iodo-albumin (i'o'-do-al-bu'min). Any one of a group of artificial iodine compounds resembling true albumins. They are used for myxedema and goiter.

iodoamylum (i'o'-do-am'il-um) [L. *io'dum* iodine + *amylum* starch]. Insoluble iodized starch: a surgical antiseptic.

iodoapplicator (i'o'-do-ap'lik-a-tor). A proprietary name for a wooden stick tipped with a mixture of iodine, 60 per cent, and potassium iodide, 40 per cent.

iodo-atoxyl (i'o'-do-at-ok'sil). The sodium salt of iodine-phenyl-arsenic acid.

iodobesin (i'o'-do-be-sin). A proprietary preparation of iodalbumin and pluriglandular extracts for the treatment of obesity.

iodocaffeine (i'o'-do-ka'f'e-in). A white, crystalline compound; used in heart diseases. Dose, 2–15 grains (0.133–1 Gm.).

iodocasein (i'o'-do-ka'se-in) [*iodine* + *casein*]. A yellow, antiseptic preparation of iodine and casein containing about 18 per cent of iodine in organic combination; used like iodoform.

iodocin (i-o'd'o-sin). A styptic, analgesic, and antiseptic preparation.

iodocitin (i-o-do-si'tin). A proprietary iodine lecithin preparation; used internally in syphilis.

iodocol (i-o'-do-kol). A preparation of iodine and guaiaacal; used in tuberculosis.

iodocresin, **iodocresol** (i'o'-do-kre'sin, -kre'sol). An antiseptic compound, $\text{CH}_3.\text{C}_6\text{H}_4.\text{I}.\text{OH}$, of iodine and cresol; used like iodoform. Called also *traumatol*.

iodocrol (i-o'd'ok-rol). Carvacrol iodide, $\text{C}_{10}\text{H}_{13}\text{OI}$, an odorless agent; used like iodoform.

iododerma (i'o'-do-der'mah) [L. *io'dum* iodine + *δέρμα* skin]. Any skin disease resulting from iodism.

iodo-ethylformin (i'o'-do-e-thil-for'min). A remedy, $\text{C}_6\text{H}_5\text{N}_4(\text{C}_2\text{H}_5)_2$; used like the iodides.

iodo-eugenol (i'o'-do-u'-je-nol). A yellowish, inodorous, antiseptic powder, $\text{C}_6\text{H}_5\text{I}(\text{C}_6\text{H}_5)(\text{OCH}_3)_2$, a compound of iodine and eugenol.

iodofan (i-o'-do-fan). A reddish, crystalline powder, $\text{C}_6\text{H}_5\text{I}(\text{OH})_2.\text{HCOH}$; used like iodoform.

iodoferratin (i'o'-do-fer'at-in). A hematogenic preparation of iodine and ferratin.

iodoform (i-o'-do-form) [*iodine* + *formyl*]. A yellow, crystalline substance, CHI_3 , tri-iodo methane, or formyl tri-iodide, having a strong, penetrating odor, containing about 96 per cent of iodine, and soluble in chloroform and ether and somewhat in alcohol and water. It is a local anesthetic and an antiseptic, and is used as a dressing for wounds and in tuberculous and syphilitic ulcers; internally it is employed in syphilis, pulmonary tuberculosis, cirrhosis of the liver, rickets, and goiter. Dose, 1–3 grains (0.066–0.2 Gm.). The preparations include the ointment (*unguen'tum iodoformi*, U. S. P.) and suppositories which are used in fissure of the anus. **i. albuminate**, iodoformogen. **i.-salol**, an antiseptic mixture of iodoform and phenol salicylate.

iodoformagen (i'o'-do-for'maj-en). A nearly odorless, yellowish powder composed of iodoform and albumin.

iodoformal (i'o'-do-for'mal). A fragrant yellow powder prepared from iodoform and ethyl iodide, and used like iodoform.

iodoformalbumin (i'o'-do-form-al-bu'min). Iodoformagen.

iodoformin (i'o'-do-for'min). An odorless substitute, $\text{C}_6\text{H}_5\text{N}_4.\text{CHI}_3$, for iodoform. It is a white powder, from which 75 per cent of iodoform is set free by contact with a wound.

iodoformism (i'o'-do-form-izm). Poisoning by iodoform.

iodoformize (i'o'-do-form'iz). To treat or impregnate with iodoform.

iodoformogen (i'o'-do-for'mo-jen). Iodoform albuminate: a compound of iodoform and albumin occurring in the form of a fine yellow powder; used as a substitute for iodoform.

iodoformum (i'o'-do-for'mum). Iodoform.

iodogallicin (i'o'-do-gal'is-in). A dark-gray powder, bismuth oxyiodo methyl gallol, $\text{C}_6\text{H}_2\text{COOCH}_3(\text{OH})_2\text{O}.\text{BiO}.\text{I}$, prepared from bismuth oxyiodide and methyl gallicin; used like bismuth oxyiodogallate.

iodogene (i-o'-do-jën). A proprietary mixture of charcoal and potassium or sodium iodate: to be burned for disinfecting fumigation.

iodogenin (i-o'-do-jen-in). A preparation of iodoform and alcohol; used in fumigation.

iodogenol (i-o'-doj'en-ol). A proprietary preparation of iodine and peptone; used like the iodides.

iodoglandin (i'o'-do-glan'din). A thyroid preparation containing no thyroïdin: a therapeutical agent.

iodoglidin (i-o-gli'din). A preparation of iodine and wheat protein, used in skin diseases like iodine.

iodoglobulin (i'o'-do-glob'u-lin). An active principle derived from the thyroid gland; more abundant and far more soluble than thyroïdin.

iodoglycerin (i'o'-do-glis'er-in). A solution of potassium iodide and iodine in glycerin.

iodoguaiaacal (i'o'-do-gwi'ak-ol). Colorless crystals used in tuberculosis in doses of 1 grain (0.06 Gm.).

iodohemol (i'o'-do-he'mol). A therapeutical preparation of hemol and iodine (16.6 per cent); used in syphilis, tuberculosis, and psoriasis. Dose, 3 grains (0.2 Gm.).

iodohydrargyrate (i'ô-do-hi-drar'jir-ât). Any compound of iodine and mercury with another substance.

iodokefir (i'ô-do-ke'fir). Any one of a series of preparations of kefir and sodium iodide.

iodol (i'ô-dol). A brownish, crystalline powder, $\text{C}_4\text{I}_4\text{NH}$, or tetra-iodopyrrole, soluble in ether and alcohol: used like iodoform, and also in the treatment of diabetes, etc. Dose, $\frac{1}{2}$ grains (0.033–0.133 Gm.).

iodolcaffeine (i'ô-dol-kaf'e-in). A gray, tasteless compound, $\text{C}_8\text{H}_{10}\text{N}_4\text{O}_2\cdot\text{C}_4\text{I}_4\text{NH}$: antiseptic and alterative.

iodolein (i-od-o-le'in). Iodized poppyseed oil.

iodolen (i-od'o-lên). A yellowish powder, a combination of iodol and albumin: used as an antiseptic.

iodolmenthol (i'ô-dol-men'thol). Iodol, 99 parts; menthol, 1 part: antiseptic.

iodolysine (i-od'ol'is-in). A compound of thiosin-amine and iodine, for the treatment of rheumatism and arthritis.

iodomaisin (i'ô-do-ma'sin). A preparation of iodine with the gluten of maize.

iodomangan (i'ô-do-man'gan). Ferromangan containing 1 per cent of iodopeptone.

iodomenin (i-o-dom'en-in). A proprietary iodo-albumin compound in tablet form: used like the alkaline iodides.

iodomethan (i-o'ô-do-meth'an). Methyl iodide.

iodometry (i-o-dom'et-re) [*iodine* + μέτρον measure]. Estimation of the quantity of a chemical by titration with iodine.

iodomuth (i-od'o-muth). A reddish-brown powder, $\text{Bi}_2\text{C}_{15}\text{H}_{12}\text{I}_2\text{O}_{12}$: a bismuth preparation containing 25 per cent of iodine. It is a stimulant, antiseptic, and healing agent. Dose, 5–30 grains (0.333–2 Gm.).

iodon (i'ô-dôn). A proprietary periodide of phthalic acid anhydride; it gives off iodine and is used as an antiseptic.

iodonafan (i'ô-do-naf'tan). A compound containing 3 per cent of iodine combined with a naphtha product.

iodonaphthol (i'ô-do-naf'thol). Same as *naphthol-aristol*.

iodonucleoid (i'ô-do-nu'kle-oid). A brownish powder, insoluble in alcohol, ether, and acids, being a combination of iodine with nuclein. Recommended in syphilis.

iodopeptide (i'ô-do-pep'tid). A preparation of peptonized albumin which has been subjected to the action of iodine: used hypodermically in syphilis, tuberculosis, and struma.

iodophen (i-o'do-fen). Same as *nosophen*.

iodophenacetin (i'ô-do-fe-nas'et-in). An antiseptic iodine and acetphenetidin compound.

iodophenin (i'ô-do-fe'nin). An iodine and acetphenetidin substitution product, $\text{C}_{20}\text{H}_{25}\text{I}_3\text{N}_3\text{O}_4$; a brown powder, sometimes crystalline: antiseptic and antirheumatic. Dose, $7\frac{1}{2}$ grains (0.5 Gm.).

iodophenochloral (i'ô-do-fe-no-klo'al). A parasiticide mixture of tincture of iodine, phenol, and chloral hydrate.

iodophenol (i'ô-do-fe'no-l). Iodine, 20 parts; phenol, 76 parts; and glycerin, 4 parts: antiseptic.

iodophil (i'ô-do-fil). Easily combining with or staining with iodine.

iodophilia (i'ô-do-fil'e-ah) [*iodine* + φιλέω to love]. The reaction shown by leukocytes in certain conditions when treated with iodine or iodides. Normal leukocytes are colored bright yellow, but in certain pathologic conditions, as toxemia and severe anemia, the polymorphonuclears show diffuse brownish coloration. When the staining affects the leukocytes themselves, it is termed *intracellular*; when only the particles around the leukocytes are affected, it is *extracellular*.

iodoprotein (i'ô-do-pro'te-in). A chemical compound of egg protein with iodine: used in the treatment of syphilis.

iodopyrine (i'ô-do-pi'rin). See *iodantipyrine*.

iodoscilline (i'ô-do-sil'in). A proprietary preparation of iodopeptone, scammony, and squill: cardiac tonic and diuretic.

iodoseraum (i'ô-do-se'rum). A preparation of iodine and blood serum: used like the iodides.

iodosin (i-o'do-sin). An artificial iodine and albumin compound: for use in goiter and myxedema.

iodosol (i'ô-do-sol). A proprietary, nonstaining, nonirritating solution of iodine.

iodospongion (i'ô-do-spon'jin). A protein and iodine compound obtainable from sponge.

iodostarin (i-o-dos'tar-in). A white crystalline insoluble substance, diiodotariric acid, $\text{C}_{17}\text{H}_{31}\text{I}_2\text{COOH}$. It is used in place of, and in the same dose as, potassium iodide.

iodostem (i-o-dos'tem). A syrupy fluid obtained by concentration of grape juice. It contains iodine and is used in gout, rheumatism, and disorders of the lymphatics.

iodostick (i'ô-do-stik). Same as *iodoapplicator*.

iodosulphate (i'ô-do-sul'fat). A combination of a base with iodine and sulphuric acid.

iodosyl (i-od'o-sil). A deep-red, amorphous powder, $\text{C}_6\text{H}_5\text{I.OI.COOH}$, containing 65 per cent of iodine: used as an antiseptic and analgesic in powder or ointment.

iodotannin (i'ô-do-tan'in). A compound of tannin and iodine: alterative and astringent. Dose of syrup, 1–4 minims (0.066–0.246 cc.).

iodotannol (i'ô-do-tan'ol). A preparation of iodine and tannin: used like iodoform.

iodoterpin (i'ô-do-ter'pin). A dark brown liquid, $\text{C}_{10}\text{H}_{16}\text{I}$, derived from iodine and terpin. It is an antiseptic, and is used like iodoform.

iodothein (i'ô-do-the'in). An iodine and caffeine compound in a white, amorphous or crystalline powder: a heart stimulant. Dose, 2–8 grains (0.13–0.5 Gm.).

iodothrobromine (i'ô-do-the-o-bro'min). Theobromine, 40 parts; sodium iodide, 21.6 parts; and sodium salicylate, 38.4 parts: recommended for use in aortic insufficiency. Dose, 4–8 grains (0.25–0.5 Gm.).

iodotherapy (i'ô-do-ther'ap-e) [*iodine* + θεραπεία treatment]. Treatment with iodine or the iodides.

iodothiophen (i'ô-do-thi'o-fen). Thiophen iodides, an antiseptic used like iodoform.

iodothymoform (i'ô-do-thi'mo-form). A patented yellow and nearly odorless powder derived from thymol, formaldehyde, and iodine. It is antiseptic and germicide.

iodothymol (i'ô-do-thi'mol). A brand of thymol iodide.

iodothyrein (i-o-do-thi're-in). Iodothyrein.

iodothyrin (i'ô-do-thi'rin). 1. The normal iodine compound in the body (Baumann, 1895). 2. A patented amorphous, brown powder derived from the thyroids of sheep: used in goiter, rickets, corpulency, and myxedema. 3. A milk sugar triturate of the above. Daily dose, 15–30 grains (1–2 Gm.).

iodothyroglobulin (i'ô-do-thi-ro-glob'u-lin). A protein-iodine compound isolated from the thyroid.

iodothyroidin (i'ô-do-thi-ro'i'din). A preparation resembling iodothyrin and used like that drug.

iodotone (i-o-do'tôn). A proprietary glycerol of hydrogen iodide: used like the iodides.

iodoval (i-o'do-val). A crystalline preparation, α -mono-odo-isovalerianyl urea: used like iodides. Dose, 5 grains (0.33 Gm.).

iodovasogen (i'ô-do-vas'o-jen). An iodine and vasogen compound: used in skin diseases.

iodovasol (i'ô-do-va'sol). Vasol containing 7 per cent of iodine.

iodoxybenzoic acid. See under *acid*.

iodoxen (i-o'do-zen). A combination of methyl salicylate with iodine in a fragrant powder: used as an external antiseptic and discutient.

iodozone (i'o-do-zōn'). An antiseptic iodine and ozone compound: used for mouth washes and gargles and for inhalation.

iodpeptide (i-od-pep'tid). An iodine-albumin preparation: used in syphilis and tuberculosis.

iodterpin (i-od-ter'pin). Iodoterpine.

iodum (i-o'dum), gen. *iodi*. Latin for *iodine*.

iodurase (i-od'u-rās). A preparation of iodine and yeast: used like the iodides.

iodylin (i-od'il-in). Bismuth iodosalicylate: used like iodoform.

iodyloform (i-o-dil'o-form). A combination of iodine and gelatin: used as a substitute for iodoform.

iola (i-o'lah). A proprietary detergent for use in uterine complaints.

iolin (i'o-lin). A so-called stainless 20 per cent iodine solution for external use.

ion (i'on) [*ión* going]. An atom or a group of atoms having a charge of positive (cation) or negative (anion) electricity. See *ionic theory*, under *theory*. **hydrogen i.**, the hydrogen atom bearing a positive electric charge. **hydroxyl i.**, the hydroxyl group, OH, in solution bearing a negative electric charge.

ionic (i-on'ik). Pertaining to an ion or to ions.

ionidine (i-on'id-in). A narcotic alkaloid, $C_{19}H_{25}N_4O_4$, from California poppy, *Eschscholzia californica*.

ionium (i-o'ne-um) [*ion*]. A radioactive element emitting alpha rays; atomic weight, 230.5. It is probably a disintegration product of uranium and the parent of radium.

ionization (i-on-iz-a'shun). 1. The dissociation of a substance in solution into its constituent ions. 2. Same as *iontophoresis*. **medical i.** Same as *iontophoresis*.

ionize (i-on-iz). To separate into ions.

ionocolorimeter (i'o-no-kol-or-im'et-er). An apparatus for measuring the ionic acidity of solution.

ionogen (i-on'o-jen) [*ion* + *-γεν* to form]. A substance which may be ionized.

ionogenic (i-on-o-jen'ik). Forming or supplying ions.

ionometer (i-o-nom'et-er). An instrument for the measurement of the intensity or quantity of roentgen rays. In passing through a closed air chamber, the roentgen rays ionize the air; the time of discharge of a condenser of known capacity varies with the quantity of roentgen rays passing through.

ionone (i'on-ōn) [*ion* violet]. Artificial extract of violets, $(CH_3)_2C_6H_5(CH_2)CH:CH.CO.CH_3$, an odoriferous derivative of orris root, prepared commercially from citral and used as a perfume.

ionophose (i'o-no-fōz) [*ion* violet + *phose*]. A violet phose.

ionotherapy (i'o-no-ther'ap-e). 1. [*ion* + *therapy*]. Iontophoresis. 2. [*ion* violet + *therapy*]. Treatment by means of the violet rays.

ion-protein (i-on-pro'te-in). A protein molecule combined with an inorganic ion, which is the form in which protein takes part in vital processes.

iontherapy (i-on-ther'ap-e). Same as *iontophoresis*.

iontophoresis (i-on'to-to-fo-re'sis). The introduction, by means of the electric current, of ions of different sorts into the tissues of the body for therapeutic purposes. Called also *ionotherapy*, *galvano-ionization*, *ionic medication*, and *medical ionization*.

iontoquantimeter (i-on'to-quan-tim'et-er) [*ion* + *quantimeter*]. An instrument for measuring the quantity of roentgen radiation based on the fact that roentgen rays are able to ionize gases.

iontotherapy (i-on'to-ther'ap-e) [*ion* + *therapy*]. Same as *iontophoresis*.

iophobia (i-o-fō-be-ah) [*lōs* poison + *φόβος* fear]. A morbid fear of poisons.

iopropane (i-o-pro'pān). Same as *iothion*.

iosorptol (i-o-sor'pōl). A honey-like liquid, used in skin diseases and in veterinary practice.

iotacism (i-o'tas-izm) [*lōra* letter I]. Inability to pronounce distinctly the sound of the letter I.

ioterpin (i-o-ter'pin). A preparation of iodine and terpin hydrate used as an antiseptic dressing, powder, or ointment.

iothion (i-o-thi'ōn). A yellow, oily fluid, diiodo-hydroxypropane, $CH_2I.CHOH.CH_2I$, containing about 80 per cent of iodine: used as a means of introducing iodine into the system by inunction in syphilis, lymphadenitis, etc.

iothionol (i-o-thi'o-nol). A preparation containing 25 per cent of iothion, used in veterinary practice in osteitis, peristitis, lymphadenitis, struma, etc.

iothymin (i-o-thi'min). A proprietary combination of iodine and thymus extract used in thyroid disease.

I-para. Abbreviation for *primipara*.

ipecac, **ipecacuanha** (ip'e-kak, ip'e-kak-u-an'-ah) [Tupi-Guarani name]. The dried rhizome and roots of *Cephaelis ipecacuanha*, or of *Cephaelis acuminata* L., rubiaceous plants of tropical America. It is a local irritant, emetic in full doses, in small doses expectorant, diaphoretic, and stimulant to the stomach. It is employed in moderate doses as an emetic, and is given in small doses in laryngitis, bronchitis, chronic diarrhea, cholera morbus, and as a sedative in hemorrhages, such as hemoptysis and uterine hemorrhage. Emetic dose, 15-30 grains (1-2 Gm.); expectorant dose, $\frac{1}{4}$ -1 grain (0.011-0.066 Gm.); dose of fluidextract (U. S. P.), 1-5 minims (0.066-0.333 cc.); of syrup (U. S. P.), $\frac{1}{2}$ -2 drachms (2-8 cc.); of wine (*vinum ipecacuanhae*), 1-60 minims (0.066-4 cc.); of *tinctura ipecacuanhae* et *o'pii*, or liquid Dover's powder, 10 minims (0.6 cc.); of *trochisci morphinae* et *ipecacuanhae*, 1 or more; of *pulvis ipecacuanhae* et *o'pii* (U. S. P.), or Dover's powder, 10 grains (0.66 Gm.). **alcresta i.**, a proprietary preparation of ipecac which remains inactive in the acid gastric juice and is not set free until it reaches the intestinal juices. This preparation can be administered in large doses without causing nausea and vomiting. **Brazilian i.**, *Cephaelis ipecacuanha*. **Cartagena i.**, **Colombia i.**, *Cephaelis acuminata*. **deemetized i.**, ipecac deprived of its emetic properties. **Rioi.**, *Cephaelis ipecacuanha*. **wild i.**, the plant *Euphorbia ipecacuanhae*, of North America, an acrid cathartic and emetic.

ipoh (e'po). The Malay name of various arrow poisons. **i. aker**, an arrow poison derived from *Strychnos waltichiana*.

ipomea, **ipomoea** (i-po-me'ah). The dried root of *Ipomoea orizabensis*, Orizaba jalap root or Mexican scammony root: used as a cathartic. Dose of the resin (*resina ipomoeae*, U. S. P.), 3 grains (2 Gm.).

ipral (i'pral). Calcium ethylisopropylbarbiturate, $Ca(C_2H_5)_2C_4H_7.CO.NHCON.CO_2H_2O$, having the therapeutical properties of barbital and used as a hypnotic. Dose, 2-4 grains (0.12-0.25 Gm.).

ipsilateral (ip-se-lat'er-al). Ipsolateral.

ipsilene (ip'sil-ēn). A disinfectant gas obtained by heating iodoform and ethyl chloride under pressure.

ipsolateral (ip-so-lat'er-al) [*ipōs* same + *L. la'tus* side]. Situated on the same side: said of symptoms appearing on the same side as the cerebral lesion causing them.

ipuanin (ip-u'an-in). Cephaelin iso-amyl-ether hydriodide, a synthetic emetine, more amebicidal and less toxic than emetine.

I. Q. Abbreviation for *intelligence quotient*.

- iquinine** (i-kwin'in). A proprietary substitute for quinine. Dose, 2-10 grains (0.133-0.66 Gm.).
- Ir.** 1. A symbol for *iridium*. 2. An abbreviation for *internal resistance*.
- iralgia** (i-ral'je-ah) [*iris* + ἄλγος pain]. Pain in the iris.
- irascibility** (ir-as-ib-il'te) [L. *irascibilis* ill tempered]. Morbid irritability and quickness of temper.
- iridadenosis** (i'rid-ad-en-o'sis) [*iris* + ἄδην gland]. A glandular disease of the iris.
- iridal** (ir'id-al). Of, or pertaining to, the iris.
- iridalgia** (i-rid-al'je-ah) [*iris* + ἄλγος pain]. Pain in the iris.
- iridauxesis** (i'rid-awk-se'sis) [*iris* + αὐξησις increase]. Thickening of the iris.
- iridectome** (ir-id-ek'tōm) [*iris* + ἐκτέμνειν to cut out]. A cutting instrument for use in iridectomy.
- iridectomesodialysis** (i-rid-ek'to-me-so-di-al'is-is) [*iris* + *iris* + ἐκτομή excision + μέσος middle + διάλυσις loosening]. The operation of excision and separation of the adhesions around the inner edge of the iris for the formation of an artificial pupil.
- iridectomize** (ir-id-ek'tom-iz). To remove a part of the iris.
- iridectomy** (ir-id-ek'to-me) [*iris* + ἐκτομή excision]. Surgical removal of a part of the iris by cutting. **antiphlogistic i.**, that which is performed to diminish intra-ocular tension in inflammatory conditions. **optic i.**, that which is done to enlarge a pupil when it is in any way abnormally small. **preliminary i.**, **preparatory i.**, that which is performed in order to enlarge the space through which a cataract is to be extracted. **stenopeic i.**, a small iridectomy with preservation of the sphincter. **therapeutical i.**, iridectomy for the cure or prevention of some disease of the eye.
- iridectropium** (i-rid-ek-tro'pe-um) [*iris* + ἐκτροπὴν eversion]. Eversion of the iris.
- iridemia** (i-rid-e'me-ah) [*iris* + αἷμα blood]. Hemorrhage from the iris.
- iridencleisis** (ir'id-en-kl'i'sis) [*iris* + ἐγκλείν to lock in]. The strangulation of a slip of the iris in a corneal incision.
- iridentropium** (i'rid-en-tro'pe-um) [*iris* + ἐντροπὴν inversion]. Inversion of the iris.
- irideremia** (ir'id-e-re'me-ah) [*iris* + ἐρημία lack]. Absence of the iris.
- irides** (i'rid-ēz). Plural of *iris*.
- iridescence** (ir-id-es'ens) [L. *iridescere* to gleam like a rainbow]. The condition of gleaming with bright and changing colors.
- iridescent** (ir-id-es'ent) [L. *iridescens*]. Gleaming with bright colors like those of the rainbow.
- iridesis**, **iridodesis** (i-rid'es-is, ir-id-od'es-is) [*iris* + ἔδωσι a binding]. The operation of forming a new pupil or changing the position of the old by tying a slip or slips of it in an opening made in the cornea.
- iridiagnosis** (i-re-di-ag-no'sis). Iridodiagnosis.
- iridial**, **iridian** (i-rid'e-al, i-rid'e-an). Iridic.
- iridic** (i-rid'ik). Pertaining to the iris.
- iridin** (ir'id-in). An oleoresin from *Iris versicolor*: a cholagogue and aperient. Dose, 1-5 minims (0.066-0.333 cc.).
- iridinol** (i-rid'in-ol). A proprietary hematic alterative remedy.
- iridium** (i-rid'e-um) [L. *i'ris* rainbow, from the tints of its salts]. A very hard white metal; symbol, Ir; atomic weight, 193.1: its use as a remedy is chiefly homeopathic.
- iridization** (ir-id-iz-a'shun). The subjective perception of an iridescent halo in glaucoma.
- irido-avulsion** (i'rid-o-av-ul'shun). Complete tearing away of the iris from its periphery.
- iridocapsulitis** (ir'id-o-kap-su-li'tis). Inflammation of the iris and the capsule of the lens.
- iridocoele** (ir-id'o-sēl) [*iris* + κήλη hernia]. Hernial protrusion of a slip of the iris.
- iridoceratitis** (i'rid-o-ser-at-i'tis). Same as *iridokeratitis*.
- iridochoroiditis** (ir'id-o-ko-roid-i'tis). Inflammation of the iris and the choroid.
- iridocinesia**, **iridocinesis** (i'rid-o-sin-e'ze-ah, -sin'e-sis). See *iridokinesia*.
- iridocoloboma** (ir'id-o-kol-o-bo'mah) [*iris* + κολόβωμα mutilation]. Congenital fissure or coloboma of the iris.
- iridoconstrictor** (ir'id-o-kon-strik'tor). Any one of the short ciliary elements of the iris.
- iridocyclectomy** (ir'id-o-si-klek'to-me) [*iris* + κύκλος circle + ἐκτομή excision]. Surgical removal of the iris and of the ciliary body.
- iridocyclitis** (ir'id-o-si-kl'i'tis) [*iris* + κύκλος circle + -ιτις inflammation]. Inflammation of the iris and of the ciliary apparatus.
- iridocyclochoroiditis** (i'rid-o-si'klo-ko-roi-di'tis) [*iris* + κύκλος circle + choroiditis]. Inflammation of the iris, ciliary body, and choroid coat.
- iridocystectomy** (ir'id-o-sis-tek'to-me). A plastic operation on the iris devised by Knapp.
- iridodesis** (ir-id-od'es-is). Same as *iridesis*.
- iridodiagnosis** (i'rid-o-di-ag-no'sis). Diagnosis of disease by the appearance of the iris, its color, markings, changes, etc.
- iridodialysis** (ir'id-o-di-al'is-is) [*iris* + διά through + λύνω to loosen]. 1. Same as *coredialysis*. 2. The separation or loosening of the iris from its attachment. 3. Division or splitting of the iris, congenital or other, producing more than one pupil.
- iridodilator** (i'rid-o-di-la'tor). Dilating the pupil.
- iridodonesis** (ir'id-o-do-ne'sis) [*iris* + δόνησις tremor]. Hippus; a tremulous condition of the iris.
- iridokeratitis** (i'rid-o-ker-at-i'tis) [*iris* + κέρας cornea + -ιτις]. Inflammation of the iris and cornea.
- iridokinesia**, **iridokinesis** (i'rid-o-kin-e'ze-ah, -kin-e'sis) [*iris* + κίνησις movement]. The contraction and expansion of the iris.
- iridokinetic** (i'rid-o-kin-et-ik'). Pertaining to movements of the iris.
- iridoleptinsis** (i'rid-o-lep-tin'sis) [*iris* + λεπτύνσις attenuation]. Thinning or atrophy of the iris.
- iridology** (i-rid-ol'o-je) [*iris* + λόγος treatise]. The study of the iris, particularly of its color, markings, changes, etc., as associated with disease.
- iridomalacia** (i'rid-o-mal-a'se-ah) [*iris* + μαλακία softness]. Softening of the iris.
- iridomedialysis** (i'rid-o-me-de-al'is-is). Same as *iridomesodialysis*.
- iridomesodialysis** (i'rid-o-me'so-di-al'is-is) [*iris* + μέσος middle + διάλυσις loosening]. Loosening of adhesions around the inner edge of the iris.
- iridomotor** (i'rid-o-mo'tor). Pertaining to movements of the iris.
- iridoncus** (i-rid-ong'kus) [*iris* + ὄγκος tumor]. Tumor or swelling of the iris.
- iridoparalysis** (i'rid-o-par-al'is-is) [*iris* + παράλυσις]. Iridoplegia.
- iridopareklysis** (ir'id-o-par-el'kis-is) [*iris* + παρέκλυσις protraction]. Artificial displacement of the pupil by causing a prolapse of the iris.
- iridoperiphacitis** (i'rid-o-per-if-as-i'tis) [*iris* + περί around + φακός lens]. Inflammation of the capsule of the crystalline lens.
- iridoplegia** (ir'id-o-ple'je-ah) [*iris* + πλῆγῃ stroke]. Paralysis of the sphincter of the iris; rigidity of the pupil. **accommodation i.**, failure of the pupil to contract when an accommoda-

tive effort is made. **complete i.**, iridoplegia in which the iris does not react to any stimulation. **reflex i.**, failure of the pupil to contract under the influence of light or when the skin is stimulated. **sympathetic i.**, iridoplegia in which the pupil does not dilate on irritation of the skin.

iridoptosis (ir'id-op-to'sis) [*iris* + πτώσις falling]. Prolapse of the iris.

iridopupillary (ir'id-o-pu'pil-a-re). Pertaining to the iris and the pupil.

iridorhexis (ir'id-or-eks'is) [*lris* iris + ῥήξις rupture]. 1. Rupture of the iris. 2. The tearing away of the iris.

iridoschisis (ir-id-os'ke-sis). Coloboma of the iris.

iridoschisma (ir'id-o-skiz'mah). Iridoschisis.

iridosclerotomy (ir'id-o-skle-rot'o-me) [*iris* + sclera + τέμνω to cut]. The puncturation of the sclera and of the edge of the iris.

iridoscope (ir-id'o-skōp) [*iris* + σκοπεῖν to view]. An instrument for viewing the interior of the eye.

iridoses (i-rid-o'sis). Same as *iridesis*.

iridosteresis (ir'id-o-ste-re'sis) [*lris* iris + στέρησις loss]. The removal of the iris or a part of it.

iridotasis (i-rid-ot-as'is) [*lris* iris + τάσις stretching]. The operation of stretching the iris for glaucoma.

iridotomy (ir-id-ot'o-me) [*lris* iris + τομή cut]. 1. An incision into the iris. 2. The formation of an artificial pupil by cutting the iris.

iridovalosis (ir-id-o-val-o'sis). Oval shape of the pupil.

irinic (i-rin'ik). Pertaining to the iris.

iris (i'ris) pl. *irides* [*lris* a rainbow or halo]. 1. The circular pigmented membrane behind the cornea, perforated by the pupil. It is made up of circular muscular fibers surrounding the pupil, the band of radiating fibers by which the pupil is dilated, and of a pigmentary layer behind it which is really a part of the retina. 2. A genus of iridaceous plants. 3. The rhizome of *I. versicolor*: purgative, emetic, and diuretic. Dose, 10–20 grains (0.666–1.333 Gm.); of extract, 1–2 grains (0.066–0.133 Gm.); of fluidextract, 5–10 minims (0.333–0.666 cc.). 1.

Iris bombé or umbrella iris (Woolf).

bombé, umbrella iris; a condition in which the iris is bowed forward by the collection of aqueous humor between the iris and lens in total posterior synechia. **Florentine i.**, orris root, the fragrant rhizome [*L. rhizoma iridis*] of *I. florentina* and other European species of iris: astringent, aromatic, and pectoral. Dose, 5–15 grains (0.333–1 Gm.). **I. germanica** yields Verona iris root. **tremulous i.**, iridodonesis. **umbrella i.** See *i. bombé*.

Irish moss (i-rish maws). See *Chondrus*.

irisin (i'ris-in). A concentration or resinoid prepared from *I. versicolor*: aperient and cholagogue. Dose, 2–4 grains (0.133–0.266 Gm.).

irisol (ir'is-ol). A proprietary disinfectant mixture containing iodoform (50 per cent) and boric acid (45 per cent).

irisopsia (i-ris-op'se-ah) [*lris* rainbow + ὄψις vision]. Visual defect in which objects appear surrounded by rings of colored light.

iritic (i-rit'ik). Pertaining to or of the nature of iritis.

iritis (i-ri'tis) [*lris* iris + -itis inflammation]. Inflammation of the iris (Schmidt, 1807). The condition is marked by pain, congestion in the ciliary

region, photophobia, contraction of the pupil, and discoloration of the iris. It is caused by injury, syphilis, rheumatism, gonorrhea, tuberculosis, etc. 1. **catamenia** *lis*, iritis recurring before each menstrual period. **plastic i.**, a variety in which the exudate consists of fibrinous matter which forms new tissue. **purulent i.**, iritis in which the exudate is purulent. **quiet i.**, iritis without pain or ciliary congestion. **serous i.**, iritis in which the exudate consists of serum. **spongy i.**, iritis with a fibrinous exudate, forming a spongy mass in the anterior chamber. **sympathetic i.**, a variety affecting a previously sound eye from sympathy with the other eye, which has been injured.

Iritis (Woolf).

iritoectomy (i'rit-o-ek'to-me) [*iris* + ἐκτομή excision]. Removal of a portion of the iris for cataract in which the pupil has been closed by inflammatory deposits.

iritomy (i-rit'o-me). Same as *iridotomy*.

irocose (i'ro-kōs). A proprietary preparation of proteoses and iron in an organic form.

iron (i'ern) [A. S. *iren*; L. *fer'rum*]. A metalleclement found in certain minerals, in nearly all soils, and in mineral waters: atomic weight, 55.84; specific gravity, 7.7; symbol, Fe. Iron occurs in the blood, especially in the hemoglobin, and is used to build up the blood in anemia. The compounds of iron are astringent and styptic. 1. **acetate**, a compound, $\text{Fe}(\text{C}_2\text{H}_3\text{O}_2)_3$, used as an astringent. Dose, in solution, 5–15 minims (0.3–1 cc.); of tincture, 10–30 minims (0.6–2 cc.). 1. **albuminate** [L. *fer'ri albu'minas*]. Dose, 10–20 grains (0.6–1.3 Gm.). 1. **alcoholized i.** Same as *pulverized i.* 1. **alginate**, a tasteless, brown, insoluble powder; a salt especially valuable for its blandness and assimilability; a sedative and laxative tonic. Dose, 10–15 grains (0.66–1 Gm.). 1. **and aluminum sulphate** [L. *fer'ri et alu'minae sul'phas*], an astringent salt now little used. Dose, 5–10 grains (0.33–0.66 Gm.). 1. **and ammonium acetate**, dose of solution (Basham's mixture, *li'quor fer'ri et ammon'ii aceta'tis*) 4–8 drachms (16–32 cc.). 1. **and ammonium citrate** [L. *fer'ri et ammo'nii ci'tras*], a substance in transparent garnet scales. Dose, 2–5 grains (0.13–0.33 Gm.). 1. **and ammonium sulphate** [L. *fer'ri et ammo'nii sul'phas*], ammonioferric alum, $\text{FeNH}_4(\text{SO}_4)_2 + 12\text{H}_2\text{O}$; a powerful styptic. Dose, 5–10 grains (0.3–0.6 Gm.). 1. **and ammonium tartrate** [L. *fer'ri et ammo'nii tar'tras*], potassioferric tartrate; a mild chalybeate. Dose, 5–15 grains (0.3–1 Gm.). 1. **and magnesium citrate** [L. *fer'ri et magnes'ii ci'tras*], a salt in greenish-yellow scales. Dose, 5–10 grains (0.33–0.66 Gm.). 1. **and potassium tartrate** [L. *fer'ri et potas'sii tar'tras*], a salt, $\text{C}_4\text{H}_4\text{O}_6(\text{FeO})\text{K}$, in brown, red, or garnet scales; potassioferric tartrate; a pleasant chalybeate. Dose, 5–15 grains (0.3–1 Gm.). 1. **and quinine citrate** [L. *fer'ri et quini'nae ci'tras*], a preparation in dark greenish golden scales. Dose, 3–5 grains (0.2–0.3 Gm.); of solution, 3–15 minims (0.2–1 cc.). 1. **and strychnine citrate** [L. *fer'ri et strychni'nae ci'tras*], a bitter tonic substance in red scales. Dose, 1–3 grains (0.06–0.2 Gm.). 1. **arsenate**, ferrous arsenate, $\text{Fe}_2(\text{AsO}_4)_2 \cdot 6\text{H}_2\text{O}$. Dose, $\frac{1}{10}$ – $\frac{1}{5}$ grain (0.006–0.008 Gm.). 1. **arsenite**, ferric arsenite, $4\text{Fe}_2\text{O}_3 \cdot \text{As}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$, a brownish-yellow powder, used in anemia and in pellagra in doses of $\frac{1}{2}$ –1 grain (0.03–0.06 Gm.). 1. **arsenotartrate**. See *asferryl*. 1. **benzoate**, an orange-brown powder, $\text{Fe}_2\text{C}_7\text{H}_5\text{O}_2 + 6\text{H}_2\text{O}$. Dose, 1–5 grains (0.06–0.33 Gm.). 1. **bromide** [L. *fer'ri bro'midum*], a brick-red, deliquescent

body, FeBr_2 : tonic, alterative, and styptic. Dose, 5-10 grains (0.3-0.6 Gm.). **i. cacodylate**, a compound used in anemia. Dose, 1-5 grains (0.06-0.3 Gm.); hypodermically, $\frac{1}{2}$ grain (0.03 Gm.). See *marssyle*. **i. carbonate** [*L. fer'ri car'bonas*], ferrous carbonate, FeCO_3 : a white, flocculent or crystalline salt, readily convertible into ferric oxide. Dose, in pill (Blaud's pill, *mas'sa fer'ri carbona'tis*), 3-5 grains (0.2-0.3 Gm.); of saccharated carbonate, 2-10 grains (0.13-0.66 Gm.). **i. caseinate**. Same as *i. nucleo-albuminate*. **i. chloride** [*L. fer'ri chlor'idum*], hydrous ferric chloride, $\text{FeCl}_3 + 12\text{H}_2\text{O}$: an orange-colored, crystalline body. Dose of solution (*li'quor fer'ri chlor'id*), 2-10 minims (0.13-0.66 cc.); of tincture (*tinctu'ra fer'ri chlor'id*), 5-10 minims (0.33-0.66 cc.). Several other iron chlorides are described. **i. citrate** [*L. fer'ri cit'ras*], ferric citrate, $\text{Fe}_2(\text{C}_6\text{H}_5\text{O}_7)_2 + 6\text{H}_2\text{O}$: an agent in clear, garnet-colored scales. Dose, 2-5 grains (0.13-0.33 Gm.); of solution (*li'quor fer'ri cit'ra'tis*), 5-10 minims (0.33-0.66 cc.); of wine (*vin'um fer'ri cit'ra'tis*), 1-2 drachms (4-8 cc.). **i. citrate green**, a complex ferric ammonium citrate: used for intramuscular and subcutaneous injection. **i. citropyrophosphate**, the official soluble ferric pyrophosphate. **dialyzed i.** [*L. fer'rum dialysa'tum*], an aqueous solution of ferric oxchloride prepared by dialysis. Dose, 5-15 minims (0.33-1 cc.). **i. glycerophosphate**, a salt, $(\text{CH}_2\text{OH}.\text{CHOH}.\text{CHO}.\text{PO}_3)_2\text{Fe}_2$, in yellow plates or in a greenish-gray powder; a nerve tonic. Dose, 2-5 grains (0.1-0.3 Gm.). **i. hydroxide** [*L. fer'ri hy'droxidum*], the hydrated oxide of iron, $\text{Fe}(\text{OH})_3$, a reddish-brown substance, used as an antidote in poisoning by arsenous acid, in tablespoonful doses, often repeated. **i. hydroxide with magnesium oxide** is used as an antidote in arsenic poisoning in doses of 4 fl.oz. (120 cc.). **i. hypophosphite** [*L. fer'ri hypophos'phis*], dihydric ferric hypophosphite, $\text{Fe}(\text{H}_2\text{PO}_3)_2$: a white or grayish salt. Dose, 5-10 grains (0.33-0.66 Gm.); of syrup, 1-2 fluidrachms (4-8 cc.). **i. iodate**, ferric iodate, $\text{Fe}_2\text{O}_3.2\text{I}_2\text{O}_5.8\text{H}_2\text{O}$: said to be tasteless and not to injure the teeth. Dose, 2-5 grains (0.13-0.32 Gm.). **i. iodide**, ferrous iodide, FeI_2 , in clear, greenish, deliquescent, tabular crystals: it is especially useful in scrofulous conditions. Dose, 1-5 grains (0.06-0.33 Gm.); of saccharated iodide, 5-10 grains (0.33-0.66 Gm.); of syrup, 5-30 minims (0.33-2 cc.). **i. iodobehenate**, an amorphous, reddish-brown powder, useful in scrofula, chlorosis, rachitis, etc. **i. lactate** [*L. fer'ri lac'tas*], ferrous lactate, $\text{Fe}(\text{C}_3\text{H}_5\text{O}_2)_2.3\text{H}_2\text{O}$, a salt in minute, whitish-green crystals. Dose, 1-5 grains (0.06-0.33 Gm.). **i. magnesium sulphate**, a greenish-white powder, $\text{FeSO}_4.\text{MgSO}_4 + 7\text{H}_2\text{O}$: used in anemia. Dose, 8 grains (0.5 Gm.). "**masked**" **i.**, iron occurring in the form of a complex ion. **i. nucleo-albuminate**, caseinated iron; a tasteless preparation of casein and iron. **i. oleate**, a waxy solid; astringent and tonic. **i. oxalate**, ferrous oxalate: $\text{FeC}_2\text{O}_4 + \text{H}_2\text{O}$; a yellowish, crystalline powder. Dose, 1-2 grains (0.06-0.13 Gm.). **i. phosphate** [*L. fer'ri phos'phas*], ferrosferric phosphate; the salt is a compound of ferric and ferrous phosphates, $\text{Fe}_2\text{P}_2\text{O}_7$, $\text{FePO}_4 + 12\text{H}_2\text{O}$. Dose, 5-10 grains (0.33-0.66 Gm.). **i. phosphate, soluble** [*L. fer'ri phos'phas solu'bilis*], sodioferric phosphate rendered soluble by sodium citrate, $\text{FePO}_4.\text{Na}_3\text{H} = \text{C}_6\text{H}_5\text{O}_8 + \text{H}_2\text{O}$. Dose, 5-10 grains (0.3-0.6 Gm.). **pulverized i.** [*L. fer'rum pulve'ratum*], metallic iron mechanically powdered. Dose, 1-5 grains (0.06-0.3 Gm.). **i. pyrophosphate** [*L. fer'ri pyrophos'phas*], ferric pyrophosphate, $\text{Fe}_4(\text{P}_2\text{O}_7)_3$. The soluble and official salt (*fer'ri pyrophos'phas solu'bilis*) is a double citropyrophosphate of iron and sodium. Dose, 1-5 grains (0.06-0.33 Gm.). **Quevenne's i.**, reduced iron. **reduced i.** [*L. fer'rum reduc'tum*], finely powdered metallic iron obtained by precipitation with hydrogen from a solution of the oxide or carbonate. Dose, 1-5 grains (0.06-0.33 Gm.). **i. subcarbonate** [*L. fer'ri subcar'bonas*], an amorphous,

brownish powder, consisting mainly of iron hydroxide. Dose, 5-30 grains (0.33-2 Gm.). **i. sub-sulphate** [*L. fer'ri subsul'phas*], basic ferric sulphate, or Monsel's salt, $\text{FeO}(\text{SO}_4)_2$: in reddish-brown, transparent scales or in an amorphous mass; a powerful styptic. **i. succinate**, a ferrous succinate, a green-gray substance: said to be useful in cholelithiasis. Dose, 5 grains (0.33 Gm.). Various ferric succinates are also prepared. **i. sulphate** [*L. fer'ri sul'phas*], ferrous sulphate, $\text{FeSO}_4 + 7\text{H}_2\text{O}$: an astringent tonic; used also as a deodorizer and disinfectant. Dose, 1-5 grains (0.06-0.33 Gm.); of dried sulphate (*fer'ri sul'phas exsicca'tus*), $\frac{1}{2}$ -3 grains (0.03-0.19 Gm.); of granulated sulphate, 3 grains (0.19 Gm.). **i. tannate**, a salt in crimson scales or plates. Dose, 8-30 grains (0.52-2 Gm.). **i. valerianate** [*L. fer'ri valeriana'tis*], a dark red, amorphous powder, $\text{Fe}_2(\text{C}_6\text{H}_9\text{O}_2)_6$: tonic and sedative. Dose, 1-3 grains (0.06-0.2 Gm.). **i. vitellinate**, a therapeutical preparation of egg yolk and iron. See *oviferrin*.

irone (i'ron). The volatile oil, $(\text{CH}_3)_2\text{C}_6\text{H}_5(\text{CH}_2)_2\text{CH}:\text{CH}:\text{CO}:\text{CH}_3$, characteristic of orris oil, which gives it the odor of violets.

irotomy (i-rot'o-me). Same as *iridotomy*.

irradiate (ir-ra'de-ât). To treat with roentgen rays or other form of radioactivity.

irradiation (ir'a-de-a'shun) [*L. in into + radiare to shine*]. 1. A phenomenon in which, owing to the difference in the illumination of the field of vision, objects appear to be much larger than they really are. 2. Treatment by roentgen-rays or other form of radioactivity. 3. The dispersion of a nervous impulse beyond the normal path of conduction.

irreducible (ir-e-du'si-bl). Not susceptible of being reduced.

irregular (ir-eg'u-lar) [*L. in not + regula rule*]. Not in conformity with the rule of nature; not recurring at regular intervals.

irregularity of pulse. See *arrhythmia*.

irreinnoculability (ir'e-in-ok'u-la-bil'i'te). Immunity due to the effects of a previous inoculation.

irrespirable (ir-es'pir-ab-l). That cannot be breathed with safety.

irresuscitable (ir-es-us'it-a-bl). Beyond the possibility of being revived.

irrigate (ir'ig-ât). To wash out.

irrigation (ir-ig-a'shun) [*L. irriga'tio; in into + riga're to carry water*]. Washing by a stream of water or other lotion. **continuous i.**, the steady maintenance of a stream of water over an inflamed surface. **mediate i.**, the passing of a stream of hot or cold water through a flexible tube coiled around a part.

irrigator (ir'ig-a-tor) [*L. "waterer"*]. An apparatus for performing irrigation.

irrigoradioscopy (ir'ig-o-ra-de-os'ko-pe). Roentgenoscopy of the intestines following the injection of a suspension of bismuth.

irritability (ir'it-ab-il'i'te) [*L. irritabil'itas, from irrita're to tease*]. 1. The quality of being irritable or of responding to stimuli. 2. Abnormal responsiveness to slight stimuli. **i. of the bladder**, a condition in which the presence of a small amount of urine in the bladder produces a desire to urinate. **chemical i.**, responsiveness to a stimulus that acts by producing a chemical change in the tissues. **electric i.**, the response of a nerve or muscle to the stimulus of an electric current passed through it. **faradic i.**, muscular responsiveness to faradic currents. **galvanic i.**, a condition in which a galvanic current will cause a muscular response. **mechanical i.**, responsiveness to a mechanical stimulus. **muscular i.**, the normal contractile quality of muscular tissue. **myotatic i.**, the power of a muscle to contract in response to stretching. **nervous i.** 1. The ability of a nerve to transmit impulses. 2. Morbid

- excitability of the nervous system. **specific i.** See *law of specific irritability*. **i. of the stomach**, a condition of the stomach in which vomiting is caused by normal amounts of digestible food.
- irritable** (ir'it-a-bl) [L. *irritabilis*; *irrita're* to tease]. 1. Capable of reacting to a stimulus. 2. Abnormally sensitive to a stimulus.
- irritant** (ir'it-ant) [L. *ir'ritans*]. 1. Giving rise to irritation. 2. An agent that irritates.
- irritation** (ir'it-a'shun) [L. *irritatio*]. 1. The act of stimulating. 2. A state of overexcitation and undue sensitiveness. **cerebral i.**, the second stage of brain concussion. **direct i.**, irritation due to direct stimulation of a part. **functional i.**, that which is attended with functional derangement without organic lesion; also overexcitability due to excessive functional activity. **spinal i.**, any condition of functional derangement and nervous irritability accompanied by tenderness along the spinal column.
- irritative** (ir'it-a-tiv). Dependent on or caused by irritation.
- irrumation** (ir-u-ma'shun) [L. *irruma're* to give suck]. Introduction of the penis into the mouth of another person.
- isacen** (i'sas-en). Diacetyldioxyphenylisatin, a white crystalline powder: used as a laxative and purgative. Dose, 5-20 mg.
- Isambert's disease** (e-zohn-berz') [Emile Isambert, French physician, 1828-1876]. See under *disease*.
- isamine blue** (i'sam-in). See *naphthylpararosaniline*.
- isapiol** (is-a'pe-ol). An artificial form of apiol, used in anemic headache.
- isapogen** (is-sap'o-jen). A proprietary liquid containing 6 per cent iodine and 6 per cent camphor: used in rheumatic, tuberculous, and syphilitic conditions by inunction.
- isarol** (i'sa-rol). A dark brown, sticky fluid. It has the antizymotic and astringent properties of ichthyol. Called also *ichthyoidin*.
- isatin** (i'sat-in). A crystalline compound, $C_8H_6NO_2$, formed by the oxidation of indigo.
- isatophan** (is-at'o-fan). A proprietary yellow crystalline powder, $CH_3O.C_7H_4N.C_6H_5.COOH$, a methoxy derivative of cinchophen: used like cinchophen.
- isatropylococaine** (is-sat-ro-pil-ko'ka-in). An alkaloid, $C_{19}H_{22}NO_4$, from coca leaves.
- ischemia, ischaemia** (is-ke'me-ah) [*ischēin* to hold back + *aima* blood]. Local and temporary deficiency of blood, chiefly due to the contraction of a blood vessel. **i. cordis intermittens**, an anginoid condition, marked by a feeling of pain behind the sternum coming on during exercise, and due to an insufficient supply of blood to the heart. **i. retinae**, anemia of the retina (Graefe).
- ischemic** (is-kem'ik). Pertaining to, or affected with, ischemia.
- ischesis** (is-ke'sis) [*ischēin* to hold]. Retention or suppression of a discharge.
- ischia** (is'ke-ah). Plural of *ischium*.
- ischiac, ischiadic** (is'ke-ak, is-ke-ad'ik). Same as *ischiatric*.
- ischiadelpus** (is'ke-ad-el'fus) [*ischion* hip + *adelphos* brother]. Ischiodydymus.
- ischialgia** (is-ke-al'je-ah) [*ischion* hip + *algos* pain]. Neuralgia of the hip; sciatica.
- ischias** (is'ke-as). Ischialgia.
- ischiatric** (is-ke-at'ik) [L. *ischiatricus*]. Pertaining to the ischium or to the haunch.
- ischiatitis** (is'ke-at-i'tis). Inflammation of the ischiatic nerve.
- ischidrosis** (is-kid-ro'sis) [*ischēin* to check + *idrosis* sweat]. Suppression of the secretion of sweat.
- ischio-anal** (is'ke-o-a'nal) [*ischion* hip + *anus*]. Pertaining to the ischium and anus.
- ischio-bulbar** (is'ke-o-bul'bar) [*ischion* hip + L. *bulbus* bulb]. Pertaining to the ischium and the bulb of the urethra.
- ischio-capsular** (is'ke-o-kap-su-lar) [*ischion* hip + L. *capsula* capsule]. Pertaining to the ischium and the capsular ligament of the hip joint.
- ischio-cavernosus** (is'ke-o-kav-er-no'sus) [*ischion* hip + L. *cavernosus* cavernous]. The erector penis muscle.
- ischiocele** (is'ke-o-sēl) [*ischion* hip + *κῆλη* hernia]. Hernia through the sacrosciatic notch.
- ischio-coccygeal** (is'ke-o-kok-sij'e-al). Pertaining to the ischium and coccyx.
- ischio-coccygeus** (is'ke-o-kok-sij'e-us) [*ischion* hip + *κόκκυξ* coccyx]. 1. The coccygeus muscle. 2. The posterior part of the levator ani.
- ischiodidymus** (is'ke-o-did'im-us) [*ischion* hip + *δίδυμος* twin]. A twin monster united at the hips.
- ischiodymia** (is'ke-o-dim'e-ah) [*ischion* hip + *δίδυμος* twin]. The union of twin monsters by the bones of the ischium.
- ischio-femoral** (is'ke-o-fem'or-al) [*ischion* hip + L. *femur* thigh]. Pertaining to the ischium and femur.
- ischio-fibular** (is'ke-o-fib'u-lar). Pertaining to the ischium and the fibula.
- ischio-hebotomy** (is'ke-o-he-bot'o-me) [*ischion* hip + *ἥβη* pubes + *τομή* cut]. The operation of dividing the ischiopubic ramus and the ascending ramus of the pubes.
- ischiomelia** (is'ke-o-me'ne-ah) [*ischēin* to check + *μήν* menses]. Suppression of the menstrual flow.
- ischioneuralgia** (is'ke-o-nu-ral'je-ah) [*ischium* + *neuralgia*]. Neuralgia of the hip; sciatica.
- ischiopagia, ischiopagy** (is'ke-o-pa'je-ah, is-ke-op'aj-e). Monstrosity or teratism of the kind exhibited by the ischiopagus.
- ischiopagus** (is-ke-op-ag-us) [*ischion* hip + *πάγος* fixation]. A monster with two heads and with the bodies united at the hips.

Ischiopagus.

ischio-perineal (is'ke-o-per-in'e-al). Pertaining to the ischium and perineum.

ischiopubic (is'ke-o-pu'bik). Pertaining to the ischium and pubes.

ischio-pubiotomy (is'ke-o-pu-be-ot'o-me). Obstetrical division of the ischiopubic and horizontal branches of the os pubis.

ischio-rectal (is'ke-o-rek'tal). Pertaining to the ischium and rectum.

ischio-sacral (is'ke-o-sa'kral). Pertaining to the ischium and sacrum.

ischio-vaginal (is'ke-o-vaj'in-al). Pertaining to the ischium and vagina.

ischio-vertebral (is'ke-o-ver'te-bral). Pertaining to the ischium and the vertebral column.

ischium (is'ke-um), pl. *ischia* [L.; *ischion* hip]. The lower dorsal part of the innominate bone.

ischochymia (is-ko-kim'e-ah) [*ischēin* to suppress + *χύμος* chyme]. Suppression of gastric digestion; Einhorn's term for dilatation of the stomach, so called because stagnation of the food is the essential symptom of the disease.

ischogalactic (is'ko-gal-ak'tik) [*ισχειν* to suppress + *γάλα* milk]. Suppressing the secretion of milk; also an agent so acting.

ischomenia (is-ko-me'ne-ah) [*ισχειν* to suppress + *μήνες* menses]. Suppression of the menses.

ischuretic (is-ku-ret'ik) [*ισχειν* to check + *ούρον* urine]. Pertaining to ischuria.

ischuria (is-ku're-ah) [*ισχειν* to check + *ούρον* urine]. Suppression or retention of the urine.
i. paradox'a, a condition in which the bladder is overdistended with urine, although the patient continues to urinate.

Ishihara's test (is-e-hah'rahz). See under *tests*.

isinglass (i'sin-glas). See *ichtthyocolla*. **Japanese i.**, agar-agar.

island (i'land). An isolated part or structure.
blood i., aggregations of mesenchyme cells in the angioblast of the early embryo which develop into vascular endothelium and blood corpuscles.
i's of Langerhans, irregular structures in the pancreas composed of cells smaller than the ordinary secreting cells. These masses of cells are thought to produce an internal secretion which is connected with the metabolism of carbohydrates, and their degeneration is supposed to be one of the causes of diabetes.
olfactory i's, masses of distorted pyramidal cells in the gray matter of the olfactory portion of the brain.
Pander's i's, reddish-yellow areas of corpuscular matter in the splanchnopleure of the embryo.
i. of Reil. See *insula*.

islet (i'let). A cluster of cells or an isolated piece of tissue. **Colleja's i's**, masses of pyramidal and stellate cells in the cortex of the gyrus hippocampi.

iso-agglutination (i'so-ag-lu-tin-a'shun). Agglutination by means of iso-agglutinins.

iso-agglutinin (i'so-ag-lu'tin-in). An agglutinin which is capable of agglutinating the red corpuscles of other individuals of the same species as that in which it is developed. An iso-agglutinin is formed in the blood of an animal by the injection of blood of another animal of the same species, or it may occur spontaneously, especially in man. See *blood typing*, under *typing*.

iso-amylamine (i'so-am-il-am'in). A liquid ptomaine, $(CH_3)_2CH.CH_2CH_2NH_2$, obtainable from stale yeast, cod liver oil, and other sources, especially the distillation of horn with potassium hydroxide. Leucine by the loss of CO_2 becomes iso-amylamine.

iso-amylan (i-so-am'il-en). See *pental*.

iso-apiol (i-so-a'pe-ol). Same as *isapiol*.

isobares (i'so-bärz) [*ισος* equal + *βάρος* weight]. Two or more chemical isotopic species which have the same atomic weight. They may have the same atomic number and chemical properties or they may be entirely different. See the table.

isobody (i'so-bod-e). An antibody which is active for tissues of other animals of the same species as the animal from which it is derived.

isobolism (i-sob'o-lizm) [*ισος* equal + *βάλλειν* to throw]. The tendency of motor nerve fibers to undergo maximal excitation on stimulation (Gotch, 1902; Verworm, 1912).

isocaine (i'so-kän). Para-aminobenzoyl diisopropyl amino-ethanol hydrochloride, a local anesthetic closely related to procaine, but twice as toxic; used for surface anesthetization of unbroken mucosa.

isocellular (i-so-sel'u-lar) [*ισος* equal + *L. cell'ula* cell]. Made up of equal and similar cells.

isocetylhydrocupreine (i'so-se'til-hi-dro-ku-pe'in). See *vuzin*.

ischolesterin (i'so-ko-le'ster-in). An isomeris form of cholesterol found in lanolin. Same as *phrenosterol*.

isochromatic (i'so-kro-mat'ik) [*ισος* equal + *χρώμα* color]. Of the same color throughout.

TABLE OF ISOBARES.

ATOMIC NUMBER.	NAME OF ELEMENT.	ATOMIC WEIGHT.
40	Argon.....	18
40	Calcium.....	20
70	Zinc.....	30
70	Germanium.....	32
74	Germanium.....	32

230	Protoactinium.....	91
234	Uranium X ₁	90
234	Uranium X ₂	91
234	Uranium Z.....	91
234	Uranium II.....	92

isochromatophil, isochromatophile (i'so-kro-mat'o-fil) [*ισος* equal + *χρώμα* color + *φιλεῖν* to love]. Staining anything equally with the same dye.

isochronal, isochronic (i-sok'ron-al, i-so-kron'-ik). Isochronous.

isochronous (i-sok'ron-us) [*ισος* equal + *χρόνος* time]. Performed in equal times: said of vibrations of one thing that take place at the same time and continue as long as those in another.

isochroous (i-sok'ro-us) [*ισος* equal + *χρόα* color]. Isochromatic.

isococaine (i'so-ko-ka'in). A patented artificial alkaloid; a local anesthetic, more speedy in its action than cocaine, but not suited for use in eye treatment.

isocolloid (i-so-kol'-oid). A colloid having the same composition in both phases—the disperse phase and the dispersion medium.

isocomplement (i-so-kom'-ple-ment). A complement from the same individual, or one of the same species, which furnishes the amboceptor.

isocomplementophilic (i''so-kom-ple-men-to-fil'-ik). Having affinity for isocomplements.

isocoria (i-so-ko're-ah) [*isos* equal + *kórh* pupil]. Equality in size of the two pupils.

isocreatinine (i''so-kre-at'in-in). A base similar to creatinine found in the muscle of fish.

isocyanide (i-so-si'an-id). One of a class of organic cyanides characterized by their disagreeable odor and formed by heating silver cyanide with alkyl iodides. Called also *carblyamine*.

isocyclic (i-so-sik'lik) [*isos* equal + *kúklos* circle]. A term for a closed chain compound in which all the atoms are of the same element; called also *carbocyclic*.

isocytolsine (i''so-si-tol'is-in) [*isos* equal + *cytolsine*]. A cytolsine which acts on the cells of animals of the same species as that from which it is derived.

isocytotoxin (i''so-si-to-tok'sin). A cytotoxin which destroys homologous cells of the same species.

isodactylism (i-so-dak'til-izm) [*isos* equal + *dáktylos* finger]. A hand with fingers of relatively even length.

isodiametric (i''so-di-am-et'rik) [*isos* equal + *diá* through + *métron* measure]. Having equal diameters or a uniform diameter.

isodispersoid (i''so-dis-per'soid). Same as *isocolloid*.

isodulcite (i-so-dul'sit). Rhamnose.

isodynamic (i''so-di-nam'ik) [*isos* equal + *δυναμς* power]. Generating equal amounts of force in heat units.

isodynamogenic (i''so-di-nam-o-jen'ik) [*isos* equal + *δυναμς* power + *-γεν* to produce]. Producing equal nerve force.

iso-electric (i''so-e-lek'trik) [*isos* equal + *electric*]. Uniformly electric throughout, or having the same electric potential, and therefore giving off no current. **i. period.** See under *period*. **i. point.** See under *point*.

iso-energetic (i''so-en-er-jet'ik). Exhibiting equal energy.

isoeugenol (i-so-u'-je-nol). A propenyl derivative of guaiacol, $\text{CH}_3\text{CH}:\text{CH}.\text{C}_6\text{H}_3(\text{OCH}_3)_2\text{OH}$, obtained from nutmeg oil.

isoform (i''so-form). A white, antiseptic powder, para-iodo-anisol, $\text{CH}_3\text{O}.\text{C}_6\text{H}_4\text{IO}_2$; because of its explosive properties it is marketed mixed with equal parts of calcium phosphate or glycerin.

isogame (i-sog'am-e) [*isos* equal + *γάμος* marriage]. Sexual conjugation in protozoa, in which the gametes are similar and equal in all respects.

isogamete (i-so-gam'et) [see *isogame*]. A gamete of the same size as the gamete with which it unites.

isogamous (i-sog'am-us) [see *isogame*]. Having the conjugating parts equal.

isogamy (i-sog'am-e). Isogame.

isogenesis (i-so-jen'es-is) [*isos* equal + *γένεσις* production]. Similarity in the processes of development.

isograft (i''so-graft). A graft taken from a person other than the patient.

isohemagglutinin (i''so-hem-ag-lu'tin-in). See under *hemagglutinin*.

isohemolysin (i''so-he-mol'is-in) [*isos* equal + *hemolysin*]. A hemolysin which acts on the blood of animals of the same species as that from which it is derived.

isohemolysis (i''so-he-mol'is-is). Hemolysis of the blood corpuscles of an animal by the serum from another animal of the same species.

isohypercytosis (i''so-hi-per-si-to'sis) [*isos* equal + *ὑπέρ* over + *κύτος* cell]. Increase in the number of leukocytes, with normal proportion of neutrophil cells.

isohypocytosis (i''so-hi-po-si-to'sis) [*isos* equal + *ὑπό* under + *κύτος* cell]. Decrease in the number of leukocytes, with normal proportion of neutrophil cells.

iso-iodokon (i''so-i-o-do'kon). Phenyl-tetra-iodo-phenolphthalein solution: used intravenously in cholecystography.

iso-ionia (i''so-i-o-ne-ah). Constancy of the ionic concentration of a solution.

isokreatinin (i''so-kre-at'in-in). A ptomaine from decaying fish, crystallizable in a yellow powder, $\text{C}_8\text{H}_7\text{N}_3\text{O}$: isomeric with kreatinin.

isolactose (i-so-lak'tös). A disaccharide formed from lactose by the action of an enzyme.

isolate (is'o-lät). To separate from other persons, materials, or objects.

isolation (i-so-la'shun). The separation from others of persons having a contagious disease.

isoleucine (i-so-lu'sin). An amino-acid, ethyl-methyl-alpha-amino-propionic acid, $\text{CH}_3(\text{C}_2\text{H}_5)_{-}\text{CH}(\text{NH}_2)\text{COOH}$, isolated as a decomposition product of fibrin and other proteins by F. Ehrlich (1903).

isophobia (i''so-lo-fö-be-ah) [*isolation* + *φόβος* fear]. Abnormal dread of being alone.

isolsyn (i-sol'is-in) [*isos* equal + *lysin*]. See *hemolysin*.

isolysis (i-sol'is-is). Hemolysis caused by an isolsyn.

isolytic (i-sol-it'ik). Pertaining to or caused by an isolsyn or by isolysis.

isomaltose (i-so-maw'tös). An isomeric form of maltose formed by treating glucose with strong acids or by the action of maltase on glucose.

isomastigote (i-so-mas'tig-öt) [*isos* equal + *μάστιξ* lash]. Having two equal and similar flagella at the anterior pole.

isomer (i''so-mer) [*isos* equal + *μέρος* part]. Any one of a number or set of isomeric substances.

isomeric (i-so-mer'ik) [*isos* equal + *μέρος* part]. Having the same number of atoms, but differing in the order in which the atoms are arranged in the molecule: said of chemical substances. When the substances have the same percentage of composition and the same molecular weights they are said to be *metameric*; when they have the same percentage of composition but different molecular weights, they are called *polymeric*.

isomerid (i-som'er-id). Same as *isomer*.

isomerism (i-som'er-izm) [*isos* equal + *μέρος* part]. The property of being isomeric. **nucleus i.**, isomerism between bodies which appear to differ only in the mode of connection of their carbon nuclei. **physical i.**, the isomerism of bodies which are chemically identical but physically different. **place i.**, isomerism in which two or more chemically isomeric bodies appear to differ only in the arrangement of the atoms attached to their nuclei. **stereochemical i.**, isomerism in which the atoms are the same and are connected in the same way, but are arranged differently in the molecule.

isomerous (i-som'er-us). Isomeric.

isometric (i-so-met'rik) [*isos* equal + *μέτρον* measure]. 1. Of equal dimensions. 2. Not isotonic.

isometropia (i''so-met-ro'pe-ah) [*isos* equal + *μέτρον* measure + *ὥψ* eye]. Equality in the refraction of the two eyes.

isomicrogamete (i-so-mi-kro-gam'et) [*isos* equal + *microgamete*]. A protozoan sexual cell or gamete of a small size, but equal in size to the gamete with which it conjugates.

isomorphic (i-so-mor'fik). Isomorphous.

isomorphism (i-so-mor'fiz'm) [*isos* equal + *μορφή* form]. The quality of being isomorphous.

isomorphous (i-so-mor'fus) [*isos* equal + *μορφή* form]. Having the same form.

isomuscarine (i-so-mus'kar-in). A basic substance formed by oxidizing choline. It is isomeric with muscarine, but has different physiologic properties.

isonaphthol (i-so-naf'thol). A crystalline antiseptic derived from naphthalene: isomeric with naphthol.

isonephrotoxin (i'so-nef-ro-tok'sin) [*isos* equal + *nephrotoxin*]. A nephrotoxin which acts on cells of the animals of the same species from which it is derived.

isonitroso-antipyrine (i'so-ni-tro'so-an-te-pi'-rin). An antipyretic compound, $C_{11}H_{11}N_3O_2$.

isonormocytosis (i'so-nor-mo-si'to'sis) [*isos* equal + *normocyte*]. The condition in which the leukocytes of the blood are normal, both in actual number and in the relative proportion of the various sorts. Called also *dinormocytosis* and *normonormocytosis*.

isopathy (i-sop'ath-e) [*isos* equal + *πάθος* illness]. Treatment by administering either a part of the organ or tissue affected (J. F. Hermann, 1848) or the virus that causes the disease.

isopelletierine (i'so-pel-e-ti'-rin). A liquid alkaloid, C_8H_9NO , from the root bark of pomegranate: its tannate and sulphate are used against tapeworms. Dose, 10-20 minims (0.666-1.333 cc.); of sulphate, 3-6 grains (0.2-0.4 Gm.); of tannate, 12-24 grains (0.78-1.55 Gm.).

isopepsin (i-so-pep'sin). Pepsin modified by heat.

isophagy (i-sof'aj-e) [*isos* the same + *φάγειν* to eat]. Autolysis.

isophan (i'so-fan) [*isos* equal + *φαν* to show]. A hybrid which looks like other hybrids, but yet has a different germinal constitution.

isophoria (i-so-fō-re-ah) [*isos* equal + *φώρας* bearing]. Equality in the tension of the vertical muscles of each eye; absence of hyperphoria and of hypophoria.

isopia (i-so'pe-ah) [*isos* equal + *ὄψις* vision]. Equality of vision in the two eyes.

isoplassant (i-so-plas'ont) [*isos* equal + *πλασσειν* to form]. Either of two things which have certain features in common.

isoplastic (i-so-plas'tik) [*isos* equal + *πλαστικός*]. Taken from another animal of the same species: said of transplantation.

isopral (i'so-pral). Trichlorisopropyl alcohol, $CCl_3CHOH.CH_3$, a white, crystalline substance, soluble in ether, alcohol, and water. It is used as a hypnotic like chloral hydrate.

isoprecipitin (i'so-pre-sip'it-in). A precipitin which is active against the serum of animals of the same species as the animal from which it is derived.

isoprene (i'so-prēn). A hydrocarbon, $CH_2:CH.C(CH_3):CH_2$, formed in the dry distillation of rubber.

isopropyl (i-so-pro'pil). The univalent radical, $(CH_3)_2CH$.

isopropylamino-acetic acid. See *valin*.

isopters (i-sop'terz) [*isos* equal + *ὁπτήρ* observer]. The curves in the field of vision that denote equality of visual acuity (Hirschberg).

isorubin (i-so-ru'bin). New fuchsin.

isoscope (i'so-skōp) [*isos* equal + *σκοπεῖν* to view]. An apparatus for observing the changes of position of the horizontal and vertical lines in the movements of the eyeball.

isoserine (i-so-se'rin). A compound, $CH_2NH_2.CHOH.COOH$, isomeric with serine.

isotherotherapy (i'so-se-ro-ther'ap-e). Treatment by use of an isosermum.

isosermum (i-so-se'rum) [*isos* equal + *serum*]. A serum obtained from a person who has had the same disease as the patient who is being treated.

isosmotic (i-sos-mot'ik) [*isos* equal + *osmotic*]. Having the same osmotic pressure. See *isosmotic solution*, under *solution*.

Isospora (i-sos'po-rah) [*isos* equal + *σπόρα* spore]. A genus of coccidia characterized by the presence of two tetrazoid spores in the oocyst. **I. bigemina**, a form found in dogs and cats. **I. hominis**, a nonpathogenic coccidian sometimes temporarily present in the small intestine of man. Called also *Coccidium bigeminum*, *C. hominis*, *C. perforans*, *Cytospermium hominis*, *Eimeria stiedae*, *Isospora bigemina*.

isospore (i'so-spōr) [*isos* equal + *σπόρος* seed]. A nonsexual spore that develops directly into an adult without conjugation. See *anisospore*.

isosthenuria (i'so-sthen-u're-ah) [*isos* equal + *σθένος* strength + *ουρον* urine]. The decreased variation in the specific gravity of the urine from specimen to specimen in nephritis, as contrasted with the normal variation of ten or more points.

isostimulation (i-so-stim-u-la'shun). Functional stimulation of cell action by the injection of the same sort of cells, as of liver function by the injection of liver cells.

isotamieutic (i'so-tam-e-u'tik) [*isos* equal + *ταμειναι* to save]. Sparing equally.

isotherapy (i-so-ther'ap-e) [*isos* equal + *θεραπεία* treatment]. Same as *isopathy*.

isothermal (i-so-ther'mal) [*isos* equal + *θερμη* heat]. Having the same temperature.

isothermognosis (i'so-ther-mo-gno'sis) [*isos* equal + *θερμη* heat + *γνῶσις* recognition]. Disordered sense perception in which pain, cold, and heat stimuli are all perceived as heat.

isothiocyanate (i-so-thi-o-si'an-at). A salt of isothiocyanic acid. **acrynyl i.**, a compound, $C_7H_7O.NCS$, found in white mustard. **allyl i.**, a compound, $C_6H_5.NCS$, found in oil of mustard. **butyl i.**, a compound, $CH_3.CH_2(CH_2)_3.NCS$, found in horseradish. **phenyl-ethyl i.**, a compound, $CH_3.CH_2(C_6H_5).NCS$, found in oil of mignonette.

isothymol (i-so-thi'mol). Carvacrol.

isotonia (i-so-to'ne-ah) [*isos* equal + *τόνος* tone]. 1. The normal resistance of parts of elements to stimuli or other influences. 2. Equality in tension between two elements of a solution or between two solutions.

isotonic (i-so-ton'ik) [*isos* equal + *τόνος* tone]. Having a uniform tonicity or tension. **i. solutions** are those which have the same osmotic pressure.

isotonicity (i'so-to-nis'it-e). The quality of being isotonic.

isotopes (i'so-tōps) [*isos* equal + *τόπος* place]. Two or more chemical elements which have the same atomic number, the same nuclear charge, the same number and arrangement of orbital electrons, and identical chemical properties, but which differ in atomic weight or in the structure of the nucleus.

TABLE OF ISOTOPES.

ATOMIC NUMBER.	NAME OF ELEMENT.	ATOMIC WEIGHT.

See also *Table of the Radioactive Elements.*

isotoxic (i-so-tok'sik). Same as *isolytic*.

isotoxin (i-so-tok'sin) [*isos* equal + *toxin*]. A toxin formed in an animal by the inoculation of material from another animal of the same species.

isotransplant (i-so-trans'plant) [*isos* equal + *transplant*]. A piece of tissue taken from one individual and transplanted into another individual of the same species.

isotransplantation (i''so-trans-plan-ta'shun) The making of an isotransplant.

isotrimorphism (i''so-tri-mor'fizm) [*isos* equal + *τρεῖς* three + *μορφή* form]. Isomorphism between the three forms of two trimorphous substances.

isotrimorphous (i''so-tri-mor'fus). Having the quality of isotrimorphism.

isotropic, isotropous (i-so-trop'ik, i-sot'ro-pus) [*isos* equal + *τροπή* turn]. Having like properties in all directions, as in a cubic crystal or in an egg without predetermined axis.

isotypical (i-so-tip'ik-al) [*isos* equal + *typical*]. Of the same type.

isouretin (i-so-u-re'tin). Formamidoxim, NH₂-CH : NOH, a compound isomeric with urea.

ispaghul (is'pag-ul). A plant of East India, *Planta'go is'paghula*. The seeds contain a large amount of mucilage.

issue (is'yū). A suppurating sore made and kept open by inserting an irritant substance. **i. pea**, a pellet of orris root, ivy wood, or other material used in making and maintaining an issue.

istarín (is'tar-in). A substance said to be obtainable from brain tissue.

isthmectomy (is-mek'to-me) [*isthmus* + *ἐκτομή* excision]. Excision of an isthmus; particularly excision of median goiter by removal of the isthmus of the thyroid gland.

isthmian, **isthmie** (is'me-an, is'mik). Pertaining to any isthmus, as the *isthmus faucium*.

isthmitis (is-mi'tis). Inflammation of the isthmus of the fauces.

isthmocholosis (is'mo-ko-lo'sis) [*ισθμός* isthmus + *χολή* bile]. Faucal catarrh with bilious disturbance.

isthmoparalysis (is'mo-par-al'is-is). Isthmoplegia.

isthmoplegia (is-mo-ple'je-ah) [*ισθμός* isthmus + *πληγή* stroke]. Paralysis of the isthmus faucium.

isthmospasm (is'mo-spazm). Spasm of an isthmus, as of the fallopian tubes or of the fauces.

isthmus (isth'mus, ist'mus, is'mus) [*ισθμός*]. A narrow strip of tissue or a narrow passage connecting two larger parts, especially a narrow segment of the brain forming the plane of separation between the rhombencephalon and the cerebrum. Called also *rhombencephalic i.* **aortic i.**, **i. aor'tae** [B N A], a narrow part of the aorta, seen especially in the fetus, at the point where the ductus arteriosus is attached. **i. cartilag'inis auris** [B N A], a bridge of cartilage connecting the cartilage of the external auditory meatus with the main part of the cartilage of the auricle. **i. of the eustachian tube**, the narrowest part of the eustachian tube. **i. fau'cium** [B N A], the passage between the mouth and the fauces. **i. glan'dulae thyreo'deae** [B N A], the isthmus of the thyroid. **Guyon's i.**, a prolongation and narrowing of the internal os uteri. **i. gy'ri fornicati** [B N A], the constricted portion of the fornicate gyrus which connects the posterior end of the gyrus cinguli with the hippocampal gyrus. **Haller's i.**, the fretum of Haller. **His' i.**, isthmus rhombcephali. **Krönig's i.**, a narrow, ribbon-like area of resonance extending over the shoulder and connecting the larger areas of Krönig in front and behind. **i. of limic lobe**. Same as *i. gy'ri fornicati*. **i. prosta'tae** [B N A], the middle lobe of the prostate. **rhombcephalic i.** See *isthmus*. **i. of the thyroid**, the band or strip of tissue that connects the lobes of the thyroid gland. **i. tu'bæ auditivæ** [B N A], the narrowest part of the eustachian tube. **i. tu'bæ uterini** [B N A], the narrow part of the fallopian tube where it joins the uterus. **i. u'teri**, Guyon's isthmus.

istizin (is'tiz-in). An orange-yellow crystalline powder, dioxanthraquinone, used as a purgative.

isuria (i-su're-ah) [*ἴσος* equal + *οὐρὸν* urine]. Excretion of urine at a uniform rate.

isutan (is'u-tan). Same as *bismutan*.

Italian method (it-al'yan). See under *rhinoplasty*.

Itard's catheter (e-tahrz') [Jean Marie Gaspard Itard, French otologist, 1774-1838]. See *catheter*.

Itard-Cholewa sign (e-tar'ko-la'vahz) [Itard; Erasmus Rudolph Cholewa, German physician, born 1845]. See under *sign*.

itate (i'tät). A substance in milk which oxidizes nitrite to nitrate.

itch (itsh). 1. A skin disorder marked by itching. 2. See *scabies*. **bakers' i.**, a skin disease affecting the hands of bakers, and due to the irritation produced by yeast and dough. **barbers' i.** See *tinea sycosis*. **barley i.** See *Pediculoides*. **bath i.**, pruritus due to bathing in cold water. **Bedouin i.**, a vesiculopapular eruption of Algeria, analogous to lichen tropicus. **brick-**

layers' i., eczema in bricklayers caused by the caustic action of lime. **chorioptic i.** See *Chorioptes*. **coolie i.**, an itching disease, of unknown cause, of hot countries, probably uncinariasis. **copra i.**, a dermatitic eruption affecting workers in copra and caused by the presence of an acarus (*Tyroglyphus*) found in that material. **Cuban i.** See *amaas*. **dew i.** Same as *ground i.* **dhobie i.**, the name given to tinea cruris in certain tropical countries, where it assumes a form more intensely inflammatory than in temperate climates. Cf. *linea cruris*. **flarial i.**, crawl-crawl. **foot i.**, ground itch. **frost i.** See *pruritus hiemalis*. **grain i.**, an urticarial eruption in those who handle grain, caused by *Pediculoides ventricosus* and *Ditropenolus aureoviridis*. **grocers' i.**, an eczema of the hands peculiar to grocers, and said to be sometimes due to a sugar mite (*Tyroglyphidae*). **ground i.**, the itching eruption caused by the entrance into the skin of the larvae of uncinariæ. Called also *foot i.*, *toe i.*, *dew i.*, *mazamorra*, *panighao*, and *wet weather i.* **lumbermen's i.**, pruritus hiemalis. **Malabar i.**, a skin disease occurring on the Malabar coast, believed to be a variety of tinea trichophytina. **millers' i.** See *Pediculoides*. **miners' i.**, ground itch. **Norway i.**, an itch produced by a species of *Sarcoptes* parasitic on the wolf. **poultrymen's i.**, a dermatitis caused by a chicken mite, *Dermanyssus gallinæ*. **prairie i.**, a name for various skin affections marked by pruritus, and seen among farmers, lumbermen, etc., due probably to uncleanness and the irritation of coarse underclothing. **straw i.**, **straw bed i.**, a dermatitis accompanied by itching, caused by a mite, *Pediculoides ventricosus*, which preys on the larvae of a certain insect which lives on straw. The disease affects persons who sleep on mattresses containing infected straw. Called also *dermatitis schambergi*. **summer i.**, prurigo aestivalis. **swamp i.**, *toe i.*, ground itch. **tar i.**, a diffuse form of dermatitis seen in persons working with or exposed to tar. **warehousemen's i.**, eczema of the hands affecting those who handle goods in a warehouse. **washerwomen's i.**, psoriasis or eczema on the hands of washerwomen. **water i.**, **wet weather i.** Same as *ground i.* See *panighao*. **winter i.**, pruritus hiemalis.

itch disease. See under *disease*.

itching (itsh'ing). Pruritus; a teasing irritation of the skin.

itch mite (itsh mīt). A mite of the family Sarcoptidae, especially *Sarcoptes scabiei*.

itchol (itsh'ol). A proprietary ointment for the relief of itching, containing iodoform, phenol, oil of eucalyptus, etc.

itch pus. The contents of the itch vesicles from which the homeopathic remedy, psorinum, is prepared.

iter (i'ter) [L.]. A way or tubular passage. **i. ad infundibulum**, the passage from the third ventricle to the infundibulum. **i. a tertio ad quartum ventriculū**, the aqueduct of Sylvius. **i. chor'dæ antē'rius**, the opening by which the chorda tympani nerve leaves the tympanum. **i. chor'dæ poste'rius**, the passage by which the chorda tympani nerve enters the tympanum. **i. den'tium**, the passage through which a permanent tooth makes its appearance.

iteral (i'ter-al, it'er-al). Pertaining to an iter.

-ites (i-res, a masculine termination agreeing with *δρόσφ*, drosy (understood)—e. g., tympanites, the windy drosy]. A termination indicating drosy of the part to the name of which it is attached.

ithyccyphos, **ithyokypshosis** (ith-is-i'fōs, ith'-e-o-ki-fō'sis) [*ἰθὺς* straight + *κυφός* humped]. Backward projection of the spinal column.

ithylordosis (ith'-e-lor-do'sis) [*ἰθὺς* straight + *λόρδωσις* bending forward]. Lordosis without any lateral curvature.

-itis [*itis*, a feminine adjectival termination agreeing with *πόρος* (understood)—*e. g.*, neuritis = *ἡ νευρίτις πόρος*, the disease of the nerves, which soon becomes the inflammatory disease]. A termination denoting inflammation of the part to the name of which it is attached.

itrol (it'rol). Silver citrate, $\text{CO.OAg.C(OH).(CH}_2\text{--COOAg)}_2$, a light, tasteless powder, slightly soluble in water. It is antiseptic, and is used for gonorrhea, gleet, wounds, and skin diseases, and in mouth washes, gargles, and ointments, in 1-2 per cent ointment or 1:4000 solution.

itrosyl (it'ro-sil). Concentrated nitrous ether.

ittiolo (it-e-o'lo). A brownish-black syrupy liquid, a brand of sulphonated bitumen, ammonium sulphochthylolate, a distillate from the bituminous ashes of Siffoni Vallepiiana, Italy: used like ichthyol.

I. U. Abbreviation for *immunizing unit*.

ivain (i'va-in). A bitter, yellow substance from *Achillea moschata*.

ivaol (i'va-ol). A thick, fragrant, oily substance obtained by distillation from *Achillea moschata*.

ivory (i'vo-re) [*L. ebur, eburneus*]. 1. The bone-like substance of the tusks or teeth of elephants. 2. Dentin. **i. black**. Same as *animal charcoal*.

ivyol (i've-ol). A solution in olive oil of an irritant oil extracted from the leaves of poison ivy, *Rhus toxicodendron*: used internally in ivy poisoning.

Ixodes (iks-o'dēz) [*ἰξόδης* like bird-lime]. A genus of acarids, including cattle ticks, wood

ticks, and other vermin that become parasitic on man and beasts. **I. hexagonus** occurs on squirrels in California. **I. holocyclus**, a species which causes tick paralysis in young stock in New South Wales. **I. pilosus**, a species which causes tick paralysis in sheep in South Africa. **I. ricinus**, the European castor bean tick; so called because of its resemblance to a castor oil bean. It is parasitic on cattle and transmits *Piroplasma bigeminum*.

ixodiasis (iks-o-di'as-is). Any disease or lesion due to the bite of ticks; tick infection.

ixodic (iks-od'ik). Caused by ticks.

Ixodidae (iks-od'id-e). A family of the Acarina. It includes the true ticks which are characterized by the presence of a scutum. It includes the following genera: *Amblyomma*, *Dermacentor*, *Hemaphysalis*, *Ixodes*, *Margaropus*, and *Rhipicephalus*.

ixodin (iks'o-din). A briny extract of wood ticks. Used intravenously, it diminishes the heart's action and lessens inspiration.

Ixodoidea (iks-o-doi'de-ah). An order of ticks of the class Arachnida; the ticks.

ixomyelitis (ik'so-mi-el-i'tis) [*ἰξός* waist + *μυελίτις* marrow + *-itis* inflammation]. Inflammation of the lumbar part of the spinal cord.

izal (i'zal). A proprietary disinfectant for external use in $\frac{1}{2}$ -1 per cent solution. It is an albuminous emulsion of monotonic phenols boiling between 205 and 300 C.

J

J. Symbol for *Joule's equivalent*.

jaba (jah'bah). An Asiatic plant, *Hibiscus rosa sinensis*: used in menorrhagia.

jaborandi (jab-o-ran'de) [Brazilian]. The leaflets of the rutaceous shrub, *Pilocarpus jaborandi*, a South American plant, and other congeneric species. Jaborandi produces salivation, sweating, increased flow of the secretions, and lowering of temperature and blood pressure. It is used as a diaphoretic and sialogogue in dropsy and hydrothorax, in the early stages of acute fevers, pneumonia, malarial fever, uremia, etc.; it is also employed as a miotic and to reduce intra-ocular tension. Dose of extract, 2-10 grains (0.133-0.666 Gm.); of fluidextract, 30-60 minims (2-4 cc.); of tincture, 2-4 fluidrachms (8-16 cc.); of infusion, 1-2 fl.oz. (30-60 cc.). See *pilocarpine*. **large leaved j.**, *Pernambuco j.* See *Pilocarpus jaborandi*. **small leaved j.**, *Pilocarpus microphyllus*.

jaboridine (jab-o-rid'in). An alkaloid, $\text{C}_2\text{H}_2\text{N}_4\text{O}_4$, from jaborandi.

jaborine (jab'o-rin). An alkaloid, $\text{C}_{11}\text{H}_{18}\text{N}_2\text{O}_8$, from jaborandi: it resembles atropine in its properties.

Jaboulay's button, operation (zhah-oo-lāz') [Mathieu Jaboulay, French surgeon, 1860-1913]. See under *button* and *operation*.

Jacaranda (jak-ah-ran'dah). A genus of bignoniaceous trees of tropical America. **J. caroba** is used in syphilis, urethritis, skin diseases, and rheumatism. Dose of fluidextract, 16-60 minims (1-4 cc.). **J. lancifolia** is used in gonorrhea, etc. Dose of tincture, 15 minims (1 cc.); of fluidextract, 16-30 minims (1-2 cc.).

jacareuba (jak-ah-ra'oo-bah). The *Calophyllum brasiliense*, a medicinal plant of South America.

Jaccoud's fever, sign (zhah-kooz') [Sigismond Jaccoud, French physician, 1830-1912]. See under *fever* and *sign*.

jacket, plaster-of-paris (jak'et). A casing of plaster of paris enveloping the body for the purpose of correcting deformities. **Sayre's j.**, a plaster-of-paris jacket used as a support for the spinal column. **strait j.**, a contrivance for restraining the limbs, especially the arms, of a violently insane person. **Wilcock's respiratory j.**, a sort of jacket used to strengthen the movements of respiration in emphysema of the lungs.

Jackson's membrane (jak'sunz) [Jabez North Jackson, surgeon in Kansas City, born 1868]. See under *membrane*.

Jackson's sign (jak'sunz). 1. [James Jackson, Jr., Boston physician, 1810-1834]. See under *sign*. 2. [Chevalier Jackson, American laryngologist]. See *asthmatic wheeze*, under *wheeze*.

jacksonian epilepsy (jak-so-ne-an) [after John Hughlings Jackson, English physician, 1834-1911]. See under *epilepsy*.

Jacob's membrane, ulcer (ja'kubz) [Arthur Jacob, Irish ophthalmologist, 1790-1874]. See under *membrane* and *ulcer*.

Jacobson's canal, cartilage, nerve, organ, plexus, etc. (ja'kub-sunz) [Ludwig Levin Jacobson, Danish anatomist, 1783-1843]. See under *canal*, *cartilage*, *nerve*, *organ*, *plexus*, etc.

Jacobson's retinitis (ja'kob-sunz) [Julius Jacobson, German ophthalmologist, 1829-1889]. Syphilitic retinitis.

Jacquemier's sign (zhahk-me-āz') [Jean Marie Jacquemier, French obstetrician, 1806-1879]. See under *sign*.

Jacquemin's test (zhahk-mahz'). See under *tests*.

Jacquet's disease or dermatitis (zhah-āz') [L. Jacquet, French dermatologist, 1860-1913]. See under *disease*.

jactation (jak-ta'shun). Jactitation.

jactitation (jak-tit-a'shun) [*L. jactitatio; jactitare* to toss]. The tossing to and fro of a patient in acute disease.

- jaculiferous** (jak-u-lif'er-us) [L. *jaculum* dart + *ferre* to bear]. Bearing prickles.
- Jadassohn's disease** (yah'das-ōnz) [Josef *Jadassohn*, Swiss dermatologist, born 1853]. Maculopapular erythrodermia.
- Jadelot's furrows, lines** (zhad-lōz') [Jean François Nicolas *Jadelot*, physician in Paris, died 1830]. See under *furrow* and *line*.
- Jaeger's test-types** (ya'gerz) [Edward *Jaeger* von Jasthal, Austrian oculist, 1818-1884]. See under *test-types*.
- Jaffé's test** (zhah-fāz') [Max *Jaffé*, German physiologic chemist, 1841-1911]. See under *tests*.
- jagziekte** (yahg'ze-ek'te) [Dutch *jagt* to drive + *ziekte* sickness]. A specific chronic catarrhal pneumonia of sheep in South Africa.
- jail fever** (jāl fe-ver). Typhus fever.
- Jaksch's anemia** (or disease), **sign, test**, etc. (yaks) [Rudolf von *Jaksch*, physician in Prague, born 1855]. See *anemia infantum pseudoleukaemica*, also under *sign* and *tests*.
- jalap** (jal'ap) [L. *jala'pa*, from *Jalapa*, a city of Mexico]. The root of *Exogonium jalapa* and other plants of the same genus growing in Mexico. It is a hydragogue cathartic and cholagogue, and is given in constipation, for the purpose of removing dropsical effusions by the bowels, and to produce revulsion in congestion of the brain. See also *convolvulin*. Dose in powder, 15-30 grains (1-2 Gm.); of abstract, 1-5 grains (0.066-0.33 Gm.); of fluidextract, 15-30 minims (1-2 cc.); of tincture, 30-60 minims (2-4 cc.); of extract, 4-8 grains (0.266-0.533 Gm.); of resin (*resina jalapae*, U. S. P.), 2-5 grains (0.133-0.333 Gm.); of compound powder (*pulvis jalapae composita*, U. S. P.), 10-60 grains (0.666-4 Gm.). **Orizaba j.** See *ipomea*.
- jalapin** (jal'ap-in). 1. A purgative resinous glucoside, $C_{24}H_{36}O_{16}$, from various kinds of jalap. 2. A concentration or impure resin from jalap: purgative. Dose, 3 grains (0.2 Gm.).
- jalon** (j'al-on). A proprietary colloidal silver solution for internal use.
- jambu assu** (zham'boo as-oo'). The root of *Piper jaborandi*, a tree of Brazil: a stimulant febrifuge. Dose of fluidextract, 10-30 minims (0.666-2 cc.).
- jambul** (jam'bul). The bark of *Eugenia jambos*, a tree of the East Indies: a stomachic astringent. Dose, 5-10 grains (0.333-0.666 Gm.); of fluidextract, 10-20 minims (0.666-1.333 cc.).
- jambulol** (jam'bu-lol). A phenolic compound from jambul seeds.
- James' powder** [Robert *James*, English physician, 1705-1776]. Pulvis antimonialis.
- jamrosin** (jam-ro'sin). The fluidextract of an East Indian myrtaceous plant: used in diabetes in doses of 6 drops.
- Janet's disease, test** (zhan-ēz') [Pierre *Janet*, French physician, born 1850]. See under *disease* and *tests*.
- Janeway's pill** (jān'wāz) [Edward Gamaliel *Janeway*, physician in New York, 1841-1911]. Compound pill of aloes and podophyllin.
- Janeway's sphygmomanometer** (jān'wāz) [Theodore C. *Janeway*, American physician, 1872-1917]. See *sphygmomanometer*.
- janiceps** (jan'is-eps) [L. *Ja'nus* a two-faced god + *ca'pi* head]. A monster with one head and two faces. **j. asymmetros**, a janiceps with one imperfect and one more complete face.
- Jansen's operation** (yah'n'senz) [Albert *Jansen*, contemporary German otologist]. See *operation*.
- Janthinosoma** (jan-thin-o-so'mah). A genus of mosquitos, *J. lul'zi*, a species which transports the eggs of bot flies (Dermatobia) glued to its abdomen. *J. postica'ta*, a species which also transports the eggs of a bot fly.
- Janus green**. See under *green*.
- japaconine** (jap-ak'o-nin). An amorphous alkaloid, $C_{25}H_{43}NO_9$, derivable from japaconitine.
- japaconitine** (jap-ak-on'it-in). An exceedingly poisonous alkaloid, $C_{34}H_{49}NO_{11}$, derived from a Japanese aconite.
- Japanese river fever**. See *tsutsugamushi disease*, under *disease*.
- japbenzaconine** (jap-ben-zak'o-nin). An alkaloid, $C_{32}H_{47}NO_{10}$, from a Japanese aconite.
- japonic acid** (jap-on'ik). An acid from catechu or terra japonica; a variety of tannic acid.
- jargonaphasia** (jar'go-naf-a'ze-ah). A speech defect in which several words are run into one.
- Jarisch's ointment** (yah'rish-es) [O. *Jarisch*, Austrian dermatologist, born 1850]. See *ointment*.
- Jarjavay's muscle** (zhar'zha-vāz) [Jean François *Jarjavay*, French surgeon, 1815-1868]. The depressor urethrae muscle.
- Jarvis' snare** (jahr'vis-ez) [William Chapman *Jarvis*, New York laryngologist, 1855-1895]. See under *snare*.
- jasmin, yellow** (jas'min). See *Gelsemium*.
- jasmone** (jas'mōn). A yellowish oil or ketone derived from oil of jasmine.
- Jateorrhiza** (ja'te-o-ri'zah). See *calumba*.
- jatrevin** (ja-tre'vin). A condensation product of menthol and isobutylphenol: used as a spray in respiratory diseases in a 2-5 per cent solution.
- Jatropha** (jat'ro-fah) [ἱατρὸς physician + τροφή nourishment]. A genus of tropical euphorbiaceous plants. *J. curcas* affords the physic nut. See *Curcas*. *J. manihot* produces tapioca and casareep.
- jaundice** (jawn'dis) [L. *icterus*]. Yellowness of the skin, eyes, and secretions, due to the presence of bile pigments in the blood; icterus. **absorption j.**, that due to absorption of bile into the blood vessels. **acathectic j.**, jaundice due to pathologic changes in the liver cells, which become unable to retain their secretions. **acholuric j.**, jaundice without bile pigments in urine or with only minute quantities of them. **acute febrile j.**, **acute infectious j.** See *Weil's disease*, under *disease*. **anhepatic j.**, **anhepatogenous j.**, jaundice which is not hepatogenous. **black j.**, Winckel's disease. **blue j.** See *cyanosis*. **Budd's j.**, acute parenchymatous hepatitis. See *hepatitis*. **catarrhal j.**, that which is due to closure of the common bile duct by duodenal catarrh; catarrhal cholangitis. **complete j.**, the presence of both bile pigments and bile salts in the blood. **dissociated j.**, **dissociation j.**, jaundice in which either the pigment or the salts of bile formed within the liver are separately shunted from the biliary path into the lymph vessels or blood vessels of the liver. See *hepatic dissociation j.* and *renal dissociation j.* **emotional j.**, jaundice resulting from deep emotion, such as great anxiety. **epidemic catarrhal j.** See *Weil's disease*, under *disease*. **familial acholuric j.** See *hemolytic j.* **febrile j.**, an acute infectious jaundice. See *Weil's disease*, under *disease*. **hemaphelic j.** Same as *urobilin j.* **hematogenous j.**, that which is due to disintegration of the red blood corpuscles. **hematohepatogenous j.**, jaundice that is partly hematogenous and partly hepatogenous. This form includes toxicemic jaundice and the jaundice seen in malaria, yellow fever, typhoid, typhus, acute malaria, yellow atrophy of the liver, etc. **hemolytic j.**, a rare, chronic, and generally hereditary disease characterized by periods of excessive hemolysis due to abnormal fragility of the red corpuscles. It is accompanied by enlargement

Janiceps.

of the spleen and by jaundice. The hereditary or congenital form is known as *congenital family icterus*, *familial acholuric j.*, and *Minkowski-Chauffard syndrome*; the acquired form is known as *acquired hemolytic j.* and *Hayem-Widal syndrome*. **hemorrhagic j.** See *Weil's disease*, under *disease*. **hepatic dissociation j.**, the presence of bilirubin or bile salts separately in the blood stream. **hepatogenic j.**, that which is due to some disease or disorder of the liver. **infectious j.** See *Weil's disease*, under *disease*. **inogenous j.**, icterus neonatorum due to change of the hemoglobin in the tissues. **lutein j.** Same as *carotinemia*. **malignant j.** See *icterus gravis*. **malignant j. of dogs.** See *biliary fever of dogs*, under *fever*. **j. of the new-born.** See *icterus neonatorum*. **obstructive j.**, that which is due to a mechanical impediment to the flow of the bile. **occult j.**, bile in the blood in such small quantity as to cause no symptoms. **physiologic j.**, mild icterus neonatorum lasting during the first few days after birth. **picric acid j.**, jaundice due to picric acid poisoning in munition workers or by its ingestion in malingering soldiers. **renal dissociation j.**, the presence of bile pigments in the blood due to separation of the biliary elements through renal filtration of the bile salts. **retention j.**, obstructive jaundice. **spirochetal j.**, *Weil's disease*. See under *disease*. **toxemic j.**, jaundice produced by poisons, such as phosphorus, arseniuretted hydrogen, picric acid, snake poison, etc. **urobilin j.**, jaundice due to the presence of urobilin in the blood. **xanthochromic j.**, jaundice marked by yellow discoloration of the palms, soles, and mucous membranes, but without bile pigment in the urine.

Javal's ophthalmometer (zhav'alz') [Louis Emile Javal, French oculist, 1839-1907]. See *ophthalmometer*.

javanin (jav'an-in). A proprietary pancreas extract.

javanine (jav'an-in). An alkaloid from cinchona.

Javelle solution (zha-vel') [named from Javelle Works, near Paris, where the solution was first made by Percy.] See under *solution*.

javellization (jav-el-iz-a'shun). The purification of water supplies by treatment with Javelle solution of hypochlorites.

javenine (jav'en-in). A crystalline alkaloid from *Cinchona calisaya* var. *Javanica*.

jaw, j. bone (jaw, jaw bōn). See *maxilla*. **j. chattering**, clonic masticatory spasm causing a movement like the chattering of jaws. **j. jerk**. See under *reflex*. **lockjaw**. See *trismus*. **lumpy j.** See *actinomycosis*. **phossy j.**, a popular name for necrosis of the jaw due to phosphorus poisoning. **pig j.**, abnormal protrusion of the upper jaw of the horse, with hypertrophy of the teeth.

Jaworski's bodies or corpuscles, test (yah-wor'skēz') [Valery Jaworski, Polish physician, born 1849]. See under *corpuscle* and *tests*.

jaw winking. Involuntary movements of the eyelid occasionally associated with movements of the jaw.

Jeanselme's nodules (zhah-selmz') [Edouard Jeanselme, French physician, born 1858]. See under *nodule*.

jecolein (je-ko-le'in). A glyceride of jecoleic acid from cod liver oil.

jecoral (jek'o-r'al). Pertaining to the liver.

jecorin (jek'o-rin) [L. *je'cur* liver]. 1. A water-soluble glucophospholipin, $C_{105}H_{188}N_6SP_3O_{46}$, found both in normal and in diabetic blood, the liver, spleen, brain, etc. 2. A patented cod liver oil substitute containing calcium chlorhydrophosphate, lactic acid, phosphoric acid, bromine, iodine, and ferrous iodide.

jecorize (jek'or-iz) [L. *je'cur* liver]. To impart to a food the therapeutical qualities of cod liver oil, as by treating milk with ultraviolet ray.

jecoral (jek'or-ol). A proprietary preparation of cod liver oil.

jecovol (jek'o-vol). An egg emulsion of cod liver oil, with glycerophosphates of calcium, sodium, and iron.

jecur, jecus (je'kur, je-kus). Latin for *liver*.

Jeddah ulcer (jed'ah) [Jeddah, a town of Arabia]. *Furunculus orientalis*.

Jeffersonia (jef'er-so'ne-ah) [named for T. Jefferson, 1743-1826]. A genus of berberidaceous herbs. The root of *J. diphylla*, of North America, is tonic, diuretic, and expectorant: emetic in large doses. Dose of fluidextract, 20-60 minims (1.333-4 cc.).

jejunal (je-ju'nal). Pertaining to the jejunum.

jejunectomy (je-ju-nek'to-me) [*jejunum* + *ἐκτομή* excision]. Excision of the jejunum or a part of it.

jejunitis (je-ju-ni'tis). Inflammation of the jejunum.

jejunocolostomy (je-ju'-u-no-ko-lo's-to-me) [*jejunum* + *colon* + *στόμα* mouth]. The formation of an artificial passage between the jejunum and the colon.

jejuno-ileitis (je-ju'-u-no-il-e-i'tis). Inflammation of the jejunum and ileum together.

jejuno-ileostomy (je-ju'-u-no-il-e-os'to-me) [*jejunum* + *ileum* + *στόμα* mouth]. The formation of an artificial passage between the jejunum and the ileum.

jejunojejunostomy (je-ju'-u-no-je-ju-nos'to-me). The operative formation of an anastomosis between two portions of the jejunum.

jejunostomy (je-ju-nos'to-me) [*jejunum* + *στόμα* mouth]. The surgical creation of a permanent opening through the abdominal wall into the jejunum.

jejunotomy (je-ju-not'o-me) [*jejunum* + *τέμνω* to cut]. Surgical incision of the jejunum.

jejunum (je-ju-num) [L. "empty"]. That portion of the small intestine which extends from the duodenum to the ileum.

Jellinek's sign (yel'in-eks) [Samuel Jellinek, contemporary physician in Vienna]. See under *sign*.

jelloid (jel'oid). A medicated gelatin tablet or lozenge.

jelly (jel'e) [L. *gelati'na*]. A soft substance which is coherent, tremulous, and more or less translucent; generally, a colloidal semisolid mass. **enamel j.**, a soft material in a growing tooth between the epithelial investment and the calcifying cells of the young enamel. **glycerin j.**, a compound of glycerin, zinc oxide, and gelatin: used in cases of eczema. **mineral j.**, a soft, semisolid substance prepared from petroleum, used as a basis for salves and ointments; petrolatum. **petroleum j.** Same as *mineral j.* **j. of Wharton**, the soft, pulpy, connective tissue that constitutes the matrix of the umbilical cord.

Jendrassik's maneuver (yen-drah'siks) [Ernst Jendrassik, physician in Budapest, 1858-1922]. See under *maneuver*.

Jenner's stain (jen'ers) [Louis Jenner, contemporary English physician]. See under *stains*, *table of*.

jennerian (jen'e-re-an). Pertaining to Edward Jenner (1749-1823), the discoverer of vaccination.

jennerization (jen-er-iz-a'shun). Production of immunity to a disease by repeated inoculation with cultures of bacteria similar to those producing the disease, but deprived of their virulence.

Jensen's classification (yen'sen) [Orla Jensen, contemporary Danish physiologic chemist]. A classification of bacteria based upon the nutritive characteristics of the organisms.

jequiritin (je-kwir'it-in). Same as *abrin*.

jequiritol (je-kwir'it-ol). An abrin preparation used in treating pannus, trachoma, and opacities of the cornea.

jequirity (je-kwir'it-e). The poisonous seeds of *Abrus precatorius*: used in treating trachoma.

jerk, biceps (jerk). Biceps reflex. See under *reflex*. **crossed j.**, movement of the opposite leg in attempt to elicit the knee jerk on one side. **jaw j.** See under *reflex*. **knee j.** See under *reflex*. **triceps j.**, triceps reflex. See under *reflex*.

jerks (jerks). A variety of dancing mania, sometimes associated with religious excitement.

jervic acid (jer'vik). See under *acid*.

jervine (jer'vin). A poisonous alkaloid, $C_{26}H_{37}NO_3$, from *Vera-trum al-bum* and *Vera-trum vir-ide*: a depressant to the motor and vasomotor centers.

jesaconitine (jes-ak-on'it-in). An amorphous alkaloid, $C_{40}H_{51}NO_{12}$, from a Japanese aconite.

jessamin (jes'am-in). See *Gelsmium*.

jessanodine (jes-an-o'din). A proprietary antiseptic and anodyne preparation.

Jesuits' bark (jez'u-its). See *Cinchona*.

Jesus Haly. See *Ali ben Iza*.

jigger (jig'er). See *chigger*.

jimson-weed (jim'zn). See *stramonium*.

Jobert's fossa, operation, suture (zho-behrz') [Antoine Joseph Jobert de Lamballe, French surgeon, 1799-1867]. See *fossa, operation, and suture*.

Joffroy's reflex (zhof-rwahz') [Alexis Joffroy, physician in Paris, 1844-1908]. See under *reflex*.

joha (jo'hah). An oily solution of salvarsan, marketed in ampules of 1 and 3 cc.

johannisine (jo-han'is-in). An alkaloid from anda oil.

johimbine (jo-him'bin). An aphrodisiac alkaloid from the bark of an African tree called *johimbeke*. Dose, $\frac{20}{16}$ grain (0.003-0.0065 Gm.). See *yohimbine*.

Johne's bacillus, disease (yo'néz) [Albert Johne, German physician]. See under *bacillus and disease*.

Johnson's test [Sir George Johnson, English physician, 1818-1896]. See under *tests*.

joint (joint) [L. *articula'tio*]. An articulation between two bones; more especially one which admits of more or less motion in one or both bones. **amphidiarthrodial j.**, amphidiarthrosis. **arthrodial j.** See *arthrodia*. **ball and socket j.** See *enarthrosis*. **biaxial j.**, a joint in which there are two chief axes of movement at right angles to each other. **bilocular j.**, a joint divided into two cavities by the interarticular cartilage. **bleeders' j.**, hemorrhage into a joint in persons of a hemorrhagic diathesis. **Brodie's j.**, hysteric neuralgia of a joint. **Charcot's j.** See *labeled arthropathy*, under *arthropathy*. **Chopard's j.**, the union of the os calcis and astragalus with the remaining bones of the tarsus: the mediatarsal articulation. **cochlear j.**, a form of hinge joint which permits of some lateral motion. **compound j.**, a joint composed of several bones. **condyloid j.**, a joint consisting of an ovoid head moving in an elliptical cavity, permitting of all movements except axial rotation. **Cruveilhier's j.**, the atlanto-odontoid joint. **diarthrodial j.** See *diarthrosis*. **dry j.**, a chronic villous arthritis. See under *arthritis*. **ellipsoid j.**, a joint with two axes of motion, both of them through the same bone.

Section of true joint: *f.f.*, Fibrous layer; *s.l.*, synovial layer of joint capsule. The articular cartilages are white, bones dotted, and the joint cavity black in the figure. (Sisson.)

enarthrodial j. See *enarthrosis*. **false j.** See *pseudarthrosis*. **fringe j.**, a joint affected with villous arthritis. **ginglymoid j.** See *ginglymus*. **gliding j.** See *arthrodia*. **hemophilic j.** See *bleeders' j.* **hinge j.** See *ginglymus*. **hysteric j.**, an hysterical condition which resembles arthritis. **immovable j.** See *synarthrosis*. **intercarpal j's**, the articulations formed by the carpal bones in relation to each other. **irritable j.**, a condition in which a joint is subject to attacks of inflammation without discoverable cause: it frequently follows sprain. **Lisfranc's j.**, the tarsometatarsal articulation. **midcarpal j.**, the joint between the scaphoid, semilunar, and cuneiform bones and the second row of the carpus. **mixed j.** See *amphiarthrosis*. **movable j.** See *diarthrosis*. **multiaxial j.** Same as *enarthrosis*. **open j.**, a veterinary term for inflammation of a joint with sloughing which exposes the joint surfaces. **piscocuneiform j.**, the articulation of the pisiform and cuneiform carpal bones. **pivot j.**, a rotary joint. **polyaxial j.** Same as *enarthrosis*. **rotary j.**, a lateral ginglymus or rotating diarthrosis. **saddle j.**, a joint having two saddle-shaped surfaces at right angles to each other. **simple j.**, a joint made up of two bones. **spheroid j.**, an enarthrosis with spherical surfaces. **spiral j.** Same as *cochlear j.* **synarthrodial j.** See *synarthrosis*. **tomato j.**, a painful condition of one or more joints erroneously attributed to an acid state of the system caused by eating tomatoes. **trochoid j.**, a rotary joint. **uniaxial j.**, a joint which moves on one axis only. **unilocular j.**, a joint having only one cavity.

joint capsule. The capsular ligament of a joint. **joint evil**. 1. Anesthetic leprosy of the West Indies (Towne, 1726). 2. Joint ill.

joint ill (joint il). Pyemia affecting the joints of young animals soon after birth, due to infection through the navel.

joint mouse. A movable cartilage or other body in a joint.

joint muscle. A muscle which moves a joint.

Jolles' test (jol'ez) [Adolf Jolles, Austrian chemist, born 1862]. See under *tests*.

Jolly's bodies (zho-léz') [J. Jolly, contemporary French physician]. Howell's bodies. See under *body*.

Jolly's reaction (yo'léz) [Friedrich Jolly, German neurologist, born 1844]. See under *reaction*.

Jones' position, splint [John Jones, American surgeon, 1729-1791]. See under *position, splint*.

Jonnesco's fold, fossa, operation, spinal anesthesia (jo-nés'kōz) [Thomas Jonnesco, Rumanian surgeon, 1861-1926]. See under *fold, fossa, operation, and anesthesia*.

Jorissenne's sign (zhor-is-enz') [Gustav Jorissenne, Belgian physician]. See under *sign*.

joss-stick (jos'stik). A Chinese preparation of amadou in sticks, sometimes perfumed; burned as a pastil to overcome ill smells in the sick room.

joule (jool). The work expended by a current of one ampere flowing for one second against a resistance of one ohm.

Joule's equivalent (joolz) [J. P. Joule, English physicist, 1818-1890]. See *equivalent*.

Jourdain's disease (zhoor-daz') [Anselme Louis Bernard Jourdain, French surgeon, 1734-1816]. See under *disease*.

juccuya (uc-koo'yah). The ulcerative type of dermal leishmaniasis.

juga (ju'gah). Plural of *jugum*.

jugal (ju'gal) [L. *juga'lis*: ju'gum yoke]. 1. Connecting like a yoke. 2. Pertaining to the cheek.

jugale (ju-ga'le). The jugal point. See *point*.

jugged (jugd). Having glanderous swellings: said of horses.

juglandic acid (jug-lan'dik). An acid from the bark of *Juglans cinerea*: thought to be the same as nucin.

juglandin (ju-glan'din). A compound from the green shell and leaves of the walnut tree: used in scrofulous conditions and skin diseases.

Juglans (ju'glans) [L. "Jove's nut," walnut]. 1. A genus of juglandaceous trees: the walnuts. See *walnut*. 2. The root bark of *J. cinerea*, the butter-nut tree. It is an aperient, and is sometimes given in remittent and intermittent fevers. Dose of extract, 5-20 grains (0.333-1.333 Gm.).

jugomaxillary (ju-go-mak'sil-a-re). Pertaining to the malar bone and the maxilla.

jugular (ju'gu-lar) [L. *jugula'ris*: *ju'glulum* neck]. Pertaining to the neck.

jugulation (jug-u-la'shun) [L. *jugula're* to cut the throat off]. The sudden and rapid arrest of disease by therapeutical measures.

jugum (ju'gum), pl. *ju'ga* [L. "a yoke"]. A depression or ridge connecting two structures. **j. alveola're** [B N A], a depression on the anterior surface of the alveolar process, between the ridges caused by the roots of the incisor teeth. **j. cerebra'le** [B N A], one of the elevations on the orbital plate of the frontal bone between the digital impressions. **j. pe'nis**, a forceps for compressing the penis. **j. sphenoida'le**, the structure connecting the two wings of the sphenoid bone.

juice (jus) [L. *jus* broth]. Any fluid from an animal or plant tissue. **cancer j.**, a milky juice which may be obtained from cancerous tissue, and containing cancer cells. **duodenal j.**, **duodenic j.**, a remedy used in some disorders of digestion. **gastric j.**, the clear liquid secreted by the stomach. **intestinal j.**, the transparent liquid secreted by the follicles of Lieberkühn. **pancreatic j.**, the thick, transparent fluid secreted by the pancreas. **press j.**, the liquid obtained by submitting to great pressure finely ground tissue. This fluid contains in suspension the endo-enzymes of the tissue cells.

jujube (ju'jub). The fruit of *Ziz'yphus vulga'ris*: a pectoral.

julep (ju'lep) [L. *jula'pium*]. A sweetened alcoholic drink or cordial, of various kinds.

jumbul (jum'bul). The plant, *Syzygium jambola-num*: used for diabetes.

jumentous (ju-men'tus) [L. *jumen'tum* a beast of burden]. Having a strong animal odor; said of urine.

jumper (jum'per). A neurotic person affected with palms and enfeebled will.

junction (junk'shun). The place of meeting or coming together. **amelodental j.**, the dento-enamel junction. **dentocemental j.**, the line of meeting between the dentin and cementum. **dentoenamel j.**, the line of meeting of the dentin and enamel. **myoneural j.**, the point of junction of a nerve with the muscle to which it is distributed.

junctu'rae os'sium [B N A]. The place at which, or the mechanism by which, two or more bones are joined together. **j. ten'dinum**, narrow bands extending obliquely between the tendon of inser-

tion of the extensor digitorum communis on the back of the hand.

Jungbluth's vasa propria (yoong'bloods) [Hermann Jungbluth, contemporary German physician]. See *vasa propria*.

jungle plant (jun'gl). See *Combretum sundiacum*.

juniper (ju'nip-er). See *Juniperus*. **j. moss**. See *Polytrichum*.

Juniperus (ju-nip'er-us) [L.]. 1. A genus of coniferous trees. 2. The berry or fruit of *Juniperus communis*, or juniper tree; the oil of the fruit is a stimulant diuretic. See *gin*. Dose of oil, 3-5 minims (0.19-0.33 cc.); of spirit, 30 minims (2 cc.).

junk (jungk). 1. A form of cushion used in dressing fractures. 2. Oakum, somewhat used in surgical dressings.

junket (jungk'et). Curds and whey flavored and used as food.

Junod's boot (zhoo-nōz') [Victor Theodor Junod, French physician, 1809-1881]. See *boot*.

jurisprudence, medical (ju-ris-pru'dens) [L. *juris pruden'tia* knowledge of law]. The application of the teachings of medical science to questions of law and justice; also the application of the principles of law to the relations between physicians and patients.

jury-mast (ju're-mast). An upright bar used in supporting the head in cases of Pott's disease.

Juscul. Abbreviation for *L. jus'culum*, broth.

jusculum (jus'ku-lum) [L.]. Soup or broth.

justo major (jus'to ma'jor) [L.]. Larger than is normal or usual. **j. minor**, smaller than is normal or usual.

Justus' test (joos'toos) [J. Justus, contemporary Hungarian dermatologist]. See under *tests*.

jute (jüt). The fibers of *Corchorus olito'rius*: used in surgical dressings.

juvantia (ju-van'she-ah) [L. pl.]. Adjuvant and palliative medicines or appliances.

juvenile (ju'ven-il). Pertaining to youth or childhood.

juvenine (ju'ven-in) [L. *juvenis* young]. A preparation said to be the yohimbine and strychnine salts of methyl arsenic acid: used in sexual neurasthenia.

juxta-articular (juks'tah-ar-tik'u-lar) [L. *jux'ta* near + *artic'ulus* joint]. Situated near a joint or in the region of a joint.

juxtangina (juks-tan'jin-ah) [L. "almost quinsy"]. Inflammation of the pharyngeal muscles.

juxtaposition (juks'tah-po-zish'un) [L. *jux'ta* near + *posi'tio* place]. An adjacent situation; apposition.

juxtapyloric (juks'tah-pi-lor'ik). Situated near the pylorus or near the pyloric vein.

juxtaspinal (juks-tah-spi'nal) [L. *jux'ta* near + *spine*]. Close to the spinal column.

K

- K.** The symbol for *potassium* [L. *ka'lium*]; also abbreviation for *electrostatic capacity*, *kathode*, and *absolute zero*.
- k.** Symbol for *magnetic susceptibility*.
- Ka.** An abbreviation for *kathode*, or *cathode*.
- kabure** (kah-boo're). A skin disease found in Japan; it is probably caused by the burrowing of the cercariae of *Schistosoma japonica* in the skin.
- kadamba** (kad-am'bah). An Asiatic plant, *Nau-dea cadamba*; the flowers are vulnerary.
- Kader's operation** (kah'ders) [Bronislaw Kader, contemporary Polish surgeon]. See *operation*.
- kaffee hag.** A coffee preparation composed of coffee beans which have been treated so that a relatively large proportion of caffeine has been removed, as well as some of the wax.
- kaffir pox** (kaf'er). See *amaas*.
- kafirin** (kaf'er-in). A protein substance isolated from the seeds of kafir, *Andropogon Sorghum*.
- Kafka's reaction or test** (kaf'kaz). See under *tests*.
- Kahlbaum's disease** (kahl'bowmz) [Karl Ludwig Kahlbaum, German physician, 1828-1899]. Catatonia.
- Kahler's disease** (kah'lerz) [Otto Kahler, Austrian physician, 1849-1893]. See *multiple myeloma*, under *myeloma*.
- Kahn's test** (kahnz) [Reuben Leon Kahn, bacteriologist in Lansing, Michigan]. See under *tests*.
- kaif** (kif) [Arabic]. Dreamy tranquility from the use of drugs.
- kainite** (ki'nit). An earth containing potassium chloride and magnesium sulphate.
- kainophobia** (ki-no-fo'be-ah) [καῖνός new + φόβος fear]. Fear of new things.
- kairine** (ki-rin). The hydrochloride of hydroxynormal-ethyl-tetrahydroquinoline, $\text{OH.C}_6\text{H}_9\text{N(H-Cl).C}_6\text{H}_5$; a powerful and somewhat dangerous antipyretic remedy, prepared from quinoline. It is used as a substitute for quinine. Dose, 3-15 grains (0.2-1 Gm.). **k. ethyl**, **k. aethyl**, or **k.-a.**, a substance similar in composition and properties to ordinary kairine; its composition is $\text{C}_6\text{H}_{14}(\text{OH).C}_6\text{H}_9\text{N.H}_4\text{HCl}$. **k. methyl**, **k.-m.**, ordinary kairine.
- kairoline** (ki'ro-lin). An antipyretic medicine, normal-ethyl-tetrahydroquinoline, $\text{C}_6\text{H}_{10}\text{N.CH}_3$, prepared from quinoline and chlorine. **k. a.**, a sulphate of quinoline ethyl hydride: an antipyretic, now discarded. **k. m.**, a sulphate of quinoline methyl hydride: an antipyretic, now discarded.
- kaiserling** (ki'zer-ling). An abbreviated name for Kaiserling's solution; also for a specimen preserved in Kaiserling's solution. See under *solution*.
- Kaiserling's solution** (ki'zer-lingz) [Karl Kaiserling, German pathologist, born 1869]. See *solution*.
- kakesthesia** (kak-es-the'ze-ah). See *cacesthesia*.
- kakidrosis** (kak-id-ro'sis) [κακός bad + ἰδρῶς perspiration]. An extremely disagreeable odor of the sweat.
- kakke** (kakh'ka) [Japanese]. Same as *beriberi*.
- kakodyl** (kak'o-dil). See *cacodyl*.
- kakosmia** (kak-oz'me-ah) [κακός ill + ὀσμή smell]. A foul or disagreeable odor.
- kakotrophy** (kak-ot-ro-fe). See *cacotrophy*.
- kala-azar** (kah-lah-az'ar) [native "black fever"]. An extremely fatal infectious disease occurring along the Mediterranean shore, in West Africa, Mesopotamia, southern Russia, India, and North China. It is marked by fever, progressive anemia, wasting, enlargement of the spleen and liver, and dropsy, and is caused by the parasite *Leishmania donovani*, which infests the endothelial cells, especially of the spleen, liver, and bone marrow. It seems to be transmitted to man by the bite of the sandfly, *Phlebotomus argentipes*, and perhaps by the Indian bedbug, *Cimex hemipterus*, and by a mosquito, *Anopheles punctipennis*. The disease is also called *febrile tropical splenomegaly*, *visceral leishmaniasis*, *dumdum fever*, *cachetic fever*, *black fever*, and *nonmalarial remittent fever*. **infantile k.**, **Mediterranean k.**, a form affecting infants, chiefly in countries bordering on the Mediterranean, formerly ascribed to *Leishman'ia infantum*, which is now regarded as identical with *L. donovani*. Called also *ponos*.
- kaladana** (kal-ah-da'nah). The dried seeds of *Ipomoea nil*: used as purgative or anthelmintic. Dose, 30-50 grains (2-3 Gm.).
- kalagua** (kah-lah'gwah). A South American drug used in tuberculous.
- kali** (ka'li, kah'le). German for *potash*.
- kaligenous** (ka-lij'en-us) [L. *ka'li* potash + γεννᾶν to produce]. Producing potash.
- kalimeter** (kal-im'et-er). Same as *alkalimeter*.
- kaliun** (ka'le-um) [L.]. Same as *potassium*.
- kallak** (kal'ak). A pustular dermatitis common among the Eskimos.
- kalmarid** (kal'mar-id). A proprietary potassium mercuric iodide: used in treating catgut for sutures.
- Kalmia** (kal'me-ah). A genus of shrubs. The leaves of *K. latifolia*, the mountain laurel, have been used in syphilis, diarrhea, and chronic inflammatory disorders.
- kalmopyrine** (kal-mo-pi'rin). Calcium acetylsalicylate: used as a febrifuge in rheumatism and neuralgia.
- kalymana-bacterium**. A Brazilian term proposed for the coccus of venereal granuloma.
- kalzan** (kal'zan). A proprietary preparation of calcium lactate and sodium lactate.
- kalzin** (kal'zin). A calcium-chloride-gelatin preparation: used by subcutaneous injection in hemorrhagic diathesis, bronchial asthma, etc.
- kamakosin** (kam-ak-o'sin). An anthelmintic preparation of the active principles of kamala and kouso.
- kamala** (kam'al-ah). The glands and hairs of the capsules of *Mollot's philippinen'sis*, an East Indian shrub. It is purgative, and is used mainly against teniae and lumbrici. Dose, 1-2 drachms (4-8 Gm.); of fluidextract, 30-60 minims (2-4 cc.).
- kamaline** (kam'al-in). An alkaloid from kamala.
- Kaminer reaction**. See *Freund's reaction*, under *reaction*.
- Kamnitzer's test** (kam'nit-zerz). See under *tests*.
- kanagugui** (kam-ah-goo'gwe). A Japanese plant, *Lin'dera erythrocarp'a*; its fluidextract is used in secondary syphilis.
- kangaroo** (kang-ah-roo'). A marsupial mammal of Australasia, of many species; for its tail a tendon is derived that is valued as a ligature.
- kangri cancer** (kang're). See under *cancer*.
- kaodzera** (kah-od-ze'rah). Rhodesian trypanosomiasis; a disease prevalent in Rhodesia, similar to sleeping sickness and due to *Trypanosoma rhodesiense*.
- kaoliang** (ka-ole'ang). A sorghum grain of Africa and India whose seed can be milled into a flour.
- kaolin** (ka'o-lin) [Chinese; L. *kaoli'num*]. A fine clay employed in skin diseases, and in pharmacy for coating pills and for ointments. Chemically it is a native hydrated aluminum silicate.
- kaolinosi** (ka'o-lin-o'sis). A kind of pneumonocniosis caused by inhaling particles of kaolin.

Kaplan's test (kap'lanz) [David M. Kaplan, contemporary New York physician]. See under *tests*.

Kaposi's disease, sarcoma (ka-po'sēz) [Moriz Kohn Kaposi, Austrian dermatologist, 1837-1902]. See *disease, sarcoma*.

Kapp's serum [Josef Franz Kapp, New York physician]. See *novepithele*.

kapselcoccus (kap-sel-kok'us). A microbe found in pyosalpinx.

kaputine (kap'u-tin). A proprietary acetanilid preparation for headache.

kardin (kar'din). See *cardin*.

Karell's treatment (kah'relz) [Philip Karell, Russian physician, died 1886]. See under *treatment*.

kargon (kar'gon). A proprietary preparation of buchu and potassium acetate.

karno (kar'no). A proprietary preparation consisting of a dark, syrupy, liquid beef extract.

karnoid (kar'noid). A proprietary meat powder.

Karoo syndrome (kar-oo') [Karoo region of South Africa]. See under *syndrome*.

karus (ka'rus). A South African plant: useful in dysentery and in ulcerative and hemorrhagic intestinal affections.

Karyamoeba falca'ta. See *Karyamoebina*.

Karyamoebina (kar'e-am-e-bi'nah). An amoeba with the peripheral chromatin clumped in a few large, elongated masses. *K. falca'ta*, a form found in the intestinal tract of man in California.

karyapsis (kar-e-ap'sis) [kárvon nucleus + ápsis joining]. The union of the nuclei in a conjugating cell.

karyenchyma (kar-e-en'kim-ah) [kárvon nucleus + én in + χυμός juice]. The nuclear juice of a cell.

karyochromatophil (kar'e-o-kro-mat'o-fil) [kárvon nucleus + χρώμα color + φιλέιν to love]. Having a stainable nucleus.

karyochrome (kar'e-o-krōm) [kárvon nucleus + χρώμα color]. A nerve cell the nucleus of which is stainable, while the body is not; a nerve cell in which the stained nucleus is larger than that of a cytochrome. There are varieties designated by the Greek letters.

karyochylema (kar'e-o-ki-le'mah). *Nuclear sap.

karyogamic (kar-e-o-gam'ik) [kárvon nucleus + γάμος marriage]. Pertaining to, or characterized by, union of nuclei.

karyogamy (kar-e-og'am-e) [kárvon nucleus + γάμος marriage]. Cell conjugation with union of nuclei.

karyogen (kar'e-o-jen) [kárvon nucleus + γενᾶν to produce]. An organic iron compound found in certain cell nuclei, especially the head of the spermatozoon.

karyogenesis (kar'e-o-jen'es-is) [kárvon nucleus + γένεσις production]. The development of the nucleus of a cell.

karyogenic (kar'e-o-jen'ik). Forming the nucleus of a cell; pertaining to karyogenesis.

karyogonad (kar'e-o-go'nad) [kárvon nucleus + γονή seed]. The reproductive nucleus of a cell as distinguished from the trophonucleus: called also *gonad nucleus*.

karyokinesis (kar'e-o-kin-e'sis) [kárvon nut + κίνησις motion]. Same as *mitosis*. **asymmetrical k.**, that in which the chromosomes divide unequally and into dissimilar masses. **hyperchromatic k.**, that in which the number of chromosomes is abnormally large. **hypochromatic k.**, that in which the number of chromosomes is abnormally small.

karyokinetic (kar'e-o-kin-et'ik). Pertaining to or of the nature of karyokinesis.

karyoklasis (kar-e-ok'las-is) [kárvon nucleus + κλάσις breaking]. The breaking down of the cell nucleus.

karyolobic (kar'e-o-lo'bik). Having a lobe-shaped nucleus.

karyolobism (kar'e-o-lo'bizm). A lobed condition of a cell nucleus, especially the nucleus of a leukocyte.

karyolymph (kar'e-o-limf) [kárvon nucleus + λυφή]. The nuclear sap; the liquid part of a cell nucleus, as contrasted with the chromatin and linin. Called also *paralinin*.

karyolysis (kar-e-ol'is-is) [kárvon nut + λύσις loosening]. 1. Same as *karyokinesis*. 2. The morbid destruction of the nucleus of a cell.

Karyolysus lacerta'rum (kar-e-ol'is-us) [kárvon nut + λύειν to loose]. A hemogregarina from the blood of lizards.

karyolytic (kar'e-o-lit'ik). Producing or pertaining to karyolysis.

karyomere (kar'e-o-mēr). 1. Same as *chromomere*. 2. The head of the spermatozoon.

karyomicrosome (kar'e-o-mi'kro-sōm) [kárvon nucleus + microsome]. See *nucleomicrosome*.

karyomit (kar'e-o-mit) [kárvon nut + μίτροs thread]. Same as *chromosome*.

karyomitome (kar-e-om'it-ōm) [kárvon nut + μίτροs web]. The nuclear chromatin network.

karyomitosis (kar'e-o-mi-to'sis) [kárvon nut + μίτροs thread]. Same as *karyokinesis*.

karyomitotic (kar'e-o-mit-ot'ik). Pertaining to karyomitosis.

karyomorphism (kar'e-o-mor'fizm) [kárvon nucleus + μορφή form]. The shape of a cell nucleus, especially that of a leukocyte.

karyon (kar'e-on) [kárvon nucleus]. The nucleus of a cell.

karyophagē (kar'e-o-fāj) [kárvon nucleus + φαγείν to eat]. An intracellular sporozoon.

karyoplasm (kar'e-o-plazm) [kárvon nucleus + πλάσμα plasm]. The nucleoplasm, or protoplasm of the nucleus of a cell.

karyoplasmic (kar'e-o-plaz'mik). Pertaining to karyoplasm.

karyoplast (kar'e-o-plast). The nucleus of a cell.

karyoplastin (kar'e-o-plas'tin). The plastic substance of a cell nucleus; the parachromatin.

karyoreticulum (kar'e-o-re-tik'u-lum) [kárvon nucleus + reticulum]. The fibrillar part of the karyoplasm as distinguished from the fluid part of karyolymph.

karyorrhexis (kar'e-o-er-ek'sis) [kárvon nut + ρήξις split]. The rupture of the cell nucleus: especially a degeneration of the cell nucleus in which the chromatin is deposited upon the nuclear wall and undergoes division.

karyosome (kar'e-o-sōm) [kárvon nucleus + σῶμα body]. One of the spherical masses of chromatin in cell nucleus. Called also *false nucleolus*, *chromatin nucleolus*, and *chromatin reservoir*.

karyota (kar-e-o'tah) [kárvon nut, nucleus]. Nucleated cells.

karyotheca (kar'e-o-the'kah) [kárvon nut + θήκη sheath]. The envelop or sheath of a cell nucleus.

karyotin (kar'e-o-tin). The substance of the nuclear framework.

karyozoic (kar'e-o-zo'ik) [kárvon nucleus + ζῷον animal]. Existing in or inhabiting the nuclei of cells.

kasagra (kas-ag'rah). A proprietary aromatic fluid-extract of cascara sagrada.

kassa (kas'ah). A Japanese term for leprosy.

kasyl (ka'sil). A germicidal preparation of cresol and tincture of green soap.

kat-, kata-. For words thus beginning see *cat-, cata-*.

katabolic, katabolism. See *catabolic, catabolism*.

katachromasis (kat'ah-kro-mas-is). The process by which the daughter chromosomes reconstruct the daughter nuclei.

katakinetomere (kat-ah-kin'e-to-mër) [*katá* down + *κίνησις* motion + *μέρος* part]. A. P. Mathews' name for matter in which the molecules and atoms are poor in energy content and therefore dead. Cf. *anakinetomere*.

katakinetomeric (kat'ah-kin-e-to-mer'ik). Poor in energy content. Cf. *anakinetomeric*.

katalase (kat'al-äs). Same as *peroxidase*.

kataphraxis (kat-af-rak'sis). The operation of enclosing or surrounding an organ with metal supports to keep it in place.

kataphrenia (kat-ah-fre'ne-ah). Cataphrenia.

kataphylaxis (kat-ah-fi-lak'sis). The transport of phylactic agents to the site of infection.

kataplasia (kat-ah-pla'se-ah). Cataplasia.

kathathermometer (kat-ah-ther-mom'et-er). A pair of alcoholic thermometers, one with a dry bulb and one with a wet bulb. They are heated to 110 F., exposed to the air, and the time noted that it takes each bulb to fall from 100 to 90 F. From this the temperature as it affects the body can be deduced.

katatonia. See *catatonia*.

katatony (kat-at'o-ne). Same as *catatonia*.

Katayama disease (kat-ah-yah'mah). See under *disease*.

Katayama nosopora. A snail which is the intermediate host of *Schistosoma japonicum*.

katharmon (kath-ar'mon). A preparation of hamamelis, hydrastis, boric acid, etc.: used as an astringent and antiseptic.

katharol (kath-ar-ol). A proprietary name for two or more hydrogen dioxide preparations.

katharometer (kath-ar-om'et-er). An instrument for electrometric determination of basal metabolic rates.

katharsis (kath-ar'sis). Same as *catharsis*.

katheterpurin (kath-e-ter'pu-rin). A proprietary lubricant for catheters and cystoscopes.

kathisophobia (kath-i-so-f'o-be-ah). See *akathisia*.

katine (ka'tin). An alkaloid, $C_{10}H_{15}ON_2$, from *Ca'tha edulis*. It acts on the nervous system like cocaine, but has not local anesthetic properties.

kation (kat'e-on). See *cation*.

katjang idjo (kat'jang id-jo). The fruit of *Phaseolus radialis*, used for beriberi.

katolysis (kat-ol'is-is) [*κάτω* below + *λύσις* dissolution]. The incomplete or intermediate conversion of complex chemical bodies into simpler compounds; applied especially to digestive processes.

katophobia (kat-o-f'o-re-ah). Katotrophia.

katotrophia (kat-o-tro'pe-ah) [*κάτω* below + *τρέπειν* to turn]. A tendency of the visual axes to fall below the object looked at. Called also *kalophobia*.

Katz formula. See under *formula*.

Katzenstein's test (kats'en-stinz) [Moritz Katzenstein, contemporary German surgeon]. See under *tests*.

Kaufmann's method or treatment (kowi'manz) [Fritz Kaufmann, German neurologist, born 1875]. See under *treatment*.

Kaufmann's test (kowi'manz) [Rudolf Kaufmann, Viennese cardiologist, 1871-1927]. See under *tests*.

kava, kava-kava (kah-vah, kah'vah-kah'vah) [Polynesian]. 1. The root of *Piper latifolium*: used for cystitis, gout, and wasting diseases. Dose of fluidextract, 20-60 minims (1.33-4 cc.). 2. An intoxicating drink prepared from the above.

kavaine (kav'ah-in). An alkaloid from kava.

kavol (ka'vol). A proprietary preparation of sandalwood oil and kava: used internally in gonorrhea.

kawahin (kaw'ah-hin). A crystallizable principle from kava; medicinally active.

kawin (kah'win). A resin from kava: a motor depressant, anesthetic, and cardiac stimulant.

kayak vertigo (kah'yak). See under *vertigo*.

Kayserling. See *Kaiserling*.

kazol (ka'zol). A preparation of fermented milk similar to matzoon.

KBr. Potassium bromide.

KC. Abbreviation for *kathodal closing*.

KCC. Abbreviation for *kathodal closing contraction*.

KC₂H₃O₂. Potassium acetate.

KCl. Potassium chloride.

KClO. Potassium hypochlorite.

KClO₃. Potassium chlorate.

K₂CO₃. Potassium carbonate.

KCT. Abbreviation for *kathodal closing tetanus*.

KD. Abbreviation for *kathodal duration*.

KDT. Abbreviation for *kathodal duration tetanus*.

Keating-Hart's method or treatment (ke'-ting-hart) [Walter Valentine de Keating-Hart, French physician, 1870-1922]. See *fulguration*.

kedani disease (ka-dan'e). See *tsutsugamushi disease*, under *disease*.

Keeley cure (ke'le) [Leslie G. Keeley, American physician, 1832-1900]. See under *cure*.

Keen's operation, sign [William Williams Keen, Philadelphia surgeon, born 1837]. See under *operation* and *sign*.

keeper (këp'er). The armature of a magnet.

keflac (ke'fil-ak). A proprietary preparation of lactic acid bacteria for the making of sour milk.

kefir, kefy, kephyr (kef'er). A preparation of milk acted upon by kefir grains, which are small, irregular, yellowish granules of a gelatinous consistency, used in the Caucasus for fermenting milk. The essential organisms in these grains seem to be *Lactobacillus caucasicus* and *Torula kefir*. **arsenical k.**, any one of a series of preparations consisting of kefir medicated with Fowler's solution of arsenic. **guaiacol carbonate k.**, any one of a series of proprietary preparations of guaiacol carbonate and kefir.

Kehr's incision, operation (kahrz) [Hans Kehr, German surgeon, 1862-1916]. See under *incision* and *operation*.

keimol (ki'mol). A proprietary antiseptic preparation.

keiropasm (ki'ro-spazm) [*kelpen* to shear + *spasm*]. Shaving cramp.

Keith's bundle, node (këths) [Arthur Keith, London physician, born 1862]. See under *bundle* and *node*.

Keith-Flack node [Arthur Keith; Martin Flack, physiologists in London]. See under *node*.

kelectome (ke'lek-töm) [*κηλη* tumor + *ἐκτομή* excision]. 1 A device used in removing specimens of tissue from tumors.

kelene, kelin (ke'len, kel'in). A proprietary preparation of ethyl chloride, used as a local anesthetic. **kelis** (ke'lis) [*κηλς* stain]. Same as *morphea*; also *keloid*.

kellin (kel'in) [from *kel*, the Egyptian name of the plant]. A cardiant and spinant remedy derived from *Am'mi visnaga*.

Kelling's test (kel'ings) [Georg Kelling, contemporary German physician]. See under *tests*.

Kelly's operation, speculum (kel'ëz) [Howard Atwood Kelly, Baltimore surgeon, born 1858]. See under *operation* and *speculum*.

keloid (ke'loid) [*κηλς* scar + *εἶδος* form]. A new growth or tumor of the skin, consisting of whitish ridges, nodules, and plates of dense tissue. These growths tend to recur after removal, and are sometimes tender or painful. The condition is very frequent in the colored race, and is believed to be dependent upon traumatism. **acne k.**, an affection, chiefly of the nape of the neck, resembling

sycoosis and keloid. **Addison's k.**, morphea. **Alibert's k.**, **cicatrical k.**, **false k.**, a growth resembling a true keloid, but due to hypertrophy of a cicatrix.

keloidosis (ke-loi-do'sis). A condition marked by the formation of multiple keloids or keloid-like growths.

kelos (ke'los). Same as *keloid*.

kelosomus (ke-lo-so'mus). See *celosomia*.

kelotomy (ke-lot'o-me) [κήλη hernia + τέμνειν to cut]. The surgical division of the stricture in strangulated hernia.

kelvin (kel'vin) [Lord Kelvin (William Thompson), British physicist, born 1824]. A unit of electricity representing 1000 volt hours.

kenophobia (ken-o-fo'be-ah) [κενός empty + φόβος fear]. Morbid dread of large open spaces.

kenotoxin (ken'o-toks-in). The toxin of fatigue; produced in muscle by muscular contractions.

kentrokinesis (ken'tro-kin-e-sis). Centrokinesis.

kentrokinitic (ken'tro-kin-et'ik). Pertaining to kentrokinesis; excitomotor.

kephaldol (kef'al-dol). A proprietary antipyretic preparation.

kephalepsalis (kef'al-ep'sal-is) [κεφαλή head + ψαλς scissors]. Shears for use in embryotomy.

kephalin (kef'al-in), and other words beginning **kephal-**. See *cephalin*, etc.

kephaline (kef'al-in). A proprietary headache cure.

kephalose (kef'al-ös). A French headache remedy.

kephir, **kephyr** (kef'ër). Same as *kefir*.

kephirin (kef'er-in). A proprietary name for acetyl-salicylic acid (*q. v.*).

keracele (ker'as-ël) [κέρας horn + κήλη tumor]. A horny tumor.

Kerandel's symptom (ker-an-delz') [Jean François Kerandel, French colonial physician, born 1873]. See under *symptom*.

keraphyllocele (ker-af-il'o-sël) [κέρας horn + φύλλον leaf + κήλη tumor]. A horny tumor on the inner surface of the wall of a horse's hoof.

kerasin (ker'as-in). A galactoside, probably, $C_{12}H_{22}NO_7$, obtained from brain substance. It yields on hydrolysis galactose, sphingosin, and lignoceric acid.

keratalgia (ker-at-al'je-ah) [κέρας horn + άλγος pain]. Pain in the cornea.

keratactasia (ker'at-ek-ta'ze-ah) [κέρας horn + έκτασις extension]. Protrusion of the cornea.

keratectomy (ker-at-ek'to-me) [κέρας cornea + έκτομή excision]. Excision of a portion of the cornea: usually done for anterior staphyloma.

keratiasis (ker-at-i'as-is) [κέρας horn]. The presence of horny warts on the skin.

keratic (ker-at'ik). Pertaining to horn.

keratin (ker-at'in) [κέρας horn]. An albumin which forms the base of epidermis, hair, and of all horny tissues. It is a very insoluble protein, contains sulphur, and yields tyrosine and leucine, on decomposition. Its solution is sometimes used in coating pills when the latter are desired to pass through the stomach unchanged.

keratinize (ker-at'in-iz). 1. To render horny. 2. To become horny.

keratinoid (ker-at'in-oid). A form of tablet not soluble in the stomach, but readily soluble in the intestine.

keratinose (ker-at'in-ös). An albumose obtained from keratin by hydrolyzing with an acid, alkali, or ferment.

keratinous (ker-at'in-us). Containing or of the nature of keratin; horny.

keratitis (ker-at-i'tis) [κέρας horn + -itis]. Inflammation of the cornea. **k. bandelette**. Same as *ribbon-like k.* **k. bullo'sa**, the formation of large or small bullae or blebs upon the cornea.

deep k. See *interstitial k.* **dendriform k.**, **dendritic k.**, that which results in a dendriform ulceration of the cornea. **k. disciformis**, keratitis with the formation of a round or oval, disk-like opacity of the cornea. **fascicular k.**, keratitis attended by the formation of a band of blood vessels. **furrow k.**, dendritic keratitis. **herpetic k.**, keratitis occurring along with herpes zoster. **hypopyon k.**, suppurative keratitis associated with purulent infiltration and hypopyon. **interstitial k.**, a chronic variety of keratitis with deep deposits in the substance of the cornea, which becomes hazy throughout and has a ground-glass appearance (Sichel, 1837). The disease is associated with congenital syphilis, and occurs in children before the fifteenth year. Called also *parenchymatous k.* and *deep k.* **lagophthalmic k.**, that which accompanies lagophthalmos; it is due to exposure of the eyeball to the air. **marginal k.**, phlyctenular keratitis in which the papules are arranged around the margin of the cornea. **mycotic k.** Same as *keratomycosis*. **neuroparalytic k.**, that which follows disease of the trifacial nerve. **oyster shuckers' k.**, a kind of suppurative keratitis produced by pieces of oyster shell which have entered the cornea. **parenchymatous k.** See *interstitial k.* **phlyctenular k.**, a variety characterized by the formation of pustules or papules on the cornea. **k. profunda**, interstitial keratitis. **k. punctata**, **punctate k.**, descemetitis, cyclitis, or serous iritis resulting in dotted opacity of the cornea. **k. punctata subepithelialis**, a form with gray areas on the cornea under Bowman's membrane, with an intact superficial epithelium. **purulent k.**, that in which there is formed either a suppurating ulcer or an abscess. **reapers' k.**, suppurative keratitis due to the wounding of the cornea by the awn of some grain, as barley. **ribbon-like k.**, the formation of a transverse film on the cornea. **sclerosing k.**, keratitis associated with scleritis, leading to hyperplasia. **secondary k.**, keratitis due to disease of some other part of the eye. **suppurative k.**, keratitis attended with, or associated with, suppuration. **trachomatous k.** See *pannus*. **traumatic k.**, that which results from a wound. **vascular k.**, keratitis accompanied by the formation of blood vessels beneath the conjunctiva and outer layers of the cornea. **vasculonebulous k.**, *pannus*. **vesicular k.**, keratitis with the development of small vesicles on the surface. **xerotic k.**, softening of the cornea.

kerato- [κέρας horn, cornea]. A prefix denoting some relation to horny tissue or to the cornea.

keratoangioma (ker'at-o-an-je-o'mah). Same as *angiokeratoma*.

keratocele (ker'at-o-sël) [κέρας horn + κήλη hernia]. Hernia of the innermost layer of the cornea (Descemet's membrane).

keratocentesis (ker'at-o-sen-te'sis) [κέρας horn + κέντρσις puncture]. Puncturation of the cornea.

keratoconjunctivitis (ker'at-o-kon-junk-tiv-i'tis). Inflammation of the cornea and conjunctiva.

keratoconus (ker'at-o-ko'nus) [κέρας horn + κώνος cone]. A cone-shaped deformity of the cornea.

keratocricoid (ker'at-o-kr'i'koid). The posterior cricothyroid muscle.

keratoderma (ker'at-o-der'mah) [κέρας horn + δέρμα skin]. 1. A horny skin or covering. 2. The cornea.

keratodermatitis (ker'at-o-der-mat-i'tis) [κέρας horn + δέρμα skin + -itis inflammation]. Inflammation of the stratum corneum of the skin.

keratodermia (ker'at-o-der'me-ah) [κέρας horn + δέρμα skin]. Hypertrophy of the horny layer of the skin.

keratogenetic (ker'at-o-jen-et'ik). Pertaining to keratogenesis.

keratogenous (ker-at-oj'en-us) [*kéras* horn + *γεννᾶν* to produce]. Giving rise to a growth of horny tissue.

keratoglobus (ker''at-o-glo'bus) [*kéras* horn + *L. glo'bus* globe]. A globular enlargement and protrusion of the cornea.

keratoglossus (ker''at-o-glos'us). See *muscles*, table of.

keratohelcosis (ker''at-o-hel-ko'sis) [*kéras* horn + *ἑλκωσις* ulceration]. Ulceration of the cornea.

keratohyalin (ker''at-o-hi'al-in). A form of hyalin found in the skin.

keratohyaline (ker''at-o-hi'al-in). Both horny and hyaline, like the material of the stratum granulosum of the epidermis.

keratoid (ker-at-oid) [*kéras* horn + *εἶδος* form]. Resembling horn or corneal tissue.

keratoiditis (ker''at-oi-di'tis). Same as *keratitis*.

kerato-iridocyclitis (ker''at-o-i''rid-o-sik-li'tis). Inflammation of the cornea, iris, and ciliary body.

kerato-iridoscope (ker''at-o-i''rid-o-skōp) [*kéras* horn + *ἰρις* iris + *σκοπεῖν* to see]. A form of compound microscope for examining the eye.

kerato-iritis (ker''at-o-i''ri'tis) [*kéras* horn + *ἰρις* iris]. Inflammation of the cornea and iris.

keratoleptynsis (ker''at-o-lep-tin'sis) [*kéras* horn + *λεπτύνειν* to make thin]. Removal of the anterior thickness of the cornea and covering of the denuded area with bulbar conjunctiva. An operation for preserving a nonfunctioning eye for esthetic purposes.

keratoleukoma (ker''at-o-lu-ko'mah) [*kéras* horn + *λευκωμα*]. A white opacity of the cornea.

keratolysis (ker-at-ol'is-is) [*kéras* horn + *λύσις* a loosening]. Separation or peeling of the horny layer of the epidermis; specifically, a disease marked by a peeling or separation of the epidermis.

keratolytic (ker''at-o-lit'ik). Pertaining to or producing keratolysis; also a substance which dissolves epidermis.

keratoma (ker-at-o'mah), pl. *kerato'mata* or *keratomas* [*kéras* horn + *-ωμα* tumor]. Any horny tumor; a growth of horny tissue. **k. difu'sum**, ichthyosis congenita. **k. planta're sulca'tum**, a thickened fissured condition of the skin of the soles of the feet. It may be the tertiary lesion of framboesia tropica. **k. seni'le**, the lesion of senile keratosis.

keratomalacia (ker''at-o-mal-a'se-ah) [*kéras* horn + *μαλακία* softness]. Softening of the cornea.

keratome (ker-at-ōm) [*kéras* horn + *τέμνειν* to cut]. A knife for incising the cornea.

keratometer (ker-at-om'et-er) [*kéras* horn + *μέτρον* measure]. An instrument for measuring the curves of the cornea.

keratometry (ker-at-om'et-re). The measurement of the cornea.

keratomycosis (ker''at-o-mi-ko'sis) [*kéras* horn + *μύκης* fungus]. Fungus disease of the cornea. **k. lin'guæ**. See *black tongue*, under *tongue*.

keratonosis (ker''at-o-no'sis). Any anomaly in the horny structure of the epidermis.

keratonosus (ker-at-on'o-sus) [*kéras* cornea + *νόσος* disease]. Any disease of the cornea.

keratonyxis (ker''at-o-niks'is) [*kéras* cornea + *πύσσειν* to puncture]. Puncture of the cornea, as in certain operations on the cornea.

keratoplasty (ker''at-o-plas-te) [*kéras* cornea + *πλάσσειν* to form]. Plastic surgery of the cornea; especially the transference of a piece of the cornea of a lower animal to the human eye to take the place of an opaque spot therein. **optic k.**, the transference of a piece of corneal tissue to replace a scar which interferes with vision. **tec-tonic k.**, transplantation of corneal material with a view simply to supply lost tissue.

keratoprotein (ker''at-o-pro'te-in) [*kéras* horn + *protein*]. The protein of the horny tissues of the body, such as the hair, nails, and epidermis.

keratorhexis (ker''at-o-rek'sis) [*kéras* cornea + *ῥήξις* rupture]. Rupture of the cornea.

keratoscleritis (ker''at-o-skle-ri'tis). Inflammation of the cornea and sclera.

keratoscope (ker''at-o-skōp) [*kéras* cornea + *σκοπεῖν* to observe]. An instrument for examining the cornea.

keratoscopy (ker-at-os'ko-pe). The examination of the cornea; more especially the study of the reflections of light from its anterior surface.

keratose (ker-at-ōs). Horny.

keratotic (ker-at-o'sik). Pertaining to or characterized by keratosis.

keratosis (ker-at-o'sis) [*kéras* horn]. Any horny growth, such as a wart or callosity; any disease attended by horny growths. **k. biennorrhagica**, a condition marked by thickened horny growths on the skin and associated with gonorrheal arthritis. **k. diffu'sa foeta'lis**. See *ichthyosis congenita*. **k. follicula'ris**, a skin disease characterized by papules containing scabby crusts that can be squeezed out. It is a cornification of the epithelial layers of the skin. Called also *Darier's disease*, *ichthyosis follicularis*, *pseudospermiosis*, *acne sebaceæ cornée*, *ichthyosis sebacea cornea*. **k. follicula'ris conta'giosa**, Brooke's name for a rare form of cornification of the skin, apparently of a contagious nature. **k. nigricans**, a skin affection consisting of dark colored warty growths, especially on the back of the neck and axillary and pectoral folds. Called also *acanthosis nigricans*. **k. obtu'rans**, a mass of epidermic scales and cerumen in the external auditory meatus. **k. pila'ris**, a disease of the skin marked by the formation of a hard elevation around each hair follicle. **k. seni'lis**, a harsh, dry state of the skin in old age.

keratotome (ker-at'ot-ōm). See *keratome*.

keratotomy (ker-at'ot'o-me) [*kéras* cornea + *τέμνειν* to cut]. Surgical incision of the cornea.

keranoneurosis (ker-aw''no-nu-ro'sis) [*κεραυνός* lightning + *νεῦρον* nerve]. A nervous disorder due to lightning stroke.

keranophobia (ker-aw-no-fō'be-ah) [*κεραυνός* lightning + *φόβος* fear]. Morbid dread of lightning.

kerectomy (ke-rek'to-me) [*kéras* cornea + *ἐκτομή* excision]. Removal of a part of the cornea.

kerion (ke're-on) [*κηρίον* honey comb]. A pustular disease of the scalp; tinea kerion. **Celsus' k.**, pustular inflammation of the hair follicles of the scalp in tinea tonsurans.

kerithery (ker-ith-er'ap-e) [*κέρος* wax + *θεραπεία* treatment]. 1. Treatment by baths of liquid paraffin. 2. Treatment of extensive burns with paraffin solutions.

Kerkring's folds, ossicles, valves (ker'kringz) [Theodorus Kerkring, Dutch anatomist, 1640-1693]. See under *fold*, *ossicle*, and *valve*.

kermes (ker'mēz) [Arabic, Persian]. The *Coccus ilicis*, an insect found on the leaves of various oaks, chiefly on *Quercus coccifera* (kermes-oak.) It furnishes a red pigment which is used as a dye-stuff. **k. mineral**, antimony oxysulphide.

kernel (ker'nel). That part of an atom left after removal of the ionizable electrons.

Kerner's test (ker'nerz). See under *tests*.

Kernig's sign (ker'nigz) [Vladimir Kernig, Russian physician, 1840-1917]. See under *sign*.

Kernschwund (kärn'shwund) [Ger.]. Congenital faulty development or absence of nuclei in the cells of the central nervous system; e. g., in congenital ophthalmoplegia (Moebius).

kerocaine (ker'o-ka-in). Procaine hydrochloride of British manufacture.

keroid (ker'oid) [*keroeidēs* hornlike]. Resembling the cornea.

kerol (ke'rol). A mixture of the high boiling hydroxyl compounds of coal tar containing a diphenyl nucleus: used as an antiseptic.

keroline (ker'o-lin). A liquid used as a solvent for sulphonated bitumen (ichthyol).

kerosolene (ker-os'o-lēn). A volatile fluid from petroleum: it smells like chloroform and is anesthetic.

kerotherapy (ker-o-ther'ap-e). Kerithery.

kerril (ker'il). A venomous sea snake, *Hydrophis jerdoni*, of the Indian Ocean.

kestin (kes'tin). Trinitrophenol combined with resorcinol, ammonium chloride, orthoboric acid, and formaldehyde: a proprietary antiseptic, antipruritic, and analgesic agent.

ketene (ke'tēn). A colorless gas of penetrating odor, carbomethane, $H_2C : CO$. It is the simplest of the ketenes; combines with water to form acetic acid.

keto-. A prefix which denotes the possession of the carbonyl group, $C : O$.

keto-aldehyde (ke-to-al'de-hīd). A compound which is a ketone and an aldehyde.

ketogenesis (ke-to-jen'es-is) [*ketone* + *γένεσις* generation]. The production of acetone bodies.

ketogenetic (ke'to-jen-et'ik). Forming ketones.

ketogenic (ke-to-jen'ik). Forming ketone; capable of being converted into ketone. The ketogenic substances in metabolism are the fatty acids and certain of the amino-acids of protein.

ketogenic-antiketogenic ratio. See under *ratio*.

ketohehexose (ke-to-heks'ōs). A hexose which is a ketone derivative. Cf. *aldohexose*.

ketol (ke'tol). See *indole*.

ketolytic (ke-to-lit'ik) [*ketone* + *λυτικός* dissolving]. Splitting up acetone bodies; antiketogenic. In metabolism, carbohydrate is the ketolytic substance.

ketone (ke'tōn). Any compound containing the carbonyl group, CO . **k. bodies**, acetone bodies. See under *body*. **dimethyl k.** See *acetone*.

ketonemia, ketonaemia (ke-to-ne'me-ah) [*ketone* + *αἷμα* blood]. The presence of ketone (acetone) bodies in the blood.

ketonuria (ke-to-nu're-ah) [*ketone* + *οὐρον* urine]. The presence of ketones (acetone bodies) in the urine.

ketoplasia (ke-to-pla'se-ah). The formation of ketone bodies.

ketoplastic (ke-to-plas'tik) [*ketone* + *πλάσσειν* to form]. Causing the formation of ketone.

ketoreductase (ke'to-re-duk'tās). An enzyme in liver, muscle, and kidney which transforms acetoacetic acid into α - β -oxybutyric acid.

ketose (ke'tōs). A sugar which is the ketone of a hexatomic alcohol; any sugar which contains a carbonyl group.

ketoside (ke'to-sid). Any glucoside which yields ketose on hydrolysis.

ketosis (ke-to'sis). A condition marked by excessive formation of ketones in the body.

kettle, croup (ket'l). A kettle arranged for giving off a continuous stream of steam: used in giving vapor inhalations and for keeping the atmosphere of the room humid in cases of croup or laryngitis.

key, DuBois-Reymond's (ke). An appliance by means of which electric currents can be sent through both electrodes or through a short circuit.

keynote (ke'nōt). A homeopathic term for the characteristic property of a drug which indicates its use in treating a similar symptom of disease.

Key-Retzius foramina [Ernst Axel Henrik Key, Swedish physician, 1832-1901; Magnus Gustaf Retzius, Swedish histologist, born 1842]. See *foramen*.

Kg. Abbreviation for kilogram.

kharsin (kar'sin). The proprietary name of sodium 3-methyl-4-aminophenylarsionate, a white, crystalline powder used in protozoan diseases.

kharsivan (kar'siv-an). A British-made substitute for arsphenamine hydrochloride.

khat (kat). See *Catha*.

KHCO₃. Potassium bicarbonate.

khosam (ko'sam). See *kosam*.

K. H. P. Abbreviation for *Honorary Physician to the King*.

K. H. S. Abbreviation for *Honorary Surgeon to the King*.

KHSO₄. Potassium bisulphate; potassium acid sulphate.

KI. Potassium iodide.

kibe (kib). The same as *chilblain*.

kibisitome (ki-bis'it-ōm) [*κίβισος* pouch + *τομή* cut]. Same as *cystitome*.

kidinga pepo (kid-in'gah pe'po) [cramplike pains]. A disease of Zanzibar, probably same as dengue.

kidney (kid'ne) [L. *ren*]. Either of the two glandular bodies in the lumbar region that secrete the urine. Each kidney is about four inches long, two inches wide, and one inch thick, and weighs from four to six ounces. The kidney is of characteristic shape, presents a notch on the inner border, known as the *hilum*, which communicates with the cavity or sinus by which the vessels, nerves, and ureter pass. The kidney consists of a *cortical substance* and of a *medullary substance*. The medullary substance forms pyramids, whose bases are in the cortex, and whose apices, which are called *papillae*, project into the calices of the *pelvis* of the kidney. The renal pyramids of Malpighi are in three rows, and number from ten to fifteen. The parenchyma of the kidney is composed of *uriniferous tubules*, held together by a little connective tissue. The terminal orifices of these open at the summit of each papilla. A *uriniferous tubule* begins at a capsule of Malpighi within the cortex, has a neck or constriction below the capsule, becomes the proximal convoluted tube, then the spiral tube of Schachowa, and successively Henle's loop, irregular tubule, distal convoluted tubule curved tubule, and the straight collecting tubule, which opens at the apex of a renal papilla. The straight collecting tubes converge as they descend, forming groups in the center, known as *medullary rays*. The *pyramids of Ferrein* are the subordinate cones of the kidney papillae. The tubules are lined with pavement epithelium; the epithelium in other portions varies in shape and size. An envelop of a glomerule of the kidney is known as *Bowman's capsule*. Urine is formed by a process partly physical and partly vital, the watery elements being extruded from the blood by filtration; the solid portions by a special elaborative action of the renal epithelium. **amyloid k.**, one that is the seat of amyloid or waxy degeneration. **arteriosclerotic k.**, a kidney contracted as a result of sclerosis of the renal arteries; chronic interstitial nephritis. **atrophic k.**, a kidney affected with

Kidney, longitudinal section: A, Renal artery; U, ureter; C, a calyx into which a papilla projects; 1, cortex; 2, medulla; M, Malpighian pyramids; B, columns of Bertini; 4, adipose masses; 5, branches of renal artery. (Henle.)

diffuse chronic nephritis. **branny k.**, a kidney which appears as if it contained bran, due to fatty degeneration in spots. **cicatrical k.**, a shriveled, irregular, and scarred kidney; usually the last stage of a surgical kidney. **cirrhotic k.**, granular kidney. **contracted k.**, granular kidney. **cyanotic k.**, passive congestion of the kidney. **cystic k.**, a kidney containing cysts. **disk k.**, a condition in which the two kidneys are fused, one kidney being superimposed upon the other. **fatty k.**, a kidney affected with fatty degeneration. **floating k.**, one which is loosened and displaced. **Formad's k.**, an enlarged and deformed kidney, sometimes seen in chronic alcoholism. **gouty k.**, **granular k.**, one affected with chronic interstitial inflammation. See *diffuse chronic nephritis*, under *nephritis*. **head k.**, the pronephros. **horseshoe k.**, the two kidneys partially united or fused. **lardaceous k.**, an amyloid kidney. **large white k.**, one affected with chronic interstitial nephritis. **leaky k.**, a condition in which the kidneys allow sugar to pass through into the urine at a lower level of blood sugar concentration than usual, resulting in renal glycosuria. **massage k.**, a condition of chronic renal incompetence and uremia due to excessive excretory effort on the part of the kidney, resulting from the improper and excessive application of massage to a gouty patient. **mural k.**, a kidney located in a pocket of peritoneum in the abdominal wall. **palpable k.**, slight nephroptosis. **pelvic k.**, dislocation of the kidney into the pelvis. **pig-back k.**, a kidney congested and enlarged as a result of chronic alcoholism. **primordial k.**, the pronephros. **red contracted k.**, a gouty kidney. **Rokitansky's k.**, amyloid kidney. **Rose-Bradford k.**, a form of fibrotic kidney of inflammatory origin found in young subjects. **sclerotic k.**, granular kidney. **sigmoid k.**, a deformed and fused kidney somewhat resembling the horseshoe form, the upper pole of one kidney being fused with the lower pole of the other. **small white k.**, an atrophied and degenerated state of the kidney following a chronic interstitial nephritis. **soapy k.**, a large white kidney which contains myelins instead of simple fats. **solitary k.**, a kidney made up of two kidneys fused. **succenturiate k.**, a suprarenal body. **super-numerary k.**, an occasional kidney-like structure detached from the kidney proper. **surgical k.**, suppurative pyelonephritis following an operation upon a urinary organ. **wandering k.**, a floating or displaced kidney. **waxy k.**, an amyloid kidney.

Kielland's forceps (kyel'ands) [Christian *Kielland*, contemporary Norwegian obstetrician]. See under *forceps*.

Kienboch's disease (kēn'boks). Chronic osteitis of the semilunar bone.

Kienboeck unit (kēn'bek) [Robert *Kienboeck*, Austrian physician, born 1871]. See under *unit*.

Kiernan's space (ker'nanz) [Francis *Kiernan*, English physician, 1800-1874]. Interlobar space of the liver.

Kieselguhr (ke'sel-goor) [Ger.]. A fossil earth used for clearing fluids and as an absorbent dressing. It is essentially the same as purified silicious earth (U. S. P.).

Kiesselbach's area or space (ke'sel-bahks) [W. *Kiesselbach*, German laryngologist, 1839-1902]. See under *area*.

Kiestein (ki-es'te-in). Same as *kyestein*.

kikekunemalo (ki'ke-ku-ne-mah'lo). A resin much resembling copal: used for varnishes.

kil (kil). A white, sticky, and soapy clay from the Black Sea region. When sterilized, it is employed as an ointment base for use in skin diseases.

Kilian's line (kil'e-anz) [Herman Friedrich *Kilian*, German gynecologist, 1800-1863]. See under *line*.

Killian's operation (kil'e-anz) [Gustav *Killian*, German laryngologist, 1860-1921]. See under *operation*.

kilogram (kil'o-gram). One thousand grams, or 2.68 pounds troy. See *weights and measures*.

kilogramm (kil'o-gram-me-ter). A unit of work, representing the energy required to raise 1 Gm. a meter vertically against gravitational force, equivalent to about 7.2 foot-pounds and equal to 1000 grammeters.

kiloliter (kil'o-le-ter) [Fr. *kilolitre*]. One thousand liters; 35.3171 cubic feet. See *weights and measures*.

kilometer (kil'o-me-ter) [Fr. *kilomètre*]. One thousand meters. See *weights and measures*.

kilurane (kil'u-rān). A unit of radioactivity, being 1000 uranium units.

Kimpton-Brown tube [Arthur Ronald *Kimpton*, Boston surgeon]. See under *tube*.

kinaesthesia, kinaesthesia (kin-es-the'ze-ah, kin-es-the'sis). See *kinesthesia*.

kinanesthesia (kin-an-es-the'ze-ah) [*κίνησις* motion + *anesthesia*]. Loss of power of perceiving the sensation of movement, due to derangement of deep sensibility.

kinase (kin'as) [*κίνησις* motion]. A colloidal substance, existing in various tissues, which serves to activate the specific enzyme of those tissues.

kinazyme (kin'az-īm). A proprietary preparation of extracts from the pituitary, pancreas, liver, and spleen given as a stimulus to metabolism.

kinectine (kin-ek'tin). A preparation, benzosulphone-para-amino-phenyl-arsenate of quinine: used in influenza, coryza, catarrh, hay-fever, malaria, etc.

kinematics (kin-e-mat'iks) [*κίνημα* motion]. The science of motion, including the movements of the body.

kinematograph (kin-em-at'o-graf) [*κίνημα* motion + *γράφειν* to record]. An instrument for exhibiting pictures of objects in motion: it is of considerable service in diagnosis.

kineplastics (kin-e-plas'tiks). Kineplasty.

kineplasty (kin'e-plas-te) [*κίνησις* motion + *πλάσσειν* to form]. Plastic amputation; amputation in which the stump is so formed as to be utilized for motor purposes.

kinergy (kin'er-jet-e). The capacity for kinetic energy.

kinesalgia (kin-es-al'je-ah) [*κίνησις* movement + *ἄλγος* pain]. Pain on muscular exertion.

kinescope (kin'es-kōp) [*κίνησις* motion + *σκοπεῖν* to view]. An instrument for measuring ocular refraction, in which the patient observes a fixed object through a slit in a moving disk.

kinesia, kinetia (kin-e'se-ah, kin-e'te-ah). Motion sickness, including seasickness, car-sickness, etc.

kinesialgia (kin-e-se-al'je-ah). Kinesalgia.

kinesiatics (kin-e-se-at'riks) [*κίνησις* motion + *ιατρικός* curative]. Same as *kinesitherapy*.

kinesi-esthesiometer (kin-e'se-es-the-ze-om'et-er) [*κίνησις* motion + *αἰσθησις* sensation + *μέτρον* measure]. An instrument for estimating or measuring the muscular sense.

kinesimeter (kin-e-sim'et-er) [*κίνησις* motion + *μέτρον* measure]. 1. An instrument for the quantitative measurement of movements. 2. An instrument for exploring the surface of the body to test cutaneous sensibility.

kinesiodic (kin-e-se-od'ik) [*κίνησις* motion + *ὁδός* way]. Pertaining to motor nerve paths.

kinesiology (kin-e-se-ol'o-je) [*κίνησις* motion + *λόγος* discourse]. The sum of what is known regarding muscular movements, especially hygienic or therapeutic movements.

kinesiometer (kin-e-se-om'et-er). Same as *kinesimeter*.

- kinesioneurosis** (kin-e''se-o-nu-ro'sis) [*κίνησις* movement + *neurosis*]. A functional nervous disorder characterized by derangement of the nervous system. **external k.**, one that affects the muscles of external relation. **internal k.**, visceral k., one that affects the muscles of the viscera. **vascular k.** Same as *angioneurosis*.
- kinesipathy** (kin-es-ip'ath-e). An incorrect synonym of *kinesitherapy*.
- kinesiphony** (kin-e-sif'o-ne) [*κίνησις* motion + *φώνη* sound]. The employment of a buzzer in retraining the hearing.
- kinesitherapy** (kin-es''e-ther'ap-e) [*κίνησις* motion + *θεραπεία* cure]. The treatment of disease by movements or exercise; lingism.
- kinesodic** (kin-e-sod'ik) [*κίνησις* motion + *ὁδός* way]. Pertaining to the conveyance of motor impulses.
- kinesthesia, kinesthesis** (kin-es-the'ze-ah, kin-es-the'sis) [*κινεῖν* to move + *αἰσθησις* sensation]. The sense by which muscular motion, weight, position, etc., are perceived.
- kinesesthesiometer** (kin''es-the-ze-m'et-er) [*kinesesthesia* + *μέτρον* measure]. A device by which to measure or test the muscular sensibility.
- kinesthetic** (kin-es-thet'ik). Pertaining to kinesthesia or the muscular sense.
- kinetic** (kin-et'ik) [*κινητικός*]. Pertaining to or producing motion.
- kinetism** (kin-et-izm). The ability to perform or initiate muscular action.
- kinetogenic** (kin-e''to-jen'ik) [*κινητός* movable + *γεννᾶν* to produce]. Causing or producing movement.
- kinetographic** (kin-et-o-graf'ik) [*κινητός* movable + *γράφειν* to record]. Recording graphically the movements of parts and features.
- kinetonucleus** (kin-et-o-nu'kle-us) [*κινητός* movable + *nucleus*]. The micronucleus or centrosome of a cell as distinguished from the principal nucleus or trophonucleus.
- kinetoplasm** (kin-et'o-plazm) [*κινητός* movable + *πλάσμα* something formed]. The most highly contractile portion of the cytoplasm of a cell; the energy plasm: the term is applied to the chromatophilic elements in the nervous tissue.
- kinetoscope** (kin-et'os-kōp) [*κινητός* movable + *σκοπεῖν* to view]. A form of chromophotograph: useful in diagnosis and in physiologic study.
- kinetoscropy** (kin-et-os'ko-pe). Serial photography which exhibits the motions of the limbs or features: used in diagnosis.
- kinetosis** (kin-e-to'sis), pl. *kinetoses* [*κίνησις* motion]. Any disease due to unaccustomed motions, as car-sickness and seasickness.
- kinetotherapy** (kin-et-o-ther'ap-e). Same as *kinesitherapy*.
- king's evil**. Scrofula.
- kink, Lane's (kink)**. A bending and twisting of the ileum in its last six inches, with adhesions of the folds to one another, producing narrowing and obstruction of the lumen. Called also *ileal k.* and *angulation of the ileum*.
- kino** (ki'no). The dried juice of *Pterocar'pus marsu'pium*, of southern Asia, and of various other trees. It is a strong astringent, and is used in diarrhea mixtures and gargles. Dose, 5-30 grains (0.333-2 Gm.); of compound powder (*pul'vis ki'no compos'itus*), 5-15 grains (0.333-1 Gm.); of tincture (*tinctu'ra ki'no*, U. S. P.), $\frac{1}{2}$ -2 drachms (2-8 cc.).
- kinocentrum** (ki-no-sen'trum). The centrosome.
- kinoin** (ki'no-in'). A principle, $C_{14}H_{12}O_6$, from Australian kino.
- kinology** (ki-nol'o-je). Kinesiology.
- kinometer** (kin-om'et-er) [*κινεῖν* to move + *μέτρον* measure]. An instrument for measuring uterine displacements.
- kinomometer** (kin-o-mom'et-er) [*κινεῖν* to move + *μέτρον* measure]. An instrument for estimating the degree of motion in fingers and wrist.
- kinone** (kin'ōn). Same as *quinone*.
- kinoplasm** (ki'no-plazm) [*κινεῖν* to move + *πλάσμα* plasm]. The specific kinetic or motor substance of a cell; functional protoplasm. Called also *archoplasm* and *ergastoplasm*.
- kinoplastic** (ki-no-plas'tik). Pertaining to kinoplasm.
- kinosphere** (ki'no-spēr) [*κινεῖν* to move + *sphere*]. Same as *aster*.
- kinotoxin** (ki-no-tok'sin) [*κινεῖν* to move + *toxin*]. A fatigue toxin.
- kinovin** (kin-o'vin). Same as *quinovin*.
- kiono-**. For words thus beginning, see under *ciono-*.
- kiotome** (ki'ot-ōm) [*κίων* column + *τέμνειν* to cut]. A knife for amputating the uvula.
- kiotomy** (ki-ot'o-me). The use of the kiotome; amputation of the uvula.
- Kirmisson's operation** (kēr'me-sawz') [Edouard Kirmisson, French surgeon, 1848-1927]. See under *operation*.
- kirrhonosis** (kir-on-o'sis). Kirronosis.
- kirronosis** (kir-ron-o'sis) [*κίρρος* yellow + *νόσος* disease]. Lobstein's term for fetal jaundice, affecting the serous membranes exclusively.
- Kirstein's method** (kēr'stinz) [Alfred Kirstein, German physician, 1863-1923]. See under *method*.
- kissing bug**. See *Melanolestes picipes*.
- Kissingen salts** (kis'ing-en). An aperient salt from the waters of a spring at Kissingen, Bavaria.
- Kitasato's bacillus, filter, serum** (ke-tas-ah'-tōz) [Shibasaburo Kitasato, Japanese bacteriologist, born 1856]. See under *bacillus, filter, serum*.
- Kittel's treatment** (kit'elz) [M. J. Kittel, contemporary German physician]. See *treatment*.
- k. j.** Abbreviation for *knee jerk*.
- Kjeldahl's method** (kyel'dahlz) [Johann Kjeldahl, Danish chemist, 1849-1900]. See under *method*.
- kl.** Abbreviation for *klang* and *kiloliter*.
- klang** (klahng) [Ger.]. A compound musical tone; a fundamental tone combined with its overtones.
- klapp's creeping treatment** (klaps) [Rudolf Klapp, surgeon in Berlin, born 1873]. See *treatment*.
- klatsch preparation** (klatsch). A cover glass preparation made by pressing a cover glass on a plate culture of bacteria.
- Klebs-Löffler bacillus** (klebs-lef'lar) [Edwin Klebs, bacteriologist in Berlin, 1834-1913; Friedrich A. J. Löffler]. See under *bacillus*.
- klemmolin** (klem'o-lin). A proprietary preparation of pine leaves and poplar buds; a rheumatism cure.
- kleptolagnia** (klep-to-lag'ne-ah) [*κλέπτειν* to steal + *λαγνεία* lust]. Sexual gratification produced by theft.
- kleptomania** (klep-to-ma'ne-ah) [*κλέπτειν* to steal + *μανία* madness]. An insane impulse to steal; insanity marked by a desire to steal.
- kleptomaniac** (klep-to-ma'ne-ak). A person affected with kleptomania.
- kleptophobia** (klep-to-fō-be-ah) [*κλέπτειν* to steal + *φόβος* fear]. Insane dread of becoming a thief.
- Klieg eye** (klēg) [named from *Kliegal*, the name of the manufacturer of the electric lamps used in moving picture making]. See under *eye*.
- klīm** (klīm). A proprietary milk powder.
- klinol** (kli'nol). A proprietary analgesic and antipyretic.

Klinophilus (kli-nof'il-us). Same as *Cimex*.

Klippel's disease (klip-elz') [Maurice *Klippel*, French neurologist, born 1858]. Arthritic general pseudoparalysis.

Klippel-Feil disease or syndrome. See under *syndrome*.

Klippel-Weil sign. See under *sign*.

klisometer (klis-e-om'et-er). Same as *clisometer*.

Kluge's method (kloo'gez) [Karl Alexander Ferdinand *Kluge*, German obstetrician, 1782-1844]. See under *method*.

Klumpke's paralysis (kloomp'kez) [Madame A. Déjerine *Klumpke*, Parisian neurologist, 1859-1927]. See under *paralysis*.

Km. Abbreviation for *kilometer*.

KMnO₄. Potassium permanganate.

Knapp's forceps, streaks (naps) [Hermann *Knapp*, New York ophthalmologist, 1832-1911]. See under *forceps* and *streak*.

knee (ne) [L. *ge'nu*]. The anterior aspect of the leg at the articulation of the femur and tibia; also the articulation itself. **automobile k.**, chronic congestion of the ligaments of the knee joint due to the posture in driving an automobile. **big k.** 1. Bursitis over the knees of cattle. 2. A tumor of the bony parts of the knee joint in horses. **Brodie's k.**, a chronic synovitis of the knee joint in which the affected parts acquire a soft and pulpy consistence. **broken k.**, an injury of the knee of a horse due to violence. **kneecap, kneecap, the patella**. **capped k.**, distention of the synovial bursa over the knee joint of horses or cattle. **football k.**, a swollen, relaxed, somewhat tender knee seen in football players. **hooped k.**, the presence of exostoses in the knee of a horse. **house-maid's k.**, inflammation of the bursa in front of the patella, with accumulation of fluid therein. **in k., knock k.**, genu valgum; the condition in which the knees come together while the ankles are far apart. **k. of the internal capsule**, the bend at the junction of the anterior and posterior limbs of the internal capsule. **k. jerk**. See under *reflex*. **k. joint**, the articulation of the femur and tibia. **out k.**, genu varum, or bow-leg. **septic k.**, a suppurating knee joint. **sprung k.**, forward bending of the knee of a horse, due to shortening of the flexor tendons.

kneippism (nīp'izm) [after Rev. Father *Kneipp* (1821-1897), who introduced the practice]. Cure by walking barefoot in the morning dew, cold bathing, etc.

knife (nif). A cutting instrument, of various shapes and sizes, for surgeons' and dissectors' use. **Beer's k.**, a knife with a triangle-shaped blade, used in operations for cataract and for excising staphylocoma of the cornea. **cataract k.**, a knife for cutting the cornea in operations for cataract. **cautery k.**, a knife having the blade connected with an electric battery, so that the tissues may be seared while cutting, thus preventing bleeding. **Graefe's k.**, a slender knife used in linear extraction of cataract.

knismogenic (nis-mo-jen'ik) [κνισμός tickling + γέννᾱν to produce]. Producing a tickling sensation.

knitting (nit'ing). The repair of a fractured bone. **knives, Liston's**. Long-bladed knives for amputation.

KNO₃. Potassium nitrate.

knock, pericardial. A clear, metallic clicking sound heard over the precordium in certain cases of penetrating chest wounds in the neighborhood of the pericardium; it has been ascribed to emphysema of the mediastinal connective tissue or to free air in the interstitial connective tissue of the lung.

knock knee (nok nē). Genu valgum. See *knee*.

knot (not). An intertwining of the ends or parts of one or more cords so that they cannot easily be separated. **clove-hitch k.**, a knot consisting of two contiguous loops which are placed around an object, the ends of the cord being toward each other: used for making traction on a part for the reduction of dislocations. **double k.** Same as *friction k.* **false k.** Same as *granny k.* **friction k.**, a knot in which the ends of the cord are twisted twice around each other before being tied. **granny k.**, a double knot in the second loop of which the end of one cord is over, and the other under, its fellow, so that the loops do not lie in the same line. **Hensen's k.**, the first appearance of the primitive streak of the embryo in the form of a knotlike thickening. **net k.** See *net-knot*. **protochordal k.** Same as *Hensen's k.* **reef k.**, a double knot in which the free ends of the second knot lie in the same plane as the ends of the first knot. Called also *sailors' k.* and *square k.* **sailors' k., square k.** See *reef k.* **Staffordshire k., a**

Clove-hitch knot (Erichsen).

Knots: A, Square or reef knot; B, granny knot; C, surgeon's knot. (DaCosta.)

knot for tying pedicles, as of the ovary. It is made by passing a ligature through the pedicle by a needle, which is withdrawn so as to leave a loop which is passed over the pedicle. One of the ends of the ligature is drawn through the loop, and the two ends are tied by a reef knot: called also *Tait's k.* **stay k.**, a knot made with two or more ligatures, each being tied with the first half of a reef knot; then all the ends of one side are taken in one hand, and all the ends on the other side in the other hand, and tied as if they formed one single thread. **surgeons' k., surgical k.**, a knot in which the thread is passed twice through the same loop. **Tait's k.** See *Staffordshire k.*

knuckle (nuk'l). 1. The dorsal aspect of any phalangeal joint. 2. An extruded loop, as of the bowel or omentum in hernia. **k. pads**. See under *pad*.

knuckling (nuk'ling). A condition in which the fetlock joint of a horse is pushed upward and forward, due to shortening of the tendons behind.

koagulen (ko-ag'u-len). Same as *coagulen*.

Kobelt's tubes (ko'belts) [George L. *Kobelt*, German physician, 1804-1857]. See under *tube*.

Kobert's test (ko'bertz) [Eduard Rudolf *Kobert*, German chemist, 1854-1919]. See under *tests*.

KOC. An abbreviation for *kathodal opening contraction*.

Koch's lymph, etc. (kōks) [Robert *Koch*, German bacteriologist, 1843-1910]. See under *lymph*, etc.

Koch's node (kōks) [Walter *Koch*, German surgeon, born 1880]. Atrioventricular node. See *node*.

Koch's test (kōks). See under *tests*.

Koch-Weeks bacillus (kōk-wēks) [Robert *Koch*; John Elmer *Weeks*, New York oculist, born 1853]. See under *bacillus*.

Kocher's forceps, operation (kōk'erz) [Theodor *Kocher*, Swiss surgeon, 1841-1917]. See under *forceps* and *operation*.

Kocks' operation [Joseph Kocks, German surgeon, born 1846]. See under *operation*.

kodol (ko'dol). A proprietary digestant and dyspepsia cure

kodozonol (ko-do-zo'nol). A proprietary ozonized preparation of cod liver oil.

Koeberlé's forceps (ke-ber-láz') [Eugene Koeberlé, French surgeon, 1828-1915]. Hemostatic forceps.

Koebner's disease (keb'nerz) [Heinrich Koebner, German dermatologist, born 1838]. Epidermolysis bullosa.

Koenecke's reaction or test (ke-nek'ez). See under *tests*.

KOH. Potassium hydroxide.

Köhler's disease (ka'lerz) [Alban Köhler, German physician, born 1874]. See under *disease*.

Kohlrausch's fold or valve (kôl'rowsh) [Otto Ludwig Bernhard Kohlrausch, German physician, 1811-1854]. See under *fold*.

Kohnstamm's phenomenon (kôn'stahmz). See under *movement*.

koilonychia (koi-lo-nik'e-ah) [κόιλος hollow + ὄνυξ nail]. A condition in which the nail is concave; spoon nail.

koilorrhachic (koi-lo-rak'ik) [κόιλος hollow + ραχίς spine]. Having a curved lumbar spine with the concavity forward.

kola (ko'lah). The seeds of *Co'lah acuminata*, a tree of Africa and several other species; it is a cardiac, aphrodisiac, and nerve stimulant. Dose of tincture, 60 minims (4 cc.); of fluidextract, 20-30 minims (1.333-2 cc.). **k. cardinette**, a therapeutic combination of kola and phosphates from cereal grains. **k. tannin**, a compound of caffeine and tannin derived from kola.

kolabon (ko'lah-bon). A proprietary confection containing kola.

kolanin (ko'lan-in). An active principle from kola.

Kolle's serum (kol'ez) [Wilhelm Kolle, German bacteriologist, born 1868]. See under *serum*.

Kölliker's layer, nucleus, etc. (kel'ik-erz) [Rudolf Albert von Kölliker, German anatomist, 1817-1905]. See under *layer*, *nucleus*, etc.

kolloylin (kol-ok'sil-in). A substance allied to collodion, and used in histologic work.

Kolmer's test (kôl'merz) [John A. Kolmer, Philadelphia pathologist, born 1886]. See under *tests*.

kolp-. For words beginning thus, see those beginning *colp-*.

kolynos (kol'in-os) [κωλύειν to hinder + νόσος disease]. A proprietary antiseptic dental paste.

kolyone (ko'le-ôn). See *colyone*.

kolyptic (ko-lip-ep'tik) [κωλύειν to hinder + πεπτικός peptic]. Hindering or checking digestion.

kolyphrenia (ko-le-fre'ne-ah) [κωλύειν to hinder + φρην mind]. Psychic inhibition.

kolyseptic (ko-lis-ep'tik) [κωλύειν to hinder + σепτικός septic]. Checking or hindering septic processes.

kolytic (ko-lit'ik) [κωλύειν to prevent]. Hunt's term for the inhibitory temperament, marked by calmness, self-control, with a tendency to passivity of mind and body. Cf. *erethitic*.

kombe (kom'ba). An African arrow poison from *Strophan'thus kom'be*.

Kondoleon's operation (kon-do'le-onz) [Emmanuel Kondoleon, contemporary surgeon in Athens]. See under *operation*.

König's operation (kân'igz) [Franz König, German surgeon, 1832-1910]. See under *operation*.

König's rods (kân'igz) [Charles Joseph König, German otologist, born 1868]. See under *rod*.

konimeter (ko-nim'et-er). Same as *konometer*.

koniology (ko-ne-o'l'o-je). Same as *coniology*.

konométer (ko-nom'et-er) [κόνος dust + μέτρον measure]. An apparatus for counting the number of dust particles in the air.

konseal (kon'sel). A proprietary form of cachet or capsule for enclosing a dose of medicine.

kontraluesin (kon-trah-lu'es-in). A preparation of colloidal mercury with arsenic, phosphorus, and salicyl-sozoidol-quinine sublimate: used for syphilis.

kontrastin (kon-tras'tin). Zirconium oxide.

koosin (koo'sin). See *koussin*.

kooso (koo'so). See *koussou*.

kopf-tetanus (kopf-tet'an-us) [Ger. *Kopf* head + *tetanus*]. Tetanus following a wound of the head.

kophemia (ko-fe'me-ah) [Gr.]. Word deafness; logokophsis.

kopiopia (ko-pe-o-pe-ah). See *copiopia*.

Koplik's spots (kop'liks) [Henry Koplik, New York pediatrician, 1858-1927]. See under *spot*.

Kopp's asthma [Johann Heinrich Kopp, German physician, 1777-1858]. See *asthma*.

kopraemia (kop-re'me-ah). Same as *copremia*.

kopratin (kop'rat-in) [κόπρος dung]. The chemical substance which produces the so-called pyridine-hemochromogen spectrum in the pyridine test for blood. It is produced from alpha-hematin by putrefaction.

koprosterin (kop-ro-ste'rin). Same as *stercorin*.

Korányi's auscultation or percussion, treatment (ko-ran'yéz) [Baron F. von Korányi, Hungarian physician, 1829-1913]. See under *auscultation* and *treatment*.

koronion (ko-ro'ne-on), pl. *korónia* [κορώνη crest]. A point at the apex of the coronoid processes of the inferior maxilla.

koroscopy (ko-ros'ko-pe). See *coroscopy*.

Korsakoff's psychosis or syndrome (kor-sak'-ofs) [Sergei Sergeevich Korsakoff, Russian neurologist, 1853-1900]. See *psychosis*.

kosam (ko'sam). The seeds of *Bru'cea sumat-ra'na*, of southeastern Asia; a Chinese remedy for dysentery and uterine hemorrhage. Dose, 5-10 grains (0.333-0.666 Gm.).

Koshevnikoff's disease (ko-shev'nik-ofs) [Alexici Jakovlevich Koshevnikoff, Russian neurologist, 1836-1902]. A mild epilepsy.

kosin (ko'sin). Same as *koussin*.

kosotoxin (ko-so-toks'in). A yellowish, amorphous powder, $C_{26}H_{34}O_{10}$, from koussou: a powerful muscle poison.

Kossal's test (kos'alz). [Albrecht Kossal, German physiologist, 1853-1927]. See under *tests*.

Köster's nodule (kes'terz) [Karl Köster, German pathologist, born 1843]. See *nodule*.

Kottmann's reaction or test (kot'manz) [K. Kottmann, contemporary German physician]. See under *tests*.

koumiss, kumiss (koo'mis) [Tartarian]. A fermented alcoholic drink prepared from cow's milk; originally from mare's milk by the Tartars. **kefir k.**, milk fermented with kefir fungi.

koussein (koo'se-in). A yellowish-brown powder, the active principle of brayera. It is soluble in alcohol, ether, and chloroform, and sparingly soluble in water: used as an anthelmintic. Dose, 15-30 grains (1-2 Gm.).

koussin (koo'sin). An anthelmintic resin, $C_{31}H_{38}O_{10}$, from koussou. Dose, 20-40 grains (1.333-2.666 Gm.). Called also *brayerin*.

koussou (koo'so). The flowers of *Hage'nia abyssin'ica*, or *Braye'ra anthelmin'tica*. See *brayera*.

Kovalevski's canal (ko-val-ev'skéz) [Pavel Ivanovich Kovalevski, Russian anatomist, born 1845]. See under *canal*.

Kowarsky's test (ko-var'skez) [A. Kowarsky, physician in Berlin]. See under *tests*.

Koyter's muscle (koi'terz) [Volcherus *Koyter*, Dutch anatomist, 1534-1600]. The corrugator supercilii.

Kr. The chemical symbol of *krypton*.

Kraepelin's classification (kra'pa-linz) [Emil *Kraepelin*, Berlin psychiatrist, 1846-1926]. Division of mental diseases into the manic-depressive and schizophrenic groups.

Krameria (krah-me're-ah) [after J. G. H. *Kramer*]. A genus of polygaleaceous shrubs and herbs. The root of *K. triandra*, or Peruvian rhatany, and of *K. argentea*, or Brazilian rhatany, are astringent, like tannic acid: used in diarrhea, hemorrhages, and locally in leukorrhea, fissure of the anus, fissured nipples, etc. Dose of extract, 5 grains (0.333 Gm.); of fluidextract, 4-30 minims (0.333-2 cc.); of syrup, $\frac{1}{2}$ -4 fluidrachms (2-16 cc.); of tincture (U. S. F.), 60 minims (4 cc.).

Kraske's operation (kras'kez) [Paul *Kraske*, German surgeon, born 1851]. See under *operation*.

krauomania (kraw-o-ma'ne-ah). A tic marked by rhythmic movements, such as balancing, head rotation, etc.

kraurosis (kraw-ro'sis) [κραιῦπος dry]. A dry, shriveled condition of a part, especially of the vulva (Breisky, 1885).

Krause's bundle, corpuscles, membrane (krow'zehz) [Wilhelm *Krause*, German anatomist, 1833-1910]. See *bundle, corpuscle, and membrane*.

Krause's gland, ligament, valve (krow'zehz) [Karl Friedrich Theodor *Krause*, German anatomist, 1797-1868]. See *gland, ligament, and valve*.

Krause's operation (krow'zehz) [Fedor *Krause*, German surgeon, born 1857]. See *operation*.

kreat (kre'at). The plant of *Andrographis paniculata* of Asia: a bitter tonic and febrifuge.

creatin, kresol, etc. See *creatin, cresol*, etc.

krebisote (kre'bis-öt). A combination of creosote and bismuth: used like iodoform and internally in dysentery. Dose, 3-15 grains (0.3-1 Gm.).

krelos (kre'los). A proprietary antiseptic and germicide, consisting of a solution of cresols and rosin soap.

kreosal (kre'o-sal). A brown powder, the tannic acid ester of creosote: used in diseases of the throat, nose, and larynx.

kreosolid (kre-o-sol'id). A triturate of creosote and magnesia in equal parts, for internal use. Dose, 2-8 grains (0.125-0.5 Gm.).

kreosotal, kreosote, etc. See *creosotal, creosote*, etc. **K. kefir**, a preparation of creosotal and kefir in a series of different strengths.

kreotoxicon (kre-o-tok'sik-on). The substance in poisonous meat that produces the toxic symptoms.

kreotoxin (kre-o-tok'sin). Any basic poison generated in a flesh food by a plant micro-organism.

kreotoxism (kre-o-tok'sizm) [κρέας meat + τοξικόν poison]. Poisoning by meat.

kreozonol (kre-o-zo'nol). A proprietary ozonized preparation of oil of tar.

kresamine (kres-am'in). A yellowish, alkaline liquor, containing 25 per cent each of trikresol and ethylenediamine: used as an antiseptic and in skin diseases in 0.1-1 per cent solution or 1-5 per cent ointment.

kresapol (kres'ap-ol). An antiseptic solution of cresol in potassium soap.

kresatin (kre'sat-in). Metacresyl acetate, an oily liquid used in diseases of the nose, throat, and ear.

kresin (kre'sin). A brownish solution of cresylic acid and sodium oxyacetate: disinfectant.

kresival (kres'iv-al). The calcium salt of cresol sulphonic acid in a concentrated solution of sugar, used as an expectorant.

kreso (kre'so). A coal tar product containing cresols and phenols: used as a disinfectant and sterilizer for instruments, etc.

kresofuchsin (kres-o-fuk'sin). A blue-gray powder used as a stain in histology. Its aqueous solution is red, the alcoholic solution blue.

kresol (kres'ol). Same as *cresol*.

kresosteril (kre-so-ster'il). Metacresolortho-oxalic acid ester, used as a disinfectant.

Kretz's paradox. See under *paradox*.

Kreysig's sign (kri'zigs) [Friedrich Ludwig *Kreysig*, physician in Dresden, 1770-1839]. See *sign*.

krimpsiekte (krip'se-ik'te). A disease of cattle in South Africa caused by poisoning with the plant *Cotyledon wallachii*.

krinin (krin'in). See *crinin*.

krinosin (kri'no-sin). An amino-lipin, $C_{38}H_{79}NO_6$, obtained from brain substance.

Krishaber's disease (krës-ab-airz') [Maurice *Krishaber*, Hungarian physician in France, 1836-1883]. See under *disease*.

kristallin (kris'ta-lin). A proprietary lining varnish for tooth cavities, consisting of a solution of trinitrocellulose in anhydrous amyl acetate.

Kristeller method or technic (kris'tel-er). See under *method*.

Kromayer's lamp (kro'mi-erz) [Ernst *Kromayer*, German dermatologist]. See *lamp*.

Krompecher's tumor (kröm'pek-erz) [Edmund *Krompecher*, pathologist in Budapest, 1870-1926]. Rodent ulcer.

kromoskop (kröm'sköp) [χρῶμα color + σκοπεῖν to view]. An apparatus used for the color photography of pathologic specimens.

Kronecker's center, serum, etc. (kro'nek-erz) [Hugo *Kronecker*, Swiss pathologist, 1839-1914]. See *center, serum*, etc.

kronethyl (kron'eth-il). An ethereal fluidextract of Chinese cantharides: used externally for relieving gouty and neuralgic pains.

Krönig's area, field, isthmus, steps (kra'nigz) [Georg *Krönig*, physician in Berlin, 1859-1911]. See *area, field, isthmus, and steps*.

Krönig's method (kra'nigz) [Bernhard *Krönig*, German gynecologist, 1863-1918]. See *method*.

Krönlein's hernia, operation (krän'linz) [Rudolf Ulrich *Krönlein*, surgeon in Zurich, 1847-1910]. See *hernia, operation*.

Krukenberg's tumor (kroo'ken-bergz) [Friedrich Ernst *Krukenberg*, German gynecologist, born 1871]. See *tumor*.

Kruse's brush (kroo'sez) [Walther *Kruse*, German bacteriologist, born 1864]. See *brush*.

krymotherapy (kri-mo-ther'ap-e). See *crymotherapy*.

kryofin (kri'o-fin). A substance in white crystals derived from paraphenetidin and methyl-glycolic acid, $C_2H_5O.C_6H_4.NH.CO.CH_2OCH_3$, antipyretic and antineuralgic. Dose, 5-8 grains (0.3-0.5 Gm.).

kryogenin (kri-oj'en-in). See *cryogenin*.

kryoscopy. See *cryoscopy*.

kryptomnesic (krip-tom-ne'sik) [κρυπτός hidden + μνᾶσθαι to remember]. Hidden in the memory; subconscious.

krpton (krip'ton) [κρυπτός hidden]. An inert gaseous chemical element found in the atmosphere; atomic weight, 82.9; symbol, Kr.

krysolgan (kri-sol'gan). A proprietary gold preparation, $NH_2.C_6H_3(S.Au)COOH$, claimed to be useful in tuberculosis.

KSC. Abbreviation for *kathodal closing contraction*.

K₂SO₄. Potassium sulphate.

K₂T. Abbreviation for *kathodal closing tetanus*.

kuatsu (koo-at'soo). The Japanese method of reviving patients rendered unconscious.

KUB, K. U. B. Abbreviation for *kidney, ureter, and bladder*.

kubisagari, kubisgari (koo-bis-ag-ah're, koo-bis-gah're). A form of paralytic vertigo endemic in Japan (Gerlier-Nakano, 1884).

Kuhn's mask (koonz) [Ernst Kuhn, Prussian physician, born 1873]. See under *mask*.

Kühne's method of staining (ke'nēz) [Willy Kühne, German histologist, 1837-1900]. See *stains*, *table of*.

Kühne's methylene blue (ke'nēz) [Heinrich Kühne, German histologist]. See *methylene blue*.

Kuhnt's operation (koont) [Hermann Kuhnt, German oculist, 1850-1925]. See *operation*.

kukoline (ku'ko-lin). An alkaloid contained in *Cocculus diversifolius*, having a paralyzing action on muscle.

Külz's cylinders, test (kelts) [Rudolph Eduard Külz, German physician, 1845-1895]. See under *cylinder* and *tests*.

Kümmell's disease (kim'elz) [Hermann Kümmell, surgeon in Hamburg, born 1852]. See under *disease*.

kumysss (koo'mis). See *koumiss*.

Kundrat's lymphosarcoma (kund'rats). See *lymphosarcoma*.

kuorin (ku-o'rin). A proprietary preparation used in a 3 per cent solution as a serum reagent in testing for syphilis and leprosy.

Kupffer's cells (koop'ferz) [Karl Wilhelm Kupffer, anatomist in Munich, 1829-1902]. See *cell*.

kupramite (ku'pram-it). A gas mask absorbent for ammonia fumes.

Kupressoff's center (koo-pres'ofs) [J. Kupressoff, Russian physician of the 19th century]. See *center*.

kuprosan (koo'pro-san). A copper preparation used in treating gonorrhea by intramuscular injection.

kurcheine (kooor-tshe'in). An alkaloid, the active principle of kurchi.

kurchi (kooor-tshi') [E. Ind.]. The root bark of *Holarrhena antidysenterica* of Asia: an astringent febrifuge and antidysenteric.

kurhaus (kooor'howz) [Ger. *Kur* cure + *Haus* house]. A house designed for the convenience of patients at mineral springs.

Kurloff's bodies (kooor'lowfs) [Mikhail Georgiye-vitch Kurloff, Russian physician, born 1859]. See under *body*.

Küss' experiment (kes) [Emil Küss, German physiologist, 1815-1871]. See *experiment*.

Kussmaul's disease, etc. (kus'mowlz) [Adolf Kussmaul, German physician, 1822-1902]. See under *disease*.

Küster's operation (kis'terz) [Ernst Georg Ferdinand Küster, German surgeon, born 1839]. See under *operation*.

Küstner's sign (kist'nerz) [Otto Ernst Küstner, gynecologist in Breslau, born 1850]. See under *sign*.

kuttarosome (kut-ar'o-sōm) [κύτταρος a cavity + σώμα body]. A structure at the neck of a retinal cone composed of a series of parallel bars.

K.W. Abbreviation for *kilowatt*.

kyanophane (ki'an-o-fān) [κύανος blue + φαίνειν to appear]. A supposed bluish pigment from the oil globules of the retinal cones.

kyanopsia (ki-an-op'se-ah). See *cyanopsia*.

kyestein (ki-es'te-in) [κύστις conception]. A film sometimes seen on stale urine, formerly believed to be a sign of pregnancy.

kylosis (kil-o'sis) [κύλλωσις]. Clubfoot or other like deformity of the foot or feet.

kymatism (ki'mat-izm) [κύμα wave]. Same as *myokymia*.

kymogram (ki'mo-gram). The curve made by a kymograph.

kymograph (ki'mo-graf) [κύμα wave + γράφειν to record]. An instrument for recording variations or undulations, arterial or other (Carl Ludwig, 1847).

kymographion (ki-mo-gra'fe-on). One form of *kymograph*.

kymoscope (ki'mo-skōp) [κύμα wave + σκοπεῖν to observe]. A device for observing the blood current.

kynocephalus, cynocephalus (ki-no-sef'al-us, si-no-sef'al-us) [κύων dog + κεφαλή head]. A fetal monster with a head like that of a dog.

kyphobia (ki-no-fo'be-ah) [κύων dog + φόβος fear]. Morbid fear of dogs or of hydrophobia.

kynurin (ki-nu'rin) [κύων dog + ούρον urine]. A crystalline substance, $C_{18}H_{14}N_2O_2$, obtainable from cynuric acid and other sources.

kyphos (ki'fos) [κυφός humpbacked]. The hump of the spine in kyphosis.

kyphoscoliosis (ki'fo-sko-le-o'sis) [kyphosis + scoliosis]. Backward and lateral curvature of the spinal column.

kyphosis (ki-fo'sis) [κύφωσις]. Humpback; abnormal curvature and dorsal prominence of the vertebral column.

kyphotic (ki-fo'tik). Affected with or pertaining to kyphosis.

kyphotone (ki'fo-tōn) [κυφός crookedness + τόνος brace]. An apparatus for reducing deformity in Pott's disease.

kyrin (ki'rin). A basic tripeptid obtained by Siegfried by the partial hydrolysis of proteins.

kyrtorrhachic (ker-to-rak'ik) [κύρτος curved + ράχis spine]. Having a curved lumbar spine with the concavity backward.

kysthitis (kis-thi'tis) [κύσθος vagina + -itis inflammation]. Vaginitis; colpitis.

kysthoptosis (kis-thop-to'sis) [κύσθος vagina + πῶσις falling]. Prolapse of the vagina.

kyto-. For words beginning thus, see those beginning *cyto-*.

L

- L.** 1. An abbreviation for *Latin, left, lithium, light sense, libra* (pound, balance), *liter, length, and coefficient of induction*. 2. Ehrlich's symbol for *lethal* (deadly, fatal).
- Lo.** Ehrlich's symbol for a toxin-antitoxin mixture which is completely neutralized and therefore will not kill an animal.
- L+**. Ehrlich's symbol for a toxin-antitoxin mixture which contains one fatal dose in excess and which will kill the experimental animal.
- La.** Symbol for *lanthanum*.
- l-**. A prefix which signifies *levo-*.
- lab, lab ferment** [Ger. *Lab rennet*]. The ferment of rennet, causing coagulation of milk. 1. **secretion**, secretion of lab zymogen or lab ferment by stomach. 1. **zymogen**, a proenzyme in the stomach transformed into lab ferment by acids of gastric juice.
- Labarraque's solution** (lab-ar-aks') [Antoine Germain *Labarraque*, French chemist, 1777-1850]. See under *solution*.
- Labbé's triangle, veins** (lab-áz') [Léon *Labbé*, French surgeon, 1832-1916]. See *triangle* and *veins, table of*.
- labdacism** (lab'das-izm). Lambdacism.
- labdanum** (lab'da-num) [L.]. Same as *ladanum*.
- labia** (la'be-ah) [L.]. The plural of *la'bium*, lip.
- labial** (la'be-al) [L. *labia'lis*]. Pertaining to a lip, or labium.
- labialism** (la'be-al-izm). Defective speech, with use of labial sounds.
- labially** (la'be-al-e). Toward the lips.
- labichorea** (la'be-ko-re'ah). Same as *labiochorea*.
- labidometer** (lab-id-om'et-er) [*λαβίς* forceps + *μέτρον* measure]. A forceps-like instrument for measuring the fetal head in the forceps. Called also *labimeter*.
- labile** (la'hil) [L. *la'bi* to glide]. 1. Gliding; moving from point to point over the surface. 2. Chemically unstable.
- lability** (lab-il'it-e). Chemical instability.
- labimeter** (la-bim'e-ter). See *labidometer*.
- labio-alveolar** (la'be-o-al-ve-o-lar). Pertaining to the lip and the dental alveoli; pertaining to the labial side of a dental alveolus.
- labiocervical** (la'be-o-ser'vik-al). Pertaining to the labial surface of the neck of a tooth.
- labiochorea** (la'be-o-ko-re'ah) [L. *la'bium* lip + *chorea*]. A choreic stiffening of the lips in speech, with stammering.
- labioinclination** (la'bio-kli-na'shun). See *inclination*.
- labiodental** (la'be-o-den'tal). Pertaining to the labial surface of a tooth.
- labioglossolaryngeal** (la'be-o-glos'o-lah-rin'je-al) [L. *la'bium* lip + *γλῶσσα* tongue + *larynx*]. Pertaining to the lips, tongue, and larynx.
- labioglossopharyngeal** (la'be-o-glos'o-far-in'je-al). Pertaining to the lips, tongue, and pharynx. See *paralysis*.
- labiograph** (la'be-o-graf) [L. *la'bium* lip + *γράφειν* to write]. An instrument for recording the motions of the lips in speaking.
- labiologic** (la-be-o-loj'ik). Pertaining to labiology.
- labiology** (la-be-o-l'o-je). The study of the movements of the lips in speaking and singing.
- labiomancy** (la'be-o-man-se) [L. *la'bium* lip + *μαντεία* foretelling]. Lip reading; the art of understanding speech by observing the motion of the lips of the speaker.
- labiomental** (la'be-o-men'tal). Pertaining to the lip and chin.
- labiomycosis** (la'be-o-mi-ko'sis) [L. *la'bium* lip + *μύκωσις* fungus]. Any disease of the lips due to a fungus, such as *perlèche* and thrush.
- labionasal** (la'be-o-na'zal). Pertaining to the lip and nose.
- labiopalatine** (la'be-o-pal'at-in). Pertaining to the lip and palate.
- labioplacement** (la'be-o-plās'ment). Displacement of a tooth toward the lip.
- labioplasty** (la'be-o-plas-te) [L. *la'bium* lip + *πλάσσειν* to mold]. Same as *cheiloplasty*.
- labiotenaculum** (la'be-o-ten-ak'u-lum) [L. *la'bium* lip + *tenaculum*]. An instrument for holding the lip.
- labioversion** (la'be-o-ver'shun). The state of being displaced labially from the line of occlusion: said of a tooth.
- labitome** (lab'it-ōm) [*λαβίς* forceps + *τέμνειν* to cut]. A cutting forceps.
- labium** (la'be-um), pl. *la'bia* [L.]. A lip or lip-shaped organ. 1. **ante'rius**, the anterior lip of the external opening of the uterus. 1. **cer'e'brī**, the margin of the cerebral hemisphere that overlaps the callosum. 1. **infe'rius**, the lower lip. 1. **ma'jus puden'di** (pl. *la'bia ma'jo'ra*), the hairy fold of the skin on each side of the slit of the vulva. 1. **mi'nus puden'di** (pl. *la'bia mi'no'ra*), the fold of mucous membrane within the labia majora; the nympha. **la'bia o'ris** [B N A], the lips. 1. **poste'rius**, the posterior lip of the external opening of the uterus. 1. **supe'rius**, the upper lip. 1. **tympa'nicum** [B N A], the lower border of the sulcus spiralis. 1. **ure'thræ**, either lateral margin of the external urinary meatus. 1. **u'teri**, the thickened margin of the external os uteri. 1. **vestibula're** [B N A], the upper part of the sulcus spiralis. 1. **voca'le** [B N A], a projection at each side of the rima glottidis, the free edge of which forms the true vocal cord.
- labor** (la'bor) [L. "work"]. Childbirth; the bringing forth of a child. **artificial** 1., that which is facilitated or induced by mechanical or other extraneous means. **atonic** 1., that which is protracted by atony of the uterus. **complicated** 1., that in which there occurs a hemorrhage, eclampsia, or some other untoward event. **dry** 1., one in which the liquor amnii escapes too soon. **false** 1., one in which no progress toward delivery is made. **induced** 1., labor brought on by artificial means. **instrumental** 1., that which is facilitated by the use of instruments. **metastatic** 1., labor in which the contractions occur in some part other than the uterus. **missed** 1., retention of the dead fetus in utero beyond the period of normal gestation. **multiple** 1., labor with two or more fetuses present. **obstructed** 1., that in which there is some mechanical hindrance, as from a tumor or a contracted parturient canal. **perverse** 1., that in which the child occupies an abnormal position. **postponed** 1., that which takes place later than the normal limit. **powerless** 1., that in which there is atony of the uterus. **precipitate** 1., that which is accomplished with undue celerity. **premature** 1., labor taking place before the normal period. **protracted** 1., one which is prolonged beyond the ordinary limit. **spontaneous** 1., one that requires no artificial aid. **tedious** 1., parturition that is abnormally protracted. **twin** 1., tedious labor due to the presence of two fetuses.
- laboratorian** (lab'or-at-o're-an). A person who devotes himself to laboratory work, as distinguished from a clinician.
- laboratory** (lab'or-at-o-re) [L. *laborato'rium*]. A place fitted up for experimental work.
- Laborde's forceps** (lab-ordz') [Jean Baptiste

Vincent Laborde, French physician, 1830-1903]. See *forceps*.

labordin (lab'or-din). Same as *analgen*.

labrocyte (lab'ro-sit) [λάβρος greedy + κύτος cell]. A mast cell.

labrum (la'brum) [L.]. Brim, lip. 1. **glenoida'le** [B N A], a ring of white fibrocartilage attached to the rim of the socket in a ball and socket joint to increase the depth of the joint.

labyrinth (lab'ir-inth) [λαβύρινθος]. 1. Any system of intercommunicating cavities or canals. 2. The internal ear, made up of the cochlea, vestibule, and canals. See *ear*. **bony** 1., the bony part of the internal ear. Called also *osseous* l. **cortical** 1., a network of tubules and blood ves-

The osseous labyrinth, viewed outwardly in front: 1, Vestibule; 2, fenestra vestibulae or oval window; 3, fenestra cochleae or round window; 4, superior semicircular canal; 5, posterior semicircular canal; 6, inferior semicircular canal; 7, ampullae; 8, cochlea. (Leidy.)

sels in the cortex of the kidney. 1. of the **ethmoid**, either lateral mass of the ethmoid bone. **Ludwig's** 1's, spaces between Bertin's columns and the cortical arches. **membranous** 1., the membranous contents of the osseous labyrinth. **olfactory** 1. Same as 1. of the **ethmoid**. **osseous** 1. See *bony* l.

labyrinthectomy (lab'ir-in-thek'to-me) [labyrinth + ἐκτομή excision]. Excision of the labyrinth of the ear.

labyrinthine (lab-ir-in'thīn) [L. labyrinthi'nus]. Pertaining to a labyrinth.

labyrinthitis (lab'ir-in-thi'tis). Inflammation of the labyrinth; otitis interna.

labyrinthus (lab-ir-in'thus). Labyrinth.

lac (lak) [L., gen. lac'tis]. 1. Milk. 2. Any milk-like medicinal preparation. 3. A substance collected from various tropical trees, caused by an insect, *Coccus lac'tis*. 1. **cani'num**, dog's milk, and its homeopathic preparation. 1. **deflora'tum**, skimmed milk: recommended as a remedy in diabetes and anemia. 1. **fermen'tum**, fermented milk, or koumiss. 1. **humaniza'tum**, humanized milk. 1. **sulphu'ris**. See *precipitated sulphur*, under *sulphur*. 1. **vaccini'num**, cow's milk. 1. **virginal'e**, virgin's milk: a strained liquor of litharge; an ancient remedial wash, variously prepared, but now entirely obsolete.

lac-bismo (lak-biz'mo). A proprietary preparation of bismuth hydroxide and subcarbonate. Dose, 1-4 fluidrachms (4-16 cc.).

laccase (lak'ās). An oxidizing ferment which causes the formation of Japanese lacquer. Laccase is found in many plants, as the beet, turnip, apple, pear, clover, etc., and has the property of oxidizing many polyatomic phenols.

lacerable (las'er-ab-l). Liable to become lacerated.

lacerated (las'er-a-ted) [L. lacera're to tear]. Torn; of the nature of a rent.

laceration (las'er-a'shun) [L. lacera'tio]. 1. The act of tearing. 2. A wound made by tearing.

lactertofulvin (la-ser-to-ful'vin) [L. lacert'us lizard + ful'vus yellow]. A yellow coloring matter from the skin of certain reptiles.

lactertus fibro'sus (las-er'tus) [L. "fibrous arm"]. [B N A] An aponeurotic band from the tendon of the biceps to the forearm; the bicipital fascia.

Lacerations of cervix: 1, Unilateral; 2, bilateral; 3, stellate. (J. C. Hirst.)

lachesis (lak'es-is) [L.; λάχσις fate]. A homeopathic preparation of the venom of *Lach'esis mu'tus*, a South American serpent.

lachry-. For words beginning thus, see those beginning *lacri-*.

lacinia (las-in'e-ah) [L. "fringe"]. Same as *fimbria*.

lactmoid (lak'moid). A deep-blue dye, formed when resorcinol is heated with sodium nitrite. It is used as an indicator and has a pH range of 4.4 to 6.2.

lactus (lak'mus) [Ger. *Lackmus*]. Litmus.

lacrima (lak'rim-ah) pl. *lacrimae*. Latin for *tear*.

lacrimal (lak'rim-al) [L. lacrima'tis; lac'rima tear]. Pertaining to the tears.

lacrimalin (lak-rim'al-in). A substance obtained from the secretion of the lacrimal gland: said to have induced a flow of tears.

lacrimase (lak'rim-ās). A ferment obtained from the secretion of the lacrimal gland.

lacrimation (lak-rim-a'shun) [L. lacrima'tio]. The secretion and discharge of tears.

lacrimotome (lak'rim-o-tōm) [L. lac'rima tear + τομή a cut]. A knife for operating upon the lacrimal sac or lacrimal duct.

lacrimotomy (lak-rim-ot'o-me) [L. lac'rima tear + τέμνειν to cut]. Incision of the lacrimal sac or duct.

lactacidase (lak-tas'id-ās). An enzyme of lactic acid bacteria which produces lactic acid fermentation.

lactacidin (lak-tas'id-in). A food preservative composed of lactic and salicylic acids.

lactacidogen (lak-tas'id-o-jen) [lactic acid + -γεν to produce]. A compound of a monosaccharide and a phosphate, hexose diphosphate, $4C_6H_{10}O_4(K_2PO_4)_2$, found in muscle tissue and in fermenting mixtures. It is thought that it splits into lactic acid and phosphoric acid during the contraction of muscle.

lactaciduria (lak-tas-id-u're-ah) [lactic acid + ούρον urine]. The presence of lactic acid in the urine.

lactagogue (lak'tag-og) [L. lac milk + ἀγωγός leading]. See *galactagogue*.

lactagol (lak'tag-ol). A galactagogue extract of cotton seed oil.

lactalase (lak'tal-ās). A ferment which converts dextrose into lactic acid.

lactalbumin (lak-tal-bu'min). An albumin found in milk and resembling serum albumin.

lactam (lak'tam). A cyclic amide formed from aminocarboxylic acids by the elimination of water. They are isomeric with lactims, which are enol forms of lactams.

lactamide (lak-tam'id). The amid of lactic acid, $CH_3CHOH.CONH_2$.

lactamine (lak-tam'in). Alanine.

- lactampule** (lak-tam'pūl). A pure culture of *Bacillus bulgaricus* in ampules.
- lactase** (lak'tās). An intestinal enzyme that splits lactose into glucose and galactose.
- lactate** (lak'tāt). Any salt of lactic acid.
- lactation** (lak-ta'shun) [*L. lacta'tio*, from *lacta're* to suckle]. 1. The secretion of milk. 2. The period of the secretion of milk. 3. Suckling.
- lactational** (lak-ta'shun-al). Pertaining to lactation.
- lactéal** (lak'te-al) [*L. lac'teus* milky]. 1. Pertaining to milk. 2. Any one of the intestinal lymphatics that take up chyle.
- lactein** (lak'te-in). Same as *lactolin*.
- lacteol** (lak'te-ol). A proprietary culture of lactic acid bacilli in tablet form.
- lactescence** (lak'tes'ens) [*L. lactes'cere* to become milky]. Resemblance to milk; milkiness.
- lactic acid fermentation**, etc. (lak'tik). See *acid, fermentation*, etc.
- lactiferous** (lak-tif'er-us) [*L. lac* milk + *fer're* to bear]. Producing or conveying milk.
- lactification** (lak-tif-ik-a'shun). The production of lactic acid by the lactic acid bacteria.
- lactifuge** (lak'tif-ū) [*L. lac* milk + *fuga're* to expel]. 1. Checking or stopping the secretion of milk. 2. An agent that checks the secretion of milk.
- lactigenous** (lak-tij'en-us) [*L. lac* milk + *γεννᾶν* to produce]. Producing or secreting milk.
- lactigerous** (lak-tij'er-us) [*L. lac* milk + *ger'ere* to carry]. Same as *lactiferous*.
- lactim** (lak'tim). See under *lactam*.
- lactimorbus** (lak-tim-or'bus) [*L. lac* milk + *mor'bus* disease]. Milk sickness.
- lactin** (lak'tin). 1. Lactose, or sugar of milk. 2. A proprietary sterile milk in ampules for injection in nonspecific protein therapy.
- lactinated** (lak'tin-a-ted). Prepared with sugar of milk.
- lactinum** (lak-ti'num). A proprietary form of neutral aluminum lactate.
- lactivorous** (lak-tiv'or-us) [*L. lac* milk + *vora're* to devour]. Feeding or subsisting upon milk.
- lactobacillin** (lak-to-bas-il'in). A preparation of lactic acid bacteria to be added to milk to cause lactic acid fermentation.
- Lactobacillus** (lak-to-bas-il'us) [*L. lac* milk + *bacillus*]. A genus of bacterial organisms. They are gram-positive, nonmotile rods that ferment carbohydrates with the production of acid (usually lactic acid) and often gas (mostly carbon dioxide and hydrogen). **L. acidophil-aero'genes**, an anaerobic organism closely resembling *L. acidophilus* except that it ferments many carbohydrates. **L. acidophilus**, an anaerobic, gram-positive organism found in the normal yellow stool of the infant. It produces acid in milk and will live and grow in a higher hydrogen ion concentration than most other bacteria. It produces two types of colony, α and γ . The α type is a fuzzy colony resembling that of *L. bulgaricus*; the γ type resembles that of the colon bacillus. **L. bif'idus**, a strictly anaerobic, nonpathogenic organism found in the stools of normal infants. It is rather polymorphic and at times shows terminal bifurcation. **L. bulgar'icus**, a rod-shaped organism found in Bulgarian yakhourth. It ferments milk and produces a high degree of acidity. Such milk is drunk in the hope that the acid production will lessen the growth of putrefactive organisms in the intestines. Called also *Bacillus bulgaricus*, *B. gastrophilus*, *b. of Massol*, *Boaz-Oppler bacillus*, and *filamentary bacillus*. **L. caucas'icus**, a sporogenic species found in kefir grains. **L. odontolyt'icus**, a species credited with being one of the agents in decay of teeth.
- lactobiose** (lak-to-bi'ös). Lactose.
- lactobutyrometer** (lak'to-bu-tir-om'et-er) [*L. lac* milk + *butyrometer*]. An instrument for measuring the proportion of cream in milk.
- lactocèle** (lak'to-sèl). Same as *galactocèle*.
- lactochrome** (lak'to-kröm) [*L. lac* milk + *χρῶμα* color]. An alkaloid of milk, $C_6H_{18}NO_6$.
- lactocin** (lak'to-sin). A hypnotic preparation said to be prepared from the juice of *Lactuca viro'sa*.
- lactoconium, lactokonium** (lak-to-ko'ne-um) [*L. lac* milk + *kóvus* dust]. One of the small particles, of unknown nature, seen with the ultra-microscope in the milk of animals.
- lactocrit** (lak'to-krit) [*L. lac* milk + *κριτής* judge]. An instrument for estimating the amount of fat in milk.
- lactodensimeter** (lak'to-den-sim'et-er). An instrument for ascertaining the specific gravity of milk.
- lactodextrin** (lak-to-dex'trin). A proprietary mixture of lactose, dextrin, and lemon juice: claimed to increase the growth of normally present aciduric organisms in the alimentary tract.
- lactiform** (lak'to-form). A preparation of milk and formaldehyde used in rheumatism.
- lactoglobulin** (lak-to-glob'u-lin). The globulin of milk.
- lactojod** (lak-to-i'od). See *projodin*.
- lactol** (lak'tol). 1. A colorless, tasteless powder, $C_{10}H_{20}O_{11} \cdot 0.005 CH(OH)CH_3$; a lactic acid ester of beta-naphthol: an intestinal antiseptic. Dose, $3\frac{1}{2}$ -8 grains (0.25-0.5 Gm.). 2. Actol lactate: a silver preparation used in gonorrhea.
- lactola** (lak'to-lah). A food preparation of skimmed milk and cotton seed oil.
- lactolase** (lak'to-lās). A vegetable enzyme which causes the formation of lactic acid.
- lactolin** (lak'to-lin). Condensed milk.
- lactometer** (lak-tom'et-er) [*L. lac* milk + *me'trum* measure]. An instrument for ascertaining the specific gravity of milk.
- lactonaphthol** (lak-to-naf'thol). Same as *lactol*.
- lactone** (lak'tön). 1. An aromatic liquid, $C_{10}H_{16}O_4$, prepared by distillation from lactic acid. 2. Tablets containing lactic acid bacteria: used in preparing buttermilk.
- lactopeptin** (lak-to-pep'tin). A proprietary digestant remedy of milk sugar, 120 parts; pancreatin, 18 parts; peptone, 24 parts; lactic acid, 2 parts; hydrochloric acid, 2 parts; and diastase, 1½ parts. Dose, 5-15 grains (0.333-1 Gm.).
- lactophenin** (lak-to-fe'nin). A bitter, crystalline powder derived from phenetidin and lactic acid. Its formula is $C_6H_4(OC_2H_5)_2NH.CO.CH(OH)CH_3$. It is soluble in 500 parts of cold and in 55 parts of boiling water, and it is used as a sedative and antipyretic. Dose, 8-15 grains (0.5-1 Gm.).
- lactophosphate** (lak-to-fos'fat) [*L. lac* milk + *phos'phas* phosphate]. Any salt of lactic and phosphoric acids.
- lactopicroin** (lak-to-pik'r'in). A bitter substance, one of the active principles of *Lactuca canadensis*.
- lactoprecipitin** (lak'to-pre-sip'it'in). A precipitin which will precipitate the casein of milk.
- lactoprotein, lactoproteid** (lak-to-pro'te-in, lak-to-pro'te-id). Any one of the proteins of milk.
- lactorrhœa** (lak-to-re'ah). Galactorrhœa.
- lactosazone** (lak-to-sa'zön). The phenyl-osazone of lactose. It is a yellow crystalline substance made by treating lactose with phenylhydrazine and acetic acid. The crystals melt at 200 C. and may be used in identifying lactose.
- lactoscope** (lak'to-sköp) [*L. lac* milk + *σκοπεῖν* to inspect]. A device showing the proportion of cream in milk.
- lactose** (lak'tös) [*L. sac'charum lac'tis*]. Milk sugar, $C_{12}H_{22}O_{11} + H_2O$, a white crystalline disaccharide obtained from cow's milk. It is a glucose galactoside and on hydrolysis with acids or certain enzymes yields glucose and galactose.

lactosermum (lak-to-se'-rum). The serum of an animal into which has been injected milk from another animal. This serum precipitates milk from an animal of the same species as that from which the milk was taken.

lactosomatose (lak-to-so'-mat-ös). A patented food preparation of the albumoses of milk with 5 per cent of combined tannin.

lactosum (lak-to-'sum). The U. S. P. name for *lactose*.

lactosuria (lak-to-su'-re-ah) [*lactose* + *ουρον* urine]. A condition characterized by the occurrence of lactose in the urine.

lactotoxin (lak-to-toks'in). A ptomaine found in milk.

Lactuca (lak-tu-'kah) [L.]. 1. A genus of composite-flowered plants, including *L. sativa*, common lettuce, and *L. viro'sa*, the principal source of lactucarium. 2. The herb, *L. viro'sa*, of Europe: a milk hypnotic and sedative. Dose of extract, 5-15 grains (0.333-1 Gm.); of fluidextract, 4-16 minims (0.25-1 cc.). *L. canadensis*, a wild lettuce of North America, has similar uses. Dose of extract, 4-12 grains (0.25-0.78 Gm.); of fluidextract, 4-16 minims (0.25-1 cc.).

lactucarium (lak-tu-ka'-re-um) [L.]. The bitter inspissated juice of various species of *Lactuca*, chiefly *L. viro'sa*. It is a mild hypnotic and sedative. Dose, 8-15 grains (0.5-1 Gm.); of tincture, 10-30 minims (0.666-2 cc.); of fluidextract, 8-30 minims (0.5-2 cc.); of syrup, 1-3 fluidrachms (4-12 cc.).

lactucerin (lak-tu'se-rin) [L. *lactuca* lettuce + *cera* wax]. A waxy, crystallizable principle found in lactucarium.

lactucin (lak-tu'sin). A bitter principle, $C_{11}H_{12}O_3$, from lactucarium: sedative. Dose, 1-5 grains (0.066-0.333 Gm.).

lactucism (lak-tu-sizm). Poisoning by lactuca.

lactulum unguis (lak-tu-lum un'gwis). The nail matrix.

lactupicrin (lak-tu-pik'in). A bitter acid principle, $C_{44}H_{32}O_{21}$, from lactucarium.

lactyltropine (lak-til-to'-pe-in). A remedy in white needles, $C_6H_{14}NO.CO.CH.(OH)CH_3$, derived from tropine and lactic acid: a stimulant of the heart and respiration.

lacuna (lak-u'nah), pl. *lacu'nae* [L.]. A small pit, hollow, or depression. **absorption 1., Howship's 1.**, small depressions of bone under the periosteum. **air 1.**, cavities filled with air, as in the hairs. **1. cer'ebri**, the cerebral infundibulum. **intervillous 1.**, any one of the blood spaces of the placenta in which the fetal villi are found. **1. latera'lis**. Same as *parasinoidal sinus*. See *sinus*. **1. mag'na**, the largest of the orifices of the glands of Littre. **Morgagni's 1.**, the lacuna of the urethra. **1. musculo'rum** [B N A], the compartment beneath the inguinal (Poupart's) ligament for the passage of the iliopsoas muscle and femoral nerve, separated from the lacuna vasorum by the iliopectineal ligament. **parasinoidal 1.**, parasinoidal sinus. See under *sinus*. **1. pharyn'gis**, a depression at the pharyngeal end of each eustachian tube. **1. of the urethra**, depressions or follicles in the mucous membrane of the urethra, especially numerous in the region of the bulb. **1. vaso'rum** [B N A], a compartment separated from the lacuna musculorum by the iliopectineal ligament for the passage of the femoral vessels.

lacunar (lak-u'nar). Pertaining to or containing lacunae; of the nature of a lacuna.

lacunule (lak-u'nul) [L. *lacuna*]. A small lacuna.

lacus lacrima'lis (la'kus) [L. "lake of tears"]. [B N A] The triangular space that separates the two eyelids at the inner canthus.

ladanum (lad'an-um) [L.; *λῆδανον*]. A resin from various species of *Cistus*: little used as a medicine in civilized countries.

Ladendorff's test (lah'den-dorfs) [August Ladendorff, German physician of the 19th century]. See under *tests*.

Lady Webster's pills. See *pill*.

lady's-slipper (la'dez-). See *Cypripedium*.

lae-. For words thus beginning, see *le-*.

Laelaps (le'laps). A genus of tick mites found on rats.

Laënnec's cirrhosis, pearls, etc (len-eks') [René Théophile Hyacinthe Laënnec, French physician, 1781-1826]. See under *cirrhosis, pearls*, etc.

laevo-. For words beginning thus, see those beginning *levo-*.

Lafayette's mixture (lah-fa-ets'). See *mixture*.

Lafora's sign (lah-fó'rahz) [Rodríguez Lafora, contemporary Spanish physician]. See under *sign*.

Lag. Abbreviation for *L. lag'na*, a flask.

lag. The period of time elapsing between the application of a stimulus and the resulting reaction.

lagena (la'e-nah) [L. "flask"]. A part of the upper extremity of the scala media.

lageniform (lae'en'if-orm) [*lag'na* flask]. Flask-shaped.

lagging (lag'ing). Decreased or retarded movement of the affected side of the chest in phthisis.

Lagochilas'caris mi'nor. A nematode worm found in the intestine of man in Trinidad.

lagophthalmos, lagophthalmus (lag-of-thal'-mos, -mus) [λαγῶς hare + οφθαλμός eye]. A condition in which the eye cannot be completely closed; called also *hare's eye*.

Lagrange's operation (lag-rahnzh's') [Felix Lagrange, French ophthalmologist, died 1928]. Sclerecto-iridectomy.

la grippe (lah grip'). See *influenza*.

Lahore sore (lah-hor'). See *furunculus orientalis*.

laibose (la'ib-ös). A concentrated food preparation composed of the solids of pure milk and the digestible portion of whole wheat.

laifan (li-fan'). A Chinese neuralgia remedy: said to be crude Blumea camphor.

laiose (li'ös). Leo's sugar; a pale-yellow syrup, $C_6H_{12}O_6$, found in the urine in diabetes mellitus. It is nonfermentable and levorotatory.

laira (la'rah) ["barking"]. An epidemic of hysterical barking in women, which broke out at Arnon, France, in 1613, and at Blackthorn (Oxfordshire) in 1700.

lakit (lak'sit). A dried preparation of humanized citrated milk for infant feeding.

laking (lak'ing). The separation of hemoglobin from the red blood corpuscles.

laky (la'ke). Resembling a pigment of the class known as lakes: used of blood in which the red corpuscles have been partially destroyed.

Lallemand's bodies (lal-mahz') [Claude Francois Lallemand, French surgeon, 1790-1853]. See under *body*.

lalling, lallation (lal'ing, lal-a'shun) [L. *lalla'tio*]. A babbling, infantile form of speech.

lalognosis (la-log-no'sis) [λαλέιν to babble + γνώσις knowledge]. The understanding of speech.

laloneurosis (la'lo-nu-ro'sis) [λαλέιν to babble + neurosis]. Any nervous speech disorder.

lalopathy (la-lop'ath-e) [λαλέιν to babble + πάθος illness]. Any disorder affecting the speech.

lalophobia (la-lo-fó-be-ah) [λαλέιν to babble + φόβος fear]. Morbid or extreme dislike of speaking, often associated with stuttering.

laloplegia (la-lo-ple'je-ah) [λάλος speech + πλῆγη stroke]. Paralysis of the organs of speech.

lalorrhoea (la-lo-re'ah) [λάλος speech + ροία flow]. An abnormal or excessive flow of words.

Lalouette's pyramids (lal-oo-ets') [Pierre Lalouette, French physician, 1711-1742]. See under *pyramid*.

Lamarck's theory (lam-arks') [Jean Baptiste Pierre Antoine de Lamarck, French naturalist, 1744-1829]. See *theory*.

lambda (lam'dah) [Gr. letter Λ or λ]. The point at the site of the posterior fontanel where the lambdoid and sagittal sutures meet.

lambdacism, **lambdacismus** (lam'das-izm, lam-das-iz'mus) [$\lambda\mu\beta\alpha\kappa\iota\sigma\mu\acute{o}\varsigma$]. 1. The substitution of *l* for *r* in speaking. 2. Inability to utter correctly the sound of *l*.

lambdoid (lam'doid) [$\lambda\mu\beta\delta\alpha$ "l" + $\epsilon\acute{\iota}\delta\omicron\varsigma$ form]. Shaped somewhat like the Greek letter Λ or λ .

lambert (lam'bert) [J. H. Lambert, British physicist of the 18th century]. A unit of brightness, being the brightness of a perfect diffuser emitting one lumen per square centimeter. The unit generally used is one one thousandth of this and is called a *millilambert*. When the area chosen is one square foot the unit is called a *foot lambert*.

Lambia intestina'lis (lam'ble-ah). See *Giardia intestinalis*.

lambliasis, **lambliosis** (lam-bli'as-is, lam-ble-o'-sis). Infection with *Lambia intestinalis*.

Lambotte's treatment (lam-bots') [Albin Lambotte, Belgian surgeon, 1856-1912]. See *treatment*.

lamella (lam-el'ah), pl. *lamel'lae* [L. dim. of *lam'ina*]. 1. A thin leaf or plate, as of bone. 2. A medicated disk or wafer. **articular l.**, the layer of bone to which an articular cartilage is attached. **concentric l.**, the bony plates that surround the haversian canals. **Havers' l.**, concentric layers of bone around Havers' canals. **intermediate l.**, the plates which are found between the concentric layers of a bone. **osseous l.**, any one of the thin plates into which bone can be divided. **periosteal l.**, **peripheral l.**, the layers of bone lying next to the periosteum. **triangular l.**, the layer that joins the choroid plexuses of the third ventricle. **vitreous l.**, Bruch's membrane; the inner layer of the choroid coat of the eye.

lamellar (lam-el'ar). Disposed in lamellae.

lamina (lam'in-ah), pl. *lam'inae* [L.]. 1. A thin, flat plate. 2. Either neuropophysis of a vertebra.

l. affix'a [B N A], a plate in the floor of the pars centralis of the lateral ventricle, over the superior surface of the thalamus. **l. basa'lis** [B N A], basal layer, 1. vitrea, Bruch's membrane, Henle's membrane, the transparent inner layer of the choroid in contact with the pigmented layer of the retina. **l. basila'ris** [B N A], the basal lamina of the neural tube, a broad strip on the ventral surface. **Bowman's l.** See *l. elastica anterior*. **l. choriocapilla'ris** [B N A], Ruysch's membrane, the middle layer of the choroid, composed of a very close capillary network. **l. chorioid'ea**, the epithelial wall of a cerebral ventricle. **l. chorioid'ea epithelia'lis** [B N A], the thin epithelial layer lining the roof of the third and also of the fourth ventricle. **l. cine'rea**, 1. terminalis [B N A]. **l. cribro'sa** [B N A], cribriform plate of the ethmoid bone; a horizontal plate from which are suspended the lateral mass, or labyrinth, on either side and the lamina perpendicularis in the center; it articulates with the ethmoidal notch of the frontal bone and contains numerous openings for the passage of the olfactory nerves. **l. cribro'sa scle'rae**, the portion of the sclera through which pass the fibers of the optic nerve. **l. denta'lis**, dental ridge; a band of thickening of the epithelium along the margin of the gum, in the embryo, from which the enamel organ is developed. **l. denta'ta**, crista spiralis, the firmly serrated edge of the lamina spiralis ossea. **l. elastica ante'rior** [B N A], Bowman's membrane, a thin layer of the cornea beneath the outer layer of stratified epithelium between it and the substantia propria. **l. elastica poste'rior** [B N A], Descemet's membrane, membrane of Demours, a thin membrane between the substantia propria and the endothelial layer of the cornea.

l. exter'na [B N A], the outer table of the skull, the outer compact layer of the cranial bones.

l. fibrocartilagin'ea interpu'bica [B N A], the cartilaginous layer at the symphysis pubis: called also *discus interpubicus*. **l. fus'ca** [B N A], a thin layer of loose, pigmented connective tissue on the inner surface of the sclera, connecting it with the choroid. **l. inter'na** [B N A], the inner table of the skull, the inner compact layer of the cranial bones. **l. latera'lis**, **media'lis**, **proce'ssus pterygoid'ei** [B N A], the external and internal pterygoid plates, two bony plates extending downward from the point of union of the body and greater wing of the sphenoid bone on either side. **lam'inae medulla'res** [B N A], (1) layers of white substance seen on section of the cerebellum; (2) layers of white substance seen on section of the thalamus. **lam'inae medulla'res thal'ami**, sheets of white fibers, covering the surface and separating the nuclei of the thalamus, formed by the fibers of the thalamic radiation. **l. modi'oli** [B N A], a bony plate, the continuation of the modiolus and of the septum between the convolutions of the spiral canal of the cochlea extending upward toward the cupola. **l. papyra'cea** [B N A], orbital plate of the ethmoid bone, os planum; a thin plate of bone bounding externally the ethmoidal labyrinth on either side and forming part of the inner wall of the orbit. **l. perpendicular'is** [B N A], perpendicular or vertical plate of the ethmoid bone; a thin plate of bone, projecting above the horizontal plate to form the crista galli. **l. quadrigem'ina** [B N A], a layer formed by the quadrigeminal bodies, resting on the stratum griseum centrale, and separating it from the surface of the mesencephalon. **l. reticula'ris**, reticular plate, membrana reticularis. **l. rostra'lis** [B N A], the thin terminal part of the rostrum of the corpus callosum passing down in front of the anterior commissure to the anterior perforated substance and the subcallosae gyrus. **l. spira'lis os'sea** [B N A], osseous spiral lamina, a double plate of bone winding spirally around the modiolus dividing the spiral canal of the cochlea incompletely into two, *scala tympani* and *scala vestibuli*. **l. suprachorioid'ea** [B N A], a layer of pigmented connective tissue on the outer surface of the choroid, attached to the lamina fusca of the sclera. **l. supraneuropor'ica**, the part of the membranous roof of the diencephalon covering the foramen of Monro. **l. termina'lis** [B N A], 1. cinerea, a thin place passing upward in front of the optic chiasm and forming the anterior wall of the third ventricle. **l. tra'gi** [B N A], **l. tra'gica**, a longitudinal curved lamina of cartilage, the beginning of the cartilaginous portion of the external auditory meatus. **l. vasculo'sa** [B N A], vascular layer, the outer part of the choroid containing the largest blood vessels. **l. vit'rea**. See *l. basalis*.

laminar (lam'in-ar) [L. *lamina'ris*]. Made up of laminae.

Laminaria (lam-in-a're-ah) [L.]. 1. A genus of seaweeds. 2. The stems of *L. digitata* and *L. cloustoni* (seatangle): used in making tents and bougies.

laminated (lam'in-a-ted). Made up of thin layers or laminae; disposed in laminae or layers.

lamination (lam-in-a'shun). 1. A laminated structure or arrangement. 2. The slicing of the fetal head in embryotomy.

lamine (la'min). An alkaloid from the flowers of *La'mium al'bum*, or dead-nettle. Its hydrochloride and sulphate are strongly hemostatic: used subcutaneously.

laminectomy (lam-in-ek'to-me) [L. *lam'ina* layer + *ektomē* excision]. The excision of the posterior arch of a vertebra.

laminitis (lam-in-i'tis). Inflammation of a lamina, and especially of the laminae of a horse's foot; a form of founder.

laminotomy (lam-in-ot'o-me) [*lamina* + *τομή* a cutting]. The operation of dividing the lamina of a vertebra.

lammectomy (lam-nek'to-me) [L. *lam'ina* + *λαμνία* layer + *ἐκτομή* excision]. Excision of the lamina of a vertebra.

lamp (lamp). Any apparatus for furnishing artificial light. **annealing l.**, an alcohol lamp for heating gold leaf for tooth fillings. **carbon arc l.**, an open flame lamp with carbon arcs: used in artificial light therapy. **Gullstrand's slit l.**, a diaphragm containing a slitlike opening, by means of which a narrow, flat beam of intense light may be projected into the eye. It gives intense illumination so that microscopic study may be made of the conjunctiva, cornea, iris, lens, and vitreous, the special feature being that it illuminates a section through the substance of these structures. **Kromayer's l.**, a quartz lamp of mercury vapor used in treating skin diseases with actinic rays. **Lortet l.**, an electric lamp used in Finsen light treatment. **mercury vapor l.**, a lamp in which the arc is struck in mercury and is enclosed in a quartz burner: used in light therapy. There are two types, the air cooled and water cooled (*Kromayer's l.*). **mignon l.** (min'yun). A minute electric light used in cystoscopy, etc. **Nernst l.**, an incandescent electric lamp the filament of which is made of metallic oxides. **quartz l.**, a mercury vacuum lamp made of melted quartz glass embedded in a running water-bath: used for applying light treatment. **Simpson l.** See *Simpson light*, under *light*. **slit l.** See *Gullstrand's slit l.* **tungsten arc l.**, a lamp having highly compressed tungsten electrodes. **zoalite l.**, a device for producing radiant heat for therapeutic purposes.

lampas (lam'pas). A swelling of the mucous membrane that covers the hard palate and projects in a ridge immediately behind the upper incisors in horses.

lampblack (lamp'blak). Finely powdered carbon derived from the burning of oils, rosin, etc.

lamprophonia (lam-pro-fō'ne-ah) [λαμπρός clear + φωνή voice]. Clearness of voice.

lamprophonic (lam-pro-fon'ik). Having a clear voice.

Lamus (la'mus). A genus of predatory insects of the family Reduviidae. **L. magis'tus**, a large black bug of tropical America which transmits *Trypanosoma (Schizotrypanum) cruzi*. It frequently bites the face and so is called Barberio by the natives. **L. rubrofascia'tus**, a brown bug of South Africa which bites man and may transmit kala-azar. **L. sanguisuga**, the blood-sucking cone nose or Mexican bedbug of the southern United States. Its bite is painful and causes irritation, swelling, and nausea. Other species which harbor parasites closely resembling *Trypanosoma cruzi* are: **L. chaga'si**, that was found in an uninhabited desert; **L. dimidia'ta**, of Central America; **L. geniculata**, which inhabits the burrows of the armadillo; **L. infes'tans**, the vinchuca or great black bug of the Pampas; **L. mexicanus** found in Mexico; **L. nigroviridis**, widely distributed in South America; **L. protracta**, of the southern United States; **L. rubrofascia'ta**, the Malay bug of tropical Asia, Madagascar, and parts of Africa. It has a large proboscis and produces a severe sting; **L. sor'dida** of Sao Paula; and **L. vi'ticeps**, of Rio de Janeiro.

lamziekte (lahm'zēk-te) [Danish "lame-sickness"]. A disease of cattle in South Africa secondary to

bovine osteophagia. The cattle, in their effort to satisfy their craving for phosphorus, sometimes eat bones from putrefying carcasses and thus become infected with *Parabotulinus bovis*.

lanain (lan'a-in). Purified wool fat.

lana kerol (lah'nah ke'rol). A proprietary bactericidal preparation: used in skin diseases.

lance (lans) [L. *lan'cea*]. 1. Same as *lancet*. 2. To cut or open with a lancet. **Mauriceau's l.**, a pointed knife used in embryotomy.

Lancereaux's diabetes, treatment, etc. (lahn-ser-oz') [Étienne Lancereaux, physician in Paris, 1829-1910]. See *diabetes, treatment*, etc.

lancet (lan'set) [L. *lan'cea lance*]. A small pointed and two-edged surgical knife. **abscess l.**, a wide-bladed lancet with one convex and one concave edge. **acne l.**, a form with a narrow blade for puncturing the papules of acne. **gum l.**, a knife for incising the gums. **laryngeal l.**, a delicate knife for operations within the larynx: it is operated through a cannula. **spring l.**, one the blade of which is held by a spring. **thumb l.**, one with a wide, two-edged blade.

Lancet coefficient (lan'set) [*The Lancet*, a British medical journal]. See under *coefficient*.

lancinating (lan'sin-a-ting) [L. *lan'cinās*]. Tearing, darting, or sharply cutting. See *pain*.

Lancisi's nerve or stria (lan-sis'ēz) [Giovanni Maria Lancisi, Italian physician, 1654-1720]. See *stria longitudinalis*.

Landau's test (lahn'dowz) [Leopold Landau, German surgeon, 1848-1920]. See under *tests*.

Landerer's treatment (lahn'der-erz) [Albert Sigmund Landerer, German surgeon, 1854-1904]. See *treatment*.

Landolt's bodies (lahn-dolts') [Edmund Landolt, oculist in Paris, 1846-1920]. See under *bodies*.

Landouzy's disease (lan-doo'zez) [Louis Landouzy, French physician, 1845-1917]. Weil's disease.

Landouzy-Déjerine type (lan-doo-ze'de-zhe-rēn'). See under *type*.

Landouzy-Grasset law (lan-doo-ze'gras-sā'). See under *law*.

Landry's paralysis (lan-drēz') [Jean Baptiste Octave Landry, French physician, 1826-1865]. See *paralysis*.

land scurvy (land skur-ve). Same as *purpura haemorrhagica*.

Landström's muscle (lahnd'stremz) [John Landström, Swedish surgeon, 1869-1910]. See under *muscle*.

Lane's disease, kink, operation, plates (lānz) [Sir W. Arbuthnot Lane, English surgeon]. See under *disease, kink, operation, and plate*.

lanesin (lan'es-in). A patented wool fat preparation.

Lange's solution, test (lahng'e2) [Carl Lange, German physician, born 1883]. See under *solution and tests*.

Langenbeck's incision, operation (lahng'en-beks) [Bernard Rudolf Konrad von Langenbeck, German surgeon, 1810-1887]. See under *incision*.

Langer's muscle (lang'erz) [Carl Ritter von Edenberg von Langer, German anatomist, 1819-1887]. See under *muscle*.

Langerhans' cells, islands (lahng'er-hanz) [Robert Langerhans, German pathologist, 1849-1888]. See under *cell and island*.

Langhans' cells, layer (lahng'hanhz) [Theodor Langhans, German pathologist, 1839-1915]. See under *cell and layer*.

lanichol (lan'ik-ol). A proprietary preparation of refined wool fat resembling lanolin.

laniol (la'ne-ol). A wool fat preparation similar to hydrous wool fat.

Lankesterella rana'rum. A sporozoan parasite of the red blood cells of the frog.

Lamus magistus
(female).

lannainol (lan-a'in-ol). An iodocresol preparation: used as a substitute for iodoform.

Lannelongue's operation (lan-el-ongs') [Odilon Marc Lannelongue, French surgeon, 1841-1911]. See under *operation*.

lanoform (lan'o-form). Lanolin mixed with 1 per cent of formaldehyde: antiseptic.

lanoix (lahn-wah'). A proprietary remedy for malaria and influenza.

lanolin (lan'o-lin) [L. *lanoli'num*; la'na wool + *oleum* oil]. Adeps lanae hydrosus, or hydrous wool fat: used as an excipient for remedies for external use. It is a mixture of the esters of cholesterol and ischolesterol with the higher fatty acids.

Lantana (lan-ta'nah, lan-tah'nah) [L.]. A genus of verbenaceous shrubs, several species of which are actively medicinal.

lantanine (lan'tan-in). An alkaloid from *Lanta'na brasiliensis*: antiperiodic and antipyretic. Dose, 15-30 grains (1-2 Gm.).

lanthanin (lan'than-in) [λανθάνειν to conceal]. Same as *oxychromatin*.

lanthanum (lan'than-um) [λανθάνειν to conceal]. A rare metallic element: symbol, La; atomic weight, 139.

lanthopine (lan'tho-pin). A white, crystalline alkaloid, $C_{23}H_{23}NO_4$, from opium.

lantol (lan'tol). Colloidal rhodium proposed for use in cancer and septic diseases.

lanuginous (lan-u'jin-us) [L. *lanugino'sus*]. Covered with lanugo.

lanugo (lan-u'go) [L.]. 1. The fine hair on the body of the fetus. 2. The fine downy hair found on nearly all parts of the body except the palms and soles.

lanum (la'num) [L. *la'na* wool]. Hydrous wool fat (adeps lanae hydrosus).

Lanz's operation, point (lahnts) [Otto Lanz, contemporary surgeon in Amsterdam, born 1865]. See under *operation* and *point*.

lapactic (lap-ak'tik) [λαπακτικός; λαπάσσειν to discharge]. Pertaining to or effecting a removal; purgative.

laparectomy (lap-ar-ek'to-me) [λαπάρα loin + έκτομή excision]. Excision of a portion or of portions of the abdominal wall: performed for the purpose of overcoming laxity of the walls and to gain support.

laparocholecystotomy (lap'ar-o-ko'le-sis-tot'o-me) [λαπάρα loin + χολή bile + κύστις bladder + τομή cut]. Incision of the gallbladder through an abdominal section.

laparocollectomy (lap'ar-o-ko-lek'to-me) [λαπάρα loin + κόλον colon + έκτομή excision]. Same as *colectomy*.

laparocolostomy (lap'ar-o-ko-los'to-me) [λαπάρα flank + colostomy]. The operation of forming a permanent opening into the colon by an incision in the anterior lateral wall of the abdomen.

laparocolotomy (lap'ar-o-ko-lot'o-me) [λαπάρα flank + κόλον colon + τομή cut]. Colotomy through the abdominal wall.

laparocolpohysterotomy (lap'ar-o-kol'po-his-ter-ot'o-me) [λαπάρα loin + κόλπος vagina + hysterotomy]. Cesarean section by a combined vaginal and abdominal method.

laparocolpotomy (lap'a-ro-kol-pot'o-me) [λαπάρα loin + κόλπος vagina + τομή cut]. Same as *laparo-elytrotomy*.

laparocystectomy (lap'ar-o-sis-tek'to-me) [λαπάρα loin + κύστις cyst + έκτομή excision]. Removal of a cyst, especially one produced by extra-uterine pregnancy, by an abdominal incision.

laparocystidotomy (lap'ar-o-sis-tid-ot'o-me) [λαπάρα loin + κύστις bladder + τομή cut]. In-

cision into the bladder through the abdominal wall just above the pubes.

laparocystotomy (lap'ar-o-sis-tot'o-me) [λαπάρα loin + κύστις bladder + τέμνειν to cut]. 1. The removal of an extra-uterine fetus, the sac being allowed to remain. 2. Laparotomy with removal of the contents of a cyst.

laparo-elytrotomy (lap'ar-o-el-it-rot'o-me) [λαπάρα loin + ἐλντρον sheath + τομή cut]. Removal of a fetus through an incision of the abdominal wall and vagina.

laparo-enterostomy (lap'ar-o-en-ter-os'to-me) [λαπάρα loin + ἔντερον intestine + στόμα mouth]. The creation of an artificial opening into the intestine through the abdominal wall.

laparo-enterotomy (lap'ar-o-en'ter-ot'o-me) [λαπάρα loin + ἔντερον intestine + τομή cut]. Laparotomy with incision into the intestine.

laparogastroscopy (lap'ar-o-gas-tros'ko-pe) [λαπάρα loin + gastroscopy]. Examination of the interior of the stomach through a gastrotomy incision.

laparogastrostomy (lap'ar-o-gas-tros'to-me) [λαπάρα loin + γαστήρ stomach + τομή cut]. The creation of a permanent gastric fistula through the abdominal wall.

laparogastrotomy (lap'ar-o-gas-trot'o-me) [λαπάρα loin + γαστήρ stomach + τομή cut]. Incision into the stomach through the abdominal wall.

laparohepatotomy (lap'ar-o-hep-at-ot'o-me) [λαπάρα loin + hepatotomy]. Incision of the liver through the abdominal wall.

laparohysterectomy (lap'ar-o-his-ter-ek'to-me) [λαπάρα loin + ὕστερα womb + έκτομή excision]. Removal of the uterus through an opening in the abdominal walls.

laparohystero-oophorectomy (lap'ar-o-his'ter-o-o'of-o-rek'to-me) [λαπάρα loin + ὕστερα womb + οοφωρεκτομή]. Laparotomy with removal of the uterus and ovaries.

laparohysteropexy (lap'ar-o-his'ter-o-pek-se) [λαπάρα loin + ὕστερα womb + πήξις fixation]. Same as *ventrofixation*.

laparohysterosalpingo-oophorectomy (lap'ar-o-his'ter-o-sal-pin'go-o'of-o-rek'to-me). Removal of the uterus, oviducts, and ovaries by an abdominal cut.

laparohysterotomy (lap'ar-o-his-ter-ot'o-me) [λαπάρα flank + ὕστερα womb + τομή cut]. Laparotomy with incision of the uterus.

laparo-ileotomy (lap'ar-o-ile-ot'o-me) [λαπάρα loin + ἰλεum + τομή cut]. Laparotomy with incision of the ileum.

laparokelyphotomy (lap'ar-o-kel-if-ot'o-me) [λαπάρα loin + κέλυφος egg-shell + τομή cut]. Laparotomy with incision of the sac of an extra-uterine gestation.

laparokolpotomy (lap'ar-o-kol-pot'o-me). See *laparocolpotomy*.

laparomonodidymy (lap'ar-o-mon-o-did'im-us) [λαπάρα loin + μόνος single + διδυμος twin]. A monster fetus, double above but single below the pelvis.

laparomyitis (lap'ar-o-mi-i'tis) [λαπάρα loin + μῦς muscle + -itis inflammation]. Inflammation of the abdominal or lumbar muscles.

laparomyomectomy (lap'ar-o-mi-o-mek'to-me) [λαπάρα loin + μῦς muscle + έκτομή excision]. The removal of a myoma by an abdominal incision.

laparomyotomy (lap'ar-o-mi-o-mot'o-me) [λαπάρα loin + myotomy]. The incision or removal of a fibroid tumor of the uterus by abdominal section.

laparonephrectomy (lap'ar-o-nef-ek'to-me) [λαπάρα loin + νεφρός kidney + έκτομή excision]. Removal of a kidney by an incision in the loin.

laparorrhaphy (lap-ar-or'af-e) [λαπάρα loin + ράφει suture]. Suture of the abdominal wall.

laparosalingectomy (lap'ar-o-sal-pin-jek'to-me) [λαπάρα loin + σάλπιγξ tube + έκτομή excision]. Removal of an oviduct by abdominal section.

laparosalingo-oophorectomy (lap'ar-o-sal-ping'o-o'of-o-rek'to-me). The removal of the oviducts and ovaries by an abdominal incision.

laparosalingotomy (lap'ar-o-sal-pin-got'o-me) [λαπάρα loin + σάλπιγξ tube + τέμνω to cut]. The surgical incision of an oviduct through an abdominal cut.

laparoscopy (lap-ar-o-skōp). Peritoneoscopy.

laparoscopy (lap-ar-os'ko-pe) [λαπάρα loin + σκοπεῖν to see]. Endoscopic examination of the interior of the abdomen.

laparosplenectomy (lap'ar-o-sple-nek'to-me) [λαπάρα loin + σπλήν spleen + έκτομή excision]. Laparotomy with excision of the spleen.

laparosplenotomy (lap'ar-o-sple-not'o-me) [λαπάρα loin + splenotomy]. The operation of making an incision into the side to gain access to the spleen, usually for the purpose of draining a cyst or abscess of the spleen.

laparothoracoscopy (lap'ar-o-tho-rak-os'ko-pe) [λαπάρα loin + θώραξ chest + σκοπεῖν to view]. The inspection of the peritoneal and pleural cavities through an instrument resembling a cystoscope pushed into them through the body wall.

laparotomy (lap'ar-o-tōm). A knife used in laparotomy.

laparotomize (lap-ar-ot'om-iz). To perform laparotomy upon.

laparotomy (lap-ar-ot'o-me) [λαπάρα loin + τομή cut]. Surgical incision through the flank: less correctly, abdominal section at any point.

laparotrachelotomy (lap'ar-o-trak-el-ot'o-me) [λαπάρα loin + τραχήλος neck + τέμνω cutting]. Cesarean section done by incising the cervix and lower uterine segment with a minimum of encroachment on the peritoneum; law or cervical cesarean section.

laparotyphlotomy (lap'ar-o-tif-lot'o-me) [laparotomy + typhlotomy]. The process of exposing and cutting into the cecum.

laparo-uterotomy (lap'ar-o-u-ter-ot'o-me) [λαπάρα loin + υστεροτομή]. Incision of the uterus through an abdominal incision.

lapathum (lap'ath-um) [L.]. A plant called bitter dock; also its homeopathic preparation.

lapis (la'pis). Latin for *stone*. 1. **albus**, the native silicofluoride of calcium; also its homeopathic preparation. 1. **caramina'ris**, calamine. 1. **caus'ticus**, fused potash. 1. **divi'nus**, 1. **ophthal'micus**, ammoniated copper. 1. **impe'rialis**, 1. **inferna'lis**, 1. **luna'ris**, silver nitrate.

lappus (lap'nus). Nonfebrile disease of the Philippines beginning with anorexia, abdominal pain, and vomiting—later, burning sensation in hands and feet with blackish-red patches on feet, toes, and fingers; desquamation always follows, sometimes deafness and blindness.

Laportea (lah-por'te-ah) [L.]. A genus of nettles. *L. canadensis* is North American; *L. gi'gas*, of Australia, is a tree sometimes one hundred and twenty feet high. Some of the species are exceedingly poisonous. *L. crenula'ta*, a large, acrid nettle: in Nepal the seed is used as an aromatic stimulant. *L. moro'des*, a poisonous Australian tree: the juice of the plant *Colocasia macrorrhiza* is said to be its antidote.

lappa (lap'ah) [L.]. The root of the burdock, *Arctium lappa*: diuretic, diaphoretic, and alterative. Dose of tincture, 10–60 minims (0.666–4 cc.); of fluidextract, 30–60 minims (2–4 cc.).

lappaconitine (lap-ak-on'it-in). A crystalline alkaloid, $C_{28}H_{44}N_2O_8$, from *Aconitum septentrionale*, with the aconite action.

lapsus (lap'sus) [L. a "fall"]. A falling or dropping of a part; ptosis.

laqueus (lak'we-us). Same as *lemniscus*.

Larat's treatment (lar-az') [Jules Louis François Adrien Larat, French physician, born 1857]. See under *treatment*.

larbish (lar'bish). A creeping eruption occurring in Senegal; called also *Oerbiss*.

larch. See *Larix*.

lard (lard) [L. *lar'dum*]. The fat of the swine; adeps suillus.

lardacein (lar-da'se-in). Amyloid substance; a protein found in tissues affected with amyloid degeneration. It is characterized by being insoluble in nearly all reagents, not acted upon by the gastric juice, and not readily subject to putrefaction. It gives a brown color with iodine and sulphuric acid.

lardaceous (lar-da'shus). 1. Resembling lard. 2. Containing lardacein, or amyloid substance.

Lardennois' button (lar-den-wahz') [Henri Lardennois, French surgeon, born 1872]. See *button*.

largin (lar'jin). A gray powder, being a compound of silver and protalbin, containing 11 per cent of silver, and soluble in water, glycerin, and peptones. It is used as a bactericide, especially in gonorrhea and in ulcers of the stomach and intestines. Dose, 5–8 grains (0.333–0.5 Gm.), in pill; in gonorrhea a 0.25–5 per cent solution is used.

laricis cortex (lar'is-is) [L. "larch bark"]. The stimulant and astringent bark of the European larch tree, *La'rix europae'a*.

Larix (la'riks) [L.]. A genus of coniferous trees, the larches. The astringent bark of *L. europae'a* is useful in skin diseases and in pectoral complaints. Dose of tincture, 10–30 minims (0.66–2 cc.).

larixin (lar-rik'sin). See *laric acid*, under *acid*.

larkspur (lar'k'spur). A ranunculaceous plant, *Delphinium consolida*: its seeds are diuretic, emmenagogue, and poisonous. Dose of fluid-extract, 1–10 minims (0.066–0.666 cc.).

larosan (lar'o-san). A proprietary preparation of casein and calcium oxide: used for addition to milk for children with digestive disturbance.

Laroyenne's operation (lar-oi-enz') [Lucien Laroyenne, French surgeon, born 1876]. See under *operation*.

Larrey's bandage, operation, etc. (lar-az') [Domenique Jean Larrey, French surgeon, 1766–1842]. See *bandage, operation*, etc.

Larrey-Weil disease (lar-a-vil). Weil's disease.

Lartigue's pills (lar-te-guz'). See under *pill*.

larva (lar'vah, pl. lar'vae [L.]). An immature stage in the life history of an animal in which it is unlike the parent; especially the first stage of insect development after leaving the egg. 1. **mi'grams**. See *creeping eruption*, under *eruption*. 1. **rat-tailed**. See *Eristalis tenax*.

larvaceous, larval, larvate, larvated (lar-va'shus, lar'val, lar'vat, lar'va-ted) [L. *lar'va* mask]. Masked; concealed: said of a disease or a symptom of a disease.

larvicide (lar'vis-id) [larva + L. *caedere* to kill]. An agent destructive to insect larvae. **Panama** 1., 150 gallons of crude carbolic acid, 200 pounds of rosin, and 30 pounds of caustic soda are mixed and heated to a uniform dark colored soap. One part to 10,000 parts of water kills Anopheles larvae in one-half hour.

laryngalgia (lar-in-gal'je-ah) [λάρυγξ larynx + άλγος pain]. Pain in the larynx.

laryngeal (lar-in'je-al). Of or pertaining to the larynx.

laryngectomy (lar-in-jek'to-me) [λάρυγξ larynx + έκτομή excision]. Extirpation of the larynx.

laryngemphraxis (lar-in-jem-frak'sis) [λάρυγξ larynx + ἔμφραξις stoppage]. Obstruction or closure of the larynx.

laryngendoscope (lar-in-jen'do-skōp) [λάρυγξ larynx + ἔνδον within + σκοπεῖν to view]. An instrument for viewing the posterior wall of the larynx.

laryngismal (lar-in-jiz'mal). Pertaining to laryngismus.

laryngismus (lar-in-jiz'mus) [L.; λαρυνγισμός a whooping]. Spasm of the larynx. 1. **paralyticus**. Same as *roaring*. 1. **strid'ulus**, a disease of children marked by sudden laryngeal spasm, with a crowing inspiration and the development of cyanosis. It occurs in laryngeal inflammations and as an independent disease, especially in connection with rickets.

laryngitic (lar-in-jit'ik). Pertaining to laryngitis.

laryngitis (lar-in-jit'is). Inflammation of the larynx, a condition attended with dryness and soreness of the throat, hoarseness, cough, and dysphagia. **acute catarrhal l.**, a form characterized by aphonia or hoarseness, pain and dryness of the throat, dyspnea, a wheezy cough, and more or less fever. **atrophic l.** See *chronic l.* **chronic catarrhal l.**, a form due to a recurring irritation, or oftener a sequel of the acute form, and leading to atrophy of the glands of the mucous membrane. **diphtheritic l.**, that which is due to diphtheria: true or membranous croup. **membranous l.**, that which is attended with the formation of false membrane, diphtheritic or other. **phlegmonous l.**, a usually fatal complication of erysipelas, smallpox, etc., attended with submucous suppuration and edema. 1. **sic'ca**, chronic laryngitis. 1. **stridulo'sa**. See *laryngismus stridulus*. **subglottic l.**, inflammation of the under surface of the vocal cords. **syphilitic l.**, a chronic form due to syphilitic involvement of the larynx. **tuberculous l.**, a chronic form due to tuberculous ulceration of the larynx.

laryngocoele (lar-in'go-sēl) [λάρυγξ larynx + κήλη hernia]. Protrusion of the mucous membrane across the cricothyroid space.

laryngocentesis (lar-in'go-sen-te'sis) [λάρυγξ larynx + κέντησις puncture]. Surgical puncture of the larynx.

laryngofissure (lar-in'go-fish'un). Laryngofissure.

laryngofissure (lar-in'go-fish'ūr). The operation of opening the larynx by a median incision through the thyroid cartilage: median laryngotomy.

laryngograph (lar-in'go-graf) [λάρυγξ larynx + γράφειν to write]. A device for registering the laryngeal movements.

laryngography (lar-in-gog'raf-e) [λάρυγξ larynx + γράφειν to record]. 1. The description of the larynx. 2. Roentgen examination of the larynx after the application of a radiopaque substance to it.

laryngology (lar-in-gol'o-je) [λάρυγξ larynx + λόγος word]. That branch of medicine which has to do with the throat, pharynx, larynx, nasopharynx, and tracheobronchial tree.

laryngometry (lar-in-gom'et-re) [larynx + μέτρον measure]. Measurement of the larynx.

laryngoparalysis (lar-in'go-pah-ral'is-is) [larynx + paralysis]. Paralysis of the larynx.

laryngopathy (lar-in-gop'ath-e) [λάρυγξ larynx + πάθος illness]. Any disorder of the larynx.

laryngophantom (lar-in-go-fan'tom) [λάρυγξ larynx + φάντασμα phantom]. An artificial model of the larynx.

laryngopharyngeal (lar-in'go-fa-rin'je-al). Pertaining to the larynx and pharynx.

laryngopharyngectomy (lar-in'go-fa-rin-jek'to-me). Excision of the larynx and pharynx.

laryngopharyngeus (lar-in'go-fa-rin'je-us). The inferior constrictor of the pharynx.

laryngopharyngitis (lar-in'go-fa-rin-ji'tis). Inflammation of the larynx and pharynx.

laryngopharynx (lar-in'go-far'inks) [larynx + pharynx]. The lower portion of the pharynx as distinguished from the oropharynx and the nasopharynx.

laryngophony (lar-in-gof'o-ne) [λάρυγξ larynx + φωνή voice]. The vocal sound as heard in auscultation of the larynx.

laryngophthisis (lar-in-gof'this-is) [λάρυγξ larynx + φθίσις phthisis]. Tuberculosis of the larynx.

laryngoplasty (lar-in'go-plas-te) [λάρυγξ larynx + πλάσσειν to mold]. Plastic surgery of the larynx.

laryngoplegia (lar'in-go-ple'je-ah) [λάρυγξ larynx + πληγή stroke]. Paralysis of the larynx.

laryngorhinology (lar-in'go-rin-ol'o-je) [λάρυγξ larynx + ρίς nose + λόγος treatise]. The sum of what is known regarding the larynx and nose and their diseases.

laryngorrhagia (lar-ing-o-ra'je-ah) [larynx + ραγία break]. Hemorrhage from the larynx.

laryngorrhoea (lar'in-gor-e'ah) [λάρυγξ larynx + ροία flow]. Excessive secretion of mucus whenever the voice is used.

laryngoscleroma (lar-in'go-skle-ro'mah) [λάρυγξ larynx + scleroma]. Scleroma of the larynx.

laryngoscope (lar-in'go-skōp) [λάρυγξ larynx + σκοπεῖν to view]. An apparatus for use in ocular examination of the larynx.

laryngoscopic (lar-in-go-skop'ik). Pertaining to laryngoscopy.

laryngoscopist (lar-in-gos'ko-pist). An expert in the use of the laryngoscope.

laryngoscopy (lar-in-gos'ko-pe) [λάρυγξ larynx + σκοπεῖν to view]. Examination of the interior of the larynx by means of the laryngoscope. **suspension l.**, laryngoscopy performed with the head of the patient hanging over the edge of the examination table.

laryngospasm (lar-in'go-spazm) [λάρυγξ larynx + σπασμός spasm]. Spasmodic closure of the larynx.

laryngostasis (lar-ing-os'tas-is) [larynx + στάσις stoppage]. Croup.

laryngostenosis (lar-in'go-sten-o'sis) [λάρυγξ larynx + στένωσις contracture]. Narrowing or stricture of the larynx.

laryngostomy (lar-in-gos'to-me) [λάρυγξ larynx + στόμα mouth]. The formation of a permanent opening into the larynx through the neck and trachea.

laryngostroboscope (lar'in-go-strob'o-skōp) [λάρυγξ larynx + στρόβος whirl + σκοπεῖν to view]. An apparatus for observing the intralaryngeal phenomena of phonation.

laryngotome (lar-ing'o-tōm). An instrument for performing laryngotomy.

laryngotomy (lar-in-got'o-me) [λάρυγξ larynx + τέμνειν to cut]. The operation of incising the larynx. **complete l.**, the longitudinal slitting of the entire larynx. **inferior l.**, incision through the cricothyroid membrane. **median l.**, incision of the thyroid cartilage; thyrotomy. **subhyoid l.**, the opening of the larynx by a cut through the thyrohyoid membrane. **superior l.**, thyrohyoid l. Same as *subhyoid l.*

laryngotracheal (lar-in-go-tra'ke-al). Pertaining to the larynx and trachea.

laryngotracheitis (lar-in'go-tra-ke-i'tis). Inflammation of the larynx and trachea.

laryngotracheobronchitis (lar-ing'go-tra'ke-o-brong-ki'tis). Inflammation of the larynx, trachea, and bronchi.

laryngotracheobronchoscopy (lar-ing'go-tra'ke-o-bron-kos'ko-pe). Higher bronchoscopy; examination of the interior of the trachea and bronchi by means of a bronchoscope introduced through the mouth, larynx, and trachea into the main tube of a bronchus.

laryngotracheoscopy (lar-ing'go-tra-ke-os'ko-pe). Peroral tracheoscopy. See *tracheoscopy*.

laryngotracheotomy (lar-ing'go-tra-ke-ot'o-me) [*laryngotomy* + *tracheotomy*]. Incision of the larynx and trachea.

laryngotyphoid (lar-in-go-ti'foid). Typhoid fever with laryngeal complications.

laryngovestibulitis (lar-ing'go-ves-tib-u-li'tis). Inflammation of the vestibule of the larynx.

laryngoxerosis (lar-in'go-ze-ro'sis) [ἀλάρυξ larynx + ξηρόσις dryness]. Dryness of the throat.

larynx (lar'inks) [ἀλάρυξ]. The musclocartilaginous structure, lined with mucous membrane, situated at the top of the trachea and below the root of the tongue and the hyoid bone. It is the organ of voice. The cartilages of the larynx are nine in number, and are named as follows: thyroid, cricoid, epiglottis, two arytenoid, two cornicula laryngis (cartilages of Santorini), and two cuneiform (cartilages of Wrisberg). These cartilages are connected by ligaments. The two superior thyro-arytenoid ligaments are the false vocal cords; and the two inferior thyro-arytenoid ligaments are the true vocal cords. The cricothyroid membrane connects the adjacent margins of the cricoid and thyroid cartilages.

lasanum (las'an-um). An obstetric chair.

lascivia (las-iv'e-ah). Satyriasis.

Laségué's sign (lah-säg'z') [Ernest Charles Laségué, French physician, 1816-1883]. See under *sign*.

laser (la'ser). Asafetida.

lash. An eyelash.

Lassar's paste (las'arz) [Oskar Lassar, German dermatologist, 1849-1908]. See under *paste*.

lassitude (las'i-tüd). Weakness; exhaustion.

lata, latah (lah'tah). A form of palmus, or jumping disease, endemic in Java.

Lat. dol. Abbreviation for *L. lat'eri dolent'i*, to the painful side.

latent (la'tent) [*L. latens* hidden]. Concealed; not manifest; potential.

laterad (lat'er-ad). Toward a side or a lateral aspect.

lateral (lat'er-al) [*L. latera'lis*]. Pertaining to a side.

lateral-chain theory. See *Ehrlich's side-chain theory*, under *theory*.

latericeous, lateritious (lat'er-ish'us) [*L. laterit'ius*; *lat'er* brick]. Resembling brick dust.

latero-abdominal (lat'er-o-ab-dom'in-al). Pertaining to the side and the abdomen.

laterodeviation (lat'er-o-de-ve-a'shun). Deviation or slight displacement to one side.

lateroduction (lat'er-o-duk'shun) [*L. lat'us* side + *du'cere* to draw]. Movement of an eye to either side.

lateroflection, lateroflexion (lat'er-o-flek'shun). Flexion to either side.

lateroposition (lat'er-o-po-zish'un). Displacement to one side.

lateropulsion (lat'er-o-pul'shun) [*L. lat'us* side + *pel'lere* to drive]. An involuntary tendency to go to one side while walking.

laterotorsion (lat'er-o-tor'shun) [*L. lat'us* side + *torque're* to turn]. Twisting of the vertical meridian of the eye to the right or to the left.

lateroverion (lat'er-o-ver'shun) [*L. lat'us* side + *versio*]. A turning to one side.

latexed (lat-exd'). Bent to one side.

lateralion (lat-ek'shun). Lateral flexion.

Latham's circle (la'thamz') [Peter More Latham, English physician, 1789-1875]. See *circle*.

lathyrism (lath'ir-izm). Poisoning by the chick-pea (*Lath'yrus cic'ere*) or by lupines; lupinosis.

latissimus co'li (lat-is'im-us) [*L.* "widest of the neck"]. See *platysma myoides*, in *muscles*,

table of. **1. dor'si** [*L.* "widest of the back"]. See *muscles*, *table of*.

latrine (lat'rín). A privy or water closet, especially a public one.

Latrodectus (lat-ro-dek'tus). A genus of poisonous spiders. *L. mac'tans*, a species found in the United States; it is commonly known as the "black widow." Its bite may cause severe symptoms or even death. *L. er'ebus* is found in Russia; *L. geomel'ricus* in California; *L. hassel'vii* in New Zealand; and *L. malmigniat'us* in Europe.

laudable (law'dab-l) [*L. laudab'ilis*]. Commendable; healthy; of a kind thought to indicate an improving condition: used of pus.

laudanidine (law-dan'id-in). An alkaloid, $C_{20}H_{25}O_4N$, from opium.

laudanine (law'dan-in). An alkaloid, $C_{20}H_{25}NO_4$, from opium, in colorless hexagonal prisms.

laudanon (law'dan-on). A proprietary combination of various opium alkaloids.

laudanosine (law-dan'o-sin). A colorless alkaloid, in prismatic crystals, $C_{21}H_{27}NO_4$, derivable from opium.

laudanum (law'dan-um). The tincture of opium. Sydenham's 1., the wine of opium.

laugh (laf). An act or paroxysm of laughter.

laughing gas. Nitrogen monoxide; nitrous oxide.

laughter (laf'ter). A series of spasmodic and partly involuntary expirations with inarticulate vocalization, normally indicative of merriment; often a hysteric manifestation or a reflex result of tickling.

Laugier's hernia (lo-zhe-ärz') [Stanislaus Laugier, French surgeon, 1799-1872]. See *hernia*.

Laumonier's ganglion (lo-mon-e-ärz') [Jean Baptiste Laumonier, French surgeon, 1749-1818]. The carotid ganglion.

lauranga (law-rang'ah). See *bush disease*, under *disease*.

laurel (law'rel). See *Laurus* and *laurocerasus*.

laurenol (law're-nol). A proprietary deodorizer and antiseptic.

laurin (law'rin). The glyceride, $C_{22}H_{30}O_3$, of lauric acid, found in the oil of the seeds of *Laur'us nob'ilis*; also in many vegetable oils: it may be crystallized in white needles.

laurocerasus (law-ro-ser'as-us) [*L. lau'rus* laurel + *cer'asus* cherry]. The European cherry laurel, an evergreen cherry tree, *Pru'nus laurocer'asus*. See *aqua laurocerasi*.

laurotetanine (law-ro-tet'an-in). An alkaloid, $C_{19}H_{21}NO_4H_2O$, from *Lit'sea citra'ta*, a lauraceous shrub of southern Asia; it crystallizes in needles; its exhibition is liable to cause tetanic spasm.

Laurus (law'rus) [*L.* "laurel"]. A genus of lauraceous trees. *L. nob'ilis* is a native of southern Europe. The leaves and berries afford fragrant oils, that of the leaves being volatile, and that of the berries a fixed oil.

Lauth's canal, ligament (lowts) [Thomas Lauth, German anatomist, 1758-1826]. See under *canal* and *ligament*.

Lauth's violet (lawths) [Charles Lauth, English chemist, 1836-1913]. See under *violet*.

lava (lah'vah) [Ital.]. The scoria ejected from volcanoes; a homeopathic remedy.

lavage (lah-vahzh') [Fr.]. The irrigation or washing out of an organ, such as the stomach or bowel.

1. of the blood, blood 1., the washing out of toxic matters from the blood by injecting serum into the veins. **electric 1.**, injection of a saline enema that has been electrized by a continuous current. **ether 1.** See *Souligoux-Morestin method*, under *method*. **systemic 1.**, lavage of the blood.

Lavandula (lav-an-du-lah) [*L.*]. A genus of labiate plants; lavenders. The true lavender, *L. ve'ra*, is carminative and stimulant. The

volatile oil of the flowers is official. Dose, 1-5 minims (0.066-0.333 cc.); of spirit (*spir'itus lavandulae*), and also of compound spirit, 30-60 minims (2-4 cc.); of compound tincture, $\frac{1}{2}$ -2 fluidrachms (2-8 cc.).

lavatio ori (la-va'she-o o'ri). The N. F. name for a mouth wash containing granulated soap 60, gluside 2, basic fuchsin 0.02, oil of cinnamon 5, oil of peppermint 5, oil of clove 10, alcohol 750, and water to make 1000 cc.

lavation (la-va'shun) [L. *lava'tio*]. Same as *lavage*.

lavement (lāv'ment). Same as *lavage*.

lavender (lav'en-der). See *Lavendula*.

laver (la'ver). An edible seaweed, *Por'phyra vulga'ris*, recommended as a food for scrofulous patients.

Laveran's bodies, corpuscles (lav-ranz') [Charles Louis Alphonse *Laveran*, French physician, 1845-1922]. See *Laverania*.

Laverania (lav-er-a'ne-ah). Malarial parasites which cause the estivo-autumnal form of malaria. They differ from the Plasmodia in that the gametocyte has the form of a crescent and schizogony occurs in the internal organs. **L. falcip'ara** produces estivo-autumnal malaria of the tertian type and is carried by *Anopheles*. **L. falcip'arum quotidianum** produces estivo-autumnal malaria of the quotidian type.

laveur (lah-vur') [Fr.]. An instrument for performing lavage or irrigation.

law (law). A uniform or constant fact or principle. **all or none l.** See *all or none*. **Allen's paradox l.**, whereas in normal individuals the more sugar is given the more is utilized, the reverse is true in diabetes. **Ambard's l's.** 1. With the urinary urea concentration constant, the output of urea varies directly as the square of the concentration of the blood urea. 2. With the blood urea concentration constant, the output of urea varies inversely as the square root of the urinary concentration. **Ampère's l.**, the force of an electric current on a movable magnet deviates the austral pole of the latter to the left. **Angström's l.**, the law that the wavelengths of the light absorbed by a substance are the same as those given off by it when luminous. **l. of anticipation.** See *Mott's l.* **Aran's l.**, fractures of the base of the skull (except those by contrecoup) result from injuries to the vault, the fractures extending by irradiation along the line of shortest circle. **Arndt-Schulz l.**, weak stimuli increase physiologic activity and very strong stimuli inhibit or abolish activity. **Arrhenius's l.**, only solutions of high osmotic pressure are electrically conductive. **l. of avalanche**, hypothetical law assumed by Ramón y Cajal, that multiple sensations may be aroused in the brain by a simple sensation at the periphery. **l. of average localization**, visceral pain is most accurately localized in the least mobile viscus. **Avogadro's l.**, equal volumes of gases with the same pressure and temperature contain an equal number of molecules. **Babinski's l.**, the law of voltaic vertigo that a normal subject inclines to the side of the positive pole; a pathologic subject falls to the side to which he tends to incline spontaneously. If the labyrinth is destroyed there is no reaction. **Baer's l.**, the more specialized forms and structures arise from the more general, and that by a gradual change. **Baruch's l.**, when the temperature of the water used in a bath is above or below that of the skin the effect is stimulating; when both temperatures are the same the effect is sedative. **Bastian's l.**, **Bastian-Bruns l.**, if there is a complete transverse lesion in the spinal cord cephalad to the lumbar enlargement, the tendon reflexes of the lower extremities are abolished. **Baudin's l.**, the alleged law or principle that an antagonism exists between tuberculosis and malarial disease. **Baumé's l.** Same as *Colles' l.* **Behring's l.**, the blood and serum of

an immunized person, when transferred to another subject, will render the latter immune. **Bell's l.**, the anterior roots of the spinal nerves are motor and the posterior roots are sensory. **Berthollet's l.**, if two salts in solution by double decomposition can produce a salt less soluble than either, such a salt will be produced. **biogenetic l.** See *Müller's l.* **Blagden's l.**, in moderate concentrations the reduction of the freezing point of a solution is proportional to the amount of matter in the solution. **Bordet's l.**, when blood corpuscles are added to a hemolytic medium in bulk, they are more rapidly dissolved than when added in fractions. **Boudin's l.**, there is antagonism between malaria and tuberculosis. **Bowditch's l.** 1. The law that any stimulus that will produce a contraction of the heart muscle will cause as powerful a pulsation as the most powerful stimulus. 2. Nerves cannot be tired out by stimulation. **Boyle's l.**, at any stated temperature a given mass of gas varies in volume inversely as the pressure. **Buhl-Dittrich l.**, the opinion or supposed principle that in every case of acute miliary tuberculosis there exists within the body at least one old focus of caseation. **Bunge's l.**, the secreting cells of the mammary gland in the dog, cat, and rabbit take from the blood, plasma mineral salts in the exact proportion in which they are needed for developing and building up the offspring. **Camerer's l.**, children of the same weight have the same food requirements regardless of their ages. **Charles' l.**, the volume of a gas at a constant pressure varies directly with the temperature. **Cohn's l.**, the specific forms of bacteria have a fixed and unchanging basis. **Colles' l.**, a child that is affected with congenital syphilis, its mother showing no signs of the disease, will not infect its mother (1837). **Colles-Beaumé l.** Same as *Colles' l.* **l. of contrary innervation.** See *Melzer's l.* **Cope's l.**, genera with little specialization originate many types of organisms; while highly specialized genera produce but few biological variations. **Coppet's l.**, the law that solutions which have the same freezing point are equimolecular. **Coulomb's l.**, the force of attraction or repulsion between two electrified bodies is proportional directly to the quantities of electric charge, and inversely as the square of their distance apart. **Courvoisier's l.**, when the common bile duct is obstructed by a stone, dilatation of the gallbladder is rare; when the duct is obstructed in some way, dilatation is common. **Currie's l.**, the law that all substances may be rendered radioactive by the influence of the emanations of radium, and that substances thus influenced hold their radioactivity longer when inclosed on some material through which the emanations cannot pass. **Cushing's l.**, the law that increase of intracranial tension causes increase of blood pressure to a point slightly above the pressure exerted against the medulla. **Dalton's l.**, though the volume of a gas absorbed by a liquid remains constant, the weight of the absorbed gas rises and falls in proportion to the pressure. **Dalton-Henry l.**, when a fluid absorbs a mixture of gases, it will absorb as much of each gas as it would have absorbed of either gas separately. **Dastre-Morat l.**, dilatation of the splanchnic vessels is usually accompanied by constriction of the surface vessels of the body, and vice versa. **l. of definite proportions**, any compound always contains the same kind of elements in the same proportions; called also *Proust's l.* **Descartes' l.**, the sine of the angle of incidence bears a constant relation to the sine of the angle of refraction for two given media. **l. of diffusion**, any process set up in the nerve centers affects the organism throughout by a process of diffused motion. **Dollos' l.**, phyletic development is irreversible, i. e., reversion to an ancestral peculiarity (atavism) is impossible. **Donders' l.**, the rotation of the eye around the line of sight is not voluntary; when attention

is fixed upon a remote object, the amount of rotation is determined entirely by the angular distance of the object from the median plane and from the horizon. **DuBois-Reymond** 1., it is the variation of current density, and not the absolute value of current density at any given moment, that acts as a stimulus to a muscle or motor nerve. **Dulong and Petit's** 1., that the atoms of all elements have exactly the same capacity for heat. **Edinger's** 1., a gradual increase in the function of the neuron causes at first increased growth, but if irregular and excessive, then it leads to atrophy and degeneration. **Elliot's** 1., the activity of epinephrine is due to a stimulation of the endings of the sympathetic nerve. **Ewald's** 1., nystagmus resulting from endolymph currents in a semicircular canal is in a direction parallel with the plane of that canal and opposite to the current, and in the horizontal canals the amount of ocular motor impulse derived from the canals whose hair cells are bent toward the utricle is twice as great as from the other (short end); but in the vertical canals the reverse is true. **1. of excitation**, a motor nerve responds by the contraction of its muscle to the alterations of the strength of an electric current and not to its absolute strength. **1. of facilitation**, when an impulse has passed once through a certain set of neurons to the exclusion of others, it will tend to take the same course on a future occasion, and each time it traverses this path the resistance in the path will be smaller. **Faget's** 1., in yellow fever the pulse is at first accelerated, but, as the temperature rises, it shows a marked tendency to fall. **Fajans's** 1., the product left after the emission of alpha rays has a valence less by two than that of the parent radioactive substance; the product left after the emission of beta rays has a valence greater by one than that of the parent radioactive substance. **Faraday's** 1., in electrolysis the amount of an ion liberated in any given time is proportional to the strength of the current. **Farr's** 1., "subsidence is a property of all zymotic diseases"; the gradually decreasing increase of incidence in an epidemic disease, in virtue of which the epidemic curve first ascends rapidly, then more slowly to a maximum, with a descent more rapid than the ascent. **1. of fatigue** (**Houghton's**), when the same muscle or group of muscles is kept in constant action until fatigue sets in, the total work done, multiplied by the rate of work, is constant. **Fechner's** 1., the intensity of a sensation produced by a varying stimulus varies directly as the logarithm of that stimulus. **Fitz's** 1., the law that acute pancreatitis is to be suspected when a previously healthy person is suddenly affected with violent epigastric pain, vomiting, and collapse, followed inside of twenty-four hours by epigastric swelling, tympanites, or resistance, with slight elevation of temperature. **Flatau's** 1., the law that the greater the length of the fibers of the spinal cord, the closer are they situated to the periphery. **Fleischig's myelogenetic** 1. See *myelogenetic* 1. **Freund's** 1., during growth ovarian tumors change their position; when pelvic, they tend to grow downward behind the uterus; when they have arisen out of the pelvis, they tend to fall forward toward the abdominal wall. **Frobiep's** 1., the theory that the skull is developed by the annexation of true vertebrae, the head growing at the expense of the neck. **Galton's** 1., a law of inheritance by which, in the composition of an individual, the two parents contribute one half of the total, the four grandparents one quarter, and so on. **Galton's 1. of regression**, average parents tend to produce average children; minus parents tend to produce minus children; plus parents tend to produce plus children; but the offspring of extreme parents, whether plus or minus, inherit the parental peculiarities in a less marked degree than the latter were manifested in the parents themselves. **Gay-Lussac** 1. Same as *Charles's* 1. **Gerhardt-**

Semon 1., various peripheral and central lesions affecting the recurrent laryngeal nerve cause the vocal cord to assume a position between abduction and adduction, the paralysis of the parts being incomplete. **Giraud-Teulon** 1., binocular retinal images are formed at the intersection of the primary and secondary axes of projection. **Godélier's** 1., tuberculosis of the peritoneum is invariably associated with tuberculosis of the pleura. **Golgi's** 1., the severity of a malarial attack depends upon the number of parasites in the blood. **Goodell's** 1., when the cervix is hard as one's nose, pregnancy does not exist; when it is as soft as one's lips, pregnancy is probable. **Graham's** 1., the rate of diffusion of a gas through porous membranes is in inverse ratio to the square root of their density. **Grasset's** 1. Same as *Landowzy-Grasset* 1. **1. of gravitation**, the law that all bodies attract each other with a force that is directly proportional to their masses and inversely proportional to the square of their distance apart. Called also *Newton's* 1. **Gudden's** 1., the degeneration of the proximal end of a divided nerve is cellulipetal. **Guldberg and Waage's** 1., the velocity of a chemical reaction is proportional to the active masses of the reacting substances; called also *1. of mass action*, *mass* 1., and *1. of chemical kinetics*. **Gullstrand's** 1., if while the patient is made to turn the head while fixing a distant object the corneal reflex from either eye moves in the direction in which the head is turning, it moves toward the weaker muscle. **Gull-Toynbee** 1., in otitis media the lateral sinus and cerebellum are liable to involvement in mastoid disease, and the cerebrum may be attacked when the roof of the tympanum becomes carious. **Haeckel's** 1., an organism, in developing from the ovum, goes through the same changes as did the species in developing from the lower to the higher forms of animal life. **Hallion's** 1., extracts of an organ when injected into the body exert a stimulating influence on that same organ. **Hamberger's** 1., when the blood is rendered acid, albumins and phosphates pass from the red corpuscles to the serum, and chlorides pass from the serum to the cells; the reverse occurs when the blood is rendered alkaline. **Hecker's** 1., in every successive childbirth the weight of the infant is greater than its predecessor by from 150 to 200 grams. **Heidenhain's** 1., glandular secretion always involves change in the structure of the gland. **Hellin's** 1., one in 80 pregnancies are twins; one in 80 $\times$ 80, or 6400, are triplets; one in 80 $\times$ 80 $\times$ 80, or 512,000, are quadruplets. **Henry's** 1. Same as *Dalton's* 1. **Hering's** 1., the clearness or purity of any conception or sensation depends on the proportion existing between its intensity and the sum total of the intensities of all the simultaneous conceptions and sensations. **Hilton's** 1., a nerve trunk which supplies the muscles of any given joint also supplies the muscles which move the joint and the skin over the insertions of such muscles. **Hofacker-Sadler** 1., when the father is older than the mother the ratio of male births is increased (r_3 to 100); when the parents are of equal age the ratio of female births is increased (93.5 males to 100 females); when the mother is older than the father the ratio of female births is further increased (88.2 males to 100 females). **Hoff's** 1. See *van't Hoff's* 1. **1. of the intestines**, the presence of a bolus in the intestine induces contraction above and inhibition below the stimulus, thereby producing a progression of the intestinal contents. **1. of isolated conduction**, the wave of change or nervous impulse which passes through a neuron is never communicated to other neurons except at the terminals. **Jackson's** 1., the law that the nerve functions that are latest developed are the earliest to be destroyed. **Kahler's** 1., the ascending branches of the posterior roots of the spinal nerves pass within the cord in succession from the root zone toward the mesial plane. **Koch's** 1., the speci-

ficity of a micro-organism is not demonstrated without the fulfilment of the following conditions: (1) The micro-organism is present and discoverable in every case of the disease; (2) it is to be cultivated in a pure culture; (3) inoculation from such culture must reproduce the disease in susceptible animals; (4) it must be reobtained from such animals and again grown in a pure culture. **Küstner's l.**, if an ovarian tumor is left sided, torsion of its pedicle takes place toward the right; if right sided, toward the left. **Lancereaux's l.**, marantic thrombosis always takes place at points where the tendency to stasis is greatest, and especially at points where the influence of thoracic aspiration and cardiac propulsion is smallest. **Landouzy-Grasset l.**, in lesion of one cerebral hemisphere the head is turned to the side of the brain lesion if there is paralysis, and to that of the affected muscles if there is spasticity. **Lasègue's l.**, functional disorders or superficial lesions of an organ increase reflexes, while organic lesions diminish them. **Leopold's l.**, when the placenta is inserted upon the posterior wall of the uterus, the oviducts assume directions converging upon the anterior wall; but if the insertion be on the anterior wall during recumbency, the tubes turn backward and become parallel to the axis of the body. **Levret's l.**, the insertion of the cord is marginal in placenta prævia. **Listing's l.**, when the eyeball is moved from a resting position, the rotational angle in the second position is the same as if the eye were turned about a fixed axis perpendicular to the first and second position of the visual line. **Louis's l.** 1. Pulmonary tuberculosis generally begins in the left lung. 2. Tuberculosis of any part is attended by localization in the lungs. **Magendie's l.** Same as *Bell's l.* **Marey's l.**, a pulse of high tension is slow. **Mariotte's l.** Same as *Boyle's l.* **l. of mass action, mass l.** See *Guldberg and Waage's l.* **Meltzer's l.** (*of contrary innervation*), "all living functions are continually controlled by two opposing forces; augmentation or action on the one hand, and inhibition on the other." **Mendel's l., mendelian l.**, the law that the offspring is not intermediate in type between its parents, but the type of one or other parent is predominant. If two well-defined varieties of the same species be cross fertilized, the resulting hybrid offspring will show the distinguishing characteristics of one of the parents only, this inherited characteristic being termed *dominant*. The characteristic of the other parent, however, known as *recessive*, is latent and will appear in the next generation bred from the hybrid. The offspring of this second generation will be of two kinds, three quarters of the offspring having the dominant characteristic and one quarter of them the recessive characteristic. If two of these recessive members of the third generation are bred together, the subsequent generations will show constantly the recessive character. As regards the dominant members of the third generation, they divide themselves into two orders: one third of these members produce purely dominant offspring; the other two thirds are true hybrids showing a mixed character, and each subsequent generation from them shows the same proportion of pure dominants, pure recessives, and hybrids. This law may be expressed by the following formula, $n(DD + 2DR + RR)$, in which DD represents pure dominant offspring; RR, pure recessive offspring; DR, hybrid offspring, and n , the number of the generation. **Mendelëeff's l.** Same as *periodic l.* **Metchnikoff's l.**, whenever the body is attacked by bacteria, the polymorphonuclear leukocytes and the large mononuclear leukocytes quickly become protective phagocytes. **Meyer's l.**, the internal structure of fully developed normal bone represents the lines of greatest pressure or traction and affords the greatest possible resistance with the least possible amount of material. **Mott's l. of anticipation**, when the children of the insane be-

come insane they do so at a much earlier age than did their parents. **Müller's l.** 1. The embryo and fetus in its development recapitulates that of the ancestral series to which it belongs. 2. Same as *l. of specific irritability*. **l. of multiple variants**, any variation from the normal in the bones of the hand or foot is always multiple. **myelogenetic l.** (of *Flechsig*), the myelination of the nerve fibers of the developing brain takes place in a definite sequence so that fibers belonging to particular functional systems mature at the same time. **Nageli's l.**, a disease in which eosinophils are present in one-half normal, normal, or increased numbers cannot be typhoid; and the appearance of even a few of such cells must incite caution in the diagnosis. **Neumann's l.**, the molecular heats in compounds of analogous constitution are always the same. **Newland's l.** Same as *periodic l.* **Newton's l.** Same as *l. of gravitation*. **Nysten's l.**, rigor mortis affects first the muscles of mastication, next those of the face and neck, then those of the upper trunk and arms, and last of all those of the legs and feet. **Ohm's l.**, the strength of an electric current varies directly as the electromotive force, and inversely as the resistance. **orbital-canine l.**, in the normal denture the orbital line intersects the cusps of the canine teeth. **orbital-gnathion l.**, in the normal denture the gnathion lies in the orbital line. **Pascal's l.**, the law that pressure applied to a liquid at any point is transmitted equally in all directions. **periodic l.**, the law that if the elements are arranged in the sequence of the weight of their atoms, and divided into groups of seven or eight, the corresponding members of each group show relationship in chemical properties: thus, elements having characters alike recur at regular intervals throughout the series. Called also *Mendelëeff's l.* **Peters's l.**, atheroma most commonly affects blood vessels at their angles or turns. **Pfeiffer's l.**, the law that the blood serum of an animal immunized against a disease will, when introduced into the body of another animal, destroy the bacteria of that disease. **Pfuger's l.**, the law that a nerve tract is stimulated when catectrotonus develops or anectrotonus disappears, but not under the reverse conditions. **Poiseuille's l.**, the speed of currents in capillary tubes is proportional to the square of their diameter. **Prévost's l.**, in a lateral cerebral lesion the head is turned to the side on which the lesion is. **Profeta's l.**, a nonsyphilitic child born of syphilitic parents is immune. **Proust's l.**, law of definite proportions. **psychophysical l.** Same as *Weber-Fechner l.* **Raoult's l.**, the depression of the freezing point of a solution is proportional to the molecular concentration of the solution, every molecule of substance per liter of solution depressing the freezing point of water 1.85 degrees C. **l. of reciprocal proportions**, two chemical elements that unite with a third element do so in proportions that are multiples of those in which they unite with each other. **l. of refraction**, rays of light passing from a rarer to a denser medium are deflected toward a perpendicular to the surface of incidence; while rays passing from a denser to a rarer medium are deflected away from the perpendicular. **l. of refreshment**, the refreshment of a laboring muscle depends on the rate of supply of arterial blood. **l. of regression**. See *Galton's l. of regression*. **l. of relativity**, the law that simultaneous and successive sensations modify each other. **Ritter's l.**, both the opening and the closing of an electric current produce stimulation in a nerve. **Ritter-Valli's l.**, the primary increase and secondary loss of irritability in a nerve, produced by a section which separates from the nerve center travel in a peripheral direction. **Rommelaere's l.**, in cases of carcinoma there is a constant diminution of the nitrogen in the urine. **Rosa's l.**, the possibilities of phyletic variation in an organism decrease in proportion to the extent of its development. **Rosenbach's l.**, in lesions of the nerve centers and nerve trunks

paralysis appears in the extensor muscles before it does in flexor muscles. **Roussel's l.**, a French law initiated by Théophile Roussel (1874) for the protection of friendless children. **Rubner's l.** 1. (*Law of constant energy consumption.*) The rapidity of growth is proportional to the intensity of the metabolic process. 2. (*Law of constant growth quotient.*) The same fractional part of the entire energy is utilized for growth. This fractional part is called the "growth quotient." **Schroeder van der Kolk's l.**, the sensory fibers of a mixed nerve are distributed to the parts moved by muscles which are stimulated by the motor fibers of the same nerve. **Schütz's l.**, the law that the intensity of enzyme action is directly proportional to the square root of its concentration. 1. **of segregation**, in each generation the ratio of pure dominants, dominants giving descendants in the proportion of three dominants to one recessive, and pure recessives is 1 : 2 : 1. **Semon's l.**, in progressive organic diseases of the motor laryngeal nerves the abductors of the vocal cords (posterior crico-arytenoids) are the first, and occasionally the only, muscles affected. **Sherrington's l.**, every posterior spinal nerve root supplies a special region of the skin, although fibers from adjacent spinal segments may invade such a region. 1. **of similars.** See *homeopathy*. 1. **of sines**, the sine of the angle of incidence is equal to the sine of the angle of reflection multiplied by a constant quantity. **Snell's l.** Same as *Descartes' l.* **Spallanzani's l.**, the law that regeneration is more complete in younger individuals than in older ones. 1. **of specific irritability**, every sensory nerve reacts to one form of stimulus and gives rise to one form of sensation only, though if under abnormal conditions it be excited by other forms of stimuli, the sensation evoked will be the same. Called also *Müller's l.* **Stokes' l.**, a muscle situated above an inflamed membrane is often affected with paralysis. **Tait's l.**, in every case of pelvic or abdominal disease in which life is endangered or the health ruined, exploration by celiotomy should be made, except when the disease is known to be malignant. **Talbot's l.**, when complete fusion occurs and the sensation is uniform, the intensity is the same as would occur were the same amount of light spread uniformly over the disk. **Teevan's l.**, fractures of bones occur in the line of extension, and not in the line of compression. **Toynbee's l.**, in cases of brain disease due to otitis the cerebellum and lateral sinuses are affected from the mastoid, and the cerebrum from the tympanic roof. **van der Kolk's l.** See *Schroeder van der Kolk's l.* **van't Hoff's l.** 1. Many substances in solution exert an osmotic pressure equal to the gas pressure that they would exert if their molecules were in a gaseous state and occupied a volume equal to that of the solution under the same conditions of temperature and pressure. 2. *Van't Hoff's rule.* See under *rule*. **Virchow's l.**, the cell elements of tumors are derived from normal and preexisting tissue cells. **Vulpian's l.**, when a portion of the brain is destroyed the functions of that part are carried on by the remaining parts. **Waller's l.**, **wallerian l.**, if the sensory fibers of the root of a spinal nerve be divided on the central side of the ganglion, the fibers on the peripheral side of the cut do not degenerate; while those that remain connected with the cord degenerate. **Weber's l.**, the variation of stimulus which causes the smallest appreciable change in sensation maintains an approximately fixed ratio to the whole stimulus. **Weber-Fechner's l.**, the law that for a sensation to increase, by equal amounts (arithmetical progression), the stimulus must increase by geometrical progression. Called also *psychophysical l.* **Weigert's l.**, loss or destruction of elements in the organic world is apt to be followed by overproduction of such elements in the reparative process. **Wolff's l.**, the law that all changes in the function of a bone are attended by definite

alterations in its internal structure. **Wundt-Lamansky l.**, the law that the line of vision in moving through a vertical plane parallel to the frontal plane moves in straight lines in the vertical and horizontal directions, but in curved paths in all other movements. **Wyssakowitsch's l.**, the cells covering any part of the body, so long as they preserve their integrity, protect the underlying tissues. **Zeune's l.**, the law that the proportion of cases of blindness is less in the temperate than in the frigid zone, and increases in the torrid zone as the equator is approached.

Läwe's treatment (la'vez). See under *treatment*.

lawn tennis arm (lawn ten'is). Displacement of the pronator radii teres muscle from excessive tennis playing.

Lawson Tait. See *Tait*.

laxaphen (laks'af-en). A proprietary cathartic containing phenolphthalein and salicylic acid in a chocolate-flavored base.

laxase (laks'äs). A proprietary concentrated form of agar-agar for internal administration in constipation.

laxatin (laks'at-in). A proprietary preparation of phenolphthalein.

laxative (laks'at-iv) [*L. laxativus*]. 1. Aperient; mildly cathartic. 2. An aperient medicine.

laxator tym'pani (laks-a'tor) [*L. "relaxer of the tympanum"*]. See *muscles, table of*.

laxiquinine (laks-ik-win'in). A proprietary laxative preparation of quinine.

laxoin (laks'o-in). Same as *phenolphthalein*.

laxol (laks'ol). Castor oil prepared with saccharin and oil of peppermint.

layer (la'er). A stratum of nearly uniform thickness. **adamantine l.**, the enamel layer of the teeth. **ambiguus l.**, the second layer of the cerebral cortex, counting from without: named from the indefinite shapes of many of its cells. **bacillary l.**, the outermost but one of the retinal layers; the rod and cone layer; Jacob's membrane. **Baillarger's l.** See *Baillarger's line*, under *line*. **basement l.**, basement membrane. **Bechterew's l.**, a layer of fibers in the cerebral cortex between Baillarger's layer and the tangential fibers. **Bernard's glandular l.**, a layer of cells which line the acini of the pancreas. **blastodermic l.**, any one of the germ layers—the epiblast, mesoblast, or hypoblast. **Bowman's l.**, Bowman's membrane. See *membrane*. **Bruch's l.**, the inner layer of the choroid coat of the eye: the vitreous lamina. **claustral l.**, the layer of gray matter between the external capsule and the insula. **columnar l.**, the rod and cone layer of the retina; also same as *manile l.* **cortical l.**, the superficial layer, especially of the brain and the ovary. **dermic l.**, the middle or connective-tissue layer of the membrana tympani. **Dobie's l.** Same as *Krause's membrane*. **ependymal l.**, the inner layer of cells next to the cavity of the medullary tube. **epitrichial l.**, the most superficial layer of the epidermis of the embryo. **fillet l.**, the stratum lemnisci. **Floegel's l.**, a granular layer in each transparent lateral disk of a muscular fibril. **ganglion cell l.**, a layer of the retina between the nerve fiber layer and the inner molecular layer. **ganglionic l.**, a stratum of angular cells in the cerebral cortex. **Genari's l.** Same as *Baillarger's l.* **germ l.**, one of the primary layers of cells (ectoderm, endoderm, or mesoderm) from which the tissues and organs of the adult develop. **granular l.**, the stratum granulosum. **Henle's l.**, the outer layer of cells of the inner root sheath of a hair follicle. **horny l.**, the outer layer of the skin; the stratum corneum. **Huxley's l.**, a layer of the root sheaths of a hair follicle within Henle's layer. **Köl liker's fibrous l.**, the mesiris; the substantia propria of the iris. **Langerhans' l.**, the stratum granulosum of the skin. **Langhans' l.**,

the deep cellular layer of chorionic villi. **laticed** l., a cortical cell layer of the hippocampus. **malpighian** l., the stratum mucosum of the skin. **mantle** l., the columnar layer or zone of nuclei in the myelospongium. **Meynert's** l., a layer of pyramidal cells in the cortex of the cerebrum. **molecular** l. 1. The outer layer of the cerebral or cerebellar cortex. 2. A designation of two of the layers of the retina. **molecular** l., **inner**, the inner plexiform layer of the retina. **molecular** l., **outer**, the outer plexiform layer of the retina. **mucous** l., the innermost layer of the epidermis; the rete mucosum. **nerve fiber** l., the innermost layer of the retina, excepting the membrana limitans interna. **neu-rodermal** l., the epiblast. **Ohl's** l., the stratum lucidum of the skin. **Ollier's** l., **osteogenetic** l., the innermost layer of the periosteum. **palisade** l., the basal layer of the stratum mucosum. **papillary** l., the outer layer of the corium. **peripheral** l., the outer portion of the molecular layer of the cerebral cortex. **pigmentary** l., the outermost of the ten layers of the retina, and the inner lining of the ciliary organ. **plexiform** l's, the two molecular layers of the retina. **prickle cell** l., the stratum malpighii. **primary blastodermic** l., the germinal layers developed by the differentiation of the blastoderm, the epiblast, and hypoblast or mesoblast. **Rauber's** l., the most external of the three layers of cells which form the young blastodisk of the embryo. Called also *blastodermic ectoderm* and *primitive ectoderm*. **Renaut's** l., a thin hyaline membrane between the corium and the epidermis. **reticular** l., the tunica propria or deeper layer of the corium. **Sattler's elastic** l., a thin layer of elastic fibers lying between the large vessel layer and the choriocapillary layer of the chorioid of the eye. **skeletogenous** l., the layer of mesoderm cells surrounding the notochord of the embryo and developing into the axial skeleton. **sluggish** l., the layer of slow-moving leukocytes in the blood strewn along the walls of the vessel. **still** l. Same as *sluggish* l. **subcallosal** l., the layer of nerve fibers on the lower side of the callosum. **subpapillary** l., the vascular layer of the corium. **superpapillary** l., the rete mucosum. **Tomes' granular** l., the outer layer of dentin next the cement. **trophic** l., the hypoblast. **Unna's** l., Langerhans' layer. **vegetative** l., the hypoblast. **Waldeyer's** l., the vascular layer of the ovary. **Weil's basal** l., a pale, transparent layer of cells just inside of the layer of odontoblasts of tooth pulp. It is made up of delicate fibrils of connective tissue communicating with the processes of odontoblasts. **yellow** l. See *crusta philagistica*. **Zeissel's** l., a layer in the stomach wall between the muscularis mucosae and the submucosa. **zonular** l. See *stratum zonale*.

lazar (laz'ar) [*Lazarus*, the leper of the Bible]. An old name for leper.

lazaretto (laz-ar-et'ō). 1. A pest-house or hospital for contagious diseases. 2. A quarantine station.

Lb. An abbreviation for *L. ſ'bra*, pound.

L. Ch. Abbreviation for *Licentiate in Surgery*.

L. D. Abbreviation for *perception of light difference*.

L. D. A. Left dorso-anterior position of the fetus.

L. D. P. Left dorso-posterior position of the fetus.

L. D. S. Abbreviation for *Licentiate in Dental Surgery*.

L. E. Abbreviation for *left eye*.

leaching (le'tshing). Lixivation.

lead (led) [*L. plum'bum*]. A soft, grayish-blue metal with poisonous salts; symbol, Pb; atomic weight, 207.2. 1. **acetate** (*L. plum'bi ac'e'tas*), sugar of lead; a sweetish, white, basic salt, used in the preparation of lead-water, Goulard's extract, Goulard's cerate, etc. It is astringent, anodyne,

and discutient. **arsenate of l.** (as an insecticide), dissolve separately in wooden pails arsenate of soda (5 per cent strength) 4 ounces in 2 quarts of water and acetate of lead 11 ounces in 4 quarts of water. Pour into 1 gallon of water. 1. **bitan-nate**. See *lead tannate*. **black** l. See *graphite*. 1. **carbonate** (*L. plum'bi carbo'nas*), ceruse; a basic salt, $(PbCO_3)_2 \cdot Pb(OH)_2$; used as an application to burns and inflamed surfaces. 1. **chloride** (*L. plum'bi chlo'ridum*), horn lead, $PbCl_2$; anodyne and astringent. 1. **chromate**, a lemon-yellow powder, $PbCrO_4$. Called also *chrome yellow*. 1. **iodide** (*L. plum'bi iod'idum*), a yellow, crystalline powder, PbI_2 ; resolvent and astringent. 1. **monoxide** (*L. plum'bi ox'idum*), a binary compound, PbO , called *litharge* when crystalline and *massicot* when amorphous: much used in plasters, etc., and in the treatment of burns. 1. **nitrate** (*L. plum'bi ni'tras*), a sweetish, crystalline agent, $Pb(NO_3)_2$; astringent, detergent, and deodorant. 1. **oleate**, a white powder, $3Pb(C_{18}H_{33}O_2)_2$; used in diachylon ointment, etc. 1. **oxide**. See *l. monoxide* and *l. tetroxide*. 1. **phenolsulphonate**, white needles, astringent and antiseptic, $Pb(OH \cdot C_6H_4 \cdot SO_3O)_2 \cdot 5H_2O$; used in skin diseases. 1. **subacetate**, a basic acetate of lead. 1. **tannate** (*L. plum'bi tan'nas*), a yellowish-gray powder; anodyne and astringent; used in ointments for bed sores, etc. 1. **tetra-ethyl** l., an organic lead compound, $Pb(C_2H_5)_4$, used as an antiknock agent in internal combustion motors. It is highly poisonous, and because of the mental symptoms produced it is known as "looney gas." It can be absorbed through the skin and has caused several deaths among those handling it. It is added to the gasoline in small amount (1 part in 10,000), but the lead comes out with the exhaust, and may under some conditions be harmful. Called also *ethyl gas*. 1. **tetroxide**, red lead, or minium, Pb_3O_4 ; it may be used like the monoxide. **white** l., a basic lead carbonate.

lead (led). Any one of the records made by the electrocardiograph, varying with the part of the body from which the current is led off. It is customary to use the following three leads: lead I, right arm and left arm, in which the current is derived largely from the base of the heart; lead II, right arm and left leg, corresponding essentially to the long axis of the heart; lead III, left arm and left leg, representing chiefly the left side of the heart. A lead is also known as a derivation.

leading (led'ing). Lead poison; plumbism.

leafcup. Polymnia.

leak point. See under *point*.

leaping-ill (le'ping-il). See *thor-ill*.

leash (lēsh). A bundle of cordlike structures, as nerves, blood vessels, fibers, etc.

leaves. Many drugs are extracted from leaves. **blue gum** l., Eucalyptus. **chestnut** l., Castanea. **coltsfoot** l., Tussilago. **deadly nightshade** l., belladonna. **marshmallow** l., white mallow l., Althaea. **thornapple** l., Stramonium. **witchhazel** l., Hamamelidis.

leben (leb'en) [Arabic]. A ferment drink of Egypt made from the milk of cows, buffaloes, and goats.

Leber's disease (la-berz') [Theodor Leber, German ophthalmologist, 1840-1917]. See *disease*.

Lebis'tes reticulatus. A small fish valued because it devours mosquito larvae.

Lecat's gulf (le-kats') [Claude Nicolas Lecat, French surgeon, 1700-1768]. See *gulf*.

lecibrin (les'ib-rin). A preparation of lecithin with nucleoprotein: used like lecithin.

lecipon (les'ip-on). A water-soluble preparation of lecithin in powdered form.

lecithalbumin (les-ith-al'bu-min). A compound of albumin and lecithin, found in the stomach, liver, kidney, lungs, and spleen.

lecithid (les'ith-id). A compound of lecithin with venom hemolysin. See *cobra lecithid*.

lecithin (les'ith-in) [λέκιθος yolk of egg]. A monoaminomonophosphatide, $C_{44}H_{90}NP_2O_8$, found in animal tissues, especially nerve tissue, semen, yolk of egg, and in smaller amount in bile and blood. It is a colorless, crystalline compound, soluble in alcohol, and is chemically the stearyl-oleylglycerophosphate of choline. Other substances of similar constitution are grouped as lecithins. The lecithins, whether of animal or plant origin, are said to be antivenomous. Lecithins are said to have the therapeutic properties of phosphorus, and have been given in rickets, dyspepsia, neurasthenia, diabetes, anemia, and tuberculosis. **1. albumin**, the name of a series of compounds of lecithin with proteins developed in the stomach, kidney, liver, lungs, etc.

lecithinase (les'ith-in-ās). An enzyme which produces disintegration of lecithin. **cobra 1.**, one of the constituents of the hemolysin of cobra venom.

lecithinose (les-ith'in-ōs). A lecithin from the yolk of eggs: used as a nutrient.

lecithol (les'ith-ol). A proprietary emulsion-like solution of lecithin.

lecithoprotein (les'ith-o-pro'te-in). A compound of the protein molecule with a lecithin.

Leclainche-Vallée serum. See under *serum*.

Leclanché's cell (le-klan-shāz') [Georges Leclanché, French physicist. 1839-1882]. See *cell*.

lectual (lek'tu-al) [L. *lectua'lis*; *lectus* bed]. Pertaining to a bed or couch.

lectulum (lek'tu-lum) [L. "a little bed"]. The nail-bed.

Le Dentu's suture (leh-den-tez) [*Le Dentu*, Paris surgeon, 1841-1926]. See under *suture*.

Ledran's suture (la-drahz') [Henri François Ledran, French surgeon, 1685-1770]. See *suture*.

Leduc's current (led-ooks') [Stéphane Armand Nicolas Leduc, contemporary French physicist]. See *current*.

leech (lēsh) [L. *hiru'do*]. 1. An aquatic anelid, *Hiru'do medicina'lis*: used for drawing blood. An aqueous therapeutic extract of the heads of leeches is employed to prevent the formation of blood clots, etc. Some species, chiefly tropical, may become semiparasitic upon man and animals. See also *Placobdella*. 2. To apply leeches. 3. An old name for physician. **American 1.**, the *Sanguisuga deco'ra*, a small species sometimes used in drawing blood. **artificial 1.**, an apparatus for drawing blood by artificial suction. **horse 1.** See *Limnaeus* and *Haemaphys*. **Hungarian 1.**, the *Sanguisuga officina'lis*, a species locally used in drawing blood. **land 1.** See *Haemadipsa*. **Swedish 1.**, the *Sanguisuga medicina'lis*, or official leech.

leeches, leeching (lē'shez, lē'tshing). An infectious disease of horses in Florida and India, with local lesions on the skin, which begin with slight lumps, which grow in size until there is a large raw surface. Called also *hyphomycosis destruens equi*, and in India *bursante*.

Lee's ganglion [Robert Lee, English physician, 1793-1877]. See *ganglion*.

lees (lēz). The dregs or sediment of wine.

Leeuwenhoekia australien'sis [Antonj van Leeuwenhoek, Dutch microscopist, 1632-1723]. A mite found at Sidney, New South Wales, which causes great irritation by burrowing in the skin of people who work in gardens.

Le Fort's amputation, suture (la fōrz) [Léon Clément Le Fort, French surgeon, 1829-1893]. See *amputation* and *suture*.

left handed (left hand'ed). Using the left hand with more dexterity than the right.

leg (lēg). The lower extremity, especially the part between the knee and the ankle. **Anglesey 1.**, a form of jointed artificial leg; named from a marquis of Anglesey. **badger 1.**, inequality in the length of the legs. **baker 1.**, genu valgum, or knock

knee. **bandy 1.** Same as *bow 1*. **Barbados 1.**, elephantiasis of the leg. **bayonet 1.**, uncorrected backward displacement of the bones of the leg at the knee, followed by ankylosis at the joint. **bird 1.**, reduction in size of the leg from atrophy of the muscles. **black 1.**, symptomatic anthrax. **boom-erang 1.**, a bone disease occurring among Australian natives causing the leg to assume a shape resembling a boomerang. **bow 1.**, genu varum; an outward curvature of the legs at the knees. **1. holder**, a device for holding the legs in surgical operations; especially for holding the legs apart and up in gynecologic operations. **lawn tennis 1.** See *coup de fouet*. **milk 1.**, phlegmasia alba dolens. **riider's 1.**, strain of the adductor muscles of the thigh in horse-back riders. **scissor 1.**, cross leg deformity; a result of double hip disease, in which the patient walks cross legged. **trench 1.** See *trench shin*, under *shin*. **1. type**, progressive hereditary muscular atrophy. **white 1.**, phlegmasia alba dolens.

Legal's disease, test (la-galz') [Emmo Legal, German physician, 19th century]. See under *disease* and *tests*.

Legg's disease (legz) [Arthur T. Legg, American surgeon, born 1874]. Osteochondritis deformans juvenilis.

leg-ill (lē'il). Inflammation of the interdigital space of sheep, producing lameness.

legitimacy (lē-jit'im-as-e) [L. *legit'imus* lawful]. The condition of having been born in wedlock.

legume (lē'gūm). The pod or fruit of a leguminous plant, such as peas and beans.

legumelin (lē-gū-me'lin). A protein from lentils.

legumin (lē'gū-min) [L. *legu'men* pulse]. A protein from the seeds of various plants, chiefly of the order *Legumino'sae*.

Leichtenstern's phenomenon or sign (lik'ten-ster-nz) [Michael Ludwig Leichtenstern, German physician, 1845-1900]. See under *sign*.

leinol (lē'nol). A proprietary sedative medicine.

leioderma (lē-o-der-me-ah) [λεῖος smooth + δέρμα skin]. Abnormal glossiness and smoothness of the skin.

leiomyblastoma (lē-o-mi-o-blas-to'mah). Leiomyoma.

leiomyobroma (lē'o-mi-o-fi-bro'mah). A tumor with leiomatous, myomatous, and fibromatous elements.

leiomyoma (lē'o-mi-o'mah) [λεῖος smooth + μῦς muscle + -ωμα tumor]. Myoma composed of unstriated muscle fiber. **1. cutis**, a disease characterized by numerous translucent nodules, the size of peas, on the extensor surfaces of the extremities, the nodules containing masses of smooth muscle fibers.

leiomyosarcoma (lē'o-mi-o-sar-ko'mah). A sarcoma containing large spindle cells of unstriated muscle.

leiphemia (lē-fe-me-ah) [λεῖπειν to fail + αἷμα blood]. Thinness and poverty of the blood.

leipo-. For words beginning thus, see those beginning *leipo-*.

Leishman's cells, method, stain (lēsh'manz) [Sir William B. Leishman]. See *cell*, *method*, *stains*, *table of*.

Leishman-Donovan body (lēsh'man-don'o-van) [Sir William B. Leishman; C. Donovan, surgeon in Indian Medical Service]. See under *body*.

Leishmania (lēsh-man'e-ah) [named from Sir William Boog Leishman, English army surgeon, 1865-1926]. 1. A genus of flagellate protozoans parasitic in the human and animal bodies, where they are found as small oval or round intracellular organisms, chiefly in endothelium. In artificial cultures on blood-agar they develop into typical flagellate herpetomonads. Called also *Piroplasm*, *Helcosoma*, and *Herpetomonas*. 2. One of the developmental stages through which trypanosomes

pass in their insect hosts. **L. americana**. See **L. braziliensis**. **L. braziliensis**, a form morphologically identical with **L. donovani** and which causes leishmaniasis americana. **L. donovani**,

Leishmania donovani cultures (Leishman).

the organism causing kala-azar; a species occurring in the spleen, liver, and bone marrow in the form of small oval or round bodies (Leishman-Donovan bodies). Called also **L. infantum**, *Piroplasma donovani*, and *Herpetomonas donovani*. See **kala-azar**. **L. farciminosus**. See *Blastomyces farciminosus*. **L. furunculo**, the parasite which

Leishmania furunculo (Ch. Nicolle).

causes furunculus orientalis or oriental sore. It is morphologically identical with **L. donovani** and has a similar life history. **L. infantum**, the organism causing Mediterranean kala-azar or infantile splenomegaly. It is morphologically identical with **L. donovani**. **L. mediterranea**. See **L. infantum**. **L. nilotica**, Brumpt's name for the **L. tropica** found in the keloid form of oriental sore. **L. tropica**, the organism causing oriental sore.

leishmaniasis (lish-man-i'as-is). Same as **leishmaniosis**.

leishmaniosis (lish-man-e-o'sis). Any disease due to infection with species of *Leishmania*. **L. americana**, a disease caused by *Leishmania braziliensis*. It is common in Brazil and is found also in Panama and in Yucatan. It is characterized by ulceration of the mucous membranes of the nose and throat and is called forest yaws and boubia brasileira. It may be the same as oriental sore. **dermal l.**, oriental sore. See **furunculosis orientalis**. **infantile l.** See **infantile kala-azar**, under **kala-azar**. **naso-oral l.**, espundia. **visceral l.** See **kala-azar**.

Leistungskern (lis'toongs-kern) [Ger.]. The functional part or active center of a cell.

Leiter's coil (li'terz) [Joseph Leiter, Austrian instrument maker, died 1892]. See **coil**.

Leloir's disease (lél-warz) [Henri Camille Leloir, French dermatologist, 1855-1896]. Lupus vulgaris erythematoides.

lema (le'mah) [λήμη gum]. The meibomian secretion.

Lembert's suture (lah-bärs') [Antoine Lembert, French surgeon, 1802-1851]. See **suture**.

lemco (lem'ko). A proprietary meat extract preparation.

lememia (le-me'me-ah) [λοιμός plague + αίμα blood]. The presence of plague germs in the blood.

lemic (le'mik) [λοιμός plague]. Pertaining to an epidemic disease, as the plague.

lemmoplast (lem'o'-blast). A primitive or immature leucocyte.

lemmoplastic (lem-o-blas'tik). Forming or developing into neurilemma tissue.

lemmocyte (lem'o-sit) [λέμμα sheath + κύτος cell]. A cell derived from the neural crest and developing into a neurilemma cell.

lemniscus (lem-nis'kus), pl. *lemnisci* L.; [λήμνισκος fillet]. A band of longitudinal sensory fibers in the medulla and pons extending upward from the decussation, passing along the outer surface of the superior cerebellar peduncle, and terminating in the thalamus. Called also **fillet** and **loquens**. **acoustic l.** Same as **lateral l. bulbar l.**, ascending sensory fibers of the second order running from the medulla oblongata to the thalamus and including several different tracts. **gustatory l.** Same as **visceral l. lateral l.**, a tract of longitudinal fibers extending upward through the lateral part of the tegmental substance of the pons. It is formed by fibers of the corpus trapezoidum and runs toward the quadrigeminal region. Called also **lateral fillet**. **medial l.**, a band of white fibers arising from the gracile and cuneate nuclei, crossing to the opposite side in the lower part of the medulla oblongata, and extending upward to enter the optic thalamus. Called also **medial fillet** and **ribbon of Reil**. **optic l.**, the optic tract. **spinal l.**, ascending fibers of touch, temperature, and pain sensibility extending from the spinal cord to the optic thalamus. In the cord the fibers constitute two tracts, the dorsal and ventral spinothalamic tracts. **l. temporalis et occipitalis**, a cordlike bundle of nerve fibers connecting the cortex of the temporal and occipital lobes of the brain. Called also **Hooze's bundle**. **trigeminal l.**, ascending sensory fibers in the pons running from the sensory fifth nuclei to the thalamus. **visceral l.**, ascending sensory fibers running from the nucleus of the solitary fasciculus to the higher cerebral centers.

lemnoplast (lem'no-blast). Same as **lemmoplast**.

lemography (le-mog'raf-e) [λοιμός plague + γράφειν to write]. A treatise on the plague or other epidemic disease.

lemology (le-mol'o-je) [λοιμός plague + λόγος treatise]. The science of contagious and epidemic diseases, especially the plague.

lemon (lem'un). The fruit of *Citrus medica*, var. *limonum*, an aurantiaceous tree. The rind or peel of the fruit (**lemon peel**) furnishes **oil of l.** (*oleum limonis*), an essential oil, $C_{10}H_{16}$, which is an aromatic stimulant and flavoring agent. Dose, 1-5 minims (0.066-0.333 cc.). Dose of spirit of lemon, 1-4 fluidrachms (4-16 cc.); of tincture (U. S. P.), 1 drachm (4 cc.).

lemon balm (lem'un bahm). See **Melissa**.

lemon grass. Any of several Indian grasses of the genus *Andropogon*. They yield a fragrant oil used in perfumery.

lemoparalysis, laemoparalysis (le'mo-par-al'-is-is) [λαιμός gullet + paralysis]. Paralysis of the gullet.

length, dental (length). A line from the anterior surface of the first premolar to the posterior surface of the last molar. **sitting l.**, the length from the crown of the head to the coccyx, called by Pirquet Si.

Lenhartz treatment (len'harts) [Hermann Albert Dietrich Lenhartz, physician in Hamburg, 1854-1910]. See **treatment**.

lenicet (len'is-et). A polymerized, finely divided acetate of aluminum preparation.

lenigallol (len-e-gal'ol). Pyrogallol triacetate, $(CH_3.CO.O)_3C_6H_3$, a white, insoluble powder; used like pyrogallol in psoriasis and eczema.

leniol (len'e-ol). A proprietary medicated emulsion of cod liver oil, for use in lung disorders.

lenirenin (len-ir-e'nin). A mixture of lenicet, aluminum hydroxide, and suprarenal substances used in catarrh of the upper air passages.

lenirobin (len-e-ro'bin). Chrysarobin tetra-acetate: used in skin diseases.

lenitive (len-it'iv) [*L. leni've* to soothe]. 1. Demulcent or soothing. 2. A demulcent remedy.

lenitol (len-it'-ol). A proprietary petroleum preparation for constipation.

Lennander's operation (len-an'derz) [Karl Gustav Lennander, Swedish surgeon, 1857-1908]. See *operation*.

Lennhoff's index, sign (len'hofs) [Rudolf Lennhoff, German physician, born 1866]. See *index* and *sign*.

lens (lenz) [*L. "lentil"*]. A piece of glass or other transparent substance so shaped as to converge or scatter the rays of light. **achromatic l.**, a lens corrected for chromatic aberration. **aplanatic l.**, one which serves to correct spherical aberration. **apochromatic l.**, one corrected for chromatic or spherical aberration. **biconcave l.**, **concavo-concave l.**, a lens concave on both faces. **biconvex l.**, a lens with two convex faces. **bicylindrical l.**, one which has both surfaces cylindrical. **bifocal l.**, a spectacle glass having two lenses, the upper for distant vision and the lower of different refractive power for near vision. **bispherical l.**, a lens that is spherical on both sides. **Brücke l.**, a combination of a double convex and double concave lens arranged so as to give considerable working distance. **cataract l.**, a powerful lens for spectacles to be used after cataract operation. **compound l.**, one made up of two or more lenses. **contact l.**, a thin shell of glass bounded by concentric spherical surfaces: used in cases of corneal opacity or abnormal curvature of the cornea. **converging l.**, **convex l.**, one which brings light to a focus. **convexoconcave l.**, one which has one convex and one concave surface. **Coquille plano l.**, a lens that is +8D on one side and -8D on the other. **Crookes' l.**, a lens made from glass rendered opaque to the ultraviolet and ultrared rays and still transparent to light. **crossed l.**, a lens with front and back surfaces of different curvatures. **crystalline l.**, **eye l.**, the transparent lenticular organ behind the pupil. **cylindrical l.**, a lens which is a section of a cylinder cut parallel to its axis; one which has one surface plane and another concave or convex. **decentered l.**, one in which the visual line does not pass through the center. **dispersing l.**, **concave l.**, one which disperses light. **immersion l.**, immersion objective. See *objective*. **meter l.**, a lens which will focus parallel rays at a distance of one meter. **minus l.**, a concave lens. **orthoscopic l.**, a form of lens which gives a very flat and undistorted field of vision. 1. **particles**, fine brown points of pigment on the anterior capsule of the lens—the vestiges of the capsulopupillary membrane of the fetus. **periscopic l.**, a concavoconvex or concavoconcave lens. 1. **pit**, a pitlike involution in the ectoderm of the fetal head where the lens is developed. **planoconcave l.**, one having one plane and one concave side. **planoconvex l.**, one which has one plane and one convex side. **plus l.**, a convex lens. **retroscopic l.**, a lens that is tilted inward at the top. 1. **rudiment**, a thickening of the ectoderm of the sides of the embryonic head, from which the lens is developed. **spherical l.**, one which is the segment of a sphere. 1. **stars**, starlike lines formed within the lens of the eye by fibers which pass from the anterior to the posterior surface. **Stokes' l.**, a combination of a concave cylindrical and a convex cylindrical lens, used in the diagnosis of astigmatism. **toric l.**, a lens which is cut from a torus by a cut parallel to its axis of formation. Such a lens has power in all meridians, but dif-

ferent amounts on the same side. **trial l.**, any one of a set of lenses used in testing the vision. 1. **whorl**, the peculiar bowed appearance presented by the marginal portion of the lens in meridional sections.

lenticel (len'tis-el). A lens-shaped gland, especially one of those at the base of the tongue.

lenticonus (len-tik-o'nus) [*L. lens* lens + *conus* cone]. An exaggerated curvation of the crystalline lens, producing a conic bulging. It may be either *anterior* or *posterior*, according to the surface affected.

lenticula (len-tik'u-lah) [*L.*]. 1. The lenticular nucleus. 2. A freckle.

lenticular (len-tik'u-lar) [*L. lenticula'ris*]. Pertaining to or shaped like a lens.

lenticulo-optic (len-tik'u-lo-op'tik). Pertaining to the lenticular nucleus and the optic thalamus.

lenticulostriate (len-tik'u-lo-stri'at). Pertaining to the lenticular nucleus and the corpus striatum.

lenticulothalamic (len-tik'u-lo-thal-am'ik). Relating to the lenticular nucleus and the optic thalamus.

lentiform (len'tif-orm). 1. Shaped like a lens. 2. A lens-shaped medicinal tablet.

lentigo (len-ti'go), pl. *lentigines* [*L. "freckle"*]. 1. A freckle; a small local pigmentation of the skin. 2. A small nevus.

lentigomelanosis (len-ti'go-mel-an-o'sis) [*lentigo* + *melanosis*]. A malignant disease of the skin of the face originating in freckles.

lentin (len'tin). Colorless crystalline powder, metadiaminobenzene hydrochloride, $C_6H_4(NH_2)_2 \cdot 2HCl$: used as an intestinal antiseptic.

lentitis (len-ti'tis). Inflammation of the eye lens; phakitis.

lenticalin (len-to-ka'lin). A preparation of the lens of the eye of animals: used in senile cataract.

Leo's test (la'oz) [Hans Leo, German physician, 1854-1928]. See under *tests*.

leonotis (le-o-no'tis). See *dagga*.

leontiasis (le-on-ti'as-is) [*λέων* lion]. 1. A bilateral and symmetrical hypertrophy of the bones of the face and skull, leading to a lion-like facial expression. Called also *l. ossea* or *l. ossium*. 2. The facies leonina of leprosy.

leontodin (le-on'to-din). A concentration prepared from the root of the dandelion: tonic, cholagogue, aperient, and diuretic. Dose, 2-4 grains (0.133-0.266 Gm.).

Leontodon (le-on'to-don) [*λέων* lion + *οδούς* tooth]. See *Taraxacum*.

Leopold's law (la'o-poldz) [Christian Gerhard Leopold, German physician, 1846-1911]. See *law*.

leotropic (le-o-trop'ik) [*λαίος* left + *τρόπος* turning]. Running spirally from right to left. See *dextrotopic*.

leper (lep'er). A person afflicted with leprosy.

lepidic (le-pid'ik) [*λεπίς* scale]. Pertaining to scales. A term applied by Adami to the lining membrane tissues of the embryo, that is, the ectodermic, endodermic, and mesothelial structures.

lepidoma (le-pid-o'mah) [*λεπίς* scale + *-ωμα* tumor]. A tumor derived from lepidic tissue: called also *ring tumor*. **endothelial l.**, a tumor originating from the endothelium of the blood vessels or lymphatics.

lepidophyton (lep'id-o-fi'ton) [*λεπίς* scale + *φυτόν* plant]. A fungus said to be the cause of Tokelau ringworm.

Lepidoptera (le-pid-op'ter-ah). An order of insects including the butterflies and moths.

Lepidoseлага (lep-id-o-sel-ag'ah). A genus of the tabanid flies. *L. lepidote* is the common "motuca fly" of Brazil.

lepidosis (lep-id-o'sis) [λεπίς scale]. Any scaly eruption.

lepine (lep'in). A shotgun proprietary mixture of nine antiseptics.

lepyocyte (lep'o-sit) [λέπος rind + κύτος cell]. Any nucleated cell having a cell wall.

lepothrix (lep'o-thriks) [λέπος scale + θρίξ hair]. A condition due to a microbe, in which the hairs and lanugo become covered with scales; often associated with red chromidrosis.

lepra (lep'rah) [λέπρα leprosy]. Leprosy; also psoriasis. See *leprosy*. **1. al'ba**, leprosy with more or less leukopathy, or absence of pigment from the skin. **1. al'phos**. See *psoriasis*. **1. anaesthetic**, leprosy with anesthetic spots. **1. ar'abum**, true leprosy. **1. conjuncti'vae**, leprosy with lesions of the conjunctiva. **1. graeco-rum**, a term vaguely applied to various diseases bearing more or less resemblance to true leprosy. **1. maculo'sa**, leprosy characterized by spots of skin pigmentation. **1. mutilans**, leprosy in its final stages, with mutilation of the extremities. **1. nervo-rum**, leprosy with nervous complications. **1. taur'ica**, Cossack or Crimean leprosy. **tubercular l.**, leprosy with the formation of nodules in the skin. **Willan's l.**, psoriasis.

lepraphobia (lep-rah-fo'be-ah) [λέπρα leprosy + φόβος fear]. Morbid dread of leprosy.

leprid (lep'rid). A leprous skin lesion.

leprolin (lep-ro-lin). A preparation of the toxin of the lepra bacillus, said to be curative of leprosy.

leprologist (lep-ro-lo-jist). An expert in the study and treatment of leprosy.

leprology (lep-ro-lo-je). The study of leprosy.

leproma (lep-ro'mah). A leprous tumor or swelling; one of the nodules of leprosy.

leprosarium (lep-ro-sa're-um). Same as *leprosary*.

leprosary (lep'ros-er-e) [*L. leprosa-rium*]. A hospital or colony for lepers.

leprosy (lep-ro-se) [*L. le'pra*]. A chronic, transmissible disease, due to a specific microbe, the *Mycobacterium le'prae*. It is a constitutional disorder, accompanied in its beginnings with fever, chills, etc. The lesions consist of either well-defined patches of macular erythema (*macular l.*) or blebs, followed by the development of anesthetic patches of cicatricial tissue (*atrophic l.*), with atrophy of the skin and loss of the hair; or else of nodules and tubercles (*tubercular l.*), which may either become absorbed or ulcerate. In both varieties atrophy may be followed by deformity and mutilation of the digits. Other parts than the skin may become involved, especially the larynx, conjunctiva, nerves, viscera, and bones. Called also *lepra* and *elephantiasis graecorum*. **anesthetic l.**, a variety of leprosy marked by hyperesthesia, followed by anesthesia, paralysis, ulceration, and gangrene. **Asturian l.**, pellagra. **Italian l.**, pellagra. **Kabyle l.**, an hereditary disease of Kabyle, probably tertiary syphilis. **Lombardy l.**, pellagra. **macular l.** See under *leprosy*. **nodular l.**, a form of leprosy marked by the development of masses of granulation tissue, called leproma, which may appear superficially, causing great distortion. **rat l.**, a leprosy-like disease affecting rats. **trophoneurotic l.**, anesthetic leprosy. **white l.**, macular leprosy.

leprotic (lep-rot'ik) Pertaining to leprosy; leprous. **leptous** (lep'rus) [*L. lepro'sus*]. Pertaining to or affected with leprosy.

leptandra (lep-tan'drah) [λεπτός thin + ἀνθή anther]. Culver's root; the rhizome and rootlets of *Veronica virgin'ica*. It is aperient, cholagogue, and tonic, and is used like podophyllum in chronic constipation, indigestion, etc. Dose of extract, 1-3 grains (0.066-0.2 Gm.); of fluidextract, 20-60 minims (1.333-4 cc.).

leptandrin (lep-tan'drin). A bitter glucoside from leptandra, whose active properties it possesses. Dose, 1-4 grains (0.016-0.26 Gm.).

leptinol (lep'tin-ol). A preparation of colloidal palladium hydroxide: said to be useful for reducing obesity.

leptocephalia (lep-to-sef-a'le-ah) [see *leptocephalus*]. Abnormal tallness and narrowness of the head.

leptocephalic, leptocephalous (lep-to-sef-al'ik, lep-to-sef'al-us). Characterized by leptocephalia.

leptocephalus (lep-to-sef'al-us) [λεπτός slender + κεφαλή head]. A person with an abnormally tall, narrow head.

leptochroa (lep-to-kro'ah) [λεπτός slender + χροά skin]. Abnormal delicacy of skin.

leptochromatic (lep'to-krom-at'ik) [λεπτός delicate + chromatini]. Having a fine chromatin network.

leptochymia (lep-to-ki'me-ah) [λεπτός thin + χυμός juice]. Meagerness of the body fluids.

Leptodera pellio. Same as *Rhabditis genitalis*.

leptodermic (lep-to-der'mik) [λεπτός slender + δέρμα skin]. Thin skinned.

leptodontous (lep-to-don'tus) [λεπτός thin + ὀδούς tooth]. Having slender teeth.

leptomeninges (lep'to-me-nin'jes) [λεπτός slender + μήνιγξ membrane]. The pia and arachnoid together.

leptomeningioma (lep'to-men-in-je-o'mah). A tumor of the leptomeninges.

leptomeningitis (lep'to-men-in-ji'tis) [λεπτός thin + μήνιγξ membrane + -ιτις inflammation]. Inflammation of the pia and arachnoid of the brain or spinal cord. Leptomeningitis is variously qualified as acute, basilar, cerebrospinal, chronic, epidemic, external, infantile, intracranial, purulent, nonpurulent, serous, tubercular, etc. **1. exter'na**. Same as *arachnitis*. **1. inter'na**, inflammation of the pia mater.

Leptomit (lep-tom'it-us). A genus of mycetic fungi. *L. epider'midis* has been found in pustules on the hand. *L. uroph'ilus* has been found in the urine. *L. vagi'nae* causes a chronic vaginitis.

Leptomonas (lep-to-mo'nas). See *Herpetomonas*.

leptonema (lep-to-ne'mah) [λεπτός thin + νήμα thread]. A presynaptic stage of mitosis in which the chromatin is in the form of fine spireme threads.

leptonomorphology (lep'to-no-mor-fol-o-je). The morphology of membranes.

leptopellic (lep-to-pel'ik) [λεπτός narrow + πέλλα bowl]. Having a narrow pelvis.

leptophonia (lep-to-fo'ne-ah) [λεπτός thin + φωνή voice]. Weakness or feebleness of the voice.

leptophonic (lep-to-fon'ik). Having a weak voice.

leptoprosop (lep-top'ro-söp) [λεπτός thin + πρόσωπον face]. A person with slender features, round, open orbits, long nose, narrow nostrils, and small mouth.

leptoprosopia (lep'to-pros-o'pe-ah) [λεπτός thin + πρόσωπον face]. Narrowness of the face.

leptoprosopic (lep'to-pros-o'pik). Having a narrow face.

Leptopsylla mus'culi. A flea found on mice and rats.

leptorhine (lep'to-rin) [λεπτός thin + ρίς nose]. Having a slender proboscis or nose.

Leptosira (lep-to-spi'rah) [λεπτός thin + σπείρα coil]. A genus of spirochetes characterized by minute elementary spirals running through the body, by the absence of flagella, and by great flexibility of the terminal portion of the organism. **L. den'tium**, an organism found in the dental deposits of normal persons. **L. hebdom'idis**. Same as *Spirochaeta hebdom'idis*. **L. ictero-haemorrhag'iae**, a species causing infectious jaundice (Weill's disease). The organism is now

called *Spironema icterohaemorrhagiae*. **L. icteroides**, a species believed to be the cause of yellow fever. It is transmitted by the mosquito, *Stegomyia calopus*. **L. interrogans**, *Spirochaeta interrogans*.

leptospirosis (lep-'to-spi-ro-'sis). The disease produced by Leptospira in the blood. **1. icterohaemorrhagica**. See *Weil's disease*, under *disease*.

leptostaphyline (lep-to-staf'il-in) [λεπτός slender + σταφυλή palate]. Having a high narrow palate.

leptothricosis (lep-to-thri-'ko-'sis). Infection with any leptothrix. **1. conjunctivae**, Parinaud's conjunctivitis.

Leptothrix (lep-to-thriks) [λεπτός slender + θρίξ hair]. A genus of Trichomyces, consisting of simple slender threads without branching. **L. asteroides**, a species from a tumor near the ear and from a metastatic retropharyngeal abscess: polymorphous; made up of bundles of filamentous rods, often forming pseudothreads, strands, or continuous membranes: pathogenic. **L. buccalis**, a form from the tartar of the teeth, the mouth, etc.; from typhus stools, gangrene of the lung, etc. **L. cuniculi**, a species from an infectious disease of rabbits: pathogenic. **L. filiformis**, a species from the uterus, pericardium, and pleura of a diseased rabbit: in nonmotile, threadlike bacilli with rounded ends: its injection causes pleurisy and pericarditis in rabbits. **L. gigantea**, a much larger species from the teeth of cattle and sheep. **L. innominata**, a species from the mouth and from tartar of neglected teeth: said to cause caries of the teeth.

Leptotrichia (lep-to-trik'e-ah). A genus of bacterial organisms growing in long, thick unbranched threads which are often clubbed at one end and tapering at the other. The threads may fragment into bacillary forms. **L. buccalis**, a non-pathogenic species found in the healthy mouth. It produces a golden-yellow pigment on culture mediums. Called also *Vignal's bacillus*.

Leptotrombidium akamu'shi. Same as *Trombicula akamushi*.

leptuntic (lep-tun'tik) [λεπτύνειν to thin]. A medicine that thins the blood.

Leptus (lep'tus) [L.]. A name for the larval form of mites of the genus *Trombicula* and *Trombidium*. **L. akamu'shi**. See *Trombicula akamushi*. **L. americanus**, **L. irritans**, and **L. autumnalis** sometimes burrow under the skin, causing irritation and pruritus. See *chigger*, 2d def.

Lerch's percussion [Otto Lerch, contemporary physician in New Orleans]. See *percussion*.

leresis (ler-e'sis) [λήρησις]. Insane or senile loquacity or garrulousness.

Leriche's operation (la-rēsh'ez) [René Leriche, contemporary French surgeon]. See *periarterial sympathectomy*, under *sympathectomy*.

Leri's sign (la'rēz). See under *sign*.

Lermoyez's syndrome (lehr-moi-yaz'). See under *syndrome*.

Leroux's method (ler-ooz') [Laurent Charles Pierre Leroux, French accoucheur, 1730-1792]. See under *method*.

Lesage's bacillus (les-azh') [Adolphe Auguste Lesage, physician in Paris, born 1862]. See *bacillus*.

lesbian love (les-be-an). Same as *sapphism*.

lesbianism (les-be-an-izm). Same as *sapphism*.

Lesieur-Privey sign (leh'se-er-pre-va'e) [C. Lesieur and Paul Privey, French physicians]. Same as *albuminoreaction*.

lesion (le'zhun) [L. lae'sio; laed'ere to hurt]. Any hurt, wound, or local degeneration. **coarse l.**, **molar l.** Same as *macroscopical l.* **degenerative l.**, one which is caused by or characterized by degeneration. **depressive l.**, one that causes diminution of functional activity. **destructive l.**, one which leads to the obliteration of an organ

or the abolishment of its functions. **diffuse l.**, one that spreads widely and irregularly. **discharging l.**, a lesion attended with great and sudden liberation of energy. **disseminated l.**, one that involves a number of separate spots. **Ebstein's l.**, hyaline degeneration and insular necrosis of epithelial cells of the renal tubercles in diabetes mellitus. **focal l.**, one that has a small area and definite limits. **functional l.**, one which leads to no obvious or discoverable change of structure, but which causes disturbances of function. **Ghon's primary l.**, a bean-shaped shadow in the roentgenogram of the lung seen in pulmonary tuberculosis of children. **gross l.**, a lesion that is visible to the naked eye. **histologic l.**, **microscopical l.**, **minute l.**, one that is discoverable only by the microscope. **impaction l.**, an osteopathic term for a lesion of any spinal joint in which there is present abnormal thickening of the intervertebral disk with approximation of all the bony parts. **indiscriminate l.**, a lesion affecting distinct parts or systems of the body. **initial syphilitic l.**, true or hard chancre. **irritative l.**, one which stimulates the functions of the part where it is situated. **local l.**, one in the nervous system giving origin to distinctive local symptoms. **macroscopical l.**, one that is attended by changes obvious to the unaided eye. **mixed l.** See *indiscriminate l.* **molecular l.**, a lesion not visible even with the aid of a microscope. **nervous l.**, one which affects nervous tissue. **organic l.** Same as *structural l.* **partial l.**, one which involves a part only of an organ or of the diameter of a conducting tract. **peripheral l.**, a lesion of the nerve endings. **structural l.**, one that produces an obvious change in a tissue. **systemic l.**, one limited to a system or set of organs with a common function. **total l.**, one involving the whole of an organ or of the diameter of a conducting tract. **toxic l.**, one due to a poison. **traumatic l.**, a wound or injury. **trophic l.**, a pathologic change originating in the capillary system, and consisting originally in an excess or deficiency of the particles of blood in the processes of assimilation, absorption, and the like. **vascular l.**, one which affects a vessel or vessels.

Lesshaft's space or triangle (les'hafts) [Pyotr Frantsovich Lesshaft, Russian physician, born 1839]. See *space*.

lethal (le'thal) [L. *lethalis*, from *le'thum* death]. 1. Deadly; fatal. 2. An alcohol, C₁₂H₂₂OH, from spermaceti.

lethality (le-thal'it-e). The ratio of deaths from a given disease to existing cases of that disease.

lethargus (le-thar'gus) [λήθαργος drowsiness]. Nélavan, or African sleeping sickness; a disease associated with a form of filariasis.

lethargy (leth-ar'je) [ληθαργία, from λήθη forgetfulness]. A condition of drowsiness of mental origin. **African l.** See *Congo trypanosomiasis*, under *trypanosomiasis*. **induced l.**, hypnotic trance.

lethe (le'the) [λήθη oblivion]. Amnesia; complete loss of memory.

lethin (le'thin). A proprietary mixture of alcohol, camphor, chloroform, and ethereal oil: anodyne.

lethologica (leth-o-loj'ik-ah) [λήθη forgetfulness + λόγος word]. Inability to remember the proper word.

lettuce (let'us). See *Lactuca*.

Leube's extract of beef (loy'bez) [William O. von Leube, German physician, 1843-1912]. See under *extract*.

leucine (lu-se'in). One of a series of compounds related to leucine, but having two atoms less of hydrogen in the molecule.

leucemia, leucaemia (lu-se'me-ah). See *leukemia*.

leucine (lu'sin) [λευκός white]. A crystallizable amino-acid, C₆H₁₃NO₂ = (CH₃)₂CH.CH₂CHNHz.

COOH, or amino-isocaproic acid, formed by the digestion or hydrolytic cleavage of protein and found normally in the spleen and pancreas, in various tissues, and in the urine in disease, especially in cases of acute yellow atrophy of the liver (Proust, 1818; Braconnot, 1820). In the liver it is converted into urea.

leucinethylester (lu-sin-eth-il-es'ter). An oily liquid, $(\text{CH}_3)_2\text{CH}.\text{CH}_2\text{CH}(\text{NH}_2).\text{CO}_2\text{C}_2\text{H}_5$.

leucinimide (lu-sin-im'id). The anhydride of leucine, $\text{C}_{12}\text{H}_{22}\text{N}_2\text{O}_9$, a decomposition product of certain proteins.

leucinosi (lu-sin-o'sis). Any condition in which leucine appears in the urine.

leucinuria (lu-sin-u're-ah) [*leucine* + *ουρον* urine]. The presence of leucine in the urine.

leucitis (lu-si'tis). Same as *s-leiritis*.

leuco-. For words thus beginning, see *leuko-*.

Leucoium (lu-ko'i-um) [L.; *λευκός* white + *ιον* violet]. A genus of old world amaryllidaceous plants. *L. aestivum* and *L. vernum* (called snowflake) are common in garden culture: emetic and poisonous.

Leucostoc (lu-ko-nos'tok) [L.; *λευκός* white + *Nostoc* a genus of fungoid plants]. A genus of Coccaceae. *L. mesenterioi'des* converts cane sugar into glucose and glucose into dextrin. It occurs in chains of hyaline cocci, in tough, whitish zooglear masses in the juice of sugar beets.

leucosin (lu'ko-sin). An albumin found in the cereal grains.

leucotine (lu-ko'tin). An alkaloid, $\text{C}_{21}\text{H}_{39}\text{O}_6$, from paracoto.

leucotropin (lu-kot'ro-pin). A compound of methenamine and cinchophen: stated to be for intravenous injection in inflammatory processes.

Leudet's tinnitus (led-az') [Théodor Emile Leudet, physician at Rouen, 1825-1887]. See *tinnitus*.

leukamid (lu'kam-id). A toxic dermatitis occurring in cases of leukemia.

leukanemia (lu-kan-e'me-ah) [*leukemia* + *anemia*]. A disease marked by the blood conditions of both lymphatic leukemia and pernicious anemia.

leukasmus (lu-kaz'mus) [*λευκός* white]. Albism; also leukoderma.

leukemia, leukaemia (lu-ke'me-ah) [*λευκός* white + *αἷμα* blood]. A fatal disease with a marked increase in the number of leukocytes in the blood, together with enlargement and proliferation of the lymphoid tissue of the spleen, lymphatic glands, and bone marrow. The disease is attended with progressive anemia, internal hemorrhage (as into the retina, etc.), and increasing exhaustion. **aleucemic l.**, **aleukemic l.**, pseudoleukemia. **aleukocythemic l.**, leukemia with no increase in the total white cells of the blood. **amygdaline l.**, a form associated with disease of the tonsils. **aplastic l.**, leukemia with diminution of both red and white cells with an increase of the proportion of large atypical leukocytes. **l. cutis**, a skin lesion occurring in leukemia and consisting of tumors composed of small round cells resembling leukocytes. **Fränkel's l.**, acute leukemia with long mononuclear lymphocytes. **hepatic l.**, a form due to disorder of the liver. **intestinal l.**, that which is associated with intestinal disease. **liemoncytogenous l.**, that which is due to disease of the spleen and bone marrow. **lymphatic l.**, that which is associated with hyperplasia and overactivity of the lymphoid tissue. **medullary l.**, **myelogenic l.**, that which is due to disease of the bone marrow. **mixed l.**, myelocytic leukemia. **monocytic l.**, leukemia in which the leukocytes are of the monocytic form (large mononuclears and transitionals). **myelocytic l.**, leukemia with the presence of leukocytes of both myeloid and lymphoid origin. **myeloid l.**, leukemia in which the myeloid tissues of the body are affected. **polymorphocyte l.**, a variety affecting the bone marrow, especially with

obliteration of many of the small blood vessels. **splenic l.**, that which is associated with splenic enlargement. **splenomedullary l.**, **spleno-myelogenous l.** Same as *liemoncytogenous l.* **symptomatic l.**, **temporary l.**, leukocytosis. **thymic l.**, **l. thymica**, acute lymphadenosis with great enlargement of the thymus.

leukemic (lu-ke'mik). Pertaining to or affected with leukemia.

leukemoid (lu-ke'moid). Resembling leukemia.

leukexosis (lu-kek-so'sis). An aggregation of dead leukocytes in one of the channels of the body.

leukin (lu'kin). 1. An endocellular bactericidal substance which can be extracted from leukocytes. Called also *leukocytic alexin* and *leukocytic endolysin*. 2. See *leucin*.

leuko-agglutinin (lu'ko-ag-lu'tin-in). An agglutinin which acts upon a leukocyte.

leukoblast (lu'ko-blast) [*λευκός* white + *βλαστός* germ]. An immature leukocyte. **granular l.** See *promyelocyte*.

leukoblastosis (lu'ko-blas-to'sis). A general term for proliferation of leukocytes.

leukocidin (lu-ko-si'din) [*leukocyte* + *L. caedere* to kill]. A substance destructive to leukocytes.

leukocytal (lu-ko-si'tal). Pertaining to leukocytes.

leukocyte (lu'ko-sit) [*λευκός* white + *κύτος* cell]. Any colorless, ameboid cell mass, such as a white blood corpuscle, pus corpuscle, lymph corpuscle, or wandering connective tissue cell. A leukocyte consists of a colorless granular mass of protoplasm, having ameboid movements, and varying in size between 0.005 and 0.015 mm. in diameter. The following varieties of leukocytes are found in normal blood: (1) *Small mononuclear l's*, or lymphocytes, possessing a relatively large nucleus; (2) *large mononuclear l's*, containing a large round or oval nucleus surrounded by a zone of protoplasm; (3) *transitional mononuclear l's*, differing from the large mononuclears only in having a horseshoe-shaped nucleus; varieties 2 and 3 have been classified together as *endothelial leukocytes* or *endotheliocytes*; (4) the *polymorphonuclear* or *polynuclear neutrophil l's*, finely granular oxyphil cells with an irregularly shaped nucleus; (5) *eosinophil l's*, coarsely granular eosinophil cells with a lobed nucleus; (6) *basophil l's*, or mast cells, having their origin in lymphoid tissue and found only rarely in the blood. Other forms of leukocytes are found in disease, among which are myelocytes, myeloblasts, lymphoblasts, plasma cells, and various degenerated forms of cells. **alpha-1.**, a leukocyte which undergoes dissolution during coagulation of the blood. **beta-1.**, a leukocyte which does not undergo dissolution during coagulation of the blood. **endothelial l.**, Mallory's name for the large wandering cell of the circulating blood and the tissues which have notable phagocytic properties. See *endotheliocyte*. **l. extract**. See under *extract*. **hyaline l.**, a large, faintly granular mononuclear cell of the blood found in small numbers in normal blood, but increased in number in certain diseases. **Türk's irritation l.**, large mononuclear, nongranular cells, resembling plasma cells, with dense, opaque, strongly basophilic cytoplasm which often contains vacuoles. They are of myeloid origin and are found in the blood in conditions associated with irritation of the bone marrow.

leukocythemia (lu'ko-si-the'me-ah) [*λευκός* white + *κύτος* cell + *αἷμα* blood]. Leukemia.

leukocytic (lu-ko-sit'ik). Pertaining to leukocytes.

leukocytoblast (lu-ko-si'to-blast) [*leukocyte* + *βλαστός* germ]. A cell from which a leukocyte develops.

leukocytogenesis (lu'ko-si-to-jen'es-is) [*leukocyte* + *γενέσις* production]. The formation of leukocytes.

leukocytoid (lu'ko-si-to'id) [*leukocyte* + εἶδος form]. Resembling a leukocyte.

leukocytology (lu'ko-si-to'l-o-jē). The study of leukocytes.

leukocytolysin (lu'ko-si-to'l'is-in). A lysin which causes dissolution of leukocytes: called also *leukolysin*.

leukocytolysis (lu'ko-si-to'l'is-is) [*leukocyte* + λύσις solution]. The breaking down or destruction of leukocytes. **venom l.**, destruction of leukocytes with snake venom.

leukocytolytic (lu'ko-si-to-lit'ik). Destroying leukocytes.

leukocytoma (lu'ko-si-to'mah) [*leukocyte* + -ωμα tumor]. A tumor-like mass of leukocytes.

leukocytometer (lu'ko-si-tom'et-er) [*leukocyte* + μέτρον measure]. An instrument used in counting the leukocytes.

leukocytopenia (lu'ko-si-to-pe'ne-ah) [*leukocyte* + πένια poverty]. Decrease in the number of leukocytes in the blood.

leukocytopenia (lu'ko-si-to-pla'ne-ah) [*leukocyte* + πλάνη wandering]. The wandering of leukocytes or their passage through a membrane.

leukocytopoiesis (lu'ko-si'to-poi-e'is) [*leukocyte* + ποιέω to make]. The production of leukocytes.

leukocytosis (lu'ko-si-to'sis). An increase in the number of leukocytes in the blood. It occurs normally during digestion and in pregnancy, and is seen as a pathologic condition in inflammation, traumatic anemia, various fevers, etc. **absolute l.**, increase in the total number of leukocytes in the blood. **active l.**, one in which the increased leukocytes are capable of spontaneous movement and of active emigration into the blood. **agonal l.**, leukocytosis occurring just before death. **basophilic l.**, increase of the mast cells in the blood. **digestive l.**, leukocytosis occurring normally after eating. **mononuclear l.**, mononucleosis. **passive l.**, leukocytosis in which the increased leukocytes are not capable of motion and have been washed into the blood by mechanical forces. **pure l.**, increase of the multinuclear leukocytes of the blood. **relative l.**, increase in the proportion of any variety of leukocytes in the blood, without increase of the total number of leukocytes. **terminal l.**, that which occurs in moribund states. **toxic l.**, leukocytosis occurring in intoxication with blood poisons.

leukocytotactic (lu'ko-si-to-tak'tik). Pertaining to or marked by leukotaxis.

leukocytotaxis (lu'ko-si-to-taks'is). Same as *leukotaxis*.

leukocytotherapy (lu'ko-si-to-ther'ap-e). Treatment by the administration of leukocytes.

leukocytotoxin (lu'ko-si-to-toks'in). A toxin which destroys leukocytes.

leukocytotropic (lu'ko-si-to-trop'ik). Having a selective affinity for leukocytes.

leukocytozoa (lu'ko-si-to-zo'ah) [λευκός white + ζῷον cell + ἄνιμα animal]. Amebae said to infest the blood in leukemia.

Leukocytozoon (lu'ko-si-to-zo'on). A genus of sporozoan parasites found in the blood cells of birds. **L. danilewskyi**, a species found in the little owl (*Glaucidium noctuae*) and in the wood owl (*Syrnium aluco*). Its invertebrate host is the mosquito, *Culex pipiens*. **L. macleani**, a species found in the common pheasant (*Phasianus colchicus*). **L. pal'idum**. See *Ross's bodies*, under *body*. **L. Sakharof'i** is found in the crow (*Corvus cornix*). **L. smit'hi** is found in the domestic turkey (*Meleagris gallopavo*). **L. syphil'idis**, a sporogenic coccidial protozoon believed by McDonough to be the cause of syphilis, the *Spirochaeta pallida* being one stage of its life cycle.

leukocyturia (lu'ko-si-tu're-ah) [*leukocyte* + ὀύρον urine]. The discharge of leukocytes in the urine.

leukoderivative (lu'ko-de-riv'at-iv). Any white derivative from a pigment or coloring matter.

leukoderma, leukoderma (lu'ko-der'mah, lu'ko-der'me-ah) [λευκός white + δέρμα skin]. Abnormal whiteness, or albinism, in patches; a congenital lack of normal pigmentation of the skin, especially that which is partial: if acquired, the condition is called vitiligo.

leukodermic, leukodermatous (lu'ko-der'mik, lu'ko-der'mat-us). Pertaining to or exhibiting leukoderma.

leukodextrin (lu'ko-deks'trin). A compound formed in the transformation of starch into sugar.

leukodiagnosis (lu'ko-di-ag-no'sis). Diagnosis based on the number, varieties, or specific sensitiveness of leukocytes.

leuko-encephalitis (lu'ko-en-sef-al-i'tis) [λευκός white + ἐγκέφαλος brain]. Forage poisoning; a contagious disease of horses, the lesion of which is softening of the white matter of the brain. It is marked by drowsiness, dimmed vision, unsteady gait, and paralysis of the throat.

leukofermantin (lu'ko-fer-man'tin). A proprietary antiferment used in suppurative conditions to counteract the leukoferment of the pus.

leukoferment (lu'ko-fer'ment). A ferment that digests or disintegrates leukocytes.

leukogen (lu'ko-jen). A proprietary vaccine consisting of an emulsion of dead staphylococci.

leukokeratosis (lu'ko-ker-at-o'sis) [λευκός white + κέρα horn]. Same as *leukoplakia*.

leukol, leukolin (lu'kol, lu'ko-lin). Same as *quinoline*.

leukolysin (lu'kol'is-in). Same as *leukocytolysin*.

leukolysis (lu'kol'is-is). Same as *leukocytolysis*.

leukolytic (lu'ko-lit'ik). Pertaining to leukolysis or to a leukolysine.

leukoma (lu'ko'mah) [λευκωμα white of egg]. 1. Milky-white opacity of the cornea. 2. Leukoplakia buccalis. **l. adhaerens**, a white tumor of the cornea enclosing a prolapsed adherent iris.

leukomaine (lu'ko-ma-in) [λευκωμα white of egg]. Any one of a large group of basic substances or alkaloids normally present in the tissues which are products of metabolism and are probably excrementitious. Some of them, at least, may become toxic, and many are physiologically active. The leukomaines are divided into groups: (1) The *uric acid group*, including adenine, carnine, gerontine, guanine, heteroxanthine, hypoxanthine, paraxanthine, pseudoxanthine, spermine, and xanthine; (2) the *creatine group*, including amphicreatine, creatine, creatinine, chrysocreatinine, methylhydantoin, and xanthocreatinine; and (3) a miscellaneous group, including aramine and others.

leukomainemia (lu'ko-ma-in-e'me-ah) [*leukomaine* + αἷμα blood]. Excess of leukomaines in the blood.

leukomainic (lu'ko-ma'in-ik). Pertaining to, caused by, or characterized by, a leukomaine.

leukomatous (lu'ko-mat-us). Affected with or of the nature of leukoma.

leukomonocyte (lu'ko-mo'no-sit) [λευκός white + μόνος single + κύτος cell]. A lymphocyte.

leukomyelitis (lu'ko-mi-el-i'tis) [λευκός white + μυελός marrow + -ιτις inflammation]. Inflammation of the white substance of the spinal cord.

leukomyelopathy (lu'ko-mi-el-op'ath-e) [λευκός white + μυελός marrow + πάθος disease]. Any disease of the white substance of the spinal cord.

leukomyoma (lu'ko-mi-o'mah). Same as *lipomyoma*.

leukonecrosis (lu'ko-nek-ro'sis) [λευκός white + νέκρωσις necrosis]. Gangrene resulting in the formation of a white slough.

leukonuclein (lu'ko-nu'kle-in). An acid nucleoprotein derivable from nucleohiston: when conjugated with histon it again forms nucleohiston.

leukonychia (lu-ko-nik'e-ah) [λευκός white + ὄνυξ nail]. A whitish discoloration of the nails.

leukopathia, leukopathy (lu-ko-path'e-ah, lu-kop'ath-e) [λευκός white + πάθος illness]. 1. Same as *leukoderma*. 2. A disease of the leukocytes or a condition produced by aggregation of dead leukocytes. 1. **un'guium**. Same as *leukonychia*.

leukopodesis (lu'ko-pe-di'sis) [leukocyte + πήδαν to leap]. Diapedesis of leukocytes through the walls of blood vessels.

leukopenia (lu-ko-pe'ne-ah) [λευκός white + πένυς poor]. Reduction in the number of leukocytes in the blood; hypoleukocytosis. **malignant** 1., agranulocytic angina. See under *angina*.

leukophlegmasia (lu'ko-fleg-ma'ze-ah) [λευκός white + φλεγμασία]. A variety of white, non-dropsical edema. Phlegmasia alba dolens, or milk leg, is an example of true leukophlegmasia.

leukophyl, leukophyll (lu'ko-fil) [λευκός white + φύλλον leaf]. A colorless substance in plant tissues which becomes converted into protochlorophyll.

leukoplakia (lu-ko-pla'ke-ah) [λευκός white + πλάξ plate]. A disease marked by the development upon the mucous membrane of the cheeks (*l. buccalis*), gums, or tongue (*l. lingualis*) of white, thickened patches which sometimes show a tendency to fissure. It is common in smokers and sometimes tends to malignancy. Called also *leukokeratosis*, *leukoma*, *smokers' tongue*, *smokers' patches*, *psoriasis buccalis*, and *psoriasis of the tongue*.

leukoplasia (lu-ko-pla'ze-ah). See *leukoplakia*.

leukoplast (lu'ko-plast). Leukoplastid.

leukoplastid (lu'ko-plas'tid) [λευκός white + πλάσσειν to form]. A colorless granule of the plant cells whence the starch-producing elements are formed.

leukopoiesis (lu'ko-poi-e'sis). Production of leukocytes.

leukopoietic (lu'ko-poi-et'ik) [leukocyte + ποιείν to make]. Forming or producing leukocytes.

leukoprecipitin (lu'ko-pre-sip'it-in). A precipitin specific for leukocytes.

leukoprophylaxis (lu'ko-pro-fil-ak'sis). The increase by artificial means of the number of leukocytes in the blood in order to secure immunity to surgical infection.

leukoprotease (lu-ko-pro'te-ās). An enzyme found in the polynuclear leukocytes which splits up protein.

leukopsin (lu-ko-sin) [λευκός white + ὤψ eye]. Visual white; the colorless matter into which rhodopsin is changed by exposure to white light. It is reconvertible into rhodopsin under proper conditions.

leukorrhagia (lu-ko-ra'je-ah) [λευκός white + ραγία a breaking out]. Profuse leukorrhea.

leukorrhea, leukorrhoea (lu-kor'e-ah) [λευκός white + ῥοία flow]. A whitish, viscid discharge from the vagina and uterine cavity. It is symptomatic of congestion of these parts. Called also *whites*. **menstrual** 1., **periodic** 1., leukorrhea in place of or along with the menses.

leukorrheal (lu-ko-re'al). Pertaining to or marked by leukorrhea.

leukosarcoma (lu'ko-sar-ko'mah) [λευκός white + sarcoma]. 1. A tumor composed of lymphoid cells which are eventually poured into the blood in such numbers as to constitute a true leukemia (Sternberg). 2. Any colorless or unpigmented sarcoma.

leukosarcomatosis (lu'ko-sar-ko-mat-o'sis). A condition marked by the development of multiple sarcomas composed of leukocytes.

leukoscope (lu'ko-skōp) [λευκός white + σκοπέω to see]. An instrument of Helmholtz's, modified by A. König, for testing color blindness.

leukosis (lu-ko'sis). Proliferation of leukocyte-forming tissue, including myelosis and lymphadenosis.

leukotactic (lu-ko-tak'tik). Pertaining to leukotaxis; having the power of attracting leukocytes.

leukotaxis (lu-ko-taks'is) [λευκός white + τάξις arrangement]. The cytotoxicity of leukocytes.

leukotherapy (lu-ko-ther'ap-e) [λευκός white + θεραπεία treatment]. Treatment by the administration of leukocytes.

leukothrombin (lu-ko-throm'bin) [leukocyte + thrombin]. A fibrin factor formed by the leukocytes and existing in the blood, which unites with hepatothrombin to form thrombin.

leukotoxic (lu-ko-tok'sik). Destructive to leukocytes.

leukotoxicity (lu'ko-tok-sis'it-e). Toxicity for leukocytes.

leukotoxin (lu-ko-tok'sin) [leukocyte + toxin]. A cytotoxic destructive to the leukocytes.

leukotrichia (lu-ko-trik'e-ah) [λευκός white + θρίξ hair]. Whiteness of the hair. 1. **annula'ris**, a condition in which the hair is ringed with white.

leukotropen (lu-ko-tro'pen). A combination of cinchophen and methenamine used intravenously as an analgesic in inflammatory processes.

leuko-urobilin (lu'ko-u-ro-bi'lin) [λευκός white + urobilin]. A product of the decomposition of urobilin said to occur in light-colored stools.

leukozon (lu'ko-zon). An antiseptic mixture of equal parts of calcium perborate and talc.

Levaditi's stain (lev-ad-e'tēz) [Constantin Levaditi, contemporary Parisian bacteriologist]. See *stains*, table of.

levator (le-va'tor) [L. "lifter"]. Any raising or lifting muscle. See *muscles*, table of.

lever, Davy's (le'ver). A piece of wood placed in the rectum for pressing on an artery and arresting hemorrhage.

levicellular (lev-is-el'u-lar) [L. *le'vis* smooth + *cellula* cell]. Smooth celled.

levigation (lev-ig-a'shun) [L. *laeviga're* to render smooth]. The grinding to a powder of a hard or moistened substance.

Levisticum (le-vis'tik-um). See *lovage*.

levo-. A chemical prefix which denotes that the compound is an optical isomer and rotates the plane of polarization to the left.

levocardiogram (le'vo-kar'de-o-gram) [L. *lae'vus* left + *cardiogram*]. That part of the normal cardiogram which represents the action of the left ventricle.

levoduction (le-vo-duk'shun). Movement of an eye to the left.

levograttion (le'vo-ji-ra'shun). A turning toward the left.

levogyric, levogyrous (le-vo-ji'rik, le-vo-ji'rus) [L. *lae'vus* left + *gyra're* to turn]. Rotating the rays of polarized light to the left.

levophobia (lev-o-fō'be-ah) [L. *lae'vus* left + φόβος fear]. Dread of objects on the left side of the body.

levorotation (le-vo-ro-ta'shun). A turning to the left.

levorotatory (le-vo-ro'ta-to-re) [L. *lae'vus* left + *rota're* to turn]. Rotating polarized light rays to the left.

levotorsion (le-vo-tor'shun). A twisting to the left.

levoversion (le-vo-ver'shun). An act of turning to the left.

Levret's forceps, law, etc. (lev-rāz') [André Levret, French accoucheur, 1703-1780]. See *forceps*, *law*, etc.

levulargyre (lev'u-lar-jir). A mercurial nucleoprotein extracted from brewers' yeast grown in a mash containing bichloride of mercury; used in the cutaneous eruptions of syphilis.

levulin (lev'u-lin). A starchlike compound, $C_6H_{10}O_6$, occurring in certain plant tubers.

levulinic acid (lev-u-lin'ik). See under *acid*.

levulosan (lev-u-lo'san). A carbohydrate, $C_6H_{10}O_5$, obtained by heating levulose.

levulosazone (lev-u-lo'sa-zōn). A phenyl-osazone of levulose identical with glucosazone. See also *methyl-phenyl-levulosazone*, under *methyl*.

levulose (lev'u-lōs) [L. *laevus* left]. Fruit sugar; a levogyrous ketohexose, $CH_2OH.(CHOH)_3CO.CH_2OH$, in the form of a colorless, syrupy liquid, from fruits and honey. It occurs also in the intestines, and is sometimes found in the urine. Ordinary cane sugar is changed into dextrose and levulose by digestion. Called also *fructose*.

levulosemia (lev'u-lo-se'me-ah) [levulose + αμα blood]. The presence of levulose in blood.

levulosuria (lev'u-lo-su're-ah) [levulose + ούρον urine]. The occurrence of levulose in urine.

levuretin (lev-u-re'tin). A preparation from beer yeast: used in skin diseases and in diabetes.

levurin (lev'u-rin). A proprietary extract of yeast: used in furunculosis. Daily dose, 1-2 drachms (4-8 Gm.).

lewinin (lu'in-iv) [after *Levin*, its discoverer]. A resin from kava: a local anesthetic. Called also *alpha-kava-resin*. Internal dose, $1\frac{1}{2}$ grains (0.097 Gm.).

lewisite (lew'is-it) [named for W. Lee *Lewis*, chemist in the chemical warfare service, U. S. A.]. A lethal war gas, dichloro-beta-chloro-vinylarsine, $ClCH:CH.AsCl_2$.

Lewisohn's method (lew'is-onz) [Richard *Lewisohn*, contemporary New York surgeon]. See under *method*.

Lewisonella (lu-is-on-el'ah). A genus of trypanosomes.

Lexer's operation (leks'erz) [Erich *Lexer*, contemporary German surgeon]. See *operation*.

Leyden jar (li'den). A jar covered with tinfoil for charging it with electricity.

Leyden's ataxia, crystals, disease, etc. (li'denz) [Ernst Victor von *Leyden*, German physician, 1832-1910]. See *ataxia, crystals, disease*, etc.

Leyden-Moebius type (li'den-me'be-us). See under *type*.

Leydenia gemmip'ara (li-de'ne-ah). Cells occasionally found in the ascitic fluid in cases of peritoneal cancer, which may be body cells rather than parasites.

Leydig's cells, cylinders, duct (li'digz) [Franz von *Leydig*, German anatomist, 1821-1908]. See under *cell, cylinder, duct*.

L. F. A. The left fronto-anterior position of the fetus in utero.

L. F. D. Abbreviation for *least fatal dose* of a toxin.

L. F. P. The left frontoposterior position of the fetus in utero.

L. F. P. S. Licentiate of the Faculty of Physicians and Surgeons.

Li. The symbol of *lithium*.

lianthal (li-an'thal). A proprietary ointment base containing a coal tar extract and casein.

Lib. Abbreviation for *L. li'bra*, a pound.

libanol (lib'an-ol). The oil of *Cedrus atlantica*, or santonin: used in gonorrhea and in bronchitis and tuberculosis along with cod liver oil. Dose in gonorrhea, 10 cc. (0.6 Gm.).

liberomotor (lib'er-o-mo'tor) [L. *li'ber* free + *mo'tor* mover]. Pertaining to voluntary and conscious movements or actions.

libidinous (lib-id'in-us) [L. *libidino'sus*]. Lustful or salacious.

libido (lib-id'o) [L.]. Plural *libid'ines*. Sexual desire; in freudian psychology any conscious or subconscious craving.

libidogen (lib-id'o-jen). A supposed erogenous substance secreted by the testicles.

LiBr. Lithium bromide.

libra (li'brah). Latin for *pound* and for *balance*.

libradol (lib'rad-ol). A proprietary non-narcotic anodyne: used locally.

Lic. Med. Abbreviation for *Licentiate in Medicine*.

lice (lis). See *louse*.

lichen (li'ken) [λεῖχην lichen]. 1. Any species or plant of a group believed to be composed of symbiotic algae and fungi. 2. A papular skin disease of many kinds, but usually synonymous with lichen planus. 1. **acumina'tus**, a grave form with a papulosquamous eruption. 1. **a'grius**, a severe form of eczema. 1. **annula'ris**, a disease marked by ring-shaped lesions on the fingers. 1. **circina'tus**, tinea tonsurans. 1. **corné**, a stage of or form of lichen planus in which the lesions are horny. 1. **diabet'icus**, xanthoma diabeticum. 1. **dissemina'tus**, a form with an irregularly placed eruption. 1. **eczemato'des**, a papular form of eczema. 1. **haemorrhag'icus**, a papule at the mouth of a hair follicle, due to hemorrhage into the skin. 1. **infan'tum**, strophulus. 1. **i'ris**, tinea tonsurans in which there are concentric rings of erythema. 1. **liv'idus**, acne scorbatica. 1. **men'ti**, syccosis barbae. 1. **nit'idus**, a rare skin disease in which the lesions are small, usually flat, sharp margined papules scarcely raised above the level of the skin, pale red or yellowish brown in color. 1. **obtu'sus**, lichen planus in which the lesions are rounded. 1. **pila'ris**, a form which especially affects the hair follicles; keratosis pilaris. 1. **pla'nus**, an inflammatory skin disease with wide, flat papules, often very persistent, and occurring in circumscribed patches. 1. **pla'nus ocreafor'mis**, a form of lichen planus with a dense assemblage of papules surrounding each leg like a shin guard (Lieberthal, 1915). 1. **ru'ber**, a papulosquamous disease with grave constitutional symptoms and sometimes fatal wasting: named from the red color of the eruption. 1. **ru'ber acumina'tus**, pityriasis rubra pilaris. 1. **ru'ber monilifor'mis**, an eruption of papules in long lines on the extremities. 1. **scorbu'ticus**, acne scorbatica. 1. **scrofulo'sus**, a form, consisting of reddish papules, peculiar to persons of a tuberculous diathesis. 1. **sim'plex**, papular eczema. 1. **syphilit'icus**, a secondary syphilitic eruption, consisting of a crop of small, pointed papules. 1. **trop'icus**. See *miliaria*. 1. **urtica'tus**, a papular form of urticaria.

licheniasis (li-ken-i'as-is). The formation or development of lichen.

lichenification (li'ken-if-ik-a'shun). The conversion of an eruption, such as eczema, into a form resembling lichen.

lichenine (li'ken-in). A starchy demulcent polysaccharide, $(C_6H_{10}O_5)_n$, which yields glucose on hydrolysis. It occurs abundantly in Iceland moss, *Cittraria islandica*, and in Irish moss, *Chondrus crispus*. Called also *lichen starch* and *moss starch*.

lichenization (li'ken-iz-a'shun). The development of patches of lichen.

lichenoid (li'ken-oid) [λεῖχην lichen + εἶδος form]. 1. Resembling the disease called lichen. 2. A disease of the tongue in young children, consisting of whitish patches surrounded by yellow rings.

Lichtheim's sign (lisht'himz) [Ludwig *Lichtheim*, German physician, 1845-1915]. See *sign*.

Lichtheimia corymbif'era. A genus of the Mucoraceae. It is pathogenic for rabbits and has been found in man in mycosis of the lungs, ear, and pharynx.

Li₂CO₃. Lithium carbonate.

licorice, liquorice (lik'or-is). See *Glycyrrhiza*. **Russian** 1., *Glycyrrhiza glabra glandulifera*. **Spanish** 1., *Glycyrrhiza glabra typica*.

Lieben's test (le'benz) [Adolf *Lieben*, Austrian chemist, 1836-1914]. See under *tests*.

lieberkühn (le'ber-kën). An apparatus attached to the microscope for the purpose of concentrating a ray of light upon a field.

Lieberkühn's crypts, etc. (le'ber-kënz) [Johann Nathanael *Lieberkühn*, German anatomist, 1711-1765]. See *crypts*, etc.

Liebermann's test (le'ber-mahnz) [Leo von Szentlörincz *Liebermann*, Hungarian physician, 1852-1926]. See under *tests*.

Liebermeister's rule (le'ber-mis-terz) [Carl von *Liebermeister*, German physician, 1833-1901]. See *rule*.

Liebig's extract, test, theory (le'bigz) [Baron Justus von *Liebig*, German chemist, 1803-1873]. See under *extract*, *tests*, and *theory*.

lien (li'en) [B N A]. Latin for *spleen*. **1. accessory** [B N A], an accessory spleen.

lienaden (li-en'ad-in) [L. *li'en* spleen + *ἀδην* gland]. A proprietary remedy made from the spleen; linaden: used in leukemia.

lienial (li'en-al). Pertaining to the spleen.

lienculus (li-en'ku-lus). An accessory spleen.

lienitis (li-en-i'tis) [L. *li'en* spleen + *-itis* inflammation]. Inflammation of the spleen; splenitis.

lienocoele (li-e'no-sēl) [L. *li'en* spleen + *κῆλη* hernia]. Hernia of the spleen.

lienomalacia (li'en-o-mal-a'se-ah). Same as *splenomalacia*.

lienomedullary (li'en-o-med'u-la-re). Pertaining to the spleen and the bone marrow.

lienomyelogenous (li'en-o-mi-el-oj'en-us) [L. *li'en* spleen + *μυελός* marrow + *γεννᾶν* to produce]. Originating in the spleen and the bone marrow.

lienomyelomalacia (li'en-o-mi'el-o-mal-a'se-ah) [L. *li'en* spleen + *μυελός* marrow + *μαλακία* softness]. Softening of the spleen and bone marrow.

lienopaneareatic (li'en-o-pan-kre-at'ik). Connecting the spleen and pancreas.

lienorenal (li'en-o-re'nal). Pertaining to the spleen and the kidney.

lienotoxin (li'en-o-tok'sin) [L. *li'en* spleen + *toxin*]. Splenotoxin.

lienteric (li-en-ter'ik). Affected by or of the nature of a lientery.

lientery (li'en-ter-e) [*λεϊεντερία*; *λείος* smooth + *έντερον* intestine]. Diarrhea in which the stools contain undigested food.

lienunculus (li-en-ung'ku-lus). A detached mass or exclave of splenic tissue.

Lieutaud's body, sinus, uvula, etc. (lu-toz') [Joseph *Lieutaud*, French physician, 1703-1780]. See *body*, *sinus*, *uvula*, etc.

life (lif) [L. *vi'ta*; *Bios* or *ζωή*]. The aggregate of vital phenomena; a certain peculiar stimulated condition of organized matter; that obscure principle whereby organized beings are peculiarly endowed with certain powers and functions not associated with inorganic matter. **animal** **1.**, vegetative life conjoined with the employment of the senses and with spontaneous movements. **intellectual** **1.**, **mental** **1.**, **psychic** **1.**, that which is attended by conscious exercise of feelings, impulses, and will, and by reason. **vegetative** **1.**, that which is manifested in automatic acts requisite for the maintenance of the existence of the individual and the propagation of the species.

ligament (lig'am-ent) [L. *ligamen'tum*; *lig'are* to bind]. Any tough, fibrous band which connects bones or supports viscera. Some of the ligaments are distinct fibrous structures; others are folds of fascia or of indurated peritoneum; still others are the relics of disused fetal organs. All ligaments are described under their B N A name in the column *ligamentum*. Here are given the names of ligaments which differ from the B N A. **accessory** **1.**, any ligament which strengthens or supports another. See *ligamenta accessoria*. **acromioclavicular** **1.**, a ligament from the acromion to the coracoid process, covering over the head of the humerus. **adipose** **1.**, a fatty and mucous fold of the synovial membrane of the knee joint. **alar** **1's**. See *ligamentum alare*. **Allan Barnes' 1.** Same as *Hey's 1.* **alveolodental** **1.**, the pericementum. **apical odontoid** **1.** See *ligamentum apicis dentis*. **appendiculo-ovarian** **1.**, a fold of mesentery extending between the appendix and the broad ligament. **Arantius' 1.**, the remains of the ductus venosus of the fetus. **Arnold's 1.**, the suspensory ligament which connects the incus with the roof of the middle ear. **Baridnet's 1.**, the posterior portion of the internal lateral ligament of the elbow. **Barkow's 1.**, the anterior and posterior ligaments of the elbow joint. **Bellini's 1.**, a band going from the capsule of the hip joint to the trochanter major. **Béraud's 1.**, the suspensory ligament of the pericardium, extending to the third and fourth vertebrae. **Bertin's 1.**, **Bigelow's 1.**, the iliiofemoral ligament. **Bichat's 1.**, the lower bundle of the posterior sacro-iliac ligament. **Borgery's 1.**, the oblique popliteal ligament. **Botal's 1.**, the persistent remains of the ductus arteriosus. **brachioacubital** **1.**, the internal ligament of the elbow joint. **brachioradial** **1.**, the external lateral ligament of the elbow joint. **broad 1.** **1.** The peritoneal fold which supports the uterus on either side. **2.** The suspensory ligament of the liver. **3.** Same as *ligamentum latum pulmonis*. **Brodie's 1.**, the transverse humeral ligament. **Burns' 1.**, the falciform process of the fascia lata. **Caldani's 1.**, a band going from the inner border of the coracoid process to the lower border of the clavicle, the first rib, and the tendon of the subclavius. **Campbell's 1.**, the suspensory ligament of the axilla; the lower portion of the clavipectoral fascia, extending from the pectoralis minor to the axillary fascia. **Camper's 1.**, the deep perineal fascia. **canthal** **1's**, the external and internal palpebral ligaments. **capitular** **1's**. See *ligamentum capituli*. **capsular** **1.**, the articular capsule; the tough fibrous sac that surrounds every joint. The inner surface is lined with synovial membrane. **Carcassonne's 1.**, the triangular ligament of the urethra. **cardinal** **1.**, any one of a number of fibrous bands extending through the base of the broad ligament of the uterus. **caudal** **1.**, any one of several fibrous bands attaching the skin to the coccyx. **central** **1.** Same as *filum terminal*. **cervical** **1's**, two ligaments—the *anterior* connecting the occipital bone with the bodies of the cervical vertebrae; the *posterior* being the ligamentum nuchae. **check** **1's**. See *ligamentum alare*. **ciliary** **1.**, the structure which joins the iris to the corneosclera. **Clado's 1.**, the appendiculo-ovarian ligament. **Cloquet's 1.**, Haller's habenua: the persistent relic of a fetal canal connecting the tunica vaginalis with the peritoneal cavity. **Colles' 1.**, a portion of the aponeurosis of the external oblique muscle, extending from Poupart's ligament to the linea alba. **conoid** **1.**, the inner part of the coracoclavicular ligament. **Cooper's 1.** **1.** A fold of the fascia transversalis attached to the iliopectineal eminence and spine of the pubis. **2.** A set of arciform fibers connecting the base of the olecranon with the coronoid process on the inner aspect of the elbow joint. **Cooper's suspensory** **1's**, fibrous processes connecting the external capsule of the mammary gland with the skin. **costocentral** **1.**, the ligament fastening the head of a rib to the body of a vertebra. **costocolic** **1.**, a fold that attaches the spleen to the diaphragm. **costocoracoid** **1.**, a ligament that attaches the first rib to the coracoid process. **costopericardiac** **1.**, a ligament joining the upper costosternal articulation with the pericardium. **costosternal** **1.**, a ligament binding the edges of the cartilages of the true ribs to the sternum.

THE ATLANTO-OCCIPITAL ARTICULATION.

A, Posterior view: *a*, Posterior atlanto-occipital membrane; *b*, posterior atlanto-epistropheal ligament; *c*, capsula articularis; *d*, posterior surface of occipital bone; *e*, posterior arch of atlas; *f*, lamina of axis.

B, Anterior view: *a*, Lateral atlanto-occipital membrane; *b*, anterior atlanto-occipital membrane; *c*, anterior atlanto-epistropheal ligament; *d*, capsula articularis; *e*, atlas; *f*, axis.

LIGAMENTS OF THE SHOULDER.

a, Superior acromioclavicular ligament; *b*, coracoclavicular ligament; *c*, coracohumeral ligament; *d*, transverse ligament; *e*, coracoclavicular ligament; *f*, anterior sternocostal ligament; *g*, interclavicular ligament; *h*, anterior sternoclavicular ligament; *i*, costoclavicular ligament; *j*, capsula articularis.

LIGAMENTS OF THE WRIST JOINT.

A, Anterior aspect: *a*, Radius; *b*, ulna; *c*, anterior radioulnar ligament; *d*, medial ulnocarpal ligament; *e*, volar radiocarpal ligaments; *f*, medial ulnocarpal ligaments; *g*, first metacarpal bone; *h*, volar carpometacarpal ligaments; *i*, palmar carpal ligaments; *j*, capsula articularis.

B, Dorsal aspect: *a*, Ulna; *b*, radius; *c*, posterior radioulnar ligaments; *d*, posterior ligament.

LIGAMENTS OF THE ELBOW JOINT.

A, Anterior aspect: *a*, Humerus; *b*, ulna; *c*, radius; *d*, ulnar collateral ligament; *e*, anterior ligament; *f*, annular ligament; *g*, oblique cord.

B, Posterior aspect: *a*, Humerus; *b*, radius; *c*, ulna; *d*, radial collateral ligament; *e*, annular ligament of radius; *f*, posterior ligament.

LIGAMENTS OF THE PELVIS.

A, Anterior aspect: *a*, Iliolumbar ligament; *b*, anterior longitudinal ligament; *c*, lumbosacral ligament; *d*, anterior sacro-iliac; *e*, articular capsule; *f*, ligamentum teres; *g*, arcuate ligament; *h*, anterior pubic ligament; *i*, superior pubic ligament.
B, Posterior aspect: *a*, Supraspinous ligament; *b*, posterior sacro-iliac ligament; *c*, sacrotuberous ligament; *d*, sacrospinous ligament.

LIGAMENTS OF THE KNEE JOINT.

A, Anterior aspect: *a*, Femur; *b*, ligamentum patellae; *c*, tibial collateral ligament; *d*, fibular collateral ligament.

B, Posterior aspect: *a*, Femur; *b*, posterior ligament; *c*, tibial collateral ligament; *d*, fibular collateral ligament; *e*, posterior ligament of peroneotibial articulation; *f*, interosseous ligament.

LIGAMENTS OF THE ANKLE JOINT.

A, Internal aspect: *a*, Tibia; *b*, internal lateral ligament.
B, External aspect: *a*, Tibia; *b*, anterior ligament; *c*, external lateral ligament.

LIGAMENTS OF THE FOOT.

A, Dorsal aspect: *a*, Astragalus; *b*, talocalcaneal ligaments; *c*, dorsal ligaments of tarsus; *d*, tarsometatarsal ligaments; *e*, transverse ligaments.

B, Plantar aspect: *a*, Os calcis; *b*, greater calcaneocuboid ligament; *c*, deep calcaneocuboid ligament; *d*, inferior tarsometatarsal ligament; *e*, tarsometatarsal ligaments.

costovertebral l's, the ligaments which bind the ribs to the adjacent vertebrae. **cotyloid** l., a ring at the margin of the acetabulum. **Cowper's** l., that part of the fascia lata which is attached to the crest of the pubes. **crico-santorinian** l., ligamentum corniculopharyngeum. **cruciform** l., the transverse ligament of the atlanto-axoid joint. **crural** l. See *ligamentum inguinale*. **Cruveilhier's** l's. Same as *glenoid* l. (2d def.). **cutaneo-phalangeal** l's, ligamentous fibers from the sides of the phalanges near the joints to the skin. **cysticoduodenal** l., a fold of peritoneum extending between the gallbladder and the duodenum. It occurs as an anomaly. **deltoid** l. See *ligamentum deltoideum*. **Denonvillier's** l., the puboprostatic ligament. **dentate** l. See *ligamentum denticulatum*. **Denucé's** l., a short and wide band connecting the radius and ulna at the wrist. **Douglas' l's**, the peritoneal folds which limit Douglas' culdesac. **Ellis' l.**, that portion of the rectovesical fascia which extends to the sides of the rectum. **epihyal** l., a ligament between the styloid process of the temporal bone and lesser horn of the hyoid bone. **fallopian** l., the ligamentum teres uteri. **false** l., any suspensory ligament that is a peritoneal fold and not of true ligamentous structure. **Ferrein's** l., the thick external part of the capsule of the temporomaxillary joint. **Flood's** l., one of the three glenohumeral ligaments. **gastrohepatic** l., the fold of great omentum attached to the stomach and the liver. **gastropancreatic** l., a fold of peritoneum extending from the pancreas to the pyloric end of the stomach. **gastrophrenic** l., a peritoneal fold connecting the cardiac end of the stomach to the diaphragm. **gastrosplenic** l., a fold of peritoneum joining the culdesac of the stomach and the hilum of the spleen. **Gerdy's** l., the suspensory ligament of the axilla, from the coracoid process to the skin around the axilla. **Gimbernati's** l., the triangular expanse of the aponeurosis of the external oblique muscle, anteriorly joined to Poupart's ligament and going to the iliopectineal line. **glenohumeral** l's, three ligaments that strengthen the capsule of the shoulder. **glenoid** l. 1. A ring of fibrocartilage connected with the rim of the glenoid fossa. 2. The anterior ligament of the metacarpophalangeal joint. **Guenz's** l., the upper and inner wall of the canal which transmits the obturator nerve and vessels. **hamatometacarpal** l., a ligament connecting the hamulus of the unciform bone with the base of the fifth metacarpal. **Helmholtz's** l., that part of the anterior ligament of the malleus which is attached to the greater tympanic spine. **Henle's** l., the inner portion of the conjoined tendon, attached mainly to the sheath of the rectus muscle. **Hensing's** l., a small serous fold from the upper end of the descending colon to the abdominal wall; the left superior colic ligament. **hepatic** l's, folds of peritoneum extending from the liver to adjacent parts. **Hesselbach's** l., ligamentum interfoveolare. **Hey's** l., the falciiform process of the fascia lata. **Hueck's** l., ligamentum pectinatum. **Hunter's** l., round ligament of the uterus; ligamentum teres. **Huschke's** l., a fold of peritoneum from the upper part of the lesser curvature of the stomach to the anterior surface of the pancreas. **iliopectineal** l., the line of attachment of the iliac fascia to the iliopectineal eminence. **iliopubic** l., Poupart's ligament. **iliothrochanteric** l., a portion of the capsular ligament of the hip joint. **infundibulopelvic** l., the upper free edge of the broad ligament, with the attached fibrous tissue which carries the ovarian vessels to the ovary: called also *suspensory l. of ovary*. **inter-articular** l., any ligament situated within the capsule of a joint. **interclavicular** l., joins the two clavicles to each other and to the sternum. **interureteral** l., a transverse band or fold of mucous membrane extending between the orifices of the ureters. **ischioprosthetic** l., the deep

perineal fascia. **Krause's** l., the transverses ligament of the pelvis. **lambdoid** l. Same as *ligamentum fundiforme pedis*. **lateral** l., a peritoneal fold, one on either side of the liver, joining it to the diaphragm. **lateral** l., **external**. See *ligamentum radiocarpum laterale*. **lateral** l., **internal**. See *ligamentum ulnocarpum mediale*. **Lauth's** l., the transverse ligament of the atlas. **Lisfranc's** l., a fibrous band running from the lower external surface of the first cuneiform bone to the internal surface of the base of the second metatarsal bone. **Lockwood's** l., the suspensory ligament of the globe of the eye, connecting Tenon's capsule and the orbit on either side. **Luschka's** l., a band extending between the anterior surface of the pericardium and the posterior surface of the sternum. **Mackenrodt's** l's, the lateral cervicopelvic or uterosacral ligaments. **Mauchart's** l's, the lateral odontoid or cheek ligaments. **Mayer's** l., the ligaments on the floor of the carpal canal connecting one of the bones of the carpus. **Meckel's** l., Meckel's band. **mesenteriommesocolic** l. See *mesenteriommesocolic fold*, under *fold*. **metacarpal** l., a ligament joining the lower ends of the last four metacarpals. **nephrocolic** l., fasciculi from the fatty capsule of the kidney passing down on the right side to the posterior wall of the ascending colon and on the left side to the posterior wall of the descending colon. **odontoid** l's. See *ligamentum alare*. **orbicular** l., the ligament which surrounds the neck of the radius. **pancreaticosplenic** l., a fold of peritoneum extending from the pancreas to the spleen. **Petit's** l., the ligamentous back and sides of Douglas' culdesac. **phrenocolic** l. Same as *costocolic*. **Poupart's** l. See *ligamentum inguinale*. **pterygomaxillary** l., connects the apex of the internal pterygoid plate and the posterior end of the oblique line of the lower jaw. **radiate** l. Same as *stellate* l. **radiocarpal** l's, two ligaments, a **dorsal** and **volar**, from the lower end of the radius to the first row of carpal bones. **reinforcing** l's, ligaments which serve to reinforce joint capsules. **Retzius' l.**, the fundiform ligament. **rhomboid** l. 1. ligamentum costoclaviculare. 2. A ligament from the lower end of the radius to the unciform and cuneiform bones. **round** l. See *ligamentum teres*. **sacro-sciatic** l., two ligaments (the great, or posterior, and lesser, or anterior) from the sacrum to the ischium. **Sappey's** l., the thicker posterior part of the capsule of the temporomandibular joint. **Sommering's** l., the suspensory ligament of the lacrimal gland. **splenophrenic** l., the peritoneal fold which suspends the spleen, connecting it with the diaphragm. **spring** l., the inferior calcaneoscaphoid ligament; so called because it gives elasticity to the arch of the foot. **stapedial** l., the annular ligament of the stapes. **stellate** l., a radiate structure strengthening the costovertebral joints anteriorly. **subflavous** l., a yellowish ligament between the laminae of a vertebra. **suspensory** l. (of axilla). See *Campbell's* l. **sutural** l., a band of fibrous tissue between the opposed bones of a suture or immovable joint. **synovial** l., a large synovial fold. **tensor** l., **Toynbee's** l., the anterior ligament of the malleus: the so-called tensor tympani muscle. **Teutleben's** l's, lateral folds joining the pericardium and diaphragm. **l. of Treitz**. See *muscle of Treitz*, under *muscle*. **Tuffier's inferior** l., that part of the mesentery which is connected with the wall of the iliac fossa. **utero-ovarian** l's, short round cords continuous with the external fibers of the uterus at the superior angle of that organ, and extending to the inner end and edge of each ovary. Called also *l's of the ovaries*. **uteropelvic** l's, expansions of muscular tissue in the broad ligament, radiating from the fascia over the obturator internus to the sides of the uterus and the vagina. **uterorectosacral** l's, peritoneal folds which reach from

the posterior attachment of the vagina and cervix to the peritoneum which overlies the sacrum: they surround the rectum. **Valsalva's l.**, a ligament connecting the pinna of the ear to the temporal bone. **vertebropleural l.** See *Sibson's aponeurosis*, under *aponeurosis*. **Vesalius' l.**, Poupart's ligament. **vesico-umbilical l.** Same as *urachus*. **vesico-uterine l.** extends from the anterior aspect of the uterus to the bladder. **vocal l.**, the inferior thyro-arytenoid ligament. **Walther's oblique l.**, the posterior astragalofibular ligament. **Weitbrecht's l.**, a fibrous band connecting the outer portion of the coronoid process to the inner edge of the neck of the radius. **Winslow's l.**, the posterior ligament of the knee. **Wrisberg's l.**, the ligament of the lateral meniscus. **Y-l.**, the iliofemoral ligament. **Zaglas' l.**, the oblique sacro-iliac ligament. **Zinn's l.**, the annular ligament of origin common to the recti muscles of the eye, attached to the edge of the optic foramen and the inner part of the sphenoid fissure. Called also *annulus tendineus communis*, *annulus zinnii*, and *tendon of Zinn*.

ligamentopectis (lig-a-men-to-peks'is) [*ligament* + *πῆξις* fixation]. Ventrosuspension by suturing the round ligaments to the uterus.

ligamentopecty (lig-am-en-to-pek'se). Same as *ligamentopectis*.

ligamentous (lig-am-en'tus). Pertaining to or of the nature of a ligament.

ligamentum (lig-am-en'tum), pl. *ligamenta* [L.]. A ligament. In the following table of ligaments the names are given in the BNA terminology, Latin form. All the names in this list are BNA names. For other ligaments see under *ligament*.

ligamenta accesso'ria planta'ria, thick dense bands situated on the plantar surfaces of the metatarsophalangeal articulations and between the collateral ligaments.

ligamenta accesso'ria vola'ria, thick, dense fibrocartilaginous structures situated on the volar surfaces of the metacarpophalangeal articulations and between the collateral ligaments.

1. **acromioclavicula're**, a dense band which joins the superior surfaces of the acromion and the clavicle together.

1. **ala're**, 1. **ala're den'tis**, 1. **ala're epistro'phei**, one of two strong bands which pass from the posterolateral part of the tip of the dens epistrophei upward and laterally to the articular condyles of the occipital bone. They limit rotation of the head. Called also *odontoid ligaments* and *check ligaments*.

1. **annula're ba'seos stape'dis**, a ring of fibrous tissue which attaches the base of the stapes to the fenestra vestibuli of the inner ear.

ligamenta annula'ria digito'rum ma'nus, strong transverse bands of fibrous tissue in the ligamenta vaginalia of the fingers. They cross the flexor tendons at the level of the upper half of the proximal phalanx.

ligamenta annula'ria digito'rum pe'dis, bands in the toes homologous with similar bands in the fingers.

1. **annula're radii**, a strong fibrous band which encircles the head of the radius and holds it in position. It is attached to the ends of the incisura radialis ulnae and with this forms a complete ring.

ligamenta annula'ria (trachea'lia), circular horizontal ligaments which join the tracheal cartilages together.

1. **anococcyge'um**, a fibrous band which connects the posterior fibers of the sphincter of the anus to the coccyx.

1. **a'p'icis den'tis epistro'phei**, a cord of tissue which extends from the tip of the dens epistrophei to the anterior margin of the foramen magnum of the occipital bone. It is usually delicate though sometimes well developed and seems to be a vestigial intervertebral disk. It may contain notochordal cells.

1. **arcua'tum pu'bis**, a thick archlike band of fibers which is situated just below the symphysis pubis. Its fibers are attached to the medial borders of the inferior rami of the pubic bones and thus it rounds out and forms the top of the pubic arch.

1. **arterio'sum arte'riae pulmona'lis**, a short, thick, strong fibromuscular cord which extends from the pulmonary artery to the arch of the aorta. It is the remains of the ductus arteriosus.

1. **auricula're ante'rius (valsal'vae)**, fibrous bands which extend from the tragus and the spina helix to the root of the zygomatic process of the temporal bone.

1. **auricula're poste'rius (valsal'vae)**, a fibrous band which extends from the posterior surface of the concha to the outer surface of the mastoid process of the temporal bone.

ligamenta auricula'ria (valsal'vae), a more or less continuous curved band of fibers which help to fasten the outer ear to the side of the head. It is divided into anterior, posterior, and superior portions.

ligamenta ba'sium, transverse bands which join together the bases of the metacarpal bones.

ligamenta ba'sium (os'sium metacarpa'lium) interos'sea, short, strong fibrous bands situated between the adjacent surfaces of the bases of the second to the fifth metacarpal bones and just distal to the articular surfaces.

ligamenta ba'sium (os'sium metacarpa'lium) vola'ria, bands on the volar surfaces of the bases of the metacarpal bones similar to the ligamenta basium dorsalia.

ligamenta ba'sium (os'sium metatarsa'lium) dorsa'lia, light transverse bands on the dorsal surfaces of the bases of the metatarsal bones similar to the corresponding ligaments on the metacarpal bones.

ligamenta ba'sium (os'sium metatarsa'lium) interos'sea, bands between the bases of the metatarsal bones similar to the homologous ligaments of the hand.

ligamenta ba'sium (os'sium metatarsa'lium) planta'ria, strong transverse bands on the plantar surfaces of the bases of the metatarsal bones which join together the second to the fifth bones.

1. **bifurca'tum**, a Y-shaped ligament on the dorsum of the foot made up of a pars calcaneonavicularis and a pars calcaneocuboidae.

1. **calcaneocuboi'deum planta're**, a short, wide, and strong band which connects the plantar surfaces of the calcaneus and the cuboid bone.

1. **calcaneofibula're**, a band of fibers which arise from the lower cutaneous surface of the lateral malleolus of the fibula just anterior to the tip and pass downward and backward and inward to be attached to the lateral surface of the calcaneus.

1. **calcaneonavicu'la're dorsa'le**, the dorsal portion of the calcaneonavicular part of the bifurcate ligament. It connects the dorsal surfaces of the calcaneus and the navicular bone.

1. **calcaneonavicu'la're plan'tare**, the plantar portion of the calcaneonavicular part of the bifurcate ligament. It is a broad, thick, band which passes from the anterior margin of the sustentaculum tali to the plantar surface of the navicular bone. It bears on its deep surface a fibrocartilage which helps to support the head of the talus.

1. **calcaneotibia'le**, the medial portion of the deltoid ligament. It passes from the cutaneous face of the internal malleolus of the tibia down to and is attached to the calcaneus.

1. **capit'uli cos'tae interarticula're**, a horizontal fibrocartilaginous plate which is attached to the crista capituli costae and to the intervertebral disk, thus dividing the joint into two cavities.

1. **capit'uli cos'tae radia'tum**, fibers which are attached to the ventral surface of the head of a rib and radiate fanlike medially to be attached to the two adjacent vertebrae and to the intervertebral disk.

ligamenta capit'uli fib'ulae, fibrous bands situated in and reinforcing the capsule of the tibiofibular articulation and thus attaching the fibula to the tibia.

ligamenta capitulo'rum (os'sis metacarpa'lium) transver'sa, a narrow fibrous band which extends across, is attached to the volar surfaces of, and thus joins together the heads of the second to fifth metacarpal bones.

ligamenta capitulo'rum (os'sis metatarsa'lium) transver'sa, a narrow fibrous band which extends across, is attached to the volar surfaces of, and thus joins together the heads of all of the metatarsal bones.

1. **car'pi dorsa'le**, obliquely transverse reinforcing fibers in the wrist. They extend as a broad, flat band from the distal end of the volar margin of the radius obliquely across the back of the wrist to the styloid process of the ulna and to the triquetral and pisiform bones.

1. **car'pi radia'tum**, a group of seven fibrous bands which diverge in all directions from the volar surface of the capitate bone.

1. *carpi transversum*, a broad fibrous band which extends across the sulcus carpi from the radial to the ulnar eminence and thus forms the canal carpi.

1. *carpi volare*, transverse reinforcing fibers in the antibrachial fascia over the volar surface of the wrist.

ligamenta carpo-metacarpea dorsalia, a series of bands on the dorsal surface of the carpo-metacarpal articulations which join the carpal bones to the bases of the second to fifth metacarpals. The second is thus joined to the lesser multangular, the greater multangular, and to the capitate, the third to the capitate, the fourth to the capitate and the hamate, and the fifth to the hamate.

ligamenta carpo-metacarpea volaria, a series of bands on the volar surface of the carpo-metacarpal articulations which join the carpal bones to the metacarpals. The multangulum majus is thus joined to the second and third, the multangulum minus to the third, the capitate to the second, third, and fourth, and the hamate to the fourth and fifth.

1. *caudale integumentii communis*, a fibrous band which extends from the tip of the coccyx to the adjacent skin and thus forms the foveola coccygea.

1. *ceratocricoidaeum anterius*, a fibrous band which extends from the anterior surface of the tip of the inferior cornu of the thyroid cartilage forward and downward and is attached to the side of the arch of the cricoid cartilage.

ligamenta ceratocricoidae lateralia, fibrous bands which extend downward and back from the tip of the inferior cornu of the thyroid cartilage and are attached to the lower, lateral, outer surface of the lamina of the cricoid cartilage.

ligamenta ceratocricoidae posteriora, fibrous bands which extend from the posterior surface of the inferior cornu of the thyroid cartilage near its tip upward and backward and medially and are attached to the superior lateral margin of the lamina of the cricoid cartilage.

ligamenta cinguli extremitatis inferioris, the intrinsic ligaments of the pelvic girdle are the iliolumbar, the sacrotuberous, the sacrospinous, and the superior and the arcuate ligaments of the symphysis pubis. The extrinsic ligaments are those of the sacroiliac and the hip joints.

ligamenta cinguli extremitatis superioris, the intrinsic ligaments of the shoulder girdle are the ligamentum transversum scapulae superioris and inferioris, and the coracoclavicular; the extrinsic ligaments are those of the sternoclavicular articulation.

ligamenta collateralia articulationum digitorum manus, massive fibrous bands on each side of the joints of the fingers. They are placed diagonally, the proximal ends being near the dorsal, and the distal ends near the volar, margins of the fingers.

ligamenta collateralia articulationum digitorum pedis, fibrous bands similar to those in the fingers.

ligamenta collateralia articulationum metacarpophalangearum, massive fibrous bands at the sides of the metacarpophalangeal joints similar to those of the fingers.

ligamenta collateralia articulationum metatarsophalangearum, bands similar to those in the hands.

1. *collaterale carpi radiale*, a short, thick band which passes from the tip of the styloid process of the radius distally to the navicular bone to which it is attached.

1. *collaterale carpi ulnare*, a strong fibrous band which passes from the tip of the styloid process of the ulna distally and is attached to the triquetral and pisiform bones.

1. *collaterale fibulae*, a strong, round, fibrous cord entirely independent of the capsule of the knee joint which is attached above to the back part of the lateral condyle of the femur and below to the lateral side of the head of the fibula just in front of the styloid process.

1. *collaterale radiale*, a large bundle of fibers which arises from the lateral epicondyle of the humerus, spreads out fanlike and is attached to the ulna. It may be divided into an anterior (l. epicondyloradiale), a medial (l. epicondyloradiale) and a posterior bundle (l. epicondyloradiale).

1. *collaterale tibiale*, a broad flat, longitudinal band on the lateral side of the knee joint. It is attached above to the epicondylus medialis femoris, below to the medial surface of the body of the tibia, and in between to the medial meniscus, the margo infraglenoidalis, and the articular capsule.

1. *collaterale ulnare*, a bundle of fibers which arise from the medial epicondyle of the humerus, which spread out fanlike and are attached to the ulna. It may be divided into an anterior (l. humero-coronoideum) and a posterior portion (l. olecrano-humerales).

1. *colli costae*, short fibers which connect the back surface of the neck of a rib with the anterior surface of the adjacent transverse process.

ligamenta columnae vertebrales et cranii, ligaments of the vertebral column and the cranium.

1. *conoideum*, the posteromedial portion of the coracoclavicular ligament. It is conical in shape and is attached below by its tip to the base of the coracoid process and above by its base to the lower surface of the clavicle.

1. *coracacromiale*, a strong broad triangular band which is attached by its base to the lateral border of the coracoid process and by its tip to the summit of the acromion just in front of the articular facet for the clavicle.

1. *coracoclaviculae*, strong bands which join the coracoid process and clavicle. They are divided into an anterolateral (l. trapezoideum) and a posteromedial portion (l. conoideum).

1. *coracohumerales*, a broad band which arises from the lateral border of the coracoid process and passes downward and laterally and is attached to the neck of the humerus and the greater tubercle.

1. *corniculopharyngeum*, the upper part of the jugal ligament between the Y and the corniculate cartilage.

1. *coronarum hepatis*, the line of reflection of the peritoneum from the posterior surface of the liver to the under surface of the diaphragm.

1. *costoclaviculae*, a powerful ligament which extends from the upper margin of the first costal cartilage to the costal tuberosity of the clavicle.

1. *costotransversarium anterius*, a strong quadrangular band which extends from the lower border of a transverse process of a vertebra to the crista colli of the next rib below.

1. *costotransversarium posterius*, a thin band which extends from the root of the spinous process and from the root of the transverse process of a vertebra to the posterior surface of the neck of the rib next below.

ligamenta costoxiphoidae, strandlike bands which pass obliquely from the anterior surface of the seventh and sometimes from the sixth costal cartilage to the xiphoid process. There may be some bands also on the posterior surface.

1. *cricoarytenoideum posterius*, an elastic band which strengthens the posterior portion of the capsula articularis cricoarytenoidea. It extends from the upper margin of the lamina cartilaginosa cricoidea to the medial part of the dorsal surface of the arytenoid cartilage.

1. *cricopharyngeum*, the lower united part of the l. jugale between the Y and the cricoid cartilage.

1. *cricothyreoideum (mediale)*, a flat band of white fibrous tissue extending from the incisura thyroidea inferior down to the center of the arcus of the cricoid cartilage, thus forming the conus elasticus.

1. *cricotracheale*, a narrow fibrous ring which connects the lower margin of the cricoid cartilage with the upper tracheal cartilage. It is continuous behind with the paries membranaceus tracheae.

1. *cruciatum anterius genu*, one of the cruciate ligaments of the knee joint. It arises from the posteromedial portion of the lateral condyle of the femur, passes forward and down between the condyles and is attached to the depression in front of the intercondylar eminence of the tibia.

1. *cruciatum atlantis*, a ligament in the form of a cross of which the l. transversum atlantis forms the horizontal bar, and the crus superior and the crus inferior the vertical bar of the cross.

1. *cruciatum cruris*, thickened bands of the fascia cruris which pass from each malleolus across the front of the ankle joint, at which point they cross each other and pass onto the dorsum of the foot.

ligamenta cruciata digitorum manus, diagonal bundles of the fascia of the fingers which cross each other on the dorsal surfaces of the phalanges at the level of the distal end of the proximal phalanx.

ligamenta cruciata digitorum pedis, fascial fibers in the toes similar to those in the fingers.

ligamenta cruciata genu, the anterior and posterior cruciate ligaments of the knee. They are strong, thick intra-articular bundles which are situated in the knee joint between the condyles of the femur.

1. **cruciatum posterius genu**, one of the crucial ligaments of the knee. It is a strong band which arises from the anterolateral surface of the medial condyle of the femur and passes backward and down and is inserted into the posterior portion of the intercondylar fossa.

1. **cuboideonavicula're dorsa'le**, a fibrous bundle which connects the dorsal surfaces of the cuboid and the navicular bones.

1. **cuboideonavicula're planta're**, a fibrous band which connects the plantar surfaces of the cuboid and the navicular bones.

1. **cuneocuboid'eum dorsa'le**, bundles of fibers which connect the dorsal surfaces of the cuboid and the third cuneiform bones.

1. **cuneocuboid'eum interos'eum**, fibers which unite the central portions of the adjacent surfaces of the cuboid and the third cuneiform bones between the articular surfaces.

1. **cuneocuboid'eum planta're**, a band of fibers which connects the plantar surfaces of the cuboid and the third cuneiform bones.

Ligamenta cuneometatar'sea interos'ea, fibrous bands which join the adjacent faces of the cuneiform and the metatarsal bones.

1. **deltoid'eum**, a large fan-shaped ligament on the medial side of the ankle which passes from the lower end of the tibia down onto the tarsal bones. It is made up of four ligaments: 1. talotibiale anterior, 1. tibionaviculare, 1. calcaneotibiale, and 1. talotibiale.

1. **denticula'tum**, a ribbon-like band of fibers in the spinal pia mater which helps to hold the spinal cord in position. Its medial border is attached continuously to the side of the cord; its lateral border is attached to the dura mater between the exits of the spinal nerves.

1. **duodenorena'le**, a fold of peritoneum which passes from the duodenum to the right kidney. It is connected in front to the hepatoduodenal ligament and behind to the hepatorenal ligament.

1. **epididym'idis infe'rius**, a strand of fibrous tissue covered with a reflection of the tunica vaginalis which connects the lower end of the body of the epididymis with the testicle.

1. **epididym'idis supe'rius**, a strand of fibrous tissue covered with a reflection of the tunica vaginalis which connects the upper end of the body of the epididymis with the testis.

1. **falcifor'me hepa'tis**, a sickle-shaped sagittal fold of peritoneum which helps to attach the liver to the diaphragm, which separates the right and left lobes of the liver, and which extends from the coronary ligament of the liver behind to the umbilicus in front.

Ligamenta fla'va, sections of yellow elastic tissue attached to and extending between the ventral adjacent portions of the arches of the vertebrae. They assist in maintaining or regaining the erect position and serve to close in the spaces between the arches.

1. **fundifor'me clito'ridis**, a small ligament in the female homologous with the 1. fundiforme penis in the male.

1. **fundifor'me pe'dis**, the single outer half of the Y-shaped lower band of the anterior annular ligament of the ankle. It is attached externally to the calcaneum and forms a loop through which the tendons of the extensor longus digitorum pedis and the peroneus tertius muscles pass.

1. **fundifor'me pen'is**, a broad elastic band of fascial fibers which arises from the linea alba and from the fibrae intercruales just above the symphysis pubis and then passes down to the penis where it divides, passes around the penis and on into the scrotum.

1. **gastrocol'icum**, the omental folds of the peritoneum which extend from the greater curvature of the stomach to the transverse colon.

1. **gastroliena'le**, a peritoneal fold extending from the greater curvature of the stomach to the hilus of the spleen and containing blood vessels, nerves, and lymph glands.

1. **hepatocol'icum**, a fold of peritoneum which sometimes passes from the lower surface of the liver near the gallbladder to the right colic flexure.

1. **hepatoduodena'le**, a peritoneal fold which passes from the porta hepatis to the superior portion of the duodenum. It is continuous on the left with the hepatogastric ligament and on the right it forms one of the borders of the epiploic foramen of Winslow. It contains the hepatic artery, portal vein, bile duct, nerves, and lymphatics.

1. **hepatogas'tricum**, a peritoneal fold which passes from the under surface of the liver to the lesser curvature of the stomach.

1. **hepatorena'le**, a fold of peritoneum which passes from the back part of the lower surface of the liver to the front of the right kidney. It forms the right margin of the epiploic foramen of Winslow.

1. **hyoepiglott'icum**, a triangular elastic band with its base attached to the upper border of the body of the hyoid bone and its tip to the anterosuperior surface of the epiglottis.

1. **hyothyreo'i'deum latera'le**, a round elastic cord which forms the posterior margin of the hyothyroid membrane. It extends from the tip of the superior horn of the thyroid cartilage upward to the tip of the greater horn of the hyoid bone.

1. **hyothyreo'i'deum me'dium**, the central, thicker portion of the hyothyroid membrane. Its broader upper part is attached to the body of the hyoid bone and its narrow lower end to the superior incisure of the thyroid cartilage.

1. **iliofemora'le**, a very strong triangular or inverted Y-shaped band which covers the front and upper portions of the hip joint. It arises by its apex from the lower part of the anterior inferior iliac spine and is inserted by its base into the intertrochanteric line of the femur.

1. **iliolumba'le**, strong bands which pass from the transverse processes of the fourth and fifth lumbar vertebrae to the inner lip of the adjacent portions of the iliac crest.

1. **in'cusdis poste'rius**, fibrous bands by which the cartilaginous tip of the short crus of the incus is fixed to the fossa incudis.

1. **in'cusdis supe'rius**, fibers which pass from the body of the incus to the roof of the tympanic cavity just back of the superior ligament of the malleus.

1. **inguina'le**, Poupart's ligament; a fibrous band running from the anterior superior spine of the ilium to the spine of the pubis.

1. **inguina'le reflex'um (collesi)**, a triangular band of fibers which arise from the lacunar ligament and the pubic bone, pass diagonally upward and medially behind the subcutaneous abdominal ring and in front of the inguinal aponeurotic falx to the linea alba.

Ligamenta intercar'pea interos'ea, short fibrous bands which joint the adjacent surfaces of the various carpal bones.

Ligamenta intercar'pea vola'ria, the bands which join together the volar surfaces of the carpal bones.

1. **interclavicula're**, a flattened band which passes from the superior surface of the sternal end of one clavicle across the top of the sternum to the same position on the other clavicle.

Ligamenta intercosta'lia, the diagonally placed fibrous bands which pass from rib to rib.

Ligamenta intercosta'lia exter'na, aponeurotic bands parallel with, and perhaps replacing, the fibers of the external intercostal muscles in the spaces between the ventral tips of the ribs and between the costal cartilages.

Ligamenta intercosta'lia inter'na, aponeurotic bands parallel with, and perhaps replacing, the fibers of the internal intercostal muscles in the spaces between the vertebral portions of the ribs. They extend from the angles of the ribs medially to the tubercles.

Ligamenta intercuneifor'mia interos'ea, short fibrous bands which join the adjacent surfaces of the first and second and the second and third cuneiform bones.

Ligamenta intercuneifor'mia planta'ria, two fibrous bands which join the plantar surfaces of the first, second, and third cuneiform bones.

1. **interfoveola're (hesselbach'i)**, the outer part of the conjoined tendon which crosses Hesselbach's triangle.

Ligamenta interspina'lia, fibrous membranes which extend from one spinous process to the next. They extend from the ligamentum flava in front to the supraspinous ligament behind and contain white fibrous and yellow elastic tissue and sometimes cartilage.

1. **intertransversa'le**, any of several fibrous bands which extend from one transverse process to the next. They consist of fine membranes in the lumbar region, of small cords in the dorsal, and are lacking in the cervical region.

1. **ischiocapsula're**, 1. **ischiofemora'le**, a broad triangular band on the back side of the hip joint. Its base is attached to the ischium behind and below the acetabulum from which the fibers pass upward, laterally, and forward across the capsule, bend over the neck and are inserted in part into the inner side of the trochanteric fossa and in part blend into the zona orbicularis.

1. **juga'le**, a Y-shaped ligament in the posterior wall of the larynx. It is attached below in the midline to the superior border of the cricoid cartilage, passes up, divides, and each branch is attached to the tip of a corniculate cartilage. Below the Y it is called the 1. cricopharyngeum and above 1. corniculopharyngeum.

1. **lacinia'tum**, a strong band of fascia which extends from the medial malleolus down onto the calcaneus. It holds in place the tendons of the tibialis posticus, flexor digitorum, and flexor hallucis muscles as they pass to the sole of the foot and gives protection to the posterior tibial vessels and tibial nerve.

1. **lacuna're (gimberna'ti)**, a small triangular membrane with its base just medial to the femoral ring. One side is attached to the inguinal ligament and the other to the pectineal line of the pubis.

1. **la'tum u'teri**, a broad fold of peritoneum which extends from the side of the uterus to the wall of the pelvis. It contains the ovary, uterine tube, round ligament, and other structures.

1. **longitudina'le ante'rius**, a long fibrous band attached to the ventral surfaces of the bodies of the vertebrae. It extends from the occipital bone and the anterior tubercle of the atlas above to the sacrum below.

1. **longitudina'le poste'rius**, a fibrous band attached to the dorsal surfaces of the bodies of the vertebrae. It extends from the occipital bone to the sacrum.

1. **lumbocosta'le**, a strong fascial band which passes from the twelfth rib to the transverse processes of the first and second lumbar vertebrae.

1. **mal'lei ante'rius**, a fibrous band which extends from the neck of the malleus just above the anterior process to the anterior wall of the tympanic cavity close to the petrotympanic fissure. Some of the fibers pass through the fissure to the spina angularis of the sphenoid.

1. **mal'lei latera'le**, a triangular fibrous band which passes from the posterior portion of the incisura tympanica (Rivini) to the head or neck of the malleus.

1. **mal'lei supe'rius**, a delicate fibrous strand which passes from the roof of the tympanic cavity to the head of the malleus.

1. **malle'oli latera'lis ante'rius**, a flat triangular band which passes diagonally downward and laterally from the anterior portion of the lateral face of the distal end of the tibia to the anterior surface of the lower end of the fibula.

1. **malle'oli latera'lis poste'rius**, a fibrous band which joins the posterior adjacent surfaces of the distal ends of the tibia and the fibula.

ligamenta naviculariuncuneiformia dorsa'lia, bands which join the navicular bone to the three cuneiform bones.

ligamenta naviculariuncuneiformia planta'ria, bands which join the plantar surface of the navicular to the adjacent plantar surfaces of the three cuneiform bones.

1. **nu'chae**, a broad fibrous sagittal septum in the back of the neck which separates the right side from the left. It extends from the tips of the spinous processes of the cervical vertebrae up to and is attached to the entire length of the external occipital crest.

ligamenta ossiculo'rum audi'tus, the ligaments of the auditory ossicles are the anterior, lateral, and superior ligaments of the malleus, the posterior and superior ligaments of the incus and the annular ligament of the base of the stapes.

1. **ova'rii**, 1. **ova'rii pro'rium**, a musculo-fibrous cord in the broad ligament which joins the ovary to the upper part of the lateral margin of the uterus just back of the insertion of the uterine tube.

1. **palpe'brale media'le**, fibrous bands which connect the medial ends of the tarsi to the bones of the orbit. An anterior bundle passes in front of the lacrimal sac and is attached to the frontal process of the maxilla. A posterior bundle passes behind the lacrimal sac and is attached to the posterior crest of the lacrimal bone.

1. **patel'lae**, the portion of the tendon of the quadriceps femoris muscle distal to the patella. It extends from the patella to the tuberosity of the tibia.

1. **pectina'tum i'ridis**, an open network of interlacing fibers situated at the angulus iridis which allows communication between the anterior chamber and the sinus venosus sclerae.

1. **phrenicocol'icum**, a peritoneal fold which passes from the left colic flexure to the adjacent costal portion of the diaphragm.

1. **phrenicoliena'le**, 1. **phrenosplen'icum**, a peritoneal fold which passes from the diaphragm to the concave surface of the spleen.

1. **pisohama'tum**, a fibrous band from the inferior extremity of the pisiform bone to the superior border of the hamulus ossis hamati.

1. **pisometacar'peum**, a fibrous band from the inferior extremity of the pisiform bone to the bases of the fifth and usually the fourth and sometimes the third metacarpal bones.

1. **planta're lon'gum**, the longest ligament of the foot. It arises from the lower surface of the calcaneus as far back as the lateral and the medial processes, passes forward over the tendon of the peroneus longus, and is inserted into the bases of the third and fourth metatarsal bones.

1. **poplite'um arcua'tum**, variable and ill-defined fibers at the back of the knee joint. They pass upward from the lateral epicondyle and merge into the capsule and the oblique popliteal ligament.

1. **poplite'um obli'quum**, a band of fibers which arise from the medial tuberosity of the tibia, merge more or less with the tendon of the semimembranosus, pass obliquely across the back of the knee joint, and merge into the general ligament near the external condyle of the femur.

1. **pterygospino'sum**, a band of fibers which extends from the upper part of the superior border of the lateral pterygoid plate to the spinous process of the sphenoid bone.

1. **pu'bicum supe'rius**, fibers which pass transversely across the upper surface of the symphysis pubis. They are attached to the bone and to the lamina fibrocartilaginea interpubica, they extend laterally as far as the pubic tubercle, and there merge with the fibers of the ligamentum pubicum (Cooperi).

1. **pubocapsula're**, a band which arises from the entire length of the crista obturatoria anterior, passes down laterally and merges into the capsule, some fibers reaching to the lower part of the neck of the femur. Called also *pubofemoral ligament*.

1. **puboprostat'icum (pubovesica'le) latera'le**, thickened bands of the fascia diaphragmatis pelvis superior which pass from the symphysis pubis on each side to the anterior surface of the prostate in the male and the bladder in the female.

1. **puboprostat'icum (pubovesica'le) me'dium**, a thickened band of the fascia diaphragmatis pelvis superior which passes from the lower portion of the symphysis pubis in the midline to the anterior surface of the prostate in the male or the bladder in the female.

1. **pulmona'le**, 1. **pulmo'nis**, a vertical pleural fold which extends from the hilus down to the base on the medial surface of the lung. It forms the posterior boundary of the impressio cardiaca.

ligamenta pylo'ri, thickened bands of the longitudinal muscular layer of the stomach situated on the anterior and the posterior surfaces of the antrum pyloricum.

1. **radiocar'pem latera'le**, the external lateral ligament of the wrist; a band attached by one end to the tip of the styloid process of the radius and by the other to the base of the tuberosity of the navicular bone.

1. **radiocar'peum dorsa'le**, a fibrous band which passes obliquely from the dorsal border of the distal extremity of the radius to the dorsal surface of the triquetrum.

1. **radiocar'peum vola're**, several bundles of fibers which pass obliquely from the styloid process and the distal volar margin of the radius to the lunatum, triquetrum, capitatum, and hamatum bones.

1. **sacrococcyge'um ante'rius**, a flat band homologous with the anterior longitudinal ligament which passes from the lower part of the sacrum over onto the anterior part of the coccyx. There are also diagonal bands which cross at about the level of the second coccygeal vertebra.

1. **sacrococcyge'um latera'le**, a fibrous band homologous with the ligamenta intertransversaria which passes from the distal transverse process of the sacrum to the superior cornu of the coccyx.

1. **sacrococcyge'um poste'rius profun'dum**, the distal terminal portion of the posterior longitudinal ligament. It helps to unite the dorsal surfaces of the fifth sacral and the second and third coccygeal vertebrae.

1. **sacrococcyge'um poste'rius superficia'le**, two fibrous bands which are attached above to the margin of the hiatus sacralis, which diverge as they pass down and are attached to the dorsal surface of the second and third coccygeal vertebrae.

ligamenta sacroili'aca ante'riora, numerous thin fibrous bands which pass from the ventral margin of the auricular surface of the sacrum to the adjacent portions of the fossa iliacae.

ligamenta sacroili'aca interos'sea, numerous short, strong bundles which connect the tuberosities and adjacent surfaces of the sacrum and the ilium behind the articular surface.

1. **sacroili'acum poste'rius bre've**, short transverse bands which pass from the cristae sacralis laterales and articularis to the inferior posterior iliac spine.

1. **sacroili'acum poste'rius long'um**, a long vertical band which passes from the tubercles of the transverse processes of the third and fourth sacral vertebrae and the intervening crista up to the superior posterior iliac spine.

1. **sacrospino'sum**, a deep, thin triangular band which is attached by its apex to the spine of the ischium and by its base to the lateral margins of the sacrum and the coccyx.

1. **sacro'utero'sum**, a large, flat band which is attached below to the tuberosity of the ischium, spreads out as it ascends and is attached to the lateral margins of the sacrum and the coccyx and often to the inferior posterior iliac spine.

1. **sero'sum**, a fold of peritoneum or other serous membrane which helps to hold an organ or part in position and transmits blood vessels and nerves.

1. **sphenomandibula're**, a thin aponeurotic band which extends from the spina angularis of the sphenoid bone downward medial to the mandibular articulation and is attached to the lingula mandibularis.

1. **spira'le coch'leae**, the thickened outer or centrifugal portion of the periosteum of the ductus cochlearis of the cochlea. It forms a spiral band to which the basal membrane is attached.

1. **sternoclavicula're**, a reinforcing band on the ventral portion of the articular capsule of the sternoclavicular articulation.

1. **sternocosta'le interarticula're**, a horizontal fibrocartilaginous plate in the center of the second sternocostal joint which joins the tip of the costal cartilage to the synchondrosis sternalis superior and thus divides the joint into two parts.

ligamenta sternocosta'lia radia'ta, fibrous bands which are attached to the sternal end of a costal cartilage and from there radiate out onto the sternum.

ligamenta sternopericardi'aca, two (superior and inferior) or more fibrous bands which attach the pericardium to the dorsal surface of the sternum.

1. **stylohyoi'deum**, a vertical fibro-elastic aponeurotic cord attached above to the tip of the styloid process of the temporal bone and below to the lesser horn of the hyoid bone.

1. **stylomandibulare**, 1. **stylo'amaxillare**; 1. **mylohyoi'deum**; an aponeurotic band attached above to the tip of the styloid process of the temporal bone and below to the posterior margin of the ramus of the mandible nearly down to the angle.

1. **supraspina'le**, a long vertical fibrous band passing over and attached to the tips of the spinous processes of the vertebrae from the seventh cervical to the sacrum. It is continuous above with the ligamentum nuchae.

1. **suspensio'rium clitor'idis**, a fibro-elastic band attached above to the lower portion of the symphysis pubis and below to the body of the clitoris.

1. **suspensio'rium ova'rii**, the portion of the broad ligament lateral to and above the ovary. It contains the ovarian vessels and nerves and passes upward over the iliac vessels.

1. **suspensio'rium pe'nis**, a triangular aponeurotic band which is attached above to the linea alba and the front of the symphysis pubis and below to the fascia penis.

1. **talocalca'neum ante'rius**, a fibrous band from the front and lateral surface of the neck of the talus to the superior surface of the calcaneus. It forms the posterior border of the sinus tarsi.

1. **talocalca'neum interos'seum**, fibrous bands in the sinus tarsi. They pass from the sulcus tali to the sulcus calcanei.

1. **talocalca'neum latera'le**, a fibrous band which passes from the lateral surface of the talus to that of the calcaneus.

1. **talocalca'neum media'le**, a fibrous band which connects the posterior portion of the medial surface of the calcaneus with the sustentaculum tali.

1. **talocalca'neum poste'rius**, a fibrous band which connects the processus posterior tali with the upper and medial part of the calcaneus.

1. **talofibula're ante'rius**, one or more fibrous bands which pass from the anterior surface of the lateral malleolus to the anterior margin of the lateral articular surface of the talus.

1. **talofibula're poste'rius**, a strong fibrous horizontal band from the posteromedial face of the lateral malleolus to the processus posterior tali.

1. **talonavacula're (dorsa'le)**, a broad, thin fibrous band from the dorsal surface of the collum tali to that of the navicular bone.

1. **talotibia'le ante'rius**, the deeper portion of the deltoid ligament. It is attached to the anterior margin of the medial articular surface of the talus.

1. **talotibia'le poste'rius**, a fibrous band attached above to the posterior part of the lower surface of the medial malleolus and below to the posterior border of the median articular surface of the talus.

ligamenta tar'si dorsa'lia, the dorsal ligaments of the tarsus.

ligamenta tar'si interos'sea, the interosseous ligaments of the tarsus.

ligamenta tar'si planta'ria, the plantar ligaments of the tarsus.

ligamenta tar'si profun'da, the deep ligaments of the tarsus.

ligamenta tarsometatar'sea dorsa'lia, fibrous bands from the dorsal surfaces of the bases of the metatarsal bones to the dorsal surfaces of the cuboid and the three cuneiform bones.

ligamenta tarsometatar'sea planta'ria, fibrous bands from the plantar surfaces of the bases of the metatarsal bones to the plantar surfaces of the cuboid and the three cuneiform bones.

1. **temporomandibula're**, a strong triangular fibrous band which is attached above by its apex to the tubercle of the zygomatic process of the temporal bone, passes down on the lateral side of the joint in contact with the capsule and is inserted by its base into the lateral and posterior surfaces of the neck of the condyloid process of the mandible.

1. **te'res femo'ris**, a curved triangular or V-shaped fibrous or synovial band which is attached by its apex to the anterosuperior part of the fovea capitis femoris and by its base into the sides of the incisura acetabuli and the intervening transverse ligament.

1. **te'res hep'atis**, a fibrous cord which is the remains of the umbilical vein. It extends from the porta hepatis where it is attached to the left branch of the portal vein out through the fossa venae umbilicalis and the falciform ligament to the umbilicus.

1. **te'res u'teri**, a fibromuscular band in the female homologous with the lower part of the gubernaculum testis in the male. It is attached to the uterus near the end of the uterine tube, it passes along the broad ligament, out through the inguinal ring and into the labium majus.

1. **thyreoepiglott'icum**, a fibrous band which attaches the petiolus of the epiglottis to the thyroid cartilage just below the superior incisure.

1. **tibionavacula're**, the superficial part of the anterior portion of the deltoid ligament. It is attached to the dorsal and medial surfaces of the navicular bone.

1. **transver'sum aceta'buli**, a fibrous band continuous with the labrum glenoidale which bridges the acetabular notch and converts it into a foramen.

1. **transv'r'sum atlan'tis**, the strong horizontal portion of the cruciate ligament. It is attached at each end to the lateral masses of the atlas and curves back around the dens epistrophei with which it articulates.

1. **transver'sum cru'ris**, the thickened lower portion of the fascia on the front of the leg. It is attached to the tibia on one side and the fibula on the other and serves to hold in place the extensor tendons which pass beneath it.

1. **transver'sum ge'nu**, a more or less distinct bundle of fibers which joins together the anterior convex margins of the menisci of the knee joint.

1. **transver'sum pel'vis**, a strong fascial band which passes horizontally across the pubic arch just below the arbus pubis and dorsalis penis vein.

1. **transver'sum scap'ulae infe'rius**, more or less distinct fascial fibers which pass from the lateral border of the spine of the scapula to the adjacent margin of the glenoid cavity, thus converting the notch at the base of the spine into a foramen for the passage of vessels and nerves.

1. **transver'sum scap'ulae supe'rius**, a band of fibers which bridges across the incisura scapulae, thus forming a foramen for the passage of the suprascapular nerve.

1. **trapezoi'deum**, a broad, flat band forming the anterior and lateral portion of the coracoclavicular ligament. It is attached below to the upper surface of the

coracoid process and above to the oblique ridge on the lower surface of the clavicle.

1. triangula're dex'trum hep'atis, the point of right extremity of the coronary ligament of the liver where the superior and the inferior layers join in their attachment to the diaphragm.

1. triangula're sinis'trum hep'atis, a triangular extension of the left extremity of the coronary ligament which helps to fasten the left lobe of the liver to the diaphragm.

1. tuber'culi cos'tae, a fibrous band which passes transversely from the posterior surface of the tip of a transverse process of a vertebra to the superolateral portion of the tubercle of the contiguous rib.

1. ulnocar'pem media'le, the internal lateral ligament of the wrist; from the tip of the styloid process of the ulna to the border of the triquetral bone.

1. umbilica'le latera'le, a fibrous cord, the remains of the obliterated umbilical artery which is situated in and produces the plica umbilicalis lateralis.

1. umbilica'le me'dium, a fibrous cord which extends from the bladder to the umbilicus. It is situated in and produces the plica umbilicalis medialis.

1. vagina'le, a fibrous band sometimes found in the inguinal canal, being the remains of the obliterated processus vaginalis.

ligamenta vagina'lia digito'rum ma'nus, **ligamenta vagina'lia digito'rum pe'dis**, more or less complete fascial sheaths in the digits of the hand and the foot for the tendons and their synovial membranes.

1. ve'næ ca'væ sinis'trae, a fibrous cord in the vestigial fold of the pericardium. It is the remains of the obliterated left superior vena cava and descends, near the left border of the base of the heart, from the left branch of the pulmonary artery to the left superior pulmonary vein.

1. veno'sum (aran'ti), **1. veno'si hep'atis**, a fibrous cord which joins the left branch of the portal vein to the inferior vena cava. It is the remains of the ductus venosus of the fetus.

1. ventricula're, a more or less distinct fibrous band which is situated in and supports the ventricular fold of the larynx. It is attached in front to the thyroid cartilage below the incisura and behind to the colliculus of the arytenoid cartilage.

1. voca'le, a fibro-elastic band situated in and supporting the vocal fold. It is attached in front to the middle of the incisura of the thyroid cartilage and dorsally to the vocal process of the arytenoid cartilage.

ligate (li'gāt). To tie or bind with a ligature.

ligatight (lig'at-it). A naprapathic term for a shrunken condition of the connective tissue of a ligament.

Ligat's test (lig'ats) [David *Ligat*, contemporary English surgeon]. See under *tests*.

ligation (li-ga'shun) [L. *ligatio*]. The application of a ligature. **distal** 1., ligation of an artery on the side of an aneurysm farthest from the heart. **immediate** 1., ligation of an artery directly around the artery without including any of the surrounding tissues. **mediate** 1., ligation of an artery, including also some of the surrounding tissue. **pole** 1., ligation of both poles of the thyroid gland for the purpose of limiting the amount of blood to and from the gland; employed in Basedow's disease. **proximal** 1., ligation of an artery on the side of an aneurysm nearest the heart.

ligator (li-ga-tor). An instrument used in ligating in parts that are not easily accessible.

ligature (lig'at-ūr) [L. *ligatura*]. 1. A thread or wire for tying a vessel or strangulating a part. 2. The act of ligation. 3. In orthodontia, a string or wire used to fasten a tooth to an orthodontic appliance or to another tooth. **chain** 1., a kind of ligature used in tying an ovarian pedicle in several places. On making it a long thread is carried through the pedicle in one place, and is seized with a pressure forceps. Next the long end of the same thread is carried through in one or more places and loops secured in the same way. When all are in place, the loops are cut, one after another, near the forceps, and the halves crossed or tied, so that finally the whole mass to be ligated is inclosed in threads forming a chain. **Désault's** 1., ligation of the femoral artery as it passes through the

adductor muscle; done for popliteal aneurysm. **double** 1., the ligation of an artery at two places and division between them. **elastic** 1., a band of caoutchouc used to strangulate hemorrhoids and pedunculated growths. **Erichsen's** 1., a double thread of white and black for ligating nevi. **intermittent** 1., a tourniquet applied to interrupt the blood current, but occasionally relaxed to renew the circulation. **kangaroo** 1., the prepared tendon of a kangaroo's tail; used as a ligature. **lateral** 1., a ligature so applied as to check, but not to interrupt, the blood current. **McGraw's elastic** 1., a ligature used in performing intestinal anastomosis. **occluding** 1., a ligature which includes every blood channel leading to the distal tissue. **provisional** 1., one applied at the beginning of an operation, but removed before its close. **soluble** 1., a ligature of fresh animal membrane applied with a view to its ultimate absorption or incorporation with the tissues. **1. of Stannius** (1852), a ligature tied around a frog's heart, between the sinus venosus and the auricle. It causes the auricle and ventricle to cease beating. **suboccluding** 1., a ligature which obstructs the main blood supply, but leaves unobstructed a portion of tissue capable of establishing capillary anastomosis.

light (lit). The electromagnetic waves which specifically stimulate the retina of the eye and thus give rise to the sensation of light. These waves vary in length from 7700 Angström units for the red to 3900 for the violet. **actinic** 1., light capable of producing chemical effects. **axial** 1., **central** 1., light whose rays are parallel to each other and to the optic axis. **1. chaos**, the minute fluctuations of the intensity of intrinsic light of the retina. Called also *light dust*. **1. difference**, the difference between the two eyes in their sensitiveness to light; often abbreviated to L. D. **diffused** 1., that which has been scattered by reflection and refraction. **1. dust**. See *1. chaos*. **Finsen** 1., light consisting principally of the violet and ultraviolet ray. To obtain it sunlight is passed through a lens containing an ammoniacal solution of copper sulphate, which absorbs the yellow, red, and ultraviolet rays. Such light is used in the treatment of lupus and similar diseases. **infrared** 1. See *infrared rays*, under *ray*. **intrinsic** 1. (of the retina), the dim light always present in the visual field. **Landeker-Steinberg** 1., a light which emits a spectrum similar to that of the sun except that the ultraviolet waves are eliminated; used therapeutically. **1. minimum**, the smallest degree of light perceived by the eye; often abbreviated to L. M. **Minin** 1., a therapeutical lamp for the administration of violet and ultraviolet light. **monochromatic** 1., one of the colors of the spectrum into which light is divided by a prism. **neon** 1., a light in which there are no ultraviolet and no infrared rays. **oblique** 1., the light that falls obliquely on a surface. **polarized** 1., light the vibrations of which are made over one plane or in circles or ellipses. **reflected** 1., light turned back from an illuminated surface. **refracted** 1., light whose rays have been bent out of their original course by passing through a transparent membrane. **1. sense**, the faculty by which varying degrees of light or brightness may be perceived. **Simpson** 1., an electric arc light in which the electrodes are made of tungstate of iron and manganese. The light emitted consists of rays of two kinds: visible rays and invisible rays. The latter consist of heat rays and ultraviolet rays. This light is used in the treatment of rodent ulcer, lupus, eczema, wounds, rhinitis, and sinusitis. **transmitted** 1., light which passes or has passed through an object. **ultraviolet** 1. See *ultraviolet ray*, under *ray*. **Wood** 1., light which has been passed through a filter which eliminates the visible rays. It has fluorescent exciting properties and is used in dermatological diagnosis.

lightening (li'ten-ing). The sensation of decreased

abdominal distention produced by the descent of the uterus into the pelvic cavity just previous to labor.

lignaleo, lignaleos (lig-nal'o, lig-nal'öz, or lin-al'o, lin-al'öz). 1. The fragrant wood (called agallochum, or eaglewood) produced by *Aquilaia agallochum*, a tree of the East Indies. 2. The resin of the above wood: used mainly as a perfume and in preparing incense.

Lignières' test (lên-yearz') [J. Lignières, contemporary physician in Buenos Aires]. See under *tests*.

lignin (lig'nin). A substance like cellulose lining woody vegetable cells.

lignoceric acid (lig-no-se'rik). See *acid*.

Lignognathoides montanus. The common sucking louse of the California ground squirrel, *Citellus beecheyi*.

lignosulf (lig-no-sul'fit). A liquid obtained in the manufacture of cellulose: its vapor, which contains sulphurous acid and various aromatic principles, is inhaled for pulmonary disorders.

lignosulphur (lig-no-sul'fin) [L. *lig'num* wood + *sulphur*]. A disinfectant by-product of the manufacture of sulphocellulose.

lignum (lig'num) [L. gen *lig'ni*]. Latin for wood. 1. **rho'dium**, the wood of *Am'yris balsamifera*, a tree of tropical America. 1. **sanc'tum**, -1. **vitae**. See *guaiacum*.

ligroine (lig'ro-in). A volatile inflammable liquid, used as a solvent in pharmacy and chemistry. It is the fraction that distills from petroleum between 90 and 120 C. and consists mostly of heptane and octane. It is essentially the same as purified petroleum benzine (petroleum ether) U. S. P.

ligula (lig'u-lah) [L. "strap"]. A strip of white substance near the lateral border of the fourth ventricle.

ligule (lig'ül). Same as *ligula*.

Ligusticum (li-gus'tik-üm). See *lovage*.

Lilienthal's probe (lil'e-en-talz) [Howard Lilienthal, surgeon in New York, born 1861]. See *probe*.

lily-of-the-valley (li'e-). See *Convallaria*.

liman cure (li'man'). See under *cure*.

limanol (li'man-ol) [Turkish and Russian *liman* bay; λιμάνι creek, harbor]. A preparation of salt-marsh mud: used for rheumatism.

limatura (li-mat-u'rah). Latin for filings. 1. **fer'-ri**, iron filings.

limb (lim) [L. *lim'bus* border]. 1. An arm or a leg with its appendages: an extremity. 2. Anything resembling an arm or a leg. **anacrotic l.**, the up-stroke of a sphygmographic record. **pectoral l.**, **thoracic l.**, an arm or its homologue. **pelvic l.**, a leg or lower extremity. **phantom l.**, a sensation as of the limb still existing in a patient in whom the limb has been amputated.

limberneck (lim'ber-nek). See *limber neck*, under *neck*.

limbic (lim'bik). Pertaining to a limbus, or margin.

limbus (lim'bus) [L. "border"]. A border or hem. 1. **alveola'ris** [B N A], the free lower edge of the alveolar process. 1. **angulo'sus**, the oblique line of the thyroid cartilage. 1. **chorio'deus**, the innermost arch of the limbic lobe. 1. **conjuncti'vae**, the edge of the conjunctiva that overlaps the margin of the cornea. 1. **cor'neae** [B N A], the edge of the cornea where it joins the sclerotic. 1. **cortica'lis**, the outermost arch of the limbic lobe. 1. **fos'sae ova'lis** [B N A], the prominent rounded margin of the fossa ovalis; annulus ovalis. 1. **lam'inae spira'lis**, the periosteal border of the bony lamina spiralis; the crista spiralis. 1. **lu'-teus**, the yellow spot of the retina; macula lutea. 1. **medulla'ris**, the middle arch of the limbic lobe. 1. **membra'nae tym'pani** [B N A], the thickened margin of the tympanic membrane attached to the tympanic sulcus. 1. **palebra'lis** [B N A], one of the margins of the eyelids. 1. **sphenoida'-**

lis, the posterior edge of that part of the body of the sphenoid which bears the ethmoid spine.

lime (lim) [L. *calx*]. 1. Calcium oxide. See *calcium*. 2. The acid fruit of *Cit'rus ac'ida*: its juice is antiscorbutic and refrigerant. 1. **arsenate** (as an insecticide), boil until dissolved 2 pounds of white arsenic and 8 pounds of sal soda in 2 gallons of water. For use take 1 pint of this stock solution, 2 pounds of freshly slaked lime, and 45 gallons of water. **chlorinated l.** See *calx chlorata*. **soda l.** See under *soda*. **sulphurated l.** See *calx sulphurata*. **syrup of l.** (*syrup'us cal'cis*), a solution of lime succrate: said to be useful in some cases of chronic rheumatism.

limen (li'men) [L.]. 1. Same as *threshold*. 2. The portion of the brain lying between the base and the island of Reil. Called also *l. in'sulae* [B N A]. 1. **na'si** [B N A], the boundary line between the bony and cartilaginous portions of the nasal cavity.

liminal (lim'in-al) [L. *li'men* threshold]. Barely appreciable to the senses: pertaining to a threshold.

liminometer (lim-in-om'et-er) [*limen* + μέτρον measure]. An instrument for measuring the strength of stimulus applied over a tendon and determining the reflex threshold.

limit, Anstie's. See *Anstie's rule*, under *rule*. **assimilation l.**, the amount of carbohydrate that the organism can metabolize without causing glycosuria. Called also *saturation limit*. 1. of **perception**, the limit of perception is reached when the object looked at has a visual angle of four or five minutes, thus making its image on the retina about the size of a retinal cone of from 3.3 to 3.6 microns in diameter.

limitans (lim'it-anz) [L. "limiting"]. Same as *membrana limitans*.

limitation, eccentric (lim-it-a'shun). A circumscribed condition of the visual field, more pronounced at some parts of the periphery than at others.

limitrophes (lim'et-rofs) [Fr. "frontier lands"]. The sympathetic ganglia and their connections.

limitrophic (lim-it-rof'ik). Controlling nutrition.

Limnaea (lim'ne-ah). A genus of snails, several species of which act as invertebrate host for the liver fluke (*Fasciola hepatica*).

Limnatis (lim-na'tis). A genus of the Hirudinea. Some are very large. **L. granulo'sa** and **L. myso'melas** occasionally are parasitic in the nasal passages. **L. nilot'ica**, an African species that sometimes becomes lodged in the pharynx. It may be found in the normal cavities of animals.

limnemia, limnaemia (lim-ne'me-ah) [λιμνη marsh + αἷμα blood]. Malarial cachexia.

limnemic (lim-ne'mik). Affected with malarial cachexia.

limo (li'mo), gen. *limo'nis*. Latin for lemon. The fruit of the lemon tree, *Cit'rus limo'num*. See *lemon*.

limonene (lim'o-nën). An essential oil found in the peel of oranges and lemons. It is a terpene, C₁₀H₁₆. C₁₀H₁₆.CH₃.

limo'nis cor'tex [L.]. The U. S. P. name for lemon peel.

limo'nis suc'cus [L.]. Lemon juice.

limophthisis (lim-of'this-is) [λιμωσ hunger + φθισ wasting]. Wasting from lack of food or starvation.

limosis (li-mo'sis) [λιμωσ hunger]. Abnormal or morbid hunger.

limotherapy (li-mo-ther'ap-e) [λιμωσ hunger + θεραπεία cure]. Hunger cure; the treatment of disease by fasting or by a meager diet: used in dyspepsia, aneurysm, syphilis, and cancer.

limping (lim'ping). See *claudication*.

Linacre (lin'ak-er), Thomas. A noted English physician and classic scholar, 1460-1524. He was physician to Henry VIII. He was the first

president of the College of Physicians, London, and translated Galen from Greek into Latin.

linadin (lin'ad-in). A proprietary dry extract of the spleen of animals, combined with iodine and iron; used for malarial cachexia, splenomegaly, and leukemia.

linalool (lin-al'-o-o). The olefinic terpene alcohol, $(\text{CH}_3)_2\text{C}:\text{CH}:\text{CH}_2\cdot\text{CH}_2\cdot\text{C}(\text{CH}_3)(\text{OH})\text{CH}_2\cdot\text{CH}_2\cdot$ of oil of lign aloe; found also in oil of coriander and various other volatile oils.

linalyl acetate (lin'al-il). The fragrant ester in oil of bergamot.

lincture, linctus (lingk'tūr, lingk'tus) [L. *linctus* a licking]. An electuary; a thick, syrupy medication to be taken by licking.

Lindemann's cannula, method (lin'de-manz). See under *cannula* and *method*.

linden (lin'den). See *Tilia*.

line (lin) [L. *lin'ea*]. 1. Any stripe, streak, mark, or narrow ridge. 2. A measure equal to one twelfth of an inch.

abdominal l., any line upon the abdomen indicating the boundary of a muscle.

absorption l's, dark lines in the spectrum due to the absorption of light by the substance (usually an incandescent gas or vapor) through which the light has passed. Cf. *absorption bands*, under *band*.

accretion l's, microscopic lines seen in sections of enamel marking successive layers of calcification. Called also *Retzius' lines*.

adrenal l. See *Sergent's l.*

alveobasilar l., a line from the basion to the alveolar point.

alveolar l., a line from the nasion to the alveolar point.

alveolonasal l., a line from the alveolar to the nasal point.

Amberg's l., a line dividing into two halves the angle formed by the anterior border of the mastoid process and the temporal line. It indicates the most easily accessible part of the lateral sinus for a mastoid operation. Called also *lateral sinus line*.

l. of Amici. Same as *Krause's membrane*, under *membrane*.

arcuate l., the iliac portion of the iliopectineal line.

atropic l., a line normal to the plane of the axes of rotation of the eye.

auriculobregmatic l., a line from the auricular point to the bregma.

axillary l's (anterior and posterior), lines from the axillary margin downward.

Baillarger's l., two bands of white fibers seen on section of the cerebral cortex, running parallel to the surface of the cortex. These lines are distinguished as *inner* and *outer*. In the area striata of the cortex only one of these lines (the outer) is visible and here it is known as the *l. of Gennari*.

base l., a line from the infra-orbital ridge to the external auditory meatus and the middle line of the occiput.

base-apex l., a line perpendicular to the edge of a prism and bisecting the refracting angle of the prism.

basinasal l., a line from the basion to the nasion.

basibregmatic l., a line from the basion to the bregma.

Baudelocque's l., the external conjugate diameter of the pelvis.

Beau's l's, transverse lines on the finger nails seen after wasting diseases.

biauricular l., a line from one auditory meatus over the vertex to the other.

bi-iliac l., a straight line joining the most prominent points of the two iliac crests.

blood l., a particular inherited character transmitted through several generations.

blue l., the characteristic line on the gums showing chronic lead poisoning.

Borsier's l., a white mark made upon the skin by the finger nail in the early stages of scarlet fever.

Brödel's white l., a longitudinal white line on the anterior surface of the kidney near the convex border.

Brucke's l's, broad bands alternating with Krause's membranes in the fibrils of the striated muscles.

Bryant's l. 1. The vertical side of the iliofemoral triangle. 2. A test line for detecting shortening of the femur.

Burton's l. Same as *blue l.*

calcification l's, accretion lines.

Camper's l., a line from the external auditory meatus to a point just below the nasal spine.

Chaussier's l., the median raphe of the callosum.

Chiene's l's, a set of lines established to aid in localizing the cerebral centers.

Clapton's l., a green line on the gums in copper poisoning.

clavicular l., a line following the course of the clavicles.

l. of communications, in military medicine, the zone between the service of the interior and the zone of the advance.

Conrad's l., a line from the base of the xiphoid process to the point of the apex beat, indicating the upper limit of percussion dullness of the left lobe of the liver.

Corrigan's l., a purplish line on the gums in copper poisoning.

costo-articular l., a line from the sternoclavicular joint to a point on the eleventh rib.

costoclavicular l., parasternal l., a line midway from the nipple line and the border of the sternum.

Crampton's l., a line on the abdomen to indicate the position of the common iliac artery. It extends from the apex of the cartilage of the last rib nearly to the crest of the ilium, then forward to a point just below the anterior superior spine.

cricoclavicular l., a line drawn from the cricoid cartilage of the larynx to the point upon the clavicle crossed by the upward projection of the anterior axillary line.

curved l's of the ilium (superior, middle, and inferior), three prominent lines on the outer surface of the ala of the ilium. The areas limited by these lines give attachment to the glutei muscles.

curved l's of the occipital bone, two lines (superior and inferior) on the outer surface of each half of the occipital bone.

Daubenton's l., a line from the opisthion to the basion.

l. of demarcation, the boundary between gangrenous and healthy tissue.

dental l. See *pectinate l.*

De Salle's l., a line starting at the upper margin of the ala nasi and curving around the angle of the mouth; Jadelot's nasal line.

Dobie's l. See *Krause's membrane*, under *membrane*.

Douglas's l. See *linea semicircularis*.

Eberth's l's, microscopic broken or scariform lines at the junction of the cardiac muscle cells.

ectental l., the line of junction between the ectoderm and endoderm.

Ellis' l., an S-shaped line on the chest, showing the upper border of pleuritic effusions.

embryonic l., the primitive tract in the center of the germinal area.

facial l., a straight line touching the glabella and a point at the lower border of the face: said to indicate some abdominal disorder.

Farré's white l., the boundary of the insertion of the mesovarium at the hilum of the ovary.

Feiss' l., a line from the internal malleolus to the plantar surface of the first metatarsophalangeal joint.

l. of fixation, a straight line extending through the center of rotation of the eye to the object of vision.

focal l., anterior, a line whose direction is perpendicular to the meridian of greatest curvature of a refracting surface.

focal l., posterior, a line whose direction is perpendicular to that of the meridian of least curvature of a refracting surface.

Fraunhofer's l's, dark lines of the solar spectrum.

Frommann's l's, transverse marks on the axis-cylinder of a medullated nerve fiber, rendered visible by silver nitrate.

gamma l's, lines of very high frequency in the roentgen-ray spectrum of an element which are related to its atomic number.

Gant's l., an assumed line on the femur below the trochanter major, for service as a guide in surgical operations.

genal l., one of Jadelot's lines, extending from the nasal line near the mouth toward the malar bone.

l. of Gennari. See *l. of Baillarger*.

gingival l. 1. A reddish streak on the edge of the gum. 2. The line where the cementum and enamel of a tooth join, and where the gum is attached to the neck of the tooth.

gluteal l's. See *linea gluteae*.

Gottinger's l., a line along the upper border of the zygomatic arch.

Granger l., a curved line seen in radiographs of skulls produced by that portion of the upper surface of the sphenoid bone called the optic groove.

Gubler's l., a line connecting the apparent origins of the roots of the fifth nerve.

Haller's l., the *linea splendens*.

Helmholtz's l., a line perpendicular to the plane of the axis of rotation of the eyes.

Hensen's l., the light line in the middle of the dark band of a sarcomere.

Hilton's l., a white line which marks the junction of the skin of the perineum with the anal mucosa.

Holden's l., a sulcus below the inguinal fold, crossing the capsule of the hip.

Hunter's l., the *linea alba*.

iliopectineal l. See *linea terminalis*.

incremental l's, lines that are supposed to show the laminar structure of dentin.

infracostal l., a line connecting the lower borders of the tenth costal cartilages.

infrascapular l., a horizontal line at the level of the inferior angles of the scapulae.

intercondylar l., **intercondyloid l.** See *linea intercondyloidea*.

interspinal l., a line on the abdomen connecting the two anterior superior iliac spines.

intertrochanteric l's. See *linea intertrochanterica*.

intertuberal l., a line drawn between the prominences of the frontal bone.

intertubercular l., an imaginary line drawn transversely across the abdomen at the level of the iliac crests.

isothermal l's, imaginary lines drawn through places that have the same average temperature at a given time.

Jadelot's l's, lines of the face in young children, supposed to be indicative of disease: the genal, nasal, labial, and oculozygomatic lines (*q. v.*). Called also *Jadelot's furrows* or *trails*.

K l's, L l's, M l's, N l's, O l's, P l's, groups of lines in a spectrum. They are arranged according to certain mathematical relations and are determined by the stability level to which the radiating electron falls; the K lines come from the level nearest the nucleus of the atom.

l. of Kaes, a thin zone or strip of fibers in the supradiary zone of white matter of the cerebral cortex.

Kilian's l., the *linea prominens* of the promontory of the sacrum.

Krause's l. See *Krause's membrane*, under *membrane*.

L l's. See under *K lines*.

labial l., one of Jadelot's lines, from the angle of the mouth outward: said to indicate disease of the lungs.

lateral sinus l. See *Amberg's l.*

lead l., a bluish line at the edge of the gums in lead poisoning.

Ligar's l. 1. An imaginary line from the posterior superior spine of the ilium to the midpoint between the tuberosity of the ischium and the great trochanter; the emergence of the gluteal artery is at the point of the upper trisection of this line. 2. A line from the posterior superior spine of the ilium to the tuberosity of the ischium: at its lower trisection the sciatic and pubic arteries emerge.

M l's. See under *K lines*.

mammary l., a line from one nipple to the other.

mammillary l., a vertical line through the center of the nipple.

McKee's l., a guide to the common iliac artery, being a line drawn from the tip of the cartilage of the eleventh rib to a point an inch and a half to the inner side of the anterior superior spine, then curving downward and forward and inward to a point just above the abdominal ring.

Meyer's l., the axial line of the big toe which if extended passes through the center of the heel if shoes have never been worn.

midaxillary l., a perpendicular line from the middle of the axilla.

midclavicular l., a perpendicular line let fall from the center of the clavicle. Called also *mammillary l.*

midspinal l., a perpendicular line down the middle of the spinal cord.

midsternal l., a topographical line passing through the middle of the sternum from the cricoid cartilage to the xiphoid.

milk l., the line of thickened epithelium in the embryo along which the mammary glands are developed.

Monro's l., a straight line from the umbilicus to the anterior superior spine of the ilium.

Monro-Richter l., a line from the umbilicus to the left anterior superior iliac spine.

Moyer's l., a line from the middle of the body of the third sacral vertebra to a point midway between the anterior superior iliac spines.

mylohyoidean l. See *linea mylohyoidea*.

nasal l., one of Jadelot's lines extending from the ala nasi in a semicircle around the mouth.

nasobasilar l., a line through the basion and nasal point.

nasolabial l., the furrow extending from the ala nasi to the angle of the mouth.

Nélaton's l., a line from the anterior superior process of the ilium to the most prominent part of the tuberosity of the ischium.

nigra l. See *linea nigra*.

nipple l. Same as *mammillary l.*

nuchal l's. See *linea nuchae*.

oblique l., a name applied to many lines, as of the fibula, radius, thyroid cartilage, tibia, etc. See *linea obliqua*.

l. of occlusion. Angle's term for "the line with which, in form and position according to type, the teeth must be in harmony if in normal occlusion."

ocular l., oculozygomatic l., one of Jadelot's lines, extending outward from the inner canthus toward the zygoma: said to be a sign of some disorder of the nervous system.

Ogston's l., a line from the tubercle of the femur to the intercondylar notch.

omphalospinous l., a line on the abdomen connecting the umbilicus and the superior spine of the ilium; on it is situated McBurney's point.

parasternal l., the costoclavicular line.

pectinate l., the serrated line where the skin of the anus unites with and overlaps the mucous membrane: called also *dentate line* and *dentate margin*.

pectineal l., the portion of the iliopectineal line that lies on the pubic bone.

Pickerill's imbrication l's, the horizontal lines on the surface of tooth enamel.

Poirier's l., a line running from the nasofrontal angle to a point just above the lambda.

popliteal l. See *linea poplitea*.

Poupart's l., an imaginary line on the surface of the abdomen passing perpendicularly through the center of Poupart's ligament.

precentral l., a line on the head, extending from a point midway between theinion and glabella downward and forward.

primitive l., the primitive streak.

profile l. Same as *Camper's l.*

pure l., a group of individuals traceable through self-fertilized lines to a single homozygous ancestor.

quadrate l., a line on the posterior surface of the femur.

respiratory l., a line that connects the bases of the upstrokes in a sphygmogram.

Retzius' l's, accretion lines.

Robson's l., an imaginary straight line drawn from the nipple to the umbilicus.

Rolando's l., a line on the head marking the position of the fissure of Rolando beneath.

Roser's l. Same as *Nélaton's l.*

Salter's l., the incremental line of dentin.

scapular l., a vertical downward line from the lower angle of the scapula.

Schreger's l's, lines in dentin, probably due to an optic illusion, and ascribed to the primary curvatures of the dentinal tubules.

semicircular l. Same as Douglas' l.

semilunar l. See *linea semilunaris*.

Sargent's white adrenal l., a white line on the abdomen which follows drawing of the finger nail across it: seen in cases of defective adrenal activity.

Shenton's l., a curved line seen in the roentgenogram of the normal hip joint, formed by the top of the obturator foramen.

Shoemaker's l., a line connecting the point of the trochanter with the anterior superior iliac spine: under normal conditions the extension of this line runs above the umbilicus; when the trochanter is higher than normal the line passes below the umbilicus.

side sternal l., a line along the border of the sternum on either side.

l. of sight, a straight line from the center of the pupil to the object viewed.

Spigelius' l. See *linea semilunaris*.

sternal l., a line paralleling the lateral border of the sternum.

sternomastoid l., a line from the heads of the sternomastoid to the mastoid process.

subcostal l., an imaginary transverse line on the surface of the abdomen at the level of the lower edge of the tenth costal cartilage.

supra-orbital l., a line across the forehead, just above the root of the external angular process of the frontal bone.

sylvian l., a line upon the head indicating the direction of the fissure of Sylvius. It extends from the external angular process of the frontal bone to a point three fourths of an inch below the most prominent point of the parietal bone.

temporal l. See *linea temporalis*.

Thompson's l., a red line upon the gums in pulmonary tuberculosis.

thyroid red l., an erythematous line produced by irritating the skin on the front of the neck and upper part of the chest in patients with hyperthyroidism.

Topinard's l., a line between the glabella and the mental point.

trapezoid l., the mark of the attachment of the trapezoid ligament to the clavicle.

Trummerfeld l., a zone of metaphyseal degeneration sometimes seen in the bones of infantile scurvy.

umbilico-iliac l., a line joining the umbilicus and the anterior superior spine of the ilium.

l. of Venus, the principal transverse line on the palmar surface of the wrist.

Virchow's l., a line from the root of the nose to the lambda.

visual l., a line from the object seen, through the nodal point of the eye, to the macula lutea.

Voigt's boundary l's, lines which delimit the distribution of peripheral nerves.

Wagner's l., a thin, whitish line at the junction of the epiphysis and diaphysis of a bone formed by preliminary calcification.

Waldeyer's l. Same as *Farré's white l.*

white l. 1. The linea alba. 2. A whitish band in the pelvic fascia, from the lower part of the symphysis pubis to the lower part of the spine of the ischium. 3. A pale line seen after scratching the skin and considered to be a sign of decreased arterial tension.

white adrenal l. See *Sargent's l.*

Wrisberg's l's, a set of filaments connecting the motor and sensory roots of the trigeminal nerve.

l's of Zahn, corrugations on the free surface of a thrombus formed by the projecting edges of the lamellae of blood platelets.

Zöllner's l's, a set of lines of peculiar arrangement designed to be used as an optical test.

linea (lin'e-ah), pl. lin'eae. Latin for *line*. 1. **al'ba** [L. "white line"] [B N A], the tendinous mesial line down the front of the abdomen, giving attachment to the oblique and transverse abdominal muscles. 1. **al'ba cervicalis**, the middle line of the neck where the fascial sheaths of the sternothyroid and sternohyoid muscles blend. 1. **alibican tes**, the white abdominal lines seen after pregnancy. 1. **arcua'ta** [B N A], the iliac

portion of the iliopectineal line. 1. **as'pera** [B N A], a rough longitudinal line with two lips on the posterior surface of the shaft of the femur; gives attachment to vastus internus, adductor longus, adductor magnus, adductor brevis, short head of biceps, and vastus externus. 1. **glutae'a** [B N A], gluteal line, one of three rough curved lines (anterior or middle, inferior, and posterior) on the outer surface of the ala of the ilium; the areas between these give attachment to the gluteus minimus muscle below and gluteus medius above. 1. **iliopectine'a**, 1. terminalis. 1. **intercondyloid'ea** [B N A], intercondyloid line, a transverse ridge separating the floor of the intercondyloid notch from the popliteal surface of the femur; gives attachment to the posterior portion of the capsular ligament of the knee. 1. **intermedia cris'tae ili'acae** [B N A], the intermediate surface of the crest of the ilium between the outer and inner lips. 1. **intertrochanter'ica**, intertrochanteric line. 1. [B N A] A rough line on the anterior surface of the femur from the great trochanter obliquely downward, just beneath the lesser trochanter. 2. **Crista intertrochanterica** [B N A]. 1. **mensa'lis**, any one of the lines on the palm of the hand caused by flexion of the middle, ring, and little fingers. 1. **myohyoid'ea** [B N A], myohyoid line, internal oblique line; a ridge on the inner surface of the mandible from the base of the symphysis to the ascending ramus behind the last molar tooth; affords attachment to the myohyoid muscle and superior constrictor of the pharynx. 1. **ni'gra**, black line, the l. alba in pregnancy, which then becomes pigmented. 1. **nu'chae infe'rior** [B N A], inferior nuchal or curved line of the occipital bone, running outward and forward from the external occipital crest. 1. **nu'chae supe'rior** [B N A], superior nuchal or curved line of the occipital bone, running from the external occipital protuberance toward the external angle, giving attachment to the trapezius, occipitalis, sternomastoid, and splenius capitis muscles. 1. **nu'chae supe'ria** [B N A], a line running from the external occipital protuberance toward the external angle, giving attachment to the epicranial aponeurosis. 1. **obli'qua** [B N A]. 1. Oblique line, external oblique line; a ridge on the external surface of the body of the mandible from the mental tubercle to the anterior border of the ascending ramus on either side. 2. **Sylvian line**. 1. **pectine'a**. 1. Continuation of the iliopectineal line on the pubis. 2. A line running down the posterior surface of the shaft of the femur, giving attachment to the pectineus muscle. 1. **poplite'a** [B N A], popliteal or oblique line, a line extending from the fibular facet downward and inward across the posterior surface of the tibia; it gives attachment to fibers of the popliteus muscle. 1. **semicircula'ris** [B N A], Douglas' line, a crescentic line marking the termination of the posterior sheath of the rectus abdominis muscle just below the level of the iliac crest. 1. **semiluna'-ris** [B N A]. Line of Spigelius, the line of junction of the muscular fibers and aponeurosis of the transversus abdominis. 2. **Fold of Douglas**, 1. **semicircularis** [B N A]. 1. **spira'lis**, spiral line, 1. **intertrochanterica** [B N A]. 1. **splen'dens**, a fibrous band down the anterior surface of the pia mater of the spinal cord. 1. **tempora'lis**, temporal line, ridge, or crest; a ridge extending upward, from the external angular process, on each side of the frontal bone, giving attachment to the temporal fascia. 1. **tempora'lis infe'rior** [B N A], inferior temporal line, temporal ridge, a curved line on the convex surface of the parietal bone marking the limit of attachment of the temporal muscle. 1. **tempora'lis supe'rior** [B N A], superior temporal line, a curved line on the external surface of the parietal bone, above and parallel to the inferior temporal line, giving the attachment to the temporal fascia. 1. **termina'-lis** [B N A], iliopectineal line, an oblique ridge on the inner surface of the ilium, continued on the

pubis, forming the lower boundary of the iliac fossa; it separates the true from the false pelvis. **1. transver'sae**, the transverse tendinous lines on the abdomen connecting the linea alba and the linea semilunaris. **1. vi'sus** [B N A], the visual axis. **1. vita'lis**, the line of life: a palmar line curving around the base of the thumb.

linear (lin'e-ar) [L. *linea'*ris]. Pertaining to or resembling a line.

lingism (ling'izm) [after Peter H. Ling, Swedish poet and gymnast, 1776-1839]. The movement cure; kinesitherapy.

lingua (ling'wah). Latin for *tongue*. **1. frae-na'ta**, tongue-tie. **1. geograph'ica**, the geographic tongue; the presence on the tongue of maplike denudations bordered by thickened epithelium. **1. ni'gra**, black tongue. **1. plica'ta**, furrowed tongue. **1. villo'sa ni'gra**, black tongue. See under *tongue*.

lingual (ling'wal) [L. *lingua'*lis]. Pertaining to the tongue.

linguale (ling-wa'le). The point at the upper end of the symphysis of the lower jaw on its lingual surface.

lingualis (ling-wa'lis) [L.]. See *muscles, table of*.

lingually (ling'wal-e). Toward the tongue.

Linguatula (ling-wat'u-lah). A genus of arthropods which, in the adult form, inhabit the frontal, nasal, and maxillary sinuses of animals and sometimes of man. Their larval form (known as *Pentastoma* and *Porocephalus*) infests the digestive organs and lungs. Called also *longue worms*. **L. rhina'ria** (*serra'ta*), the species found in man; both the larval and the adult forms have been found.

Linguatula, larval form (Mitchell).

linguatuliasis (ling-wat-u-li'-as-is). Invasion of the body by *Linguatula*.

linguiform (lin'guif-orm). Tongue shaped.

lingula (lin'gu-lah) [L. "little tongue"]. A tongue-like structure, especially the lingula cerebelli. **1. cerebel'li** [B N A], a small eminence on the ventral surface of the cerebellum where the anterior medullary velum joins the vermis. **1. mandib'ulae** [B N A], the sharp anterior border of the inferior dental foramen. **1. pulmo'nis**, a projection from the lower portion of the upper lobe of the left lung, just beneath the incisura cardiaca. **1. of the sphenoid**, a ridge between the body and greater wing of the sphenoid. **1. wrisbergii**, fibers joining the motor and sensory roots of the trifacial nerve.

linguoclination (lin'gwo-kli-na'shun). See under *inclination*.

linguodistal (lin'gwo-dis'tal). Distally and toward the tongue.

linguogingival (lin'gwo-jin'jiv-al). Relating to the tongue and the gums.

linguopapillitis (lin'gwo-pap-il'i-tis) [L. *lin'gua* tongue + *papilli'tis*]. Small painful ulcers around the papillae of the edges of the tongue.

linguoplacement (lin'gwo-plas-ment) [L. *lin'gua* tongue + *displacement*]. Displacement of a tooth in a lingual direction.

linguotrite (lin'gwo-trit). An instrument for seizing the tongue and drawing it forward.

linguoversion (lin-gwo-ver'shun). The state of being displaced lingually to the line of occlusion: said of a tooth.

Linim. Abbreviation for *liniment*.

liniment (lin'im-ent) [L. *linimen'tum*; *lin'ere* to smear]. An oily liquid preparation to be rubbed upon the skin. Among the more important liniments are the ammonia liniment (*linimen'tum ammo'niae*), belladonna liniment (*l. belladon'nae*), lime liniment (*l. cal'cis, carron oil*), camphor lin-

iment (*l. cam'phorae, camphorated oil*), chloroform liniment (*l. chloro'for'mi*), compound opium liniment (*l. o'pii compos'itum*), liniment of lead subacetate (*l. plum'bi subaceta'tis*), camphorated soap liniment (*l. saponato-camphora'tum*), soap liniment (*l. sapo'nis*), soft-soap liniment (*l. saponis mol'lis*), compound mustard liniment (*l. simo'pis compos'itum*), turpentine liniment (*l. terebin'thinace acel'icum*), and croton oil liniment (*l. tig'lii*).

A. B. C. 1., a liniment composed of equal parts of the liniments of aconite, belladonna, and chloroform. **anodyne 1.**, opium liniment. **camphor 1.** [L. *l. cam'phorae*, U. S. P.], camphor, 20 parts; cotton seed oil, 80 parts. **camphor 1., compound** [L. *l. cam'phorae compos'itum*], contains camphor, ammonia, oil of lavender, and alcohol. **chloroform 1.** (U. S. P.), chloroform, 30 parts; soap liniment, 70 parts. **drying 1.**, a solution of a drug in some mucilaginous liquid which on drying leaves a permanent film. **hartshorn 1.**, a liniment containing 25 per cent ammonia water in sesame oil. **kentish 1.**, linimentum terebinthinae. **lime 1.**, linimentum calcis; lime water 50 per cent in linseed oil: used for burns. **mercurial 1.**, a liniment containing 1 ounce of ointment of mercury, 160 minims of strong solution of ammonia, and liniment of camphor enough to make 1½ fl.oz. **Pick's 1.**, a preparation of 75 grains gum tragacanth, 30 minims of glycerin, and 253 fluidrachms of water: used in dry eczema. **soap 1.** (U. S. P.), soap, dried and granulated, 60 Gm.; camphor, 45 Gm.; oil of rosemary, 10 cc.; alcohol, 700 cc.; water to make 1000 cc. **1. of soft soap**, soft soap, 650 Gm.; oil of lavender, 20 cc.; water to make 1000 cc. **St. John Long's 1.**, linimentum terebinthinae aceticum. **Stokes' 1.**, an acetic turpentine liniment.

linimentum (lin-im-en'tum) [L.]. See *liniment*. **1. cal'cis**. See *lime liniment*, under *liniment*. **1. cam'phorae** (U. S. P.). See *camphor liniment*, under *liniment*. **1. chloro'for'mi** (U. S. P.). See *chloroform liniment*, under *liniment*. **1. sapon'is** (U. S. P.). See *soap liniment*, under *liniment*. **1. saponis mol'lis** (U. S. P.), liniment of soft soap. **1. volat'ile**, ammonia liniment.

linin (li'nin) [L. *lin'um* thread]. The faintly staining substance composing the fine, netlike threads found in the nucleus of a cell, where it bears the chromatin in the form of granules. Cf. *achromatin*.

linitis (lin-i'tis) [λινον web + -itis inflammation]. Inflammation of the gastric cellular tissue. **1. plas'tica**, diffuse hypertrophy of the submucous connective tissue of the stomach, rendering the walls of the stomach rigid, thick, and hard, like a leather bag. Called also *Brinton's disease*, *hypertrophic gastritis*, *gastric sclerosis*, *cirrrosis of the stomach*, and *leather bottle stomach*.

linkage, linking (ling'aj, ling'king). 1. The bond used in constitutional chemical formulas to represent one valency. 2. In genetics, the hanging together of neighboring genes of the same chromosome throughout the processes of heredity.

linked (linkt). United so as to be inherited together; as *linked characters*.

Linognathus (lin-og'na-thus). A genus of sucking lice, *L. peda'vis*, infests sheep; *L. pilif'erus*, the dog; *L. sten'opis*, the goat, and *L. vilu'i* is the long-nosed louse of the ox.

linolein (lin-o'le-in) [L. *lin'um* flax + *oleum* oil]. A neutral fat from linseed oil; the glyceride of linoleic acid.

linonine (lin-o'nin). A proprietary expectorant and cough remedy and substitute for cod liver oil.

linoval (li'no-val). A proprietary ointment base.

linoxanthine (li-no-zan'thin) [L. *lin'um* flax + ξανθός yellow]. An orange-yellow pigment produced by *Sarcis auranti'aca*; it is the coloring matter of orange pus.

linseed (lin'sed). The seeds of flax, *Lin'um usit-*

atis' sinum: demulcent and emollient. The seed affords a fixed drying oil (*o'leum l'ni*), and the residue left after the removal of the oil is used in preparing poultices. The freshly ground seed is used as a demulcent in irritations of the pharynx and of the respiratory and urinary passages. Dose of oil, 1-2 fl.oz. (30-60 cc.).

lint (lint) [*L. lin'leum*, from *lin'um* flax]. An absorbent dressing material made by scraping or picking apart old woven linen; also a specially finished woven fabric for surgical dressing. **cotton l.**, a lint of inferior quality prepared from cotton fabrics. **patent l.** Same as *sheet l.* **picked l.** [*L. lin'leum carp'tum*], charpie; lint prepared by hand. **scraped l.**, lint prepared by scraping. **sheet l.**, a form of lint in sheets, prepared by machinery.

Lint. Abbreviation for *L. lin'leum*, lint.

linton (lin'tin). A loose fabric of prepared absorbent cotton: used in dressing wounds.

lentine (lin'ten). A cotton lint from which the oil has been removed.

linum (li'num). Latin for *flax* and for *linseed*. See *linseed*.

Li₂O. Lithium oxide.

liodermia (li-o-der'me-ah). See *leioderma*.

LiOH. Lithium hydroxide.

liomyofibroma (li'o-mi-o-fi-bro'mah). Leiomyofibroma.

liomyoma (li'o-mi-o'mah). See *leiomyoma*.

liomyosarcoma (li'o-mi-o-sar-ko'mah). See *leiomyosarcoma*.

Liouville's icterus (le-oo'velz) [Henri Liouville, French physician, 1837-1887]. Icterus neonatorum.

lip (lip). 1. Either of the fleshy folds at the orifice of the mouth. 2. Any labium or marginal part. **double l.**, redundancy of the submucous tissue and mucous membrane of the lip on either side of the median line. **hare l.** See *harelip*. **rhombic l.**, the lateral boundary of the rhombencephalon during embryonic life.

lipacidemia (lip'as-id-e'me-ah) [*λίπος* fat + *L. ac'idus* acid + *αἷμα* blood]. The presence of any fatty acid in the blood.

lipaciduria (lip'as-id-u're-ah) [*λίπος* fat + *L. ac'idus* acid + *οὐρον* urine]. The presence of any fatty acid in the urine.

lipaemia (lip-e'me-ah). See *lipemia*.

lipamine (lip'am-in). A compound isolated from the corpus luteum, said to have a stimulating effect on the menstrual flow.

lipanin (lip'an-in). Olive oil (100 parts) and oleic acid (6 parts): used as a substitute for cod liver oil. Dose, 1-4 fluidrachms (4-16 cc.).

Liparis (lip'ar-is). Same as *Euproctis*.

liparocele (lip-ar-o-sel) [*λιπαρός* fat + *κήλη* tumor]. A fatty scrotal tumor; also a hernia containing fatty material.

liparomphalus (lip-ar-om'fal-us) [*λίπος* fat + *ομφαλός* navel]. A fatty tumor of the navel.

lipase (lip'as) [*λίπος* fat + *-ase*]. A fat-splitting ferment occurring in the liver, pancreas, stomach, and other digestive organs and also in certain plants. Called also *steapsin* and *pialyn*.

lipasuria (lip-ās-u're-ah). The presence of lipase in the urine.

lipectomy (lip-ek'to-me) [*λίπος* fat + *ἐκτομή* excision]. Excision of fatty tissue.

lipemia, lipaemia (lip-e'me-ah) [*λίπος* fat + *αἷμα* blood]. The presence of fat or oil in the blood. 1. **retina'lis**, an alteration in the appearance of the retinal blood vessels seen in certain cases of lipemia.

lipese (lip'ēs). An enzyme which brings about the synthesis of fats.

liphemia (li-fe'me-ah). Lipemia.

lipid, lipide (lip'id). One of a group of substances which includes the fats and esters having analogous properties.

lipidtemns (lip'id-temz). A collective name for the products produced by the digestion of fats, namely, glycerin and fatty acids.

lipin (lip'in) [*λίπος* fat]. A general term for the fats and fatlike substances; a class of organic substances which are insoluble in water, soluble in alcohol, ether, chloroform, and other fat solvents and which have a greasy feel. The lipins include the fats and fatty acids, the fatty oils, essential oils, waxes, sterols, phospholipins, glycolipins, sulpholipins, and aminolipins. **amino l.**, a lipin containing amino nitrogen.

lipiodine (lip-i'o-din) [*λίπος* fat + *iodine*]. Lipiodine.

lipiodol (lip-i'o-dol). A name for iodized oil; a solution of iodine in poppy seed oil, used as an opaque medium in radiography.

lipoblast (lip'o-blast) [*λίπος* fat + *βλαστός* germ]. A specialized connective tissue cell which develops into a fat cell.

lipoblastoma (lip'o-blas-to'mah) [*λίπος* fat + *βλαστός* germ + *-ωμα* tumor]. A tumor made up of lipoblasts or embryonic fat cells.

lipocardiac (lip-o-kar'de-ak) [*λίπος* fat + *καρδία* heart]. Relating to a fatty heart.

lipocèle (lip'o-sel) [*λίπος* fat + *κήλη* tumor]. Adipocèle.

lipoceratous (lip-o-ser'at-us). Same as *adipoceratous*.

lipocere (lip'o-sēr) [*λίπος* fat + *L. cera* wax]. Same as *adipocere*.

lipochondroma (lip'o-kon-dro'mah) [*λίπος* fat + *χόνδρος* cartilage + *-ωμα* tumor]. A chondroma containing fatty elements.

lipochrin (lip'ok-rin) [*λίπος* fat + *ώχρος* swallow]. A pigment from the retinal fat globules.

lipochrome (lip'ok-rōm) [*λίπος* fat + *χρώμα* pigment]. Any one of a special group of animal fat pigments; a pigment which is either a fat, a compound of fat, or a solution of a substance in fat (*lipofuchsin*). The lipochromes include the pigments of fat, butter, and egg yolk, serum, lutein, the chromophanes, and several bacterial pigments.

lipocithin (lip-os'ith-in). A combination of lecithin and cholesterol in olive oil used as a restorative.

lipoclasia (lip-ok'las-is) [*λίπος* fat + *κλάσις* breaking]. The splitting up of fat.

lipoclastic (lip-o-klas'tik) [*λίπος* fat + *κλαστικός* breaking up]. Lipolytic, fat splitting.

lipocyanine (lip-o-si'an-in) [*λίπος* fat + *κύανος* blue]. A blue pigment resulting from the action of strong sulphuric acid on lipochrome.

lipocyte (lip'o-sit) [*λίπος* fat + *κύτος* cell]. A fat cell.

lipodiareisis (lip-o-di-ar-e'sis). The disappearance of stored fat from an organ.

lipodiereisis (lip'o-di-er'es-is) [*λίπος* fat + *διερεσις*]. The splitting or destruction of fat.

lipodysentery vaccine (lip-o-dis'en-ter-e). A lipovaccine for dysentery.

lipodystrophia (lip'o-dis-tro'fe-ah). Lipodystrophy. 1. **intestinal'lis**, intestinal lipodystrophy. **progressiva**, a disease of women characterized by the progressive disappearance of subcutaneous fat from the parts above the pelvis, facial emaciation, and abnormal accumulation of fat about the thighs and buttocks (A. Simons, 1911).

lipodystrophy (lip-o-dis'tro-fe) [*λίπος* fat + *δυστροφία* dystrophy]. Any disturbance of fat metabolism. **intestinal l.**, a disease marked by diarrhea with fatty stools, arthritis, emaciation, and loss of strength. It is attended with deposit of fat in the intestinal lymphatic tissue.

lipoferous (lip-of'er-us) [*λίπος* fat + *L. fer're* to carry]. 1. Carrying fat. 2. Same as *sudonophil*.

lipofibroma (lip'o-fi-bro'mah). A lipoma containing fibrous elements.

lipofuscin (lip-o-fus'sin). Any one of a class of fatty pigments formed by the solution of a pigment in fat. Cf. *lipochrome*.

lipogenesis (lip-o-jen'es-is) [*λίπος* fat + *genesis*]. The formation of fat.

lipogenetic, lipogenic (lip'o-jen-et'ik, lip-o-gen'-ik). Forming or producing fat.

lipogenin (lip-oj'en-in). A mixture of fatty acids used as an ointment base.

lipogenous (lip-oj'en-us) [*λίπος* fat + *γενῶν* to produce]. Producing fatness.

lipohemia (lip-o-he'me-ah). Lipemia.

lipoid (lip'oid) [*λίπος* fat + *εἶδος* form]. Any one of a class of cell components, other than liquid fats, which can be extracted with organic solvents like alcohol and ether. They include the phospholipins (phosphatides), glycolipins (cerebrosides), sterols, glycolipins, sulpholipins, and aminolipins. **acetone-insoluble l's**, the lipoids, consisting largely of lecithins, precipitated from an ethereal extract of dried ox heart by adding an excess of acetone. They are used as an antigen in the Wassermann test after being brought into solution in a mixture of 1 part of ether and 9 parts of methanol. **anistropic l.**, a lipid having doubly refractive properties. **brain l.**, an impure cephalin extracted from brain substance and used in checking hemorrhage by accelerating the coagulation of the blood. **Frossmann's l.** See *Frossmann's antigens*, under *antigen*.

lipoidase (lip'oi-dās). An enzyme which splits up lipoids.

lipoidemia (lip-oi-de'me-ah) [*lipoid* + *αἷμα* blood]. The presence of lipoids in the blood.

lipoidosis (lip-oi-do'sis). The presence of lipoids in the cells.

lipoidsiderosis (lip'oid-sid-er-o'sis). The absorption of iron by lipoids.

lipiodine (lip-o-i'o-din). The ethyl ester of diiodized erucic acid, $\text{CH}_3(\text{CH}_2)_7\text{Cl}:\text{Cl}(\text{CH}_2)_{11}\text{CO.O} \cdot \text{C}_2\text{H}_5$; used like the iodides. Dose, 5-20 grains (0.3-1.5 Gm.).

lipolipoidosis (lip'o-lip-oi-do'sis). The presence of lipoids and neutral fats in the cells.

lipolysis (lip-o-lis-is) [*λίπος* fat + *λύσις* dissolution]. The decomposition or splitting up of fat.

lipolytic (lip-o-lit'ik). Having the power of producing lipolysis; fat splitting.

lipoma (lip-o'mah) [*λίπος* fat + *-ωμα* tumor]. A fatty tumor; a tumor made up of fat cells. Lipomas are painless and benign, but may become the seat of gangrene or fat necrosis. 1. **annula're col'li**, diffuse lipomatosis in the neck producing a collar-like enlargement in the region. 1. **arborescens**, a lipoma within a joint having a tree-like form. 1. **capsula're**, a fatty tumor due to increase of the fat adjacent to the mamma. 1. **cavernosum**, a lipoma containing blood spaces. 1. **du'rūm**, steatoma. 1. **fibrosūm**, a fatty tumor with framework of fibrous tissue. 1. **myxomatodes**, a myxolipoma. **nevoid l.**, a lipoma containing many blood vessels. 1. **ossificans**, a lipoma containing bony tissue. 1. **petrificans**, a calcified lipoma. 1. **petrificum ossificans**, an ossified lipoma. 1. **sarcomatodes**, liposarcoma. **telangiectatic l.**, a lipoma containing dilated blood vessels.

lipomatoid (lip-o'mat-oid). Resembling a lipoma.

lipomatosis (lip-o-ma-to'sis). An excessive proportion of fat in the tissues; obesity; also fatty degeneration. **diffuse symmetrical l.**, abnormal increase of subcutaneous fat in the parts above the pelvis, usually in males. **nodular circumscribed l.**, the formation of multiple

circumscribed or encapsulated lipomas. They are often accompanied by local tenderness and constitutional symptoms.

lipomatous (lip-o'mat-us). Affected with, or of the nature of, lipoma.

lipomeria (li-po-me're-ah) [*λείπειν* to leave + *μέρος* a part]. Monstrosity consisting of the congenital absence of a limb.

lipometabolic (lip'o-met-ab-ol'ik). Pertaining to metabolism of fat.

lipometabolism (lip'o-met-ab-olizm) [*λίπος* fat + *μεταβολισμ*]. The metabolism of fat; utilization of fat.

lipomyoma (lip'o-mi-o'mah). A myoma containing fatty tissue.

Lipomys'sus baco'ti. A mite commonly found on rats, but which may also greatly annoy man.

lipomyxoma (lip'o-miks-o'mah) [*λίπομα* + *μυξωμα*]. A lipoma with myxomatous elements.

liponeurocyte (lip-o-nu'ro-sit). The name given by Cramer to cells found in the pituitary body of rats.

lipopectic (lip-o-pek'tik). Characterized by lipopexia.

lipopeptid (lip-o-pep'tid). A compound of amino-acids and fatty acids.

lipopexia (lip-o-pek'se-ah) [*λίπος* fat + *πῆξις* fixation]. The accumulation of fat in the tissues.

lipophagic (lip-o-fa'jik) [*λίπος* fat + *φαγῖν* to eat]. Consuming or absorbing fat.

lipophagy (lip-o-faj-e) [*lipophagic*]. 1. The destruction of fat; lipolysis. 2. Fat eating.

lipophil (lip'o-fil) [*λίπος* fat + *φιλεῖν* to love]. Having an affinity for fat; absorbing fat.

lipophrenia (lip-o-fre'ne-ah) [*λείπειν* to fail + *φρῆν* mind]. Failure of the mental powers.

lipoprotein (lip-o-pro'te-in). A compound of protein with a lipin.

liporhodin (lip-o-ro'din) [*λίπος* fat + *ρόδον* rose]. A red lipochrome.

liposarcoma (lip'o-sar-ko'mah) [*λίπομα* + *sarcoma*]. Sarcoma containing fatty elements.

lipase, liposin (lip'ōs, lip-o'sin) [*λίπος* fat]. A lipase occurring in the blood.

liposis (lip-o'sis) [*λίπος* fat]. Lipomatosis.

liposoluble (lip-o-sol'u-bl) [*λίπος* fat + *soluble*]. Soluble in fats.

liposome (lip'o-sōm) [*λίπος* fat + *σῶμα* body]. One of the particles of lipoidal material held emulsified in tissues in the form of "invisible fat."

lipostomy (li-pos'to-me) [*λείπειν* to leave + *στόμα* mouth]. Atrophy of the mouth.

lipotamponade (lip-o-tam'pon-ad) [*λίπος* fat + *ταμπόν*]. The operation of forming an extra-pleural cavity and filling it with a mass of fat: done to compress the lung in pulmonary tuberculosis.

lipothymia (li-po-thi'me-ah) [*λείπειν* to leave + *θυμός* mind]. Faintness or swooning; a swoon or faint.

lipotrophic (lip-o-trof'ik). Increasing bodily fat.

lipotrophy (lip-o'tro-fe) [*λίπος* fat + *τροφή* nutrition]. Increase of bodily fat.

lipotropic (lip-o-trop'ik). Having an affinity for fats or oils.

lipotropy (lip-o'tro-pe) [*λίπος* fat + *τροπή* a turning]. Affinity for oils and fats or for fatty tissue.

lipotuberculin (lip-o-tu-ber'ku-lin). A lipovaccine for tuberculosis.

lipovaccine (lip-o-vak'sin) [*λίπος* fat + *vaccine*]. A vaccine prepared with a vegetable oil as the menstruum.

Diffuse lipomatosis (Babcock).

lipoxanthine (lip-o-zan'thin) [*λίπος* fat + *ξανθός* yellow]. A yellow lipochrome.

lipoxeny (li-pok'sen-e) [*λείπειν* to leave + *ξένος* host]. The desertion of the host by a parasite.

lipoxidemia (lip-oks-id-e-me-ah) [*λίπος* fat + *δύς* acid + *αἷμα* blood]. Same as *lipacidemia*.

lipoxism (lip-oks'izm) [*λίπος* fat + *ὄξος* sharp, acid]. Poisoning by oleic acid.

lipping (lip'ing). The development of a bony lip in osteoarthritis.

lippitude (lip'it-üd) [L. *lippitudo*; *lip'pus* bleary-eyed]. Marginal blepharitis or bleary-eye.

Lippmann's electrometer [Gabriel Lippmann, French physicist, born 1845]. See *electrometer*.

lipuria (lip-u're-ah) [*λίπος* fat + *οὐρον* urine]. The presence of oil or fat in the urine.

Liq. Abbreviation for *liquor*.

liqua (li'kwā). A solution of aluminum acetate and hydrogen dioxide: used as a wound dressing.

liquefacient (lik-we-fa'shent) [L. *liquefaciens*]. Having the quality to convert a solid material into a liquid, producing liquefaction.

liquefaction (lik-we-fak'shun) [L. *liquefactio*; *lique're* to flow + *facere* to make]. Change into a liquid form.

liquefactive (lik-we-fak'tiv). Causing, pertaining to, or characterized by, liquefaction.

liquescent (lik-wes'ent) [L. *liquescere* to become liquid]. Tending to become liquid; becoming liquid.

liqueur (li-ker') [Fr.]. An aromatized alcoholic drink; a cordial.

liquid (lik'wid) [L. *liquidus*; *lique're* to flow]. 1. A substance that flows readily without being melted. 2. Flowing readily; neither solid nor gaseous. 1. **air**, air condensed by cold and pressure into a liquid: a most powerful refrigerant. **Bonain's 1.**, an anesthetic for operations on the ear, consisting of phenol, 15 grains; menthol, 15 grains; and cocaine hydrochloride, 15 grains. **Cohn's 1.**, a culture liquid for bacteria, consisting of a mixture of 1 part each of ashes of yeast and ammonium tartrate in 100 parts of distilled water. **Declat's 1.**, a solution of carbolate of ammonia for external and internal use in cholera. **Dutch 1.** See *ethylene dichloride*. **Ebner's 1.**, a decalcifying liquid for microscopical objects consisting of hydrochloric acid, 7 cc.; distilled water, 100 cc.; cold saturated solution of sodium chloride, 100 cc.

Liquidambar (lik-wid-am'bar) [L.]. 1. A genus of hamamelidaceous trees. *L. orientalis* and *L. altissima* afford storax, and *L. styraciflua* (sweetgum tree), of North America, yields a fragrant, gummy balsam which is stimulant in diarrhea, coughs, etc. 2. The balsam afforded by *L. styraciflua*.

liquiform (lik'wif-orm). Resembling a liquid.

liquor (Eng. lik'er, Lat. li'kwor, pl. *liquores* [L. "a liquid"]). A liquid; an aqueous solution; a solution not obtained by distillation. 1. **acidi arsenio'si** (U. S. P.), 1. **arsen'ici hydrochlor'ici**, a solution of arsenic trioxide in dilute hydrochloric acid and water. Dose, 2-5 minims (0.133-0.333 cc.). 1. **adhaesivus**, a solution of nitrated cellulose in acetone, which, when applied to the skin, forms a filmlike collodion. **alcoholic 1.**, a beverage containing alcohol, whether distilled or fermented. 1. **ammo'nii aceta'tis** (U. S. P.), spirit of Mindererus; an aqueous solution containing 7 per cent of ammonium acetate. Dose, 4 fluidrachms (15 cc.). 1. **am'ni**, the fluid contained in the amnion. 1. **arse'ni brom'idi**, Clemens' solution; a 1 per cent solution of arsenic bromide. Dose, 1-5 minims (0.066-0.333 cc.). 1. **arse'ni et hydrar'gyri iodi'di** (U. S. P.), Donovan's solution of arsenous iodide and red mercuric iodide: used in syphilis and in skin diseases. Dose, 2-10 minims (0.133-0.666 cc.). 1. **of Batavia**, for cholera: laudanum, 6 cc.; ether, 2½ cc.; orange flower water, 6 cc. 1. **bel-**

los'tii, a solution of mercury nitrate in water slightly acidified with nitric acid: used in testing the urine for paresis; 10 to 15 drops are added to a few cubic centimeters of urine. In negative cases a white or yellowish precipitate is formed; in positive cases the precipitate is gray or blackish, and the supernatant fluid is yellowish. 1. **cal'cii hydrox'idi** (U. S. P.), 1. **cal'cis**, lime water; a saturated solution of calcium hydroxide in water. 1. **cho'rii**, the false waters; a liquid which separates the amnion from the chorion in the early stages of gestation. 1. **cor'neae**, the liquid occupying the lymph spaces of the cornea. 1. **cotun'ni**, the perilymph of the internal ear. 1. **cre'solis compos'itus** (U. S. P.), a 50 per cent solution of cresol in a potassium and sodium soap solution: used as an antiseptic and disinfectant. Called also *compound solution of cresol*. 1. **di'astos**, a digestant containing pepsin, diastase, trypsin, nux vomica, nitrohydrochloric acid, etc. **distilled 1.**, any alcoholic beverage prepared by distillation. 1. **enter'icus**, the intestinal juice. 1. **epinephri'nae hydrochlor'idi** (U. S. P.), a solution of epinephrine hydrochloride. 1. **epipas'ticus**, a 50 per cent acetic acid tincture of cantharides: used as a blistering liquid. **fermented 1.**, a beverage prepared by fermentation. 1. **fer'ri chlo'ridi** (U. S. P.), a solution of ferric chloride. 1. **fer'ri et ammo'nii aceta'tis** (U. S. P.), solution of iron and ammonium acetate, Basham's mixture. Dose, 4 fluidrachms (15 cc.). 1. **fer'ri subsulpha'tis**, Monsel's solution. 1. **fer'ri tersulpha'tis** (U. S. P.), a solution of normal ferric sulphate, $Fe_2(SO_4)_3$, about 10 per cent. 1. **follic'uli** [B N A], an albuminous fluid in the graafian follicle between the stratum granulosum and the cumulus oophorus. 1. **formaldehyd'i** (U. S. P.), an aqueous solution containing about 37 per cent by weight of formaldehyde, HCHO. 1. **hydrogen'ii diox'idi** (U. S. P.), an aqueous solution of hydrogen peroxide, about 3 per cent by weight: used as an antiseptic. 1. **hypoph'ysis**. Same as *l. pituitarii*. 1. **iodi compos'itus** (U. S. P.), Lugol's solution. See under *solution*. 1. **magne'sii citra'tis** (U. S. P.), a solution of magnesium citrate sweetened and flavored. **malt 1.**, ale, beer, or other fermented beverage having malt as its basis. **Morgagni's 1.**, the fluid between the eye lens and its capsule. 1. **morphi'nae aceta'tis**, solution of acetate of morphine. Dose, 20-40 minims (1.333-2.666 cc.). 1. **morphi'nae hydrochlor'a'tis**, solution of the hydrochloride of morphine. Dose, 15-30 minims (1-2 cc.). 1. **morphi'nae hypoder'micus**, Magendie's solution of morphine sulphate. 1. **morphi'nae sulpha'tis**, solution of sulphate of morphine. Dose, 10-40 minims (0.666-2.5 cc.). 1. **pancreat'icus**, the pancreatic juice. 1. **peri-car'dii**, the pericardial fluid. 1. **pi'cis alkali-nus**, a liquid consisting of 2 parts of pine tar, 1 part of potassium hydroxide, and 5 parts of water: used externally for eczema. 1. **pituita'rii** (U. S. P.), solution of the fresh posterior lobe of the pituitary body of cattle. 1. **plum'bi subaceta'tis** (U. S. P.), Goulard's extract; an aqueous solution of the subacetate of lead, $(CH_3COO)_2Pb_2O$, about 18 per cent. 1. **plum'bi subaceta'tis dilu'tus**, lead water; liquor plumbi subacetatis diluted with 25 volumes of distilled water. 1. **potas'sii arseni'tis** (U. S. P.), 1. **arsenica'lis**, Fowler's solution of potassium arsenite: much used in chronic malarial disorders. Dose, 2-10 minims (0.133-0.666 cc.). 1. **potas'sii citra'tis** (U. S. P.), an 8 per cent solution of potassium citrate. 1. **potas'sii hydrox'idi** (U. S. P.), a 4.5 per cent solution of potassium hydroxide. 1. **pur'is**, the more liquid or sanious portion of pus. 1. **sanguinis**, the plasma or serum of the blood. 1. **scar'pae**, the endolymph. 1. **se'dans**, a proprietary remedy containing black haw, golden seal, and Jamaica dogwood. It is a uterine sedative. 1. **sem'inis**, the fluid portion of the semen. 1. **so'dae chlorina'tae** (U. S. P.), Labarraque's

solution. **1. so'dae chlorina'tae chirurgica'-lis** (U. S. P.), modified Dakin's solution. **1. so'-dii arsenat'is**, a 1 per cent solution of disodium arsenate, Na_2HAsO_4 . **1. so'dii chlo'ridi physiologicus** (U. S. P.), physiologic salt solution (0.85 per cent). **1. so'dii glycerophosphatis**, a 50 per cent solution of the salt, $\text{CH}_2\text{OH}.\text{CHOH}.\text{CH}_2\text{O}.\text{PO}(\text{ONa})_2$. **1. so'dii hydrox'idi** (U. S. P.), a 4.5 per cent solution of sodium hydroxide. **Villate's 1.** See *Villate's solution*, under *solution*. **1. zin'ci chlo'ridi** (U. S. P.), a 50 per cent solution of zinc chloride.

liquorice (lik'er-is). See *Glycyrrhiza*.

liquorrhea (li-kwor-e'ah) [L. *li'quor* liquid + *rho'ta* flow]. An excessive discharge of any body fluid, e. g., liquorhea nasalis.

Lisfranc's amputation, joint, ligament, tubercle (lis-frahns') [Jacques Lisfranc, French surgeon, 1790-1847]. See *amputation, joint, ligament, tubercle*.

lisping (lisp'ing). The substitution of the *th* sounds for *s* and *z*.

Lissauer's tract (lis'ow-erz) [Heinrich Lissauer, German neurologist, 1861-1891]. See *tract*.

lissencephalic (lis-en-sef-al'ik) [*λίσσος* smooth + *ἐγκέφαλον* brain]. Having a smooth brain; having a brain without convolutions.

Lissoflagellata (lis'-o-flag-el-a'tah) [*λίσσος* smooth + *flagellum*]. A class of flagellate organisms having no protoplasmic collar at the base of the flagellum.

Lister's antiseptic, dressing, etc. (lis'terz) [see *listerism*]. See *antiseptic and dressing*.

listerine (lis'ter-ēn). A proprietary antiseptic and detergent compound containing boric and benzoic acids, thymol, and principles derived from eucalyptus, baptisia, gaultheria, etc.

listerism (lis'ter-izm) [from Lord Joseph Lister, an English physician, 1827-1912, the father of modern antiseptic surgery]. The principles and practice of antiseptic and aseptic surgery.

Listing's law (lis'tingz) [Johann Benedict Listing, German physiologist, 1808-1882]. See *law*.

listol (lis'tol). An Argentine mange remedy and antiseptic containing thymol and iodine. It is a heavy reddish-brown liquid soluble in water, alcohol, and glycerin.

Liston's forceps, knives, operation, etc. (lis'tonz) [Robert Liston, Scottish surgeon in London, 1794-1847]. See *forceps, knife, operation, etc.*

liter (le'ter, li'ter) [Fr. *li'tre*]. The unit of capacity in the metric system; it is 1000 cubic centimeters or 1.056 quarts wine measure.

lithaemia (lith-e'me-ah). See *lithemia*.

lithagogue (lith'ag-og) [*λίθος* stone + *ἀγώγειν* to lead]. 1. Expelling calculi. 2. A remedy that expels calculi.

lithangiuria (lith-an-je-u're-ah) [*λίθος* stone + *ἀγγεῖον* vessel + *οὖρον* urine]. Calculous disease of the urinary tract.

litharge (lith'ari) [*λίθαργυρος*; *λίθος* stone + *ἀργυρος* silver]. Fused lead protoxide, PbO.

lithate (lith'at). A urate.

lithectasy (lith-ek'tas-e) [*λίθος* stone + *ἐκτασις* extension]. The extraction of calculi through the mechanically dilated urethra.

lithectomy (lith-ek'to-me). Same as *lithotomy*.

lithemia (lith-e'me-ah) [*lithic acid* + *αἷμα* blood]. Excess of lithic or uric acid and the urates in the blood. It is due to imperfect metabolism of the nitrogenous elements.

lithemic (lith-e'mik). Pertaining to, affected with, or of the nature of, lithemia.

lithia (lith'e-ah). Lithium oxide, Li_2O : an alkali.

lithiasis (lith-i'as-is) [*λίθος* stone]. The formation of calculi and concretions; also the gouty diathesis. **appendicular 1.**, a condition in which the lumen

of the vermiform appendix becomes obstructed with calculi. The condition is said to run in families, and to be akin to gout and rheumatism.

1. conjunctivae, a condition marked by the formation of white, calcareous concretions in the acini of the meibomian glands. **pancreatic 1.**, the presence of concretions in the pancreas. It is attended with colic, fat diarrhea, diabetes, and emaciation.

lithic acid (lith'ik). Same as *uric acid*. See *acid*.

lithicosis (lith-ik-o'sis) [*λιθικός* made of stone]. Pneumonokoniosis.

lithiopiperazin (lith'e-o-pip'er-za-in). A proprietary lithium and piperazin compound: anti-arthritis. Daily dose, 15-45 grains (1-3 Gm.).

lithium (lith'e-um) [*λίθος* stone]. A white metal; atomic weight, 6.94; symbol, Li; its oxide, lithia, Li_2O , is alkaline; its salts are solvents of uric acid to a certain extent in the test tube: based on this, erroneous deductions were made that lithium compounds are indicated in gout and rheumatic conditions, which was utilized as propaganda by many proprietary remedies. The lithium-uric acid theory has been completely exploded. **1. benzoate**, a salt, $\text{C}_6\text{H}_5.\text{CO.O.Li}$, in a white powder or in scales. Dose, 5-15 grains (0.333-1 Gm.). **1. bitartrate**. See *tartarilithum*. **1. bromide**, a white, deliquescent, granular substance, LiBr, used in epilepsy, etc., like the other bromides. Dose, 5-20 grains (0.333-1.333 Gm.). **1. cacodylate**, a salt, $(\text{CH}_3)_2\text{AsOLi}$: used like sodium cacodylate. **1. caffeine sulphonate**, a salt used in gout and rheumatism: strongly commended as a diuretic.

1. carbonate, a white, powdery salt, Li_2CO_3 ; normal lithium carbonate: useful in urinary and calculous disorders. Dose, 2-10 grains (0.133-0.666 Gm.). **1. citrate**, a white, crystalline powder, $\text{C}_6\text{H}_5\text{O}_7.\text{Li}_3 + 4\text{H}_2\text{O}$: is used like the carbonate.

1. citrate, effervescent, effervescent citrate of lithium: the ordinary citrate, 10 parts; common sugar, milk sugar, and tartaric acid, each, 20 parts; sodium bicarbonate, 20 parts. Dose, 1 drachm (4 Gm.). **1. dithiosalicylate**. 1. An amorphous salt, used in the treatment of gout and rheumatism.

2. A yellow salt of one of the nine dithiosalicylic acids. **1. diuretin**, diuretin in which the sodium is replaced by lithium; double salicylate of theobromine and lithium: diuretic. Dose, 10-15 grains (0.666-1 Gm.). **1. formate**, a salt in colorless needles, $\text{HCOOLi} + \text{H}_2\text{O}$: used in gout and rheumatism. Dose, 3 grains (0.2 Gm.). **1. glycerophosphate**, a white powder, $\text{C}_3\text{H}_5(\text{OH})_2.\text{PO}_2(\text{OLi})_2$: a nerve tonic and antilithic. Dose, 8-15 grains (0.5-1 Gm.). **1. hippurate**, a gout remedy. Dose, 5-20 grains (0.333-1.333 Gm.). **1. iodate**, a salt, LiIO_3 , used in gouty and renal disorders. Dose, 1½ grains (0.1-0.2 Gm.). **1. iodide**, a white, crystalline body, LiI, in deliquescent prisms. **1. phenolsulphonate**, white crystals of lithium sulphocarbonate, $\text{OH.C}_6\text{H}_4.\text{SO}_3\text{OLi}$: used in gonorrhea. **1. salicylate** [L. *lith'ii salic'ylas*], a white, crystalline powder, $\text{OH.C}_6\text{H}_4.\text{COOLi}$: used in rheumatism. Dose, 8-15 grains (0.5-1 Gm.). **1. salolophosphite**, the lithium salt of salol-orthophosphoric acid, $\text{C}_6\text{H}_5.\text{CO.O.C}_6\text{H}_4.\text{O.PO}(\text{OH})\text{OLi}$. It is a white, crystalline compound, used in influenza and gout, in doses of 4-5 grains (0.26-0.32 Gm.). **1. sozoiodo-**

late, an antiseptic agent, lithium diiodopara-phenolsulphonic acid, $\text{OH.C}_6\text{H}_2\text{I}_2.\text{SO}_3\text{OLi}$, in glancing white or yellowish plates. **1. sulphocyanate**, a white, crystalline powder, LiCNS. Dose, 3-5 grains (0.2-0.3 Gm.). **1. sulphoichthyolate**, a tarry substance: antirheumatic. Dose, 8 grains (0.5 Gm.). **1. theobromine salicylate**, a white, diuretic salt. Dose, 15 grains (1 Gm.). **1. valerate**, a white powder used in rheumatism with nervous symptoms. Dose, 5-15 grains (0.3-1 Gm.). **1. vanadate**, a yellow powder used in rheumatism. Dose, 1½ grain (0.004 Gm.) every other day.

lithizit (lith'í-zit). A salt of lithium and sodium combined with citric acid: used in the treatment of diabetes.

lithococcosis (lith''o-sen-o'sis) [λίθος stone + κένωσις evacuation]. The removal from the bladder of the fragments of calculi that have been crushed.

lithoclast (lith'o-klast) [λίθος stone + κλάν to crush]. A lithotrite, or stone-crushing forceps, of various forms.

lithocystitis (lith'o-kliz-me-ah) [λίθος stone + κύστις bladder]. Treatment of calculus by injecting solvent liquids into the bladder.

lithocystotomy (lith''o-sis-tot'o-me) [λίθος stone + κύστις bladder + τομή cut]. A cutting operation for removing a stone from the bladder.

lithodialysis (lith''o-di-al'is-is) [λίθος stone + διαλύειν to dissolve]. 1. The solution of calculi in the bladder by injected solvents. 2. The crushing of a calculus in the bladder.

lithogenesis, lithogeny (lith-o-jen'es-is, lith-oj'en-e) [λίθος stone + γεννάν to produce]. The formation of calculi.

lithokelyphedion (lith''o-kel-if-o-pe'de-on) [λίθος stone + κέλυφος sheath + παιδιον child]. A lithopedion in which both the fetus and the membranes are petrified.

lithokelyphos (lith-o-kel'if-os) [λίθος stone + κέλυφος sheath]. A lithopedion in which the calcification is limited to the fetal membranes.

lithokonion (lith-o-ko'ne-on) [λίθος stone + κονίαν to pulverize]. An instrument for pulverizing calculi in the bladder.

litholapaxy (lith-o-ap-aks-e) [λίθος stone + λάπαξ removal]. The crushing of a calculus in the bladder, followed at once by the washing out of the fragments. **Bigelow's l.**, the crushing of a stone by a special kind of lithotrite and the removal of the fragments by another apparatus.

litholein (lith-o'le-in). A yellow antiseptic and parasiticide liquid; an oily derivative from petroleum: for external use in skin diseases.

lithology (lith-o'l'o-je) [λίθος stone + λόγος treatise]. The sum of what is known regarding calculi and their treatment.

litholysis (lith-o'l'is-is) [λίθος stone + λύσις solution]. The solution of calculi in the bladder.

litholyte (lith'o-lit) [λίθος stone + λύσις solution]. An instrument used in injecting solvents of calculi into the bladder.

lithometer (lith-om'et-er) [λίθος stone + μέτρον measure]. An instrument for measuring calculi.

lithometra (lith-o-me'trah) [λίθος stone + μήτρα womb]. Ossification of the uterus.

lithomoscus (lith-o-mos'kus) [λίθος stone + μόσχος calf]. Lithopedion in cattle.

lithomyl (lith'o-mil) [λίθος stone + μύλη mill]. An instrument for crushing a stone in the bladder.

lithona (lith-o'nah). A preparation of lithia with saline laxatives.

lithonephria (lith-o-nef're-ah) [λίθος stone + νεφρός kidney]. Any disease condition due to the presence of calculi in the kidney.

lithonephritis (lith''o-nef-ri'tis) [λίθος stone + nephritis]. Inflammation of the kidney due to irritation of calculi.

lithonephrotomy (lith''o-nef-rot'o-me) [λίθος stone + νεφρός kidney + τομή cut]. The operative removal of a renal calculus.

lithontriptic (lith-on-trip'tik). See *lithotriptic*.

lithopedion, lithopaedion (lith-o-pe'de-on) [L. *lithopae'dium*; from λίθος stone + παιδιον child]. A dead fetus that has become stony or petrified.

lithophone (lith'o-fōn) [λίθος stone + φωνή sound]. A device for indicating the presence of a calculus by the sound which the latter emits when struck.

lithopiperazin (lith''o-pip-er-a'zin). See *lithiopiperazin*.

lithos (lith'os). A proprietary preparation of lithium bitartrate and sodium salicylate.

lithoscope (lith'o-skōp) [λίθος stone + σκοπεῖν to view]. An instrument for examining calculi in the bladder.

lithosis (lith-o'sis) [λίθος stone]. A disease condition of the lung due to the inhalation of fine particles of stone; grinders' disease.

lithotome (lith'o-tōm) [λίθος stone + τέμνειν to cut]. A knife for performing lithotomy.

lithotomist (lith-ot'o-mist). One who performs a lithotomy.

lithotomy (lith-ot'o-me) [λίθος stone + τέμνειν to cut]. The removal of a stone by cutting into the bladder; cystotomy. **bilateral l.**, one performed by a transverse incision across the perineum. **lateral l.**, one in which the cut is before the rectum and to one side of the raphe. **marian l.**, **median l.**, one made on the raphe of the perineum before the anus. **mediolateral l.**, a combination of the median and lateral operations. **perineal l.**, that in which the incision is made in the perineum. **prerectal l.** See *marian l.* **rectal l.**, **rectovesical l.**, one performed within the dilated rectum. **suprapubic l.**, one done with a cut above the pubes. **vaginal l.**, **vesicovaginal l.**, one performed by an incision within the vagina.

lithotomy (lith-ot'o-ne) [λίθος stone + τέμνειν to stretch]. The creation of an artificial vesical fistula which is dilated to allow the extraction of a stone.

lithotresis (lith-o-tre'sis) [λίθος stone + τρήσις a boring]. The drilling or boring of holes in a calculus.

lithotripsy (lith'o-trip-se) [λίθος stone + τρίβειν to rub]. The crushing of a calculus within the bladder.

lithotriptic (lith-o-trip'tik) [λίθος stone + τρίβειν to rub]. An agent that dissolves calculi.

lithotriptor (lith'o-trip-tor) [λίθος stone + τρίβειν to rub]. An instrument for crushing calculi in the bladder.

lithotrite (lith'o-trīt) [λίθος stone + τρίβειν to rub]. An instrument for crushing a stone in the bladder.

lithotritry (lith-ot'rit-e). The crushing of a vesical calculus within the bladder by means of the lithotrite.

lithous (lith'us) [λίθος stone]. Pertaining to or of the nature of a calculus.

lithoxiduria (lith''oks-e-du're-ah) [λίθος stone + οξίς + ούρον urine]. The existence of xanthic oxide in the urine.

lithuresis (lith-u-re'sis) [λίθος stone + ούρησις urination]. The passage of gravel through the urethra with the urine.

lithureteria (lith''u-re-te're-ah) [λίθος stone + ούρητηρ ureter]. Calculous disease of the ureter.

lithuria (lith-u're-ah) [λίθος stone + ούρον urine]. Excess of uric acid or of ureates in the urine.

litmus (lit'mus). A blue pigment prepared from *Roccella tinctoria* and other lichens: used as a test for acidity and alkalinity. It has a pH range of 4.5 to 8.3. See *azolitmin*. **l. milk**, milk stained with litmus: used as a culture medium. **l. paper**, paper impregnated with litmus: used as a test for alkalis and acids.

litolain (lit-o'le-in). A yellow fluid distilled from petroleum: used as an antiseptic and antiparasitic in skin diseases.

litre (le'ter) [Fr.]. See *liter*.

Litten's sign (lit'en) [Moritz Litten, German physician, 1845-1907]. See *sign*.

litter (lit'er). A movable couch for transporting the sick or wounded.

Little's disease (lit'elz) [William John Little, English physician, 1810-1894]. See *disease*.

sion of a portion of the right lobe of the liver. Called also *floating l.*, *linguiform l.*, and *Riedel's l.* **caucuminal l.**, the superior semilunar lobe of the cerebellum. **caudate l.** 1. The taillike process of the liver. 2. A part of the median lobe of the cerebellum. **central l.** See *insula*. **crestic l's**, two lobes (anterior and posterior) on the upper surface of each hemisphere of the cerebellum, separated by the preclival fissure.

The lobes of the cerebral cortex.

cuneate l., one of the convolutions on the internal surface of the cerebral hemisphere above the calcarine fissure. **digastric l.**, one of the lobes of the lower surface of the cerebellum. **frontal l.**, a cerebral lobe corresponding in position to the frontal bone. **Home's l.**, a third lobe of the prostate, sometimes seen as a small, glandular structure between the sphincter of the bladder and the caput gallinaginis; in old age it may become much enlarged. **lacing l.**, a lobe of the liver produced by long-continued tight lacing. **limbic l.** See *gyrus fornicatus*. **linguiform l.** Same as *Riedel's l.* **marginal l.**, the first frontal convolution of the cerebrum. **median l.**, the superior vermiform process of the cerebellum. **occipital l.**, a cerebral lobe corresponding in position to the occipital bone. **olfactory l.**, a lobe of each hemisphere of the cerebrum composed of the olfactory bulb, its crus, and the anterior part of the olfactory area. **optic l's**, one of the upper pair of corpora quadrigemina; called also *colliculus superior*, *optic tectum*, and *nates*. **orbital l.**, the under surface of the frontal lobe resting on the orbital bone. **parietal l.**, a cerebral lobe corresponding in position to the parietal bone. **pneumogastric l.**, **subpeduncular l.**, one of the lobes of the under surface of the cerebellum. **prefrontal l.**, the part of the frontal lobe of the brain anterior to the ascending convolution. **pyriform l.**, the lateral exposed portion of the olfactory cerebral cortex in lower mammals. **quadrangular l.**, **quadrate l.** See *square l.* **Riedel's l.**, an abnormality of the liver consisting of a tongue-shaped portion of liver substance attached to the right lobe. **rolandic l.**, the operculum of the insula. **semilunar l.**, the posterior lobe of the upper surface of either hemisphere of the cerebellum. **slender l.**, the fourth of the five lobes on the under surface of the cerebral hemisphere. **square l.** 1. The anterior lobe on the superior surface of the cerebellum. 2. The precuneus. Called also *quadrate l.* **supplemental l.**, a tooth lobe which is additional to the regular lobes of a tooth. **temporal l.**, a lobe on the outer side and under surface of each cerebral hemisphere. **temporosphenoïd l.**, a cerebral lobe corresponding in position to the bones indicated by its name. **uncinate l.**, the internal part of the occipitotemporal convolution. **vagal l.** Same as *visceral l.* **vermiform l.** Same as *vermis cerebelli*. **visceral l.**, the visceral sensory area of fishes; called also *vagal l.* and *lobus vagi*.

lobectomy (lo-bek'to-me) [*L. lobus* lobe + *ἐκτομή* excision]. Excision of a lobe of a gland, as the thyroid or of the lung.

Lobelia (lo-be'le-ah) [after M. de Lobel]. A genus of lobeliaceous plants. The leaves and tops of

L. inflata, an herb of North America, are acronarcotic, emetic, sedative, expectorant, and depressant. They are used in asthma, croup, and whooping cough. Dose of vinegar (*acetum lobeliae*), 5–30 minims (0.333–2 cc.); of fluidextract, 1–5 minims (0.066–0.333 cc.). Emetic dose, 10–60 minims (0.6–4 cc.); of infusion, 1–4 fluidrachms (4–16 cc.); of tincture (U. S. P.), 5–30 minims (0.333–2 cc.); of extract, 1½–2 grains (0.099–0.13 Gm.); of fluidextract of the seed, 1–10 minims (0.066–0.666 cc.).

lobelidine (lo-be'lid-in). A crystalline alkaloid, $C_{20}H_{25}NO_2$, from *Lobelia inflata*.

lobeline (lob'e-lin). Before the isolation of the three pure crystalline alkaloids the name lobeline was given to a raw liquid mixture of the then unknown alkaloids of *Lobelia inflata*, contaminated with resins. A sulphate has been prepared from this raw liquid and used in asthma, croup, and whooping cough with uncertain action. Recently Heinrich Wieland and Hermann Wieland discovered the three pure crystalline alkaloids of *Lobelia inflata*. *Alpha-lobeline*, $C_{23}H_{29}O_2N$, is a specific stimulant to the respiratory center. It is claimed to be a powerful resuscitant in respiratory failure, collapse, or shock. The hydrochlorate of lobeline-alpha is marketed in doses of ½ grain (0.01 Gm.) for adults and ¼ grain (0.003 Gm.) for children. *Beta-lobeline*, $C_{22}H_{27}O_2N$, and *lobelidine*, $C_{20}H_{25}O_2N$, are alkaloids having about the same properties but only half the strength of the alpha-lobeline and therefore are not in the market.

lobelism (lo-be'lizm). Poisoning by lobelia.

lobengulism (lo-ben'gu-lizm). A disorder characterized by development of subcutaneous fat and with decrease of the sexual function.

lobinol (lo'bin-ol). The active and poisonous principle of poison oak (*Rhus diversiloba*).

lobopodium (lo-bo-po'de-um), pl. *lobopodia*. A pseudopodium consisting of a more or less fluid extrusion of the body of the organism. See *filopodium*.

Lobstein's cancer, ganglion, etc. (lōb'stēnz) [Johann Georg Lobstein, surgeon in Strassburg, 1777–1835]. See *cancer, ganglion*, etc.

lobular (lob'u-lar) [*L. lobula'ris*]. Of or pertaining to a lobule.

lobulated (lob'u-la-ted). Made up of or divided into lobules.

lobule (lob'yūl) [*L. lob'ulus*, dim. of *lob'us* lobe]. A little lobe or one of the primary divisions of a lobe. **crestic l.**, the square lobe of the cerebellum. **fusiform l.**, a convolution on the median aspect of the brain, below the collateral fissure. **petrosal l.** Same as *flocculus*.

lobulette (lob-u-let') [Fr.]. 1. A minute lobule. 2. Any one of the primary divisions of a lobule.

lobulose, lobulous (lob'u-lōs, lob'u-los). Having lobules.

lobulus (lob'u-lus), pl. *lob'uli* [L.]. A lobe. 1. **auric'ulae** [B N A], the portion of the auricula caudal to the antitragus and the incisura intertragica. It contains tough areolar and fatty tissue but no cartilage. 1. **biven'ter** [B N A], a lobule on the inferior surface of the hemisphere of the cerebellum situated between the tonsilla cerebelli and the lobulus semilunaris inferior. 1. **centra-lis cerebel'li** [B N A], the portion of the vermis between the lingula and the culmen. It is in the anterior cerebellar notch and it rests on the anterior medullary velum. **lobuli cortica'les re'nis** [B N A], more or less distinctly marked small polygonal areas on the surface of a kidney. Each area corresponds to a medullary ray together with its attached malpighian corpuscles and tubules. 1. **epidid'yimidis** [B N A], the convoluted outer end of one of the ductuli efferentes testis. It forms a nodule on the head of the epididymus. **lobuli glan'dulae thyroi-deae** [B N A], irregular areas on the surface of

the thyroid gland produced by the entrance into the gland of fibrous trabeculae from the sheath.

1. gracilis anterior, the posterior portion of the lobulus biventer. **1. gracilis posterior**, the anterior portion of the lobulus semilunaris inferior. **lobuli hep'atis** [B N A], small irregular more or less distinct masses 1 to 2½ mm. in diameter which closely packed together make up liver tissue. They are composed of cells arranged in radial cords and a network of capillaries.

1. paracentralis [B N A], a lobe on the medial surface of the pallium which is contiguous with the central gyri. It lies above the sulcus cinguli, in front of the pars marginalis sulci cinguli, and behind the superior frontal gyrus. **1. parietalis inferior** [B N A], the lobule which forms the posterior part of the lateral portion of the parietal lobe of the cerebrum. It lies below the interparietal sulcus, above the posterior ramus of the lateral cerebral fissure and back of the retrocentral sulcus. It includes the supramarginal and the angular gyri. **1. parietalis superior** [B N A], the posterior part of the upper portion of the parietal lobe of the brain. It lies back of the pars marginalis sulcus cinguli, in front of the parieto-occipital fissure, and above the interparietal sulcus. **lobuli pulmo'num** [B N A], more or less distinctly outlined units of lung tissue. Each lobulus has its own bronchial and vascular system, is from 5 to 12 mm. in diameter, and is separated from its fellows by connective tissue. **1. quadrangul'aris cerebell'i** [B N A], the lobule which constitutes the greater part of the superior surface of the cerebellar hemisphere. It is situated above the superior semilunar lobule, back of the ala lobuli centralis, and is continuous medially with the monticulus. **1. semilunaris inferior** [B N A], a lobule which constitutes the lower back part of the cerebellum. It is separated from the superior semilunar lobule behind by the horizontal sulcus and from the biventral lobule in front by the inferior sulcus. **1. semilunaris superior** [B N A], the lobule which constitutes the most lateral portion of the cerebellar hemisphere. It is separated from the quadrangular lobe above by a cerebellar sulcus and from the inferior semilunar sulcus below by the horizontal sulcus. **lobuli tes'tis** [B N A], 250 to 300 subdivisions of the testicular substance. Each pyramid has its base against the albuginea and its apex at the mediastinum and is composed largely of tubuli seminiferi. **lobuli thym'i** [B N A], smaller subdivisions of the lobes of the thymus separated by fibrous trabeculae.

lobus (lo'bus) [gen. and pl., lo'bi]. A more or less well-defined portion of any organ and especially of the brain and glands. Lobes are marked by fissures sulci, connective tissue septa, and by their shape. **1. anterior cerebell'i**, See *anterior lobe*, under *lobe*. **1. anterior hypophys'eos** [B N A], the anterior, larger, and glandular portion of the hypophysis. **1. biventralis**, the cuneiform lobe of the cerebellum. **1. cacuminis**, the presemilunar lobe of the cerebellum. **1. caudatus (spigeli)** [B N A], a small lobe on the posterior surface of the liver. It is above the porta hepatis, and between the fossa venae cavae on the right and the fossa ductus venosi on the left. **1. centralis**. See *island of Reil*. **lobi cereb'ri** [B N A], the chief divisions of the pallium are lobus frontalis, occipitalis, parietalis, and temporalis; minor divisions are the limbic, olfactory, and quadrate lobes as well as the insula and preuncus. **1. cli'vis**, the quadrangular lobe of the cerebellum. **1. cul'minis**. Same as *culmen*. **1. cuneiformis**. Same as *l. biventralis*. **1. gracilis posterior**, the posterior slender lobe of the cerebellum. **1. frontalis** [B N A], the anterior portion of the pallium. It extends from the frontal pole to the sulcus centralis. **1. hep'atis dext'er** [B N A], the large right lobe of the liver. It is separated from the left lobe above by the falciform ligament and below by the left sagittal fossa.

1. hep'atis sinis'ter [B N A], the smaller left lobe of the liver. It is separated from the right lobe on the convex surface by the falciform ligament and on the lower surface by the left sagittal fossa. **1. inferior pulmo'nis** [B N A], the larger lower portion of a lung. It extends from the base to the incisura interlobaris. **lobi mam'mae** [B N A], fifteen to twenty separate portions of the mammary gland, each of which empties into its own ductus lactiferi. **1. medius prosta'tae** [B N A], a name given to the isthmus of the prostate when it is enlarged and prominent. **1. medius pulmo'nis** [B N A], a small lobe constituting the lower front portion of the right lung. It extends from the interlobar to the accessory incisura. **1. occipitalis** [B N A], the posterior portion of the cerebral hemisphere. It extends from the posterior pole to the parieto-occipital fissure. **1. olfact'orius** [B N A], a structure on the lower surface of the frontal lobe of the brain which in man is somewhat rudimentary. It consists of the olfactory bulb, tract, and trigone. **1. parietalis** [B N A], the upper central lobe of the pallium. It is separated from the temporal lobe below and the frontal lobe in front by the posterior and ascending rami, respectively, of the lateral cerebral fissure and from the occipital lobe behind by the parieto-occipital fissure. **lobi placen'tae**, well-marked areas on the uterine surface of the placenta produced by the connective tissue septa. **1. posterior hypophys'eos** [B N A], the posterior, smaller and neural portion of the hypophysis. **1. pyramida'lis gland'ulae thyreo'id'ae** [B N A], an occasional third lobe of the thyroid gland which extends upward from the isthmus across the thyroid cartilage to the hyoid bone and is the remains of the thyroid stalk in the fetus. **1. quadrangul'aris cerebell'i** [B N A], the principal portion of the upper half of the cerebellar hemisphere. It is separated from the superior semicircular lobule by the superior cerebellar sulcus, it is continuous medially with the monticulus, and it is divided into anterior and posterior portions by the superior collateral sulcus. **1. quadratus hep'atis** [B N A], a small lobe on the anterior portion of the inferior surface of the liver. It lies anterior to the porta and between the ligamentum teres hepatis on the left and the fossa vesicae felleae on the right. **lobi rena'les** [B N A], the units of the kidney. Each consists of a pyramid and its surrounding cortical substance. The division of the kidney into lobes is more distinctly marked in some animals and in infants than in adult man. **1. superior pulmo'nis** [B N A], the upper and smaller lobe of the lung. It lies in front of and above the incisura interlobaris. **1. temporalis** [B N A], the lower lateral lobe of the cerebral hemisphere. It lies below the posterior ramus of the lateral cerebral fissure, lateral to the collateral fissure, and merges behind with the occipital lobe.

local (lo'kal) [L. *loca'lis*]. Restricted to or pertaining to one spot or part; not general.

localization (lo'kal-iz-a'shun). 1. The determination of the site or place of any process or lesion. 2. Restriction to a circumscribed or limited area. **cerebral l.**, the determination of the situation of the various centers of the brain; also the limitation of the various cerebral faculties to a particular center or organ of the brain.

localized (lo'kal-iz'd). Not general; restricted to a limited region or to one or more spots.

localizer (lo'kal-i-zer). An instrument for locating solid particles in the eyeball by means of the roentgen ray.

Loc. dol. Abbreviation for *L. lo'co dol'en'ti*, to the painful spot.

lochia (lo'ke-ah) [λόχια]. The vaginal discharge that takes place during the first week or two after childbirth. **1. al'ba**, the whitish discharge normal after about the first six days after child-

- birth. 1. *crū'enta*, 1. *ru'bra*, the reddish, sanguineous flow of the first week after delivery.
1. *sero'sa*, a serous or ichorous lochial discharge.
- lochial** (lo'ke-al). Pertaining to the lochia.
- lochiocolpos** (lo'ke-o-kol'pos) [*lochía* + κόλπος vagina]. Distention of the vagina by retained lochia.
- lochiocyte** (lo'ke-o-sit) [*lochía* + κύτος cell]. Any one of the characteristic decidual cells of the lochia.
- lochiometra** (lo'ke-o-me'trah) [λόχια lochia + μήτρα uterus]. The retention or nondischarge of the lochia.
- lochiometritis** (lo'ke-o-me-tri'tis) [*lochía* + *metritis*]. Puerperal metritis.
- lochiopyra** (lo-ke-op'ir-ah) [λόχια lochia + πύρ fever]. Puerperal fever.
- lochiorrhagia** (lo'ke-or-a'je-ah) [λόχια lochia + ρηγνύναι to burst forth]. Same as *lochiorrhœa*.
- lochiorrhœa**, **lochiorrhœa** (lo'ke-or-e'ah) [*lochía* + ροία flow]. An abnormally free lochial discharge.
- lochioschesis** (lo-ke-os'ke-sis) [*lochía* + σχέσις retention]. Retention of the lochia.
- lochometritis** (lo'ko-me-tri'tis) [λόχος childbirth + *metritis*]. Puerperal metritis.
- lochoeperitonitis** (lo'ko-per-e-to-ni'tis) [λόχος childbirth + *peritonitis*]. Puerperal peritonitis.
- Locke's solution** (lòks) [Frank Spiller *Locke*, contemporary British physician]. See under *solution*.
- lock finger** (lòk fīng-er). See *finger*.
- lockjaw** (lòk'jaw). Tetanus or trismus.
- Lockwood's ligament** (lòk'wudz) [Charles Barrett *Lockwood*, English surgeon, 1858-1914]. See *ligament*.
- loco** (lo'ko) [Sp. "insane"]. 1. A name of various leguminous plants of the genera *Astragalus*, *Hosackia*, *Sophora*, and *Oxytropis*: poisonous to horses, cattle, and sheep. 2. Same as *locoism*. 3. An animal affected with locoisim.
- locoism** (lo'ko-izm). A disease of horses, cattle, and sheep ascribed to poisoning by loco. Called also *loco disease* and *loco poisoning*.
- locomotion** (lo-ko-mo'shun) [L. *locus* place + *move're* to move]. Movement from one place to another. **quadruped l.**, walking upon all fours: the only mode possible in certain extreme cases of tuberculosis of the spinal column.
- locomotive** (lo-ko-mo'tiv). Pertaining to locomotion.
- locomotor** (lo-ko-mo'tor). Of or pertaining to locomotion. 1. *ataxia*. See *ataxia*.
- locomotorial** (lo'ko-mo-to're-al). Pertaining to the locomotorium.
- locomotorium** (lo'ko-mo-to're-um). The motive apparatus of the body.
- locomotory** (lo-ko-mo'tor-e). Pertaining to locomotion.
- ocular** (lòk'u-lar). Pertaining to a locus.
- loculate** (lòk'u-lāt). Divided into loculi.
- loculus** (lòk'u-lus), pl. *loc'uli* [L.]. A small space or cavity.
- locum**, 1. *tenens*, 1. *tenent* (lò'kum, lò'kum ten'enz, lò'kum ten'ent). A practitioner who temporarily takes the place of another.
- locus** (lò'kus). L. for *place*. 1. *caeru'leus* [B N A], 1. *cine'reus*, 1. *ferrugin'eus*, a pigmented eminence in the superior angle of the floor of the fourth ventricle. 1. *mino'ris resistentiæ*, a spot of lessened resistance; that organ or part which is most liable to take on a disease condition in consequence of exposure to any morbid influence. 1. *ni'ger*, a dark spot in the section of the crus cerebri between the tegmentum and crusta. 1. *perforatus ante'rior*, a space on the inside of the fissure of Sylvius. 1. *perforatus poste'-*
- rior**, a similar space just in front of the pons. 1. *ru'ber*. See *red nucleus*, under *nucleus*.
- lodal** (lò'dal). A preparation made by oxidizing laudanum: used in uterine hemorrhage.
- lodua** (lò-du'ah). The fruit of a plant: used as a remedy for tapeworm.
- Loeffle'ria neverman'ni**. An organism isolated by Frosch and considered by him to be the cause of foot and mouth disease.
- loemology**, **loimology** (le-mol'o-je, loi-mol'o-je) [λοιμός plague + λόγος word]. Same as *lemology*.
- loempe** (lem'pe). Beriberi.
- Loeschia** (lësh'e-ah). The name given by Chatton and Lalung-Bonnaire in 1912 to the parasitic amebæ having no contractile vacuoles. See *Entamoeba*. 1. *coli*. Same as *Entamoeba coli*. 1. *gingiva'lis*, *Entamoeba gingivalis*. 1. *histolytica*, *Entamoeba histolytica*.
- loeschiasis** (lësh-i'as-is). The disease condition due to infection with parasites of the genus *Loeschia*; amebiasis.
- Löffler's bacillus, serum, stain**, etc. (lef'lerz) [Friedrich A. J. *Löffler*, German bacteriologist, 1852-1915]. See *bacillus, serum, stain*, etc.
- Löffleria** (lef-le're-ah) [after *Löffler*]. A disease in which the diphtheria (Klebs-Löffler) bacillus is present without the ordinary symptoms of diphtheria.
- lofotol** (lof'o-to). A preparation of cod liver oil containing carbon dioxide.
- logadectomy** (log-ad-ek'to-me) [λογάδες conjunctivæ + ἐκτομή excision]. Excision of a portion of the conjunctiva.
- logaditis** (log-ad-i'tis) [λογάδες conjunctivæ + *itis* inflammation]. Inflammation of the sclera.
- logadoblennorrhœa** (log'ad-o-blen-o-re'ah) [λογάδες conjunctivæ]. Egyptian conjunctivitis (C. Graefe).
- logagnosia** (log-ag-no'ze-ah) [λόγος word + *a* priv. + γνώσις knowledge]. Aphasia, alogia, or other central word defect.
- logagraphia** (log-ag-raf'e-ah) [λόγος word + *a* neg. + γράφειν to write]. Inability to express ideas in writing.
- logamnesia** (log-am-ne'ze-ah) [λόγος word + ἀμνησία forgetfulness]. Word deafness or word blindness.
- logaphasia** (log-af-a'ze-ah) [λόγος word + *a*phasia]. Inability to express ideas in speech, due to brain disease.
- logasthenia** (log-as-the'ne-ah) [λόγος word + *asthenia*]. Disturbance of that faculty of the mind which deals with speech comprehension.
- logokophosis** (log'o-kof-o'sis) [λόγος word + κώφωσις deafness]. Word deafness; inability to comprehend spoken language.
- logomania** (log-o-ma'ne-ah) [λόγος word + μανία madness]. 1. Talkative insanity. 2. Aphasia.
- logoneurosis** (log'o-nu-ro'sis) [λόγος word + *neurosis*]. Any neurosis with disorder of the speech.
- logopathy** (log-op'ath-e) [λόγος word + πάθος illness]. Any disorder of speech of central origin.
- logopedia**, **logopedics** (log-o-pe'de-ah, log-o-pe'diks) [λόγος word + *orthopedics*]. The study and treatment of speech defects.
- logoplegia** (log-o-ple'je-ah) [λόγος word + πληγή stroke]. 1. Any paralysis of the speech organs. 2. Inability to speak, while words are remembered.
- logorrhœa**, **logorrhœa** (log-or-e'ah) [λόγος word + ροία flow]. Excessive or abnormal volubility.
- logospasm** (log'o-spazm) [λόγος word + σπasmus spasm]. The spasmodic utterance of words.
- logwood** (log'wood). See *Haematoxylon*.
- Lohnstein's saccharimeter** (lôn'stinz) [Theodor *Lohnstein*, German physician, 1866-1918]. See *saccharimeter*.

loiasis (lo-i'as-is). Infestation with *Filaria loa*.

loimic (loi'mik) [λοῖμός plague]. Pertaining to the plague.

loimographia (loi-mo-gra'fe-ah) [λοῖμός plague + γράφειν to write]. A description of the plague.

loimology (loi-mol'o-je). See *lemology*.

loin (loin) [L. *lumbus*]. The part of the back between the thorax and the pelvis.

loliism (lo'le-izm). Lolism.

lolism (lo'lizm). Poisoning by seeds of *Lo'tium temulen'tum*, or poisonous dandel.

lomadera (lo-mad-e'rah). A variety of Texas cattle fever seen in Venezuela.

Lombardi's sign (lom-bar'dēz) [Antonio Lombardi, physician in Naples]. See under *sign*.

lomi-lomi (lo'me-lo'me). A shampooing process practised in Polynesia.

London paste (lun'dun). See *paste*.

Long's coefficient [John Harper Long, American physician, 1856-1927]. See *coefficient*.

longevity (lon-jev'it-e) [L. *longus* long + *ae'vum* age]. Long life; the condition or quality of being long lived.

longilineal (lon-je-lin'e-al). Built on long, narrow lines; dolichomorphous.

longimanous (lon-je-man'us). Having long hands.

longiradiata (lon-ji-ra'de-at). Having long radiations; a term applied to certain neuroglia cells.

longissimus dor'si (lon-jis'im-us) [L. "longest of the back"]. See *muscles, table of*.

longitudinal (lon-jit-u'din-al) [L. *longitu'do* length]. Lengthwise; parallel to the long axis of the body.

longitypical (lon-je-tip'ik-al). Same as *longilinal*.

longsightedness (long-sit'ed-nes). See *hyperopia*.

longus cap'itis (long'us) [L. "long (muscle) of the neck"]. See *rectus cap'itis anticus major*, in *muscles, table of*. 1. *col'li*. See *muscles, table of*.

Loomis' mixture (loo'mis) [Alfred L. Loomis, physician in New York, 1831-1895]. See *mixture*.

loop (loop). 1. A turn or sharp curve in a cordlike structure. 2. Any one of a set of corneal nerve end-organs somewhat resembling the hooks of the same structure. **archoplastic l.** Same as *pseudochromosome*. **Gerdy's interauricular l.**, a small muscular bundle in the interauricular septum of the heart. **Henle's l.**, a U-shaped turn in a uriniferous tubule of the kidney. **Hyrtil's l.**, an occasional looplike anastomosis between the right and left hypoglossal nerves in the geniohyoid muscle. **lenticular l.**, nerve fibers extending between the lemniscus and the lenticular nucleus.

loopful (loop'ful). The quantity of liquid that can be held within the loop of platinum wire used in transferring bacterial cultures.

Loos'ia dobrogien'sis. *Metagonimus yokogawai*.

L. O. P. Abbreviation for *left occipitoposterior* position of the fetus in utero.

lophius (lo'fe-us) [λόφος a ridge]. A ridge between two furrows on the ventricular surface of the cerebrum.

lophodont (lof'o-dont) [λόφος ridge + ὀδούς tooth]. Having the crown of the molar teeth in the form of ridges or crests.

lophophorine (lo-f'o-rin). A poisonous alkaloid $C_{12}H_{17}NO_3$, from *Anhalonium lewinii*, having effects similar to those of mezcaine.

Lophophy'ton gallina'rum. A variety of achorion which causes comb disease in fowls.

lophophytosis (lo-fof-i-to'sis). See *comb disease, under disease*.

Lophotrichea (lo-fot-trik'e-ah) [see *lophotrichous*]. A group of bacteria, including those forms which have a tuft of cilia at one pole.

lophotrichous (lo-fot'rik-us) [λόφος tuft + θρίξ hair]. Having a tuft of flagella: said of microorganisms.

lordoma (lor-do'mah). See *lordosis*.

lordoscoliosis (lor''do-sko-le-o'sis) [*lordosis* + *scoliosis*]. Lordosis complicated with scoliosis.

lordosis (lor-do'sis) [λορδῶν to bend]. Curvature of the spinal column with a forward convexity.

lordotic (lor-dot'ik). Relating to or affected with lordosis.

lorenit (lo'ren-it). A substance, $OH.C_6HI.(CH_3)_3.N.SO_2.OH$, in yellow plates or needles, isomeric with iodo-oxyquinoline sulphonate (loretin, yatren, etc.): it is used as a wound dressing.

Lorenz's operation, sign (lo'rentz) [Adolf Lorenz, Austrian surgeon, born 1854]. See *operation and sign*.

Loreta's operation (lor-e'tahz) [Pietro Loreta, Italian surgeon, 1831-1889]. See *operation*.

loretin (lo're'tin) [after Loreta, a surgeon]. A yellow, crystalline, antiseptic powder, $OH.C_6HI.(CH_3)_3.N.SO_2.OH$, or meta-iodo-ortho oxyquinoline-sulphonic acid. It is sparingly soluble in water and alcohol, and insoluble in ether and oils, though it forms emulsions with oily fluids. It is used externally like iodoform. 1. **bismuth** is used in 10 per cent ointment and in powder in various skin troubles.

lorgnette, lorgnon (lorn-yet', lorn-yon') [Fr.]. A double eye-glass which can be shut into a frame that serves as a handle; also an opera glass.

Loring's ophthalmoscope (lor'ingz) [Edward Greely Loring, American oculist, 1837-1888]. See *ophthalmoscope*.

losophan (los'o-fan). Metacresol tri-iodide, $CH_3C_6H_3I_3.OH$, a crystalline substance, insoluble in water, and used in eczema and syphilis in 10 per cent solution and in ointment.

loss. In life insurance, a death claim.

Lot. Abbreviation for L. *lo'tio*, lotion.

lotahiston (lo-tah-his'ton). A histon found in the spermatozoa of the frog.

lotase (lo'tās). An enzyme from *Lo'tus arab'icus*; it splits lotusin into lotoflavine, hydrocyanic acid, and dextrose.

lotio (lo'she-o). Latin for *lotion*. 1. **adstrin'gens**, Warren's styptic: a mixture of sulphuric acid, 5 parts; alcohol, 4 parts; and oil of turpentine, 4 parts. 1. **hydrar'gyri fla'va**, yellow mercurial lotion or yellow wash. 1. **hydrar'gyri ni'gra**, black mercurial lotion or black wash.

lotion (lo'shun) [L. *lo'tio*]. A liquid preparation used for washing; a wash. **Granville's l.**, a lotion composed of stronger water of ammonia, spirit of camphor, and spirit of rosemary. **Hardy's l.**, a lotion for removing freckles containing 1 part of corrosive sublimate dissolved in alcohol, 4 parts each of zinc sulphate and lead acetate, and 250 parts of water.

lotsil (lot'sil). A proprietary antipyretic, analgesic, and anodyne mixture.

louchettes (loo-shets') [Fr.]. A kind of goggles worn for the correction of strabismus.

Louis' angle (loo-ēz') [Antoine Louis, French surgeon, 1723-1792]. See *angle*.

Louis' law (loo-ēz') [Pierre Charles Alexander Louis, French physician, 1787-1872]. See *law*.

loupe (loop) [Fr.]. A convex lens for magnifying or for concentrating light upon an object. **corneal l.**, a magnifying lens, properly mounted, for examining the cornea of the eye.

louping ill. See *thorier ill*.

louse (lows) [L. *pedic'ulus*]. A general name for various degraded parasitic insects; the true lice, which infest mammals belong to the suborder *Anoplura*. Those which are parasitic upon man

are *Pediculus capitis*, or head louse; *P. corporis*, the body or clothes louse; and *P. pubis*, or crab louse, which lives in the hair upon the pubes and in the eyelashes and eyebrows. The causal organisms of typhus fever, relapsing fever, trench fever, and plague are transmitted by the bite of lice. **biting l.**, Mallophaga. **body l.**, *Pediculus corporis*. **chicken l.** See *Lernaeus*. **crab l.**, *Phthirus pubis*. **goat l.** See *Linognathus stenopsis*. **horse l.** See *Trichodectes pilosus*.

lousewort (lows'wert). See *Staphisagria*.

lousiness (low'ze-nes). Infestation with lice; pediculosis or phthiriasis.

loutrotherapy (lu-tro-ther'ap-e) [λουτρόν bath + θεραπεία treatment]. The therapeutical use of baths, especially carbonated baths.

lovage (luv'aj). The umbelliferous plant, *Levisticum officinale*, and its aromatic, carminative, and emmenagogue root. Dose of fluidextract, 30-120 minims (2-8 cc.).

Löwe's ring, test. See under *ring* and *tests*.

Löwenberg's canal (la'wen-bergz) [Benjamin Benno Löwenberg, German surgeon, born 1836]. See under *canal*.

Löwenthal's reaction, tract (le'ven-talz) [Wilhelm Löwenthal, German physician, born 1850]. See *reaction, tract*.

Lower's rings, tubercle (lo'erz) [Richard Lower, F.R.S., English anatomist, 1630-1691]. See *ring* and *tubercle*.

loxa bark (loks'ah). Pale cinchona bark.

loxarthron (loks-ar'thron) [λοξός oblique + ἄρθρον joint]. An oblique deformity of a joint without luxation.

loxophthalmus (loks-of-thal'mus) [λοξός oblique + ὄφθαλμος eye]. Strabismus.

loxopterygine (loks-op-ter'ij-in). A white, amorphous alkaloid, $C_{28}H_{34}N_9O_2$, from *Loxopterygium lorenzii*.

Loxopterygium (loks''op-ter-ij'e-um) [λοξός oblique + πτερόγιον wing]. See *quebracho*.

loxotic (lok-sot'ik) [λοξός oblique]. Slanting.

loxotomy (loks-of-o-me) [λοξός oblique + τομή cutting]. Oblique amputation.

Loxotrema ova'tum. See *Metagonimus yokogawai*.

lozenge (loz'enj) [Fr.]. A form of medicated troche.

L. B. C. P. Abbreviation for *Licentiate of the Royal College of Physicians*.

L. R. C. S. Abbreviation for *Licentiate of the Royal College of Surgeons*.

L. R. C. S. E. Abbreviation for *Licentiate of the Royal College of Surgeons, Edinburgh*.

L. R. C. V. S. Abbreviation for *Licentiate of the Royal College of Veterinary Surgeons*.

L. S. A. 1. Abbreviation for *left sacro-anterior* position of the fetus in utero. 2. *Licentiate of Society of Apothecaries*.

L. S. P. Abbreviation for *left sacroposterior* position of the fetus in utero.

Lu. Chemical symbol for *lutecium*.

luargol (lu-ar'gol) [lues + argol]. An orange-colored powder, bromo-argento-ammoniated arseno-benzene: used somewhat like arsphenamine in the treatment of syphilis and trypanosomiasis. Called also 102.

luatol (lu'a-tol). Potassium and sodium bismuth tartrate in a 10 per cent aqueous dextrose solution: used for the treatment of syphilis. Dose by intramuscular injection, 0.1 Gm.

Lubarsch's crystals (loo'barshs) [Otto Lubarsch, German pathologist, born 1860]. See *crystal*.

lubraseptic (lu-brah-sep'tik). A disinfectant jelly prepared from chondrus and containing boric acid and formaldehyde.

lubrichondrin (lu-brik-on'drin). A proprietary surgical and obstetrical lubricant made from *Chondrus crispus*, eucalyptol, and formaldehyde.

Luc's operation (lics) [Henri Luc, French laryngologist, 1855-1925]. Caldwell-Luc operation. See *operation*.

Lucas's probe (loo'kāz) [Johann C. A. Lucas, otologist in Berlin, 1835-1911]. See under *probe*.

Lucas's glau'ca. A South American plant: its seed is said to destroy the hair of animals that eat it, to abolish completely the sexual appetite, and to cause remarkable fatness. The bark and root are used as emmenagogues. It is known as wild tamarind and jambul.

Lucas's sign (loo'kas) [Richard Clement Lucas, English physician, 1846-1915]. Enlargement of the abdomen in rickets.

Lucas-Championnière's disease (le-kah-'shaw-pe-on-e-airz) [Just Marie Marcellin Lucas-Championnière, French surgeon, 1843-1913]. Pseudo-membranous bronchitis.

Lucatello's sign (loo-kat-el'ēz). See under *sign*.

Luciani's triad (loo-se-an'ēz) [Luigi Luciani, Italian Physiologist, 1840-1919]. See *triad*.

lucid (lu'sid) [L. *lucidus* clear]. Clear; not obscure; as, *lucid* interval.

lucidification (lu-sid'if-ik-a'shun) [L. *lucidus* clear + *facere* to make]. The clearing up of the protoplasm of cells.

lucidity (lu-sid'it-e). The quality or state of having a clear mind; clearness of the mind.

luciferase (lu-sif'er-ās). An enzyme produced by *Pho'las dac'tylus*, a luminiferous marine mollusk. When its aqueous solution is mixed with the alcoholic solution of luciferin, light is produced.

luciferin (lu-sif'er-in). A principle produced by *Pho'las dac'tylus*, a luminiferous marine mollusk. Combined with luciferase it emits light.

lucifugal (lu-sif'u-gal) [L. *lux* light + *fuga're* to flee]. Avoiding bright light.

Lucilia (lu-sil'e-ah). A genus of flies which have a blue or green metallic iridescence. **L. cae'sar** is the common "gold-fly" or "sheep maggot"

which infests sheep; its larvae have been found in the intestine and in myiasis of the skin. **L. no'bilis** has been found in the external meatus. **L. regi'na** has been found in wounds and in myiasis. **L. serica'ta**, a sheep maggot fly which lays its eggs in wounds of sheep and in soiled wool.

lucium (lu'se-um). A chemical element discovered in 1896.

Lücke's test (lek'ēz) [George Albert Lücke, German surgeon, 1829-1894]. See under *tests*.

lucotherapy (lu-ko-ther'ap-e) [L. *lux* light + *therapy*]. The treatment of disease by rays of light.

Ludloff's sign (lood'lawfs) [Karl Ludloff, surgeon in Breslau, born 1864]. See under *sign*.

Ludwig's angina (lood'vizg) [Wilhelm Friedrich von Ludwig, German surgeon, 1790-1865]. See *angina*.

Ludwig's angle (lood'vizg) [Daniel Ludwig, German anatomist, 1625-1680]. See under *angle*.

Ludwig's ganglion (lood'vizg) [Karl Friedrich Wilhelm Ludwig, German physiologist, 1816-1895]. See *ganglion*.

ludyl (lu'dil). A proprietary organic arsenical preparation: used somewhat like arsphenamine in the treatment of syphilis and protozoal diseases.

Luer's syringe (lu'erz). See under *syringe*.

lues (lu'ez) [L.]. The plague: more frequently, syphilis. 1. *nervo'sa*, syphilis with marked nervous lesions. 1. *vene'rea*, syphilis.

Lucilia caesar and its larva.

luesan (lu'es-an). A compound of mercury and glidin: used in syphilis.

luetic (lu-et'ik). Pertaining to or affected with syphilis.

luetin (lu-et'in) [L. *lu'es* syphilis]. An extract of a killed culture of several strains of *Treponema pallidum*: used in the skin test for syphilis. See *Noguch's luetin reaction*, under *reaction*.

luetism (lu-et-izm). An attenuated form of syphilis not reactive to tests.

Lugol's caustic, solution (lu'golz) [J. G. A. Lugol, physician in Paris, 1786-1851]. See *caustic* and *solution*.

lumalgin (lu-mal'jin). A proprietary analgesic mixture of phenobarbital and acetylsalicylic acid.

lumbago (lum-ba'go) [L. *lum'bus* loin]. Pain in the lumbar region; backache. **ischemic l.**, pain in the back due to vascular causes.

lumbar (lum'bar). Pertaining to the loins.

lumbarization (lum-bar-iz-a'shun). A condition in which the first sacral vertebra is coalesced with the transverse processes of the fifth lumbar vertebra.

lumbo-abdominal (lum'bo-ab-dom'in-al). Pertaining to the loins and abdomen.

lumbocolostomy (lum'bo-ko-los'to-me) [L. *lum'bus* loin + *colostomy*]. The operation of forming a permanent opening into the colon by an incision through the lumbar region.

lumbocolotomy (lum'bo-ko-lot'o-me) [L. *lum'bus* loin + *colotomy*]. An incision into the colon through the loin.

lumbocostal (lum-bo-kos'tal) [L. *lum'bus* loin + *cos'ta* rib]. Pertaining to the loin and ribs.

lumbodorsal (lum-bo-dor'sal). Pertaining to the lumbar and dorsal regions.

lumbodynia (lum-bo-din'e-ah) [L. *lum'bus* loin + *δύσπν* pain]. Lumbago.

lumbo-iliac (lum-bo-il'e-ak). Pertaining to the loin and ilium.

lumbo-ovarian (lum'bo-o-va're-an). Connecting the loins and the ovary.

lumbosacral (lum-bo-sa'kral). Pertaining to the loins and sacrum.

lumbricalis (lum-brik-a'lis) [L. *lum'bus* loin]. See *muscles*, *table of*.

lumbricide (lum'bris-id) [L. *lumbricus* earthworm + *caedere* to kill]. Destroying lumbricoid worms: also a drug so acting.

lumbricin (lum'bris-in). A hemolytic substance extracted from earthworms.

lumbricoid (lum'brik-oid) [L. *lumbricus* earthworm + *είδος* form]. Resembling the earthworm.

lumbrocosis (lum-brik-o'sis). The condition of being infested with lumbrici.

Lumbricus (lum-bri'kus), pl. *lumbrici* [L.]. 1. A genus of annelids, including the earthworm. 2. The ascaris (*g. v.*) or round intestinal worm.

lumen (lum'en). Latin for *loin*.

lumen (lum'en), pl. *lumina* [L. "light"]. 1. A transverse section of the clear space within a tube. 2. The unit of light flux: it is the flux emitted in unit solid angle by a uniform point source of one international candle. Called also *meter candle*. **residual l.**, the remains of the original lumen in the pituitary pouch.

luminal (lu'min-al). 1. Pertaining to the lumen of a tubular structure. 2. See *phenobarbital*. 1. **so-dium**, the monosodium salt of luminal: used as a hypnotic in doses of 1-2 grains (0.06-0.12 Gm.).

luminescence (lu-min-es'ens). The property of giving off light without showing a corresponding degree of heat.

luminiferous (lu-min-if'er-us) [L. *lu'men* light + *ferre* to bear]. Conveying light or propagating those vibrations which constitute light.

luminophore (lu'min-o-för) [L. *lu'men* light + *φóρος* bearing]. A chemical group which gives the property of luminescence to organic compounds.

lumpy jaw (lum'pe jaw). See *actinomycosis*.

lunacy (lu'nas-e) [L. *lu'na* moon]. Insanity; formerly supposed to be sometimes due to or affected by the influence of the moon.

lunar (lu'nar) [L. *luna'ris*; *lu'na* moon, also silver]. Pertaining to or containing silver.

lunare (lu-na're). The semilunar bone.

lunargen (lu-nar'jen). A proprietary astringent and antiseptic, a combination of silver with a vegetable protein.

lunatic (lu'nat-ik) [L. *lunat'icus*; from *lu'na* moon]. 1. Insane; moonstruck. 2. An insane person.

lunatism (lu'nat-izm) [L. *luna* moon]. 1. A disease varying with the lunar changes. 2. Sleep walking during moonlight.

Lundvall's blood crisis (loond'valz) [Halvar Lundvall, Swedish neurologist]. See under *crisis*.

lung (lung) [L. *pul'mo*; pl. *pulmo'nes*]. The organ of respiration; either one of a pair of respiratory organs which effect the aeration of the blood. The lungs occupy the lateral cavities of the chest, and are separated from each other by the heart and mediastinal structures. The right lung has three lobes and the left two. The lung consists of an external serous coat (the visceral layer of the pleura), subserous areolar tissue, and the lung parenchyma. The latter is made up of lobules, which are bound together by connective tissue. A primary lobule consists of a bronchiole and infundibulum, or air passage, communicating with many air cells, each air cell being surrounded by a network of capillary blood vessels. 1. **fever**, pneumonia. **fibroid l.**, a lung affected with chronic interstitial pneumonia. 1. **flake**. See *Distoma ringieri*. **honeycomb l.**, a lung containing numerous small pus-filled cavities. **masons' l.**, a lung affected with pneumokoniosis due to the inhalation of lime, gypsum, etc. **miners' l.**, anthracosis. 1. **plague**. See *pleuropneumonia* (2d def.). **trench l.**, a condition observed in the trench es in the World War, characterized by attacks of rapid defecation.

lungmotor (lung'mo-tor). An apparatus for forcing air or air and oxygen into the lungs in cases of asphyxia.

lunosol (lu'no-sol). A preparation of colloidal silver chloride in heavy syrup: used as an antiseptic and germicide in the eye, ear, nose, throat, and genitourinary tract.

lunula (lu'nu-lah) [L. dim. of *lu'na* moon]. 1. The whitish crescent at the root of the nail; 1. *un'guis* [B N A]. 2. Semilunar ulcer of the cornea (Hirschberg), a depressed area on the frons of a dipterous insect just above the antennae. 1. **val'vula semiluna'ris**, the free edge of the semilunar valve at each side of the corpus arantii.

lupanine (lu'pan-in). A poisonous alkaloid, C₁₅H₂₄N₂O, from *Lupi'nus angustifo'lius* and other species of *Lupinus*.

lupeose (lu'pe-ös). A tetrasaccharide from the seeds of lupines.

lupetazin (lu-pet'a-zin). Dimethylpiperazin, a white, crystalline powder, HN(CH₂.CHCH₃)₂NH: used in gout and rheumatism. Dose, 15 grains (1 Gm.).

lupia (lu'pe-ah). An old term for encysted tumor of the eyelids (Himley).

lupiform (lu'pif-orm) [L. *lu'pus* + *for'ma* form]. 1. Resembling lupus. 2. Resembling a wen.

lupine (lu'pin) [L. *lupi'nus*]. Any leguminous plant of the genus *Lupi'nus*: many species are cultivated as forage plants, and the seeds of some are used as pulse for food, but several species are actively poisonous.

lupinidine (lu-pin'id-in). Same as *sparleine*.

lupinine (lu'pin-in). A poisonous alkaloid, $C_{10}H_{19}NO$, from lupines.

lupinosis (lu-pin-o'sis). A disease, often fatal, ascribed to poisoning by lupines or by the chick-pea; lathyrism.

lupinotoxin (lu'pin-o-toks'in). A poisonous aromatic principle from diseased lupines: believed to be the product of a parasitic microphyte.

lupoid (lu'poid). 1. Same as *lupiform*. 2. A lupiform disease of the skin, described by Boeck, and ascribed to an acid-fast bacillus. Called also *tuberculosis cutis typus* Boeck.

lupoma (lu-po'mah) [*lupus* + -oma tumor]. The nodosity whence lupus is developed.

lupous (lu'pus) [L. *lupo'sus*]. Pertaining to or of the nature of lupus.

lupulin (lu'pu-lin) [L. *lupuli'num*; *lu'pulus* hop]. A yellow, resinous powder from hops: sedative and stomachic. Dose, 5-10 grains (0.333-0.666 Gm.); of fluidextract, 30-120 minims (2-8 cc.); of oleo-resin, 10-40 minims (0.666-2.666 cc.).

lupulus (lu'pu-lus) [L.]. Hops. See *hops*.

lupus (lu'pus) [L. "wolf"]. *Lupus vulgaris*; a tubercular disease of the skin and mucous membrane, marked by the formation of brownish nodules in the corium. The lesions appear in various forms, and, according to their character, different varieties of the affection are named. 1. *annularis*, lupus occurring in a circle which heals at the center while spreading at the circumference. 2. *butterfly* *l.*, lupus of the skin of the nose and cheeks. 3. *Cazenave's l.* Same as *l. erythematosus*. 4. *discretus*, lupus disseminatus. 5. *disseminated follicular l.*, lupus of the face expressed in large and small papules. 6. *disseminatus*, lupus manifested in a growth of scattered nodules. 7. *erythematous*, a chronic, nontuberculous disease of the skin marked by disklake patches with raised reddish edges and depressed centers, and covered with scales or crusts. These fall off, leaving dull-white cicatrices. Called also *l. erythematodes*, *l. sebaceus*, and *Cazenave's l.* 8. *exedens*, true or typical tuberculous lupus. See *lupus*. 9. *exfoliatus*, lupus with desquamation. 10. *Hilliard's l.*, lupus marginatus. 11. *hypertrophicus*, a kind marked by the formation of vegetations. Called also *l. vegetans*. 12. *impetiginosus*, a form with tubercles (but not due to *Bacillus tuberculosus*) covered with persistent dark crusts. Called also *pustular l.* 13. *livido*, persistent livid lesions on the extremities, allied to Raynaud's disease. 14. *maculosus*, a variety of true lupus in which the skin lesions have the form of macules. 15. *margina'tus*, lupus verrucosus on the hands and arms. 16. *nonexedens*, a variety without ulcerations. 17. *papillomatosus*, lupus verrucosus. 18. *pernio*, lupus beginning as a chilblain. 19. *pustular l.* See *l. impetiginosus*. 20. *sclerosus*, a form in which the lesions have a hard center and a hard, elevated border. 21. *sebaceus*. See *l. erythematosus*. 22. *serpiginosus*, a variety that spreads by serpiginous growth. 23. *tuberculosus*, a variety characterized by the formation of more or less typical tubercles. 24. *tumidus*, a form marked by subcutaneous infiltration and doughy swelling. 25. *vegetans*. See *l. hypertrophicus*. 26. *verruco'sus*, *l. vorax*, true lupus. 27. *vulgaris*. See *lupus*. 28. *Willard's l.*, tuberculous lupus.

lura (lu'ra) [L. "mouth of a bag"]. The orifice of the infundibulum of the brain.

lural (lu'ral). Pertaining to the lura.

Luschka's gland, tonsil, etc. (lush'kahz) [Herbert von Luschka, German anatomist, 1820-1875]. See *gland, tonsil*, etc.

Lusk's ring (lusks) [William Thompson Lusk, New York physician, 1838-1897]. See *Band's ring*, under *ring*.

Lustgarten's bacillus (loost'gar-tenz) [Sigmund

Lustgarten, Austrian physician in New York, 1857-1911]. See *bacillus*.

Lustig's serum (loos'tigz) [Alessandro Lustig, contemporary Italian physician]. See *serum*.

lusus naturae (lu'sus na-tu're) [L.]. A teratism or freak of nature.

lute (lüt) [L. *lutum* mud]. A paste for covering the joints of vessels.

luteum (lu-te'she-um). A rare element having atomic weight 175 and the symbol Lu.

lutein (lu'te-in) [L. *lutus* yellow]. 1. A yellow pigment, or lipochrome, from the corpus luteum, from fat cells, and from the yolk of eggs. 2. Any lipochrome. **serum l.**, a lipochrome found in blood serum.

luteolipoid (lu'te-o-li'poid). A compound isolated from the corpus luteum: said to have a hemostatic influence on menstruation. Cf. *lipamine*.

luteoma (lu-te-o'mah). A tumor apparently developing from the corpus luteum.

lutidin (lu'tid-in). A liquid compound, $C_8H_9N(CH_3)_2$, or dimethylpyridine, formed by the distillation of coal tar. **beta-l.**, **b-l.**, a colorless liquid, C_7H_9N , with narcotic and antispasmodic properties: used as an antidote to strychnine.

lux. The metric unit of illumination, being one lumen per square meter. Cf. *foot-candle*.

luxatio (luks-a'she-o) [L.]. A dislocation. 1. **erecta**, dislocation of the shoulder so that the arm stands straight up above the head. 2. **imperfecta**, a sprain. 3. **perinea'lis**, a form of dislocation of the hip in which the head of the femur lies in the perineum.

luxation (luks-a'shun) [L. *luxatio*]. Same as *dislocation*.

luxuriant (luk-su're-ant). Growing freely or excessively.

luxus (luks'us). Latin for *excess*. See under *consumption* and *heart*.

Luys' body (lu-ēz') [Jules Bernard Luys, French physician, 1828-1898]. The subthalamus.

Luys' segregator or separator (lu-ēz') [Georges Luys, contemporary French physician]. See *segregator*.

luz (looz) [Hebrew]. A mythical bone of the Talmudists, from which the body was supposed to be restored at the resurrection; located in the lower part of the spinal column.

lycaconitine (li-kah-kon'it-in) [*λύκος* wolf + *aconite*]. A highly poisonous alkaloid, $C_{28}H_{46}N_2O_{10}$, from *Aconitum lycoctonum*.

lycanthropy (li-kan'thro-pe) [*λύκος* wolf + *ἄνθρωπος* man]. A delusion in which the patient believes himself a wolf.

lycetol (li'se-tol). Dimethylpiperazine tartrate, a white powder, soluble in water, $NH(CH_2CHCH_3)_2 \cdot NH.CHOH.CO_2$; a proprietary remedy for gout and rheumatism. Dose, 4-10 grains (0.26-0.66 Gm.) daily.

lychnin (lik'n-sis). A poisonous glucoside or saponin from species of *Lychnis*.

lycine (li'sin). Same as *betaine*.

lycoctonine (li-kok'to-nin). An alkaloid from *Aconitum lycoctonum*.

lycomania (li-ko-ma'ne-ah). Same as *lycanthropy*.

Lycoperdon (li-ko-per'don) [*λύκος* wolf + *πέρδωμι* to break wind]. A genus of fungi; puffballs. *L. bovis'ta*, *L. gigan'teum*, and other species are said to be anodyne, anesthetic, and styptic, and have a limited use in medicine.

lycopin (li'ko-pin). 1. A resinoid preparation from *Ly'copus virgin'icus*: used as a tonic and stimulant in diseases of the mucous membranes. Dose, 1-4 grains (0.066-0.26 Gm.). 2. A lipochrome pigment found in certain chromogenic bacteria.

lycopodine (li-ko-po'din). A crystalline alkaloid, $C_{32}H_{52}N_2O_3$, from *Lycopodium complanatum*.

Lycopodium (li-ko-po'de-um) [*λύκος* wolf + *πούς* foot]. A genus of club-mosses. The yellow, inflammable spores of *L. clavatum* form a light, dry powder, used as a dusting and absorbent powder, and as a coating for pills. It is much used in homeopathy as a remedy. Several species are actively poisonous. **L. saururus** yields pilganine.

Lycopus europaeus. The bitter bugleweed of Europe: tonic and alterative. Dose of fluidextract, 30–60 minims (2–4 cc.).

lycorexia (li-ko-reks'e-ah) [*λύκος* wolf + *δρεξις* appetite]. Ravenous, wolfish hunger.

lycorine (lik'o-rin). Same as *narcissine*.

lycosine-quinine (li-ko-sin-kwin'in). A combination of quinine and di-o-oxydibenzol acetone: used as a dusting powder.

lye (li). An alkaline percolate from wood ashes; luvivum. To the public lye generally means a crude mixture of sodium hydroxide with some sodium carbonate, known as household lye.

lygosin (li'go-sin). A greenish, crystalline substance, sodium lygosinate, $\text{CO}(\text{CH} : \text{CH} \cdot \text{C}_6\text{H}_4 \cdot \text{ONa})_2 \cdot 7\text{H}_2\text{O}$: used like silver in gonorrhea.

lying-in (li-ing'in). 1. Puerperal. 2. The puerperium.

lymph (limf) [*Lym'pha* water]. 1. A transparent, slightly yellow liquid of alkaline reaction which fills the lymphatic vessels. It is occasionally of a light-rose color from the presence of red blood corpuscles, and is often opalescent from particles of fat. Under the microscope lymph is seen to consist of a liquid portion (*liquor lymphae*) and of corpuscles. These lymph corpuscles are about $\frac{1}{100}$ of an inch in diameter, are granular, and are not to be distinguished from white blood cells. Lymph coagulates when drawn from the body. Lymph liquor differs chemically from the blood liquor, rather in quantity than in constituents, both fluids consisting of water, albumin, fibrin, and salts. The lymph contains as much fibrin as the blood, but less albumin; more water, but an equal quantity of salts. 2. Any clear, watery fluid resembling true lymph. **animal l.**, vaccine or other lymph from an animal. **aplastic l.**, lymph that contains an excess of leukocytes and does not tend to become organized. Called also **corpuscular l.** **blood l.**, lymph derived from the blood by transudation. **bovine l.**, vaccine lymph from the cow. **calf l.**, lymph for vaccination obtained from calves. **corpuscular l.** See *aplastic l.* **croupous l.**, inflammatory lymph that tends to the formation of a false membrane. **euplastic l.**, **fibrinous l.**, that which tends to coagulate and become organized. **glycerinated l.**, vaccine virus mixed with glycerin in order to destroy any bacteria. **humanized l.**, vaccine virus from the human subject. **inflammatory l.**, the lymph produced by inflammation, as in a wound. **Koch's l.** See *tuberculin*. **l. node**, any one of the numerous nodules composed of lymphoid tissue occurring along the course of the lymphatic vessels. **plastic l.** 1. That from which embryonic tissue is formed. 2. Inflammatory lymph that has a tendency to become organized. **l. space**, any cistern, cavity, or receptacle for lymph. **l. spaces**, **epidural**, a system of lymph clefts and slits on the outer surface of the dura. **tissue l.**, lymph derived from the tissues and not from the blood. **vaccine l.**, the serous exudate from the vesicles of cowpox.

lymphaden (lim'fad-en) [*Lym'pha* lymph + *ἀδην* gland]. A lymphatic gland.

lymphadenectasis (lim'fad-en-ek'tas-is) [*Lym'pha* lymph + *ἀδην* gland + *ἐκτασις* distention]. Dilatation of a lymphatic gland.

lymphadenhypertrophy (lim'fad'en-hi-per'tro-fe) [*lymphaden* + *hypertrophy*]. Hypertrophy of lymphatic glands.

lymphadenia (lim'fad'e-ne-ah) [see *lymphaden*].

Hypertrophy of lymphatic tissue. 1. **os'sea**. See *multiple myeloma*, under *myeloma*.

lymphadenism (lim-fad'en-izm). The disease condition that accompanies lymphadenoma.

lymphadenitis (lim'fad-en-i'tis) [*Lym'pha* water + *ἀδην* gland + *-itis* inflammation]. Inflammation of lymph glands. It may be tuberculous or syphilitic. **paratuberculous l.**, inflammation of the lymph nodes associated with tuberculosis of some other part, but showing no tubercle bacilli in the lymphatics.

lymphadenoid (lim-fad'en-oid) [*Lym'pha* lymph + *ἀδην* gland + *εἶδος* form]. Resembling a lymphatic gland or lymphatic tissue. Lymphadenoid tissue includes the lymph glands, spleen, bone marrow, tonsils, and the lymphatic tissue of the organs and mucous membranes.

lymphadenoleukopoiesis (lim'fad'en-o-lu-ko-poi-e'sis). The production of leukocytes by the lymphadenoid tissue.

lymphadenoma (lim'fad-en-o'mah). Hyperplasia of the lymphadenoid tissue; lymphoma. **malignant l.**, lymphosarcoma. **multiple l.**, Hodgkin's disease.

lymphadenomatosis (lim'fad'en-o-mat-o'sis). Lymphomatosis. **general l. of bones**, Kahler's disease.

lymphadenopathy (lim-fad-en-op'ath-e) [*lymphaden* + *πάθος* disease]. Disease of the lymph glands.

lymphadenosis (lim-fad-en-o'sis) [see *lymphaden*]. Hypertrophy or proliferation of lymphatic tissue. **acute l.** See *glandular fever*, under *fever*. **aleukemic l.**, a disease marked by diffuse generalized hyperplasia of the lymphadenoid system (lymph glands, spleen, bone marrow, tonsils, and other lymphatic tissues), but without leukemia. **leukemic l.**, lymphatic leukemia.

lymphæmia (lim-fe'me-ah). See *lymphemia*.

lymphagogue (lim'fag-og). An agent which promotes the production of lymph.

lymphangeitis, lymphangiitis (lim'fan-je-i'tis). See *lymphangitis*.

lymphangial (lim-fan'je-al). Pertaining to a lymphatic vessel.

lymphangiectasis (lim'fan-je-ek'tas-is) [*Lym'pha* lymph + *ἀγγείον* vessel + *ἐκτασις* dilatation]. Dilatation of the lymphatic vessels.

lymphangiectodes (lim-fan'je-ek-to'déz). Lymphangioma circumscriptum.

lymphangiitis (lim-fan-je-i'tis). Lymphangitis.

lymphangio-endothelioblastoma (lim-fan'je-o-en-do-the'le-o-blas-to'mah). A tumor composed of endothelial cells which tend to form lymph vessels.

lymphangio-endothelioma (lim-fan'je-o-en'do-the-le-o'mah). Endothelioma arising from lymph vessels or lymph spaces—the ordinary variety of endothelioma. Called also *lymphendothelioma*.

lymphangiofibroma (lim-fan'je-o-fi-bro'mah). Fibroma with lymphangiomatous tissue.

lymphangioi'tis farcimino'sa bo'vis. See *cattle farcy*, under *farcy*.

lymphangiology (lim'fan-je-o'l-o-je) [*Lym'pha* lymph + *ἀγγείον* vessel + *λόγος* discourse]. The branch of anatomy relating to the lymphatics.

lymphangioma (lim'fan-je-o'mah). A tumor composed of new-formed lymph spaces and channels. 1. **capsula're varico'sum**, lymphangioma circumscriptum. 1. **caverno'sum**, dilatation of the lymphatic vessels resulting in cavities filled with lymph. 1. **circumscrip'tum**, a skin disease of early life marked by the development of yellow vesicles connected with the lymphatic vessels. 1. **cyst'icum**, the formation of multiple cysts filled with lymph. 1. **sim'plex**, dilatation of a lymph vessel over a circumscribed area. 1. **tubero'sum mul'tiplex**, a skin disease marked

by the development of groups of papules or tubercles resembling and believed to be lymphangioma. 1. **xanthelasma** (*deum*), lymphangioma circumscriptum marked by formation on the skin of yellow or brownish patches.

lymphangiophlebitis (lim-fan''je-o-fleb-i'tis). Inflammation of the lymph vessels and veins.

lymphangioplasty (lim-fan''je-o-plas-te) [*L. lympha* lymph + *ἀγγείον* vessel + *πλάσσειν* to form]. Operative restoration or replacement of lymph vessels that have been destroyed. It is done by making artificial lymph channels by the subcutaneous introduction of long threads of tubular woven silk.

lymphangiosarcoma (lim-fan''je-o-sar-ko'mah). Lymphangioma blended with sarcoma.

lymphangiectomy (lim-fan''je-o-t'o-me) [*L. lympha* lymph + *ἀγγείον* vessel + *τομή* cutting]. Dissection of the lymphatic vessels.

lymphangitis (lim-fan-jī'tis). Inflammation of a lymphatic vessel or vessels. 1. **carcinomato'sa**, proliferating inflammation of the lymphatics of the peritoneum associated with peritoneal tumors. 1. **epizootica**, a chronic contagious disease of horses caused by a yeast fungus, *Cryptococcus* (*Blastomyces*) *farciminosus*, and marked by purulent inflammation of the subcutaneous lymphatic vessels and of the regional lymph glands. Called also *pseudofarcy*, *blastomycosis farciminosus*, *saccharomycosis*, *Cryptococcus farcy*, *lymphosporidiosis*, *African glanders*, *Japanese glanders*. 1. **ulcero'sa pseudoglanders**, a disease of horses resembling glanders, and due to a bacillus very much like the glanders bacillus. Called also *pseudoglanders*.

lymphatic (lim-fat'ik) [*L. lymphat'icus*]. 1. Pertaining to or containing lymph. 2. A vessel conveying lymph. 3. Of a sluggish or phlegmatic temperament. **afferent l.**, a lymphatic vessel which enters a gland.

lymphaticostomy (lim-fat-ik-os'to-me) [*Lymphatic* + *στόμα* mouth]. The operation of making a permanent opening into a lymphatic duct, such as the thoracic duct: done for peritonitis.

lymphatism (lim-fat-izm). 1. The lymphatic temperament; a slow or sluggish habit. 2. A morbid state due to excessive production or growth of lymphoid tissues, such as the thymus and thyroid glands. It results in impaired development, lowered vitality, and sometimes death. Called also *lymphotoxemia*, *lymphoidotoxemia*, *status lymphaticus*, and *status thymicus*.

lymphatitis (lim-fat-i'tis). Inflammation of some part of the lymphatic system.

lymphatolysine (lim-fat-ol'is-in). A toxin which acts on lymphatic tissue.

lymphatolysis (lim-fat-ol'is-is) [*Lymphatic* + *λῶσις* dissolution]. The destruction or solution of lymphatic tissue.

lymphatolytic (lim-fat-o-lit'ik) [*Lymphatic* + *λῶσις* dissolution]. Destroying lymphatic tissue.

lymphatome (lim-fat-ōm). Lymphotome.

lymphectasia (lim-fek-ta'ze-ah) [*L. lympha* lymph + *ἐκτασις* distention]. Distention with lymph.

lymphedema (lim-fe-de'mah) [*Lymph* + *edema*]. Edema due to the clogging of an efferent lymphatic vessel.

lymphemia (lim-fe-me-ah) [*Lymph* + *αἷμα* blood]. The presence of an undue number of lymphocytes or their forerunners in the blood; lymphatic leukemia.

lymphendothelioma (lim''fen-do-the-le-o'mah). Same as *lymphangio-endothelioma*.

lymphenteritis (lim''fen-ter-i'tis). Enteritis with serous infiltration.

lympherythrocyte (limf-er'ith-ro-sīt). An erythrocyte.

lymphization (lim-fi-za'shun). The formation of lymph.

lymphnoiditis (limf-no-di'tis). Inflammation of a lymph node.

lympho-adenoma (lim''fo-ad-en-o'mah). A benign neoplasm of the uterus, involving the interstitial lymph tissue and the glandular structures.

lymphoblast (lim'fo-blast) [*Lymph* + *βλαστός* germ]. A lymphocyte in its germinative stage; a developing lymphocyte. Such cells are found in the blood in acute lymphatic leukemia.

lymphoblasthemia (lim-fo-blas-the'me-ah). Lymphoblastosis.

lymphoblastic (lim-fo-blas'tik). Pertaining to a lymphoblast; producing lymphocytes.

lymphoblastoma (lim''fo-blas-to'mah). A tumor composed of cells of the lymphocyte series. The term includes lymphocytoma, lymphoma, lymphosarcoma, and pseudoleukemia.

lymphoblastosis (lim''fo-blas-to'sis). Excess of lymphoblasts in the blood. **acute benign l.** See *glandular fever*, under *fever*.

lymphocele (lim'fo-sēl) [*Lymph* + *κῆλη* tumor]. A tumor containing lymph.

lymphocerastrism (lim''fo-se-ras'tizm) [*Lymph* + *κεράστρος* mixed]. The formation of lymphoid cells.

lymphococcus (lim-fo-kok'us). A diplococcus isolated from diseases of elephantiasis.

lymphocyst (lim'fo-sist). Lymphocele.

lymphocystosis (lim''fo-sis-to'sis). The formation of cysts containing lymph.

lymphocyte (lim'fo-sīt) [*Lymph* + *κύτος* cell]. 1. A variety of white blood corpuscle which arises in the reticular tissue of the lymph glands and lymph nodes. The nucleus is single and is surrounded by protoplasm which is generally described as nongranular. Two varieties are described: (a) the small lymphocytes (*small mononuclear leukocytes* or *microlymphocytes*), which are about the size of a red corpuscle and constitute from 22 to 25 per cent of the white corpuscles; (b) the large lymphocytes (*macrolymphocytes* or *lymphoblasts*), which are probably lymphocytes in their developing stage, are two or three times larger than the small lymphocytes and contain a larger proportion of protoplasm. They form about 1 per cent of the white corpuscles. 2. A lymph corpuscle. **Rieder's l.**, a lymphocyte having a nucleus which is lobed and twisted: seen in chronic lymphemia.

lymphocythemia (lim''fo-si-the'me-ah) [*Lymphocyte* + *αἷμα* blood]. Excess of lymph corpuscles in the blood.

lymphocytic (lim-fo-sit'ik). Pertaining to lymphocytes.

lymphocytoma (lim''fo-si-to'mah) [*Lymphocyte* + *-ωμα* tumor]. A tumor of the lymphatic system in which lymphocytes are the predominating elements.

lymphocytopenia (lim-fo-si-to-pe'ne-ah). Reduction in the number of leukocytes in the blood.

lymphocytopoiesis (lim-fo-si-to-poi-e'is) [*Lymphocyte* + *ποιεῖν* to make]. The formation of lymphocytes.

lymphocytosis (lim''fo-si-to'sis). Excess of normal lymphocytes in the blood or in any effusion.

lymphocytotic (lim-fo-si-tot'ik). Pertaining to lymphocytosis.

lymphocytotoxin (lim-fo-si-to-toks'in). A toxin that has a specific destructive action on lymphocytes.

lymphocytozoon (lim''fo-si-to-zo'on) [*Lymphocyte* + *ζῷον* animal]. A genus of ameoboid bodies, species of which are found in leukocytes. **L. coba'yae**. Same as *Kurloff's bodies*. See *body*. **L. pal'idum**, Ross's bodies. See *body*.

lymphodermia (lim-fo-der'me-ah) [*Lymph* + *δέρμα* skin]. Any disease of the lymphatics of the skin: particularly enlargement of the glands due to leukocythemia (*l. pernicio'sa*).

lymphoduct (lim'fo-duk't). A lymphatic vessel.

lymphoganglin (lim-fo-gan'glin). A hypothetical hormone from lymph glands.

lymphogenous (lim-foj'en-us) [*lymph* + γεννᾶν to produce]. 1. Producing lymph. 2. Produced from lymph or in the lymphatics.

lymphoglandula (lim-fo-glan'du-lah). [B N A] A lymph node.

lymphogonia (lim-fo-go'ne-ah) [*lymph* + γόνος offspring]. Large lymphocytes with a large nucleus, little chromatin, and nongranular protoplasm. They are the mother cells of small lymphocytes and are seen in lymphatic leukemia.

lymphogranuloma (lim'fo-gran-u-lo'mah). Hodgkin's disease.

lymphogranulomatosis (lim'fo-gran-u-lo-mat-o'sis). Infectious granuloma of the lymphatic system: used by continental writers as a synonym for multiple lymphoma (Hodgkin's disease).

lymphoid (lim'foid) [*lymph* + εἶδος form]. Resembling lymph.

lymphoidectomy (lim-foi-dek'to-me). Excision of lymphoid tissue, such as adenoids and tonsils.

lymphoididity (lim-foi-did'ti-e). The condition of exhibiting lymphoid characteristics.

lymphoidocyte (lim-foi'fo-do'sit). An embryonic cell, the primordial mother cell of all the types of blood cells.

lymphoidotoxemia (lim-foi''do-tok-se'me-ah). See *lymphatism* (2d def.).

lymphoids (lim'foids). A preparation of testicular extract, zinc phosphide, iron, nux vomica, aloin, etc.

lympholeukocyte (lim-fo-lu'ko-sit). A large mononuclear leukocyte.

lymphology (lim-foi'o-je) [L. *lym'pha* lymph + λόγος treatise]. The study or science of the lymphatics.

lymphoma (lim-fo'mah). Any tumor made up of lymphoid tissue. **atypical l.**, lymphosarcoma. **malignant l.**, **multiple l.**, Hodgkin's disease. **typical l.**, lymphomatosis.

lymphomatosis (lim'fo-mat-o'sis). The development of multiple lymphomas in various parts of the body. 1. **granulomato'sa**. See *Hodgkin's disease*, under *disease*.

lymphomatous (lim-fo'mat-us). Pertaining to or of the nature of lymphoma.

lymphomegaloblast (lim-fo-meg'al-o-blast). A megaloblast without hemoglobin.

lymphomonocyte (lim-fo-mo'no-sit). A large unilobular leukocyte.

lymphomyelocyte (lim-fo-mi'el-o-sit). A myeloblast.

lymphomyeloma (lim'fo-mi-el-o'mah). A sarcoma containing small round cells.

lymphomyxoma (lim'fo-mik-so'mah). Any benign growth consisting of adenoid tissue.

lymphopathy (lim-fop'ath-e) [L. *lym'pha* lymph + πάθος disease]. Any disease of the lymphatics. **ataxic l.**, a sudden swelling of the lymphatic glands sometimes accompanying the pain crises of locomotor ataxia.

lymphopenia, lymphopaenia (lim-fo-pe'ne-ah) [*lymphocyte* + πείρα poverty]. Decrease in the proportion of lymphocytes in the blood.

lymphoplasm (lim'fo-plazm). Same as *spongio-plasm*.

lymphoplasma (lim-fo-plaz'me-ah). A condition of the red blood corpuscles in which they contain no hemoglobin.

lymphopoiesis (lim'fo-poi-e'sis) [see *lymphopoietic*]. The development of lymphocytes or of lymphatic tissues.

lymphopoietic (lim'fo-poi-et'ik) [*lymph* + ποίειν to make]. Forming lymphocytes or lymphatic tissue.

lymphoprotease (lim-fo-pro'te-ās). A protein-splitting ferment existing in the lymphocytes.

lymphorrhagia (lim-for-a'je-ah) [*lymph* + ῥήγναι to break out]. Same as *lymphorrhea*.

lymphorrhea (lim-for-e'ah) [*lymph* + ῥοα flow]. A flow of lymph from cut or ruptured lymph vessels.

lymphosarcoleukemia (lim-fo-sar-ko-lu-ke'me-ah). Leukemia with lymphosarcomatous degeneration of bone marrow and lymphatics.

lymphosarcoma (lim'fo-sar-ko'mah). A malignant neoplasm arising in lymphatic tissue from proliferation of atypical lymphocytes. **Kundrat's l.**, a form of lymphosarcoma which rapidly extends to adjacent glands, but shows no tendency to invade neighboring organs. The blood shows anemia with neutrophil leukocytosis and decrease of lymphocytes.

lymphosarcomatosis (lim'fo-sar-ko-mat-o'sis). A disease condition associated with and due to lymphosarcoma.

lymphosporidiosis (lim'fo-spo-rid-e-o'sis). See *lymphangitis epizootica*.

lymphostasis (lim-fos'tas-is) [*lymph* + στάσις standing]. Stoppage of the lymph flow.

lymphotaxis (lim-fo-taks'is) [*lymphocyte* + τάξις arrangement]. The property of attracting or repulsing lymphocytes.

lymphotism (lim'fo-tizm). A disordered state associated with the development of so-called adenoids.

lymphotome (lim'fo-tōm) [*lymph* + τέμνειν to cut]. An instrument for excising adenoid growths on the tonsils.

lymphotomy (lim-fot'o-me) [L. *lym'pha* lymph + τομή cut]. The anatomy of the lymphatic system.

lymphotoxemia (lim'fo-tok-se'me-ah). Toxemia due to excess of lymphoid matters or lymphoid tissue, as in rickets, exophthalmic goiter, enlarged thymus, etc.

lymphotoxin (lim-fo-tok'sin). The toxin or lysine contained in lymph glands.

lymphotrophy (lim-fot'ro-fe) [*lymph* + τρέφειν to nourish]. The attractive energy of cells for lymph.

lymphous (lim'fus). Pertaining to or containing lymph.

lymph scrotum. See under *scrotum*.

lymphuria (lim-fu're-ah). The presence of lymph in the urine.

lymph-vascular (limf-vas'ku-lar). Pertaining to or containing lymphatic vessels.

Lyn'chia mau'ra, L. livido'color. A biting hippoboscid fly of louse-like habits, which lives in the nest and in the plumage of the dove and which is the invertebrate host of *Hemoproteus columbae*.

lyogen (li'o-jen). A proprietary form of colloidal silver.

Lyon method or test (li'on) [B. B. Vincent Lyon, Philadelphia physician]. See *Meltzer-Lyon test*, under *tests*.

lyophil, lyophile (li'o-fil) [λύνειν to dissolve + φίλειν to love]. Having an affinity for solution; a term applied to colloidal systems in which there is strong affinity between the disperse phase and the dispersion medium.

lyophobe (li'o-fōb) [λύνειν to dissolve + φόβος fear]. Not inclined to solution; a term applied to colloidal systems in which there is a tendency of the disperse phase to separate from the dispersion medium.

lyotropic (li-o-trop'ik) [λύνειν to dissolve + τρέπω a turning]. Having an affinity for entering into solution; readily soluble.

Lyo'zo'on atroph'icans. An organism occurring in the lesions of epitheliosis atrophicans.

lypemia (li-pe-ma'-ne-ah) [*λύπη* sadness + *μαλία* madness]. Melancholia; insanity with depression.

lyperophrenia (li-'per-o-fre'-ne-ah) [*λυπηρός* distressing + *φρήν* mind]. Melancholia.

Lypero'sia ir'ritans. See *Hematobium serrata*.

Lypomyssus (li-po-nis'-us). A genus of mites which sometimes attack man. *L. baco'i* live normally on rats and *L. bur'sae* on birds.

lypothymia (li-po-thi'-me-ah) [*λύπη* distress + *θυμός* mind]. Morbid or insane despondency.

lyptol (lip'tol). A proprietary antiseptic ointment.

lyra (li'rah) [L.; *λύρα* lyre]. The posterior part of the body of the fornix including the commissura hippocampi. Called also *lyre of David*, *lyra Davidis*, *lyre of the fornix*, and *psalterium*. 1. **uterina**, 1. of uterus, the arbor vitae uteri. 1. of vagina, the vaginal rugae.

lysargin (li-sar'jin). Colloidal silver containing 52 per cent of silver: used as an antiseptic.

lysatin (lis'at-in). A basic principle or leukomaine, $C_8H_{13}N_3O_2$, derivable from casein.

lysatinin (lis-at'in-in). A mixture of lysine and arginine.

lysemia (li-se'me-ah) [*λύσις* solution + *αἷμα* blood]. Disintegration of the blood.

lysidin (lis'id-in). A red, crystalline body, methylglyoxalidin, $CH_2NH.C(CH_3):N.CH_2$; also its yellowish or pinkish, soapy, 50 per cent solution: used as a solvent for uric acid. Daily dose of the first-named form, 15-75 grains (1-5 Gm.). 1. **bitartrate**, a soluble, white, crystalline powder, of one third the solvent power of pure lysidin.

lysimeter (li-sim'et-er) [*λύσις* solution + *μέτρον* measure]. An apparatus for determining the solubilities of substances.

lysin (li'sin) [*λύειν* to dissolve]. An antibody which has the power of causing dissolution of cells. The term includes hemolysin, bacteriolysin, cytolyisin, etc. See *hemolysin*.

lysine (li'sin). An amino-acid, $CH_2NH_2CH_2CH_2CH_2CHNH_2COOH$ (Ellinger, 1900), or α - ϵ -diaminocaproic acid, first isolated from casein (Drechsel, 1880). It is a hydrolytic cleavage product of protein either by digestion or by boiling with hydrochloric acid.

lysingen (li-sin'o-jen) [*lysin* + *γεν*- producing]. A substance having the power of producing lysines.

lysinosis (lis-in-o'sis) [*λύσις* a raveled fiber]. Lung disease due to inhaling cotton fibers, as in mills.

lysis (li'sis) [*λύειν* to dissolve]. 1. The gradual abatement of the symptoms of a disease. 2. The action of a lysine; the destruction of cells by a specific lysine.

lysitol (li'sit-ol). A germicide resembling compound solution of cresol.

lysocythin (li-so-si'thin). A substance formed by combination between an animal poison and the body tissues and having a cytolytic action.

lysoform (li'so-form). An oily, soapy, liquid disinfectant containing compound solution of cresol and formol: used for the sterilization of surgical instruments and in the treatment of various skin diseases.

lysogen (li'so-jen) [*lysine* + *γεννᾶν* to produce]. A substance or body which develops into a lysine.

lysogenesis (li-so-jen'es-is). The production of lysines.

lysogenic (li-so-jen'ik) [*lysine* + *γεννᾶν* to produce]. Producing lysines or causing lysis.

lysol (li'sol). A proprietary brand (the name is a trade mark) of compound solution of cresol. See *liquor cresolis composuit*.

lysopest (li'so-past). A lysol soap preparation containing 70 per cent of lysol.

lyssosolveol (li-so-sol've-ol). An antiseptic and disinfectant mixture of tricresol (44.5 per cent), potassium linoleate (38 per cent), and water.

lysozym, **lysozyme** (li'so-zim) [*λύσις* solution + *ζύμη* leaven]. A stable bacteriolytic substance present in most animal (and human) and some vegetable secretions and tissues.

lyssa (lis'ah) [*λύσσα* frenzy]. Rabies. See *hydrophobia*.

lyssic (lis'ik). Pertaining to hydrophobia.

lyssin (lis'in). The specific virus of hydrophobia.

lyssodexis (lis-o-dek'sis) [*λύσσα* rabies + *δῆξις* a bite]. The bite of a rabid dog.

lyssoid (lis'oid) [*λύσσα* rabies + *εἶδος* form]. Resembling rabies.

lyssophobia (lis-o-f'o-be-ah) [*λύσσα* madness + *φόβος* fear]. Morbid dread of rabies, with symptoms simulating those of that disease.

Lyster tubes (lis'ter) [William J. L. Lyster, U. S. Army surgeon]. See under *tube*.

lysulphol (li-sul'fol). A black, liquid preparation of lysol and sulphur: used in treatment of skin diseases.

lyterian (li-te're-an). Indicative of the approach of lysis.

lythol (li'thol). A proprietary antiseptic and germicide adapted especially for catarrhal conditions of mucous membranes.

lytic (lit'ik). Pertaining to lysis or to a lysine; producing lysis.

lytta (lit'ah). Hydrophobia.

lyxose (lix'ös). A pentose isomeric with ribose, $CH_2OH.(CHOH)_3.CHO$.

lyze (liz). To cause or produce lysis.

M

M. An abbreviation for *mil*; *mille*, thousand; *misce*, mix; *mistura*, mixture; *macera're*, macerate; *meter*, *minim*, molar, *muscle*, *myopia*, and *manipulus*, handful; also symbol for *strength of pole*.

m. Abbreviation for *meta*.

μ. Abbreviation for Gr. *micron*.

M. A. Abbreviation for *meter angle* and *Master of Arts*.

M + Am. Compound myopic astigmatism.

Ma., ma. Abbreviation for *milliampere*.

M. A. B. British abbreviation for *Metropolitan Asylums Board*.

Mac. Abbreviation for L. *ma'cera*, macerate.

macabuhay (mak-ah-boo-hi'). A plant of the Philippines, *Menispermum cris'pum*: used as a febrifuge and emetic, and externally in the treatment of rabies.

macaco worm (mah-kah'ko). The larva of the fly, *Dermatobia noxia'lis*, of South America, which burrows under the skin of man and animals.

macaja, macaya (mak-ah'yah). The fixed oil obtained from the fruit of *Acrocomia sclerocarpa*.

macalline (mak-al'in). An alkaloid from macallo, a tree of Yucatan: used like quinine.

MacBurney, etc. See under *McBurney*, etc.

mace (mās) [L. *ma'cis*]. The dried aril or envelop of the fruit of the nutmeg tree, *Myristica fra-grans*. The volatile oil contains macene, and is used as a flavoring agent.

macene (mas'en). An essential oil, $C_{10}H_{18}$, from nutmeg flowers and from the oil of mace.

maceration (mas-er-a'shun) [L. *macera'tio*]. The softening of a solid by soaking.

macerative (mas'er-at-iv). Characterized by maceration.

Macewen's operation, triangle, etc. (mak-ew'en) [Sir William Macewen, surgeon in Glasgow, 1848-1924]. See *operation, triangle*, etc.

Maché unit (mash-a') [Heinrich Maché, Austrian physicist, born 1876]. See under *unit*.

macho (mah'tsho). The tubercle type of dermal leishmaniasis.

machonnement (mash-shōn-maw') [Fr.]. A chewing motion of the jaws.

machromin (mak-ro'min). A yellow substance formed by reducing maclurin with zinc and sulphuric acid. It turns blue when oxidized.

Macht's test (makts). See under *tests*.

macies (ma'she-ēz). Latin for *wasting*.

macintosh (mak'in-tosh) [Charles Macintosh, Scotch chemist, 1766-1843, the inventor]. Cloth made waterproof by treating with a solution of India-rubber: used for surgical dressings.

macis (ma'sis). See *mace*.

Mackenrodt's operation (mahk'en-rōts) [Alwin Karl Mackenrodt, German gynecologist, 1859-1926]. See *operation*.

Mackenzie's disease (mak-en'zēz) [Sir James Mackenzie, English physician, 1854-1925]. See *x-disease*, under *disease*.

mackenzol (mak-en'zol). A proprietary oleo-balsamic preparation: used as an antiseptic in diseases of the nose, throat, and air passages.

maclayin (mak-la'in). A glucoside, $C_{17}H_{32}O_{11}$, from *Illi'pe macloya'na*: a strong local irritant.

MacLean-Maxwell disease [Charles Murray MacLean, physician in West Africa; James Laidlaw Maxwell, English physician in Formosa]. See under *disease*.

MacLeod's rheumatism [Roderick MacLeod, Scotch physician, 1795-1852]. See under *rheumatism*.

maclurin (mak-loo'rin). A yellow, crystalline substance, pentahydroxy-benzophenone, $(OH)_5C_6H_2-CO.C_6H_5(OH)_2$, occurring in the wood of *Mo'rus tinctoria*, or yellow-wood.

MacMunn's test. See under *tests*.

macradenous (mak-rad'en-us) [μακρὰς large + ἀδὴν gland]. Having large glands.

macrencephalia, macrencephaly (mak-ren-sef-a'le-ah, -sef'al-e) [μακρὸς long + ἐγκέφαλος brain]. Hypertrophy of the brain.

macrobacterium (mak''ro-bak-te're-um). A large bacterium.

Macrobdel'la deco'ra. A leech widely distributed in United States and Canada.

macrobiosis (mak''ro-bi-o'sis) [μακρὸς long + βίος life]. Longevity; long life.

macrobiotia (mak''ro-bi-o'she-ah). Same as *macrobiosis*.

macroblast (mak''ro-blast) [μακρὸς large + βλαστὸς germ]. An abnormally large red blood cell; a large young normoblast; a megaloblast.

macrobrachia (mak-ro-bra'ke-ah) [μακρὸς long + βραχίον arm]. Abnormal size or length of arms.

Macrocanthorhynchus hirudina'ceus. A parasitic worm very common in swine and said to occur in man in Russia. It is transmitted by certain insects.

macrocardius (mak-ro-kar'de-us) [μακρὸς large + καρδία heart]. A monster fetus with an extremely large heart.

macrocephalia, macrocephaly (mak''ro-sef-a'le-ah, mak-ro-sef'al-e) [μακρὸς large + κεφαλή head]. Excessive size of the head.

macrocephalic (mak''ro-sef'al'ik). Macrocephalous.

macrocephalous (mak-ro-sef'al-us). Having an excessively large head.

macrocheilia (mak-ro-ki'le-ah) [μακρὸς large + χείλος lip]. Abnormal or excessive size of the lips, as in some cases of lymphangioma and cretinism.

macrocheiria (mak-ro-ki're-ah) [μακρὸς large + χεῖρ hand]. Abnormal size of the hands.

macrochemical (mak-ro-kem'ik-al). Pertaining to macrochemistry.

macrochemistry (mak-ro-kem'is-trē) [μακρὸς large + chemistry]. Chemistry in which the reactions may be seen with the naked eye.

macrochilia (mak-ro-ki'le-ah) [μακρὸς large + χείλος lip]. Same as *macrocheilia*.

macrochiria (mak-ro-ki're-ah) [μακρὸς large + χεῖρ hand]. Abnormal size of the hands.

macrocnemia (mak-rok-ne'me-ah) [μακρὸς large + κνήμη shin]. Abnormal size of the legs below the knee.

macrococcus (mak-ro-kok'us) [μακρὸς large + κόκκος berry]. A bacterial coccus of the largest recognized type.

macrocolon, macrocoly (mak-ro-ko'lon, mak''ro-ko-le). Abnormal length of the sigmoid flexure and descending colon.

macroconidium (mak''ro-ko-nid'e-um). A large-sized conidium.

macrocornea (mak-ro-kor'ne-ah) [μακρὸς large + cornea]. Unusually large size of the cornea.

macrocyt (mak''ro-sist) [μακρὸς large + κύστις cyst]. A large cyst.

macrocytase (mak-ro-si'tās). A cytase formed by the macrocytes, and capable of causing destruction of animal cells. Cf. *microcytase*.

macrocyte (mak''ro-sit) [μακρὸς large + κύτος cell]. An abnormally large erythrocyte, *i. e.*, one from 10 to 12 μ in diameter. 2. A large lymphocyte.

macrocythemia (mak'ro-si-the'me-ah) [*macrocyte* + *αἷμα* blood]. The occurrence of macrocytes in the blood. **hyperchromatic m.**, macrocythemia in which the macrocytes are abnormally rich in hemoglobin; called also *macrocytic hyperchromatism*.

macrocytosis (mak'ro-si-to'sis). The formation of macrocytes.

macroductily, macrodactylia (mak-ro-dak-til'e, mak'ro-dak-til'e-ah) [*μακρός* large + *δάκτυλος* finger]. Abnormal largeness of the fingers and toes.

Macrodactyly: Localized hypertrophy of a single finger (Ridlon).

macrodont (mak'ro-dont). Possessing large teeth.

macrodontia, macrodontism (mak-ro-don'she-ah, mak'ro-don-tizm) [*μακρός* large + *ὀδούς* tooth]. Excessive size of the teeth.

macro-erythroblast (mak-ro-er'ith-ro-blast). A very large nucleated red blood corpuscle.

macro-esthesia (mak'ro-es-the'ze-ah) [*μακρός* great + *αἴσθησις* feeling]. A sensation as if all things were larger than they really are.

macrogamete (mak-ro-gam'et) [*μακρός* large + *γαμέτη* wife]. The female form of the malarial parasite which, fertilized by a flagellum in the mosquito, becomes a zygote and goes through the exogenous cycle of development.

macrogametocyte (mak'ro-gam-e'to-sit) [*μακρός* long + *γαμέτης* spouse + *κύτος* cell]. The female form of the malarial parasite which transferred from man to the mosquito becomes a macrogamete.

macrogamy (mak-ro-g'am-e). Conjugation or fusion between adult protozoan individuals.

macrogastrica (mak-ro-gas'tre-ah) [*μακρός* large + *γαστήρ* stomach]. Dilatation of the stomach.

macrogenesy (mak-ro-jen'is-e) [*μακρός* large + *γένεσις* production]. Gigantism.

macrogenitosomia (mak'ro-jen'it-o-so'me-ah) [*μακρός* large + *γενίτις* + *σῶμα* body]. General precocious bodily development with unusual size of the genital organs.

macroGLOSSIA (mak-ro-glos'e-ah) [*μακρός* large + *γλῶσσα* tongue]. Hypertrophy of the tongue.

macrognathia (mak-ro-na'the-ah) [*μακρός* large + *γνάθος* jaw]. Enlargement of the jaw.

macrographia (mak-ro-gra'fe-ah). Macrography.

macrography (mak-ro-gra'fe) [*μακρός* large + *γράφειν* to write]. The formation in writing of letters that are larger than the normal writing of the individual.

macrolabia (mak-ro-la'be-ah) [*μακρός* large + *Λ. labium* lip]. Same as *macrocheilia*.

macroleukoblast (mak-ro-lu'ko-blast). A very large leukoblast.

macromania (mak-ro-ma'ne-ah) [*μακρός* large + *μανία* madness]. 1. Delusive belief that external objects or one's own members are larger than they really are. 2. Megalomania; delirium of grandeur.

macromastia (mak-ro-mas'te-ah) [*μακρός* large + *μαστός* breast]. Oversize of the breasts or mammae.

macromazia (mak-ro-ma'ze-ah) [*μακρός* large + *μαζός* breast]. Same as *macromastia*.

macromelia (mak-ro-me'le-ah). Enlargement of one or more members, due to occlusion of the lymph channels. **m. paraesthet'ica**, a sen-

sation occurring in the initial form of acromegaly as well as in the formes frustes of hyperpituitarism in which the patient feels as if the head were growing larger and the extremities longer.

macromelus (mak-rom-el-us) [*μακρός* long + *μέλος* limb]. A fetus with abnormally large or long limbs.

macromere (mak'ro-mēr) [*μακρός* large + *μέρος* part]. A large blastomere.

macromerozoite (mak'ro-mer-o-zo'it). A large merozoite.

macromonocyte (mak-ro-mon'o-sit). A very large monocyte.

macronormoblast (mak-ro-nor'mo-blast). A very large nucleated red blood corpuscle.

macronormochromoblast (mak'ro-nor-mo-kro'mo-blast). A macronormoblast.

macronormocyte (mak-ro-nor'mo-sit). A giant red blood corpuscle.

macronucleus (mak-ro-nu'kle-us) [*μακρός* large + *νucleus*]. The principal nucleus of a cell, distinguished from the micronucleus or accessory nucleus. Called also *trophonucleus*.

macronychia (mak-ro-nik'e-ah) [*μακρός* long + *ὄνυξ* nail]. Abnormal length of the finger nails.

macropathology (mak'ro-path-ol'o-je) [*μακρός* large + *pathology*]. The nonmicroscopical pathologic account of any disease or organ.

macrophage, macrophagus (mak'ro-fāj, mak-rof'a-gus) [*μακρός* large + *φαγείν* to eat]. Metchnikoff's name for a large mononuclear wandering phagocytic cell which originates in the tissues. Cf. *endotheliocyte*.

macrophagocyte (mak-ro-fag'o-sit). A phagocyte of relatively large size.

macrophallus (mak-ro-fal'us) [*μακρός* large + *φαλλός* penis]. Abnormal largeness of the penis.

macrophotograph (mak-ro-fo'to-graf) [*μακρός* large + *photograph*]. An enlarged photograph.

macrophthalmous (mak-rof-thal'mus) [*μακρός* large + *ὀφθαλμός* eye]. Having abnormally large eyes.

macropia (mak-ro'pe-ah) [*μακρός* large + *ὤψ* eye]. Same as *macropsia*.

macroplasia (mak-ro-pla'ze-ah) [*μακρός* large + *πλάσις* forming]. Excessive growth of a part or tissue.

macroplastia (mak-ro-plas'te-ah). Macroplasia.

macropodia (mak-ro-po'de-ah) [*μακρός* large + *πούς* foot]. Excessive size of the feet.

macropolycyte (mak-ro-pol'e-sit) [*μακρός* large + *πολύ* many + *κύτος* cell]. A very large polymorphonuclear leukocyte.

macropromyelocyte (mak'ro-pro-mi-el-o-sit). A very large promyelocyte.

macroprosopia (mak'ro-pro-so'pe-ah) [*μακρός* large + *πρόσωπον* face]. Excessive size of the face.

macropsia (mak-rop'se-ah) [*μακρός* large + *ὄψις* vision]. A condition in which objects seen appear to be larger than they really are; called also *macrophia* and *megalopsia*.

macrorhinia (mak-ro-rin'e-ah) [*μακρός* large + *ῥίς* nose]. Hypertrophy and enlargement of the nose.

macroscelia (mak-ro-se'le-ah) [*μακρός* large + *σκέλος* leg]. Excessive size of the legs.

macroscopical (mak-ro-skop'ik-al) [*μακρός* large + *σκοπεῖν* to view]. Visible with the unaided eye or without the microscope.

macroscopy (mak-ro's'ko-pe). Examination with the naked eye.

macrosigma, macrosigmoid (mak-ro-sig'mah, mak-ro-sig'moid) [*μακρός* large + *sigmoid*]. Abnormal enlargement of the sigmoid.

macrosis (mak-ro'sis) [*μακρός* large]. Increase in size.

macrosmatic (mak-ro-smat'ik) [μακρός large + ὀσμᾶν to smell]. Having the sense of smell strongly or acutely developed.

macrosmatia, macrosomia (mak'ro-so-ma'she-ah, mak-ro-so'me-ah) [μακρός large + ὥμα body]. Great bodily size.

macrosome (mak'ro-sōm) [μακρός large + ὥμα body]. One of the larger granules seen in the nuclei of certain cells.

macrospore (mak'ro-spōr) [μακρός large + σπορός seed]. An unusually large spore.

Macrostoma mesnili. Same as *Chilomastix mesnili*.

macrostomia (mak-ro-sto'me-ah) [μακρός large + στόμα mouth]. Abnormal largeness of the mouth.

macrostructural (mak-ro-struk'tur-al). Pertaining to gross structure.

macrotia (mak-ro'she-ah) [μακρός large + οὖς ear]. Excessive size of the ears.

macrotin (mak'ro-tin). A proprietary resin or concentration derived from cimicifuga. Dose, $\frac{1}{2}$ -2 grains (0.033-0.133 Gm.).

macrotoime (mak'ro-tōm) [μακρός large + τομή cut]. An apparatus for cutting large sections of tissue for anatomical study.

macrotyis (mak-ro'tis). Cimicifuga.

macula (mak'u-lah), pl. *mac'ulae* [L.]. A stain or spot; a discolored spot on the skin not elevated above the surface. **maculae acusticae** (mak'ule a-kus'tis-e), the terminations of the acoustic nerve in the utricle or sacculle. **mac'ulae alb'idae**, white spots sometimes seen after death on the serous layer of the peritoneum. **mac'ulae atrophicae**, white patches resembling scars formed on the skin by atrophy. **mac'ulae caeruleae**, bluish patches on the skin sometimes seen in pediculosis. **cerebral m.** See *tache cérébrale*. **m. cor'neae**, a corneal opacity. **m. crib-ro'sa** [B N A], an area on the wall of the vestibule perforated for the passage of filaments of the auditory nerve. It includes the *m. cribro'sa inf'erior*, for branches to the posterior semicircular canal; the *m. cribro'sa me'dia*, for branches to the sacculus; the *m. cribro'sa supe'rior*, for branches to the utricle and superior semicircular canals; and the *m. cribro'sa quar'ta*, for the cochlear nerve. **m. fla'va** [B N A], a part of the anterior end of the vocal cord at which a yellowish nodule is visible.

m. follic'uli, the point in a graafian follicle where rupture occurs. **m. germinati'va**, the germinal area. See *area*. **m. gonorrh'o'ica**, a red spot at the orifice of the vulvovaginal gland in gonorrheal vulvitis. Called also *Sänger's m.* **mac'ulae lac'teae**. Same as *maculae albiae*. **m. lu'tea** [B N A], an oval depression on the retina temporal to and slightly below the papilla of the optic nerve: it is the point of clearest vision at the center of the retina. **Mongolian m.**, Mongolian spots. **Robert's m.**, a mass of coloring matter seen in the red corpuscles when blood is treated with dilute tannic acid solution. **m. sac'culi**, a patch of sensory epithelium in the sacculle. **Sänger's m.** See *m. gonorrh'o'ica*. **m. sola'ris**, a freckle; lentigo. **m. utric'uli**, a patch of sensory epithelium in the utricle. **mac'ulae tend'in'ae**. Same as *maculae albiae*.

maculanin (mak-u-lan'in). Potassium amylate: it is caustic, like potassium hydroxide, but milder.

macular (mak'u-lar). Characterized by maculae.

maculate (mak'u-lāt) [L. *macula'tus* spotted]. Spotted or blotched.

Macrostomia (Gould and Pyle).

maculation (mak-u-la'shun) [L. *mac'ula* spot]. The condition of being spotted; the formation of spots or macules.

macule (mak'ül). See *macula*.

maculocerebral (mak'u-lo-ser'e-bral). Affecting the macula lutea and the brain.

maculopapular (mak'u-lo-pap'u-lar). Both macular and papular.

maculopapule (mak'u-lo-pap'ül). A lesion resembling both a macule and a papule.

MacWilliam's test [John Alexander MacWilliam, English physician, born 1857]. See under *tests*.

mad (mad). 1. Insane; affected with madness. 2. Affected with rabies; rabid.

madarosis (mad-ar-o'sis) [μαδάρω bald]. Loss of the eyelashes or eyebrows (Galen).

madder (mad'er). The root of *Rubia tinctoria*, affording a red dye.

Maddox prism, rod (mad'ox) [Ernest Edmund Maddox, contemporary English ophthalmologist]. See *prism* and *rod*.

madefaction (mad-e-fak'shun) [L. *madefac'ere* to moisten]. The act of moistening or making wet.

Madelung's deformity and neck [Otto Wilhelm Madelung, surgeon in Strassburg, 1846-1926]. See *deformity* and *neck*.

madescence (mad-es'ent) [L. *madescere* to become moist]. Slightly moist.

madidans (mad'id-ans). Moist, wet.

Madura foot (ma-du'rah). See *mycetoma*.

Madurella (mad-u-rel'ah). The type of organisms found in mycetoma which have septate mycelia.

M. myceto'mi. See *Actinomyces maduræ*.

maduromycosis (mad-u-ro-mi-ko'sis). Mycetoma.

Mag. Abbreviation for *L. mag'nus*, large.

mageiric (maj-i'rik) [μαγειρικὸς relating to cookery]. Pertaining to cookery or dietetics.

Magendie's foramen, solution (ma-jen'déz) [François Magendie, French physiologist, 1783-1855]. See *foramen* and *solution*.

magenta (mah-jen'tah). Same as *basic fuchsin*. **acid m.**, acid fuchsin.

magisal (mag'is-al). Magnesium acetosalicylate; used in place of acetylsalicylic acid.

magistry (maj'is-ter-e) [L. *magis'ter*; *magis'ter* master]. A precipitate; any subtle or masterly preparation.

magistral (maj'is-tral) [L. *magis'ter* master]. Pertaining to a master: a term used to denote medicines that are prepared in accordance with a physician's prescription.

Magitot's disease (maz-it-ōz') [Emile Magitot, French dentist, 1833-1897]. See *disease*.

magma (mag'mah) [μάσσειν to knead]. An amorphous mass of finely divided material. **m. bismu'thi**, milk of bismuth. **m. magn'esiae** (U. S. P.), milk of magnesia. Dose as antacid, 1 fluidrachm (4 cc.); as laxative, 4 fluidrachms (15 cc.).

Magnan's movement, sign (mag'nanz) [Valentin Jacques Joseph Magnan, alienist in Paris, 1835-1916]. See *movement* and *sign*.

magnesia (mag-ne'ze-ah) [the name of a district in ancient Lydia]. Magnesium oxide, MgO, a white and light powder: aperient and antacid. Dose, 15-60 grains (1-4 Gm.). **m. al'ba**, a hydrated magnesium carbonate. **calcined m.**, **light m.**, the ordinary form of magnesia. **heavy m.**, **m. pondero'sa**, a fine, white, dense, and heavy powder, identical with ordinary or light magnesia, except in its physical properties. **Henry's m.**, a proprietary preparation of heavy magnesia. **Husband's m.**, a proprietary preparation of heavy magnesia. **m. lev'is**, **m. us'ta**, light or ordinary magnesia. **milk of m.**, a milky magnesium hydroxide, Mg₂H₂O₂, mixed with water: aperient. Dose, $\frac{1}{2}$ -4 fluidrachms (2-15 cc.) for infants.

magnesian (mag-ne'sik). Relating to or containing magnesium or one of its compounds.

magnesite (mag-ne'sit). Native magnesium carbonate, $MgCO_3$; used like plaster of paris in splints and dressings.

magnesium (mag-ne'ze-um), gen. *magne'sii* [L.]. A white, metallic element; symbol, Mg; atomic weight, 24.32; specific gravity, 1.75. **m. benzoate**, a white, crystalline powder, $(C_6H_5.CO_2)_2Mg$; used in gout and urinary calculus. Dose, 2½–15 grains (0.15–1 Gm.). **m. borate**, $Mg(BO_2)_2 \cdot 2H_2O$; a white powder, soluble in hot water. It is used as a gargle in diphtheria. **m. borocitrate**, the borocitrate of magnesium. Dose, 2–4 drachms (8–16 Gm.). **m. bromide**, colorless deliquescent crystals, $MgBr_2 \cdot 6H_2O$. **m. carbomas effervesces**, an effervescent preparation of magnesium carbonate. Dose, ½–1 oz. (7.8–30 Gm.). **m. carbonate**, a mildly aperient antacid, $(MgCO_3)_4 \cdot Mg(OH)_2 + 5H_2O$. Dose, 15–60 grains (1–4 Gm.). It is prepared in two forms, *m. c. lev's* (light magnesium carbonate), in friable masses or in a fine white powder, or in a much heavier form, *m. c. ponderosa*, but the two are identical, except in physical properties. **m. chloride**, transparent crystals of $MgCl_2 \cdot 6H_2O$; used as a laxative. **m. citras granulatus**, a granulated preparation of magnesium citrate. Dose, 2–8 drachms (8–32 Gm.). **m. fluoride**, a white, antiseptic powder. **m. glycerophosphate**, a soluble white, crystalline powder, $C_3H_7O_3PO_3Mg$; a nerve tonic. Dose, 2–5 grains (0.13–0.333 Gm.). **m. gynecardate**, a white powder: used for leprosy. Dose, 15–60 grains (1–4 Gm.). **m. ichthyolate**, calcined magnesia, 100 parts, combined with ichthylol, 775 parts; an antiseptic powder. **m. lactate**, a salt in colorless crystals, $(CH_3.CHOH.CO_2)_2Mg + 3H_2O$; aperient. Dose, 15–45 grains (1–3 Gm.). **m. loretinate, basic**, the magnesium compound of iodo-oxyquinoline-sulphonate, $MgI.O.C_9H_4N.SO_3.5H_2O$; an antiseptic for external use. **m. loretinate, neutral**, a salt in salmon-yellow prisms, $MgI.OH.C_9H_4N.SO_3.2.7H_2O$. **m. oxide**, a compound, MgO , formed by calcining magnesium carbonate. **m. permanganate**, an antiseptic salt, $Mg(MnO_4)_2 \cdot 6H_2O$, in bluish-black crystals. **m. peroxide**, MgO_2 : a white powder, insoluble in water, but gradually decomposed with the liberation of oxygen. **m. phenolsulphonate**, a white, bitter, crystalline salt, $(OH.C_6H_4.SO_2.O)_2Mg \cdot 7H_2O$; antiseptic and purgative. Dose, 15–30 grains (1–2 Gm.). **m. salicylate**, a salt, $(OH.C_6H_4.CO_2)_2Mg + 4H_2O$, in colorless crystals; antiseptic: used in typhoid, etc. Dose, 15–30 grains (1–2 Gm.). **m. silicate**, $3MgSiO_3.5H_2O$; used in diarrhea. **m. sozoidolate**, an antiseptic salt, $(C_6H_5I_2(OH)SO_3)_2Mg + 8H_2O$, in colorless needles. **m. sulphate**, epsom salt, a white, crystalline salt, $MgSO_4 + 7H_2O$; an active saline cathartic: used in dysentery, colic, and the early stages of febrile diseases. Dose, 1–8 drachms (4–32 Gm.). **m. sulphate, dried**, is used like the ordinary sulphate, from which it differs in the expulsion of five sevenths of its water of crystallization by heat. **m. sulphite**, an antiseptic, $MgSO_3 + 6H_2O$. Dose, 5–30 grains (0.333–2 Gm.).

magnet (mag'net) [L. *magne's*; *μάγνης* magnet]. A lodestone; native iron oxide that attracts iron; also a bar of steel or iron that attracts iron and has magnetic polarity. **electrom.**, a piece of soft iron rendered temporarily magnetic by an electric current passing in a helix around the iron. **Grün-ing's m.**, a magnet made up of a number of steel rods: used in removing particles of iron and steel from the eye. **Haab's m.**, a powerful magnet for extracting foreign metallic bodies from the eye. **horseshoe m.**, a magnet shaped like the letter U. **permanent m.**, one with permanent magnetic qualities. **temporary m.**, a substance that possesses magnetic properties only during the

passage of an electric current or when a fixed magnet is near it.

magnetic (mag-net'ik). Pertaining to, derived from, or having the properties of, a magnet.

magnetism (mag'net-izm). Magnetic attraction or repulsion. **animal m.**, mesmerism.

magnetization (mag'net-iz-a'shun). The act or process of rendering an object or substance magnetic.

magnetoconstriction (mag'net-o-kon-strik'-shun). A change in the dimensions of a body produced by the application of a magnetic field.

magneto-electricity (mag'net-o-e-lek-tris'ti'e). Electricity induced by means of a magnet.

magneto-induction (mag'net-o-in-duk'shun). See *induction, magnetic*.

magnetology (mag-net-ol'o-je). That branch of physics which treats of magnetics.

magnetometer (mag-net-om'et-er) [*magnetic* + *μέτρον* measure]. An apparatus for measuring magnetic forces.

magneton (mag-net-on). An ultimate elemental magnetic particle.

magnetotherapy (mag'net-o-ther'ap-e). The treatment of disease by magnets or by magnetism.

magnetotropism (mag-net'ro-pizm) [*magnet* + *τρόπος* turning]. The turning of the direction of growth of an organism under the influence of a magnet.

magniductor (mag-nid-uk'tor). The adductor femoris magnus.

magnification (mag'nif-ik-a'shun) [L. *magnifica'tio*; *mag'nus* great + *fa'cere* to make]. Apparent increase in size under the microscope.

magnify (mag'nif-i) [L. *mag'nus* great + *fa'cere* to make]. To cause to appear larger than is natural by the use of lenses or suitable mirrors.

magniscopes (mag'nis-köp). A variety of chromo-photograph.

magnodat (mag'no-dat). Magnesium peroxide.

Magnolia (mag-no'le-ah) [after Pierre *Magnol*, 1638–1715]. 1. A genus of magnoliaceous trees. 2. The bitter aromatic bark of *M. acuminata*, *M. glauca*, and *M. tripetala*; diaphoretic and antifebrile. Dose, 20–60 grains (2–4 Gm.).

magnum, os magnum (mag'num) [L. "great bone"]. The largest of the bones in the distal row of the carpus.

magolan (mag'o-lan). A proprietary organic phosphorus compound.

mahamari (mah-hah-mah're). The native name for a form of plague occurring in the southern slopes of the Himalayas.

Mahler's sign (mah'lerz) [Richard A. *Mahler*, contemporary German obstetrician]. See under *sign*.

ma huang (mah hoo-ang'). The native name for a Chinese variety of *Ephedra vulgaris*. See *Ephedra*.

maidalokri (mi-dal-ok're). The bark of *Tetranthea laxifolia*, of India: used in dysentery and diarrhea.

maidenhead (ma'dn-hed). 1. Virginity. 2. The hymen.

maidism, maidism (ma'id-izm, ma-id-iz'mus) [L. *ma'is* maize]. Pellagra; poisoning by damaged maize.

Maier's sinus (mi'erz) [Rudolf *Maier*, German physician, 1824–1888]. See under *sinus*.

maieusiomania (mi-u'se-o-ma-ne-ah) [*maievōis* childbirth + *μανία*]. Puerperal mania.

maieusiophobia (mi-u'se-o-fō-be-ah) [*maievōis* childbirth + *φόβος* fear]. Morbid dread of childbirth.

maieutic (mi-u'tik). 1. Obstetrical. 2. A rubber bag for dilating the uterine cervix.

maieutics (mi-u'tiks). Obstetrics.

maim (mām). 1. To disable by a wound; to dis-

- member by violence. 2. A dismemberment or disablement effected by violence.
- main d'accoucheur** (mān dak-oo-shuhr') [Fr.]. Obstetrician's hand. See under *hand*.
- main en crochet** (ma nong kro-shā'). A permanently flexed condition of the third and fourth fingers.
- main en griffe** (ma nong grif') [Fr.]. Same as *claw hand*.
- main en singe** (ma nong sēnz'h'). See *monkey hand*, under *hand*.
- main en squelette** (ma nong skel-et'). See *skeleton hand*, under *hand*.
- main succulente** (mān suk-u-lent') [Fr.]. Edema of the hands.
- maiosis** (mi-o'sis). Same as *miosis* (2).
- maiotic** (mi-ot'ik). Same as *miotic* (4).
- maisin** (ma'zin). A protein found in the seeds of maize.
- maisonneuve** (ma-zo-nev'). See *Maisonneuve's urethrolome*, under *urethrolome*.
- Maisonneuve's bandage** (ma-zo-nevz') [Jules Germain François Maisonneuve, French surgeon, 1809-1897]. See under *bandage*.
- Maissiat's band** (ma-se-az') [Jacques Henri Maissiat, French anatomist, 1805-1878]. See under *band*.
- maizavena** (ma-zah-ven'ah). A proprietary urinary antiseptic and diuretic.
- maise** (māz) [L. *mays* maize]. Indian corn; a cereal grain, the seed of *Zea mays*. See *Zea*.
- maizenate** (ma'zen-āt). Any salt of maizenic acid.
- maizole** (ma'zöl). A proprietary emulsion of corn oil: used as a food remedy.
- maizolithium** (ma-zo-lith'e-um). A solution of lithium maizenate: diuretic and genito-urinary sedative. Dose, 1-2 fluidrachms (4-8 cc.).
- Majocchi's disease** (mah-jok'ēz) [Domenico Majocchi, contemporary Italian physician]. See *disease*.
- make** (māk). The closure and completion of an electric current.
- Makins' murmur** (ma'kins) [Sir George Henry Makins, British surgeon, born 1853]. See under *murmur*.
- makro-**. For words thus beginning, see *macro-*.
- mal** (mah) [Fr.; L. *ma'lum*, ill]. Disease. **m. de abajo**, Peruvian name for uterine cancer or syphilis. **m. d'Aviateur**. See *aviators' disease*, under *disease*. **m. de Caderas**, a disease of horses, mules, and dogs in South America which is characterized by weakness, especially of the hind quarters, and a staggering, swinging gate. It is caused by *Trypanosoma equinum* which is probably transmitted by flies (*Musca brava*?). Dogs may get it by eating infected meat. **m. de Cayenne**, elephantiasis. **m. de coit**. Same as *dourine*. **m. comital**, epilepsy. **m. d'estomac**, ankylostomiasis. **m. de los pintos** (da lōs pin'tos). See *pinta*. **m. de Melada**, symmetrical keratoderma of the extremities, occurring endemically in the island of Melada. **m. de mer** (deh mār'), seasickness. **m. perforant**, perforating ulcer of the foot. **m. perforant palatin**, perforating ulcer of the roof of the mouth. **petit m.**, a mild attack of epilepsy. **m. de quebrach**. Same as *paay*. **m. de siete dias**, seven-day disease. **m. de Zousfana**, a disease of horses in Algeria; probably a form of surra.
- mala** (ma'lah) [L.]. The cheek or cheek bone.
- malabar itch** (ma'lab-ar). See under *itch*.
- malabathrum** (mal-ab-ath'rūm) [L.]. The leaf of *Cinnamomum tam'ala*; formerly used in medicine.
- malabsorption** (mal-ab-sorp'shun). Disorder of normal nutritive absorption; disordered anabolism.
- Malacarne's pyramid, space** (mal-ah-kar'naz) [Michele Vincenzo Giacinto Malacarne, Italian surgeon, 1744-1816]. See *pyramid* and *space*.
- malachite green** (mal'ak-it). See under *green*.
- malacia** (mal-a'se-ah) [μαλακία]. 1. The morbid softening or softness of a part or tissue. 2. Craving for highly spiced food and dishes, as pickles, salads, mustard, etc. **myeloplastic m.** Same as *osteogenesis imperfecta*. **porotic m.**, softening accompanied by proliferation of connective tissue.
- malacin** (mal'as-in). See *malakin*.
- malacoma** (mal-ak-o'mah). Morbid softening; also a morbidly soft part or spot.
- malacoplakia** (mal'ak-o-pla'ke-ah) [μαλακός soft + πλάξ plaque]. The formation of soft patches on the mucous membrane of a hollow organ. **m. vesicae**, a soft, yellowish, fungus-like growth on the mucous membrane of the bladder and ureters.
- malacosarcosis** (mal'ak-o-sar-ko'sis) [μαλακός soft + σάρξ flesh]. Softness of muscular tissue.
- malacosis** (mal-ak-o'sis). Same as *malacia*.
- malacosteon** (mal-ak-os'te-on) [μαλακός soft + ὀστέον bone]. Morbid softness of the bones; osteomalacia.
- malacotic** (mal-ak-ot'ik). Inclined to malacia; soft: said of teeth.
- malacotomy** (mal-ak-ot-o'me) [μαλακός soft + τέμνω to cut]. Incision of the abdominal wall.
- malactic** (mal-ak'tik) [μαλακός soft]. 1. Softening, emollient. 2. An emollient medicine.
- maladie** (mal-ad-e') [Fr.]. A disease. **m. bronzée** (braw-za'), epidemic hemoglobinuria. **m. cystique** (sis-tēk'), cystic degeneration of the breast. **m. de Woillez** (du woy-ya'). See *Woillez's disease*, under *disease*. **m. du coit** (du ko-e'). See *dourine*.
- malady** (mal'ad-e) [Fr. *maladie*]. Any disease or illness.
- malagma** (mal-ag'mah) [Gr.]. An emollient or cataplasm.
- malaise** (mal-āz') [Fr.]. Any uneasiness or indisposition, discomfort, or distress.
- malakin** (mal'ak-in). Salicyl-paraphenetidin, $C_6H_4(OC_2H_5).N.CH_3.C_6H_4(OH) + H_2O$, a proprietary antipyretic and antirheumatic, in yellow needles. It is insoluble in cold water, slightly soluble in alcohol, and soluble in hot alcohol and solutions of alkaline carbonates. Dose, 15 grains (1 Gm.).
- malakoplakia**. See *malacoplakia*.
- malalignment, malalignment** (mal-al-in'ment). A condition in which the teeth are displaced from their normal relation to the line of the dental arch.
- malanders** (mal'an-derz). See *mallanders*.
- malandrín** (mal-an'drin). A homeopathic remedy from grease (equine smallpox): used as a preventive of variola.
- malar** (ma'lar) [L. *ma'la* cheek]. Pertaining to the cheek.
- malaria** (mah-la're-ah) [It. *mal'aria*, bad air]. A febrile disease, formerly supposed to be due to poisonous emanations from damp ground, but now known to be caused by a blood parasite; more correctly, the emanations themselves. *Tertian m.* is caused by *Plasmodium vivax*; *quarlan m.* by *P. malariae*; *estivo-autumnal, tropical, quotidian, sub-terrian*, and *malignant tertian m.* by *P. falciparum*. See *fever, malarial*, and *plasmodium*. **bovine m.**, Texas fever. See under *fever*. **hybrid m.**, malaria modified by being associated with another disease.
- malarial** (mal-a're-al). Pertaining or due to malaria. **m. treatment**. See *malaria therapy*.
- malarialize** (mal-a're-al-iz). To infect with malarial poison.
- malariated** (mal-a're-a-ted). Affected with malaria.

malariatherapy (mal-a'-re-ah-ther'ap-e). Mal-
ariortherapy.

malarin (mal'ar-in). A crystalline powder, C_6H_5 -
 $C(CH_3)_2N.C_6H_4OC_2H_5$, acetophenonephenetidin;
antipyretic and antineuralgic, but dangerous.
Dose, 8-15 grains (0.6-1 Gm.); patented.

malariology (mal-a-re-ol'o-je) [malaria + λόγος
treatise]. The study of malaria.

malariosis (mal-a-re-o'-sis). A condition seen in
soldiers who have recovered from malaria, in which
they consider that they are permanently disabled
thereby, and are entitled to care and a pension.

malariotherapy (mal-a'-re-o-ther'ap-e). Treat-
ment of general paralysis or paresis by infecting
the patient with the parasite of tertian malaria.

malarious (mal-a're-us). Pertaining to or marked
by the presence of malaria.

Malassez's disease, rests, method (mal-as-az')
[Louis Charles Malassez, physiologist in Paris,
1842-1909]. See under *disease, rest, and staining*.

Malassezia (mal-
as-e'-ze-ah) [Louis
Charles Malassez].
A genus of fungi.
M. furfur causes
tinea versicolor;
M. tropica causes
tinea flava.

Malassezia (Rivas).

malate (ma'lāt). Any salt of malic acid.

malaxation (mal-aks-a'shun) [L. malaxa'tio]. An
act of kneading; kneading movement in massage.

malcoeur (mal-ker'). Ankylostomiasis.

maldigestion (mal-di-jes'tshun). Impaired diges-
tion.

male (māl). 1. A person or animal of the sex that
begets young or that produces spermatozoa. 2.
Masculine.

malemission (mal-e-mish'un). The failure of the
semen to be discharged from the meatus in coition.

maleness (māl'nes). The catabolic diathesis in the
embryo.

Malerba's test (mah-ler'bahz) [Pasquale Malerba,
Italian physician, died 1917]. See under *tests*.

maleruption (mal-e-rup'shun). The eruption of a
tooth so as to be out of its normal position.

malformation (mal-for-ma'shun) [L. mal'us evil +
forma'tio a forming]. Defective or abnormal for-
mation; deformity.

Malgaigne's amputation, fossa, hernia, hook, pads (mal-gānz') [Joseph François Mal-
gaigne, French surgeon, 1806-1865]. See *amputa-
tion, fossa, hernia, hook, pad, etc.*

maliasmus (mal-e-as'mus). Glanders, or farcy.

malic acid (mal'ik). See *acid*.

malicor (mal'ik-or) [L. malico'rium apple skin]. The
strongly astringent, coriaceous rind of pomegranate
fruit.

maligancy (mal-ig'nān-se) [L. maligna're to act
maliciously]. A tendency to progress in viru-
lence.

malignant (mal-ig'nant) [L. malignans acting
maliciously]. Virulent, and tending to go from
bad to worse.

malignin (mal-ig'nin). A ferment supposed to
exist in cancer cells and giving them their malig-
nant character.

malignogram (mal-ig'no-gram). A systematic ar-
rangement of numerical values assigned to the
various factors in cases of carcinoma.

malignometer (mal-ig-nomet-er) [malignant +
μέτρον measure]. An apparatus for detecting the
existence of malignancy by observing the color
reaction of the urine.

mali-mali (mah'le-mah'le). A form of palmus, or
jumping disease, endemic in the Philippines.

Malin's syndrome. See under *syndrome*.

malingering (mal-in'ger-er) [Fr. malingre sickly].
One who feigns illness.

malingering (mal-inger-ing). The feigning of ill-
ness; pathomimesis.

malingeroscope (mal-in'ger-o-skōp). An appa-
ratus for detecting malingering with regard to
alleged defects of vision.

malinterdigitation (mal-in-ter-dij-it-a'shun). Ab-
normal interdigitation of the teeth.

Mall's formula, ovum [Franklin Paine Mall,
Baltimore anatomist, 1862-1917]. See *formula and
ovum*.

mallanders (mal'an-derz). A scab variety of
eczema above the forefoot and about the knee of
a horse. Called also *mallenders* and *callenders*.

malleability (mal'e-ab-il'it-e). The quality of
being malleable.

malleable (mal'e-ab-l) [L. mallea're to hammer].
Susceptible of being beaten out into a thin plate.

mallease (mal'e-ās). A neutralized and filtered
solution of glands bacilli in 8 per cent antiform:
used in testing for glands. See *Konew's test, under tests*.

malleation (mal-e-a'shun) [L. mallea're to ham-
mer]. Sharp and swift muscular twitching of the
hands.

mallein (mal'e-in) [L. mal'leus glands]. The endo-
toxin of *Pfeifferella mallei*. It consists of the germ-
free bouillon in which the organism has grown
and is used in the diagnosis of glands, since, when
injected into an animal affected with glands, it
causes a rise of temperature.

malleinization (mal'e-in-is-a'shun). Inoculation
with mallein.

mallenders (mal'en-derz). See *mallanders*.

malleoidosis (mal-e-oi-do'sis). Same as *melioi-
dosis*.

malleo-incudal (mal'e-o-ink'u-dal). Pertaining
to the malleus and incus.

malleolar (mal'e-o-lar). Pertaining to a malleolus.

malleolus (mal'e-o-lus), pl. *malle'oli* [L. "little
hammer"]. A hammer-headed process of bone.
external m., lateral m., outer m., the lowest
point of the fibula. **inner m., medial m.**, the
lowest point of the tibia.

malleotomy (mal-e-ot'o-me) [malleus + τομή a
cut]. 1. The operation of dividing the malleus in
cases of ankylosis of the ossicles of the middle ear.
2. The operation of separating the malleoli by
dividing the ligaments which hold them together.

malleus (mal'e-us) [L. "hammer"]. 1. The largest
of the auditory ossicles and the one attached to
the membrana tympani. Its club-shaped head
articulates with the incus. 2. Glanders.

mallochorion (mal-o-ko're-on) [μαλλός wool +
chorion]. The primitive mammalian chorion; so
called from its villi.

Mallophaga (mal-of-ag-ah) [μαλλός wool +
φαγείν to eat]. A group of biting lice feeding on
the feathers and hair of birds.

Mallory's bodies, stain (mal'or-ēz) [Frank Burr
Mallory, pathologist in Boston, born 1863]. See
under *body and stain*.

malleotoxin (mal-o-toks'in). See *rotterlin*.

mallotus (mal'o-tus). See *Kamala*.

mallow (mal'o) [L. mal'va]. Any plant of the genus
Mal'va. The flowers and leaves of *M. sylvestris*
and *M. rotundifolia* are demulcent. **high m.,**
M. sylvestris. **low m.,** *M. rotundifolia*. **marsh-**
m. See *Althaea*.

malnutrition (mal-nu-trish'un). Imperfect assimilation and nutrition.

malocclusion (mal-ok-ly'shun). Such malposition of the teeth as will interfere with the highest efficiency during the excessive movements of the jaw which are essential to the function of mastication (A. D. A.). **close-bite m.**, malocclusion in which the labial teeth pass their proper occlusal planes so that the lower incisors strike the gum behind the upper incisors. **open-bite m.**, malocclusion in which the labial teeth are prevented from coming together by occlusion of the buccal teeth.

malonal (mal'o-nal). Same as *barbital*.

malonyl (mal'o-nil). The divalent radical, OCCH_2CO . **m. urea**. See *barbituric acid*, under *acid*. **diethyl m. urea**. See *barbital*.

maloplasty (mal'o-plas-te) [L. *ma'la* cheek + *πλάσσειν* to form]. Plastic surgery upon the cheek.

malpighian (mal-pig'e-an). Of, pertaining to, or described by, the Italian anatomist, Marcello *Malpighi* (1628-1694). See *body* and *corpuscle*.

malposed (mal-pōsd'). Not in the normal position.

malposition (mal-po-zish'un) [L. *ma'lus* bad + *posit'io* placement]. Abnormal or anomalous position.

malpractice (mal-prak'tis) [L. *mal* bad + *practice*]. Improper or injurious practice; unskilful and faulty medical or surgical treatment.

malpraxis (mal-prax'is). Malpractice.

malpresentation (mal'prez-en-ta'shun). A faulty, abnormal, or untoward fetal presentation.

malrotation (mal-ro-ta'shun). Abnormal or pathologic rotation, as of the spinal column.

malt (mawlt) [L. *ma'lum*]. Grain, for the most part barley, which has been soaked, made to germinate, and then dried: it contains dextrin, maltose, and diastase. It is nutritive and digestant, aiding in the digestion of starchy foods, and is used in tuberculosis, cholera infantum, and other wasting diseases. Dose of extract (U. S. P.), 1-2½ drachms (4-10 Gm.); of fluidextract, 1-2 fl.oz. (15-60 cc.). **m. extract**. See *extract of malt*. **m. liquors**, alcoholic beverages derived from fermented infusions of malt: they include beer, ale, and porter.

Malta fever (mawlt'ah). See *fever*.

maltase (mawlt'ās). A ferment which converts maltose into dextrose. It is found widely distributed in the animal and vegetable world.

maltaven (mawlt'av-en). A proprietary vitamin preparation.

malthusianism (mal-thu'se-an-izm) [Rev. T. R. *Malthus*, English economist, 1766-1834]. The doctrine that at the normal rate of increase the population tends to increase faster than the means of sustenance can; and that, therefore, society should check the growth of population by late marriages and sexual continence.

maltine (mawlt-tēn'). A proprietary food preparation of malt.

maltobiose (mawl-to-bi'ōs). Same as *maltose*.

malto-dextrin (mawl-to-deks'trin). A dextrin convertible into maltose.

maltol (mawlt'ol). A proprietary food prepared from predigested cereals and nuts.

maltopepsin (mawl-to-pep'sin). A proprietary digestant remedy.

maltopetral (mawl-to-pet'ral). A proprietary malt extract with tasteless petroleum and hypophosphites.

maltoazone (mawl-to-sa'zōn). The phenyl-osazone of maltose. It is a yellow crystalline substance formed by treating maltose with phenyl hydrazine and acetic acid. The crystals melt at 205 C. and may be used in identifying maltose.

maltose (mawl'tōs). Malt sugar, $\text{C}_{12}\text{H}_{22}\text{O}_{11} + \text{H}_2\text{O}$, a white crystalline disaccharide formed when starch is hydrolyzed by certain enzymes. It is a glucose-alpha-glucoside and on hydrolysis by maltase yields glucose.

maltoside (mawl'to-sid). A compound homologous with a glucoside, but in which the sugar is maltose instead of glucose.

maltosuria (mawl-to-su're-ah). The presence of maltose in the urine.

malto-yerbine (mawl-to-ye'rbin). An expectorant preparation of malt and yerba santa.

maltoen (mawl'tro-jen). A proprietary nutrient preparation of malt extract, olive oil, and glycerin.

maltron (mawl'trop'on). A combination of tropin and lecithin, used as a galactagogue.

maltsanta (mawlt-san'tah). A preparation of maltzyme and yerba santa: usually employed as a sedative and tonic for respiratory mucous membranes.

malt sugar. Maltose.

malturn (mal'tum). Latin for *malt*.

malturned (mal-ternd'). Turned abnormally: said of teeth twisted on their central axes.

maltzyme (mawlt'zim). A proprietary food and therapeutical preparation.

malum (ma'lum) [L. for evil or disease]. **m. cox'ae**, hip disease. **m. perforans pe'dis**, perforating ulcer of the foot. **m. seni'le**, a variety of arthritis deformans peculiar to aged persons. See *morbus coxae senilis*. **m. vene'reum**, syphilis. **m. vertebrae suboccipita'les**, tuberculosis of the atlas and axis.

malunion (mal-u'nyon). Union of the fragments of a fractured bone in a faulty position.

Malva (mal'vah) [L.]. See *mallow*.

mal'vae fo'lia. Mallow leaves.

Maly's test (mah'lez) [Richard Leo *Maly*, Austrian chemist, 1839-1894]. See under *tests*.

mamaliga (mah-mal-e'gah). A solid cornmeal mush made from coarsely ground meal: used by the peasants of Roumania.

mamanpian (mah-mahn'pe-ahn') [Fr. *maman* mother + *pian* yaw]. Mother-yaw. See *yaw*.

mamelonated (mam'el-on-a-ted). Having nipple-like elevations on the surface.

mamelonation (mam-el-o-na'shun). The development of nipple-like, rounded prominences on a part.

mamilla, etc. (mam-il'ah). See *mammilla*, etc.

mamma (mam'ah), pl. *mam'mae* [L.]. The mammary gland; the breast. **accessory m.**, **supernumerary m.**, mammary glands in excess of the normal number. **m. viri'lis** [B N A], male breast; the mammary gland in the male.

mammagen (mam'aj-en). A proprietary preparation of extracts from the pituitary, corpus luteum, placenta, and mammary gland: alleged to increase lactation.

mammal (mam'al). An individual belonging to the Mammalia.

mammala (mam'al-ah). A proprietary milk food preparation in dried form.

mammalgia (mam-al'je-ah) [L. *mam'ma* breast + *ἀλγος* pain]. Pain in a mamma; mastalgia.

Mammalia (mam-a'le-ah) [L. *mam'ma* breast]. A division of vertebrate animals, including all that suckle their young.

mammalogy (mam-al-o'je) [*mammal* + *λόγος* treatise]. The study of mammals.

mammary (mam'ar-e) [L. *mamma'rius*]. Pertaining to the mamma.

mammectomy (mam-ek'to-me) [L. *mam'ma* breast + *ἐκτομή* excision]. Excision of the breast.

mammiform (mam'if-orm) [L. *mam'ma* breast + *for'ma* form]. Shaped like the mamma.

mammilla, mamilla (mam-il'ah) [L.]. The nipple; also any nipple-like structure.

Mammillaria (mam-il-a're-ah). Same as *Anhalonium*.

mammillary (mam'il-a-re). Like or pertaining to a nipple.

mammillate, mammillated (mam'il-ät, mam'il-a-ted) [L. *mammilla'tus*]. Having nipple-like projections.

mammillation (mam-il-a'shun) [L. *mammilla'tio*]. 1. The condition of being mammillated. 2. A mammilliform protuberance.

mammilliform (mam-il'if-orm) [L. *mammil'la* nipple + *for'ma* form]. Shaped like a nipple.

mammillioplasty (mam-il'ip-las-te) [L. *mammil'la* nipple + *πλάσσειν* to shape]. Plastic surgery of the nipple; thelyplasty.

mammillitis (mam-il-i'tis) [L. *mammilla* nipple + *-itis*]. Inflammation of the nipple.

mammin (mam'in) [L. *mam'ma* breast]. A preparation of mammary glands, used as a hemostatic in uterine hemorrhage.

mammitis (mam-i'tis). Same as *mastitis*.

Mammococcus (mam-o-kok'us). A micro-organism found by Gorini in the udders of cows.

mammose (mam-ös) [L. *mamm'o'sus*]. 1. Having large breasts, or mammae. 2. Mammillated.

mammotomy (mam-ot'o-me). See *mastotomy*.

Man. Abbreviation for *L. mani'p'ulus*, a handful.

manaca (man'ak-ah). The Brazilian plant, *Brunfelsia* (*Franciscia*) *hopeana*: used in the treatment of gout and rheumatism. Dose of fluidextract, 10-60 minims (0.66-4 cc.).

manacaline (man'ak-al-in). An antirheumatic combination of manaca, cimicifuga, and colchicin.

manchineel (man-kin-él'). The *Hippomane mancinella*, a tree of tropical America. It abounds in a caustic poisonous sap or juice.

manicism (man'sin-izm) [L. *man'cus* crippled]. Left-handedness.

Mandel's test (man'delz) [John Alfred Mandel, physiologic chemist in New York, born 1865]. See under *tests*.

Mandelbaum's reaction (man'del-bawmz) [M. Mandelbaum, contemporary German physician]. See *reaction*.

mandible (man'dib-l) [L. *mandib'ulum*]. The horseshoe-shaped bone forming the lower jaw; called also *inferior maxilla*.

Mandible: 1, Body; 2, ramus; 3, symphysis; 4, base; 5, angle; 6, mental foramen; 7, condylloid process; 8, coronoid process; 9, mandibular notch; 10, mandibular foramen; 11, alveolar process; 12, incisor teeth; 13, canine tooth; 14, premolars; 15, molars. (Leidy.)

mandibula (man-dib'u-lah). [B N A] The mandible.

mandibular (man-dib'u-lar). Pertaining to the lower jaw bone.

mandibulopharyngeal (man-dib'u-lo-far-in'-je-al). Pertaining to the mandible and the pharynx.

Mandragora (man-drag'or-ah) [L.]. A genus of solanaceous plants. *M. officinalis*, the true or

oriental mandrake, has the general properties of belladonna, and was formerly used as a narcotic and sedative.

mandragorine (man-drag'or-in). A poisonous alkaloid, $C_{16}H_{19}NO_2$, from *Mandragora*: its properties are much like those of atropine.

mandrake (man'drāk). See *Mandragora* and *podophyllum*.

mandram (man'dram). A West Indian stomachic and stimulant mixture.

mandrel, mandril (man'drel, man'dril). A shaft in which a tool is held for rotation.

mandrin (man'drin). A stilet or guide for a catheter.

manducation (man-du-ka'shun) [L. *manduca'tio*]. The mastication or chewing of food.

manducatory (man-du'ka-to-re). Pertaining to, or adapted to, chewing.

maneuver (man-oo'ver). Any dextrous proceeding. **Deutsch's m.**, the maneuver of pushing up and rotating the fetus when in internal version it has become wedged at the internal strait. **Jendrasik's m.**, a procedure for emphasizing the patellar reflex: the patient hooks his hands together by the flexed fingers and pulls apart as hard as he can. **Naegeli's m.**, pushing upward of the patient's head with one hand under the occiput and the other under the jaw, for cure of nosebleed. **Prague m.**, a method in breech presentation of engaging the head by bringing down the breech and making traction on the head with the finger which is hooked over the nape of the neck.

anganese (man-gan-ēs) [L. *man'ganum, manganese'ium*]. 1. A metal resembling iron; symbol, Mn; atomic weight, 54.93; specific gravity, 7.2. 2. The trade name for manganous dioxide. **m. albuminate**, a salt in yellow-white scales: used in chlorosis and anemia. **m. butyrate** has been used by intramuscular injection in the treatment of dermatoses due to arspenammine. **m. citrate**, $Mn_3(C_6H_5O_7)_2$: used in making solution of iron peptonate and manganese. **m. dioxide**, the black oxide of manganese, MnO_2 . It is a strong oxidizing agent. Dose, 2-5 grains (0.133-0.333 Gm.). **m. hypophosphite**, $Mn[P(OH)_2]_2 \cdot H_2O$. **m. iodide**. Dose of syrup, 10-30 minims (0.666-2 cc.). **m. peptonate**, a preparation used for chlorosis and anemia. **m. saccharate**, a brown powder: used for chlorosis and anemia. **m. sulphate**, a salt, $MnSO_4 + 4H_2O$: used as a cholagogue and cathartic in nervous disorders, and locally as a counterirritant. Dose, 2-5 grains (0.133-0.333 Gm.).

manganum (man'gan-um). Latin for *manganese*.

mangasol (man'gas-ol). Chlorphenolsulphonate of magnesium; a brown, antiseptic powder. Dose, 10-30 grains (0.6-2 Gm.).

mange (mänj). A communicable disease of domestic animals, due to itch mites of the family Sarcopidae.

Mangifera (man-gif'er-ah). See *mango*.

mango (man'go). The fruit of *Manif'era indica*. The root and bark of this tree are used as an astringent and tonic for mucous membranes. **m. toe**, epidermophytosis of the toes.

mangosteen (man'gos-tēn). The fruit of *Garcinia mangostana*: its rind is astringent.

mangostin (man'gos-tin). A yellow, crystalline compound from mangosteen rind.

mania (ma'ne-ah) [*μᾶνία* madness]. A variety of insanity characterized by an expansive emotional state, such as wild excitement, hallucinations, delusions, and violent tendencies; insanity with exaltation, as distinguished from melancholia, or insanity with depression. **acute hallucinatory m.** See *Ganser's syndrome*, under *syndrome*. **alcoholic m.**, insanity due to the misuse of alcoholic stimulants. **m. à po'tu**, delirium tremens. **Bell's m.**, acute periencephalitis. **dancing m.** See *Choromania*. **doubting m.**, doubting in-

sanity. **epileptic m.**, mania with acts of violence following, preceding, or replacing an epileptic attack. **histrionic m.**, mania marked by dramatic speech and gestures. **hysterical m.**, mania as one of the concomitants of a hysterical condition. **m. mi'tis**, the mildest form of mania. **periodical m.**, a condition in which maniacal attacks of varying duration follow one another at more or less regular intervals. **puerperal m.**, the insanity which sometimes follows childbirth. **Ray's m.**, moral insanity. **reasoning m.**, simple mania with active but perverted ideation. **religious m.**, mania with abnormal or perverted religious impulses. **m. secan'di**, undue haste to perform unnecessary surgical operations. **transitory m.**, severe frenzied mania, the attacks of which are of short duration.

maniac (man'ne-ak) [L. *mani'acus*]. One who is affected with mania.

maniacal (man-i'ak-al). Affected with mania.

manic (ma'nik). Pertaining to or affected with mania.

manic-depressive insanity. See under *insanity*.

manicure (man'ik-ür) [L. *ma'nus* hand + *cu'ra* care]. 1. A process or method of caring for and embellishing the hand. 2. One who professionally cares for the hands and nails.

manifold (man'if-old). See *omasum*.

manigraphy (ma-nig'raf-e) [*μανία* madness + *γράφειν* to write]. Description of insanity in its various forms.

manihot (man'e-hot). See *cassava* and *Jatropha*.

manikin (man'ik-in). A model of the body, with movable members and parts, used to illustrate anatomy.

Manip. Abbreviation for L. *manip'ulus*, a handful.

maniphalanx (man-if-a'lanks) [L. *ma'nus* hand + *phalanx*]. A phalanx of the hand. Cf. *pedi-phalanx*.

manipulation (man-ip-u-la'shun) [L. *manipula're* to handle]. Skilful or dextrous treatment by the hand. **conjoined m.**, manipulation with both hands.

manipulus (man-ip'u-lus). Latin for *handful*.

Mann's sign [John Dixon Mann, English physician, 1840-1912]. See *sign*.

manna (man'ah) [L.]. A sweet, concrete, aperient exudation containing mannite, from *Fraxinus ornus*. It is a mild aperient and cholagogue. Dose, 4-1 fl.oz. (15-30 cc.). **Armenian m.**, a variety growing upon the oak, and containing glucose. **Australian m.**, a manna from various species of *Eucalyptus*, containing melitose. **Briancon m.**, a manna from larch boughs, containing melitose. **fat m.**, impure commercial manna in soft, brown masses. **m. se'ri**, lactose. **tamarisk m.**, a variety from *Tam'arix mannifera*, a tamarisk of Arabia containing saccharose, glucose, and dextrin. **trehala m.**, a manna from Persia containing trehalose. This manna is from *Aethiops per'sica*, and contains the cocoons of an insect, *Lar'inus macula'tus*. In Asia varieties of manna are obtained from *Altha'gi camelo'rum*, *Astrag'alus adnes'cens*, *A. florulen'tus*, and other trees and shrubs.

Mannaberg's sign (man'ab-ergz) [Julius Mannaberg, physician in Vienna, born 1860]. See under *sign*.

mannan (man'an). A hard, white insoluble polysaccharide which yields mannose on hydrolysis. It is found in the vegetable ivory nut, *Phylatephus macrocarpa*.

mannitan (man'it-an). A syrupy liquid, $C_6H_{12}O_6$, obtainable from mannite.

mannite (man'it). Same as *mannitol*.

mannitol (man'it-ol). An unfermentable hexatomic alcohol, $CH_2OH(CHOH)_4CH_2OH$, the principal constituent of ordinary manna. **m. hexanitate**, $C_6H_5(O.NO_2)_6$, an effective vasodilator.

mannitose (man'it-ös). Same as *levulose*.

Mannkopf's sign (man'kopfs) [Emil Wilhelm Mannkopf, German physician, 1836-1918]. See under *sign*.

manno-hydrazone (man'o-hi'dra-zön). The phenyl-hydrazone of mannose. It consists of colorless platelike crystals which melt at 195 C. and may be used in identifying mannose.

mannose (man'ös). A monosaccharide, $CH_2OH.(CHOH)_4CHO$; an aldehyde sugar produced by the oxidation of mannitol. It is very similar to dextrose in its general properties and is conveniently prepared by hydrolyzing the vegetable ivory nut.

mannosocellulose (man-o-so-sel'u-lös). A variety of cellulose from coffee; it is changed by hydrolysis into mannose and dextrose.

Manoiloff's reaction (man-o'i'lofs) [E. O. Manoiloff, contemporary Russian physician]. See under *reaction*.

manol (ma'nol). A proprietary antiseptic syrup: used for whooping cough.

manola (man-o'lah). A tonic preparation of cod liver oil, coca, china, mano nut, and phosphates.

manolymph glands (man'o-limf). See *hemolymph glands*, under *gland*.

manometer (man-om'et-er) [*μανός* thin + *μέτρον* measure]. An instrument for measuring the pressure or tension of liquids or gases, as the blood, etc. **König's m.**, an apparatus by which the notes of a musical instrument connected with it produce variations in the appearance of a flame, and thus indicate the character of the vibrations.

manometric (man-o-met'rik). 1. Pertaining to or ascertained by the manometer. 2. Varying with the pressure, as, a *manometric* cicatrix.

manoscopy (man-os'ko-pe). The measurement of the density of gases.

Man. pr. Abbreviation for L. *ma'ne pri'mo*, early in the morning.

manquea (mahn-ka'ah). An infectious disease of young cattle in South America, caused by a minute oval bacillus. It is marked by the formation of abscesses upon the legs.

mansa (man'sah). The root or rhizome of *Houttuynia californica*: used as a tonic in dysentery and malaria; yerba mansa.

Manson's pyosis (man'sonz) [Sir Patrick Manson, British physician, 1844-1922]. See *pyosis*.

mantle (man'tl). The cortex of the cerebrum. See *pallium*.

manual (man'u-al) [L. *manu'al'is*; *ma'nus* hand]. Of or pertaining to the hand; performed by the hand or hands.

manubrium (man-u'bre-um) [L. "handle"]. 1. The uppermost piece of the sternum (*m. ster'ni*). 2. The inferior process of the malleus (*m. mal'lei*).

manudynamometer (man'u-di-nam-om'et-er) [L. *ma'nus* hand + *δύναμις* force + *μέτρον* measure]. An apparatus for measuring the force of the thrust of an instrument.

manus (ma'nus) [L. "the hand"]. The hand. **m. ca'va**, a hand deformed by a deep hollowing of the palm. **m. exten'sa**, backward deviation of the hand. **m. flex'a**, forward deviation of the hand. **m. pla'na**, flattening of the arch formed normally by the proximal row of the carpal bones; flat hand. **m. superexten'sa**, manus extensa. **m. val'ga**, clubhand marked by deflection of the hand toward the ulnar side. **m. va'ra**, clubhand marked by deflection of the hand to the radial side.

manustupration (man'u-stu-pra'shun) [L. *manus-tup'atio*]. Masturbation, or self-pollution.

maypyles (men'ip-liz). See *omasum*.

Manz's glands (manz) [Wilhelm Manz, German ophthalmologist, 1833-1911]. See under *gland*.

manzanilla (man-zah-nil'ah) [Sp.]. A variety or brand of sherry wine.

manzanita (man-zah-nē'ta) [Sp., dim. of *manzana* apple]. A small shrub or tree of the genus *Arctostaphylos*, found in the western part of the United States.

M. A. O. Abbreviation for *Master of Obstetric Art*.

maqui (mah'kwē). A liliaceous shrub of South America: its berries afford an antifebrile wine.

Maragliano's serum (mah-ral-yan'ōz) [Eduardo Maragliano, Italian physician, born 1849]. See under *serum*.

Maranon's reaction or **sign** (mar-ohn'yonz) [Gregorio Marañon, contemporary Spanish physician]. See under *sign*.

Maranta (mah-ran'tah) [after *B. Marantia*]. A genus of tropical herbs: the roots of several species afford arrowroot.

marantic (mah-ran'tik) [μαραντικ to waste]. Pertaining to or of the nature of marasmus.

maraschino (mar-as-ke'no) [Ital.]. A liqueur prepared in Italy and Dalmatia from cherries.

marasmatic, **marasmic** (mar-az-mat'ik, mar-az'-mik). Affected with or of the nature of marasmus.

marasmoid (mar-az'moid) [μαρασμός a wasting + εἶδος form]. Resembling marasmus.

marasmus (mar-az'mus) [μαρασμός a wasting]. Progressive wasting and emaciation, especially such a wasting in infants when there is no obvious or ascertainable cause. It is also called *infantile atrophy*, *m. infantilis*, and *m. lactantium*.

maratrik (mar-at'rik). A mixture of i cg. of morphine hydrochlorate, 2 mg. of neutral atropine sulphate, and 1.5 cg. of sedasina gualdoni: used as a local and regional anesthetic.

marble (mar'bl) [L. *mar'or*]. Native crystalline calcium carbonate occurring as a rock. **m. bones**. See *Albers-Schoenberg marble bones*, under *bone*.

marbleization (mar-bel-iz-a'shun). The state of being veined like marble.

marc (mark) [Fr.]. The residue left after the pressing of grapes for wine or olives for their oil.

Marchand's adrenals (mar'shantz) [Felix Marchand, German pathologist, 1846-1928]. Accessory adrenals in the broad ligament.

Marchi's bundle, reaction, tract, etc. (mar-kēz) [Vittorio Marchi, contemporary Italian physician]. See *bundle, reaction, tract*, etc.

marcid (mar'sid) [L. *mar'cere* to waste away]. Wasting away.

Marckwald's operation (mark'valts) [Max Marckwald, German surgeon, born 1844]. See *operation*.

marcov (mar'kov) [L. *mar'cere* to wither]. Marasmus.

Maréchal's test (mar-a-shalz') [Louis Eugène Maréchal, contemporary French physician]. See under *tests*.

marennin (mar-en'in). A green pigment from the oysters of Marennes, in France; derived from the chlorophyll of a micro-organism that infests them.

mareo (mar-a'o) [Sp.]. Seasickness. **m. de la Cordillera**, mountain sickness.

mare's tail. See *erigeron*.

maretin (mar-e'tin). A white, colorless, tasteless powder, methylated acetanilid or carbamic acid-metatoxyhydrazide, $\text{CN}_2\text{C}_6\text{H}_4(\text{NH})_2\text{CO.NH}_2$. It is used as an antipyretic. Dose, 2-7½ grains (0.13-0.5 Gm.).

Marey's law (mar-ēz') [Étienne Jules Marey, French physiologist, 1830-1904]. See *law*.

Marfan's disease, method of puncture (mar-fahnz') [Bernard-Jean Antonin Marfan, pediatrician in Paris, born 1858]. See under *disease* and *method*.

margaric acid (mar-gar'ik). See *acid*.

margarine (mar-gar-in) [μαργαριν pearl]. 1. The (theoretical) trimargarate of propenyl. 2. An artificial butter made from natural fats and oils.

margavid (mar'gav-id). Pearl-like.

margarone (mar'gar-on). See *palmitone*.

Margaropus annulatus. A species of tick common in the southern United States, Africa, and South America. It transmits *Piroplasma bigeminum*, the cause of Texas fever in cattle.

margin (mar'jin). A bounding line; an edge. **dentate m.** See *pectinate line*, under *line*. **gingival m.**, the border of the gingiva surrounding, but unattached to, the necks of the teeth. **gum m.**, the edge of the gums at the necks of the teeth.

marginal (mar'jin-al) [L. *mar'ginalis*; mar'go margin]. Pertaining to a margin or border.

margination (mar-jin-a'shun). Adhesion of leukocytes to the blood vessel walls in the early stages of inflammation.

marginoplasty (mar-jin'o-plas-te) [L. *mar'go* margin + πλασσειν to mold]. Surgical renewal of a border, as of the eyelid.

margo (mar'go) [L.]. An edge or border. **m. nasalis** [B N A], the articular surface of the frontal bone which articulates with the nasal and superior maxillary bones; called also *incisura nasalis* and *nasal border*.

margosa oil (mar-go'sah). See under *oil*.

margosate (mar'go-sāt). A salt of margosic acid. The margosates have antiprotozoal action and are used in syphilis.

margosic acid (mar-go'sik). See under *acid*.

mariahuana (mah-re-ah-wah'nah). An extremely poisonous weed found in Mexico, probably cannabis indica.

Marie's disease, sign (mar-ēz) [Pierre Marie, French physician, born 1853]. See under *disease* and *sign*.

Marie-Kahler sign. Same as *Marie's sign*.

Marie-Robinson syndrome. See under *syndrome*.

Marie-Strümpell disease. *Marie's disease*.

marigold (mar'ig-old). See *Anthemis*, *Calendula*, *Matricaria*, *Tagetes*.

Marinesco's succulent hand (mar-in-is'kōz) [Georges Marinesco, Roumanian physician]. See under *hand*.

Mariotte's experiment, law, spot (mar-e-ots') [Edme Mariotte, French physicist, 1620-1684]. See *experiment, law, spot*.

marisca (mar-is'kah); pl. *maris'cae* [L. *maris'ca* a pile]. A hemorrhoid.

mariscal (mar-is'kal). Hemorrhoidal.

maritonucleus (mar'it-o-nu'kle-us) [L. *mar'itus* married + *nucleus*]. The nucleus of the ovum after the sperm cell has entered it.

Marjolin's ulcer (mar-zho-lanz') [Jean Nicolas Marjolin, 1780-1850]. See under *ulcer*.

marjoram (mar'jo-ram). See *Origanum*.

markasol (mar'kas-ol). A preparation said to be bismuth borophenate, $\text{Bi}_2\text{O}_3\text{B}(\text{C}_6\text{H}_5)(\text{CO}_2)_3\text{H}_2\text{O}$: a white powder used as an antiseptic for wound dressing.

markings, Fontana's (mar'kingz). The minute transverse folds seen on a divided nerve trunk.

marmite (mar'mit). A proprietary antineuritic vitamin preparation.

marmoration (mar-mo-ra'shun) [L. *mar'mor* marble]. Marbleization.

Marmo's method (mar'mōz) [Serafino Marmo, contemporary Italian obstetrician]. See under *method*.

Marmorek's serum (mar'mo-reks) [Alexander Marmorek, Austrian physician living in Paris, born 1865]. See under *serum*.

marmorekin (mar-mor'ek-in). Marmorek's antistreptococcus serum; antistreptococcin: a serum for use in erysipelas.

marmot (mar'mot). The tarbagan; a large furbearing rodent, *Arctomys bobac*; it is a natural

reservoir for the plague which is transmitted by a flea, *Ceratophyllus silantiewi*. **small m.** See *Spermophilus*.

Marriott's method (mar'e-ots) [William McKim Marriott, American physician, born 1885]. See under *method*.

Marris' atropin test (mar'is). See under *tests*.

marrol (mar'ol). A dietetic preparation of ox marrow, malt extract, and calcium phosphate.

marrow (mar'o). The soft material that fills most of the cavities and cancelli of the bones. It is made up of a meshwork of connective tissue containing branching connective tissue corpuscles, the meshes of the meshwork being filled with marrow cells, which consist variously of fat cells, large nucleated cells or myelocytes, and multinucleated giant cells called myeloplaxes. **black m.**, a pigmented marrow seen in the melanosis of old horses. **fat m.**, yellow bone marrow. **red m.**, marrow of developing bone, of the ribs, vertebrae, and many of the smaller bones. This variety of marrow is regarded as having an important hematopoietic function. **spinal m.**, the spinal cord, or myelon. **m. spoon**, gouge for removing marrow from bones. **yellow m.**, ordinary bone marrow of the kind in which the fat cells predominate.

Marrubium (mar-u'be-um) [L.]. See *horehound*.

mars (marz) [L.]. An old name for iron.

Marsden's paste (marz'denz) [Alexander Marsden, London surgeon, 1832-1902]. See *paste*.

Marsdenia (mars-de'ne-ah). See *condurango*.

Marsh's disease (marsh-ez) [Sir Henry Marsh, Irish physician, 1790-1860]. Exophthalmic goiter.

Marsh's test (marsh-ez) [James Marsh, English chemist, 1789-1846]. See under *tests*.

Marshall's fold (mar'shalz) [John Marshall, English anatomist, 1818-1891]. See under *fold*, *vestigial*.

Marshall Hall's disease, facies, etc. [English physician, 1790-1857]. See *disease*, *facies*, etc.

marsh fever (marsh fe'ver). See *fever*.

marsh gas (mars' gas'). See *methane*.

marshmallow (marsh'mal-o). See *Althaea*.

marsupial (mar-su'pe-al) [L. *marsu'pium* a pouch]. One of a class of mammals characterized by the possession of an abdominal pouch in which the young are carried for some time after birth.

marsupialization (mar-su'pe-al-iz-a'shun) [L. *marsu'pium* pouch]. The operation of stitching the edges of an ovarian tumor to the edges of the abdominal wound so as to leave a pouch. The sac suppurates, fills with granulations, and shrinks.

marsupia patella'ris (mar-su'pe-ah). The alar ligaments of the knee.

marsyle (mar'sil). Iron codolate.

martial (mar'shal) [L. *marcia'lis*; *mars* iron]. Containing iron; ferruginous.

Martin's bandage, disease, operation, etc. (mar'tinz) [Henry Austin Martin, American surgeon, 1824-1884]. See under *bandage*, *disease*, and *operation*.

Martin's tube (mar'tinz) [August Martin, gynecologist in Berlin, born 1847]. See *tube*.

Martinotti's cell, vaccine (mar-tin-ot'ez) [Giovanni Martinotti, Professor of Pathologic Anatomy, University of Bologna]. See under *cell* and *vaccine*.

martol (mar'tol). A semifluid preparation from the shells of cacao, containing theobromine, phosphates, iron tannate, etc.

martonite (mar'to-nit). A war gas mixture composed of 80 per cent of bromo-acetone and 20 per cent of chloro-acetone.

Maruta (mah-ru'tah) [L.]. A genus of composite-flowered herbs. *M. cot'ula*, mayweed or dog-fennel, is used like chamomile.

Marx stain. See under *stain*.

maschaladenitis (mas-kal-ad-en-i'tis) [μασχάλη armpit + ἀδὴν gland + -itis inflammation]. Inflammation of the glands of the axilla.

maschalephidrosis (mas'kal-e-fid-ro'sis) [μασχάλη armpit + ἐφιδρώσις excessive sweating]. Excessive sweating in the armpits.

maschaliatry (mas-kal-e-at're) [μασχάλη armpit + ἰατρία treatment]. Medication by inunction into the armpit.

Maschke's test (mahsh'kez). See under *tests*.

masculation (mas-ku-la'shun). The development of male characteristics.

masculine (mas'ku-lin) [*l. masculi'nus*]. Pertaining to the male sex; male.

masculinity (mas-ku-lin'i-e). The possession of normal masculine qualities.

masculonucleus (mas'ku-lo-nu'kle-us). See *arsenoblast*.

Masini's sign (mah-ze'nēz) [contemporary Italian physician]. See *sign*.

mask (mask) [Fr. *masque*]. An appliance for shading, protecting, or medicating the face. **ecchymotic m.**, traumatic asphyxia. See *asphyxia*.

Es-march's m., a frame of metal over which strips of gauze are stretched; used for administering ether or chloroform by inhalation. **Fontana's m.**, a transverse fold occurring on a nerve trunk at the point where it has been cut. **Hutchinson's m.**, a sensation as if the skin of the face were compressed by a mask; often a symptom of tabes dorsalis. **Kuhn's m.**, a mask to be worn over the nose and mouth, which, by obstructing the respiration, produces artificial hyperemia of the pulmonary tissues. It is used in treating pulmonary tuberculosis. **luetic m.**, a brownish, blotchy pigmentation over the forehead, temples, and cheeks, sometimes seen in persons with tertiary syphilis. **Mikulicz's m.**, a mask for covering the surgeon's nose and mouth while operating. It consists of a wire frame covered with gauze. **tropical m.**, chloasma bronzinum. **Tuttle's m.**, a wire frame covered with gauze to go over the face of a surgeon while operating. **uterine m.**, chloasma occurring during pregnancy or uterine disease.

masked (mask) [L. *larva'tus*]. Hidden or concealed; not obvious.

masochism (mas'o-kizm) [Leopold von Sacher-Masoch, an Austrian novelist, 1836-1895]. Sexual perversion with enjoyment of being cruelly treated.

masochist (mas'o-kist). One who is given to masochism.

Mas. pil. Abbreviation for L. *mas'sa pilula'rum*, pill mass.

masrium (mas're-um). A very rare metallic element; symbol, Ms, obsolete.

mass (mas) [L. *mas'sa*]. 1. A body made up of cohering particles. 2. A cohesive mixture suitable for being made up into pills. 3. That characteristic of matter which gives it inertia. The mass of a hypothetical atom of atomical weight 1.000 (a dalton) is 1.648×10^{-24} Gm., and the mass of any other atom may be found by multiplying this number by the atomic weight of the atom. **achromatic m.**, the nonstaining portion of the karyokinetic figure. **blue m.** (*mas'sa hydrar'gyri*), metallic mercury rubbed up with honey of rose, etc., for making blue pill. **electronic m.**, the mass of a negative electron when moving at moderate velocity. It is 8.999×10^{-28} Gm. **flar m.** See *spongioplasm* and *reticular structure*, under *structure*. **intermediate m.** See *massa intermedia*. **pill m.**, **pilular m.**, a drug mass of the proper consistency for being made into pills. **Priestley's m.**, a green or brownish substance sometimes seen upon the canine and incisor teeth, chiefly in quite young persons; it is caused by a chromogenic micro-organism. **Schultze's granular m's**, granular masses, consisting largely of broken-down blood plaques, formed in the blood. **Stent's m.**, a compound used in making dental

impressions and molds for surgical work. **tigroid m's.** Same as *Nissl's bodies*. See under *body*. **Vallet's m.,** mass of ferrous carbonate (*mas'sa fer'ri carbona'tis*). Dose, in pills, 3-5 grains (0.3-0.333 Gm.). **ventrolateral m.,** that portion of the primitive lateral mass of the embryo from which are developed the abdominal, thoracic, and anterior cervical muscles.

massa (*mas'ah*). Latin for *mass* (*q. v.*). **m. car'nea jaco'bi syl'vil,** the accessory muscle of the foot. **m. copa'ibae,** copaiba, 94 parts, solidified by the addition of 6 parts of magnesia; solidified copaiba. **m. fer'ri carbona'tis** (U. S. P.). Vallet's mass containing 35 per cent of ferrous carbonate, FeCO_3 . **m. hydar'gyri** (U. S. P.), blue mass, containing 33 per cent of finely divided mercury. **m. innomina'ta.** See *paradidymis*. **m. interme'dia** [B N A], a band of gray matter connecting the medial surfaces of the two thalami across the third ventricle. Called also *intermediate mass*, *commissura mollis*, *soft commissure*, and *middle commissure*. **m. latera'lis atlan'tis** [B N A], the thickened lateral portion of the atlas to which the arches are attached and which bears the articulating surfaces.

massage (*mas-azh'*) [Fr.; *μάσσειν* to knead]. The systematic therapeutical friction, stroking, and kneading of the body. **auditory m.,** massage of the drum membrane. **Cederschöld's m.,** massage by making rhythmical pressure over the parts. **douche m.,** massage combined with the application of a douche. **electrovibratory m.,** massage by means of an electric vibrator. **hydropneumatic m.,** massage by means of air forced through a tube at the end of which is a chamber containing water, the water chamber being applied to the part to be massaged. **tremolo m.,** a variety of mechanical massage. **vapor m.,** treatment of a cavity by a medicated and nebulized vapor under interrupted pressure. **vibratory m.,** massage by rapidly repeated light percussion with a vibrating hammer or sound.

Masselon's spectacles (*mas-el-awz'*) [Michel Julien Masselon, French physician, born 1844]. See *spectacles*.

massering, masseuring (*mas-e'ring*). Performing massage: used in the performance of massage.

Masset's test (*mas-áz'*) [Alfred Auguste Masset, French physician, born 1870]. See under *tests*.

massester (*mas-e'ter*) [*μασητήρ* chewer]. See *muscles, table of*.

masseteric (*mas-et-er'ik*). Pertaining to the masseter muscle.

masseur (*mahs-ser'*) [Fr.]. 1. A man who performs massage. 2. An instrument for performing massage.

masseuse (*mahs-uhz'*) [Fr.]. A woman who performs massage.

massicot (*mas'ik-ot*). Lead monoxide, PbO .

massodont (*mas'o-dent*). An instrument for performing massage of the gums.

massogran (*mas'o-gran*). A proprietary milk-curdling compound in granular form.

massol (*mas'ol*). A pill excipient made of gelatin, 40 grains; glycerin, 2 fluidrachms; powdered sugar, 3 drachms; and distilled water to make 1 oz.

Massol's bacillus (*mas-olz'*) [Léon Massol, Swiss bacteriologist, 1837-1909]. *Bacillus bulgaricus*.

massolin (*mas'o-lin*) [Léon Massol, bacteriologist at Geneva, 1837-1909]. A pure culture of *Bacillus bulgaricus* in a medium adapted for introduction into the nose, throat, and other body cavities: used in chronic inflammatory conditions of the nose, throat, and sinuses.

massor (*mas'or*). Same as *masseur*.

massotherapy (*mas-o-ther'ap-e*) [*μάσσειν* to knead + *therapy*]. The treatment of disease by massage.

massoy (*mas-oi'*). The bark of *Massoi'a aromatica*, of Japan: used in diarrhea, colic, and spasms.

mastadenitis (*mas'tad-en-i'tis*) [*μαστός* breast + *adēn* gland + *-itis* inflammation]. Inflammation of the mammary gland.

mastadenoma (*mas'tad-en-o'mah*) [*μαστός* breast + *adēn* gland + *-oma* tumor]. Tumor of the breast.

mastalgia (*mas-tal'je-ah*) [*μαστός* breast + *άλγος* pain]. Pain in the mammary gland.

mastatrophia, mastatroph (*mas-tat-ro'fe-ah*, *mas-tat-ro-fe*) [*μαστός* breast + *atrophy*]. Atrophy of the mammary gland.

mastauze (*mas-tawk'se*) [*μαστός* breast + *αύξη* increase]. Enlargement of the breast.

mast cell (*mast sel*) [Ger. "food cell"]. See *cell*.

mastectomy (*mas-tek'to-me*) [*μαστός* breast + *ἐκτομή* excision]. Excision of the breast; mastectomy.

masthelcosis (*mas-thel-kō'sis*) [*μαστός* breast + *ἐλκωσις* ulceration]. Ulceration of the breast or mammary gland.

mastic (*mas'tik*) [L. *mas'tiche*; *μαστική*]. A resin obtained from *Pista'cia lentis'cus*, a tree of the Mediterranean region. It is styptic, stimulant, and stomachic, and is used in microscopy and in dentistry. **m. test.** See under *tests*.

mastication (*mas-tik-a'shun*) [L. *mastica're* to chew]. The chewing of food.

masticatory (*mas'tik-a-to-re*). 1. Subserving or pertaining to mastication; affecting the muscles of mastication. 2. A remedy to be chewed but not swallowed.

mastiche (*mas'tik-e*). See *mastic*.

Mastigophora (*mas-tig-of'o-rah*) [*μαστιγή* whip + *φέρω* to bear]. A class of protozoan organisms comprising those which have from one to four flagella. It has two important orders, the Flagellata and the Choano-flagellata. Several species are occasionally found as parasites within the hollow organs of the body.

mastigote (*mas'tig-ōt*). A member of the class *Mastigophora*.

mastistol (*mas'tis-ol*). A proprietary antiseptic varnish for surgical use.

mastitis (*mas-ti'tis*) [*μαστός* breast + *-itis* inflammation]. Inflammation of the breast; particularly inflammation of the mammary gland. **m. carcino'sa.** See *carcinoma mastitoides*. **interstitial m.,** inflammation of the stroma of the mammary gland. **m. neonato'rūm,** inflammation of the breasts of new-born infants. **parenchymatous m.,** inflammation of the glandular substance of the breast. **phlegmonous m.,** abscess of the breast. **retromammary m.,** submammary m., paramastitis. **stagnation m.,** a local engorgement affecting one or more lobules of the breast and forming a painful lump on the organ. It occurs during early lactation. Called also *caked breast*.

mastocarcinoma (*mas'to-kar-sin-o'mah*) [*μαστός* breast + *carcinoma*]. Carcinoma of the breast.

mastoccipital (*mas-tok-sip-et'al*). Same as *masto-occipital*.

mastochondroma, mastochondrosis (*mas'to-kon-dro'mah*, *mas'to-kon-dro'sis*) [*μαστός* breast + *chondroma*]. A chondroma, or cartilaginous tumor, of the breast.

mastodynia (*mas-to-din'e-ah*) [*μαστός* breast + *δύσιν* pain]. Pain in the breast.

mastoid (*mas'toid*) [*μαστός* breast + *εἶδος* form]. 1. Nipple shaped. 2. The mastoid process of the temporal bone; sometimes called the mastoid bone. 3. Pertaining to the mastoid process.

mastoidal (*mas-toi'dal*). Pertaining to the mastoid process of the temporal bone.

mastoidale (*mas-toi-da'le*). The lowest point of the mastoid process.

mastoidalgia (*mas-toi-dal'je-ah*) [*mastoid* + *άλγος* pain]. Pain in the mastoid region.

mastoidea (mas-toi'de-ah). The mastoid portion of the temporal bone.

mastoidectomy (mas-toi-dek'to-me) [*mastoid* + *ἐκτομή* excision]. Excision of the mastoid cells or antrum of the mastoid bone; total mastoid operation.

mastoidocentesis (mas-toi'de-o-sen-te'sis) [*mastoid* + *κέντησις* puncture]. Paracentesis of the mastoid cells.

mastoideum (mas-toi'de-um). The mastoid portion of the temporal bone.

mastoiditis (mas-toi-d'i'tis). Inflammation of the mastoid antrum and cells. **Bezold's m.**, a form in which the pus has escaped into the digastric groove and the head of the sternomastoid muscle. **m. externa**, inflammation of the periosteum of the mastoid process. **m. interna**, inflammation of the cells of the mastoid. **sclerosing m.**, mastoiditis attended with hardening and condensation of the bone.

mastoidotomy (mas-toi-d-ot'o-me) [*mastoid* + *τέμνειν* to cut]. Surgical opening of the antrum or cells of the mastoid bone.

mastologist (mas-tol'o-jist). An expert in mastology.

mastology (mas-tol'o-je) [*μαστός* breast + *λόγος* treatise]. The science or study of the mammary apparatus.

mastomenia (mas-to-me'ne-ah) [*μαστός* breast + *μήνες* menses]. Vicarious menstruation from the breast.

mastoncus (mas-tong'kus) [*μαστός* breast + *ὄγκος* tumor]. A tumor of the breast or mammary gland.

masto-occipital (mas'to-ok-sip'it-al). Pertaining to the mastoid process and the occipital bone.

mastoparietal (mas'to-par-i-et-al) [*mastoid* + *parietal*]. Pertaining to the mastoid process and the parietal bone.

mastopathy (mas-top'ath-e) [*μαστός* breast + *πάθος* disease]. Disease of the mammary gland.

mastopexy (mas'to-peks-e) [*μαστός* breast + *πήξις* fixation]. The surgical fixation of a pendulous mamma.

mastoplastia (mas-to-plas'te-ah) [*μαστός* breast + *πλάσσειν* to form]. Hyperplasia of breast tissue.

mastorrhagia (mas-to-ra'je-ah) [*μαστός* breast + *ῥήγνυμαι* to burst forth]. Sudden hemorrhage from the mammary gland.

mastoscirrhus (mas-to-skir'us) [*μαστός* breast + *σκληρός* hardness]. Hardening, or scirrhus, of the mammary gland.

mastosquamous (mas-to-skwa'mus). Pertaining to or affecting the mastoid and squama.

mastotomy (mas-tot'o-me) [*μαστός* breast + *τέμνειν* to cut]. Surgical incision of a mamma.

masturbation (mas-tur-ba'shun) [L. *ma'stu* hand + *stupra're* to rape]. Self-pollution; the causation of an orgasm by the hand or by any mechanical friction of the genitals.

masurium (mas-u're-um). A chemical element of atomic number 43 discovered in 1926 in platinum ore and certain other minerals.

Matas' band, operation (mat'as) [Rudolph Matas, surgeon in New Orleans, born 1860]. See *band* and *endo-aneurysmorrhaphy*.

mate (mah'ta) [Spanish American]. The dried leaves of *Ilex paraguayensis*. They are used like tea, and are diuretic and diaphoretic.

Matefy reaction or test (mah-ta'fe). See under *tests*.

materia medica (mat-e're-ah med'ik-ah) [L. "medical material"]. That branch of medical study which deals with drugs, their sources, preparations, and uses.

Materia Medica Pu'ra. Hahnemann's work giving the result of his provings of sixty-one drugs.

It forms the basis of the homeopathic materia medica.

materies morbi (mat-e're-ēz mor'bi) [L. "substance of disease"]. The substance, virus, or principle which causes a disease. **m. peccans**, the offending substance.

materna (mat-er'nah). A proprietary phosphorus preparation used in the treatment of tuberculosis.

maternal (mat-er'nal) [L. *mater'nus*; *ma'ter* mother]. Pertaining to the mother.

maternity (mat-er'nit-e) [L. *ma'ter* mother]. 1. Motherhood. 2. A lying-in hospital.

maternoherotherapy (mat-er'-no-hem-o-ther'-ap-e) [*maternal* + *herotherapy*]. Treatment [by injecting infants with blood from their mothers.

maternology (mat-er-nol'o-je) [L. *ma'ter* + *λόγος* treatise]. The study of scientific motherhood; the art of motherhood and child bearing.

Mathieu's disease, serum (mat-e-ūz') [Albert Mathieu, physician in Paris, 1855-1917]. See *disease* and *serum*.

matico (mah-te'ko) [Sp.; a nickname for *Matthew*]. The leaves of *Piper angustifolium*, a shrub of South and Central America. They are stimulant and hemostatic. Dose, in powder, 30-60 grains (2-4 Gm.); of fluidextract, 30-60 minims (2-4 cc.); of tincture, ½-2 fluidrachms (2-8 cc.).

matlazahuatl (mat-lahz-ah-what'l). A form of typhus endemic in Mexico.

matrass (mat'ras). A glass vessel with a long neck used for treating dry substances in chemical operations.

matrical (mat'rik-al). Of or relating to a matrix.

Matricaria (mat-rik-a're-ah) [L.]. A genus of composite-flowered plants. The flowering tops of *M. chamomilla*, or German chamomile, are mildly tonic and febrifuge, and are used like the English chamomile. Dose of fluidextract, 8-30 minims (0.533-2 cc.).

matricial (ma-trish'al). Matrical.

matriclinous (mat-rik'lin-us). See *matroclinous*.

matriculation (mat-rik-u-la'shun) [L. *matricula* register]. Enrolment as a student in a college.

matridine (ma'trid-in). A crystalline alkaloid, C₁₅H₂₆N₂, from *Sophora angustifolia*.

matrilineal (ma-tri-lin'e-al) [L. *ma'ter* mother + *lin'ea* line]. Descended through the female line.

matrine (ma'trin). A crystalline alkaloid, C₁₆H₂₄N₂O, from *Sophora angustifolia*.

matrix (ma'triks) [L.]. 1. The uterus, or womb. 2. The groundwork in which anything is cast; a socket, as of a tooth; the intercellular substance. **hair m.**, the epidermic root of the hair follicle. **nail m.**, **m. unguis** [B N A], the proximal end of the nail bed.

matritixitis (ma-triks-i'tis). Inflammation of the nail matrix.

matroclinous (mat-ro-kli'nus) [*μάτηρ* mother + *κλίνειν* to incline]. Possessing characters inherited from the mother.

matter (ma'ter). 1. Substance; anything that occupies space. 2. Pus. **gray m.**, gray nervous tissue composed chiefly of nerve cells and myelinated nerve fibers. Called also *substantia grisea*. **white m.**, white nervous tissue composed chiefly of myelinated nerve fibers; called also *substantia alba*.

mattoid (mat'oid) [L. *mat'tus* drunken]. A person who, though perfectly sane, is mentally unbalanced in some way.

mattress suture (mat'res). See under *suture*.

matūra (ma'tu'rah). An East Indian plant, *Calli-car'pa inca'na*; used in menorrhagia.

maturation (mat-u-ra'shun) [L. *matūra'tio*; *matu'rus* ripe]. 1. The stage or process of becoming mature. In biology, a process of cell division during which the number of chromosomes in the germ

cells is reduced to one half the number characteristic of the species. 2. The formation of pus.

mature (mat-ūr') [L. *matūrus*]. Ripe; fully developed.

maturin (mat-ur'in). A compound of phlorhizin (0.002 Gm.) and beta-eucaine (0.001 Gm.) employed for the glycosuria test for early diagnosis of pregnancy.

Matut. Abbreviation for *L. matutinus*, in the morning.

matutinal (mat-u'tin-al) [L. *matutina'lis*]. Pertaining to or occurring in the morning.

matzol (mat'zol). A proprietary preparation of matzoon and cod liver oil.

matzoon (mat-zūn) [Armenian]. A drink, originally prepared in Asia Minor, from fermented milk: used like koumiss.

Mauchart's ligament (mow's'harts) [Burkhard David *Mauchart*, German anatomist, 1696-1751]. See *ligament*.

Maul und Klauenseuche (mowl oont klow'en-soo'ke). Foot and mouth disease.

Maumené's test (mōm-nāz') [Edme Jules *Maumené*, French chemist, born 1818]. See under *tests*.

Maunoir's hydrocele (mo'nwarz) [Jean Pierre *Maunoir*, French surgeon, 1768-1861]. Cervical hydrocele.

Maurer's dots (maw'rerz) [Georg *Maurer*, German physician in Sumatra]. See under *dot*.

Mauriceau's lance (mo'ris-ōz) [François *Mauriceau*, French obstetrician, 1637-1709]. See under *lance*.

Mauthner's sheath (mouth'nerz) [Ludwig *Mauthner*, Austrian ophthalmologist, 1840-1894]. See under *sheath*.

mauvein (mo've-in). Aniline purple, a violet dye, $C_{27}H_{24}N_4$. It is used as an indicator and has a pH range of -0.1 to 2.9, being yellow at -0.1 and crimson at 2.9.

mavi (mah've) [Puerto Rico; from Carib *mabi* potato]. An intoxicating West Indian drink.

maxilla (maks-il'ah), pl. *maxil'læ* [L.]. [B N A] The irregularly shaped bone forming with its fellow the upper jaw and articulating with the ethmoid, inferior turbinated, sometimes the sphenoid and all the bones of the face. Also called *superior maxilla*, *supramaxilla*, *superior maxillary bone*, and *upper jaw bone*. **inferior m.**, the lower jaw bone or mandible.

maxillary (mak'-sil-a-re) [L. *maxilla'ris*]. Pertaining to the maxilla or upper jaw.

maxillitis (mak-sil'i-tis). Inflammation of the maxillary gland or of the maxilla.

maxillo dental (mak-sil'o-den'tal). Pertaining to the jaws and teeth.

maxillofacial (mak-sil-o-fa'shal). Pertaining to the jaws and the face.

maxillojugal (mak-sil'o-ju'gal). Pertaining to the maxilla and the cheek.

maxillolabial (mak-sil'o-la-be-al). Pertaining to the maxilla and the labium.

maxillomandibular (mak-sil'o-man-dib'u-lar). Pertaining to the maxilla and the mandible.

maxillopalatine (mak-sil'o-pa-lat'in). Pertaining to the maxilla and the palate bone.

maxillopharyngeal (mak-sil'o-far-in'je-al). Pertaining to the maxilla and the pharynx.

maxilloturbinal (mak-sil'o-tur-bin-al). The inferior turbinated bone.

maximal (mak'sim-al). The greatest possible, allowable, or appreciable; the reverse of *minimal* and of *limited*.

maximum (mak'sim-um) [L. "greatest"]. 1. The greatest possible or actual effect or quantity. 2. The acme of a disease or process. 3. Largest; utmost. 4. Pirquet's term for the maximum amount of food which the organism can digest.

May-apple (ma'ap-l). See *Podophyllum*.

Maydl's hernia, operation (ma'delz) [Karl *Maydl*, Bohemian surgeon, 1853-1903]. See under *hernia* and *operation*.

mayer (ma'er). A unit of heat capacity; it is the capacity that is warmed one degree centigrade by one joule. It is abbreviated *my*.

Mayer's fluid, reagent, test (ma'erz) [Ferdinand F. *Mayer*, American pharmaceutical chemist of the 19th century]. See *fluid*, *reagent*, *tests*.

mayhem (ma'hēm). See *maim*.

mayidismus (ma-id-iz'mus). Same as *pellagra*.

mayo (mah'yo). A catarrhal diarrhea of Caracas.

mayol (ma'yol). May's meat preservative, a proprietary mixture of antiseptics.

Mayo's operation, sign (ma'ōz) [William James (born 1861) and Charles Horace (born 1865) *Mayo*, American surgeons]. See under *operation* and *sign*.

Mayo-Robson's point, position (ma'ō-rōb'-sonz) [A. W. *Mayo-Robson*, contemporary surgeon in London]. See *point* and *position*.

maypop (ma'pop). See *Passiflora*.

mayweed (ma'wed). See *Marula*.

maza (maz'ah) [μᾶζα a barley cake]. The placenta.

mazamorra (maz-am-o'rah). Ground-itch. See under *itch*.

mazic (ma'zik). Relating to the placenta; placental.

mazococathesis (ma'zo-kak-oth'es-is) [μᾶζα placenta + κακός bad + θέσις placement]. Malposition of the placenta.

mazodynia (ma-zo-din'e-ah) [μαζός breast + ὀδὴν pain]. Pain in the breast.

mazologist (ma-zol'o-jist). Same as *mastologist*.

mazology (ma-zol'o-je) [μαζός breast + λόγος word]. Same as *mastology*.

mazolysis (ma-zol'is-is) [μᾶζα placenta + λύσις loosening]. Detachment of the placenta.

mazomorria (ma-zo-mor'e-ah). Ground-itch. See under *itch*.

mazopathia, mazopathy (maz-o-path'e-ah, maz-op'ath-e) [μᾶζα placenta + πάθος disease]. Any disease of the placenta.

mazopecty (ma'zo-peks-e) [μαζός breast + πήξις fixation]. Surgical fixation of a pendulous mamma.

mazoplasia (ma-zo-pla'se-ah) [μαζός breast + πλάσσειν to form]. Hyperplasia of breast tissue.

Mazzoni's corpuscle (mad-zo'nēz) [Vittorio *Mazzoni*, contemporary Italian physician]. See *corpuscle*.

M. B. Abbreviation for *Medici'næ Baccalarius*, Bachelor of Medicine.

mbori (em-bo're). A disease of camels, probably a mild form of surra.

mbundu (em-boon'doo). A West African ordeal poison.

M. C. Abbreviation for *Magis'ter Chirurgiæ*, Master of Surgery; also for *medical corps*.

Maxilla, outer view: 1, Body; 2, tuberosity; 3, alveolar process; 4, orbital surface; 5, frontal process; 6, nasal notch; 7, anterior nasal spine; 8, lacrimal groove; 9, infra-orbital groove; 10, infra-orbital foramen; 11, orifices of the alveolar canals; 12, zygomatic process; 13, frontal process; 14, incisor teeth; 15, canine tooth; 16, premolar teeth; 17, molar teeth. (Leidy.)

McArthur's method [Louis Linn McArthur, Chicago surgeon, born 1858]. See under *method*.

McBurney's incision, point (mak-ber'nēz) [Charles McBurney, New York surgeon, 1845-1913]. See *incision* and *point*.

McCarthy's reflex. [David J. McCarthy, Philadelphia neurologist]. See under *reflex*.

McClintock's sign [Alfred Henry McClintock, Irish physician, 1822-1881]. See under *sign*.

McClure-Aldrich test. See under *tests*.

McDonald's solution (mak-don'aldz) [Ellice McDonald, New York gynecologist, born 1876]. See *solution*.

McDowell's operation (mak-dow'elz) [Ephraim McDowell, American surgeon, 1771-1830]. See *operation*.

McGraw's ligature (mak-grawz) [Theodore A. McGraw, surgeon in Detroit, Michigan]. See under *ligature*.

McKee's line. See under *line*.

McKendrick reaction or test. See under *tests*.

McLean's formula (mak-lānz') [Franklin C. McLean, American physician, born 1888]. See *formula*.

M. D. Abbreviation for *Medici'næ Doc'tor*, Doctor of Medicine.

Md. Symbol for molybdenum.

M. D. S. Abbreviation for *Master of Dental Surgery*.

Me. A chemical symbol for methyl.

meable (me'ab-l) [L. *meabilis*]. Susceptible of being passed through.

meadow saffron (med'o). See *Colchicum*.

meal (mēl). A portion of food or foods taken at some particular and usually stated or fixed time. **bismuth m.**, an opaque meal in which some preparation of bismuth is the opaque constituent. **butter m.**, a concentrated food containing butter, milk, flour, and sugar. **opaque m.**, a light meal, sometimes a glass of buttermilk, which contains some substance opaque to the roentgen rays, so that the outline of the stomach and the intestinal tract can be determined by roentgenography or roentgenoscopy. **test m.** See under *tests*.

mean (mēn). An average; a numerical value intermediate between two extremes. In statistical methods, the abscissa of the center of gravity of the variables or of the frequency polygon.

measles (me'zelz) [L. *morbilli*]. 1. A contagious eruptive fever with coryza and catarrhal symptoms. The period of incubation is about two weeks, and the disease begins with fever, chills, conjunctivitis, severe coryza, and frequently bronchitis, causing cough and frontal headache. The eruption appears on the fourth day on the forehead, cheeks, and back of the neck, spreading thence over the body. It consists of small, dark-pink macules in crescentic groups, which frequently become confluent. After two or three days the eruption begins to fade, and is followed in one or two weeks by desquamation. The symptoms increase with the eruption and decrease with the disappearance of it, convalescence beginning in the second week. The disease is extremely contagious and affects chiefly the young, one attack usually conferring immunity. Measles is prone to lead to complications, the chief of which are pneumonia, bronchitis, phthisis, and otitis media. See *exanthems*, table of. 2. Cysticercal disease of domestic animals. **bastard m.**, rubella. **black m.**, a severe form in which the eruption is very dark and petechial. **confluent m.**, measles in which the lesions of the eruption coalesce. **German m.** See *rubella*. **hemorrhagic m.** Same as *black m.* **pork m.**, a condition in which pork is infected with the *Cysticercus cellulosæ*.

measly (me'zlē). Containing cysticerci.

meatal (me-a'tal). Pertaining to a meatus.

meatome (me-at-ōm). Same as *meatolome*.

meatometer (me-at-om'et-er) [L. *meatus* passage + *metrum* measure]. An instrument for measuring a meatus.

meatorrhaphy (me-at-or'af-e) [L. *meatus* meatus + *raphē* suture]. Suture of the cut end of the urethra to the glans penis after incision for enlarging the meatus.

meatoscope (me-at'o-skōp) [L. *meatus* meatus + *σκοπεῖν* to examine]. A speculum for examining the urinary meatus.

meatoscopy (me-at-os'ko-pe). The inspection of any meatus, especially the urinary meatus or the vesical orifice of a ureter. **ureteral m.**, cystoscopic inspection of the vesical orifice of a ureter.

meatotome (me-at'o-tōm). An instrument for performing meatotomy.

meatotomy (me-at-ot'o-me) [L. *meatus* passage + *τέμνειν* to cut]. The cutting of the urinary meatus in order to enlarge it.

meatox (mēt'oks). A proprietary preparation of beef in powder form.

meatus (me-a'tus), pl. *meatuses* [L. for "passage"]. A passage or opening. **m. acusticus** [audito-rius] **externus** [B N A], the passage through the temporal bone from the base of the zygomatic process to the cavity of the tympanum; the external auditory canal. **m. acusticus externus cartilagineus**, the cartilaginous portion of the preceding. **m. acusticus** [audito-rius] **internus** [B N A], the passage in the petrous part of the temporal bone for the facial and auditory nerves and vessels. **m. auditorius**, the passage of the ear in two parts (internal and external meatuses). **fish mouth m.**, a red, swollen, an everted condition of the urinary meatus seen in the first stage of acute gonorrhea. **m. na'si commu'nis**, the anterior space on either side of the nasal septum into which the three meatuses open. **m. na'si infe'rior**, the inferior meatus of the nose. **m. na'si me'dius**, the middle meatus of the nose. **m. na'si supe'rior**, the superior meatus of the nose. **m. nasopharyngeus** [B N A], that part of the nasal cavity that opens into the nasopharynx. **m. of the nose**, the three passages of the nostril (inferior, middle, and superior meatuses). **m. tube**, a fetal structure containing the tympanic bone, the tympanic bulla, and the cartilage lining the eustachian tube. **m. urina'rius**, the orificial part of the urethra (especially used of the male urethra).

meca (me'kah). A proprietary snuff consisting of calcium lactate, suprarenal extract, and peppermint oil.

Mecca balsam (mek'ah). See *balsam*.

mechanical (mek-an'ik-al) [μηχανικός]. 1. Pertaining to or accomplished by mechanical or physical forces. 2. Performed by means of some artificial mechanism.

mechanicoreceptor (mek-an'ik-o-re-sep'tor). A receptor which is excited by mechanical pressures; such as those for sound, touch, and for the effects of muscular contractions.

mechanicotherapeutics, mechanotherapy (mek-an'ik-o-ther-ap-u'tiks, mek-an'ik-o-ther-ap-e). Same as *mechanotherapy*.

mechanics (mek-an'iks). The science of matter and force; statics and dynamics. **animal m.**, that branch of physiology which studies the laws of motion in animal bodies.

mechanism (mek-an'izm) [μηχανή machine]. 1. A machine or machine-like structure. 2. The manner of combination of parts which subserve a common function. 3. The theory that the phenomena of life are based on the same physical and chemical laws which operate in the inorganic world; opposed to *vitalism*. **oculogyric m.**, the series of nerve centers concerned in movements of the eye. **outgoing m.**, the apparatus by which words are uttered or ideas expressed, as in speech, writing, or

in the use of expressive gestures. **somatic m.**, the structures and organs through which the somatic activities of the body are performed. **splanchnic m.**, the structures and organs through which the visceral activities of the body are performed.

mechanist (mek'an-ist). One who believes that all phenomena relating to life are based on physical and chemical properties only.

mechanogram (mek'an-o-gram) [*μηχανή* machine + *γράμμα* mark]. An instrumental tracing representing the mechanical movements of the muscles of some organ, as the stomach or heart.

mechanogymnastics (mek'an-o-jim-nas'tiks). Gymnastics carried out by means of mechanical apparatus, such as the Zander apparatus.

mechanology (mek-an-ol'o-je) [*μηχανή* machine + *λόγος* treatise]. The science of mechanics.

mechanotherapy (mek'an-o-ther'ap-e) [*μηχανή* machine + *θεραπεία* treatment]. Treatment of disease by mechanical means, especially by massage and Swedish movements.

meche (māsh) [Fr.]. A surgical tent.

meclism (me'sizm) [*μήκος* length]. Abnormal lengthening of a part.

meclistoccephalic, meclistoccephalous (me-sis'-to-sef-al'ik, me-sis-to-sef'al-us) [*μήκιστος* tallest + *κεφαλή* head]. Having a cephalic index less than 71.

Mecistocirrhus (me-sis-to-sir'us). A genus of nematode parasites found in the fourth stomach of ruminants.

Meckel's band, cavity, diverticulum, ganglion (mek'elz) [Johann Friedrich Meckel, German anatomist, 1714-1777]. See *band, cavity, diverticulum, ganglion*.

meckelectomy (mek-el-ek'to-me) [Meckel's ganglion + *ἐκτομή* excision]. Surgical removal of Meckel's ganglion.

mecocephalic (me-ko-sef-al'ik) [*μήκος* length + *κεφαλή* head]. Same as *dolichocephalic*.

meconeter (mek-on'et-er) [*μήκος* length + *μέτρον* measure]. An instrument for measuring the length of a fetus or an infant.

meconarceine (mek-o-nar'se-in) [*μήκων* poppy + *νάρκη* stupor]. A preparation of the active alkaloids of opium other than morphine: sedative and narcotic. Dose, $\frac{1}{4}$ – $\frac{1}{2}$ grain (0.011–0.033 Gm.).

meconate (mek'on-āt) [*μήκων* poppy]. Any salt of meconic acid.

meconic acid (me-kon'ik). See *acid*.

meconidine (me-kon'id-in). An amorphous base, $C_{21}H_{23}NO_4$, from opium.

meconine (mek'on-in). A crystalline substance, $C_{10}H_{10}O_4$, obtainable from narcotine; it is used as a hypnotic by subcutaneous injection in doses of 1 grain (0.06 Gm.).

meconiorrhea (me-ko-ne-or-e'ah) [*meconium* + *ρῆν* to flow]. Excessive discharge of meconium.

meconism (mek'on-izm) [*μήκων* poppy]. The opium habit; opium poisoning.

meconium (me-ko'-ne-um) [L.; *μηκόνιον*]. 1. The fecal matter discharged by the new-born. It is a dark-green substance, consisting of mucus, bile, and epithelial threads. 2. Opium.

media (me'de-ah) [L. 'middle']. 1. The tunica media, or middle coat of an artery. 2. A plural of *medium*. **culture m.**, **nutrient m.**, a variety of materials and combinations of materials used for the cultivation of micro-organisms. See *culture medium*.

mediad (me'de-ad) [L. *me'dia* middle + *ad* toward]. Toward a median line or plane.

medial (me'de-al) [L. *media*'lis]. Pertaining to the middle; in anatomy, nearer the median plane.

median (me'de-an) [L. *media*'nus]. 1. Situated in the middle; mesial. 2. The perpendicular line

which divides the area of a frequency curve into two equal halves.

mediameter (me-de-ah-on'met-er) [*media* + *μέτρον* measure]. An instrument for detecting and measuring refractive errors of the dioptric mediums.

mediastinal (me''de-as-ti'nal) [L. *mediastina*'lis]. Of or pertaining to the mediastinum.

mediastinitis (me''de-as-tin-i'tis). Inflammation of the mediastinum. **indurative m.** Same as *mediastinopericarditis*.

mediastinopericarditis (me''de-as'tin-o-per'ik-ar-di'tis). Inflammation of the mediastinum and the pericardium.

mediastinotomy (me''de-as-tin-ot'o-me) [*mediastinum* + *τομή* a cutting]. The operation of cutting into the mediastinum. When done from the front, it is *anterior* or *cervical m.*, when from behind, *posterior* or *dorsal m.*

mediastinum (me''de-as-ti'num) [L.]. A median septum or partition; especially the septum formed in the middle line by the approximation of the two reflected pleurae, which divides the chest into two pulmonary cavities. The two pleurae are not, however, in contact with each other at the middle line, but have a space between them, which contains all the chest viscera except the lungs. The mediastinum is divided into the anterior, middle, and posterior. The *anterior* mediastinum is bounded in front by the sternum, and on each side by the pleura. It contains loose areolar tissue, lymphatic vessels, the remains of the thymus gland, the internal mammary vessels of the left side, and the origins of the sternohyoid, sternothyroid, and triangularis sterni muscles. The *middle* mediastinum contains the heart enclosed in its pericardium, the ascending aorta, the superior vena cava, the bifurcation of the trachea, the pulmonary arteries and veins, and the phrenic nerves. The *posterior* mediastinum is bounded behind by the vertebral column, in front by the pericardium, and on each side by the pleura. It contains the descending aorta, the greater and lesser azygos veins, the superior intercostal vein, the thoracic duct, the esophagus, the pneumogastric nerves, and the great splanchnic nerves. **m. cerebelli**. Same as *falx cerebelli*. **m. cerebri**. Same as *falx cerebri*. **superior m.**, that part of the mediastinum which extends from the manubrium to the vertebral column. **m. testis** [B N A], the partial septum of the testicle; the corpus highmorianum.

mediastinus (me''de-as-ti'nus) [L.]. An obsolete designation for an assistant physician or surgeon.

mediate (me'de-āt). Indirect; accomplished by the aid of a medium.

mediators (me'de-a-tors). The cells or neural connections of the nervous system by which the receptors and effectors are maintained in their proper relation.

medic (med'ik) [L. *med'ica* medical]. Any plant of the genus *Medicago*, including lucerne, none-such, shamrock, and others.

medicable (med'ik-ab-l). Subject to treatment with reasonable expectation of cure.

medical (med'ik-al). Pertaining to medicine or to the treatment of diseases.

medicament (med'ik-am-ent) [L. *medicamen'tum*]. A medicinal substance or agent.

medicamentarius (med'ik-a-men-ta're-us). Latin for *apothecary*.

medicamentous (med'ik-am-en-to'sus) [L.]. Pertaining to or caused by a drug.

medicated (med'ik-āt-ed) [L. *medica'tus*]. In-bued with a medicinal substance.

medication (med-ik-a'shun) [L. *medica'tio*]. 1. Impregnation with a medicine. 2. The administration of remedies. **conservative m.**, treatment aimed to build up the vital powers of the patient. **dialytic m.**, treatment by the internal

use of artificial mineral waters, *i. e.*, dilute aqueous solutions of salts. **hypodermatic m.**, the introduction of remedial agents beneath the skin. **ionic m.**, the application of medicines by cataphoresis, the ions of the drugs passing from one pole of the battery to the other through the body. **sublingual m.**, the administration of medicine in powdered form by placing it beneath the tongue. **substitutive m.**, medication for the purpose of causing an acute nonspecific inflammation to overcome a specific one. **transduodenal m.**, the administration of medicine through a duodenal tube into the intestines without soiling the stomach.

medicator (med'ik-a-tor). An instrument for carrying medicines into a cavity of the body; an applicator.

medicephalic (me-de-sef-al'ik). Median cephalic. See *vein*.

medicebellar (me-de-ser-e-bel'ar). Middle cerebellar.

medicerebral (me-de-ser'e-bral). Middle cerebral.

medicinal (med-is'in-al) [L. *medicina* 'lis]. 1. Having healing qualities. 2. Pertaining to a medicine or to healing.

medicine (med'is-in) [L. *medici* 'na]. 1. Any drug or remedy. 2. The art or science of healing diseases; especially the healing of diseases by the administration of internal remedies. **clinical m.**, the study of disease at the bedside by demonstrations on the living patient. **compound m.**, a medicine containing a mixture of several drugs. **domestic m.**, the home treatment of disorders without the advice of a physician. **dosimetric m.**, the practice of administering medicines by an exact and determinate system of doses. **forensic m.**, the application of medical knowledge to questions of law; medical jurisprudence. Called also *legal m.* **galenic m.**, an absolute system of practice based upon the teachings of Galen. **group m.**, the practice of medicine by a group of physicians who are associated together for the cooperative diagnosis and treatment of patients. **hermetic m.**, spagirc medicine. **Indian m.**, a North American form of quackery alleged to be derived from the aboriginals. **internal m.**, that department of medicine which deals with diseases that cannot be treated surgically; medicine as distinguished from surgery. **legal m.** See *forensic m.* **patent m.**, the vernacular term for a nostrum advertised to the public. They are generally of secret composition. **patented m.**, a medicine whose manufacture is protected by letters patent. **pre-clinical m.**, medical practice devoted to keeping the well well and preventing or postponing the development of clinical conditions in the near sick. **preventive m.**, that branch of study and practice which aims at the prevention of disease. **proprietary m.**, any chemical, drug, or similar preparation used in the treatment of diseases if such article is protected against free competition as to name, product, composition, or process of manufacture by secrecy, patent, copyright, or other means. **psychologic m.**, medicine in its relation to mental diseases. **rational m.**, practice of medicine based upon actual knowledge; opposed to *empiricism*. **spagirc m.**, the obsolete, semialchemistic system of practice established by Paracelsus (1493-1451). **state m.** 1. That branch of medicine which deals with questions of public health, with registration, statistics, and the like. 2. The control and direction of the practice of medicine by the government. **static m.**, practice of medicine based upon the varying relations of administration of food, excretion, and body weight. **suggestive m.**, treatment of disease by hypnotic suggestion. **veterinary m.**, the treatment of the diseases of animals.

medicinerea (med'is-in-e're-ah) [L. *me'dius* middle + *cine'rea* ashen]. The gray matter of the lentacula and the claustrum.

medicisterna (med-e-sis-ter'nah). The cisterna venae magnae cerebri.

medicochirurgic (med'ik-o-ki-rur'jik). Pertaining to medicine and surgery.

medicodental (med'ik-o-den'tal). Pertaining to medicine and dentistry; both medical and dental.

medicolegal (med'ik-o-le'gal). Pertaining to medicine and law, or to forensic medicine.

medicomechanic, medicomechanical (med'ik-o-me-kan'ik, med'ik-o-me-kan'ik-al). Both therapeutical and mechanical.

medicommissure, mediocommissure (me'de-kom'is-ur, me'de-o-kom'is-ur). The middle commissure, or commissura media.

medicophysical (med'ik-o-fiz'ik-al). Both medical and physical.

medicopsychological (med'ik-o-si-ko-loj'ik-al). Pertaining to medicopsychology.

medicopsychology (med'ik-o-si-ko-lo'je). The science of medicine in its relations with the mind or with mental diseases.

medicornu (me-di-kor'nu). The middle horn of the lateral ventricle.

medicotopographical (med'ik-o-to-pog-raf'ik-al). Pertaining to topography in its relation to disease.

medicozoological (med'ik-o-zo-o-loj'ik-al). Pertaining to zoology in its relation to medicine.

medicus (med'ik-us). Latin for *physician*.

medidural (me-di-du'ral). Pertaining to the central part of the dura mater.

medifrontal (me-dif-ront'al). Median and also frontal; pertaining to the middle of the forehead.

mediglycin (med-ig-li'sin). A liquid glycerin soap used as a vehicle for remedies in skin diseases.

Medina worm (med-e'nah). See *Dracunculus medinensis*.

medinal (med'in-al). A brand of barbital, soluble. See under *barbital*.

mediocarpal (me'de-o-kar'pal). Same as *midcarpal*.

medioccipital (me'de-ok-sip'it-al). Midoccipital.

mediolateral (me'de-o-lat'er-al) [L. *me'dius* middle + *lateralis* lateral]. Pertaining to the middle and to one side.

mediopontine (me'de-o-pon'tin) [L. *me'dius* middle + *pons* bridge]. Pertaining to the center of the pons.

mediotarsal (me'de-o-tar'sal) [L. *me'dius* middle + *tarsus*]. Pertaining to the middle of the tarsus.

medipeduncle (me-de-pe-dunk-el). The middle peduncle of the cerebellum. See *brachium pontis*.

mediscalenus (me-de-skal'e-nus). The scalenus medius muscle.

medisect (med'is-ekt) [L. *me'dius* middle + *seca're* to cut]. To divide or dissect medially.

medisylvian (me-dis-il've-an). Pertaining to the middle portion of the fissure of Sylvius.

meditemporal (me-dit-em'po-ral). Pertaining to the middle portion of the temporal lobe of the brain.

Mediterranean fever (med-it-er-a'ne-an). See *fever*.

meditrina (med-it-ri'nah). A proprietary germicide for use in leukorrhea, etc.

meditulium profundum [L. "deep midland"]. A portion of the tectum of the midbrain, the colliculus inferior.

medium (me-de-um), pl. *mediums* or *media* [L. "middle"]. 1. Means. 2. A substance which transmits impulses. 3. A substance used in the culture of bacteria. See *culture medium*. **Abe's m.** (for *gonococci*), mix 500 Gm. of fat-free meat, finely hashed, with 1000 cc. of water. Allow to stand in ice chest for from eighteen to twenty-five hours, then filter through paper and a Chamberland filter into sterile containers: for use it is mixed with

fluid or solid peptone mediums in the proportion of 1 to 5. **Besredka and Jufflé's m.**, a culture medium containing incoagulable egg albumin, incoagulable egg yolk, and beef broth in the proportion of 4 : 1 : 5. **Bruns' glucose m.**, a medium for mounting fresh tissue specimens: made by mixing distilled water, 140 cc., glucose, 40 Gm., and glycerin, 10 cc., then adding camphorated spirit, 10 cc., and filtering. **clearing m.**, a medium for rendering histologic specimens transparent. **Dieudonné's m.**, a culture medium composed of 30 parts of ox blood, 30 of potassium hydroxide, and 140 of cholera agar. **disperse, dispersive, or dispersion m.**, the continuous or external portion of a colloid system in which the particles of the disperse phase are distributed. It is analogous to the solvent in a true solution. **Drigalski-Conradi m.**, a culture medium made by adding nutrose and crystal violet to lactose litmus agar, using 3 per cent of agar. The crystal violet inhibits the growth of many bacteria other than the typhoid bacillus. It is used in detecting typhoid bacilli in the blood. Called also *Conradi's m.* **Elsner's m.**, a culture medium made by adding a sterilized potassium iodide solution of 10 per cent strength to Holz's potato gelatin. **m. of Endo**, a culture medium for typhoid bacilli: to 1 liter of water are added 500 Gm. of ground beef, 10 Gm. of peptone, 5 Gm. of sodium chloride, and 30 Gm. of agar. The mixture is boiled, filtered, neutralized, and then made alkaline by 10 cc. of a 10 per cent solution of sodium carbonate, then 10 Gm. of pure lactose is added, then 5 cc. of alcoholic solution of fuchsin, then 25 cc. of 10 per cent solution of sodium sulphite. **esculin m.**, a medium for the isolation of the colon bacillus, containing esculin and iron citrate, in which the colon bacillus produces a black colony. **Holz's m.**, potato gelatin. **Löffler's m.**, a culture medium for diphtheria bacillus, containing 1 part bouillon, 3 parts blood serum, and 1 per cent of glucose. **N. N. N. m.**, a culture medium for *Leishmania donovani*, consisting of agar 14, salt 6, water 900, which is sterilized and then has added to it one third rabbit's blood. **passive m.**, a medium which does not alter the structure of tissues that are placed in it. **Piorkowski's m.**, a medium consisting of 100 parts of urine that has undergone ammoniacal fermentation, 0.5 part of peptone and 3.3 parts of gelatin. **Vedder's m.**, a culture medium consisting of beef infusion agar to which 1 per cent of starch has been added. **Wickersheimer's m.** See under *fluid*.

medius (me'de-us). Intermediate between two other parts.

medol (me'dol). A liniment used for skin diseases and in veterinary practice, containing 0.8 per cent of iodine.

medorrhæa (med-o-re'ah) [μήδος penis + ροία flow]. A urethral discharge.

medorrhinum (med-o-ri'num) [μήδος penis + ροία flow]. A homeopathic trituration of the gonorrheal secretion: used in gonorrhæa and chronic rheumatism.

medulla (med-ul'ah) [L.]. 1. Marrow. 2. The medulla oblongata. 3. Any substance resembling marrow in appearance or structure. **m. dorsalis**, the spinal cord. **m. neph'rica**, the pyramids of the kidney collectively. **m. oblonga'ta** [B N A], the truncated cone of nervous tissue continuous above with the pons and below with the spinal cord. It lies ventral to the cerebellum and its back forms the floor of the fourth ventricle. **m. os'sium** [B N A], the bone marrow. **m. os'sium fla'va**, yellow bone marrow. **m. os'sium ru'-brum**, red bone marrow. **m. spina'lis** [B N A], the spinal cord or myelon.

medullæden (med-ul-a'den) [L. medul'la marrow + ἀδών gland]. A red-brown powder prepared from red bone marrow of cattle. It is a hematitic, and is used in anemia, leukemia, neurasthenia, and gout. Dose, 30-45 grains (2-3 Gm.).

medullar, medullary (med-ul'ar, med-ul-a-re) [L. medulla'ris]. Pertaining to the marrow or to any medulla; resembling marrow.

medullated (med-ul'a-ted). Containing or covered by a medullary substance. **m. nerve fiber**. See *medullated fiber*, under *fiber*.

medullation (med-ul-a'shun). The formation of a medulla or marrow.

medulliadrenal (med-u'le-ad-re'nal). Pertaining to the medullary portion of the adrenal.

medulline (med-ul'in). A proprietary extract of the spinal cord of the ox: used in nervous and spinal diseases.

medullispinal (med-ul-is-pi'nal) [L. medul'la marrow + spina'lis spinal]. Pertaining to the spinal cord.

medullitis (med-ul-i'tis). 1. Osteomyelitis. 2. Myelitis.

medullization (med-ul-iz-a'shun). The enlargement of the haversian canals in rarefying osteitis, followed by their conversion into marrow channels; also the replacement of bone by marrow cells.

medullo-arthritis (me-dul'lo-ar-thri'tis) [L. medul'la marrow + arthritis]. Inflammation of the marrow spaces of the articular extremities of bones.

medulloblast (me-dul'o-blast). An undifferentiated preneuroglial cell.

medulloblastoma (med-ul'o-blas-to'mah). A cerebellar tumor composed of undifferentiated preneuroglial cells.

medullocell (me-dul'o-sel) [L. medul'la marrow + cell]. Same as *myelocyte*.

medullo-encephalic (med-ul'o-en-sef-al'ik). Myelo-encephalic.

Medusa (me-du'sah). A genus of motile microorganisms. One species, *M. sanguinis hom'inis*, occurs in the blood in a form of remittent fever in China.

meduscongessin (me-du'so-kon-jes'tin). A poisonous substance obtained from jellyfish.

mega-, megal- [μέγας large]. A prefix signifying great.

megabacterium (meg'ah-bak-te're-um) [μέγας large + bacterium]. A bacterium of large size.

megacaryocyte, megakaryocyte (meg-ak-ar'e-o-si't). See *megakaryocyte*.

megacecum (meg-ah-se'kum) [μέγας large + cecum]. A cecum which is abnormally large.

megacephalic, megacephalous (meg'ah-sef-al'ik, meg-ah-sef'al-us) [μέγας large + κεφαλή head]. Having a large head.

megacephaly (meg-ah-sef'al-e). Abnormal largeness of the head.

megacoccus (meg-ah-kok'us) [μέγας large + κόκκος berry]. A coccus of a very large type.

megacolon (meg-ak-o'lon). Same as *giant colon*. Abnormally large size of the colon, due to dilatation and hypertrophy. The condition is usually one of childhood. Called also *giant colon*, *congenital idiopathic dilatation of colon*, and *Hirschsprung's disease*. **m. congen'itum**, congenital dilatation of the colon.

megacoly (meg-ak'o-le). Increase in the caliber of the colon.

megadont (meg'ad-ont) [μέγας large + ὀδούς tooth]. Having large teeth.

megaduodenum (meg-ah-du-o-de'nium). Abnormally large size of the duodenum.

megadyne (meg'ad-in) [μέγας great + dyne]. A million dynes.

mega-esophagus (meg'ah-e-sof'ag-us). A greatly enlarged esophagus.

megagamete (meg-ag-am'ët). Same as *macrogamele*.

- megakaryoblast** (meg-ah-kar'e-o-blast). An immature megakaryocyte.
- megakaryocyte** (meg-ah-kar'e-o-sit) [μέγας large + κάρυον nucleus + κύτος cell]. A cell with a large nucleus, as the giant cells of bone marrow.
- megalakria** (meg-al-ak're-ah) [μέγας large + άκρος extremity]. Acromegaly.
- megalerythema** (meg-al-er-ith-e'mah). Erythema with swelling of the part.
- megalgia** (meg-al'je-ah) [μέγας large + άλγος pain]. Severe pain, as in muscular rheumatism.
- megaloblast** (meg'al-o-blast) [μέγας large + δαστός germ]. An erythroblast or primitive red blood corpuscle of large size, *i. e.*, more than 11 μ in diameter. It consists of a homogeneous cytoplasm with a relatively large nucleus with granular chromatin. Megaloblasts are found in the blood in pernicious anemia. They have been called *ichthyoid cells* because they are just like the red blood cells of fishes. Cf. *erythroblast*.
- megalocardia** (meg-al-o-kar'de-ah) [μέγας large + καρδιά heart]. Hypertrophy of the heart.
- megalocephalia, megaloccephaly** (meg'al-o-sef-ale-ah, meg'al-o-sef'al-e) [μέγας large + κεφαλή head]. 1. Unusually large size of the head. 2. Progressive enlargement of the bones of the head, face, and neck; leontiasis ossea.
- megalocephalic** (meg'al-o-sef-al'ik). Same as *megacephalic*.
- megalocoly** (meg-al-ok'ok-le). Same as *megacoly*.
- megalocornea** (meg'al-o-kor'ne-ah) [μέγας large + cornea]. An enlarged or bulging cornea.
- megalocyte** (meg'al-o-sit) [μέγας large + κύτος cell]. An extremely large erythrocyte, *i. e.*, one over 12 μ in diameter.
- megalocytosis** (meg'al-o-si-to'sis). Same as *macrocytosis*.
- megalodactylia, megalodactylism** (meg'al-o-dak-til'e-ah, meg'al-o-dak'til-izm). Abnormal largeness of fingers or toes.
- megalodactylous** (meg'al-o-dak'til-us) [μέγας great + δάκτυλος digit]. Having unusually large fingers and toes.
- megalodontia** (meg'al-o-don'she-ah). Macrodon'tia.
- megalo-enteron** (meg'al-o-en'ter-on) [μέγας large + έντερον intestine]. An abnormally large intestine; ehteromegaly.
- megalo-esophagus** (meg'al-o-e-sof'ag-us). Abnormal enlargement of the esophagus.
- megalogastria** (meg'al-o-gas'tre-ah) [μέγας great + γαστήρ stomach]. Enlargement or abnormally large size of the stomach.
- megaloglossia** (meg'al-o-glos'e-ah) [μέγας large + γλώσσα tongue]. See *macroglossia*.
- megalographia** (meg'al-o-gra'fe-ah). Same as *macrographia*.
- megalohepatis** (meg'al-o-hep-at'e-ah) [μέγας large + ήπαρ liver]. Enlargement of the liver.
- megalokaryocyte** (meg'al-o-kar'e-o-sit) [μέγας large + κάρυον nucleus + κύτος cell]. The giant cells of the bone marrow, having a large lobulated nucleus (Howell).
- megalomania** (meg'al-o-ma'ne-ah) [μέγας great + μανία madness]. Delirium of grandeur; insane belief in one's own extreme greatness, goodness, or power.
- megalomaniac** (meg'al-o-ma'ne-ak). A person affected with megalomania.
- megalomelia** (meg'al-o-me'le-ah) [μέγας large + μέλος limb]. Abnormal largeness of the limbs.
- megalonychosis** (meg'al-o-nik-o'sis) [μέγας great + όνυξ nail]. Hypertrophy of the nails and their matrices.
- megalopenis** (meg'al-o-pe'nis). Excessive size of the penis.
- megalophthalmus** (meg-al-of-thal'mus) [μέγας large + όφθαλμός eye]. Abnormally large size of the eyes.
- megalopia** (meg-al-o'pe-ah) [μέγας great + όψ eye]. Macropsia.
- megaloplastocyte** (meg'al-o-plas'to-sit) [μέγας great + πλαστοκύτταρο]. A blood platelet larger than normal.
- megalopsia** (meg-al-op'se-ah) [μέγας great + όψ vision]. Same as *macropsia*.
- megaloscope** (meg'al-o-sköp) [μέγας large + σκοπείν to view]. A large magnifying lens; a magnifying speculum or mirror.
- megalosplanchnic** (meg'al-o-splank'nik). Having the abdominal portion of the body relatively larger than the thoracic.
- megalosplenitis** (meg'al-o-sple'ne-ah) [μέγας large + σπλήν spleen]. Enlargement of the spleen.
- megalospore** (meg'al-o-spör). Megalosporon.
- Megalosporon** (meg'al-os-po-ron), pl. *megalospora* [μέγας great + σπόρος seed]. The large-spored division of the trichophyton fungi. **M. ectothrix**, the form found outside or on the surface of the hair shaft. **M. endothrix**, the form found inside of the hair shaft.
- megalosyndactyly** (meg'al-o-sin-dak'til-e) [μέγας great + σνδάκτυλία]. A condition in which the digits are very large and more or less blended together.
- megalo-ureter** (meg'al-o-u-re'ter) [μέγας large + ureter]. Enlargement of the caliber of the ureter.
- megamerozoite** (meg-am-er-o-zo'it). A large merozoite.
- meganucleus** (meg-an-u'kle-us). Same as *macronucleus*.
- megaprosopon** (meg-ah-pros-o'pus) [μέγας great + πρόσωπον face]. Having a large face.
- megarectosigmoid** (meg'ah-rek'to-sig'moid). Enormous dilatation of the rectum and sigmoid.
- megarectum** (meg-ah-rek'tum) [μέγας large + rectum]. A greatly dilated rectum.
- Megarhinus** (meg-ah-r'i'nus). A genus of large, showy, but harmless mosquitoes of tropical and subtropical countries.
- megaseme** (meg'as-ēm) [μέγας great + σημα sign]. Having an orbital index exceeding 89 degrees.
- megasigmoid** (meg-ah-sig'moid) [μέγας large + sigmoid]. An enormously dilated sigmoid flexure.
- megasoma** (meg-as-o'mah) [μέγας great + σώμα body]. Great size and stature, not amounting to gigantism.
- megasome** (meg'ah-söm). Same as *macrosome*.
- megaspore** (meg'as-pör). A macrosore.
- Megastoma** (meg-as'to-mah) [μέγας great + στόμα mouth]. See *Giardia intestinalis*.
- megastria** (meg-as'tre-ah). See *megalogastria*.
- megavolt** (meg'ah-völt) [μέγας large + volt]. A million volts.
- Méglin's point** (ma-glaz') [J. A. Méglin, French physician, 1756-1824]. See *point*.
- megohm** (meg'öm) [μέγας great + ohm]. A million ohms.
- megophthalmus** (meg-of-thal'mus) [μέγας great + όφθαλμός eye]. See *buphthalmus*.
- megoxycyte** (meg-ok'se-sit) [μέγας large + oxyphil + κύτος cell]. A large oxyphil cell; a coarsely granular eosinophil leukocyte.
- megoxyphil** (meg-ok'se-fil) [μέγας great + όξύς acid + φιλείν to love]. An eosinophil leukocyte containing large granules.
- megrim** (me'grim). See *migraine*.
- meibomian** (mi-bo'me-an). Named for or described by Heinrich Meibom, German anatomist, 1638-1700. See under *gland* and *cyst*.
- Meige's disease** (mehzhz) [Henri Meige, French

- physician, born 1866]. See *Milroy's disease*, under *disease*.
- Meigs' capillaries** (megz) [Arthur V. Meigs, Philadelphia physician, 1850-1912]. See *capillary*.
- meio-**. For words thus beginning, see under *mio-*.
- Meissner's corpuscles, plexus**, etc. (mīs'nerz) [Georg Meissner, German physiologist, 1829-1903]. See *corpuscle*, *plexus*, etc.
- mekonal** (me'ko-nal). A preparation containing acetylsalicylic acid, barbital, and morphine chloride: used as a hypnotic.
- mel** (mel) [L.]. Honey; a saccharine substance deposited by the honey bee, *A'pis mellif'ica*. Clarified honey (mel, U. S. P.) is chiefly a mixture of levulose and glucose: it is used as a food, as an excipient, and as an application to aphthae. 2. A compound of honey with some medicinal agent. **m. bo'raxis**, the honey of borax: used mainly in aphthous affections of the mouth. **m. depura'tum**, **m. despuma'tum**, clarified honey. **m. ro'sae** (U. S. P.), honey of rose, a preparation of 120 cc. of fluidextract of rose with sufficient honey to make 1000 Gm. Dose, 1 fluidrachm (4 cc.).
- melachol** (mel'ak-ol). A proprietary solution of sodium citrophosphate. It is a laxative for use in liver diseases, and also has anodyne properties.
- melaena** (mel-e'nah). See *melena*.
- melagra** (mel-ag'rah) [μέλας limb + ἄγρα seizure]. Muscular pain in the extremities.
- Melaleuca** (mel-al-u'kah). See *cajuput*.
- melalgia** (mel-al'je-ah) [μέλας limb + ἄλγος pain]. Neuralgic pain in the limbs.
- melan** (mel'an). A brown, oily preparation from the leaves, flowers, and stems of *Melito'bus caeru'lens*: used as a stimulant for wounds and ulcers.
- melancholia** (mel-an-ko'le-ah) [μέλας black + χολή bile]. A form of insanity marked by a depressed and painful emotional state with abnormal inhibition of mental and bodily activity. **acute m.**, an acute form of melancholia marked, in addition to the usual symptoms, by loss of appetite, emaciation, insomnia, and subnormal temperature. **agitated m.**, **m. agita'ta**, melancholia with constant motion and signs of great emotional excitement. **m. atton'ita**, a form in which the patient lies motionless and silent. **m. with delirium**, a form in which there are distressing delusions and hallucinations. **flatuous m.**, that which is characterized by gases in the alimentary canal. **m. hypochondri'aca**, extreme hypochondriasis. **involution m.**, melancholia developing in advanced life during senile involution. **recurrent m.**, a condition in which attacks of melancholia follow one another at more or less regular intervals. **m. religio'sa**, the delusion of one's own personal damnation. **m. simplex**, a mild form with neither delusions nor great excitement. **stuporous m.**, melancholia attonita: a form in which the patient lies motionless and silent, with fixed eyes and indifference to surroundings; there are sometimes hallucinations.
- melancholiac** (mel-an-ko'le-ak). Affected with melancholia; also a person affected with melancholia.
- melanodema** (mel-an-e-de'mah) [μέλας black + οἰδημα swelling]. See *anthracosis*.
- melanemia** (mel-an-e-me-ah) [μέλας black + αἷμα blood]. The presence of black, pigmentary masses in the blood; hemachromatosis. The condition is seen chiefly in pernicious anemia.
- melanephrosis** (mel'an-ef-id-ro'sis) [μέλας black + ἐπιδρωσις excessive sweating]. The discharge of black sweat.
- mélangeur** (ma-lan-zher'). An instrument for drawing and diluting specimens of blood for examination. It consists of a capillary tube, one end of which is blown into a bulb having a capacity of 100 c.mm.
- melanidrosis** (mel'an-id-ro'sis) [μέλας black + ιδρώς sweat]. Black sweat.
- melaniferous** (mel-an-if'er-us) [melanin + L. fer're to bear]. Containing melanin or other black pigment.
- melanin** (mel'an-in) [μέλας black]. A dark pigment from the choroid, hair, and other dark tissues, and from melanotic tumors. It is a product of cell activity, contains sulphur and iron, and is probably a derivative of hematin. **artificial m.**, **factitious m.**, a compound resembling melanin, formed when a protein is heated in strong hydrochloric acid. Called also *melanoid*.
- melanism** (mel'an-izm) [μέλας black]. Excessive pigmentation or blackening of the integuments or tissues; melanosis.
- melanistic** (mel-an-is'tik). Characterized by melanism.
- melano-** [μέλας black]. A prefix signifying black.
- melanoblast** (mel'an-o-blast) [μέλας black + βλαστός germ]. An epithelial cell which generates pigment.
- melanoblastoma** (mel'an-o-blas-to'mah). A tumor made up of melanoblasts.
- melanocancroid** (mel'an-o-kang'kroid). A strongly pigmented epithelial tumor.
- melanocarcinoma** (mel'an-o-kar-sin-o'mah) [μέλας black + carcinoma]. A carcinoma pigmented with melanin.
- melanochomous** (mel-an-ok'o-mus) [μέλας black + κομή hair]. Having black hair.
- melanochroous, melanochrous** (mel-an-ok'ro-us, -ok'rus) [μέλας black + χρώα color]. Having a dark complexion.
- melanocyte** (mel'an-o-sit) [μέλας black + κύτος cell]. A cell like a leukocyte, but pigmented.
- melanoderm** (mel'an-o-derm) [see *melanoderma*]. A person belonging to one of the black races.
- melanoderma** (mel'an-o-der'mah) [μέλας black + δέρμα skin]. An abnormal deposit of melanin in the skin. **m. cachectico'rum**, a form seen in certain systemic disorders, as malarial fever, syphilis, cancer, tuberculosis, etc. **parasitic m.**, vagabonds' disease. See *disease*. **senile m.**, pigmentation of the skin in the aged.
- melanodermic** (mel'an-o-der'mik). Having a dark skin.
- melano-epithelioma** (mel'an-o-ep-e-the-le-o'mah). An epithelioma containing melanin.
- melanogen** (mel'an-o-jen) [melanin + γεννᾶν to produce]. A colorless chromogen of the urine, convertible into melanin.
- melanoglossia** (mel'an-o-glos-e-ah) [μέλας black + γλῶσσα tongue]. Black tongue. See *glossophylia*.
- melanoid** (mel'an-oid) [μέλας black + εἶδος form]. 1. Resembling melanism; of a dark color. 2. Artificial melanin. See *melanin*.
- melanoidin** (mel'an-o'id'in). A melanin obtained from the albumins.
- Melanolestes pic'ipes**. The "black corsair" or "kissing bug"; its bite much resembles the sting of a wasp, though often much more serious.
- melanoleukoderma** (mel'an-o-lu-ko-der'mah) [μέλας black + λευκός white + δέρμα skin]. A mottled appearance of the skin. **m. coli'i**, a mottled appearance of the skin of the neck and adjacent regions, seen as a rare manifestation of syphilis. Called also *venereal collar* and *collar of Venus*.
- melanoma** (mel-an-o'mah). A melanotic tumor.
- melanonychia** (mel'an-o-nik'e-ah) [μέλας black + ὄνυξ nail]. Blackening of the nail.
- melanopathy** (mel'an-op'ath-e) [μέλας black + πάθος illness]. Any disease characterized by abnormal pigmentation of the skin or tissues.
- melanophore** (mel'an-o-för) [μέλας black + φορός bearing]. A pigment-carrying cell.

melanoplakia (mel''an-o-pla'ke-ah) [μέλας black + πλάξ plate]. The formation of pigmented patches on the mucous membrane of the mouth in certain diseases, as stomatitis, jaundice, etc.

melanorrhagia (mel''an-o-ra'je-ah) [μέλας black + ρήγνυμι to burst forth]. The free and frequent discharge of feces darkened with blood pigments.

melanorrhea (mel''an-o-re'ah) [μέλας black + ροία flow]. Same as *melanorrhagia*.

melanosarcoma (mel''an-o-sar-ko'mah) [μέλας black + σάρcoma]. Sarcoma with pigmentary elements.

melanosarcomatosis (mel''an-o-sar-ko-mah-to'-sis). The development of melanosarcomas.

melanoscirrhus (mel''an-o-skir'us) [μέλας black + σκίρhus]. Same as *melanocarcinoma*.

melanosed (mel'an-ōsd). Affected with melanosis.

melanosis (mel'an-o'sis) [μέλας black]. 1. Melanism; a condition characterized by abnormal pigmentary deposits. 2. Disorder of function caused by a pigment. **m. lenticularis progressiva**, xeroderma pigmentosum. **m. scleræ**, congenital violet flecks in the sclera (Schmidt-Rimpler).

melanosity (mel-an-os'it-e). Swarthiness of complexion.

melanotic (mel-an-ot'ik). Affected with or of the nature of melanosis.

melanotrichia linguæ. Black tongue. See under *lingue*.

melanous (mel'an-us) [μέλας black]. Having a dark or swarthy complexion.

melanthin (mel-an'thin). An amorphous and poisonous glucoside, or saponin, $C_{20}H_{33}O_7$, from the seeds of *Nigella arvensis*.

melanuresis (mel''an-u-re'sis). Melanuria.

melanuria (mel-an-u're-ah) [μέλας black + ούρον urine]. The discharge of darkly stained urine.

melanuric (mel-an-u'rik). Pertaining to or marked by melanuria.

melanurin (mel-an-u'rin). A black substance from morbid urine in certain rare cases.

melasma (mel-az'mah) [μέλας black]. A disease characterized by dark pigmentation of the skin. **m. addisonii**, Addison's disease. **m. gravidarum**, discoloration of the skin in pregnant women. **m. suprarenale**, Addison's disease. **m. universale**, discoloration of nearly the entire surface of the body.

melena, **melaena** (mel-e'nah) [μέλαινα black, black bile]. 1. The passage of dark, pitchy, and grumous stools stained with blood pigments or with altered blood. 2. Black vomit. **m. neonatorum**, melena of the new-born, due to the extravasation of blood into the alimentary canal. **m. spuria**, melena in nurslings in which the blood comes from the fissured nipple of the nurse. **m. vera**, true melena.

melenemesis (mel-e-nem'es-is) [μέλας black + ἔμεσις vomiting]. Black vomit.

melenic (mel-e'nik). Marked by melena.

melezitose (mel-ez'it-ōs). A sugar from larch manna, $C_{18}H_{32}O_{16} + 2H_2O$.

melibiose (mel-ib-i'ōs). A disaccharide obtained from molasses and from Australian manna. On hydrolysis it yields galactose and dextrose.

melicera, **meliceris** (mel-is-e'rah, mel-is-e'ris) [μέλι honey + κηρός wax]. 1. A cyst filled with a honey-like substance. 2. Viscid, suppurative.

melicitose (mel-is'it-ōs). See *melizitose*.

meligrin (mel'ig-rin). A condensation product of dimethylxyloquinine and methylphenylacetamide: used in migraine.

melilot (mel'il-ot). See *Melilotus*.

Melilotus (mel-il-o'tus) [μέλι honey + λωτός lotus]. A genus of leguminous herbs. *M. officinalis* (sweet clover, melilot) contains coumarin,

coumaric acid, and melilotic acid. It is a fragrant and very mild anodyne, used in plaster or ointment.

meliodosis (me-le-oi-do'sis) [μήλις Greek name for a glanders-like disease + εἶδος resemblance]. A glanders-like disease of rodents, transmissible to man, occurring in Rangoon, and caused by *Bacterium whistleri*. Formerly called *Whitmore's disease*.

Melissa (mel-is'ah) [L. "bee"]. A genus of labiate plants. The tops and leaves of *M. officinalis*, lemon-balm, containing tannin and an essential oil, are a cooling stimulant and diaphoretic. Dose of compound spirit (*spiritus melissæ compositus*), $\frac{1}{2}$ fl.oz. (15 cc.).

melissophobia (mel-is-o-fo'be-ah) [μέλισσα bee + φόβος fear]. An insane dread of bees and wasps.

melitagra (mel-it-ag'rah, mel-it-ag-rah) [μέλι honey + ἄγρα seizure]. Eczema with honeycomb crusts.

melitemia (mel-it-e'me-ah) [μέλι honey + αἷμα blood]. An excess of sugar in the blood.

melitis (me-li'tis) [μήλον cheek + -ιτις inflammation]. Inflammation of the cheek.

melitococcosis (mel'it-o-kok-o'sis). Malta fever.

melitococcus (mel-it-o-kok'us). *Bacterium (Micrococcus) melitensis*.

melitoptyalism (mel'it-o-ti'al-izm) [μέλι honey + πτύαλον saliva]. The secretion of saliva containing glucose.

melitoptyalon (mel'it-o-ti'al-on). Glucose occurring in the saliva.

melitose (mel'it-ōs) [μέλι honey]. A crystalline sugar from Australian manna, sugar beets, and other sources. It is a trisaccharide, $C_{18}H_{32}O_{16} + 5H_2O$, and yields on hydrolysis dextrose, fructose, and galactose. Called also *raffinose* and *melitriose*.

melitriose (mel-it'ri-ōs). Same as *melitose*.

melituria (mel-it-u're-ah) [μέλι honey + ούρον urine]. The presence of any sugar in the urine; diabetes mellitus. **m. inosita**, inosuria.

melituristic (mel-it-u'rik). Pertaining to or affected with melituria.

melizitose (mel-iz-i'tōs). A trisaccharide, $C_{18}H_{32}O_{16}$, obtained from Pinus larix. On hydrolysis it yields levulose, dextrose, and galactose.

mellite (mel'it) [L. *melilium*]. Any medicated or pharmaceutical preparation of honey.

melithemia, **melithuria**. See *melitemia*, *melituria*.

melmaroba (mel-mar-o'ba). A liquid preparation of manaca, stillingia, caroba, and potassium iodide: for use in syphilis, rheumatism, and skin diseases. Dose, 1-2 fluidrachms (3.75-7.5 cc.).

melol (mel'ol). A proprietary castor oil mixture.

melomania (mel-o-ma'ne-ah) [μέλος song + μανία madness]. Insane fondness for music.

melomaniac (mel-o-ma'ne-ak). A person affected with melomania.

melomelus (mel-om-el-us) [μέλος limb + μέλος limb]. A monster fetus with both normal and supernumerary limbs, the latter rudimentary.

meloncus (mel-ong'kus) [μήλον cheek + ὄγκος tumor]. Tumor of the cheek.

melonemetin, **melonemetin** (mel-on-em'et-in, mel'on-en-em'et-in). A bitter emetic and purgative substance from the root of muskmelon, *Cucumis melo*. Dose, $\frac{1}{2}$ -2 grains (0.033-0.13 Gm.).

melonoplasty (me-lon'o-plas-te). Same as *meloplasty*, 1st def.

melon seed bodies (mel'un sēd). See *bodys*.

Melophagus (mel-of-ag-us). A genus of parasitic dipterous insects of the family Hippoboscidae. *M. ovinus*, the common louse tick of sheep.

meloplasty (mel'o-plas-te) 1. [μήλον cheek + πλάσσειν to form]. Plastic surgery of the cheek. 2. [μέλος limb + πλάσσειν to form]. Plastic surgery of the extremities.

melorheostosis (mel-o-re-os-to'sis). A form of osteosclerosis of long bones.

melosalgia (mel-o-sal'je-ah) [$\mu\epsilon\lambda\omicron\varsigma$ limb + $\acute{\alpha}\lambda\gamma\omicron\varsigma$ pain]. Pain in the lower limbs.

melting point (mel'ting). The temperature at which a substance changes from solid to liquid.

Meltzer's law, method (melt'serz) [Samuel J. Meltzer, American physiologist, 1851-1920]. See *law* and *method*.

Meltzer-Lyon method or test. See under *tests*.

melubrin (mel-u'brin). The sodium salt of phenyl-dimethyl-pyrazolon-amido-methane-sulphonic acid, $C_6H_5N_2O(CH_2)_2NH.C_6H_4.SO_3ONa$, a white, crystalline powder, a derivative of antipyrine: used as an antipyretic and analgesic in doses of 15-30 grains (1-2 Gm.).

member (mem'ber) [L. *mem'brum*]. 1. A part of the body distinct from the rest in function or position. 2. An outlying part or limb.

memberment (mem'ber-ment). The manner of arrangement of parts in a body.

membrana (mem-bran'nah), pl. *membra'nae*. Latin for *membrane*. **m. abdom'inis**, the peritoneum. **m. adamantin'ea**, Nasmyth's membrane. **m. adventit'ia**. 1. The adventitia, or outer coat of an artery. See *artery*. 2. The decidua reflexa. **m. ag'nina**, the amnion. **m. atlanto-occipita'lis**, the occipito-atloid ligament. **m. basila'ris**, the lower boundary of the scala media of the ear. **m. cadu'ca**, the decidua. **m. capsula'ris**, a capsular ligament. **m. choriocapilla'ris**, the innermost vascular layer of the choroid. **m. decid'ua** [B N A]. See *decidua*. **m. eb'oris**, the investing membrane of the tooth pulp, made up of relics of the odontoblasts. **m. elas'tica laryn'gis** [B N A], the submucous layer of the larynx. **m. flac'cida**. See *Shrapnell's membrane*, under *membrane*. **m. fus'ca**, the pigmented layer which connects the choroid and sclera. **m. germinati'va**, the blastoderm. **m. granulo'sa**, the cell layer that lines the inner surface of the graafian follicle. **m. granulo'sa exter'na** and **m. granulo'sa inter'na**, the two granular layers of the retina. **m. hyalo'i'dea** [B N A], the hyaloid membrane. **m. hyothyreo'i'dea**, the hyothyroid membrane. **m. interos'sea anti-bra'chii**, a membrane extending between the radius and ulna at the elbow joint. **m. interos'sea cru'ris**, a ligament uniting the shafts of the tibia and fibula. **m. lim'itans**, the limiting membrane of the retina. See *retina*. **m. nic'titans**. See *membrane*, *nictitating*. **m. obtura'trix**, a membrane which in early fetal life closes in the upper part of the fourth ventricle. **m. orbita'lis musculo'sa**, a system of smooth muscles deep in the orbit. **m. pituito'sa**, the schneiderian membrane. **m. pro'pria**, the basement membrane of mucous membranes. **m. quadrangula'ris**, a membrane from the epiglottis to the arytenoid cartilages. **m. reticula'ta**, the netlike membrane covering the organ of Corti in the ear. **m. ruyschia'na**, the capillary layer of the choroid; the entochoroidea. **m. saccifor'mis**, the synovial membrane of the inferior radio-ulnar articulation. **m. sero'sa**. 1. See *serous membrane*, under *membrane*. 2. The false amnion. See *amnion*. **m. seroti'na**, that part of the decidua which takes part in the formation of the placenta. **m. ster'ni** [B N A], the layer of membrane inclosing the sternum. **m. succin'gens**, the pleura. **m. tecto'ria** [B N A], the tectorial membrane. **m. ten'sa**, **m. vi'brans**, the membrana tympani proper, exclusive of Shrapnell's membrane. **m. tym'pani** [B N A], the drum-head or membrane that separates the middle from the external ear. It is made up of a large lower part (*m. vi'brans*, *m. ten'sa*) and a small upper portion (*m. flac'cida*, *Shrapnell's membrane*). **m. tym'pani secunda'ria**, the membrane that closes in the fenestra rotunda. **m. vestibula'ris Reiss'neri** [B N A], a delicate layer between the periestrum of the cochlea and the lamina spiralis; it separates the cochlear canal from the scala vestibuli. **m. vi'brans**. See *m. tym'pani*.

membranaceous (mem-bran-a'shus) [L. *membrana'ceus*]. Of the nature of a membrane.

membrante (mem'bra-nät). Having the character of a membrane.

membrane (mem'brän) [L. *membra'na*]. A thin layer of tissue which covers a surface or divides a space or organ. **accidental m.**, a pseudomembrane. **adventitious m.**, a membrane not normal to the part, as the membrane of a cicatrix. **alveolodental m.** See *pericementum*. **anal m.**, the membrane that closes the anal end of the embryonic gut. **anhistous m.**, the decidua. **animal m.**, a thin membranous diaphragm, as of bladder: used as a dialyzer. **arachnoid m.** See *arachnoid*. **Ascheron's m.**, the covering of casein enclosing the milk globules. **Baer's m.**, chronicized pig's bladder, used as a dressing over cut bone surfaces. **basement m.**, the delicate, transparent layer underlying the epithelium of mucous membranes and secreting glands. **basilar m.** See *membrana basilaris*. **Bichat's m.** See *Henle's fenestrated m.* **Bowman's m.** See *lamina elastica posterior*. **Bruch's m.** See *lamina basalis*. **Brunn's m.**, the epithelium of the olfactory region of the nose. **capsulopupillary m.**, the membrane enclosing the capsule of the lens of the eye of the early embryo. **Cargile m.**, prepared ox peritoneum used for covering surfaces from which the peritoneum has been removed, in order to prevent the formation of adhesions. **cell m.**, the condensed protoplasm which forms the enveloping capsule of a cell. **cloacal m.**, the central wall of the cloaca formed by the outer and inner germ layers. **cobalt aurate m.**, gold-beaters' skin saturated with cobalt chloride and gold chloride and water, with oil of cassia: used as an application for causing granulation in wounds. **complex m.**, any membrane made up of several layers differing in structure. **compound m.**, a membrane, like that of the tympanum, made up of two distinct layers. **Corti's m.**, the membrane over the organ of Corti. **costocoracoid m.**, the fascia between the pectoralis minor and the subclavius muscles. **cricothyroid m.**, the membrane which connects the thyroid and cricoid cartilages. **croupous m.**, the false membrane of true croup. **Débove's m.**, the delicate layer between the epithelium and the tunica propria of the bronchial, tracheal, and intestinal mucous membranes. **Demours' m.** See *lamina elastica posterior*. **Descemet's m.** See *lamina elastica posterior*. **diphtheritic m.**, the variety of false membrane characteristic of diphtheria and resulting from coagulation necrosis. See *false m.* **Driddell's m.** Same as *Descemet's m.* **drum m.**, the membrana tympani. **Duddell's m.** Same as *Descemet's m.* **dysmenorrhœal m.**, the membrane discharged in membranous dysmenorrhœa. **elastic m.**, a variety of membrane composed largely of elastic fibers. **enamel m.** 1. The cuticula dentis. 2. The inner layer of cells within the enamel organ of the dental germ in the fetus. **false m.**, a morbid pellicle or skinlike layer resembling an organized and living membrane, but made up of coagulated fibrin with bacteria and leukocytes. Called also *diphtheritic m.* **fenestrated m.**, the thickest and outermost layer of the arterial intima. **fetal m's**, the chorion, amnion, and allantois. **fibrous m.**, a membrane made up of fibrous tissue. **Fielding's m.**, the tapetum. **germinal m.**, the blastoderm. **Hannover's intermediate m.**, the enamel membrane. **haptogen m.**, the membrane of protein matter formerly believed to enclose milk globules. **Henle's elastic m.**, a thin, fenestrated layer between the outer and middle tunics of certain arteries. **Henle's fenestrated m.**, a subendothelial fibre-elastic layer in the intima of an artery. **Henle's m.** See *lamina basalis*. **homogeneous m.**, a membrane covering the placental villi. **Hovius' m.**, the entochoroidea. **Huxley's m.**, the cellular membrane of the root

sheath and proximal end of a hair. **hyaline m.** 1. The membrane between the outer root sheath and the inner fibrous layer of a hair follicle. 2. The basement membrane. **hyaloid m.**, a delicate membrane investing the vitreous humor of the eye. **hyothyroid m.**, a broad fibro-elastic sheet attached below to the upper border of the thyroid cartilage and above to the upper margin of the posterior surface of the hyoid bone. **interosseous m.** See *membrana interossea*. **intersutural m.**, the pericranium that lies between the cerebral sutures. **ivory m.**, membrana eboris. **Jack-son's m.**, a delicate curtain or web of adhesions (by some regarded as a sheet of peritoneum) sometimes seen covering the cecum and producing obstruction of the bowel and a series of definite symptoms. Called also *membranous pericolicitis*. **Jacob's m.**, the layer of rods and cones of the retina. **keratogenous m.**, the nail matrix. **Kölliker's m.**, the membrana reticulata. **Krause's m.**, a membrane, seen as a dark line on longitudinal section, serving to limit the sarcomeres of striated muscle. Called also *Dobie's line* and *telophragma*. **limiting m.**, the membrana limitans of the retina. See *retina*. **meconic m.**, a layer within the fetal rectum. **medullary m.**, the endosteum. **mucocutaneous m.**, a membrane that is partly mucous and partly cutaneous, like that of the tympanum. **mucous m.**, a membrane composed of epithelium upon a basement membrane with a subcutaneous tissue, lining those canals and cavities of the body which communicate with external air, such as the alimentary canal and its branches, the respiratory tract and its connections, and the genito-urinary tract. **Nasmyth's m.**, a membrane covering the enamel of an unworn tooth. **nictitating m.**, the so-called third eyelid of various animals, as the horse. **nuclear m.**, the outer layer of the nucleoplasm. **obturator m.**, the tough layer that closes the obturator foramen. **olfactory m.**, the schneiderian membrane. **ovular m.**, the vitelline membrane. **palatine m.**, the membrane covering the roof of the mouth. **pericolonic m.**, a membrane passing from the serosa of the abdominal wall to the colon. Cf. *Jack-son's membrane*, *Treves' fold*, etc. **peridental m.**, **periodontal m.** See *pericementum*. **peri-orbital m.**, the periosteum of the orbit. **pharyngeal m.**, the membrane that closes the oral end of the embryonic gut. **plasma m.**, the hypothetical membrane surrounding or enveloping a cell; the superficial layer of the protoplasm of a cell. See *ectoplasm*. **pleuropericardial m.**, the membrane which separates the heart and the lung sac in the embryo. **proligerous m.**, the discus proligerus. **prophylactic m.**, pyoprophylactic membrane. **pseudoserous m.**, a membrane which looks like a serous membrane, but differs from it in structure. **pupillary m.**, a delicate membrane closing in the fetal pupil and disappearing about the seventh or eighth month of fetal life. **purpurogenous m.**, the pigment epithelium of the eye. **pyogenic m.**, a membrane which produces pus. **pyophylactic m.**, a fibrinous membrane lining a pus cavity and tending to prevent the reabsorption of injurious materials. **Ranvier's m.**, Rénaut's layer. See *layer*. **Reichert's m.** See *Bowman's m.* **Reissner's m.**, vestibular membrane; a thin membrane between the cochlear canal and the scala vestibuli. **reticular m.**, **reticulated m.**, the netlike covering of the organ of Corti. **ruyschian m.** See *lamina choriocapillaris*. **Scarpa's m.**, the membrana tympani secundaria. **schneiderian m.**, the mucous membrane which lines the nose. **semipermeable m.**, a membrane which permits the passage of a solvent, such as water, but prevents the diffusion of molecules of the dissolved substance. **serous m.**, the lining membrane of any one of the great splanchnic or lymph cavities. **Shrapnell's m.**, the thin upper part of the membrana tympani. **spore m.** See *sporocyst*. **sternal m.** (*membra'na ster'ni*), a

membrane on the anterior surface of the sternum made up of interwoven fibers from the anterior costosternal ligaments. **striated m.**, the zona radiata. **subenamel m.**, a membrane said to exist between the enamel pulp and the enamel of a tooth. **subepithelial m.**, the basement membrane. **subzonal m.**, the outer layer of the amnion. **synovial m.**, a membrane that secretes synovia. Synovial membranes are of three kinds: *articular synovial m's*, or those that line the cavities of a joint, forming the synovial capsule; *bursal synovial m's*, or those that line bursae mucosae; and *vaginal synovial m's*, or those that line tendon sheaths, forming synovial sheaths. **tarsal m.**, the palpebral cartilage. **tectorial m.** 1. A broad flat band of fibers on the upper anterior portion of the vertebral canal. It is attached above to the basilar portion of the occipital bone and continued downward as the posterior longitudinal ligament. 2. A delicate gelatinous mass resting on the organ of Corti and connected with the hairs of the hair cells. **Tenon's m.** See *Tenon's capsule*. **thyrohyoid m.**, the hyothyroid membrane. **Traube's m.**, an artificial chemical membrane: when a solution of potassium ferrocyanide is brought into contact with a solution of a copper salt, a film of potassium is formed at the plane of contact of the two liquids. **tympanic m.**, the membrana tympani. **undulating m.**, a protoplasmic membrane running like a fin along the body of certain protozoa. **utero-epichorial m.**, the decidua vera. **vestibular m.** Same as *Reissner's m.* **virginal m.**, the hymen. **vitelline m.**, the external envelop of the ovum. **vitreous m.** Same as *Bruch's m.* **Volkmann's m.**, a thin, yellowish, membrane studded with miliary tubercles which lines the fibrous wall of a tubercular abscess. **Wachendorf's m.** 1. The pupillary membrane. 2. The membrane which invests a cell. **yolk m.**, the vitelline membrane. **Zinn's m.**, the ectiris, or anterior layer of the iris.

membranelle (mem-bra-nel'). A small membrane composed of cilia, seen in ciliate organisms.

membraniform (mem-bra'nif-orm). Resembling a membrane.

membranin (mem'bra-nin). 1. A protein making up the lens capsule and Descemet's membrane. 2. The cellulose of yeast cells.

membranocartilaginous (mem'bran-o-kar-til-aj'in-us). 1. Developed in both membrane and cartilage. 2. Partly cartilaginous and partly membranous.

membranoid (mem'bra-noid). Resembling a membrane.

membranous (mem'bran-us) [*L. membrano'sus*]. Pertaining to or of the nature of a membrane.

membroid (mem'broid). A capsule of animal membrane for the administration of medicines in order that they may not be absorbed until they reach the intestine.

membrum (mem'brum). Latin for *member*. **m.** **mulle'bre**, the clitoris. **m. viri'le**, the penis.

memory (mem'o-re) [*L. memo'ria*]. That mental faculty by which sensations, impressions, and ideas are recalled. **affect m.**, the memory of a psychic trauma. **anterograde m.**, a memory serviceable for events long past, but not able to acquire new recollections. **coast m.** See *tropical amnesia*, under *amnesia*. **kinesthetic m.**, the memory of movements in the limbs and other parts of the body.

menacme (men-ak'me) [*μήν month + ἀκμή top*]. That period of a woman's life which is marked by menstrual activity.

menarche (men-ar'ke) [*μήν month + ἀρχή begin-ning*]. The establishment or beginning of the menstrual function.

Mendel's reflex (men'delz) [Karl Mendel, contemporary German neurologist]. See *reflex*.

Mendeléeff's law (men-de-la'efs) [Dimitri Ivano-

- vich *Mendeleëff*, Russian chemist, 1834-1907]. See *periodic law*, under *law*.
- mendelian** (men-de'le-an). [Relating to Gregor Johann Mendel, 1822-1884, an Austrian monk and naturalist]. See *Mendel's law*, under *law*.
- mendelism** (men-del-izm). See *Mendel's law*, under *law*.
- menelize** (men-del-iz). To conform to Mendel's law. See under *law*.
- Mendelsohn's test** (men-del-sunz). See under *tests*.
- menelkosis** (men-el-ko'sis) [μήνες menses + ἑλκωσις ulceration]. Vicarious menstruation from an ulcer.
- menformon** (men-for'mon). A proprietary water-soluble female sex hormone.
- menhidrosis, menidrosis** (men-hid-ro'sis, men-id-ro'sis) [μήν month + ιδρώς sweat]. The discharge of bloody sweat in place of the menstrual flow.
- Ménière's disease** (men-e-ärz') [Prosper Ménière, French physician, 1799-1862]. See *disease*.
- meningeal** (men-in'je-al). Of or pertaining to the meninges.
- meningematoma, meningaematoma** (men-in-jem-at-o'mah). Hematoma of the dura mater.
- meningeocortical** (men-in'je-o-kor'tik-al). Of or pertaining to the meninges and cortex of the brain.
- meningeorrhaphy** (men-in-je-or'af-e) [μήνυξ membrane + ραφή suture]. Suture of membranes: especially suture of the spinal cord, in which the sutures pass through the membranes only.
- meninges** (men-in'jéz) [pl. of μήνυξ membrane]. The three membranes that envelop the brain and spinal cord, including the dura, pia, and arachnoid.
- meningina** (men-in-jí'nah). The pia mater and cerebral layer of the arachnoid considered as a single membrane.
- meninginitis** (men-in-jin-i'tis). Inflammation of the meningina; leptomeningitis.
- meningioma** (men-in-je-o'mah) [meninges + -oma tumor]. A tumor of the meninges; a tumor of the dura mater.
- meningism** (men-in'jizm). 1. A condition due to pain in the meningeocortical region of the brain, marked by excitation, followed by depression of the cortex, with vomiting, constipation, and thermic disorders. 2. An hysterical simulation of meningitis.
- meningitic** (men-in-jit'ik). Pertaining to or of the nature of meningitis.
- meningitis** (men-in-jí'tis) [μήνυξ membrane]. Inflammation of the meninges. When it affects the dura mater, the disease is termed *pachymeningitis*; when the arachnoid and pia mater are involved, it is called *leptomeningitis*, or meningitis proper.
- African m.**, sleeping sickness. **alcoholic m.**, a form associated with the excessive use of alcoholic drinks. **m. of the base, basilar m.**, that which affects the meninges at the base of the brain. **cerebral m.**, inflammation of the meninges of the brain, acute or chronic. In *acute cerebral m.*, which may be due to traumatism, tuberculosis, or to extension of inflammation from neighboring structures, the symptoms are chills, fever with slow pulse, headache, vomiting, delirium, and symptoms that indicate irritation of the nerves at the base and vertex of the brain, as ptosis, squint, optic neuritis, facial paralysis, spasm of the muscles at the back of the neck, etc. In *chronic cerebral m.*, which is usually due to alcoholism or to syphilis, the symptoms are headache, with mental degeneration in the alcoholic, and pressure symptoms in the syphilitic variety. **cerebrospinal m.**, an inflammation of the membranes of the brain and spinal cord. It may be caused by many different organisms: *Mycobacterium tuberculosis*, *pneumococcus*, *streptococcus*, *gonococcus*, *Hemophilus influenzae*, *Pasteurella pestis*, *Pfeifferella mallei*, *Bacterium typhosum*, *B. coli*, etc. **epidemic cerebrospinal m.**, an acute infectious disease attended by seropurulent inflammation of the membranes of the brain and spinal cord, and due to infection by the *Neisseria meningitidis* (*Diplococcus intracellularis-meningitidis*). The disease appears usually in epidemics, and the symptoms are those of acute cerebral and spinal meningitis, in addition to which there is usually an eruption of erythematous, herpetic, or hemorrhagic spots upon the skin. Called also *cerebrospinal fever* and *spotted fever*. **epizootic cerebrospinal m.**, a disease of horses, frequently occurring in epidemics, and characterized by dysphagia, unsteady gait, delirium, and muscular contractions. **external m.**, pachymeningitis externa. **internal m.**, pachymeningitis interna. **metastatic m.**, that which is due to the transmission of the affection from a remote part. **occlusive m.**, leptomeningitis of children which leads to the closure of the foramen of Magendie. **otitic m.**, a form that sometimes complicates an attack of otitis. **parameningococcus m.**, meningitis caused by the parameningococcus. **posterior m.**, meningitis of the cerebellar region. **purulent m.**, that which is suppurative. **septicemic m.**, that which is due to septic blood poisoning. **m. sero'sa**. See *serous m.* **m. sero'sa circumscrip'ta**, meningitis giving rise to cystic accumulations of serous fluid which cause symptoms of tumors. **m. sero'sa circumscrip'ta cystica**, chronic meningitis with cyst formation. **serous m.**, meningitis with serous exudation into the ventricles and subarachnoid spaces. **simple m.**, that in which there is an exudate of fibrin and serum. **spinal m.**, inflammation of the meninges of the spinal cord. *Acute spinal m.* is attended with fever, pain in the back and limbs, radiating along the peripheral nerves, rigidity of the muscles, dyspnea, retention of urine, and paralyses. In *chronic spinal m.* there are pains in the back and along the courses of nerves, hyperesthesia, paralysis, and atrophy of muscles. **m. sympath'ica**, a condition of the cerebrospinal fluid caused by inflammation in the neighborhood of the meninges. It is marked by increase in the pressure of the fluid and increase in its albumin and cellular content. The fluid is sterile and there may be symptoms of meningitis (Plant and Schottmüller). **traumatic m.**, that which is due to traumatism or injury. **tubercular m.**, **tuberculous m.**, acute hydrocephalus.
- meningitophobia** (men'in-jit'o'fo-be-ah) [meningitis + φόβος fear]. A condition simulating meningitis, but due to fear of that disease.
- meningobacterin** (men-in'go-bak'ter-in). A proprietary name for meningococcus vaccine for immunization against cerebrospinal meningitis.
- meningocele** (men-in'go-sél) [μήνυξ membrane + κήλη hernia]. Hernial protrusion of the meninges.
- meningocephalitis** (men-in'go-sef-al-i'tis). Same as *meningo-encephalitis*.
- meningocerebritis** (men-in'go-ser-e-bri'tis) [meningitis + cerebritis]. Meningo-encephalitis; inflammation of the meninges and the brain.
- meningococcemia** (men-ing'o-kok-se'me-ah). The presence of meningococci in the blood.
- meningococcidal** (men-ing'o-kok-si'dal) [meningococcus + caedere to kill]. Destroying meningococci.
- meningococcin** (men-in'go-kok'sin). An antigenic material precipitated from saline suspensions of the meningococcus by means of alcohol. It is applied as a skin test (intradermal) in the detection of meningococcus carriers.
- meningococcus** (men-in'go-kok'us) [μήνυξ membrane + κόκκος berry]. Same as *Neisseria meningitidis*. **Jager's m.** See *Diplococcus crassus*.
- meningocortical** (men-in'go-kor'tik-al). Affecting the meninges and cortex.
- meningo-encephalitis** (men-in'go-en-sef-al-i'tis) [μήνυξ membrane + ἐγκέφαλος brain + -itis

- inflammation]. Inflammation of the brain and meninges. **chronic m.**, general paralysis. See *paresis*.
- meningo-encephalocle** (men-in'go-en-sef'al-o-sel) [μήνιγγε membrane + εγκέφαλος brain + κήλη hernia]. Hernial protrusion of the brain and meninges.
- meningo-encephalomyelitis** (men-in'go-en-sef'al-o-mi-el-i'tis) [μήνιγγε membrane + ἐγκέφαλος brain + μυελός marrow + -itis inflammation]. Inflammation of the meninges, brain, and spinal cord.
- meningomalacia** (men-in'go-mal-a'se-ah) [μήνιγγε membrane + μαλακία softness]. Softening of a membrane.
- meningomyelitis** (men-in'go-mi-el-i'tis) [μήνιγγε membrane + μυελός marrow + -itis inflammation]. Inflammation of the spinal cord and its membranes.
- meningomyelocle** (men-in'go-mi-el'o-sel) [μήνιγγε membrane + μυελός marrow + κήλη hernia]. Hernial protrusion of a part of the spinal cord and its membranes.
- meningomyelorrhaphy** (me-inn'go-mi-el-or'af-e) [μήνιγγε membrane + μυελός marrow + ραφή suture]. Suture of the spinal cord, with sutures passing through both cord and membranes.
- meningo-osteophlebitis** (men-in'go-os'te-o-fleb-i'tis) [μήνιγγε membrane + ὀστέον bone + φλέβη vein + -itis inflammation]. Periostitis with inflammation of the veins of a bone.
- meningorachidian** (men-in'go-rah-kid'e-an) [μήνιγγε membrane + ράχis spine]. Pertaining to the spinal cord and its membranes.
- meningoradicular** (men-in'go-rad-ik'u-lar) [μήνιγγε membrane + L. *radix* root]. Pertaining to the meninges and the roots of the cranial and spinal nerves.
- meningorecurrence** (men-in'go-re-kur'ens). Syphilitic meningitis induced in a syphilitic patient by antisyphilitic treatment.
- meningorrhagia** (men-in'go-ra'je-ah) [μήνιγγε membrane + -ραγία break]. Hemorrhage from the cerebral or spinal membranes.
- meningorrhea, meningorrhoea** (men-in'gor-e'ah) [μήνιγγε membrane + ῥοία flow]. Effusion of blood between or upon the meninges.
- meningosis** (men-in-go'sis) [μήνιγγε membrane]. The membranous attachment of bones to each other.
- meningotyphoid** (me-nin'go-ti'foïd). Typhoid in which meningeal symptoms are very prominent.
- meninguria** (men-in-gu're-ah) [μήνιγγε membrane + οὖρον urine]. The occurrence of membranous shreds in the urine.
- meninx** (me'ninks), pl. *meninges* [μήνιγγε membrane]. A membrane; especially one of the three envelopes of the brain and spinal cord. **m. fibro'sa**, the dura mater. **m. sero'sa**, the arachnoid. **m. ten'uís**, the arachnoid. **m. vasculo'sa**, the pia mater.
- menischesis** (men-is-ke'sis) [μήνες menses + σχέσις retention]. Retention of the menses.
- meniscitis** (men-is-si'tis). Inflammation of a semilunar cartilage of the knee joint.
- meniscocyte** (men-is'ko-sit) [μηνίσκος crescent + κύτος cell]. A crescent-shaped or sickle-shaped red blood cell.
- meniscocytosis** (men-is'ko-si-to'sis). The presence of meniscocytes in the blood. See *sickle cell anemia*, under *anemia*.
- meniscus** (men-is'kus) [μηνίσκος crescent]. 1. A crescentic interarticular fibrocartilage. 2. The surface of a liquid column, as in a pipet or buret, made concave or convex by the influence of capillarity. **m. articula'ris** [B N A], a crescentic piece of fibrocartilage occurring in certain joints.
- converging m.** Same as *positive m.* **diverging m.**, a concavoconvex lens having its concave surface of greater radius than its convex surface. **m. latera'lis** [B N A], the external semilunar cartilage. **m. media'lis** [B N A], the internal semilunar cartilage. **negative m.**, a convexoconcave lens. **positive m.**, a concavoconvex lens. **slip m.**, dislocation of the internal semilunar cartilage of the knee joint. **tactile m.**, a disklike expansion of the axis-cylinder of a sensory nerve in the epidermis.
- menispermine** (men-is-per'min). A crystalline alkaloid, $C_{18}H_{24}N_2O_2$, from *Anamirta paniculata*.
- Menispermum** (men-is-per'mum) [μήνη moon + σπέρμα seed]. A genus of plants. The rhizome and roots of *M. canadense*, moonseed or yellow parilla, are used like sarsaparilla, as a tonic and alternative. Dose of fluidextract, 30-60 minims (2-4 cc.).
- menocelis** (men-os-e'lis) [μήν month + κηλίς spot]. A spotted condition of the skin due to stoppage of the menses.
- menoformon** (men-o-for'môn). The proprietary name for an ovarian preparation claimed to represent female sex hormone.
- menolipsis** (men-o-lip'sis) [μήν month + λείψις failing]. Temporary cessation of menstruation.
- menolysin** (men-ol'is-in). A proprietary preparation, said to be yohimbin hydrochloride, for dysmenorrhea and amenorrhea.
- menopause** (men'o-pawz) [μήν month + παύσις cessation]. The period when menstruation normally ceases; the change of life.
- menophania** (men-o-fa'ne-ah) [μήν month + φάνια appearance]. The appearance of the menses at puberty.
- menoplasia** (men-o-pla'ne-ah) [μήν. month + πλάνη deviation]. Metastasis or aberration of the menses; vicarious menstruation.
- menorrhagia** (men-or-a'je-ah) [μήν month + ρηγνύναι to burst forth]. Abnormally profuse menstruation.
- menorrhagia** (men-or-al'je-ah) [menorrhœa + ἄλγος pain]. Painful menstruation.
- menorrhea** (men-or-e'ah) [μήν month + ῥοία flow]. 1. The normal discharge of the menses. 2. Too free or profuse menstruation.
- menosal** (men'o-sal). A proprietary preparation, alleged to be menthyl salicylic methyl ester, used internally as an analgesic.
- menoschesis** (men-o-ske'sis) [μήν month + σχέσις retention]. Suppression of the menses.
- menocephsis** (men-o-sep'sis) [μήν month + σήψις decay]. Septic poisoning from retained menses.
- menostasia, menostasis** (men-o-sta'ze-ah, men-os'tas-is) [μήν month + στάσις halt]. Suppression of the menses.
- menostaxis** (men-o-stak'sis) [μήν month + στάξις dripping]. A prolonged period of menstruation due to necrosis of the endometrium.
- menotoxin** (men-o-tok'sin). A toxic substance in the blood and body fluids of women during the menstrual period.
- menoxenia** (men-ok-se'ne-ah) [μήν month + ξένος strange]. Abnormal menstruation.
- mensalin** (men'sal-in). A proprietary powder used as a nerve and sedative in gastric and intestinal disorders and in menstrual disturbance.
- mensan** (men'san). A preparation from the hazelnut, used as a hemostatic.
- menses** (men'sēz) [L. pl. of *men'sis* month]. The monthly flow of blood from the genital tract of women, attended with congestion of the genital tract and hypertrophy of the uterine mucous membrane. It attends the discharge of an ovum from the ovary.
- menstrual** (men'stru-al) [L. *menstrua'lis*]. Pertaining to the menses.

menstruant (men'stru-ant). A person who is menstruating or is capable of menstruating.

menstruate (men'stru-āt) [L. *menstruare*]. To have the monthly courses; to discharge the menses.

menstruation (men-stru-a'shun). The monthly sanguineous discharge peculiar to women; the recurrence of the menses. It begins at the age of puberty (twelve to seventeen years) and extends to the menopause. **climacteric m.**, the time or epoch of the first menstruation. **regurgitant m.**, a back flow through the tubes by which epithelial cells and other materials may be discharged through the ostium and deposited on the ovary and adjacent organs, as in endometrioma. **supplementary m.**, menstrual discharge from the uterus and also from some other part. **suppressed m.**, failure of the menstrual flow to appear. **vicarious m.**, a menstrual flow from some part or organ other than the vagina. **white m.**, menstruation in which the discharge consists of the secretion of the uterine glands only.

menstruous (men'stru-us). Pertaining to menstruation.

menstruum (men'stru-um) [L. *menstruus* menstruous: it was long believed that the menstrual fluid had a peculiar solvent quality]. A solvent medium.

mensual (men'su-al) [L. *men'sis* month]. Monthly.

mensuration (men-su-ra'shun) [L. *mensura'tio*; *mensu'ra* measure]. The act or process of measuring.

mentagra (men-tah'grah) [L. *men'tum* chin + *ἀγρα* seizure]. Same as *sycosis*.

mentagrophyton (men-tag-rof'it-on) [L. *menta'gra* sycosis + *φύτον* plant]. The fungus *Microsporon mentagrophytes*, the cause of sycosis.

mental (men'tal). 1. [L. *mens* mind]. Pertaining to the mind. 2. [L. *men'tum* chin]. Pertaining to the chin.

mentalia (men-ta'le-ah). See *psychalia*.

mentalis muscle (men-ta'lis). Same as *levator labii inferioris*. See *muscles*, table of.

mentality (men-tal'it-e). The mental power or activity.

Mentha (men'thah) [L.]. A genus of labiate plants: the mints. **M. piperita**. See *peppermint*. **M. pulegioides**, true pennyroyal. See *pennyroyal*. **M. viridis**, spearmint: a carminative and aromatic stimulant. Dose of volatile oil, 2-5 minims (0.133-0.333 cc.); of spirit, 10-40 minims (0.666-2.666 cc.).

menthalcal (men-thal'kal). A proprietary combination of menthol and a salt from the mineral springs of Ems, in Germany.

menthene (men-thēn). A fragrant liquid hydrocarbon, $C_{10}H_{18}$, derivable from menthol. **m. carbonate**, a white, tasteless powder, $(C_{10}H_{18})_2CO_3$.

menthenone (men'the-nōn). A colorless ketone, $C_{10}H_{18}O$, contained in peppermint oil.

mentholate (men'the-o-lāt). A mixture of approximately equal parts of menthol and oleic acid.

menthiadol (men-thi'o-dol). A preparation of 4 parts of menthol with 1 part of iodine: used locally in neuralgia.

menthoform (men'tho-form). A preparation of menthol, formic aldehyde, and glycerin.

menthol (men'thol). Mint camphor, a monacid methane alcohol, $(CH_3)_2CH.C_6H_9(CH_3)OH$, a crystalline stearopten from oil of peppermint or other mint oils. It is anodyne, and is used, for the most part, externally in neuralgia, skin diseases, and rhinitis. Dose, $\frac{1}{2}$ -2 grains (0.033-0.133 Gm.). **m. valerianate**. See *validol*.

mentholin (men'tho-lin). A proprietary remedy for coryza, containing menthol, 1 part; boric

acid and coffee (roasted and finely powdered), each, 10 parts.

mentholiptine (men-tho-lip'tin). A proprietary antiseptic compound of menthol and eucalyptol: for external use.

menthone (men'thōn). A volatile oil, a ketone, $(CH_3)_2CH.C_6H_9O.CH_3$, from oil of peppermint.

menthophenol (men-tho-fe'nol). A liquid preparation of menthol (3 parts) and phenol (1 part): an antiseptic and local anesthetic.

menthorol (men'tho-rol). A mixture of parachlorophenol and menthol: used locally in laryngeal phthisis.

menthospirin (men-tho-spi'rin). The acetylsalicylic acid ester of menthol: used like acetylsalicylic acid.

mentholoxol (men-thoks'ol). A solution of menthol and hydrogen peroxide in alcohol: a deodorant antiseptic for external use.

menthyl (men'thil). The monovalent radical, $C_{10}H_{19}$.

mentimeter (men-tim'et-er) [L. *mens* mind + *μετρον* measure]. A method or means of measuring mental capacity.

mentism (men'tizm). A condition marked by the formation of vivid involuntary mental images.

mento-anterior (men'to-an-te're-or) [L. *men'tum* chin + *ante'rior* before]. Having the chin directed forward.

mentolabial (men-to-la'be-al). Pertaining to the cheek and lip.

mentolabialis (men'to-la-be-a'lis). The levator labii inferioris and the quadratus menti regarded as one muscle.

mentoposterior (men'to-pos-te're-or) [L. *men'tum* chin + *poste'rior* after]. Having the chin directed toward the back, or turned sacred (used of the fetus at delivery).

mentulagra (men-tu-lag'rah) [L. *men'tula* penis + *ἀγρα* seizure]. 1. Priapism. 2. Chordee.

mentulate (men'tu-lāt). Having a large penis.

mentulomania (men'tu-lo-ma'ne-ah) [L. *men'tula* penis + *mania*]. Masturbation.

mentum (men'tum) [L.]. The chin.

Menyanthes (men-e-an'thēz) [μῦν month + ἄνθος flower]. A genus of gentianaceous plants, *M. trifoliata*, or buckbean, is a bitter tonic, useful in rheumatism, sick headache, jaundice, etc. Dose in powdered leaves, 20-30 grains (1.3-2 Gm.).

menyanthin (men-e-an'thin). Inulin.

Menzer's serum (ment'zerz) [Arthur August Ludwig Menzer, German bacteriologist, born 1872]. See *serum*.

mephitic (me-fit'ik) [L. *mephitis*; *mephitis* foul exhalation]. Emitting a foul odor.

meralgia (me-ral'je-ah) [μυρῶς thigh + ἄλγος pain]. Pain in the thigh. **m. paraesthetica**, a disease marked by paresthesia and disturbance of sensation in the outer surface of the thigh, in the region supplied by the external cutaneous femoral nerve. The paresthesia consists of burning, tingling, stabbing pains of considerable severity, or possibly only of a feeling of numbness. The sensory disturbances vary from slight hyperesthesia to total anesthesia. Called also *Bernhard's disturbance of sensation*.

merbaphen (mer'baf-en). Novasurol; a white crystalline, odorless compound, the double salt of sodium mercurichlorophenyl-oxacetate with diethyl barbituric acid, $(NaO.CO.CH_2O)Cl.C_6H_5Hg.CO.(NH.CO)_2C(C_2H_5)_2$, containing 40 per cent of mercury. Dose as a diuretic or as an antisyphilitic, 1-2 cc. of a 10 per cent solution intramuscularly or intravenously.

mercaptan (mer-kap'tan) [L. *mercurium cap'tans* seizing or combining with mercury]. Any alcohol in which hydroxyl oxygen is replaced by sulphur; a thio-alcohol.

mercaptol (mer-kap'tol). A compound formed from a ketone by introducing two thio-alkyl groups in place of the bivalent oxygen.

mercauro (mer-kaw'ro) [*mercury* + L. *aurum* gold]. A proprietary solution of bromides of gold, arsenic, and mercury, each, 10 minims, containing $\frac{1}{2}$ grain of each of the bromides.

merchochinol (mer-ko-kin'ol). Mercury oxyquinoline sulphate, a yellow powder, used for the administration of mercury internally, externally, and hypodermically.

Mercier's bar, valve, etc. (mer-se-az') [Louis Auguste Mercier, French urologist, 1811-1882]. See *bar, valve*, etc.

mercodel (mer'ko-del). A fine trituration of mercury with glucose: suggested for intravenous treatment of syphilis.

mercolint (mer'ko-lint). A cloth impregnated with metallic mercury and worn over the chest in the treatment of syphilis.

mercupressin (mer-ku-pres'in). A proprietary preparation for use in giving mercury inhalations.

mercuramine (mer-ku'ram-in). A germicide, mercury ethylene-diamine-citrate.

mercurammonium (mer-ku-ran-o'ne-um). A precipitate produced when ammonium hydroxide is added to a solution of a mercuric salt. **m. chloride**, infusible white precipitate, $HgNH_2Cl$, the essential constituent of hydrargyrum ammoniatum.

mercuran (mer'ku-ran). A 50 per cent mercurial ointment prepared with goose-fat-stearin.

mercurette (mer-ku-ret'). A proprietary preparation of mercury in cocoa butter.

mercurial (mer-ku're-al) [L. *mercuria'lis*]. 1. Pertaining to mercury. 2. Any preparation of mercury.

Mercurialis (mer-ku-re-a'lis). A genus of plants of Europe, *M. an'nua* and *M. peren'nis*, have alterative properties, and are used in scrofula, syphilis, dysmenorrhea, etc. Dose of fluidextract, 5-30 minims (0.3-2 cc.).

mercurialism (mer-ku're-al-izm). Chronic poisoning from misuse of mercury; hydrargyrim.

mercurialization (mer-ku're-al-iz-a'shun). The act or process of putting under the influence of mercury.

mercurialized (mer-ku're-al-izd). Treated with mercury; containing mercury. **m. serum**. See under *serum*.

mercuric (mer-ku'rik). Pertaining to mercury as a bivalent element. **m. benzoate**, a white, crystalline, tasteless salt, $(C_6H_5 \cdot CO \cdot O)_2Hg + H_2O$, for intramuscular injection in the treatment of syphilis. **m. cacodylate**, a white, crystalline powder of mercuric methyl-arsenate, $[(CH_3)_2AsO \cdot O]_2Hg$: used in the treatment of syphilis. **m. chloride**, mercury bichloride; corrosive mercuric chloride (U. S. P.), a crystalline salt, $HgCl_2$: used externally in syphilis, and internally in doses of $\frac{1}{20}$ to $\frac{1}{10}$ grain (0.005-0.01 Gm.), as an antiseptic, alterative, and antisiphilitic. Called also *corrosive sublimate*, *bichloride of mercury*, and *hydrargyri chloridum corrosivum* (U. S. P.). **m. chloride glutinopentionate**, an antisiphilitic double salt. Subcutaneous dose, $\frac{1}{2}$ grain (0.01 Gm.). **m. chloride-urea**, a solution of 1 Gm. of mercuric chloride and $\frac{1}{2}$ cc. of urea in 100 cc. of water: for subcutaneous injection in syphilis. **m. cyanide**, a very poisonous salt, $Hg(CN)_2$; is colorless: to be used subcutaneously, with great caution, in the treatment of syphilis. **m. di-iodosalicylate**, a yellow, amorphous powder, $(OH \cdot C_6H_2 \cdot CO \cdot O)_2Hg$: used in the treatment of syphilis. **m. formamidate**, a solution, $(NH_2 \cdot CO \cdot O)_2Hg$: used subcutaneously in syphilis. Daily dose, 1 grain (0.06 Gm.). **m. guaiacol-sulphonate**, brown crystals of $[CH_3O \cdot C_6H_3(OH) \cdot SO_2O]_2Hg$: used by intramuscular injections in

syphilis in doses of $\frac{1}{2}$ grain (0.032 Gm.) gradually increased. **m. iodate**, a salt of mercury, $Hg(IO_3)_2$: antisiphilitic. **m. iodide**, red, a scarlet red insoluble amorphous powder, HgI_2 . It is used as a germicide in solution with potassium iodide. **m. lactate**, white crystalline powder, $(CH_3 \cdot CHO \cdot H \cdot COO)_2Hg$. **m. ortho-guaiacol-sulphonate**, brown, soluble crystals of $(OH \cdot C_6H_3(CH_3O)SO_2O)_2Hg$. It has been used in the treatment of syphilis. **m. oxide**, red, red precipitate; a heavy orange-red crystalline powder, HgO : used in the dressing of syphilitic sores. **m. oxide, yellow**, a light orange-yellow amorphous powder, HgO , obtained by precipitation from mercuric chloride. It is used in ointments. **m. oxidasparagin**, an antiseptic and antisiphilitic agent, $(NH_2 \cdot C_2H_4 \cdot (CONH_2)CO)_2Hg$. **m. oxycyanide**, a white crystalline powder, $Hg(CN)_2$: HgO : used as antiseptic and antisiphilitic. **m. peptonate**, an antisiphilitic agent: to be used subcutaneously. **m. phenate**, **phenylate**. See *mercury carbolate*. **m. resorcinate**, a dark yellow, crystalline powder: used therapeutically in minute subcutaneous doses. **m. salicylate**, a white, tasteless powder, $(OH \cdot C_6H_4 \cdot CO)_2Hg$, insoluble in water and alcohol: used as an internal and external antisiphilitic, antgonorrheic, etc. Dose, $\frac{1}{2}$ to 1 grain (0.01-0.08 Gm.); locally, in 1 per cent powder or ointment. **m. sulphate, yellow**, a heavy lemon-yellow powder, $HgSO_4 \cdot 2H_2O$: used as an emetic. **m. succinimide**. See under *mercury*. **m. sulphide**, a brilliant scarlet powder, HgS . Called also *vermilion* or *cinnabar*. It may be used for fumigation in syphilis.

mercuricide (mer-ku'ris-id). Lemon-yellow crystals of lithium mercuric iodide, Li_2HgI_4 . It is actively germicidal.

Mercurio's position (mer-koo're-sz) [Geronimo Scipione Mercurio, Italian accoucheur, 1550-1595]. See *position*.

mercurivanillin (mer-ku-ri-van-il'in). A proprietary remedy for syphilis, said to contain 40 per cent of mercury.

mercurochrome (mer-ku'ro-kröm). 1. A red powder, dibrom-oxymercury-fluorescein. The acid is obtained by substituting one atom of mercury in the molecule of dibromfluorescein and contains about 26 per cent of mercury. 2. A contraction for mercurochrome-220 soluble, which is the disodium salt of 2,7-dibrom- γ -hydroxymercurofluorescein: used as a germicide, particularly for the genito-urinary tract.

mercuroidohemol (mer'ku-ro-i'-'o-do-he'mol). A brown powder, insoluble in water, containing hemol, mercury, and iodine: an alterative and hematinic.

mercurol (merku'u-rol). A cream-colored, soluble powder, mercuric nucleide: it is used in irrigations for gonorrhea and as an antisiphilitic.

mercuorphen (mer-ku'ro-fen). Sodium oxymercury orthonitrophenolate, a powerful antiseptic, $NO_2 \cdot C_6H_3(HgOH)ONa$, and germicide: used in the treatment of gonorrhea, pneumococcal infections of the eye, and pyogenic skin infections.

mercurossal (mer-ku'ro-sal). An organic mercury compound, disodium hydroxymercurosalicyloxylacetate, $COONa \cdot C_6H_3(HgOH) \cdot O \cdot CH_2 \cdot COONa$. It contains about 43 per cent of mercury and is used for the treatment of syphilis.

mercurous (mer'ku-rus). Pertaining to mercury as a univalent element. **m. acetate**, a salt in white or gray scales, $(CH_3COO)_2Hg$: antisiphilitic. Dose, $\frac{1}{2}$ to 1 grain (0.005-0.06 Gm.). **m. chloride**. See *calomel*. **m. iodide, yellow**, a bright yellow insoluble amorphous powder, HgI : it has been used in syphilis.

mercury (mer'ku-re) [L. *mercu'rius*, or *hydrargyrum*]. A metallic element, liquid at ordinary temperatures; quicksilver. Its symbol is Hg ; atomic weight, 200.6; specific gravity, 13.59. It is insoluble in ordinary solvents, being only par-

tially soluble in boiling hydrochloric acid. It may be dissolved, however, in nitric acid. Mercury forms two sets or classes of compounds—*mercurous*, in which a single atom of mercury combines with a monovalent radical, and *mercuric*, in which a single atom of mercury combines with a bivalent radical. Mercury and its salts are used in medicine as purgatives and cholagogues; as alteratives in chronic inflammations; as antisyphilitics, intestinal antiseptics, disinfectants, and astringents. They are absorbed by the skin and mucous membranes, causing chronic mercurial poisoning, or hydrargyrim. The mercuric salts are more soluble and irritant than the mercurous. See also under *mercuric* and *mercurous*. **m. alenate**, **m. aminopropionate**, a white, crystalline powder. Subcutaneous dose, $\frac{1}{10}$ – $\frac{1}{5}$ grain (0.005–0.01 Gm.). **m. albuminate**, a salt whose tritrate with sugar of milk is employed as an antiseptic dusting powder. **ammoniated m.** See *hydrargyrum ammoniatum*. **m. arsenite**, a brownish powder, Hg_2AsO_3 : used in syphilis and intestinal disorders. **m. asparaginate**, **m. imidosuccinate**, a bright, crystalline powder, $(\text{C}_2\text{H}_4(\text{CO})_2\text{N})_2\text{Hg}$. Dose, $\frac{1}{10}$ grain (0.0013 Gm.). **m. atoxyle**, the mercury salt of paraimidophenyl arsenic acid, $[\text{NH}_2\text{C}_6\text{H}_4\text{AsO}(\text{OH})_2]\text{Hg}$: used in spirochetal disease. **m. bichloride**. See *mercuric chloride*. **m. biniodide**. See *mercuric iodide*. **m. cacodylate**. See *mercuric cacodylate*. **m. carbolate**, a salt in nearly colorless needles, $(\text{C}_6\text{H}_5\text{O})_2\text{Hg} + \text{H}_2\text{O}$. Dose, $\frac{1}{4}$ – $\frac{1}{2}$ grain (0.016–0.032 Gm.). **colloidal m.** See *hyrgol*. **m. dimethylate**. See *asquiro*. **m. ethylchloride**, a substance, $\text{Hg}(\text{C}_2\text{H}_5)\text{Cl}$, in shining scales and of an offensive odor: used subcutaneously. **m. ethylenediamine**, a combination of mercury and ethylenediamine: used in aqueous solution, 1 : 50 or 1 : 200, for disinfecting the hands. **French m.**, *Mercurialis annua*. **m. fulminate**, a white, crystalline body, $(\text{C} : \text{N})_2\text{O}_2\text{Hg} \cdot \frac{1}{2}\text{H}_2\text{O}$: used in detonating caps for exploding dynamite, etc. **m. gallate**, a salt, $(\text{C}_6\text{H}_5(\text{OH})_3\text{COO})_2\text{Hg}$, in a greenish-black powder: antisyphilitic. Dose, $\frac{1}{4}$ – $\frac{1}{2}$ grain (0.03–0.05 Gm.). **m. iodicacodylate**, an antisyphilitic solution of mercury cacodylate and sodium iodide. **m. oleobrasidate**, a compound resulting from the treatment of mercuric oxide with erucic acid and oleic acid. It contains 30 per cent of mercury and is used like mercurial ointment. **m. oxycyanide**, a white, crystalline compound, so unstable as to be dangerous. It is generally sold therefore as a solution containing $\text{HgO} \cdot \text{Hg}(\text{CN})_2$: used as an antiseptic in diphtheria, erysipelas, wounds, etc. **m. perchloride**. See *mercuric chloride*. **m. peroxide**, a red powder, HgO_2 , which is decomposed by water, liberating oxygen and forming hydrogen dioxide and mercuric oxide. **m. and potassium hyposulphite**, a crystalline salt, $2\text{HgS}_2\text{O}_3 + 5\text{K}_2\text{S}_2\text{O}_3$: used subcutaneously. **m. and potassium iodide**. See under *potassium*. **m. and potassium sulphite**, a salt in colorless crystals: to be used hypodermically. **m. protochloride**. See *calomel*. **m. protoiodide**. See *mercurous iodide*. **m. pyroborate**, a brown insoluble powder, Hg_2BO_3 : used in ointments. **red iodide of m.** See *mercuric iodide*. **m. silicofluoride**, a substance in crystalline prisms, $\text{Hg}_2\text{SiF}_6 + 2\text{H}_2\text{O}$: used as a surgical antiseptic like mercuric chloride in 1 : 1000 aqueous solution or 1 : 2000 ointment. **m. soziodolate**, a fine, yellow powder, $(\text{C}_6\text{H}_5\text{I}_2(\text{O})\text{SO}_3)_2\text{Hg}$: antisyphilitic. Subcutaneous dose, 1 grain (0.06 Gm.). **m. subchloride**. See *calomel*. **m. succinimide**, a white powder, $[(\text{CH}_2\text{CO})_2\text{N}]_2\text{Hg}$: used like other mercury salts. Dose by mouth, $\frac{1}{4}$ – $\frac{1}{2}$ grain (0.01–0.015 Gm.); hypodermically, 8–16 minims (0.5–1 cc.) of a 2.5 per cent solution. **m. tannate**, a greenish-brown powder, used in syphilis. Dose, 1–2 grains (0.06–0.12 Gm.). **m. thymolacetate**, a crystalline powder, $(\text{CH}_3\text{COO})_2\text{Hg} + \frac{\text{CH}_3\text{COO}}{\text{C}_{10}\text{H}_{13}\text{O}} > \text{Hg}$. Dose, $\frac{1}{10}$ – $\frac{1}{5}$

grain (0.005–0.01 Gm.). **m. thymolate**, an unstable, violet-green salt, $\text{C}_{10}\text{H}_{13}\text{OHgOH}$. **m. thymolnitrate**, a salt in colorless crystals, $\text{C}_{10}\text{H}_{13}\text{O} \cdot \text{Hg} \cdot \text{HNO}_3$: used subcutaneously. **m. tribromphenolacetate**, a salt in yellow crystals antisyphilitic. **m. with chalk**, metallic mercury rubbed up with chalk and honey until the particles are very small. **yellow iodide of m.** See *mercurous iodide*.

mercutin (mer'ku-tin). A preparation of finely divided mercury in talcum.

mere (mēr) [μῆρος part]. Any one of the parts into which the substance of a zygote of a cell sometimes divides. Meres give rise to blasts.

merergastic (mer-er-gas'tik) [μῆρος part + ἐργον work]. Meyer's term for "part disorders" of psychic function, characterized by emotional instability and anxiety. Cf. *holergastic*.

mergal (mer'gal). A mixture of albumin tannate with mercuric cholate: used for bringing the liver under the action of mercury.

mergandol (mer-gan'dol). Mercury sodium glycerate: used in syphilis by injection. Dose, 30 minims (2 cc.) every other day.

meriatchenje (mehr'e-ah-chen'ge). See *miry-achii*.

meridian (mer-id'e-an) [L. *meridia'nus*, from *me'dius* middle + *di'es* day]. A great circle surrounding a sphere and passing through its poles. **m. of the cornea**, a curve formed on the surface of the cornea by an anteroposterior plane passing through the apex of the cornea. **m. of the eye**, a line passing around the eyeball.

meridional (mer-id'e-o-nal). Pertaining to a meridian or made along a meridian; as, *meridional* section.

meriodine (me-ri'o-din). Mercury diiodoparaphenolsulphonate: used in treatment of syphilis.

merism (mer'izm) [μῆρος a part]. The repetition of parts in an organism so as to form a regular pattern.

Merismopedia (mer'is-mo-pe'de-ah) [μερίσμα division + πῆδος plain]. A genus of bacteria characterized by division into plates: some of the species are supposed to be pathogenic.

merispore (mer'is-pōr) [μῆρος part + σπόρος seed]. A spore produced by the division of another spore.

Merista (me-ris'tah). A genus or form of bacterial cocci growing in two dimensions and exhibiting a division at right angles.

meristem (mer'is-tem) [μερίξω to divide]. The undifferentiated embryonic tissue of plants.

meristematic (mer-is-tem-at'ik). Pertaining to or composed of meristem.

meristic (mer-is'tik). Pertaining to or possessing merism; symmetrical; having symmetrically arranged parts.

meristiform (me-ris'tif-orm) [μεριστός divided + L. *for'ma* form]. A tetrad of cocci. See under *tetrad*.

Merizomyria (mer'iz-o-mir'e-ah). A genus of schizomycetes with cylindrical, phycchromous filaments in chaetlets.

merjodin (mer-i'o-din). See *meriodine*.

Merkel's corpuscles, ganglia, or touch cells (mer'kelz) [Friedrich Siegmund Merkel, German anatomist, 1845–1919]. See under *cell*, *corpuscle*, *ganglion*, etc.

Merkel's filtrum, muscle (mer'kelz) [Karl Ludwig Merkel, German anatomist, 1812–1876]. See under *filtrum* and *muscle*.

merlusan (mer'lu-san). A proprietary mercury (tyrosin-mercury) preparation: used locally in the treatment of acute gonorrhea, ophthalmia, syphilis, and cystitis.

Mermithidae (mer-mith'id-e). A family of Nematoda; the land hair worms.

meroacrania (mer' 'o-ak-ra'ne-ah) [μέρος patr + a neg. + κρανίον skull]. Partial congenital absence of the cranium.

meroblastic (mer-o-blas'tik) [μέρος part + βλαστός germ]. Undergoing segmentation in only one part.

merocoele (me'ro-sēl) [μηρός thigh + κήλη hernia]. Femoral hernia.

merocoxalgia (me'ro-kok-sal'je-ah) [μηρός thigh + L. cox'a hip + άλγος pain]. Pain in the thigh and hip.

merocrine (mer'ok-rin) [μέρος part + κρινεῖν to separate]. Partly secreting. A term applied to glands in which only parts of the secretory cells disintegrate to form the secretion, as, for example, the sweat glands and the milk glands. See *holocrine*.

merocyte (mer'o-sit) [μέρος part + κύτος cell]. Supernumerary sperm nucleus in the ovum in cases of polyspermy.

merodiastolic (mer' 'o-di-as-tol'ik) [μέρος part + diastole]. Pertaining to a part of the diastole.

merogamy (mer-og'am-e). Same as *microgamy*.

merogastrula (mer-og-as'tru-lah). The gastrula of a meroblastic ovum.

merogenesis (mer-o-jen'es-is) [μέρος part + γένεσις formation]. Segmentation.

merogenetic, merogenic (mer-o-jen-et'ik, -jen'ik). Pertaining to segmentation.

merogony (me-rog'o-ne) [μέρος part + γονος born]. The development of an organism from a portion of an egg, especially from a non-nucleated portion of an egg after fertilization by a sperm.

merology (mer-ol'o-je) [μέρος part + λόγος treatise]. That part of anatomy which deals with elementary tissues.

meromicrosomia (mer' 'o-mi-kro-so'me-ah) [μέρος part + microsomia]. Unusual smallness of some part of the body.

meromorphosis (mer-o-mor-fo'sis) [μέρος part + μόρφωσις formation]. Incomplete restoration or regeneration of a lost part.

meromyerial (mer-o-mi-e're-al). A type of arrangement of the muscular system in the Nematoda. There are only two or three broad, flat muscle cells between the pillars.

meronecrobiosis (me'ro-nek'ro-bi-o'sis). Meronecrosis.

meronecrosis (me'ro-nek-ro'sis) [μέρος part + necrosis]. Cellular necrosis.

meroparesthesia (me'ro-par-es-the'ze-ah) [μέρος limb + paresthesia]. Alteration of the tactile sense in the extremities.

meropia (mer-o'pe-ah) [μέρος part + ὥψ vision]. Partial blindness.

merorachischisis (me'ro-rak-is'kis-is) [μέρος part + ράχis spine + σχίσσις fissure]. Fissure of a part of the spinal cord.

meroscope (me'ro-skōp). An instrument for performing microscopy.

meroscopy (me-ros'ko-pe) [μέρος part + σκοπεῖν to examine]. Fractional auscultation of the heart; dissociated auscultation of various parts of the cardiac cycle.

merosystolic (me'ro-sis-tol'ik) [μέρος share + συστολή systole]. Pertaining to a part of the systole.

merotomy (me-rot'o-me) [μέρος part + τέμνειν to cut]. Division into segments.

meroxyl (mer-ok'sil). A mixture containing about 50 per cent of the sodium salt of 2,4-dihydroxy-3,5-dihydroxymercuribenzophenone-2-sulphonic acid. Used as a local antiseptic and germicide in 0.1-0.5 per cent solution.

merozoite (me-ro-zo'it) [μέρος part + ζῶον animal]. One of the spores formed by the splitting up of the schizont in schizogamous reproduction of

protozoa. Cf. *sporozoite*. See also under *Plasmodium malariae*.

merpotide (mer'po-tid). A proprietary preparation of potassium iodide and mercurous iodide: used in connection with arsenphenamine.

mersalv (mer'salv). A proprietary ointment containing 10 per cent metallic mercury with an oily basis.

mersalyl (mer'sal-il). Same as *salyrgan*.

merulan (mer'u-lan). A combination of mercury and tyrosine, recommended for syphilis.

Merulius lacrymans (me-ru'le-us). The fungus of the dry-rot of wood. Inhaled in dust, it becomes parasitic, causing a persistent and sometimes fatal catarrh and bronchitis.

mervanol (mer've-nol). A proprietary colloidal mercury sulphide: has been used in syphilis, influenza, and pneumonia.

Méry's glands (ma-rēz') [Jean Méry, anatomist in Paris, 1645-1722]. Cowper's glands.

merycism (mer'is-izm) [μυρκισμός chewing]. The regurgitation of food from the stomach and chewing it again; rumination.

merycism (mer-is-iz'mus). Merycism.

mesad (me'sad). Toward the median line or plane.

mesal (me'sal) [μέσος middle]. Pertaining to the median line or plane.

mesameboid (mes-am'e'boid) [μέσος middle + αμοιβή change + εἶδος shape]. Minot's name for a primitive blood cell or hemoblast. See *hemoblast*.

mesaortitis (mes'a-or-ti'tis) [μέσος middle + αορτίς]. Inflammation of the middle coat of the aorta.

mesaraic, mesareic, mesaroeic (mes-a-ra'ik) [μέσος middle + αραία belly]. Mesenteric.

mesarteritis (mes'ar-ter-i'tis) [μέσος middle + αρτηρία artery + -itis inflammation]. Inflammation of the middle coat of an artery.

mesaticephalic (mes-at'is-ef-al'ik) [μεσάτος medium + κεφαλή head]. Neither brachycephalic nor dolichocephalic.

mesatipellic, mesatipelvic (mes-at-ip-el'ik, -el'vik) [μεσάτος medium + πέλvis pelvis]. Having a pelvic index between 90 and 95 degrees.

mescal (mes-kahl) [Mex.]. The fermented juice of *Agave americana* and other Mexican species of that genus. **m. buttons**, the flowering tops of *Anhalonium lewinii*: nerve stimulant and antispasmodic. Its administration leads to color hallucinations and pleasant visions. See *Anhalonium lewinii*.

mescaline (mes'ka-lin). An alkaloid from *Anhalonium lewinii*. See *mescaline*.

mesicalism (mes'kal-izm). The habitual use of mescal buttons.

mesectic (mes-ek'tik). Taking up a medium or average amount of oxygen. If at an oxygen pressure of 40 mm. the blood will take up oxygen to the extent of 70-79 per cent, it is said to be mesectic. Cf. *micronectic* and *pleonectic*.

mesectoblast (mes-ek'to-blast). Same as *ectomesoblast*.

mesembrine (mes-em'brin). An alkaloid, C₁₆H₁₉NO₄, from *Mesembryanthemum expansum* with a cocaine-like action.

Mesembryanthemum (mes-em-bre-an'the-mum) [L.]. A genus of mostly suffrutescent plants. *M. crystallinum* is diuretic. *M. acinacifolium* is antidiarrhetic. *M. tortuosum* is narcotic.

mesencephal (mes-en-sef-al). Same as *mesencephalon*.

mesencephalic (mes-en-sef-al'ik). Pertaining to the mesencephalon.

mesencephalon (mes-en-sef-al-on) [μέσος middle + ἐγκέφαλος brain]. The midbrain; the smallest of the six subdivisions of the brain: it is derived from the middle cerebral vesicle of the embryonic

brain from which are developed the middle cerebral ganglia, including the corpora quadrigemina and crura cerebri.

mesenchyma (mes-en'kim-ah) [*μέσος* middle + *ἐγγύμα* infusion]. The embryonic connective tissue; that part of the mesoderm whence are formed the connective tissues of the body, and also the blood vessels and lymphatic vessels.

mesenchymal (mes-en'kim-al). Pertaining to the mesenchyma.

mesenchyme (mes'en-kim). Same as *mesenchyma*.

mesenteric (mes-en-ter'ik) [*μεσεντερικός*]. Pertaining to the mesentery.

mesenterium (mes-en-ter-i'o-lum). A small mesentery: especially the mesentery of the intestinal diverticulum.

mesenteritis (mes-en-ter-i'tis). Inflammation of the mesentery.

mesenterium (mes-en-te're-um). [B N A] Mesentery. **m. commune**, the mesentery proper.

mesenteroblast (mes-en'ter-o-blast). Same as *mesenteron*.

mesenteron (mes-en'ter-on) [*μέσος* middle + *ἐντέρον* intestine]. The middle part of the embryonic body cavity, whence are derived the alimentary canal, lungs, liver, and pancreas.

mesentery (mes'en-ter-e) [*μέσος* middle + *ἐντέρον* bowel]. The fold of peritoneum which attaches the intestine to the posterior abdominal wall. It consists of the mesentery proper, a membrane connecting the small intestine with the spinal column, and the mesentery of the cecum, colon, and rectum, called respectively mesocolon, meso-ecum, and mesorectum.

mesentoderm (mes-en'to-derm). A cell layer of the early embryo not yet differentiated into mesoderm and entoderm.

mesentomere (mes-en'to-mēr). A blastomere not yet divided into mesomeres and entomeres.

mesepithelium (mes-ep-e-the-le-um). Same as *mesothelium*.

mesiad (me'se-ad). Toward the middle; mesad.

mesial (me'se-al) [*μέσος* middle]. Situated in the middle; median; toward the middle line of the body or toward the center line of the dental arch.

mesion (me'se-en). Pertaining to the mesion.

mesin (mes'in). Methenamine lithium citrate; a urinary antiseptic.

mesibuccal (me'se-o-buk'al). Pertaining to surfaces between the mesial and buccal aspects of a tooth.

mesibucco-occlusal angle (me'se-o-buk'o-ok-lu'zal). See under *angle*.

mesiocclusion (me-se-o-klu'zhun). Malocclusion in which the mandibular arch has an anterior relation to the maxillary arch; anteroclusion.

mesiodistal (me'se-o-dis'tal). Pertaining to the mesial and distal aspects of a tooth.

mesiolingual (me'se-o-ling'wal). Pertaining to the surfaces between the mesial and lingual aspects of a tooth.

mesion (me'se-on) [*μέσος* middle]. The plane that divides the body into right and left symmetric halves.

mesio-occlusal angle (me'se-o-ok-lu'zal). See under *angle*.

mesio-occlusion (me'se-o-ok-lu'zhun). Same as *mesiocclusion*.

mesioversion (me'se-o-ver'shun). The condition of a tooth which is nearer than normal to the median line of the face.

mesiris (mes-i'ris) [*μέσος* middle + *iris*]. The middle layer of the iris.

mesitylene (mes-it'il-ēn). Symmetric trimethylbenzene, $C_6H_3(CH_3)_3$, from coal tar.

mesitylenic acid. $C_6H_3(CH_3)_3.COOH$, an oxidized form of mesitylene.

mesityluric acid. The form in which mesitylene is excreted in the urine. A compound of mesitylenic acid and glycolic, $C_6H_3(CH_3)_3.CO.NH.CH_2.COOH$.

mesmerism (mes'mer-izm) [after Friedrich A. Mesmer, 1733-1815]. Hypnotism, or animal magnetism.

mesmeromania (mes'mer-o-ma'ne-ah) [*mesmerism* + *μανία* madness]. Insane devotion to mesmerism.

meso- [*μέσος* middle]. 1. A prefix signifying "middle," either situated in the middle or moderate. 2. In chemistry, a prefix signifying inactive or without effect on polarized light.

meso-aortitis (mes'o-o-a-or-ti'tis). Inflammation of the middle coat of the aorta.

meso-appendicitis (mes'o-ap-en-di-si'tis). Inflammation of the meso-appendix.

meso-appendix (mes'o-ap-en'diks) [*μέσος* middle + *appendix*]. The mesentery of the appendix; the peritoneal fold which connects the appendix to the ileum.

mesoarial (mes-o-a're-al). Pertaining to the meso-arium.

mesoarium (mes-o-a're-um). See *mesovarium*.

mesobacteria (mes'o-bak-te're-ah). Bacteria of a medium size.

mesoblast (mes'o-blast) [*μέσος* middle + *βλαστός* germ]. The middle of the three layers of the primitive embryo. It is derived from the ectoderm and entoderm, and develops into the skin and connective tissue structures, the bones, muscles, organs of excretion, and internal genitals. **paraxial m.**, the mesoblast surrounding the neuraxis.

mesoblastema (mes'o-blas-te'mah). The cells composing the mesoblast.

mesoblastic (mes-o-blas'tik). Pertaining to or derived from the mesoblast.

mesobronchitis (mes'o-brong-ki'tis) [*μέσος* middle + *bronchitis*]. Inflammation of the middle coat of the bronchi.

mesocardia (mes-o-kar'de-ah) [*μέσος* middle + *καρδία* heart]. Location of the heart in the middle line of the thorax.

mesocardium (mes-o-kar'de-um) [*μέσος* middle + *καρδία* heart]. A membrane connecting the embryonic heart with the body wall in front and the intestine behind; also that part of the pericardium which is attached around the great arteries and veins of the heart and connects them with the surrounding parts.

mesocarpal (mes-o-kar'pal). Same as *midcarpal*.

mesocecal (mes-o-se'kal). Pertaining to the meso-cecum.

mesocecum, mesocaecum (mes-o-se'kum) [*μέσος* middle + *cecum*]. The peritoneal fold which gives attachment to the cecum.

mesocele, mesocoelia (mes'o-sēl, mes-o-se'le-ah) [*μέσος* middle + *κοιλία* hollow]. The aqueduct of Sylvius.

mesocephalic (mes'o-sef-al'ik). 1. Pertaining to the mesocephalon. 2. Same as *mesaticephalic*.

mesocephalon (mes-o-sef-al'on). 1. See *mesencephalon*. 2. The pons varolii.

mesochondrium (mes-o-kon'dre-um) [*μέσος* middle + *χόνδρος* cartilage]. The matrix in which are embedded the cellular elements of hyaline cartilage.

mesococcus (mes-o-kok'us). A bacterial granule larger than a micrococcus and smaller than a megacoccus.

mesocoelia (mes-o-se'le-ah). The cavity of the mesencephalon.

mesocolic (mes-o-kol'ik). Pertaining to the meso-colon.

mesocolon (mes-o-ko'lon, mes-ok'o-lon) [*μέσος* middle + *κόλον, κῶλον* colon]. The process of peritoneum by which the colon is attached to the posterior abdominal wall. It is divided into an ascending, transverse, descending, and sigmoid sec-

tion, according to the portion of the colon to which it is attached.

mesocolopexy (mes-o-ko'lo-peks-e) [*mesocolon* + *πῆξις* fixation]. Same as *mesocoloplication*.

mesocoloplication (mes-o-ko'lo-pli-ka'shun) [*mesocolon* + *plication*]. The operation of folding and suturing the mesocolon to limit the mobility of the bowel.

mesocord (mes'o-kord). An umbilical cord adherent to the placenta by a connecting fold of the amnion; more correctly, the connecting fold itself.

mesocuneiform (mes-o-ku'ne-if-orm). The middle cuneiform bone.

mesocyst (mes'o-sist) [*μέσος* middle + *κύστις* bladder]. The layer of peritoneum attaching the gallbladder to the liver.

mesocyte (mes'o-sit) [*μέσος* middle + *κύτος* cell]. Same as *mesolymphocyte*.

mesocytoma (mes-o-si-to'mah) [*μέσος* middle + *κύτος* cell + *-ωμα* tumor]. A connective tissue tumor; a sarcoma.

mesoderm (mes'o-derm) [*μέσος* middle + *δέρμα* skin]. See *mesoblast*.

mesodermic (mes-o-der'mik). Pertaining to the mesoderm.

mesodermopath (mes-o-der'mo-path) [*mesoderm* + *πάθος* disease]. A person who is constitutionally susceptible to diseases of the tissues derived from embryonic mesoderm, such as heart and kidneys, arteries and veins, joints and muscles.

mesodiastolic (mes-o'di-as-to'l'ik) [*μέσος* middle + *διάστολη*]. Pertaining to the middle of the diastole.

mesodinitis (mes-od-mi'tis) [*μεσόδμη* partition]. Inflammation of the mediastinum.

mesodont (mes'o-dont) [*μέσος* middle + *ὀδούς* tooth]. Having medium-sized teeth.

mesoduodenal (mes-o-du-o-de'nal). Pertaining to the mesoduodenum.

mesoduodenum (mes'o-du-o-de-num) [*μέσος* middle + *duodenum*]. The fold which in early or fetal life, and sometimes persistently, connects the duodenum to the abdominal wall.

meso-epididymis (mes-o-ep-e-did'im-is). A fold of tunica vaginalis that sometimes connects the epididymis with the testicle.

mesogaster (mes-o-gas'ter) [*μέσος* middle + *γαστήρ* belly]. Same as *midgut*.

mesogastric (mes-o-gas'trik). Pertaining to the mesogastrium.

mesogastrium (mes-o-gas'tre-um) [*μέσος* middle + *γαστήρ* belly]. The mesentery of the embryonic stomach, whence the great omentum is developed.

mesoglia (mes-og'le-ah). Same as *oligodendroglia*.

mesogluteus (mes-o-glu-te'us). The gluteus medius muscle.

mesognathic, mesognathous (mes-og-na'thik, mes-og-nath-us). 1. Pertaining to the mesognathion. 2. Having a gnathic index of from 98 to 103.

mesognathion (mes-og-na'the-on) [*μέσος* middle + *γνάθος* jaw]. The lateral center of ossification in the os incisivum for the lateral incisor tooth.

Mesogonimus (mes-o-gon'im-us). A genus of flukes. See *Paragonimus*. **M. heterophyes**. Same as *Heterophyes heterophyes*.

mesohyloma (mes-o-hi-lo'mah) [*μέσος* middle + *ὕλη* matter + *-ωμα* tumor]. A tissue developed from the mesothelium.

mesohypoblast (mes-o-hi'po-blast). Same as *mes-entoderm*.

meso-ileum (mes-o-il'e-um). The mesentery of the ileum.

mesojejunum (mes'o-je-ju-num). The mesentery of the jejunum.

mesolepidoma (mes'o-lep-id-o'mah) [*μέσος* middle + *λεπίς* scale + *-ωμα* tumor]. A tumor made

up of tissue derived from the persistent embryonic mesothelium. **atypic m.**, carcinoma of a genitourinary organ or of a serous membrane. **typical m.**, adenoma of a genitourinary organ or of a serous membrane.

mesolobus (mes-o'l'o-bus) [*μέσος* middle + *λοβός* lobe]. The corpus callosum.

mesolymphocyte (mes-o-lim'fo-sit) [*μέσος* middle + *lymphocyte*]. A medium-sized lymphocyte.

mesomere (mes'o-mēr) [*μέσος* middle + *μέρος* part]. 1. A mesoblastic somite or protovertebra. 2. A blastomere.

mesometritis (mes'o-met-ri'tis) [*μέσος* middle + *μήτρα* uterus + *-ιτις* inflammation]. Inflammation of the middle or muscular layer of the uterus.

mesometrium (mes-o-me'tre-um) [*μέσος* middle + *μήτρα* uterus]. 1. The middle layer of the uterus; the myometrium. 2. [B N A] The portion of the broad ligament below the mesovarium.

mesomorph (mes'o-morf) [*μέσος* middle + *μόρφη* form]. A person of medium stature with broad and bulky limbs and features. Cf. *hypermorph*.

mesomula (mes-om'u-lah) [*μέσος* middle + *σώμα* body]. An early stage of the embryo, when it consists of an epithelial mesoderm and entoderm inclosing a mass of mesenchyma.

meson (mes'on) [*μέσος* middle]. Same as *mesion*.

mesonasal (mes-o-na'zal). Situated in the middle of the nose.

mesonephric (mes-o-nef'rik). Pertaining to the mesonephron.

mesonephron, mesonephros (mes-o-nef'ron, mes-o-nef'ros) [*μέσος* middle + *νεφρός* kidney]. The Wolffian body. See under *body*.

mesoneuritis (mes'o-nu-ri'tis) [*μέσος* middle + *νεύρον* nerve]. 1. Inflammation of the substance of a nerve. 2. Inflammation of the lymphatics of a nerve. **nodular m.**, inflammatory hyperplasia of the connective tissue of a nerve, resulting in nodular thickenings upon its surface.

meso-omentum (mes'o-o-men'tum). The fold by which the omentum is attached to the abdominal wall.

meso-ontomorph (mes-o-on'to-morf) [*μέσος* middle + *ὢν* being + *μόρφη* shape]. A person of stocky build having a tendency toward hypothyroidism.

mesopexy (mes'o-peks-e). The operation of taking a tuck in an elongated mesentery to shorten it.

mesopharynx (mes-o-far'inks). The oval portion of the pharynx.

mesophilic (mes-o-fil'ik) [*μέσος* middle, moderate + *φιλεῖν* to love]. Fond of moderate temperature; said of bacteria which develop best at the temperature of the body—37 C. See also *psychrophilic* and *thermophilic*.

mesophryon (mes-of're-on) [*μέσος* middle + *ὄφρυς* eyebrow]. The glabella or its central point.

mesopneumon (mes-o-nu'mon) [*μέσος* middle + *πνεῦμον* lung]. The fold of pleura which attaches the lung.

mesoporphyrin (mes-o-por'fir-in). A crystalline iron-free derivative from hematin obtained by a process of reduction.

mesoprosopic (mes-o-pros-o'pik) [*μέσος* middle + *πρόσωπον* face]. Having a face of moderate width.

mesopsychic (mes-o-si'kik). Pertaining to the middle period of mental development.

mesorachischisis (mes'o-rak-is'kis-is) [*μέσος* middle + *rachischisis*]. Partial rachischisis; partial fissure of the spinal cord.

mesorchial (mes-or'ke-al). Pertaining to the mesorchium.

mesorchium (mes-or'ke-um) [*μέσος* middle + *ὄρχις* testis]. The peritoneal fold which holds the fetal testicle in place.

mesorectum (mes-o-rek'tum) [μέσος middle + *rectum*]. [B N A] The mesentery of the rectum; the fold of peritoneum connecting the upper portion of the rectum with the sacrum.

mesoretina (mes-o-ret'in-ah) [μέσος middle + *retina*]. The middle layer of the retina.

mesorhine (mes'or-in) [μέσος middle + *ῥίς* nose]. Having a nasal index between 47 and 51 degrees.

mesoropter (mes-o-rop'ter) [μέσος middle + *ὄρος* boundary + *ὀπτήρ* observer]. The normal position of the eyes with their muscles at rest.

mesosalpinx (mes-o-sal'pinks) [μέσος middle + *σάλπιγξ* tube]. [B N A] The peritoneal fold that suspends the oviduct.

mesoscapula (mes-o-skap'u-lah). The spine of the scapula.

mesosome (mes'o-sēm) [μέσος middle + *σῆμα* sign]. Having an orbital index between 83 and 90 degrees.

mesosigmoid (mes-o-sig'moid). The fold by which the sigmoid flexure is attached.

mesosigmoiditis (mes''o-sig-moi-di'tis). Inflammation of the mesosigmoid.

mesosigmoidopexy (mes''o-sig-moi'do-pek-se) [*mesosigmoid* + *πῆξις* fixation]. The operation of shortening or fixing the mesosigmoid in cases of prolapse of the rectum.

mesosoma (mes-o-so'mah) [μέσος middle + *σῶμα* body]. Medium stature.

mesosomatous (mes-o-so'mat-us). Having medium stature.

mesostate (mes'o-stāt) [μέσος middle + *στᾶν* to stand]. Any product of metabolism which represents an intermediate stage in the formation of another product.

mesosternum (mes-o-ster'num) [μέσος middle + *στέρνον* sternum]. The body of the sternum; the gladiolus.

mesosyphilis (mes-o-sif'il-is). Secondary syphilis.

mesosystolic (mes''o-sis-to'l'ik) [μέσος middle + *συστολή* systole]. Pertaining to the middle of the systole.

mesotan (mes'o-tan). A dark yellowish fluid, the methylethoxymethyl ester of salicylic acid, $C_6H_4(OH).CO_2.(CH_2O).CH_3$: used locally as a counter-irritant in the treatment of gout and rheumatism; diluted with 1 to 4 parts of olive oil or cottonseed oil and painted over the affected part.

mesotarsal (mes-o-tar'sal). Same as *midtarsal*.

mesotendon (mes-o-ten'don). The delicate connective tissue membrane attaching a tendon to its fibrous sheath.

mesotendon (mes-o-ten'on). Mesotendon.

mesothelial (mes-o-the'le-al). Pertaining to the mesothelium.

mesothelioma (mes''o-the-le-o'mah). A tumor developed from mesothelial tissue.

mesothelium (mes-o-the'le-um) [μέσος middle + *epithelium*]. That part of the mesoblast whence the serous cavities and muscles are developed. It is formed by the development of sacs from the archenteron, which become separated by constriction to form closed cavities (*somites*) between the epiblast and hypoblast.

mesothenar (mes-oth'en-ar) [μέσος middle + *θῆναρ* palm]. The adductor pollicis muscle.

mesothorium (mes-o-tho're-um). A disintegration product of thorium, intermediate between thorium and radiothorium and isotopic with radium. It has radioactive properties and has been used in the treatment of cancer.

mesotropic (mes-o-trop'ik). Situated in the middle of a cavity, as the abdomen.

mesoturbinal, mesoturbinate (mes-o-ter'bin-al, mes-o-ter'bin-āt). The middle turbinal bone.

meso-uranic (mes''o-u-ran'ik) [μέσος middle + *οὐρανός* palate]. Having a palate index between 110 and 115 degrees.

mesovarium (mes-o-va're-um). [B N A] The peritoneal fold which holds the ovary in place.

mesozalyl urea. See *alloxan*.

mesoyohimbim (mes''o-yo-him'bin). An isomer of yohimbim.

mesuranc (mes-u-ran'ik) [μέσος middle + *οὐρανός* palate]. Having a palatomaxillary index between 110 and 115 degrees.

mesurol (mes'u-rol). A 20 per cent emulsion in olive oil of a basic salicylate compound. It is used in the treatment of syphilis in 1-cc. doses of a 20 per cent emulsion of sesame oil.

meta- [μέτα beyond, over]. A prefix indicating—(1) Change, transformation, or exchange; (2) after or next; (3) the 1:3 position in derivatives of benzene.

meta-amidophenylparamethoxychinolin. An antiperidic and antipyretic agent. Dose, 4-8 grains (0.2-0.5 Gm.).

meta-arthritis (met-ah-ar-thrit'ik). Occurring as a consequence or result of arthritis.

metabasis (met-ab'as-is) [μέτα beyond + *βαίνειν* to go]. 1. A change from one disease to another. 2. Metastasis, or a change in the seat of a disease.

metabiosis (met'ah-bi-o'sis) [μέτα with + *βίωσις* way of life]. The dependence of one organism upon another for its existence.

metabolic (met-ah-bo'l'ik). Pertaining to or of the nature of a metabolism.

metabolimeter (met-ah-bo-lim'et-er) [*metabolism* + *μέτρον* measure]. An apparatus for measuring basal metabolism.

metabolimetry (met-ah-bo-lim'et-re). The measurement of basal metabolism.

metabolin (met-ab'o-lin). Any product of metabolism.

metabolism (met-ab'o-lizm) [μεταβολή change]. Tissue change; the sum of all the physical and chemical processes by which living organized substance is produced and maintained (*substance metabolism* or *anabolism*), and also the transformation by which energy is made available for the uses of the organism (*energy metabolism, katabolic m., or catabolism*). **basal m.**, the minimal heat produced by an individual measured from fourteen to eighteen hours after eating and when the individual is at rest, but not asleep. It represents the energy expended to maintain respiration, circulation, peristalsis, muscle tonus, body temperature, glandular activity, and the other vegetative functions. The measurement of basal metabolism is made by means of a calorimeter, and is expressed in calories per hour per square meter of body surface. Called also *basal metabolic rate*. **constructive m.**, anabolism; the change of matter from a lower to a higher state of organization; especially conversion of matter into protoplasm. **destructive m.**, catabolism; the conversion of matter, especially protoplasm, into a lower state of organization, and ultimately into waste products. **energy m.** See *metabolism*. **substance m.** See *metabolism*.

metabolite (met-ab'o-lit). Any substance produced by metabolism.

metabolizable (met-ab'o-li-zab-l). Capable of being transformed by metabolism.

metabolodispersion (met-ab'ol-o-dis-per'zhun). The degree of dispersion of the colloids of the body. **m. shock**. See under *shock*.

metabology (met-ab'ol-o-je). The study of metabolism and metabolic processes.

metabolon (met-ab'o-lon). A form of matter having only a temporary existence, formed by the disintegration of radioactive substances.

metabolor (met-a-bo'lor). An instrument for measuring the basal metabolic rate.

metacarpal (met-ah-kar'pal). Pertaining to the metacarpus.

- metacarpophalangeal** (met-ah-kar'po-fal-an'-je-al). Pertaining to the metacarpus and phalanges.
- metacarpus** (met-ah-kar'pus) [*μετά* after + *καρπός* wrist]. The group of five cylindric bones extending from the carpus to the fingers; also that part of the hand in which these bones are placed.
- metacasein** (met-ah-ka'se-in). An intermediate product formed in the conversion of caseinogen into casein by the action of pancreatic juice.
- metacele, metacoele** (met'ah-sēl, met-ah-se'le) [*μετά* beyond + *κοίλια* hollow]. That space which, with the epicoele, makes up the fourth ventricle of the brain.
- metaceticin** (met-as'et-in). Para-acetanisidin: an antiseptic and antipyretic.
- metacetone** (met-as'et-ōn). Diethylketone, $\text{CO}(\text{C}_2\text{H}_5)_2$.
- metachemical** (met'ah-kem'ik-al). Beyond the bounds of chemistry.
- metachloral** (met-ah-klo'ral). Insoluble chloral, a strong antiseptic: used externally and in suppositories.
- metachromasia, metachromatism** (met'ah-kro-ma'ze-ah, met-ah-kro'mat-izm) [*μετά* change + *χρώμα* color]. 1. Staining in which the same stain colors different tissues in different tints. 2. The change of color produced by staining.
- metachromatic bodies** (met-ah-kro-mat'ik). See under *body*.
- metachromatin** (met-ah-kro'mat-in). The basophil element in chromatin.
- metachromic** (met-ah-kro'mik). Staining in a tint different from that of the stain employed.
- metachromisin** (met-ah-kro'mis-in) [*μετά* beyond + *χρώμα* color]. The condition in which a stain colors the various elements of the same tissue differently.
- metachromophil, metachromophile** (met-ah-kro'mo-fil, -fil) [*μετά* beyond + *χρώμα* + *φιλεῖν* to love]. Staining in an abnormal manner with a given stain.
- metachrosis** (met-ak-ro'sis) [*μετά* over + *χρῶσις* coloring]. Change of color.
- metachysis** (met-ak'is-is) [*μετά* beyond + *χῦσις* effusion]. The transfusion of blood.
- metacinesis** (met'ah-sin-e'sis) [*μετά* beyond + *κίνησις* motion]. The separation of daughter stars from each other.
- metacoeloma** (met'ah-se-lo'mah). That part of the embryonic coelom which develops into the pleuroperitoneal cavity.
- metacone** (met'ak-ōn) [*μετά* behind + *κῶνος* cone]. The distobuccal cusp of an upper molar tooth.
- metaconid** (met-ak-on'id). The mesiolingual cusp of a lower molar tooth.
- metaconule** (met-ak-on'ül). The distal intermediate cusp of an upper molar tooth.
- metacresalol** (met-ah-kre'sal-ol). See under *cresalol*.
- metacresol** (met-ah-kre'sol). One of the three isomeric forms of cresol, and the most strongly antiseptic of the group. **m. oxalate**, kresosteril. **m. purple, m. sulphonphthalein**, a triphenylmethane compound which is a brilliant indicator being red at pH 1.2 and blue at pH 2.8.
- metacresol-anitol** (met'ah-kres-ol-an'it-ol). An insoluble compound of metacresol (40 per cent) and anitin (60 per cent): an effective bactericide.
- metacresol-cinnamic acid ester**. A crystalline agent: recommended for use in tuberculosis.
- metadromic progression** (met-ad-ro'mik). See under *progression*.
- metadysentery** (met-ah-dis'en-ter-e). A chronic colitis characterized by recurrent attacks of diarrhea, which are occasionally dysenteric for short periods of time: due to the so-called metadysentery group of bacteria.
- metagaster** (met-ah-gas'ter) [*μετά* after + *γαστήρ* belly]. The permanent intestinal canal of the embryo.
- metagastrula** (met-ah-gas'tru-lah) [*μετά* beyond + *gastrula*]. A gastrula with a cleavage differing from that of the standard type.
- metagelatin** (met-ah-je-lat-in). A substance produced by treating gelatin with oxalic acid.
- metagen** (met'aj-en). A proprietary preparation of vitamins A, B, and C.
- metagenesis** (met-ah-jen'es-is) [*μετά* after + *genesis*]. Alteration of generation.
- metagglutinin** (met-ag-lu'tin-in). An agglutinin present in an agglutinative serum which acts on organisms that are closely related to the specific antigen and in a lower dilution. Called also *partial agglutinin* and *minor agglutinin*.
- metaglobulin** (met-ah-glob'u-lin). A fibrogenous substance occurring in cell protoplasm; fibrinogen.
- Metagen'imus ova'tus** or *yokogaw'ai*. An intestinal nematode found in man and in mammals in Japan. It resembles *Heterophyes*.
- metagrippal** (met-ah-grip'al). Occurring as an after-result of influenza.
- meta-icteric** (met'ah-ik-ter'ik). Occurring after jaundice.
- meta-infective** (met-ah-in-fek'tiv). Occurring after an infection; a term applied to a febrile state occurring during convalescence from an infectious disease.
- meta-iodo-ortho-oxyquinoline-sulphonic acid**. $(\text{CH}_3)_2\text{N}(\text{OH}).\text{C}_6\text{H}_3.\text{SO}_3\text{OH}$. Same as *lore-tin*.
- metakinesis** (met'ah-kin-e'sis). 1. Same as *metacinesis*. 2. Lloyd Morgan's term for the hypothetical property possessed by all types of life of being endowed with something which is not consciousness, but which has the potentiality of developing into consciousness. 3. Metaphase.
- metal** (met'al) [*L. metal'lum; μετάλλω*]. Any element marked by luster, malleability, ductility, and conductivity of electricity and heat. **alkali m.**, any one of the sodium group of basylous elements. **bell m.**, an alloy of copper and tin. **colloidal m.**, a colloidal solution of a metal. See *electrosol*. **d'Arcet's m.**, an alloy of lead, bismuth, and tin: used in dentistry. **Wood's m.**, a metal used in making casts of blood vessels: bismuth, 50 per cent; lead, 25 per cent; tin, 12.5 per cent; cadmium, 12.5 per cent.
- metalbunin** (met-al-bu'min) [*meta-* + *albumin*]. Same as *pseudomucin*.
- metaldelhyde** (met-al'de-hid). A crystalline body, a polymer of acetaldehyde, $(\text{CH}_3.\text{CHO})_3$: antiseptic. Dose, 2-8 grains (0.133-0.533 Gm.).
- metallesthesia** (met-al-es-the'ze-ah) [*metal* + *αἰσθησις* sensation]. The recognition of metals by the sense of touch.
- metallic** (met-al'ik). Pertaining to or made of metal.
- metallocyanide** (met-al-o-si'an-id). A compound of cyanogen with a metal.
- metalloid** (met'al-oid) [*μέταλλον* metal + *εἶδος* form]. 1. Any nonmetallic element. 2. Any metallic element that has not all the characters of a typical metal. 3. Resembling a metal.
- metallophobia** (met-al-o-fo'be-ah) [*μέταλλον* metal + *φόβος* fear]. Insane fear of metals and metal objects.
- metalloplastic** (met'al-o-plas'tik). Pertaining to the plastic use of metals.
- metalloscopy** (met-al-os'ko-pe) [*μέταλλον* metal + *σκοπεῖν* to view]. Observation of the effects of applying metal to the body.
- metallotherapy** (met'al-o-ther'ap-e) [*μέταλλον* metal + *θεραπεύειν* to heal]. The treatment of disease by applying metals to the integument.

metallurgy (met-al-ur'je) [L. *metallum* + *ἐργον* work]. The science and art of using metals.

metal-sol. A colloidal solution of a metal. Such solutions have properties similar to those of enzymes, and are therefore sometimes called *inorganic enzymes*.

metamere (met'am-ēr) [*μετά* across + *μέρος* part]. A primitive segment or protovertebra.

metamerism (met-ah-mer'ik). Characterized by metamerism.

metamerid (met-am'er-id). Any metameric substance.

metamerism (met-am'er-izm). 1. Isomerism in which the component elements are identical, while the structural arrangement is not the same. 2. Arrangement in metameres or segments.

metamorphopsia (met'ah-mor-fop'se-ah) [*μετά* across + *μορφή* form + *ὄψις* sight]. A state of the eye in which objects looked at seem to be distorted. **m. va'rians**, metamorphopsia in which the distorted outline of the object looked at seems to change.

metamorphosis (met-ah-mor'fo-sis) [*μετά* across + *μορφή* form]. Change of shape or structure; particularly a transition from one developmental stage to another, as in insects. **fatty m.**, fatty degeneration. See *degeneration*. **ovulation m.**, the developmental changes which occur during ovulation. **retrogressive m.**, **retrograde m.**, a degeneration; more often a retrograde metabolic change. **revisionary m.** See *cataplasia*. **viscous m.**, the massing of blood plaques in thrombosis.

metamorphic (met-ah-mor-fot'ik). Pertaining to or characterized by metamorphosis.

metamyelocyte (met'ah-mi'el-o-sit) [*μετά* beyond + *myelocyte*]. A transitional form of myelocyte intermediate between the myelocyte and the granular leukocyte.

metanephron, **metanephros** (met-ah-nef'ron, met-ah-nef'ros) [*μετά* after + *νεφρός* kidney]. The permanent embryonic kidney, which develops after and behind the mesonephros, from the mesonephric duct and nephrogenic cord.

metaneutrophil (met-ah-nu'tro-fil) [*μετά* beyond + *neutrophil*]. Staining abnormally with neutral stains.

metaniline yellow (extra) (met-an'il-in). A dye, metasulphobenzenaeazodiphenylamine. It is used as an indicator and has a *pH* range of 1.2 to 2.3, being red at 1.2 and yellow at 2.3.

metanucleus (met-ah-nu'kle-us) [*meta* + *nucleus*]. The egg nucleus after its extrusion from the germinal vesicle.

metapeptone (met-ah-pep'tōn) [*meta* + *peptone*]. A digestive product between dyspeptone and parapeptone.

metaphase (met'af-āz) [*μετά* after + *phase*]. The middle stage of mitosis during which the lengthwise splitting of the chromosomes in the equatorial plate occurs. See *mitosis*.

metaphen (met'af-en). A heavy brownish-yellow powder, 4-nitro-3, 5-bisacetoxy-mercuri-2-cresol, $(\text{CH}_3\text{COOHg})_2\text{C}_6\text{H}(\text{NO}_2)(\text{OH})\text{CH}_3$, which contains about 60 per cent of mercury. It is insoluble in water, but soluble in dilute aqueous solution of sodium hydroxide. It is used as a germicide in a dilution of 1:1000 in gonorrhea, eye infections, skin sterilization, and sterilization of instruments.

metaphosphoric acid (met'ah-fos-for'ik). See *under acid*.

metaphrenia (met-ah-fre'ne-ah) [*μετά* between + *φρήν* mind]. A widespread neurotic phenomenon commonly called civilization.

metaphrenon (met-af-re'non) [*μετά* beyond + *φρήν* diaphragm]. The space or area between the shoulders.

metaphysial (met-ah-fiz'e-al). Pertaining to a metaphysis.

metaphysis (met-af'is-is) [*μετά* after + *φύσις* nature]. 1. The end of the diaphysis of a long bone where it joins the epiphysis. Cf. *diaphysis* and *epiphysis*. 2. Metamorphosis.

metaplasia (met-ah-pla'ze-ah) [*μετά* after + *πλάσσειν* to form]. The change of one kind of tissue into another; also the production of tissue by cells which normally produce tissue of another sort.

metaplasis (met-ap'las-is). The stage in which the organism has attained completed growth.

metaplasma (met'ah-plazm) [*μετά* after + *πλάσμα* something formed]. Same as *deutoplasma*.

metaplastic (met-ah-plas'tik). Formed by or of the nature of metaplasia.

metaplex (met'ap-lex). Metaplexus.

metaplexus (met-ah-pleks'us). The choroid plexus of the fourth ventricle.

metapneumonic (met'ah-nu-mon'ik) [*μετά* after + *pneumonia*]. Succeeding or following pneumonia.

metapodialia (met-ah-po-da'le-ah) [*μετά* behind + *πούς* foot]. A collective term for the bones of the metacarpus and metatarsus.

metapophysis (met-ah-pof'is-is) [*μετά* after + *apophysis*]. The mammillary process on the superior articular or prearticular processes of certain vertebrae.

metapore (met'ah-pör). The foramen of Magendie.

metaprotein (met-ah-pro'te-in). A product of the action of an acid or alkali on a protein, resulting in a compound soluble in very weak acids and alkalis, but insoluble in neutral fluids.

metapsyche (met-ah-si'ke) [*μετά* after + *ψυχή* soul]. The metencephalon.

metapsychics (met-ah-si'kiks) [*μετά* across + *ψυχή* mind]. The science which deals with psychic phenomena that are beyond the realm of consciousness.

metaptosis (met-ah-to'sis) [*μετά* beyond + *πτῶσις* falling]. Metastasis.

metapyretic (met'ah-pi-ret'ik) [*μετά* after + *πυρετός* fever]. Performed or occurring after the advent (otherwise after the decline) of septic fever.

metargon (met-ar'gon). A name given to a gaseous element which exists in a very small proportion in the atmosphere. Not now used.

metasol (met-as-ol). A proprietary solution (1 and 2 per cent) of metacresol-anitol: used as a germicide and disinfectant.

metasomatome (met-as-o'mat-ōm). One of the constrictions between successive protovertebrae.

metastable (met'ah-sta-bl). Not entirely stable; changing from one condition to another under the proper stimulus.

metastasis (met-as'tas-is) [*μετά* after + *στάσις* stand]. The transfer of disease from one organ or part to another not directly connected with it. **calcareous m.**, the formation of bone salts in the kidneys in softening of bone. **crossed m.**, passage of material from the venous to the arterial circulation without going through the lungs. **direct m.**, metastasis in the direction of the blood or lymph stream. **implantation m.**, metastasis along a free surface. **paradoxic m.**, **retrograde m.**, metastasis taking place in a direction opposite to that of the blood stream. **transplantation m.**, metastasis from one tissue to another.

metastasize (met-as'tas-iz). To form new foci of disease in a distant part by metastasis.

metastatic (met-ah-stat'ik). Pertaining to or of the nature of metastasis.

metasternum (met-ah-ster'num) [*μετά* after + *στέρνον* sternum]. The ensiform cartilage.

Metastrongylus (met-ah-stron'gil-us). A genus of nematodes of the family Strongylidae. *M. a'pri*, a

- species found in the lungs of hogs and occasionally in man.
- metasynapsis** (met''ah-sin-ap'sis). End-to-end union of the chromosomes in synapsis.
- metasyncrisis** (met-ah-sin'kris-is). The elimination of waste or morbid matter, as by the pores.
- metasyndesis** (met''ah-sin-de'sis). Same as *metasynapsis*.
- metasyphilis** (met-ah-sif'il-is) [*μετά* after + *syphilis*]. Congenital syphilis with general degeneration and with no appreciable local lesions.
- metasyphilitic** (met''ah-sif-il-it'ik). 1. Following or resulting from syphilis. 2. Pertaining to hereditary syphilis.
- metatarsalgia** (met''ah-tar-sal'je-ah) [*μετά* after + *ταρσός* tarsus + *άλγος* pain]. Pain in the metatarsus.
- metatarsophalangeal** (met-ah-tar''so-fal-an'je-al). Pertaining to the metatarsus and phalanges.
- metatarsus** (met-ah-tar'sus) [*μετά* beyond + *ταρσός* tarsus]. The part of the foot between the tarsus and the toes. **m. atavicus**, abnormal shortness of the first metatarsal bone. **m. la'tus**, a broadened foot due to falling of the transverse arch of the foot: called also *broad foot* and *spread foot*.
- metatela** (met-ah-tel'ah). The tela choroidea of the fourth ventricle.
- metathalamus** (met-ah-thal'am-us). [B N A] The posterior portion of the thalamus, comprising the internal and external geniculate bodies.
- metathesis** (met-ath'es-is) [*μετά* beyond + *θέσις* placement]. 1. The artificial transfer of a morbid process. 2. A chemical reaction in which an element or radical in one compound exchanges places with another element or radical in another compound.
- metathrombin** (met-ah-throm'bin) [*μετά* change + *thrombin*]. A hypothetical substance into which thrombin changes on standing, and which may be again activated into thrombin by the action of alkalis or acids.
- metatroph** (met'at-rōf). A saprophyte.
- metatrophia, metatrophy** (met-at-ro'fe-ah, met-at-ro-fe). Atrophy from malnutrition.
- metatrophic** (met-at-rof'ik) [*μετά* beyond + *τροφή* nutrition]. Utilizing organic matter for food.
- metatypic** (met-ah-tip'ik). Composed of the elements of the tissue on which it develops, but having those elements arranged in an atypical manner: said of tumors.
- metavanadate** (met-ah-van'ad-āt). Any salt of metavanadic acid. **sodium m.**, a highly poisonous salt. In doses of $\frac{1}{100}$ – $\frac{1}{10}$ grain it stimulates nutrition and improves various cachectic states.
- metaxenia, metaxeny** (met-ah-ze'ne-a, met-az'en-e). 1. Metoxeny. 2. An improper term for ectogeny.
- Metazoa** (met-ah-zo'ah) [*μετά* beyond + *ζῷον* animal]. That division of the animal kingdom the members of which are characterized by segmentation of the ovum. It includes all animals except the protozoa.
- metazonal** (met-ah-zo'nal). Situated after or below a sclerosone.
- Metchnikoff theory** (meths'nik-of) [Elie Metchnikoff, a Russian physiologist in Paris, the discoverer of phagocytes and phagocytosis, born 1845]. The theory of phagocytosis.
- metecious, metoecious** (met-e'shus) [*μετά* beyond + *οἶκος* house]. Heterecious.
- meteloidine** (met-el-oi'din). An alkaloid, $C_{13}H_{21}O_4N$, from *Datura metaloides*.
- metencephal** (met-en'sef-al). The metencephalon.
- metencephalic** (met-en-sef'al'ik). Pertaining to the metencephalon.
- metencephalon** (met-en-sef'al-on) [*μετά* after + *ἐγκέφαλος* brain]. 1. [B N A] The hindbrain: that part of the embryonic brain whence the pons and the cerebellum are developed. It is the anterior part of the rhombencephalon or posterior cerebral vesicle. 2. The cerebellum.
- metencephalospinal** (met-en-sef''al-o-spi'nal). Pertaining to the metencephalon (cerebellum) and the spinal cord.
- meteorism** (me'te-or-izm) [*μετεωρίζειν* to raise up]. Tympanites; gas in the abdomen or intestine.
- meteorology** (me-te-or-ol'o-je) [*μετεώρος* high in the air + *λόγος* treatise]. The science of the atmosphere and its phenomena.
- metepencephalon** (met''ep-en-sef'al-on) [*μετά* after + *ἐπί* upon + *ἐγκέφαλος* brain]. Same as *myelencephalon*.
- meter** (me'ter) [*μέτρον* measure; Fr. *mètre*]. 1. The basic measure of length of the metric system: it is equivalent to 39.371 inches. 2. An apparatus devised to measure the quantity of anything passing through it, such as of a gas, amperes of electric current, etc. **m. angle**, the angle of visual axes when viewing a point one meter distant. **m. candle**. See *lux*.
- metergasis** (met-er-ga'sis) [*μετά* change + *ἔργον* work]. Change of function.
- methacetin** (meth-as'et-in). $C_6H_4.OCH_3.NH.CH_3CO$, in colorless or reddish, tasteless, scaly crystals, sparingly soluble in water, easily soluble in alcohol. It is used chiefly in children's diseases. Dose, $\frac{1}{4}$ –8 grains (0.03–0.5 Gm.).
- methaform** (meth'af-orm). A proprietary preparation identical with chlorotone. See *chlorotone*.
- methal** (meth'al). Myristic alcohol, a compound existing in spermaceti, but not yet isolated.
- methanal** (meth'an-al). Same as *formaldehyde*.
- methane** (meth'an). Marsh gas, CH_4 , a colorless, odorless, inflammable gas, produced by the decomposition of organic matter.
- methanol** (meth'an-ol). Methyl alcohol.
- methanolysis** (meth-an-ol'is-is). Alcoholysis of methyl alcohol.
- Methanomonas** (meth-an-om'o-nas). A genus of bacterial organisms capable of growing in the absence of organic matter. They obtain their energy for growth from the oxidation of methane to carbon dioxide and water.
- methemoglobin, methahemoglobin** (met''hem-o-glo'bin, met''ah-hem''o-glo'bin). 1. A modified form of oxyhemoglobin found in the blood after large doses of acetanilid, potassium chlorate, nitrobenzol, and other substances. It has the same composition as oxyhemoglobin, but it is chocolate-brown in color and oxygen is so firmly held that it cannot be pumped off in a vacuum nor does it function in respiration. 2. A therapeutical product of the oxidation of hemoglobin.
- methemoglobinemia** (met''hem-o-glo-bin-e'me-ah) [*methemoglobin* + *αἷμα* blood]. The presence of methemoglobin in the blood.
- methemoglobinuria** (met''hem-o-glo-bin-u're-ah) [*methemoglobin* + *οὖρον* urine]. The occurrence of methemoglobin in the urine.
- methenamine** (meth-ēn-am'in). The U. S. P. name for a condensation product of ammonia and formaldehyde, hexamethylenetetramine $(CH_2)_6N_4$. Known in U. S. P. IX as hexamethylenamine. A useful urinary antiseptic, liberating formaldehyde only in the presence of acids. Dosage, 5 grains (0.3 Gm.) in solution. When sodium biphosphate is given to render the urine acid, methenamine is taken preferably after the acid has left the stomach. It has been sold under such proprietary names as urotropine, aminoform, formamin, formin, cystamin, cystogen, urisol, and uritone.
- methene** (meth'en). Same as *methylene*.
- methenyl** (meth'en-il). Same as *formyl*.
- methethyl** (meth-eth'il). A local anesthetic mixture of methyl and ethyl chlorides and chloroform.

methetic (meth-et'ik). Noting participation of the various strata of intelligence.

methionine (meth-i'o-nin). A sulphur bearing compound (amino-acid), γ -methylthiol- α -aminobutyric acid, isolated from protein.

method (meth'ud) [*metódos*]. The manner of performing any act or operation. For various methods of treatment, see *treatment*; for methods of staining, see under *stains*, *table of*; for methods of making qualitative tests, see under *tests*. **Abbott's m.**, treatment of scoliosis by lateral pulling and counterpulling on the spinal column by means of wide bandages and pads until the deformity is overcorrected, and then applying a plaster jacket to produce pressure, counterpressure, and fixation of the spine in its corrected position. **A. B. C. (alum, blood, clay) m.**, a method of deodorizing and precipitating sludge by the addition of alum, charcoal (or some other material), and clay to the raw sewage. **absorption m.**, the separate addition to agglutinative serums of the various bacteria in the group to remove separately the partial agglutinins. **aceto-acetic acid, m. for.** See *diacetic acid, m's for*, under *method*. **acetone, m. for.** See *Folin's m. (1)*, *Folin and Hart's m.*, *Messenger and Huppel's m.*, *Shaffer and Marriott's m.*, *Scott and Wilson's m.*, under *method*. **Achard-Castaing m.**, the methylene blue test. **acid hematin m.** (for hemoglobin): Dilute the blood in tenth normal HCl and compare the color with a standard hematin solution or glass standards. **adrenalin, m. for.** See *Folin, Cannon, and Denis' m.*, under *method*. **m. of agglutination.** See *absorption m.*, *Bass-Watkins' test*, *Bordon's m.*, *Dreyer's m.*, *Ficker's m.*, and *Kolle and Pfeiffer's m.* **albumin in urine, m. for.** See *Esbach's m.*, *Folin's m.*, *Folin and Denis' m.*, *Folin's gravimetric m.*, *Kwilecki's m.*, *life insurance m.*, *Scherer's m.*, and *turbidity m.*, under *method*. **alkali reserve, m. for.** See *Fridericia's m.*, *Marriott's m.*, *van Slyke and Cullen's m.*, and *van Slyke and Pitt's m.* **allantoin, m. for.** See *Folin's m. (9)*, *Plummer and Skellon's m.*, *Wichowski's m.*, under *method*. **amino-acid nitrogen, m. for.** See *nitrogen, m. for*, under *method*. **ammonia nitrogen, m. for.** See *nitrogen, ammonia, m's for*, under *method*. **Amoss and Wollstein's m.**, for the rapid production of antimeningococcus serum by the intravenous injection alternately of living germs and autolyzed products of them. **anaerobic m.** See *Buchner's m.*, *Esbach's m.*, *Hauser's m.*, *Liboribus' m.*, *McIntosh and Fildes' m.*, *Roux's m.*, *Wright's m.* **m. for (testing) antiseptics.** See *garnet m.*, *Rideal-Walker m.*, *thread m.* **m. for (producing) antiserums.** See *Amoss and Wollstein's m.*, *Flexner and Amoss' m.*, *Flexner and Jobling's m.*, *Kraus and Doerr's m.*, *Kruse and Shiga's m.* **Arnold and Gunning's m.** (for total nitrogen): A modified form of the Kjeldahl process for urine. **Aronson's m.**, volatilizing formaldehyde gas from the solid polymer, trioxymethylene, by heat. **Askenstedt's m.** (Parker's modification) (for indican): Precipitate the urine with solid mercuric chloride; oxidize the indican to indigo with Obermeyer's reagent; shake out with chloroform and compare the blue color with a standard solution of indigo. **Austin and van Slyke's m.** (for chlorides in whole blood): Liquefy the blood with distilled water, precipitate the proteins with picric acid, and then proceed as in McLean and van Slyke's method for chlorides in oxalated plasma. **Autenrieth and Funk's m.** (for cholesterol): Boil the blood or serum to saponify the fats. Extract with chloroform and evaporate the chloroform. Make a Liebermann-Buchard test on the residue and compare it with a standard solution of cholesterol. **autoclave m.** See *Clark-Collip m.* **Baccelli's m.** 1. Treatment of tetanus by injections of carbolic acid. 2. Treatment of aneurysm by introduction of a watchspring into the sac by means of a trocar. **Baer's m.**, prevention of the reforming of adhesions by the in-

jection of sterilized oil into an ankylosed joint. **Bang's m.** 1. (Ivar Bang) Estimation of the quantities of the sugar, albumin, urea, etc., in the blood by examination of a few drops only, collected on blotting paper. 2. (for dextrose): To an excess of the boiling reagent (an alkaline solution of copper thiocyanate) add the urine and titrate the excess of copper thiocyanate with hydroxylamine sulphate. 3. (B. L. F. Bang) Prevention of the spread of bovine tuberculosis by isolation of the affected cows and by removal of the calves of affected cows as soon as they are born and feeding them with milk of healthy cows. **Bang's micro-m.** (for dextrose): Boil the urine with an excess of the reagent (KHCO_3 , 160 Gm.; K_2CO_3 , 100 Gm.; KCl , 66 Gm.; $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$, 4.4 Gm.; and water to 1 liter) and titrate excess of CuCl with a solution of iodine, using starch as an indicator. **Barber's m.**, a method for the direct isolation of a single micro-organism. The organism is drawn into a mechanically operated pipet while under observation in the field of microscope. **Baréty's m.**, an extension method for treating hip disease and fracture of the thigh. **Bastianelli's m.**, sterilization of the skin of the patient previous to operation with a 1 : 1000 benzine solution of iodine, followed by a 50 per cent tincture of iodine. **Behring's m.**, a method producing active immunity in the patient by the injection of mixtures of diphtheria toxin and antitoxin that are almost neutral and, therefore, no toxic effect. **Bence-Jones protein, m. for.** See *Folin and Denis' m.* **Benedict's m.** 1. (for dextrose): Titrate the sugar in the urine with the following reagent: CuSO_4 (crystals), 18 Gm.; Na_2CO_3 (crystals), 200 Gm.; sodium citrate, 200 Gm.; potassium thiocyanate, 125 Gm.; potassium ferrocyanide; 5 per cent solution, 5 cc.; water to make 1 liter. 2. (for total sulphur): Add the reagent (crystallized copper nitrate, 200 Gm.; sodium chlorate, 50 Gm.; water to make 1 liter) to the urine and evaporate to dryness, ignite, take up in dilute hydrochloric acid, precipitate with BaCl_2 , filter, dry, and weigh. 3. (for urea): The urea is hydrolyzed to ammonium carbonate by heating with KHSO_4 and ZnSO_4 , made alkaline, distilled into standard sulphuric acid, and the excess acid titrated. 4. (for uric acid in blood): The same as Benedict and Franke's m. for uric acid in urine. **Benedict and Denis' m.** (for total sulphur): Mix the urine with the reagent [$\text{Cu}(\text{NO}_3)_2$, 25 Gm.; NaCl , 25 Gm.; NH_4NO_3 , 10 Gm.; and water 100 cc.] and evaporate to dryness, ignite, dissolve in 10 per cent hydrochloric acid, and test for inorganic sulphates by Folin's method (6) (q. v.). **Benedict and Franke's m.** (for uric acid in urine): To the diluted urine is added sodium cyanide and the arsenophosphotungstic acid reagent. The blue color produced is compared with a standard uric acid solution. **Benedict and Hitchcock's m.** (for uric acid): Precipitate the uric acid with an ammoniacal silver-magnesium solution (3 per cent silver lactate solution, 70 cc.; magnesia mixture, 30 cc.; concentrated ammonium hydroxide, 100 cc.). Dissolve the precipitate with potassium cyanide, add the uric acid reagent (boil 100 Gm. of sodium tungstate and 80 cc. of 85 per cent phosphoric acid in 750 cc. of water for two hours and make up to 1 liter) and sodium carbonate solution. Compare in colorimeter with a known uric acid standard. **Benedict and Leche's m.** (for inorganic phosphate in blood): The method is the same as that of Fiske and Subbarow except that the reducing agent is a hydroquinone-sulphite mixture instead of aminonaphthol-sulphonic acid. **Benedict and Murlin's m.** (for amino-acid nitrogen by formal titration): Add phosphotungstic acid to the urine to precipitate ammonia and other basic substances, neutralize to litmus, add solution of formaldehyde, and titrate with tenth normal sodium hydroxide. **Benedict and Osterberg's m.** (for sugar in normal urine): Treat the urine with picric acid, sodium carbonate, and acetone. Compare the red

color produced with a standard solution of sugar. **Benedict and Theis' m.** 1. (for lipid phosphorus): Oxidize the lipid phosphorus to phosphoric acid with a mixture of concentrated nitric and sulphuric acids and then proceed as with inorganic phosphates. 2. (for phenols in blood): To 10 cc. of blood filtrate add 1 cc. of 1 per cent gum acacia solution, 1 cc. of 50 per cent sodium acetate solution, 1 cc. of the diazotized nitro-aniline reagent, mix, and after one minute add 2 cc. of a 20 per cent sodium carbonate solution. Compare the orange color with a standard phenol solution containing 0.025 mg. of phenol in 10 cc. **Bergeim's m.** (for indole in feces): Make the feces alkaline and distil off phenols. Make distillate acid with H_2SO_4 and redistill to leave NH_3 in residue. To the second distillate add betanaphtha-quinone sodium monosulphonate and alkali. Extract the blue color with chloroform and compare it with that of a standard solution of indole similarly treated. **Berger's m.**, suture of transverse fracture of the patella. **Bergonié's m.**, reduction of fat by the use of general faradization. **Bertrand's m.** (for glucose): Boil the urine with alkaline copper sulphate solution, filter, dissolve the precipitate in an acid solution of ferric sulphate, and titrate with potassium permanganate. **Besredka's m.**, vaccination with living micro-organisms. See sensitized vaccine, under vaccine. **beta-hydroxy-butyric acid, m. for.** See *Black's m.*, *van Slyke and Palmer's m.*, under method. **Beuttner's m.**, removal of the adnexa uteri, but with preservation of a portion of the ovaries and transverse cuneiform excision of the fundus uteri. **bile pigments, m's for.** See *Meulengracht's m.*, *Wallace and Diamond's m.* **Bivine's m.**, treatment of strychnine poisoning by administration of chloral hydrate. **Black's m.** (for beta-hydroxy-butyric acid): Evaporate the urine to a small volume, acidify, add plaster of paris to form a coarse meal, extract the beta-hydroxy-butyric acid with ether in a Soxhlet apparatus, evaporate to dryness, take up in water, and determine the amount by a polariscope. **Bloor's m.** (for lipid phosphorus). See *Benedict and Theis' m.* **Bloor, Pelkan, and Allen's m.** (for fatty acids and cholesterol): Extract the lipoids by an alcohol-ether mixture, saponify, extract the cholesterol with chloroform and the soaps with hot alcohol. The cholesterol is then determined colorimetrically and the fatty acids nephelometrically. **Bock and Benedict's m.** (for total nitrogen): It is similar to Folin and Farmer's method, except that the ammonia is distilled instead of aerated over into the acid. **Bonnaire's m.**, induction of labor by digital dilatation of the cervix. **Bordon's m.** (of agglutination): Similar to Ficker's method, but the menstruum used is phenol 2.5 parts, glycerin 50 parts, and physiologic salt solution 450 parts. **Bouchon's m.**, treatment of wounds by the application of formaldehyde followed by irrigation with Javel solution. **Brandt's m.**, deep massage of the fallopian tubes for expression of the pus in pyosalpinx. **Brauer's m.**, production of artificial pneumothorax by the injection of nitrogen for the treatment of tuberculosis of the lung. **Brazilian m.**, treatment of aneurysms by continuous electric current. **Breslau's m.**, volatilizing formaldehyde from dilute (8 per cent) solutions to prevent polymerization. **Brunn's m.** See *Breslau's m.* **Buchner's m.**, a method for the anaerobic cultivation of bacteria in which an alkaline solution of pyrogallol is placed in the container and this removes the oxygen by absorption. **Bülav's m.**, treatment of purulent pleurisy by continuous drainage with a special apparatus. **Byrd-Dew m.**, a method of starting artificial respiration in asphyxia of the new-born. **calcium, m's for.** See *Clark and Collip's m.*, *Corley and Denis' m.*, *Lyman's m.*, *McCruden's m.*, and *Shohl and Pedley's m.*, under method. **carbon dioxide, m. for.** See *van Slyke and Cullen's m.* (1), under method. **Carrel's m.** 1. A method of

end-to-end suture of blood vessels. 2. See *Dakin-Carrel m.* 3. A method of determining when to make secondary closure of wounds. A loop of material is taken from the wound, spread on a slide, stained, and the number of bacteria counted. **casein, m. for.** Saturate the milk with magnesium sulphate, filter, wash, determine the nitrogen by the Kjeldahl method, and multiply the result by 6.37. See also *Harl's m.* **cathartic m.**, a method of treating psychoneuroses by enabling the patient, through properly directed questions, to bring to full consciousness the vague and unformed dread from which he has been suffering. **Cathelin's m.**, introduction of anesthetics into the epidural space through the sacrococcygeal ligament. **Chaput's m.**, treatment of osteomyelitis by scraping the cavity and inserting fat taken from the thigh or abdomen. **chlorides, m. for.** See *Austin and van Slyke's m.*, *Dehn and Clark's m.*, *McLean and van Slyke's m.*, *Mohr's m.*, *Volhard and Arnold's m.*, *Volhard and Harvey's m.*, *Whitehorn's m.*, under method. **cholesterol, m's for.** See *Bloor's m.*, *Pelkan, and Allen's m.*, *Myers and Wardell's m.* **Christiansen's m.** (for Mett tubes): Thin-walled glass tubes of 1 to 2 mm. internal diameter are filled with egg white, placed in water at 85 C., and allowed to stay until cool. **Ciaccio's m.**, treatment of tissue for the purpose of rendering visible the intracellular lipoids. They are fixed with acid chromate solution and stained with sudan III. **Ciniselli's m.**, galvanopuncture of aneurysms. **Clark-Collip m.** 1. (for calcium in serum): Dilute the serum and add ammonium oxalate. Wash the precipitate, dissolve with sulphuric acid, and titrate with potassium permanganate. 2. (for urea in blood): To 5 cc. of blood filtrate add 1 cc. of N HCl and heat in autoclave at 150 C. for ten minutes. Make alkaline, distil into acid, and titrate, using methyl red as indicator. **Claudius' m.**, sterilization of catgut by placing in a 1 per cent solution of iodine potassium iodide solution for a week. **Clausen's m.** 1. (for lactic acid in blood): Remove the glucose by adding copper sulphate and calcium hydroxide, filter, and proceed with filtrate as in Clausen's method for lactic acid in urine. 2. (for lactic acid in urine): Extract the lactic acid from the urine with ether, convert it into acetaldehyde by treatment with sulphuric acid, add sodium bisulphite, and titrate with standard iodine solution. **cold iron m.** See *Percy cautery*, under cautery. **Cori's m.** (for lactic acid in tissues): Precipitate the protein with $HgCl_2$, remove the mercury from the filtrate with H_2S , and determine the lactic acid by Clausen's method. **Corley and Denis' m.** (for calcium in tissues): If there is only a small amount of organic material it may be removed by washing, aided by nitric acid. If there is much organic material add 5 volumes of tenth normal sodium hydroxide and heat in autoclave at 180 C. for two hours. Precipitate as oxalate, dissolve in sulphuric acid, and titrate with potassium permanganate. **creatine, m. for.** See *Folin's m.* (4), *Folin, Benedict, and Myers' m.*, *Folin and Wu's m.* (1), and *Myers' m.*, under method. **creatinine, m. for.** See *Folin's m.*, *Folin and Wu's m.*, and *Shaffer's m.*, under method. **Crédé's m.** 1. Method of expressing the placenta by resting the hand on the fundus uteri and gently rubbing until the placenta is loosened; then expelling it by firmly squeezing the fundus. 2. The placing of a drop of 2 per cent solution of silver nitrate in each eye of a new-born child for the prevention of ophthalmia neonatorum. **cubicle m.**, the treatment of patients with contagious disease by placing each patient in one of the cubicle-like compartments into which the ward is divided. **Dakin-Carrel m.**, treatment of wounds by irrigation with surgical solution of chlorinated soda (Dakin's fluid). See *Carrel treatment*, under treatment. **Defer's m.**, treatment of hydrocele by evacuation and cauterization of the sac with silver nitrate. **Degkwitz's m.**, the injection of the serum of patients con-

valescens from uncomplicated measles for the purpose of prophylaxis. **Dehn and Clark's m.** (for chlorides): Oxidize any interfering organic matter with sodium peroxide and then proceed with Volhard and Arnold's method. **Delbastaille's m.**, injection of tumors with osmic acid. **Delore's m.**, manual osteoclasia for correcting genu valgum. **Demme's m.**, treatment of hydrocele by injection of iodine. **Denis' m.** (for magnesium in serum): Remove the calcium by the Clark-Collip method, precipitate as magnesium ammonium phosphate, dissolve the precipitate in tenth normal HCl, reduce it with amino-naphthol-sulphonic acid, and compare the blue color with a standard solution of ammonium magnesium phosphate in 0.1 per cent HCl. **Denis and Leche's m.** (for total sulphate): Add acid and autoclave to decompose protein, then precipitate with barium chloride, dry, and weigh. **Deventer's m.**, treatment of pelvic presentation in labor by developing the shoulders without previously freeing the arms. **diacetic acid, m's for.** See **Folin and Hart's m.**, **Scott and Wilson's m.**, **van Slyke and Palmer's m.**, under method. **direct m.**, in ophthalmoscopy, that in which the ophthalmoscope is held close to the eye examined and an erect virtual image is obtained of the fundus. **direct aeration m.** (for urea in blood). See **Myers' m.**, under method. **Dreyer's m.** (of agglutination): He uses killed (formaldehydeized) stock suspensions of typhoid, paratyphoid, dysentery, and other intestinal organisms instead of twenty-four-hour live cultures. **Duncan's m.**, autotherapy. **Eggleston's m.**, administration of digitalis in large doses frequently repeated, producing rapid digitalization. **Ellinger's m.** (for indican): Precipitate the urine with basic lead acetate and filter. To the filtrate add Obermayer's reagent. Shake out the indigo with chloroform, evaporate off the chloroform, and titrate the residue with potassium permanganate. **Epstein's m.** (for dextrose): A modification of the Lewis and Benedict method, making it possible to make the test with very little blood. **Esbach's m.** 1. A method for the anaerobic cultivation of bacteria in which inoculated roll tubes are set in cold water and then filled with melted gelatin. 2. (for albumin in urine): Precipitate the protein with picric acid, let precipitate settle in a graduated tube, and read the result. **etheral sulphates, m's for.** See **sulphates, etheral, m's for.** **Fichera's m.** See **Fichera treatment, under treatment.** **Ficker's m.** (of agglutination): Cultures of *Bacterium typhosum* killed with formaldehyde or phenol are agglutinated in test tubes by adding some of the patient's serum. **Fiske's m.** (for total fixed base): Remove the phosphates with ferric chloride, convert the fixed bases into sulphates by heating in H_2SO_4 , ignite, take up in water, precipitate the sulphates as benzidine sulphate, and titrate with alkali. **Fiske and Subbarow's m.** 1. (for acid-soluble phosphorus in blood): Destroy organic matter by heating with sulphuric and nitric acids, precipitate the phosphates as magnesium ammonium phosphate, and reduce the precipitate with amino-naphthol-sulphonic acid. Compare the blue color with a standard phosphate solution. 2. (for inorganic phosphates): The phosphates are precipitated as ammonium phosphomolybdate. This is then reduced by amino-naphthol-sulphonic acid and the blue color compared colorimetrically with a standard solution. **fixed base, m. for.** See **Fiske's m.** **flash m.**, a method of pasteurizing milk whereby the milk is brought up to a temperature of 178 F. and chilled at once. Cf. **holding m.** **Flexner and Amoss' m.**, the rapid production of antidyenteric serum by the intravenous injection of living cultures or toxin at intervals of seven days. **Flexner and Jobling's m.** (for the preparation of antimeningococcus serum). See under serum. **Folin's m.** 1. (for acetone): Aerate the acetone from the urine over into an alkaline hypodite solution of known strength. The acetone

is thus changed to iodoform and the excess of iodine is titrated with a standard thiosulphate solution, using starch as an indicator. 2. (for acetone): Micromethod. Aerate the acetone over into a solution of sodium bisulphite and then determine the amount of nephelometric comparison with a standard acetone solution using Scott and Wilson's reagent. 3. (for amino-acids in blood): Make 10 cc. of protein-free blood filtrate slightly alkaline to phenolphthalein. Add 2 cc. of beta-naphtha-quinone solution and place in the dark. The next day add 2 cc. of acetic acid-acetate solution and 2 cc. of 4 per cent thiosulphate solution. Dilute to 25 cc. and compare the blue color with a standard amino-acid solution similarly treated. 4. (for amino-acid nitrogen in blood): Treat the urine with permittit to remove the ammonia and then with beta-naphtha-quinone sulphonic acid. The red color is compared with a standard amino-acid solution. 5. (for ammonia nitrogen): Sodium carbonate is added to the urine to free the ammonia, which is aerated into standard acid and titrated. 6. (for blood sugar): To 2 cc. of neutral protein-free blood filtrate, add 2 cc. of the Folin copper solution and heat in boiling water bath ten minutes. Cool and add 2 cc. of acid molybdate reagent. Dilute to 25 cc. mark and compare the blue color with a standard glucose solution similarly treated. 7. (for creatine): Precipitate the proteins of the blood with picric acid and filter. To the filtrate add sodium hydroxide and compare color with a standard solution of creatine. 8. (for creatine in urine): Change creatine into creatinine by heating at 90 C. for three hours in the presence of third normal HCl. Determine creatinine by picric acid and alkali and deduct the preformed creatinine. 9. (for creatinine urine): To the urine add picric acid and sodium hydroxide and compare the red color with a half normal solution of potassium bichromate. 10. (for etheral sulphates): Remove the inorganic sulphates with barium chloride and then the conjugated sulphates after hydrolyzing with boiling dilute hydrochloric acid. 11. (for inorganic sulphates): Acidify the urine with hydrochloric acid, precipitate with barium chloride, filter, dry, ignite, and weigh. 12. (for protein in urine): Add acetic acid and heat, wash, dry, and weigh the precipitate. 13. (for total acidity): Add potassium oxalate to the urine to precipitate the calcium which would otherwise precipitate at the neutral point, and titrate with tenth normal sodium hydroxide, using phenolphthalein as an indicator. 14. (for total sulphates): Boil the urine for thirty minutes with dilute hydrochloric acid, precipitate with barium chloride, filter, dry, ignite, and weigh. 15. (for urea and allantoin): Decompose the urea by heating with magnesium chloride and hydrochloric acid, distil off the ammonia, and titrate. **Folin's gravimetric m.** (for protein in urine): Precipitate the protein by heat and acetic acid; centrifugalize, wash, dry, and weigh the precipitate. **Folin and Bell's m.** (for ammonia in urine). See **permittit m.** **Folin-Benedict and Myers' m.** (for creatine in urine): To 20 cc. of urine add 20 cc. of normal CHI and autoclave at 120 C. for one-half hour. Neutralize, add picric acid and alkali, and compare the color with a standard solution of potassium bichromate. **Folin and Berglund's m.** (for sugar in normal urine): Remove interfering substances by shaking the urine with Lloyd's alkaloidal reagent and then proceed as in the Folin-Wu method. **Folin, Cannon, and Denis' m.** (for epinephrine): Add Folin's uric acid phosphotungstic reagent and sodium carbonate to the unknown and estimate amount by comparison of blue color with a standard uric acid solution similarly treated. **Folin and Denis' m.** 1. (for albumin): Precipitate the albumin with sulphosalicylic acid and compare the turbidity with that of a standard protein solution. 2. (for Bence-Jones protein): Coagulate the Bence-Jones protein at 60 C., centrifugalize, wash precipitate with 50 per cent alcohol, dry, and

weigh. 3. (*for nitrogen in urine*): Destroy the organic matter in the diluted urine with the phosphoric-sulphuric acid-copper sulphate mixture, add Nessler's reagent, and compare it with a standard ammonia solution. 4. (*for nonprotein nitrogen*): It is much the same as Folin and Wu's method except that the proteins are removed with methyl alcohol and zinc chloride. The alcohol is boiled off and the nitrogen changed into ammonia and nesslerized in the usual way. 5. (*for phenols*): Precipitate interfering substances by adding acid silver lactate solution and colloidal iron. To 20 cc. of the filtrate add 5 cc. of the phosphotungstic phosphomolybdic acid reagent and 15 cc. of a saturated solution of sodium carbonate and compare the blue color, etc. 6. (*for urea*): The same as the method of Folin and Pettibone except that the urine is diluted twenty to one hundred times to prevent sugar from interfering with the test. 7. (*for uric acid in blood*): Remove the proteins by boiling acetic acid and then proceed with Benedict and Hitchcock's method. **Folin and Farmer's m.** (*for total nitrogen*): A modified microchemical Kjeldahl method for urine. Decompose the nitrogenous bodies with sulphuric acid as usual, add alkali, aerate the ammonia over into standard acid, nesslerize, and compare with a standard solution of ammonium sulphate. **Folin and Flander's m.** (*for hippuric acid*): 100 cc. of the urine is evaporated to dryness with 10 cc. of 5 per cent sodium hydroxide. Hydrolyze the residue with nitric acid, shake out the benzoic acid with chloroform, and titrate it with tenth normal sodium alcoholate, using phenolphthalein as indicator. **Folin and Hart's m.** (*for acetone and diacetic acid*): Determine the acetone by Folin's method, then heat the urine with hydrochloric acid to change diacetic acid to acetone, and determine again. **Folin and Macallum's m.** (*for ammonia nitrogen*): To the urine add potassium carbonate and potassium oxalate, aerate the ammonia over into standard acid, nesslerize, and compare with a standard solution of ammonium sulphate. **Folin, McElroy, and Peck's m.** (*for dextrose in urine*): Mix 5 cc. of an acidified 5.9 per cent copper sulphate solution, 1 cc. of 20 per cent sodium carbonate solution and then add 4 to 5 Gm. of phosphate-thiocyanate mixture. Heat and add enough urine to produce a sudden turbidity after not more than five seconds of boiling; 25 mg. of glucose will reduce the 5 cc. of copper solution. **Folin and Peck's m.** (*for dextrose*): To the boiling copper solution of Folin and McElroy run in urine until the color changes from green to yellow. **Folin and Pettibone's m.** (*for urea*): Microchemical. The urea is decomposed by heating with potassium acetate and acetic acid, the ammonia is liberated by sodium hydroxide, aerated over into standard acid, and nesslerized. **Folin and Shaffer's m.** (*for uric acid*): Phosphates and certain organic substances are first precipitated by an acetic acid solution of ammonium sulphate and uranium acetate. The uric acid is then precipitated as ammonium urate and the amount determined by titration with potassium permanganate. **Folin and Wright's m.** (*for nitrogen in urine*): A simplified macro-Kjeldahl method in which the digestion is brought about by a mixture of phosphoric and sulphuric acids aided by ferric chloride, and the liberated ammonia is distilled without the use of a condenser. **Folin and Wu's m. 1.** (*for creatinine*): The color produced by the unknown (protein-free blood filtrate or urine) in an alkaline solution of picric acid is compared in a colorimeter with the color produced by a known solution of creatinine or with a standard solution of potassium bichromate. 2. (*for creatine plus creatinine*): The creatine of a protein-free blood filtrate is changed to creatinine by heating with dilute HCl in an autoclave and the creatinine thus produced together with the preformed is determined colorimetrically after adding an alkaline picrate solution. 3. (*for glucose*): The protein-free blood filtrate is boiled

with a dilute alkaline copper tartrate solution, the cuprous oxide is dissolved by adding a phosphomolybdic-phosphoric acid solution, and the blue color produced is compared with the color from sugar solutions of known strength. 4. (*nonprotein nitrogen*): The total nonprotein nitrogen in the protein-free blood filtrate is determined by setting free the nitrogen as ammonia by the Kjeldahl process, nesslerizing this ammonia, and comparing with a standard. 5. (*for protein-free blood filtrate*): Lake the blood with distilled water, add sodium tungstate and sulphuric acid, and filter. 6. (*for urea*): Change the urea to ammonia by means of urease, and nesslerize. 7. (*for uric acid*): Uric acid is precipitated from the protein-free blood filtrate or from urine by silver lactate, treated with phosphotungstic acid and the blue color compared with the color produced by known amounts of uric acid. **Folin and Youngburg's m.** (*for urea in urine*): The ammonia is removed from the urine by permitt, the urea is changed to ammonium carbonate by urease, and nesslerized directly. **Forlanini-Morelli m.**, treatment of empyema by systematic induction of pneumothorax, continuous aspiration drainage combined with irrigation, and the use of an airtight pneumatic jacket drainage tube. **m. for (volatilizing) formaldehyde gas.** See Aronson's m., Breslaw's m., Brumi's m., lime m., Schlossmann's m., Trillat's m. **formol titration, m's of.** See Benedict and Murlin's m., Henriques and Sorensen's m., Malfatti's m., and Sorensen's m., under method. **Freiburg m.** Same as twilight sleep. See under sleep. **Frey and Gigon's m.** (*for amino-acid nitrogen*): A modified form of Sorensen's method in that the ammonia is aspirated off after adding the barium hydroxide. **Fridericia's m.** (*for alveolar carbon dioxide tension*): The carbon dioxide is absorbed into a solution of potassium hydroxide and the decrease in volume read in percentage in a special apparatus. **Gabaston's hydraulic m.**, treatment of retention of the placenta by filling it with saline solution injected through the umbilical cord. **garnet m.** (*for standardizing disinfectants*): The test objects (spores of *Bacillus anthracis*) are dried on garnets. These are then immersed in the disinfectant for stated periods, washed, and the organisms on them plated for growth. **gasometric m.** (*for urea*): See Stehle's m. **Gerota's m.**, injection of the lymphatics with a dye, such as prussian blue, which is soluble in chloroform or ether, but not in water. **Gilbert's m.**, auto-serotherapy. **Given's m.** (*for peptic activity*): Varying amounts of diluted gastric juice are added to a series of tubes containing pea globulin, the mixtures are incubated, and the amount of digestion noted. **glucose (dextrose), m's for.** See Bang's m., Benedict's m., Benedict and Osterberg's m., Bertrand's m., Folin's m., Folin and Berglund's m., Folin, McElroy, and Peck's m., Folin and Peck's m., Folin and Wu's m., Hagedorn and Jensen's m., life insurance m., Peter's m., Power and Wilder's m., and Sumner's m. **gold number m.** See Lange's test, under tests. **Gram's m.** See under staining. **Greenwald's m.** (*for nonprotein nitrogen*): The proteins are precipitated by trichloroacetic acid; the filtrate is decomposed by sulphuric acid as in the Kjeldahl method; the ammonia is distilled off and the amount titrated with tenth normal sodium hydroxide. **Greenwald and Lewman's m.** (*for titratable alkali of blood*): The protein of the blood is precipitated with an excess of picric acid. Both the free and the total picric acid in the filtrate are then determined. The difference represents the picric acid which is combined with the bases of the blood. **Griffith's m.** (*for hippuric acid*): Extract the hippuric acid with ether. Distil off the ether and destroy urea in the residue with sodium hypobromite solution. Determine the nitrogen in the residue by the Kjeldahl method. **Gross's m.** (*for tryptic activity*): Add increasing amounts of a trypsin solution to a series of tubes of pure, fat-free

casein which have been heated to 40 C. Incubate at 40 C. for fifteen minutes. Test by adding a few drops of acetic acid (dilute) to each tube. A precipitate on acidification indicates that digestion is not complete or lacking; no precipitate indicates digestion. **Grossich's m.**, the use of tincture of iodine as an antiseptic in surgical operations. **Hagedorn and Jensen's m.** (for sugar in blood): Precipitate the protein with zinc hydroxide. Heat the filtrate with potassium ferricyanide solution and determine the amount of ferricyanide reduced by adding an iodide solution and titrating the iodine set free with sodium thiosulphate. **Hall's m.** (for total purine nitrogen): Remove phosphates by means of magnesia mixture and precipitate the purine bodies in a specially graduated tube by means of silver nitrate and ammonium hydroxide. After twenty-four hours read the volume of the purine precipitate. **Hammerschlag's m.** (for specific gravity of blood): Prepare a mixture of benzene and chloroform of about 1.050 specific gravity. Into this let fall a drop of blood and add benzene or chloroform until the drop neither rises nor sinks. Then take the specific gravity of the mixture. **Harris's m.** (for preparing rabies vaccine): The spinal cord from a rabbit killed by infection with fixed virus is removed aseptically, quickly frozen, and dried in a vacuum without allowing it to thaw. **Hart's m.** (for casein in milk): Precipitate the casein from the diluted milk, filter, wash, redissolve in excess of tenth normal potassium hydroxide, and titrate remaining alkali with tenth normal HCl. The difference is casein. **Hauser's m.**, a method for the anaerobic cultivation of bacteria in which hydrogen gas is passed through the container until the air is removed. **Heintz's m.** (for uric acid): Precipitate the urine by adding hydrochloric acid, filter off the crystals, wash, dry, and weigh. **hemoglobin, m. for.** See acid hematin m. **Henderson and Palmer's m.** (for hydrogen ion concentration): The reaction of the urine is estimated by matching colors produced by certain indicators in the urine and in solutions of known hydrogen ion concentration. **Henriques and Sorenson's m.** (for amino-acid nitrogen by solution of formaldehyde titration). See Sorenson's m. **Herter-Foster m.** (for indole in feces modified by Bergeim): Make the feces alkaline and distill. Make the distillate acid and distill again. To the second distillate add beta-naphthaquinone sodium monosulphonate and alkali. Extract the blue color with chloroform and compare it with a standard solution of indole containing 0.1 mg. of indole per cubic centimeter. **hippuric acid, m's for.** See Folin and Flander's m., Griffith's m., and Raaf's m., under method. **Hirschberg's m.**, measurement of the deviation of a strabismic eye by observing the reflection of a candle from the cornea. **Hodgen's m.**, treatment of traumatic tetanus by large doses of Fowler's solution. **holding m.**, a method of pasteurizing milk whereby the milk is heated to 65 C. and kept at that temperature for from thirty to forty-five minutes. Cf. flash m. **Hunt's m.** (for the activity of thyroid products): Mice on a cracker diet are fed varying amounts of the thyroid product for ten days. They are then injected with 0.4 mg. of acetonitril per gram of body weight. If the product is active the treated mice usually live, whereas untreated mice are killed in two hours by 1.2 mg. per gram of body weight. **Hunter and Given's m.** (for uric acid and purine bases): Precipitate and decompose the precipitate as in the Krueger-Schmidt method. Determine the uric acid in an aliquot part and in the remainder destroy the uric acid by oxidation and determine the purine bases as in the Krueger-Schmidt method. **hydrogen ion concentration, m. for.** See Henderson and Palmer's m., and Levy, Rowntree, and Marriott's m., under method. **indicax, m. for.** See Askenstedt's m., Ellinger's m., under method. **indole, m's for.** See Bergeim's m.,

Herter and Foster's m. inorganic sulphates, m's for. See sulphates, inorganic, m's for, under method. **iron, m. for.** See Walker's m., and Wolter's m., under method. **Issayeff's m.**, intra-peritoneal injection of saline solution twenty-four hours previous to an abdominal operation: done to promote local leukocytosis. **Karr's m.** (for urea in blood): Change the urea to ammonium carbonate by means of urease, nesslerize directly, and compare the color with that of a standard urea solution similarly treated. **Kendall's m.** (for iodine in thyroid tissue): Oxidize the organic matter by fusion in KNO₃ and strong KOH. Acidify, oxidize with bromine, add an excess of KI, and titrate the liberated iodine with sodium thiosulphate. **Kirstein's m.**, direct inspection of the larynx by pushing the head far back and depressing the tongue. **Kjeldahl's m.** (1883), a method of determining the amount of nitrogen in an organic compound. It consists in heating the material to be analyzed with strong sulphuric acid. The nitrogen is thereby converted to ammonia, which is distilled off and caught in tenth normal solution of sulphuric acid. By titration the amount of ammonia is determined, and from this the amount of nitrogen is estimated. **Kluge's m.**, induction of premature labor by dilatation of the cervix by specially prepared sponges. **Koch and McMeekin's m.** (for total nitrogen): Destroy organic matter with sulphuric acid and hydrogen peroxide and nesslerize the resulting solution directly. **Kolle's m.**, a method of inoculation or vaccination in which the skin is shaved and the culture material rubbed vigorously into the shaved area. It is used especially in the diagnosis of plague. **Kolle and Pfeiffer's m.**, the same as the Gruber-Widal reaction except that the serum dilutions remain as made (are not doubled) and the bacteria are added by means of a platinum wire loop. **Korotkow's m.**, the auscultatory method of determining blood pressure. **Kramer and Gittleman's m.** (for sodium in serum): Dry and ash the serum. Take it up in 0.1 per cent HCl and make slightly alkaline with KOH. Precipitate with the pyroantimonate reagent and alcohol, dissolve precipitate in strong HCl, add potassium iodide, and titrate with sodium thiosulphate. **Kramer and Tisdall's m.** (for potassium in serum): Precipitate with sodium cobaltinitrite reagent, treat precipitate with acid permanganate solution, then with sodium oxalate, and titrate with standard permanganate. **Kraus and Doerr's m.**, for the production of dysentery antitoxin by the injection of sterile dysentery toxin. **Kristeller's m.**, a method of expressing the fetus in labor. The head should be in the vulva and the abdomen must be sufficiently relaxed so that the assistant may grasp the fundus. The grip on the fundus is made by the fingers of the two hands parallel behind and the thumb in front, the line of force being in the direction of the axis of the inlet. The expression should be done in one or two sustained efforts. **Krogh's m.** (for urea): The urea is oxidized by sodium hypobromite to carbon dioxide and nitrogen in an alkaline solution which absorbs the carbon dioxide. The remaining nitrogen is then measured. **Krönig's m.**, sterilization of catgut by heating for an hour in cumol at 165 C. **Krueger and Schmidt's m.** (for uric acid and purine bases): Precipitate the uric acid with copper sulphate, decompose the precipitate with sodium sulphite, acidify, concentrate, and let uric acid crystals separate. Determine the nitrogen in them by the Kjeldahl method. Reprecipitate the purine bases with copper sulphate, filter, wash, and determine the nitrogen in the precipitate by the Kjeldahl method. **Kruse and Shiga's m.**, for the production of antidyenteric serum by the subcutaneous injection of whole bacteria. **Kwilecki's m.** (for albumin): 10 drops of a 10 per cent solution of ferric chloride are added to the urine before preceeding with the regular method of Esbach. **Laborde's m.**, the making of rhythmic-

al traction movements on the tongue in order to stimulate the respiratory center in asphyxiation. **lactalbumin, m. for**, remove casein from the milk with magnesium sulphate, add Alman's reagent to the filtrate, determine the nitrogen in the precipitate with the Kjeldahl method, and multiply the result by 6.37. **lactic acid, m's for**. See *Clausen's m.*, and *Cori's m.* **Leishman's m.**, a method for determining the phagocytic index by adding the bacteria to a leukocytic cream from the patient's blood, and, after incubation, counting the number of bacteria within the phagocytes. **Leroux's m.**, treatment of placenta prævia by tamponade of the vagina. **Levy, Rowntree, and Marriott's m.** (*for hydrogen ion concentration of blood*): Dialyze the blood through a cello-dion tube against neutral physiologic salt solution; then match the color produced by phenolsulphonphthalein in the dialysate and in solution of known hydrogen ion concentration. **Lewis and Benedict's m.** (*for dextrose*): The proteins of the blood are precipitated by means of picric acid, sodium carbonate is added, and the color of the picramic acid solution is compared with that from a standard glucose solution. **Lewisohn's m.**, a method of indirect transfusion by adding sodium citrate to the blood. **Liborius's m.**, a method for the anaerobic cultivation of bacteria in which the bacteria are placed in deeply filled tubes of agar or gelatin from which the oxygen has been removed by boiling. **life insurance m.** 1. (*for albumin in urine*): The clarified urine is treated with sulphosalicylic acid and the turbidity is compared with permanent turbidity standards. 2. (*for glucose in urine*): Add picric acid and alkali and compare the red color with permanent sugar standards made by mixing varying amounts of ferric chloride and cobalt chloride in dilute HCl. **lime m.**, a method of generating or volatilizing formaldehyde gas. Forty per cent formaldehyde, containing 10 per cent of sulphuric acid, is poured over quicklime in a suitable container. One and a half to 2 pounds of lime should be used for each pint of the solution. **Lindemann's m.** (*for transfusion*): One needle cannula is placed in the arm of the donor and one in the arm of the patient. Syringes are filled from the donor and emptied into the recipient through the cannulas. **Lorthiore's m.**, radical cure of hernia by dissection and extirpation of the sac without opening the inguinal canal. **Lyman's m.** (*for calcium*): Precipitate the calcium from the protein-free blood filtrate or from urine as calcium oxalate, redissolve in dilute acid and reprecipitate as calcium ricinate, and determine amount nephelometrically. **Lyons m.** See *Meltzer-Lyon test*, under *tests*. **MacLachlan m.**, a method of conditioning liquid sludge by the application of sulphur dioxide gas. **magnesium, m's for**. See *Denis's m.* and *McCruden's m.*, under *method*. **Malfatti's m.** (*for ammonia nitrogen by solution of formaldehyde titration*): Add potassium oxalate to the urine and make neutral to phenolphthalein with tenth normal sodium hydroxide; add the neutral solution of formaldehyde and titrate again. **Marfan's m.**, puncture of the pericardium in which the trocar is passed just below the xiphoid cartilage in the middle line, directed obliquely from below upward, passing for 2 cm. along the posterior surface of the sternum. It is then directed somewhat obliquely backward, passing into the gap in the sternal insertion of the diaphragm, entering the pericardium at its base. **Marmo's m.**, a method of producing artificial respiration in asphyxiated infants; the surgeon holds the infant suspended with his hands in its axillae, raises it, and then suddenly lets it drop a foot or two, which will produce inspiration; expiration is then produced by pressure of the hands against the chest wall. **Marriott's m.** (*for alkali reserve*): The patient rebreathes the air in a bag until its carbon dioxide tension is virtually that of venous blood. This air is then bubbled through a standard bicarbonate solution until the solution is saturated

and the color produced is compared with standard color tubes. **Marshall's m.** (*for urea*): The urea is changed into ammonium carbonate by the enzyme urease and the ammonia titrated with tenth normal hydrochloric acid, using methyl orange as indicator. **McArthur's m.**, -enteroclysis through a catheter placed in the common duct after operations on the gallbladder. **McCruden's m.** (*for calcium and magnesium*): Make 200 cc. of urine faintly acid to litmus, add 10 cc. of concentrated hydrochloric acid, precipitate with oxalic acid, filter, ignite, and weigh as calcium oxide, or filter and titrate the precipitate with potassium permanganate. This gives the calcium. For the magnesium, add to the filtrate from the calcium, nitric acid, evaporate to dryness, and heat until residue fuses. Take up in water, add sodium acid phosphate and ammonia, filter, wash, ignite, and weigh as the pyrophosphate. **McIntosh and Fildes' m.**, a portion of platinized or palladinized asbestos is placed in the anaerobic jar and hydrogen gas passed in until no oxygen remains. The oxygen is removed by uniting with the hydrogen under the catalytic influence of the platinum black. **McLean and van Slyke's m.** (*for chlorides*): Precipitate the chlorides from oxalated plasma with an excess of silver nitrate and titrate the excess with potassium iodide and starch. **Meltzer's m.**, intratracheal insufflation of air containing an anesthetic vapor; employed in thoracic surgery. **Meltzer-Lyon m.** See *Meltzer-Lyon test*, under *tests*. **Mercière's m.**, embalming treatment of infected wounds designed to fill the wound with a soothing antiseptic which shall inhibit infection until proper treatment shall be given. The formula is 10 Gm. each of guaiacol, eucalyptol, and balsam of Peru; 10 Gm. of iodoform, 100 Gm. of alcohol, and enough ether to make 1 liter. **Messinger and Huppert's m.** (*for acetone*): The same as the method of Folin and Hart except that the acetone is distilled instead of aspirated. **Mett's m.** (*for peptic activity*). See *Nirenstein and Schiff's m.* **Meulengracht's m.** (*for bile pigment in serum*): The serum is diluted until the yellow color corresponds to that of a standard potassium bichromate solution. **Meyer's m.** (*for creatine*): A modification of Folin and Benedict's method in that the creatine is changed into creatinine after adding hydrochloric acid by digesting in an autoclave. **Miles' acid m.**, a method of treating sewage by the fumes of burning sulphur. **Milne's m.**, a method of prophylaxis against the spread of infectious diseases. The patient's head and chest are veiled with a gauze curtain which is sprayed with a tincture of eucalyptus and an antiseptic three times a day. Every three hours the patient's throat and nasopharynx are painted with iodized glycerin and an antiseptic oil is instilled into the nasal passages. **Minkowski's m.** Same as *Naumyn-Minkowski m.* **Mohr's m.** (*for chlorides*): Oxidize interfering organic matter by igniting with potassium nitrate. To the solution of the ash add potassium chromate and titrate with standard silver nitrate until the red silver chromate appears. **Mojon's m.**, injection of cold water to which acids have been added through the umbilical vein into the placenta with a view to facilitating its detachment from the uterus after birth. **Morelli m.** See *Forlanini-Morelli m.* **Morison's (Rutherford) m.**, a method of treating wounds which consists of a thorough opening up and mechanical cleansing of the wound, sponging of it with alcohol, and the application to the raw surface of a thin layer of a paste consisting of 1 part of bismuth subnitrate, 2 parts of iodoform, and enough paraffin to make a soft paste. This paste is known as bismuth iodoform paraffin paste, or in vernacular in the British Isles as bipp or B. I. P. The wound is then sutured without drainage. **Müller's m.** Same as *Deventer's m.* **Murphy m.** 1. Suture of an artery by invaginating the ends over a cylinder in two pieces which can

be removed. 2. Continuous proctoclysis; the continuous administration per rectum of salt solution, drop by drop, with the patient in the Fowler position: used in infections of the peritoneum. Called also *Murphy drip*. 3. See *Murphy treatment*, under *treatment*. **Myers' m.** (for *urea in blood*): Change the urea to ammonium carbonate by the action of urease, aerate off the ammonia into an acid solution, and nesslerize. **Myers and Wardell's m.** (for *cholesterol*): Dry the blood on plaster of paris and extract the cholesterol with chloroform. Add acetic anhydride and sulphuric acid and compare the color with that of a standard solution of cholesterol similarly treated. **Nageli's m.** See *Nageli's treatment*, under *treatment*. **Naunyn-Minkowski m.**, palpation of the kidney after first dilating the colon with gas. **Neisser and Wechsberg's m.** (for *testing the bactericidal power of blood*): The patient's serum is inactivated and diluted as desired. To each dilution is added a constant amount of the culture to be tested and some nonspecific complement. The mixtures are incubated and then plated. **Nikiforoff's m.**, a method of fixing blood films by placing them for from five to fifteen minutes in absolute alcohol, pure ether, or equal parts of alcohol and ether. **Nirenstein and Schiff's m.** (for *peptic activity*): Mett's tubes are placed in the solution to be tested and incubated for twenty-four hours. The length of the column digested at each end is then determined. **nitrogen, amino-acid, m's for.** See *Benedict and Murlin's m.*, *Frey and Gigon's m.*, *Henriques and Sorenson's m.*, *Sorenson's m.*, and *van Slyke's m.*, under *method*. **nitrogen, ammonia, m's for.** See *Folin's m.* (3), *Folin and Bell's m.*, *Folin and Macallum's m.*, *Malfatti's m.*, and *permutit m.* **nitrogen, nonprotein, m's for.** See *Folin and Denis' m.* (2), *Folin and Wu's m.* (3), and *Greenwald's m.*, under *method*. **nitrogen, purine, m. for.** See *Hall's m.*, under *method*. **nitrogen, total, m's for.** See *Arnold and Gunning's m.*, *Bock and Benedict's m.*, *Folin and Denis' m.*, *Folin and Farmer's m.*, *Folin and Wright's m.*, *Koch and McMeekin's m.*, *Taylor and Hulton's m.* **Noguchi's m.** (for *growing Treponema pallidum*): Place in deep tubes blood serum 1 part, distilled water 3 parts, and a small piece of fresh sterile tissue (kidney or testicle). Cover with paraffin oil, inoculate, and incubate in an anaerobic jar. Or simply add the piece of sterile tissue to a deep tube of serum agar or ascitic agar and cover with oil. **Nolf-Depage m.**, treatment of rebellious streptococcal septic pyemia by injection of peptones. **nonprotein nitrogen, m's for.** See *nitrogen, nonprotein, m's for*, under *method*. **Oberst's m.**, local anesthesia produced by injecting saline solution or distilled water into the subcutaneous connective tissue. **Ogata's m.**, a method of stimulating respiration by stroking the chest. **Olshausen's m.**, a method of operating for umbilical hernia by reduction without opening the sac, and then suturing the skin. **Orsi-Grocco m.**, palpatory percussion of the heart. **Orskov m.**, a method of obtaining single cell cultures of bacteria. **Osborne and Folin's m.** (for *total sulphur in urine*): Destroy the organic matter in the concentrated urine and oxidize the sulphur by fusing with sodium peroxide. Precipitate with barium chloride, wash, dry, ignite, and weigh. **oxalic acid, m's for.** See *Autenreith and Barth's m.* and *Salkowski's m.*, under *method*. **Pachon's m.**, cardiography with the patient lying on his left side. **panoptic m.** See *Giemsa's staining method*. **Parker's m.** (for *indican*). See *Askenstedt's m.* **Pasteur's m.**, a method of attenuating bacteria by growing them at a temperature higher than body temperature, usually 42 to 43 C. for *Bacillus anthracis*. **Pavlov's m.**, study of the changes in the salivary reflex produced by psychic influence. **Payr's m.** 1. The use of absorbable cylinders of magnesium for performing suture of blood vessels. 2. Transplantation of blood vessels so that they hang free

in the ventricle of the brain in order to absorb the fluid in hydrocele. **peptic activity, m's for.** See *Given's m.*, *Mett's m.*, and *Nirenstein and Schiff's m.* **Percy m.** See *Percy cautery*, under *cautery*. **permutit m.** (for *ammonia in urine*): Add permutit to the urine and shake for five minutes. Wash the permutit ammonia compound several times, add sodium hydroxide, and nesslerize. Compare the color with a standard solution of ammonium sulphate. **Peter's m.** (for *dextrose*): Boil the unknown in an excess of the reagent, filter off the reduced copper, and titrate the filtrate with potassium iodide and standard thio-sulphate solution. **Petroff's m.**, a method of isolating the *Bacillus tuberculosis* from the sputum. Digest the sputum in sodium hydroxide solution at 37.5 C. for twenty to thirty minutes. Neutralize with hydrochloric acid and centrifugalize. Spread several loops of the sediment on beef infusion-glycerin-egg medium to which has been added gentian violet in the strength of 1 : 10,000. **Petruschky's m.**, percutaneous tuberculin treatment by inunction with an ointment containing decomposed tubercle bacilli. **Pfeiffer's m.** (for *testing the bactericidal activity of blood*). See *Pfeiffer's phenomenon*, under *phenomenon*. **phenols, m. for.** See *Benedict and Theis' m.*, *Folin and Denis' m.*, and *Tisdall's m.*, under *method*. **phosphates, m's for.** See *Benedict and Leche's m.*, *Benedict and Theis' m.*, *Bloor's m.*, *Fiske and Subbarow's m.* **Plimmer and Skelton's m.** (for *allantoin*): Determine the urea and allantoin by Folin's method (15), and the urea alone by Marshall's urease method. The difference is allantoin. **Ponndorf's m.**, treatment of tuberculosis by rubbing old tuberculin or Ponndorf's vaccine into cutaneous scarifications. **potassium, m. for.** See *Kramer's m.* and *Tisdall's m.*, under *method*. **Power and Wilder's m.** (for *glucose in urine*): Remove interfering substances with mercuric sulphate. To the filtrate add alkaline ferricyanide; heat for ten minutes, cool, and add KI and an acid zinc sulphate solution. Titrate the liberated iodine with standard thio-sulphate solution. **protein in urine, m's for.** See *albumin in urine, m's for*. **protein-free blood filtrate, m's for.** See *Folin's m.* (4), *Folin and Denis' m.* (5), and *Folin and Wu's m.* (4), under *method*. **Purdy's m.**, the use of the centrifuge for the determination of the quantity of albumin, chlorides, sulphates, etc. **purine bodies, m's for.** See *Hunter and Given's m.*, *Krueger and Schmidt's m.*, *Salkowski's m.*, *Salkowski and Arnstein's m.*, and *Welker's m.*, under *method*. **purine nitrogen, m's for.** See *nitrogen, purine, m. for*, under *method*. **Puzos' m.**, early rupture of the membranes in cases of placenta praevia. **rabies vaccine, m. for.** See *Harris' m.*, *Pasteur's m.*, and *Terrell's m.* **Raiziss and Dubin's m.** (for *etheral and inorganic sulphates*): Oxidize the urine by Benedict's method, precipitate the sulphate with benzenidine hydrochloride, as in the method of Rosenheim and Drummond, and titrate with tenth normal potassium permanganate. **Reclus' m.**, the induction of local anesthesia by cocaine. **Rehfuß's m.**, after an Ewald test meal a tube is passed into the stomach and small quantities of the stomach contents are removed at fifteen-minute intervals and examined. **Reichert's m.** (for *crystallizing oxyhemoglobin*): add to the blood (defibrinated, laked, or whole) 1 to 5 per cent of ammonium oxalate crystals and examine under the microscope. **Rendu's m.**, treatment of tuberculous peritonitis by smearing the peritoneum with camphor naphthol. **Ribera's m.**, the induction of anemia in the legs by compressing the waist with an elastic spica. **Rideal-Walker m.** (for *determining the carbolic coefficient of disinfectants*): A method for determining the dilution at which a disinfectant kills the test organism in the same time as a control solution of phenol does. **Roaf's m.** (for *the preparation of hippuric acid*): Add 125 Gm. of

ammonium sulphate and 7.5 Gm. of concentrated sulphuric acid to 500 cc. of urine of a horse. Huppuric acid will crystallize out. **Rosenheim and Drummond's m.** (for ethereal and inorganic sulphates): Precipitate the sulphates with benzidine hydrochloride and titrate the acid in the benzidine sulphate with tenth normal potassium hydroxide. **Roux's m.**, the inoculated liquid agar or gelatin is aspirated into narrow sterile tubes which are then sealed off at each end. **Ruhemann's uricometer m.** (for uric acid): Urine is added in a specially graduated tube to a mixture of carbon bisulphide and iodine solution until the carbon bisulphide is decolorized. **Salkowski's m.** (for purine bodies and uric acid): Precipitate as silver magnesium salts, decompose the precipitate with hydrogen sulphide, precipitate uric acid by means of sulphuric acid, and the purine bodies as silver salts. **Salkowski and Arnstein's m.** (for purines): Precipitate the urine with magnesia mixture and to the filtrate add 3 per cent ammoniacal silver nitrate solution. Wash the precipitate and determine the nitrogen in it by the Kjeldahl method. The uric acid nitrogen is separately determined and deducted. **Salkowski-Autenrieth and Barth's m.** (for oxalic acid): Precipitate the oxalic acid by means of calcium chloride. Dissolve the precipitate in hydrochloric acid, extract the oxalic acid with ether, and reprecipitate it as calcium oxalate. **Scherer's m.** (for proteins): Precipitate the protein by boiling with dilute acetic acid, wash, dry, and weigh. **Schlösser's m.** See Schlösser's treatment, under treatment. **Schlossmann's m.**, to prevent polymerization, 10 per cent of glycerin is added to formaldehyde before it is volatilized by heat. **Schüller's m.**, a method of performing artificial respiration by rhythmic raisings of the thorax by means of the fingers hooked under the ribs. **Schultze's m.**, treatment of asphyxia neonatorum by swinging the inverted infant. **Scott and Wilson's m.** (for acetone and diacetic acid): Distil the acetone into an alkaline solution of basic mercuric cyanide, filter, and titrate the precipitate with potassium thiocyanate. **Shaffer's m.** (for creatinine): Folin's method adapted to very dilute solutions. **Shaffer and Marriott's m.** (for acetone bodies): Precipitate the urine with basic lead acetate and ammonia. Distil off the acetone (acetone and diacetic acid). Oxidize the residue with potassium bichromate and distil again (beta-hydroxybutyric acid). Titrate the distillates with standard iodine and thiosulphate solutions. **Shohl and Pedley's m.** (for calcium in urine): Oxidize the urine with ammonium persulphate, precipitate the calcium as oxalate, add H_2SO_4 to the precipitate, and titrate with potassium permanganate. **Sjoqvist's m.**, quantitative estimation of the urea in the urine by means of a baryta mixture. **sodium m. for.** See **Kramer and Gittleman's m.**, under method. **Sorensen's m.** (for amino-acids by solution of formaldehyde titration): Titrate the urine for total acidity using phenolphthalein as indicator, add fresh solution of formaldehyde (15 cc. of formalin, 30 cc. of water, and sufficient sodium to make it faintly alkaline to phenolphthalein), and titrate again. **Souligoux-Morestin m.**, the use of ether lavage of the peritoneal cavity in acute infections of the abdominal and pelvic viscera. **specific gravity, m. for.** See **Hammerschlag's m.** **Spengler's m.**, a method of examining the sputum for tubercle bacilli by treating it with an equal quantity of weak sodium carbonate solution, then with pancreatine, and then with crystallized carboic acid. **Stammer's m.** (for glucose in blood): Precipitate blood proteins by boiling with acid sodium sulphate and treatment with dialyzed iron. In a test tube place 20 cc. of blood filtrate, 2 drops of a 20 per cent solution of sodium hydroxide, and 1 cc. of a 0.0075 per cent solution of methylene blue. Boil until the blue color is discharged. The length of time required indicates the amount of sugar present.

Time is counted from the beginning of vigorous boiling: thirty-seven seconds indicates 0.3 per cent sugar, sixty seconds, 0.225 per cent; one minute twenty-five seconds, 0.175 per cent; one minute fifty-five seconds, 0.125 per cent; and two minutes forty-five seconds, 0.075 per cent. **Stehle's m.** (for urea): Decompose the urea in a van Slyke pipet by sodium hypobromite and measure the nitrogen. **Steinach's m.** See *Steinach's operation*, under operation. **Stockholm and Koch's m.** (for total sulphur in biological material): The material is disintegrated by heating in strong sodium hydroxide, then oxidized with 30 per cent H_2O_2 , and then with nitric acid, and bromine. Precipitate the sulphuric acid with barium, wash, dry, ignite, and weigh. **sulphates, ethereal, m's for.** See *Folin's m.* (5), *Raiziss and Dubin's m.*, and *Rosenheim and Drummond's m.*, under method. **sulphates, inorganic, m's for.** See *Folin's m.* (6), *Raiziss and Dubin's m.*, and *Rosenheim and Drummond's m.*, under method. **sulphur, total, m's for.** See *Benedict's m.* (2), *Benedict and Denis' m.*, *Denis and Leche's m.*, *Folin's m.*, *Osborne and Folin's m.*, and *Stockholm and Koch's m.*, under method. **Sumner's m.** (for sugar in urine): Heat 1 cc. of urine and 3 cc. of Sumner's dinitrosalicylic acid reagent, dilute to 25 cc. and compare the color with that of a standard sugar solution similarly treated. **Taylor and Hulton's m.** (for total nitrogen): Similar to Folin and Farmer's method except that small amounts of sulphuric acid are used and the ammonia is nesslerized in the original tube without being aerated over into acid. **Terrell's m.** (for preparing rabies vaccine): The spinal cord from a rabbit killed by infection with fixed virus is removed aseptically, ground to a fine suspension, and killed with carbolic acid (2 per cent). **Thézac-Porsmeur m.**, heliotherapy of suppurating wounds by concentrating the sun's rays on the part by means of a large double convex lens mounted on a cylinder of canvas three feet long. **thread m.** (for standardizing disinfectants): Pieces of thread are immersed in a culture of the test organism, dried, exposed to the action of the disinfectant, washed, then placed on suitable culture medium, and incubated for growth. **thyroid activity, m. for.** See *Hunt's m.* **Tisdall's m.** (for phenols in urine): Extract the phenolic substances from the urine with ether and then shake them from the ether with 10 per cent NaOH. Neutralize and proceed as in the Folin and Denis method. **total acidity, m. for.** See *Folin's m.*, under method. **total fixed base, m. for.** See *Fiske's m.* **total nitrogen, m. for.** See *nitrogen, total, m. for.*, under method. **total sulphur, m. for.** See *sulphur, total, m. for.*, under method. **toxin-antitoxin m.** See *Behring's m.* **Tracy and Welker's m.** (for deproteinizing urine): A method depending on the use of aluminum hydroxide cream. **Trillat's m.**, volatilization of formaldehyde in an autoclave under pressure to prevent polymerization. **tryptic activity, m. for.** See *Gross' m.* **Tuffier's m.**, Corning's spinal anesthesia. See under anesthesia. **turbidity m.** (for albumin). See *Folin and Denis' m.* **uranium acetate m.** (for phosphorus): Add sodium acetate and acetic acid to the urine, heat to boiling, and titrate with a special uranium acetate solution. **urea, m's for.** See *autoclave m.*, *Benedict's m.*, *Clark and Collip's m.*, *direct aeration m.*, *Folin and Denis' m.*, *Folin and Pettibone's m.*, *Folin and Wu's m.*, *Folin and Youngburg's m.*, *Karr's m.*, *Krogh's m.*, *Marshall's m.*, *Myers' m.*, *Stehle's m.*, and *van Slyke and Cullen's m.*, under method. **urease m.** See *Marshall's m.* and *van Slyke and Cullen's m.* (2), under method. **uric acid, m's for.** See *Benedict's m.*, *Benedict and Franke's m.*, *Benedict and Hitchcock's m.*, *Folin and Denis' m.* (5), *Folin and Shaffer's m.*, *Folin and Wu's m.* (6), *Heintz's m.*, *Hunter and Given's m.*, *Krueger and Schmidt's m.*, *Ruhemann's m.*, and *Salkowski's m.*, under method. **van Gehuchten's m.**, fixing of a

histologic tissue in a mixture of glacial acetic acid 10 parts, chloroform 30 parts, and alcohol 60 parts. **van Slyke's m.** (for amino-nitrogen): The unknown is treated with nitrous acid in a special apparatus and the nitrogen liberated is measured. **van Slyke and Cullen's m.** 1. (for the carbon dioxide in blood, or for the alkali reserve of blood): Freshly prepared oxalated plasma is brought into equilibrium with the carbon dioxide of expired air, acid is then added to a measured amount of the blood, the carbon dioxide is pumped out, and measured. 2. (for urea): The urea is changed into ammonium carbonate by means of the enzyme urease, the ammonia is aerated over into standard acid, and the excess titrated. **van Slyke and Fitz's m.** (for alkali reserve): Collect the urine for a two-hour period between meals and note amount and determine the ammonia and the titratable acid by Folin's methods. The plasma carbon dioxide capacity (C) may be calculated from the

formula $C = 80 - 5 \sqrt{\frac{D}{W}}$ where D = rate of ex-

cretion per twenty-four hours, W = body weight in kilograms. **van Slyke and Meyer's m.** (for amino-acid nitrogen): Precipitate the proteins of the blood by means of alcohol and then proceed by van Slyke's nitrous acid method. **van Slyke and Palmer's m.** (for organic acids in urine): Remove carbonates and phosphates and titrate with acid from the turning point for phenolphthalein to the turning point for tropaeolin OO. **Volhard and Arnold's m.** (for chlorides): Acidify the urine with nitric acid and add a known amount of silver nitrate. Titrate excess of silver nitrate with ammonium sulphocyanate, using ferric thiocyanate as indicator. **Volhard and Harvey's m.** (for chlorides): This differs from the method of Volhard and Arnold in that the silver chloride is not filtered out, but the excess of silver nitrate is titrated in the original mixture. **Walker's m.** (for iron in foods): Ignite sample, cool, and dissolve in dilute HNO_3 . Filter, oxidize, filtrate with H_2O_2 , add potassium thiocyanate and compare color with standard iron solution, similarly treated. **Wallace and Diamond's m.** (for urobilinogen): Add Ehrlich's aldehyde reagent to a series of dilutions of the urine, note the highest dilution which shows a faint pink coloration, and express the result in terms of this dilution. **Wardrop's m.**, treatment of erectile tumors by the application of potassa fusa. **Welcher's m.**, determination of the total blood volume by bleeding and then washing out the blood vessels. **Welker's m.** (for purine bodies): Remove the phosphates with magnesia mixture, then precipitate the purine bodies with silver nitrate and ammonium hydroxide. Determine nitrogen in the precipitate by Kjeldahl's method. **Welker and Marsh's m.** (for dairy-fying milk): A method using aluminum hydroxide. **Whitehorn's m.** (for chlorides in blood): To the protein-free blood filtrate add nitric acid, then heat, and add an excess of silver nitrate. Titrate excess silver with thiocyanate, using ferric ammonium sulphate as indicator. **Wiechowski and Handorsky's m.** (for allantoin): Precipitate the urine with phosphotungstic acid, with lead acetate, and with silver acetate to remove chlorides, ammonia, and basic substances. Then add sodium acetate and 0.5 per cent mercuric acetate to precipitate the allantoin, which may be weighed, submitted to a Kjeldahl, or titrated with ammonium thiocyanate. **Wolter's m.** (for iron): Add nitric acid to urine, evaporate to dryness, ignite, oxidize the iron with hydrogen peroxide, add potassium iodide and starch, and titrate excess of iodine with one-hundredth normal thiosulphate. **Wright's m.** 1. Treatment of wounds by irrigating first with hypertonic salt solution and then with isotonic salt solution. Vaccines may be used as adjuvants. Finally the wound is closed. 2. A method for the anaerobic cultivation of bacteria in which the inoculated bouillon is drawn into a glass tube pro-

vided at each end with rubber tubes and retained there by kinking the tubes. 3. (for determining the bactericidal power of blood): To fixed amounts of the patient's serum is added decreasing amounts of the culture to be tested, incubated for twenty-four hours and then planted in nutrient bouillon. The largest number of bacteria that a constant quantity of serum is able to kill measures its bactericidal power. **Wright's modification of Buchner's m.**, the alkaline solution of pyrogallol is absorbed into the absorbent cotton stopper of the test tube, which is then pushed down far enough to permit the insertion of a rubber stopper. **Wyeth's m.**, treatment of angiomas by the injection of boiling water. **Ziehl-Neelsen's m.** See under stains, table of. **Zsigmondy's gold number m.** Same as *Lange's test*. See under tests.

methodism (meth-'od-izm). The system or school of the methodists.

methodists (meth-'od-ists). An ancient sect or school of medicine, which based the practice of the art on exact rules and theories as contrasted with experience. This school followed that of the empirics and dogmatists, and was founded by Themison about 50 B. C. The methodists concentrated their attention on the pores; an acute disease being a state of contraction (status strictus), while chronic disease was a state of relaxation (status laxis) of the pores.

methodology (meth-'od-'ol-'o-je). The science of method; the science which deals with the principles of procedure in research and study.

methomania (meth-'o-ma-'ne-ah) [$\mu\epsilon\theta\eta$ drunkenness + $\mu\alpha\lambda\iota\alpha$ madness]. Insanity caused by the habitual misuse of alcoholic drinks.

methonal (meth-'o-nal). A hypnotic agent resembling sulphomethane, acetone dimethyl sulphone, $(\text{CH}_3)_2\text{C}(\text{SO}_2)\text{CH}_3$. Dose, 15-30 grains (1-2 Gm.).

methoxycaine (meth-'oks-e-'kaf'e-in). A white amorphous or crystalline agent, $\text{C}_8\text{H}_9(\text{OCH}_3)\text{N}_4\text{O}_2$: a local anesthetic and antineuralgic. Hypodermatic dose, 4 grains (0.25 Gm.).

methoxyl (meth-'ok-'sil). The chemical group, $\text{CH}_3\text{O}-$.

methozin (meth-'o-'zin). Same as *antipyrine*.

methyl (meth-'il) [$\mu\epsilon\theta\eta$ wine + $\delta\lambda\eta$ substance]. An atom group, CH_3 , from wood spirit. **m.**

acetanilide, **m. acetylsalicylate**. See *methyl-acetanilide*. **m. alcohol**, wood spirit, methanol, CH_3OH , distilled from wood: sedative, narcotic, and poisonous. **m. aldehyde**, formaldehyde.

m. amylketone, a volatile oil, $\text{C}_8\text{H}_{17}\text{CO}\cdot\text{CH}_3$, found in oil of cloves. **m. anthranilate**, a volatile oil, methyl ortho-amono-benzoate, $\text{NH}_2\cdot\text{C}_6\text{H}_4\cdot\text{CO}\cdot\text{O}\cdot\text{CH}_3$, the odoriferous constituent of neroli oil. **m. atropine**, two salts are used as mydriatics, the nitrate and the bromide. See *eumydrin* and *atropine methylbromide*, under *atropine*.

m. chloride, the hydrochloric acid ester of methyl alcohol, CH_3Cl . It is a gas which converted into a liquid by pressure is a valuable local anesthetic when used as a spray. **m. chlor-sulphonate**, an extremely irritant war gas, $\text{CH}_3\cdot\text{SO}_2\cdot\text{Cl}$. **m. cocaine**, an alkaloid sometimes found in commercial cocaine. It is ethyl benzoyl ecgonin, $\text{C}_{15}\text{H}_{23}\text{NO}_4$. **m. cyanide**, acetonitril.

m. ditannin, tannoform. **m. ether**, a colorless, anesthetic gas, $(\text{CH}_3)_2\text{O}$. **m. ethyl-maleic-imid**, a substituted pyrrole, $\text{C}_2\text{H}_5(\text{C}\cdot\text{CO})_2(\text{NH})\cdot\text{CH}_3$, obtained from hemoglobin and from chlorophyll. **m. ethyl-pyrrole**, a substituted pyrrole, $\text{CH}_3(\text{C}\cdot\text{CH}_2)(\text{NH})\text{C}_2\text{H}_5$, obtained from, and probably a constituent of, bilirubin. **m. eugenol**, a volatile oil, $\text{C}_8\text{H}_9\cdot\text{C}_6\text{H}_5(\text{OCH}_3)_2$, found in oil of bay.

m. furfuran. See *sylvan*. **m. glucose**, a glucoside, $\text{CH}_2\text{OH}\cdot(\text{CHOH})_4\text{CO}(\text{CH}_3)$, produced by the interaction of dextrose and methyl alcohol.

m. green, a green aniline dye formed by treating rosaniline with methyl derivatives. It is used in microscopy. **m.-guanidine**, a colorless, narcotic agent, $\text{NH}\cdot\text{C}(\text{NH}_2)\cdot\text{NH}(\text{CH}_3)$. **m. heptenone**,

- a volatile oil, $\text{CH}_3\text{CO}(\text{CH}_2)_4\text{CH}_3$, found in lemon-grass oil. **m. hydrate**, methyl alcohol. **m. hydride**, methane. **m. hydroxy-furfural**, the furfural, $\text{CH}_3\text{C}:\text{CH}:\text{C}(\text{OH}):\text{C}=\text{CHO}$, produced from the hexose in Molisch's test and which produces the color. **m. iodide**, a colorless or brownish liquid, CHI_3 ; a local anesthetic. **m. kairolin**, a compound, $\text{C}_9\text{H}_{10}\text{N}(\text{CH}_2)_5\text{HSO}_4$; a slow and uncertain antipyretic. **m. loretin**, an antiseptic agent, meta-iodo-ortho-hydroxy-quinoline-alphasulphonic acid, $\text{OH}.\text{C}_6\text{H}_4\text{N}(\text{I})(\text{CH}_2)_5\text{SO}_2\text{OH}$, in glossy yellow needles or scales. **m. mercaptan**, a thio-alcohol, CH_3SH . It has a vile odor and is produced during the putrefaction of proteins. **m. nitrate**, $\text{CH}_3\text{O}.\text{NO}_2$, has been used as a vasodilator. **m. nonylketone**, a volatile oil, $\text{CH}_3\text{CO}(\text{CH}_2)_8\text{CH}_3$, found in oil of rue. **m. orange**. See *helianthin*. **m. oxide**. See *methyl ether*. **m. phenacetin**, methyl acetphenetidin, a substance in colorless crystals, $\text{C}_9\text{H}_9(\text{OC}_2\text{H}_5)\text{N}(\text{CH}_3)\text{CH}_3\text{CO}$; hypnotic. **m. red**, a dye, para-dimethyl-amino-azo-benzene-orthocarboxylic acid, $(\text{CH}_3)_2\text{N}.\text{C}_6\text{H}_4.\text{N}:\text{N}.\text{C}_6\text{H}_4.\text{COOH}$. It is used as an indicator in the determination of hydrogen ion concentration and has a $p\text{H}$ range of 4.4 to 6, being red at 4.4 and yellow at 6. **m. salicylate**, the artificial oil of gaultheria, $\text{OH}.\text{C}_6\text{H}_4\text{CO}_2.\text{CH}_3$, found also in natural oil of wintergreen. See *oil of wintergreen*. **m. sulphonate**, a crystalline, non-caustic, and nonpoisonous antiseptic. **m. telluride**, a gas, $(\text{CH}_3)_2\text{Te}$, of penetrating odor found in excreta of animals after feeding with telluric and telluric acids. **m. tryosine**, surinamine. **m. violet**, blue pyoktanin. See *pyoktanin*.
- methylacetanilide** (meth'yl-as-et-til'id). A benzene derivative, $\text{C}_9\text{H}_9\text{N}(\text{CH}_3).\text{CO}.\text{CH}_3$, used as an analgesic and antipyretic. Dose, $\frac{1}{2}$ -4 grains (0.033-0.26 Gm.).
- methylaceto-acetate** (meth'yl-as-et-o-as'et-ät). A crystalline compound, $\text{CH}_3\text{CO}.\text{CH}_2\text{CO}.\text{O}.\text{CH}_3$. It is a respiratory paralyzant and germicide.
- methylal** (meth'yl-al). Same as *formal*.
- methylamine** (meth-il-am'in). A gaseous ptomaine CH_3NH_2 , from decaying fish and from commabacillus cultures.
- methylantipyrine** (meth'yl-an-te-pi'r'in). A colorless, crystalline compound, $\text{C}_{12}\text{H}_{14}\text{N}_2\text{O}$, soluble in 10 parts of water, readily soluble in alcohol, but insoluble in ether. It is used as an antipyretic, antineuralgic, and antirheumatic like antipyrine. Called also *tolpyrine*, *tolylantipyrine*. Dose, 5-15 grains (0.333-1 Gm.). **m. salicylate**. Same as *tolysal*.
- methylarsinate** (meth'yl-ar'sin-ät). A salt of methylarsinic acid.
- methylate** (meth'yl-ät). A compound of methyl alcohol and a base.
- methylated** (meth'yl-a-ted). Containing or combined with methyl alcohol.
- methylation** (meth-il-a'shun). Treatment with methyl. The act of methylating.
- methylatropine hydrobromide** (meth-il-at'ro-pin). A white, crystalline compound, soluble in water; used like atropine in night sweats of phthisis. Dose, $\frac{1}{16}$ - $\frac{1}{8}$ grain (0.006-0.013 Gm.).
- methylaurin** (meth-il-aw'r'in). A substance, $\text{C}_{28}\text{H}_{46}\text{O}_3$, derivable from rosolic acid.
- methylbenzazonein** (meth'yl-ben-zak'o-nin). An aconitine derivative with physiologic properties like those of curare.
- methylcephalin** (meth-il-sef-a'el-in). A substance probably identical with emetine.
- methylcodeine hydrobromide** (meth-il-ko'de-in). See *codeine methyl bromide*, under *codeine*.
- methylcreosol** (meth-il-kre'os-ol). A phenol, $\text{C}_9\text{H}_{12}\text{O}_2$, obtainable from wood tar creosote.
- methyldichlorarsin** (meth'yl-di-klo-rar'sin). A lethal and vesicating war gas, CH_3AsCl_2 .
- methylene** (meth'ilën). The bivalent hydrocarbon radical, CH_2 . **m. blue**. See *methylthionine chloride*. **m. blue**, Kühn's, methylene blue, 1.5; absolute alcohol, 10; 5 per cent solution of phenol, 100. **m. blue**, polychrome. See under *stains*, table of. **m. chloride**, **m. bichloride**. 1. See *m. dichloride*. 2. A mixture of methylene chloride (1 part) and chloroform (4 parts); anesthetic. **m. creosote**, a tasteless yellowish powder; used in tuberculosis. **m. dichloride**, a volatile anesthetic liquid, CH_2Cl_2 , resembling chloroform and used in the same way. Dose, 10-30 minims (0.666-2 cc.). **m. diguailacol**. See *guailacol*. **m. diiodide**, a yellow liquid, CH_2I_2 , having hypnotic and anesthetic properties. **m. dimethylate**. See *formal*.
- methylenophil**, **methylenophilous** (meth-il-en-öfil, meth'yl-en-öf'il-us) [*methylene* + *philön* to love]. Stainable with methylene blue.
- methylglyoxalidin** (meth'yl-gli-oks-al'id-in). Same as *lysidin*.
- methylguanidine** (meth-il-gwan'id-in). A poisonous ptomaine, $\text{NH}.\text{C}(\text{NH}_2)_2\text{NH}.\text{CH}_3$, from spoiled fish, etc.
- methylhydantoin** (meth'yl-hi-dan'to-in). A crystalline compound, $\text{CO}.\text{NH}.\text{CH}_2.\text{CO}.\text{N}.\text{CH}_3$, found in fresh meat, and formed by the decomposition of creatine.
- methylhydrocupreine** (meth'yl-hi-dro-ku-pre'in). See *hydroquinine*.
- methylic** (meth-il'ik). Containing methyl.
- methylil** (meth'il-il). A proprietary local anesthetic; ethyl chloride with small proportions of chloroform and methyl chloride.
- methylindol** (meth-il-in'dol). Same as *skatol*.
- methylmercaptopan** (meth'yl-mer-kap'tan). A gas, methyl hydrosulphide, $\text{CH}_3.\text{SH}$, formed in the intestines by the decomposition of proteins; said to impart to the urine the odor noticed after eating asparagus.
- methylmuriatrin** (meth'yl-mid-ri'at-in). A patented racemic mixture of synthetic ephedrine.
- methynornarcotine** (meth'yl-nor-nar'ko-tin). An active principle said to exist in opium.
- methyloxymethyl salicylate**. See *mesolan*.
- methylphenacetin** (meth'yl-fe-nas'et-in). A hypnotic compound formed by treating acetphenetidin with methyl iodide.
- methylphenmorpholine** (meth'yl-fen-mor'fo-lin). A proprietary artificial alkaloid, forming a clear, oily liquid, which, like its crystalline hydrochloride, is narcotic.
- methylphenyl fructosazone** (meth'yl-fen'fruk-to'sa-zön). Methylphenyl levulosazone.
- methylphenylhydrazine** (meth'yl-fe'n'il-hi'dra-zin). A reagent, $\text{C}_6\text{H}_5\text{N}(\text{CH}_3)\text{NH}_2$, by which ketoses can be distinguished from aldoses, as the former yield osazones, the latter, hydrazones.
- methylphenyl levulosazone** (meth'yl-fen'il-lev-u-lo'sa-zön). The methyl-phenyl-osazone of levulose, $\text{CH}_2\text{OH}(\text{CHOH})_4\text{C}[\text{N}.\text{N}(\text{CH}_3).\text{C}_6\text{H}_5].\text{CH}.\text{CH}.\text{NHN}(\text{CH}_3).\text{C}_6\text{H}_5$. It is homologous with glucosazone.
- methylphosphin** (meth-il-fos'in). An agent, $\text{P}(\text{CH}_3)_3$, useful in malarious disorders and destructive to animal micro-organisms.
- methylprotocatechuic acid** (meth'yl-pro-to-kat-e-ku'ik). See *vanillic acid*, under *acid*.
- methylpurine** (meth-il-pu'r'in). See under *purine*.
- methylpyridine** (meth-il-pi'r'id-in). A basic substance, $\text{C}_5\text{H}_4(\text{CH}_3)\text{N}$, oxidized in the body to pyridine-carboxylic acid. **m. sulphocyanate**, a crystalline, noncaustic, and nonpoisonous antiseptic.
- methylpyrocatechin** (meth'yl-pi-ro-kat'e-kin). Guaiacol.
- methylquinoline** (meth-il-kwin'ö-lin). An oily basic substance, $\text{C}_9\text{H}_7(\text{CH}_2).\text{N}.\text{C}.\text{CH}_3$, from the secretion of the skunk.

methylsalicylate (meth-'il-sal-is-'il-ät). Oil of wintergreen, $\text{OH.C}_6\text{H}_4.\text{CO.O.CH}_3$.

methylsalol (meth-'il-sa'lol). An antirheumatic crystalline agent.

methylthionine chloride (meth-il-thi'o-nin). The U. S. P. name for methylene blue: used as a urinary antiseptic, in the treatment of malaria, and in some neuralgic conditions in which it is of doubtful value. It is also one of the most important stains used in pathology and bacteriology.

methyltyrosine (meth-il-ti'ro-sin). Surinamine.

methyluramine (meth-'il-u-ram'in). Methylguanidine.

methylurethan (meth-il-u'reth-än). Urethylan: a hypnotic and diuretic agent, $\text{C}_2\text{H}_5\text{O.CO.NH.CH}_3$, in colorless plates.

methylxanthine (meth-il-zan'thin). Heteroxanthine.

methysticum (meth-is'tik-um). Same as *kava*.

metodontiasis (met-o-don-ti'as-is). Imperfect development of the teeth.

metol (me'tol). A proprietary photographic developer, methyl-amino-cresol-sulphate, $\text{CH}_3.\text{C}_6\text{H}_3(\text{OH}).\text{NH.CH}_3.\text{H}_2\text{SO}_4$, which sometimes causes a dermatitis in those who use it.

metopagus (met-op'ag-us) [*μέτωπον* forehead + *πάγος* joined]. Twin fetuses united at the forehead.

metopantalgalia (met'-o-pan-tral'je-ah) [*L. metopanthrum* frontal sinus + *άλγος* pain]. Pain in the frontal sinuses.

metopantiritis (met'-o-pan-tri'tis). Inflammation of the frontal sinuses.

metopic (met-op'ik). Pertaining to the forehead; frontal.

metopion (met-o'pe-on) [*μέτωπον* forehead]. A point in the median line of the forehead, between the frontal eminences.

metopism (met'o-pizm). The persistence of the frontal suture.

metopodynia (met'-o-po-din'e-ah) [*μέτωπον* forehead + *δύνη* pain]. Frontal headache.

metopon (met-o'pon) [*μέτωπον* forehead]. The anterior metopic lobule of the brain.

metopoplasty (met-op'o-plas-te) [*μέτωπον* forehead + *πλάσσειν* to form]. Plastic surgery of the forehead.

metoposcopy (met-o-pos'kō-pe) [*μέτωπον* forehead + *σκοπεῖν* to examine]. The study of physiognomy.

Metorchis (met-or'kis). A genus of flukes. *M. truncatus* is found in seals, deer, and cats.

metoxenous (met-oks-e'nus) [*μετά* across + *ξένος* a stranger]. Requiring two hosts for the full cycle of existence: said of certain parasites.

metoxeny (met-ok'sen-e). The condition of being metoxenous.

metra (me'trah) [*μήτρα* womb]. The uterus, or womb.

metraderm (me'trah-derm) [*μήτρα* uterus + *δέρμα* skin]. The external opening of the uterus in some tapeworms (Dibothriocephalidae).

metralgis (me-tral'je-ah) [*μήτρα* uterus + *άλγος* pain]. Pain in the uterus.

metranemia (me-tran-e'me-ah) [*μήτρα* uterus + *anemia*]. Uterine anemia.

metranoikter (met-ran-o-ik'ter). An instrument for dilating the uterine cervix, consisting of two blades which are forcibly spread by the action of a spring.

metrapectic (met-rap-ek'tik) [*μήτρα* womb + *ἀπέχειν* to avoid]. Transmitted by the mother, who herself remains unaffected.

metratome (me'trah-tōm) [*μήτρα* uterus + *τομή* cutting]. An instrument for cutting the uterus.

metratomy (met-rat'o-me). Hysterotomy.

metratonia (met-rat-o'ne-ah) [*μήτρα* uterus + *ἀτονία* atony]. Uterine atony.

metratrophia (met-rat-ro'fe-ah) [*μήτρα* uterus + *ἀτροφία* atrophy]. Uterine atrophy.

metrauxia (me-trawk'se) [*μήτρα* uterus + *αὐξή* increase]. Hypertrophy of the uterus.

metrazol (me'traz-ol). A pentamethylene tetrazol preparation with an action similar to that of camphor in stimulating the heart.

metre (me'ter). Same as *meter*.

metrechoscopy (met-rek-os'kō-pe) [*μέτρον* measure + *ἡχώ* sound + *σκοπεῖν* to inspect]. Combined mensuration, auscultation, and inspection.

metrectasia (met-rek-ta'se-ah) [*μήτρα* uterus + *ἐκτασις* extension]. Dilation of the non-pregnant uterus.

metrectomy (me-trek'to-me) [*μήτρα* womb + *ἐκ* out + *τομή* cut]. The surgical removal of the uterus.

metrectopia, metrectopy (me-trek-to'pe-ah, me-trek'to-pe) [*μήτρα* uterus + *ἐκτοπος* displaced]. Uterine displacement.

metrelcosis (met-rel-kō'sis) [*μήτρα* uterus + *ἐλκωσις* ulceration]. Ulceration of the uterus.

metreurynter (met-ru-rin'ter) [*μήτρα* uterus + *εὐρύνειν* to stretch]. An inflatable bag for dilating the cervical canal of the uterus.

metreurysis (me-tru'ri-sis). Dilation of the uterine cervix with the metreurynter.

metria (me'tre-ah) [*μήτρα* womb]. Any inflammatory condition during the puerperium.

metric (me'trik) [*μέτρον* measure]. 1. Pertaining to measures or measurement. 2. Having the meter as a basis. **m system**. See *weights and measures*.

metritis (me-tri'tis) [*μήτρα* uterus]. Inflammation of the uterus. Several varieties are named, according to the part of the organ affected—cervical, corporeal, interstitial, and parenchymatous. **diphtheric m.**, a variety of metritis in which there is a yellow exudation in and on the endometrium. **dissecting m.**, diphtheric metritis in which the infiltration extends in a layer from the endometrium to the neighborhood of the peritoneum, cutting off a large part of the muscular tissue, which later on is expelled as a pear-shaped body.

metrocace (met-rok'as-e) [*μήτρα* uterus + *κάκη* badness]. Uterine gangrene.

metrocampsis (met-ro-kamp'sis) [*μήτρα* uterus + *κάμψις* bending]. Uterine flexion.

metrocarcinoma (met'-ro-kar-sin-o'mah). Carcinoma of the uterus.

metrocele (me'tro-sēl) [*μήτρα* womb + *κήλη* hernial]. Hernia of the uterus.

metrocliyat (me'tro-klist) [*μήτρα* womb + *κλύειν* to wash]. A device for irrigating the uterus.

metrocolpocèle (me-tro-kol'po-sēl) [*μήτρα* womb + *κόλπος* vagina + *κήλη* hernial]. Hernia of the uterus into the vagina.

metrocystosis (me'tro-sis-to'sis) [*μήτρα* womb + *κύστις* cyst]. The formation of cysts in the womb.

metrocyte (me'tro-sit) [*μήτηρ* mother + *κύτος* cell]. 1. A mother cell. See *cell*. 2. A large uninuclear cell containing hemoglobin: it is supposed to be the mother cell of the red corpuscles of the blood.

metrodynia (me-tro-din'e-ah) [*μήτρα* uterus + *δύνη* pain]. Pain in the uterus.

metro-endometritis (me'tro-en'do-me-tri'tis). Combined inflammation of the uterus and its mucous membranes.

metrofibroma (me'tro-fi-bro'mah) [*μήτρα* uterus + *fibroma*]. Fibroma of the uterus.

metrolymphangitis (me'tro-lim-fan-ji'tis). Inflammation of the lymphatic vessels of the uterus.

metromalacia (me'tro-mal-a'se-ah). Metromalacosis.

metromalacoma, **metromalacosis** (me'tro-mal-ak-o'mah, me'tro-mal-ak-o'sis) [μήτρα uterus + μαλακός soft]. Morbid softening of the uterus.

metromania (me-tro-ma'ne-ah) 1. [μήτρα uterus + μανία madness]. Nymphomania. 2. [μέτρον measure + μανία madness]. A mania for writing verse.

metroneuria (me-tro-nu're-ah) [μήτρα uterus + νεῦρον nerve]. A nervous affection of the uterus.

metronome (met'ro-nōm) [μέτρον measure + νόμος law]. An apparatus for recording periods of time.

metroparalysis (me'tro-par-al'is-is) [μήτρα uterus + paralysis]. Paralysis of the uterus.

metropathia haemorrhagica. See *essential uterine hemorrhage, under hemorrhage*.

metropathic (me-tro-path'ik). Pertaining to or caused by uterine disorder.

metropathy (me-tro-path-e) [μήτρα womb + πάθος suffering]. Any uterine disorder.

metroperitonitis (me'tro-per-it-o-ni'tis) [metritis + peritonitis]. 1. Inflammation of the uterus and peritoneum. 2. Inflammation of the peritoneum about the uterus, or peritonitis resulting from infection after metritis.

metrophlebitis (me'tro-fle-bi'tis) [μήτρα womb + φλέψ vein + -itis inflammation]. Inflammation of the veins of the womb.

metroptosis (me-trop-to'se-ah). Metroptosis.

metropotosis (me-trop-to'sis) [μήτρα uterus + πτώσις falling]. Prolapse of the uterus.

metrorrhagia (me-tro-r-a'je-ah) [μήτρα uterus + ῥήγναι to burst out]. An abnormal uterine hemorrhage. **m. myopathica**, uterine hemorrhage due to insufficient contraction of uterine muscles after childbirth.

metrorrhea (met-ror-e'ah) [μήτρα womb + ῥοία flow]. A free or abnormal uterine discharge.

metrorrhexis (met-ror-eks'is) [μήτρα womb + ῥῆξις rupture]. Rupture of the uterus.

metrorthosis (met-ror-tho'sis) [μήτρα womb + ὀρθός straight]. The rectification of a uterine displacement.

metrosalpingitis (me'tro-sal-pin-jī'tis) [μήτρα womb + σάλπιγξ tube]. Inflammation of the uterus and oviducts.

metroscirrhous (me-tro-skir'us) [μήτρα uterus + σκίρρος hardness]. Scirrhous of the uterus.

metroscope (me'tro-skōp) [μήτρα womb + σκοπεῖν to view]. An instrument for examining the uterus.

metrostaxis (me-tro-stak'sis) [μήτρα womb + στάξις a dripping]. A slight but persistent escape of blood from the uterus.

metrostenosis (me'tro-sten-o'sis) [μήτρα uterus + στήνωσις contraction]. Contraction or stenosis of the cavity of the uterus.

metrosteresis (me'tro-ste-re'sis) [μήτρα womb + στέρσις deprivation]. Surgical removal of the uterus.

metrosynizesis (me'tro-sin-iz-e'sis) [μήτρα uterus + συνίησις shrinking]. Adhesion of the uterus to nearby structures.

metrotherapy (met-ro-ther'ap-e) [μέτρον measure + θεραπεία treatment]. Treatment by measurement, *i. e.*, by demonstrating to the patient his improvement by means of accurate measurements of the increase in the voluntary movements of an impaired joint.

metrotome (me'tro-tōm) [μήτρα womb + τέμνειν to cut]. See *hysterotome*.

metrotomy (me-trot'o-me). Same as *hysterotomy*.

metrotoxin (me-tro-tok'sin). A substance from the pregnant uterus which is thought to exert an inhibitory action on the ovarian function.

metro-urethrotome (me'tro-u-re'thro-tōm) [μέτρον measure + urethrotome]. An urethrotome with a device which regulates the amount of cutting.

metrypercinesis (me-tri-per-sin-e'sis) [μήτρα uterus + ὑπέρ over + κίνησις movement]. Excessive severity of labor pains.

metryperemia (me'tri-per-e-me-ah) [μήτρα uterus + hyperemia]. Congestion of the uterus.

metryperesthesia (me-tri-per-es-the'ze-ah) [μήτρα uterus + hyperesthesia]. Hyperesthesia of the uterus.

metryperkinesis. Same as *metrypercinesis*.

metrypertrophia (me-tri-per-tro'fe-ah) [μήτρα uterus + hypertrophia]. Hypertrophy of the uterus.

Mette's test (met'ēz) [Emil Ludwig Paul Mette, German physician of the 19th century]. See under *tests*.

Meyer's disease (mi'erz) [Hans Wilhelm Meyer, German physician, 1825-1896]. See *disease*.

Meyer's line, organ (mi'erz) [Georg Hermann v. Meyer, anatomist in Zürich, 1815-1892]. See *line and organ*.

Meyer's theory (mi'erz) [Adolf Meyer, psychiatrist in Baltimore, born 1866]. See *theory*.

Meynert's bundle, commissure, fasciculus (mi'nerts) [Theodore Meynert, French physician, 1831-1892]. See *bundle, commissure, fasciculus*.

Meynet's nodes (ma-nāz) [Paul Claude Hyacinthe Meynet, French physician, 1831-1892]. See under *node*.

mezcaline (mez'ka-lin). A poisonous alkaloid, C₁₁H₇NO₃, in the form of a colorless alkaline oil from *Anhalonium lewinii*. It produces an intoxication with delusions of color and music.

mezereon, mezereum (me-ze're-on, me-ze're-um) [L.]. The plant *Daphne mezereum*, a shrub of Europe. Its bark is diaphoretic, diuretic, and stimulant, and is used in rheumatism, syphilis, scrofula, and skin diseases, and as a stimulant to chronic ulcers. Dose, in substance, 5-15 grains (0.333-1 Gm.); of fluidextract, 2-5 minims (0.133-0.333 cc.).

mezzo-aortitis (mez'o-a-or-ti'tis). See *meso-aortitis*.

M. flac. Abbreviation for *L. membra'na flac'cida*, Shrapnell's membrane.

M. ft. Abbreviation for *L. mistu'ra fi'at*, let a mixture be made.

Mg. The symbol of *magnesium*.

mg. Abbreviation for *milligram*.

MgCl₂. Magnesium chloride.

MgO. Magnesium oxide.

MgSO₄. Magnesium sulphate.

M. H. D. Abbreviation for *minimum hemolytic dose*.

Mho (mo). The unit of electric conductivity.

miasm, miasma (mi'azm, mi-az'mah) [μιασμα stain]. A noxious effluvium or exhalation. Obsolete in its early signification.

miasmatic (mi-az-mat'ik). Pertaining to miasma.

miasmatic-contagious (mi-az-mat'ik-kon-ta'-jus). Exhibiting both miasmatic and contagious characteristics, as yellow fever and cholera. A term of no signification since the discovery of the causes of these diseases.

Mibelli's disease (me-bel'ēz) [Vittorio Mibelli, Italian dermatologist, 1860-1910]. Porokeratosis.

Mic. pan. Abbreviation for *L. mi'ea pa'nis*, bread crumb.

mica panis (mi'kah pa'nis). Latin for *bread crumb*.

micella (mi-sel'ah). See *micelle*.

micelle (mis-el'). A hypothetical vital unit of living matter, visible or invisible, made up of one or more molecules, and having the power of growth

and division. See also *biophore*. Similar terms which have been used in various theories are: *bioplast*, *bioblast chondria*, *gemma*, *gemmae*, *idioblast*, *ideosome*, *microzyme*, *pangen*, *physiologic unit*, *plastidule*, *protomere*, *somacule*, *tagmata*.

Michaelis-Gutmann bodies. See under *body*.

micracoustic (mi-krah-koos'tik) [μικρός small + ακουστικός acoustic]. 1. Rendering very faint sounds audible. 2. An instrument which renders faint sounds audible.

micranatomy (mi-kran-at'o-me) [μικρός small + anatomy]. Microscopical anatomy.

micranthine (mi-kran'thin). A crystalline alkaloid, $C_{26}H_{32}N_2O_6$, from *Daphnandra micrantha*.

micrazotol (mi-kra'zo-tol). An antiseptic preparation of boric acid, menthol, eucalyptol, etc.

micrencephalia (mi'kren-sef-a'le-ah) [μικρός small + ἐγκέφαλος brain]. Abnormal smallness of the brain.

micrencephalon (mi-kren-sef'al-on) [μικρός small + ἐγκέφαλος brain]. 1. Smallness of the brain; cretinism. 2. The cerebellum.

micrencephalous (mi-kren-sef'al-us). Having a small brain.

micro- [μικρός small]. A prefix signifying in general "small," and more specifically 10^{-6} .

micro-aerophile, **micro-aerophilic**, **micro-aerophilous** (mi'kro-a'er-o-fil, -a'er-o-fil'ik, -a'er-o-fil'us) [μικρός small + aerophilous]. Requiring only a small amount of free oxygen: said of bacteria.

microbacillary (mi'kro-bas'il-a-re). Same as *bacterial*.

microbacteria (mi-kro-bak-te're-ah). A class of bacteria practically the same as bacterium.

microbe (mi'kröb) [μικρός small + βίος life]. Any individual micro-organism; a microphyte or microzoon: chiefly used as a synonym of vegetable micro-organism.

microbemia (mi-kro-be'me-ah). Same as *microhemia*.

microbial (mi-kro'be-al). Pertaining to or caused by microbes.

microbian (mi-kro'be-an). 1. Pertaining to or of the nature of a microbe. 2. A microbe.

microbic (mi-kro'bik). Of or pertaining to microbes.

microbicidal (mi'kro-bis-i'dal) [microbe + L. *caedere* to kill]. Destructive to microbes.

microbicide (mi-kro'bis-id) [microbe + L. *caedere* to kill]. 1. An agent that destroys microbes. 2. Destructive to microbes.

microbicidin (mi'kro-bis-i'din). See *microcidin*.

microbiohemia (mi'kro-bi-o-he'me-ah) [μικρός small + βίος life + αἷμα blood]. A disease condition resulting from the presence of microbes in the blood.

microbiological (mi'kro-bi-o-loj'ik-al). Pertaining to microbiology.

microbiologist (mi'kro-bi-o'l-o-jist). One expert and learned in the study of microbes.

microbiology (mi'kro-bi-o'l-o-je) [μικρός small + βίος life + λόγος science]. The science which deals with the study of micro-organisms, including bacteria, molds, and pathogenic protozoa. As generally employed the term is synonymous with bacteriology.

microbion (mi-kro'be-on). Microbe.

microbionation (mi'kro-be-o-na'shun). Same as *bacterination*.

microbiophobia (mi'kro-be-o-fo-be-ah) [microbe + φόβος fear]. A morbid dread of microbes.

microbioscope (mi-kro-bi'o-sköp) [μικρός small + βίος life + σκοπεῖν to see]. A microscope for examining microbes or for studying living tissue.

microbiosis (mi'kro-bi-o'sis). Infection by a microbe.

microbiotic (mi-kro-bi-ot'ik). 1. Microbic. 2. Having a short life.

microbism (mi'kro-bizm). Infection with microbes. **latent m.**, the presence in the body of inactive organisms which only await favorable conditions to become active.

microblast (mi'kro-blast) [μικρός small + βλαστός germ]. An erythroblast of small size, *i. e.*, 5 μ or less in diameter. Cf. *erythroblast*.

microblepharia, **microblepharism**, **microblepharon**, **microblephary** (mi'kro-blef-a'-re-ah, mi-kro-blef-ar-izm, mi'kro-blef-ar-on, mi'kro-blef-ar-e) [μικρός small + βλέφαρον eyelid]. Abnormal smallness of the eyelids.

microbrachia (mi-kro-brä'ke-ah) [μικρός small + βραχίων arm]. Abnormal smallness of the arms.

microbrachius (mi-kro-brä'ke-us) [μικρός small + βραχίων arm]. A fetus with preternaturally small arms.

microbrenner (mi-kro-bren'er) [μικρός small + Ger. *Brenner* burner]. A needle-pointed electric cautery.

microby (mi'kro-be). Same as *microbiology*.

microcalorie, **microcalory** (mi-kro-kal'o-re). The heat required to raise 1 cc. of distilled water from 0 to 1 C.

microcardia (mi-kro-kar'de-ah) [μικρός small + καρδιά heart]. Smallness of the heart.

microcaulia (mi-kro-kaw'le-ah) [μικρός small + καυλός penis]. Abnormal smallness of the penis.

microcentrum (mi-kro-sen'trum) [μικρός small + κέντρον center]. The dynamic center of a cell; the center of the astral system.

microcephalia, **microcephalism**, **microcephaly** (mi'kro-sef-a'le-ah, mi-kro-sef'al-izm, mi'kro-sef'al-e) [μικρός small + κεφαλή head]. Abnormal smallness of the head.

microcephalic, **microcephalous** (mi'kro-sef-al'ik, mi-kro-sef'al-us) [μικρός small + κεφαλή head]. Having a small head.

microcephalus (mi-kro-sef'al-us) [μικρός small + κεφαλή head]. An idiot or fetus with a very small head.

microcheilia (mi-kro-ki'le-ah) [μικρός small + χείλος lip]. Abnormal smallness of the lips.

microchemical (mi-kro-kem'ik-al). Pertaining to microchemistry.

microchemistry (mi-kro-kem'is-tre) [μικρός small + chemistry]. Minute chemical investigation; chemistry which necessitates the use of the microscope.

microchiria (mi-kro-ki're-ah) [μικρός small + χεῖρ hand]. Abnormal smallness of the hands.

microcidin (mi-kro-si'din) [microbe + L. *caedere* to kill]. A substance, $C_{10}H_7ONa$; sodium betanaphtholate: an external antiseptic; internally an antiseptic and antipyretic; administered in a 3 per cent solution.

microclyster (mi'kro-klis-ter) [μικρός small + κλύστηρ]. A rectal injection of a small amount of substance.

microcnemia (mi-kro-ne'me-ah) [μικρός small + κνήμη tibial]. Abnormal shortness of the leg below the knee.

Micrococcus (mi-kro-kök'us) [μικρός small + κόκκος kernel]. 1. A minute bacterial coccus or cell form. 2. A genus of the *Coccaceae*. The cells are arranged in irregular masses, are gram-positive, and generally produce a yellow or orange pigment. **M. acidi-lac'tici**, a coccus of fresh milk causing lactic acid fermentation and a red color. It occurs in the form of large nonmotile cocci. **M. acidi-lac'tici-liquefa'ciens**, a variety from cheesy butter, in oval, immotile cocci, often seen in pairs or tetrads. **M. aëro'genes**, a species from the alimentary canal: it occurs in oval, nonmotile cocci. **M. ag'ilis**. Same as *Rhodococcus agilis*. **M. al'bus-liquefa'ciens**, a species from

the healthy nasal passages. Its cocci are oblong or spherical and nonmotile. *M. amylovorus*, a coccus which causes apple and pear blight; it produces a fermentation in saccharine solutions. The cocci are solitary and elongated. *M. aquatilis*, a species found in fresh water; the cocci are very minute and form irregular groups. *M. ascoformans*, a species found in the diseased pelvic tissues of the horse; it causes septicemia and inflammatory edema. See *bothryomycosis*. The cocci are nonmotile and paired. *M. aurantiacus*, a nonpathogenic micrococcus, in round or oval cocci, arranged in groups. It produces yellow, slimy, knob-shaped cultures. *M. aureus*. Same as *Staphylococcus pyogenes-aureus*. *M. bilrothii*, a species found in decaying bouillon. Its cultures give off a cheesy odor: it produces mucous fermentation in beet juice. *M. biskra*, capsulated diplococci from pus of Biskra butta: produces oriental sore in animals. *M. botryogenus*. Same as *M. ascoformans*. *M. candidans*. See *Staphylococcus candidans*. *M. capillorum*, a species from the scalp which changes the color of the hair. The cocci are reddish yellow and form a zooglea. *M. caprinus*, a species said to be the cause of a disease of goats called takosis. See *takosis*. *M. carneus*, a kind from flowing water: it produces a red pigment. The cocci are nonmotile and are arranged in clusters. *M. catarrhalis*. See *Neisseria catarrhalis*. *M. cerasinus-siccus*, a variety from water, producing a dull-red pigment: in single or paired, immotile cocci. *M. cereus*. Same as *Staphylococcus cereus*. *M. chlorinus*, a species which produces a yellowish-green pigment. The cocci are spherical. *M. cinnabarius*, a species from air and water; forms a brick-red pigment. *M. citreus*, a species found in water and in osteomyelitis, in rounded, nonmotile cocci, single, paired, or in chains. It produces a dingy yellowish pigment. *M. concentricus*, a species from water forming irregular masses of nonmotile cocci. *M. cremoides*, a species found in water, named from its creamy pigment; in clusters of nonmotile cocci. *M. crepusculum*, a form from putrefying liquids. The cocci are spherical or ovoid, sometimes forming a zooglea. *M. cumulatus-tenuis*, a nonpathogenic variety from healthy nasal mucus. It is seen in spherical masses of oblong, immotile cocci. *M. cyaneus*, a species found in the air: it forms a blue pigment on potato. The cocci are ellipsoid. *M. diffluens*, a saprophytic form found in air, dust, and feces. The cocci are elliptical. *M. endocarditis-rugatus*, a pathogenic species found on the valvular vegetations of ulcerative endocarditis: in round cocci, single, paired, or in tetrads. *M. fervidus*, a species found in water: not pathogenic. The cocci are round, nonmotile and form pairs or small groups. *M. floccii*, a species found in the conjunctival sac: cocci spherical. *M. flavus-conjunctivae*, a species from the human conjunctiva: pathogenic in rabbits. The cocci are spherical, immotile, single, paired, or in chains. *M. flavus-desidens*, a species from air and water producing a brownish pigment. *M. flavus-liquefaciens*, a species from air, water, and the air passages, forming a yellow pigment. The cocci are nonmotile, often in pairs or masses. *M. flavus-tardigradus*, a species from air and water, producing a yellow pigment and forming masses of immotile spherical cocci. *M. foetidus*, an ill-smelling form from the nasopharynx and from rotting teeth. In cocci, sometimes paired or in chains. *M. fusus*, a species from water, forming nonmotile cocci or short rods, and producing a dark-brown pigment. *M. gazo*, a minute, gram-negative, nonsporulating coccus which is obligately anaerobic and is found abundantly in the mouths of many people. *M. gelatinosus*, a species from milk, which it coagulates. The cocci are oval and hyaline. *M. ghidiali*, a species

said to be destructive to the enteric fever germ. *M. gingivae-pyogenes*, a pathogenic species from the buccal cavity and alveolar abscesses. The cocci are single or paired, irregular, and nonmotile. *M. gonorrhoeae*. See *Neisseria gonorrhoeae*. *M. haematodes*, a form from the hair of persons with red sweat, and also from the sweat of the armpit. It produces a red pigment. *M. intertriginis* (of Rossbach), a species said to be the cause of erythema intertrigo. *M. intracellularis-meningitis*. See *Neisseria meningitidis*. *M. lanceolatus*. See *Diplococcus lanceolatus*. *M. leucochromogenes*, a species from the intestines of persons resident in the tropics. *M. liquefaciens-conjunctivae*, a form from the normal human conjunctiva: pathogenic to rabbits. The cocci are nonmotile and are generally single. *M. loewenberghii*, a species from the nose in ozena: actively pathogenic; in short, motile rods, often in pairs or chains. *M. lyso-deikticus*, an organism found in the nasal cavity. It resembles a sarcine and is very susceptible to the lytic action of lysozyme. *M. mastitidis*, a species which produces mastitis in cows; found in the milk and pus of inflamed udders of cows. It sours milk, but is not pathogenic to man. Its cocci are single or in pairs. *M. mastobius*, a species from the milk of sheep with gangrenous mastitis: pathogenic to sheep and rabbits. Its cocci are minute and nonmotile, usually paired or in groups. *M. melitenensis*. See *Bacterium melitenensis*. *M. meningitis*. See *Neisseria intracellularis-meningitidis*. *M. micheli*, a species found in the follicles of trachoma. *M. nasalis*, a nonpathogenic form from the nasopharynx: highly motile and forming diplococci or streptococci. *M. neoformans*, a pathogenic species from cancer, in the form of minute cocci, single, in pairs, or in short chains. *M. nitrificans*, a species from the soil, in spherical cocci: it changes various nitrogen compounds into nitrates. Nocard's m. See *M. mastobius*. *Nuzum's m.*, an organism obtained from cancer of the breast which on animal inoculation causes the formation of a growth resembling alveolar carcinoma. *M. ochroleucus*, a motile species found in urine. Cultures produce a yellow pigment and give off a sulphurous odor. *m. of osteomyelitis*, a pathogenic form from osteomyelitis, believed to be the same as *Staphylococcus pyogenes-aureus*: its cocci are immotile and single or in groups. *M. ovis*, an organism resembling *Staphylococcus pyogenes-aureus*, from gangrenous mastitis in sheep. *M. paramelitenensis*, a distinct variety of *Micrococcus melitenensis*, differing from it in its agglutinating reactions. *M. paratetragenus*, a species found in the nasal cavities, and believed to cause acute coryza. *M. pasteurii*, a form from saliva, resembling the bacillus of Friedländer. *M. pfügeri*, a species from decaying flesh and potatoes: seen as minute cocci, often forming a zooglea. *M. pharyngis-siccus*, a gram-negative organism often found in the normal pharynx and recognized by its dry aerated colonies on simple culture mediums. *M. plumosus*, a species from water, the cocci often forming a zooglea. *M. pneumoniae*. See *pneumococcus*. *M. porcellorum*, a pathogenic species from swine with hepatitis. *m. of progressive lymphoma*, a highly pathogenic species from the sputum of pneumonia after measles and from the progressive lymphoma of animals. The cocci are nonmotile, single or paired. *M. pyogenes-tenuis*, a form from large abscesses. *M. radia*, a species from air and water, in slightly motile cocci. *M. restituens*, a species that changes peptones into albumin. *M. rheumaticus*. See *Streptococcus rheumaticus*. *M. rosenbachii*, a species from the pus of abscesses, resembling *Staphylococcus pyogenes-aureus*. *M. rosetaceus*, a species from aqueduct water, forming clusters of irregular, nonmotile cocci. *M. roseus*. See *Rhodococcus roseus*. *M. salivarius-septicus*, a form from the sputum of

puerperal septicemia in round or ovoid cocci. **Schütz's m.**, the organism which causes strangles in the horse. **M. tetra'genus**. See *Staphylococcus tetragenus*. **M. tetra'genus-mob-ilis-ventric'uli**, a variety from the stomach, in tetrads of motile encapsulated cocci. **M. tetra'genus-subflav'us**, a form from nasal mucus, in flat, dirty white colonies of round or ovoid, non-motile cocci, grouped in fours. **M. u'rae, ure'ae**. See *Staphylococcus ureae*. **M. uri'nae-al'bus**, **M. uri'nae-flav'us**, **M. uri'nae-ma'jor**, three forms from the urine of cystitis, etc. **M. urinal'-bus**, a form from the urine of cystitis and pyelonephritis. **M. versat'ilis**, a species found in the healthy skin and in the viscera after death from yellow fever. **M. versic'olor**, a species from air and water, in pairs or masses of small cocci. It produces an iridescent, yellowish-green pigment. **M. viniper'da**, a species found in spoiled wine. **M. vir'dis-flaves'cens**, a species from the lymph of varicella. **M. visco'sus**, a streptococcus from diseased wine. **M. viticulo'sus**, a species from air and water. The cocci are ovoid and form a dense zooglea. **M. weichselbaum'ii**. See *Neisseria*. **M. xanthogen'icus**, a form from yellow fever patients. **M. zymo'genes**. See *Streptococcus zymogenes*.

microcolon (mi-kro-ko'lon). An abnormally small colon.

microcolony (mi-kro-kol-o-ne). A microscopical colony of bacteria.

microcolorimeter (mi-'kro-kol'-o-rim'et-er). A colorimeter for use with small quantities of blood.

microconidium (mi-kro-kon-id'e-um). The smaller form of conidium or exospore of certain of the higher parasitic fungi.

microcoria (mi-kro-ko're-ah) [μικρός small + κόρη pupil]. Smallness of the pupil.

microcornea (mi-kro-ko'r-ne-ah) [μικρός small + cornea]. Unusual smallness of the cornea.

microcosmic (mi-kro-koz'mik) [μικρός little + κόσμος world]. Pertaining to or derived from the human body (man was formerly spoken of as the *microcosm*, or little world; that is, as an epitome of the universe). **m. salt**. See under *salt*.

microcoulomb (mi-kro-koo'lo-m). The one-millionth part of a coulomb.

microcoustic (mi-kro-koo'stik) [μικρός small + ακούειν to hear]. 1. Rendering feeble sounds audible. 2. An apparatus for such purpose.

microcrith (mi'kro-krit'h) [μικρός little + crith]. The weight of one atom of hydrogen.

microcrystalline (mi-kro-kris'tal-in) [μικρός small + crystalline]. Made up of minute crystals.

microcurie (mi-kro-ku're). One millionth of a curie.

microcyst (mi'kro-sist) [μικρός small + κύστις cyst]. A very small cyst.

microcytase (mi-kro-si'tās). A cytase formed by microphages and capable of dissolving bacteria. See *macrocytase*.

microcyte (mi'kro-sit) [μικρός small + κύτος cell]. 1. An undersized red blood corpuscle. 2. A polymorphonuclear leukocyte.

microcythemia (mi'kro-si-the-me-ah) [microcyte + αἷμα blood]. A condition in which the red blood corpuscles are undersized.

microcytosis (mi'kro-si-to'sis). Increase in the number of microcytes. Same as *microcythemia*.

microdactylia (mi'kro-dak-til'e-ah) [μικρός small + δάκτυλος finger]. Unusual smallness of the fingers and toes.

microdentism (mi-kro-den'tizm). The state of having teeth smaller than normal.

microdetermination (mi'kro-de-ter-min-a'shun). A chemical examination in which minute quantities of the substance to be examined are used.

microdissection (mi'kro-dis-ek'shun). Dissection of tissue or cells under the microscope.

microdont (mi'kro-dont) [μικρός small + ὀδούς tooth]. Having very small teeth.

microdontism (mi-kro-don'tizm) [see *microdont*]. Abnormal smallness of the teeth.

microdose (mi'kro-dös). A very small dose.

micro-estimation (mi'kro-es-tim-a'shun). See *microdetermination*.

microfarad (mi-kro-far'ad). One millionth of a farad.

microfilaria (mi'kro-fil-a're-ah). The larval state of filaria in the blood.

microgamete (mi-kro-gam'et) [μικρός small + γαμέτης spouse]. A "flagellum"; the conjugating male element of the plasmodium of malaria which fertilizes the macrogamete in the mosquito.

microgametocyte (mi'kro-gam-e'to-sit) [μικρός small + γαμέτης spouse + κύτος cell]. A "crescent"; the male form of the malarial parasite which is transferred from man to the mosquito.

microgamy (mi-krog'am-e). Conjugation or fusion when the gametes are smaller than the somatic cells.

microgastria (mi-kro-gas'tre-ah) [μικρός small + γαστήρ stomach]. Congenital smallness of the stomach.

microgenesis (mi-kro-jen'es-is) [μικρός small + γένεσις generation]. Abnormally small development of a part.

microgenia (mi-kro-je-ne-ah) [μικρός small + γένειον chin]. Abnormal smallness of the chin.

microglia (mi-krog'le-ah). Nonneural cells of mesodermal origin, forming part of the adventitial structure of the central nervous system. In pathologic conditions they are recognizable as Nissl's bodies in general paralysis and as gutter cells. Cf. *oligodendroglia*.

microglossia (mi-kro-glos'e-ah) [μικρός small + γλῶσσα tongue]. Undersize of the tongue.

micrognathia (mi-krog-na'the-ah) [μικρός small + γνάθος jaw]. Unusual or undue smallness of the jaws.

microgram (mi'kro-gram) [μικρός small + Fr. gramme]. 1. A thousandth part of a milligram, or a millionth part of a gram, usually written μg . 2. A photograph of a microscopical object.

micrograph (mi'kro-graf) [see *micrography*]. 1. An instrument for recording extremely minute movements. It acts by making a greatly magnified record on a photographic film of the minute motions of a diaphragm. 2. Same as *microgram*.

micrographia (mi-kro-gra'fe-ah) [μικρός small + γράφειν to write]. A reduction in the size of the lettering of the writer in comparison with his normal writing.

micrography (mi-krog'raf-e) [μικρός small + γράφειν to write]. 1. An account of microscopical objects. 2. The writing of very small letters. 3. Examination with the microscope.

microgyria (mi-kro-jir'e-ah) [μικρός small + γύρος circle]. Abnormal smallness of the convolutions of the brain.

microhepatia (mi-kro-hep-at'e-ah) [μικρός small + ήπαρ liver]. Smallness of the liver.

microhistology (mi'kro-his-tol'o-je) [μικρός small + histology]. Microscopical histology.

microhm (mi'kröm) [μικρός small + ohm]. One-millionth part of an ohm.

microkinematography (mi'kro-kin-e-mat-og'raf-e) [μικρός small + κίνημα movement + γράφειν to write]. The making of moving pictures of microscopical objects.

mirolentia (mi-kro-len'she-ah). Microphakia.

microleukoblast (mi-kro-lu'ko-blast). Same as *myeloblast*.

- microliter** (mi'kro-le-ter) [Fr. *microlitre*; *μικρός* small + *litr*]. A thousandth part of a cubic centimeter or a millionth part of a liter, usually written μ l.
- microlith** (mi'kro-lith). Very minute concretions or calculi.
- microlithiasis** (mi'kro-lith-i'as-is) [*μικρός* small + *lithiasis*]. The formation of minute concretions in an organ.
- micrology** (mi-krol'o-je) [*μικρός* small + *λόγος* treatise]. A scientific account of microscopical objects.
- microlymphoidocyte** (mi'kro-lim-foi'do-sit). A small, nongranular, immature lymphoidocyte.
- micromania** (mi-kro-ma'ne-ah) [*μικρός* small + *μανία* madness]. An insane belief that one's own body has become reduced in size.
- micromastia** (mi-kro-mas'te-ah). Micromazia.
- micromazia** (mi-kro-ma'ze-ah) [*μικρός* small + *μαζός* breast]. Abnormal smallness of the mamma.
- micromegalopsia** (mi'kro-meg-al-op-se-ah) [*μικρός* small + *μέγας* large + *ὄψις* vision]. The condition in which objects appear too small or too large or too small and too large by turns.
- micromegaly** (mi-kro-meg'al-e) [*μικρός* small + *μέγας* great]. Same as *progeria*.
- micromelia** (mi-kro-me'le-ah) [*μικρός* small + *μέλος* limb]. Abnormal smallness of the limbs.
- micromelus** (mi-krom-el-us) [*μικρός* small + *μέλος* limb]. A monster fetus with undersized limbs.
- Micromeria** (mi-kro-me're-ah). See *yerba buena*.
- micrometer** (mi-krom'et-er) [*μικρός* small + *μέτρον* measure]. An instrument for measuring objects seen through the microscope. **eyepiece m.**, **ocular m.**, a micrometer to be used in connection with the eyepiece of a microscope. **stage m.**, a micrometer fastened to the stage of a microscope.
- micrometer** (mi'kro-me-ter). Same as *micron*.
- micromethod** (mi-kro-meth'od). See *microdetermination*.
- micrometry** (mi-krom'et-re). The measurement of microscopical objects.
- micromicro-**. A prefix denoting 10^{-12} .
- micromicron** (mi-kro-mi'e-kron). The millionth part of a micron or 10^{-10} cm., represented by the symbol $\mu\mu$.
- micromillimeter** (mik-ro-mil'im-e-ter). See *micron*.
- micromotoscope** (mi-kro-mo'to-skōp) [*μικρός* small + L. *motio* motion + *σκοπεῖν* to view]. A device for photographing microscopical objects and showing their movements.
- Micromyces** (mi-krom'is-ēz) [*μικρός* small + *μύκης* fungus]. See *Streptothrix*.
- micromyeloma** (mi'kro-mi'e-le-ah) [*μικρός* small + *μυελός* marrow]. Abnormal smallness of the spinal cord.
- micromyeloblast** (mi-kro-mi'el-o-blast). Same as *myeloblast*.
- micromyelolymphocyte** (mi'kro-mi'el-o-lim'-fo-sit). Same as *myeloblast*.
- micron** (mi'kron) [*μικρός* small]. One-millionth part of a meter or one-thousandth part of a millimeter; a micromillimeter. It is usually represented by the Greek letter μ .
- microne** (mi'krōn) [*μικρός* small]. Colloid particles varying in size from 10^{-8} to 10^{-5} cm. They are visible with a microscope. Compare *amicrone* and *submicrone*.
- micronucleus** (mi-kro-nu'kle-us) [*μικρός* small + *nucleus*]. A small nucleus.
- micro-orchidia** (mi-kro-or-kid'e-ah). See *microrchidia*.
- micro-organic** (mi-kro-or-gan'ik). Pertaining to a micro-organism.
- micro-organism** (mi-kro-or'gan-izm) [*μικρός* small + *organism*]. Any minute animal or plant; a bacterium or protozoan.
- micro-organismal** (mi-kro-or-gan-iz'mal). Pertaining to micro-organisms.
- microparasite** (mi-kro-par'as-it). A parasitic micro-organism.
- micropathology** (mi'kro-path-ol'o-je) [*μικρός* small + *pathology*]. 1. The sum of what is known regarding minute pathologic changes. 2. The pathology of diseases caused by micro-organisms.
- micropenis** (mi-kro-pe'nis). Abnormal smallness of the penis.
- microphage, microphagus** (mi'kro-fāj, mi-krof'-ag-us) [*μικρός* small + *φαγεῖν* to eat]. A phagocyte of small size; a small, actively motile, polynuclear leukocyte which causes phagocytosis of the bacteria of acute affections.
- microphagocyte** (mi-kro-fag'o-sit) [*μικρός* small + *phagocyte*]. A phagocyte of the smaller type.
- microphakia** (mi-kro-fa'ke-ah) [*μικρός* small + *φακός* lens]. Abnormal smallness of the crystalline lens.
- microphallus** (mi-kro-fal'us) [*μικρός* small + *φαλλός* penis]. Abnormal smallness of the penis.
- microphobia** (mi-kro-fō-be-ah) [*microbe* + *φόβος* fear]. Insane dread of microbes.
- microphone** (mi'kro-fōn) [*μικρός* small + *φωνή* sound]. A device for rendering feeble sounds audible.
- microphonia** (mi-kro-fō-ne-ah) [see *microphone*]. Marked weakness of the voice.
- microphonograph** (mi-kro-fō-no-graf) [*μικρός* small + *φωνή* voice + *γράφειν* to record]. An instrument which magnifies and records delicate sounds: it is used in training the deaf to speak.
- microphonoscope** (mi-kro-fō-no-skōp) [*μικρός* small + *φωνή* voice + *σκοπεῖν* to view]. A bin-aural stethoscope having a membrane in the chest-piece which accentuates the sound.
- microphotograph** (mi-kro-fō'to-graf) [*μικρός* small + *photograph*]. 1. A photomicrograph. 2. A photograph of microscopical size.
- microphthalmia** (mi-krof-thal'me-ah) [*μικρός* small + *ὀφθαλμός* eye]. Abnormal smallness of the eyes.
- microphthalmus** (mi-krof-thal'mus). 1. Same as *microphthalmia*. 2. A person with abnormally small eyes.
- microphysics** (mi-kro-fiz'iks) [*μικρός* small + *physics*]. The science which deals with the ultimate structure of matter, i. e., with molecules, atoms, and electrons.
- microphyte** (mi'kro-fit) [*μικρός* small + *φυτόν* plant]. Any microscopical plant.
- microphytic** (mi-kro-fit'ik). Pertaining to or caused by microphytes.
- micropia** (mi-kro'pe-ah). Same as *micropsia*.
- micropiasia** (mi-kro-pla'ze-ah) [*μικρός* small + *πλάσσειν* to form]. Dwarfism.
- microplastocyte** (mi-kro-plas'to-sit) [*μικρός* small + *plastic*]. An undersized blood platelet.
- micropodia** (mi-kro-po'de-ah) [*μικρός* small + *πούς* foot]. Abnormal smallness of the feet.
- micropolariscope** (mi'kro-po-lar'is-kōp). A microscope with a polariscope attached.
- microprecipitation** (mi'kro-pre-sip-it-a'shun). Precipitation with a minute amount ($\frac{1}{2}$ to 1 drop) of reagent observed under the microscope.
- microprosopus** (mi'kro-pros-o'pus) [*μικρός* small + *πρόσωπον* face]. A fetus with a small or undeveloped face.
- microprotein** (mi-kro-pro'te-in). The albuminous element of a bacillus.
- micropsia** (mi-krop-se-ah) [*μικρός* small + *ὄψις* vision]. A condition in which objects seen seem to be smaller than they really are.

micropsychia (mi-krop-si'ke-ah) [μικρός small + ψυχή soul]. Feebleness of mind.

mipopus (mik'ro-pus) [μικρός small + πούς foot]. A person with abnormally small feet.

micropyle (mik'ro-pil) [μικρός small + πύλη gate]. An opening through which the spermatozoon may enter the ovum.

microrchidia (mi-kror-kid'e-ah) [μικρός small + ὄρχις testicle]. Abnormal smallness of the testicle.

microrefractometer (mi'kro-re-frak-tom'et-er). A refractometer for the discovery of variations in the minute structure of blood corpuscles.

microrespirometer (mi'kro-res-pi-rom'et-er). An apparatus for investigating the oxygen utilization of isolated tissues.

microrrhinia (mi-kro-rin'e-ah) [μικρός small + ρίς nose]. Abnormal smallness of the nose.

microscleous (mi-kros'kle-us) [μικρός small + σκέλος leg]. Short legged.

Microsciolex modestus. An annelid worm found in a fistula in Switzerland.

microscope (mi'kro-skōp) [μικρός small + σκοπεῖν to view]. An instrument which magnifies minute objects for visual inspection. **binocular m.**, a microscope to be used with both eyes together. **compound m.**, one that contains two or more lenses. **corneal m.**, a specially prepared lens of high magnifying power for studying minute changes in the cornea and iris. **simple m.**, one which consists of a single lens, or of several lenses which act as one.

microscopic, microscopical (mi-kro-skop'ik, mi-kro-skop'ik-al). Pertaining to or visible only by the aid of the microscope.

microscopy (mi-kros'ko-pe) [μικρός small + σκοπεῖν to view]. Observation by means of the microscope. **clinical m.**, employment of the microscope in making clinical diagnoses.

microsection (mi-kro-sek'shun). An extremely thin section for examination with the microscope.

microseme (mi'kro-sēm) [μικρός small + ἡμα sign]. Having an orbital index of less than 83 degrees.

Microsiphonales (mi'kro-si-fo-na'lēz). Trichomycetes.

microslide (mi'kro-slīd). The slide on which objects for microscopical examination are mounted.

microsmatic (mi-kros-mat'ik) [μικρός small + ὀσμάν to smell]. Having the sense of smell, but of relatively feeble development.

microsol (mi'kro-sol). A disinfectant mixture of copper phenolsulphonate, copper sulphate, sulphuric acid, and water: used in a 2 or 3 per cent solution.

microsoma (mi-kro-so'mah) [μικρός small + σῶμα body]. A very low but not dwarfish stature.

microsomatia (mi-kro-so-ma'she-ah). Microsomia.

microsome (mi'kro-sōm) [μικρός small + σῶμα body]. One of the finely granular elements of protoplasm.

microsomia (mi-kro-so'me-ah) [μικρός small + σῶμα body]. An undersized state of the body.

microspectroscope (mi-kro-spek'tro-skōp) [μικρός small + spectroscopē]. A spectroscope to be used in connection with a microscope for the examination of the spectra of microscopical objects.

microsphere (mi-kro-sfēr). Same as *centrosome*.

microsphygmia (mi-kro-sfig-me-ah) [μικρός small + σφυγμός pulse]. That condition of the pulse in which it is perceived with difficulty by the finger.

microsphyxia (mi-kro-sfiks'e-ah). Same as *microsphygmia*.

Microspira (mi-kros-pir-ah). A genus of bacteria of the family Spirillaceae; the cells are rigid and have one, two, or three wavy polar flagella.

Microspirone'ma pallidum. Same as *Spirochaeta pallida*.

microsplanchnic (mi-kro-splank'nik). Having the abdominal portion of the body relatively smaller than the thoracic.

microsplenia (mi-kro-sple'ne-ah) [μικρός small + σπλήν spleen]. Smallness of the spleen.

microsplenic (mi-kro-sple'nik). Not marked by splenic enlargement.

microsporia (mi-kro-spo're-ah). Same as *Gruby's disease*. See under *disease*.

Microsporidium (mi'kro-spo-rid'e-um) [μικρός small + sporidium]. A genus or form of microorganisms, probably animals. Microsporidia infest the marsh tortoise, and are found in silk-worms diseased with pébrine.

Microsporon (mi-kros'po-ron) [μικρός small + σπόρος seed]. A genus of small-spored ringworm fungi which cause various diseases of the skin and hair. **M. audouini**, one of the trichophyton fungi. It is the chief of the small-spored group and causes a form of tinea tonsurans.

M. feli'neum and **M. lano'sum** (*M. canis*) are of animal origin, but cause some infections in man.

M. flaves'cens, a Brazilian organism found in the tinea of children by Parreiras Horta (1911).

M. fur'fur is the cause of tinea versicolor. It appears in the form of large conidia, in regular masses of thirty or more, together with short, branched mycelia connecting the masses of conidia.

M. mentagrophy'tes, a species found in the hair follicles in syphilis.

M. minutis'simum, the fungus which causes erythrasma. **M. tar'dum** is of human origin.

microsporosis (mi'kro-spo-ro'sis). A trichophytosis caused by one or more of the small-spored trichophyton fungi. **M. cap'itis**. See *tinea tonsurans*.

Microsporum (mi-kros'po-rum). Microsporon.

microstat (mi'kro-stat). The stage and finder of a microscope.

microstethophone (mi-kro-steth'o-fōn) [μικρός small + στήθος chest + φωνή voice]. A proprietary form of stethoscope.

microstethoscope (mi-kro-steth'o-skōp) [μικρός small + stethoscopē]. A form of stethoscope said to be constructed upon the principles of a telephone.

microsthenic (mi-kro-sthen'ik) [μικρός small + σθέμος strength]. Having feeble muscular power.

microstomia (mi-kro-sto'me-ah) [μικρός small + στόμα mouth]. Undue smallness of the mouth.

microsyringe (mi-kro-sēr'inj). A syringe fitted with a screw-thread micrometer head for the accurate control of minute syringe measurements.

microtechnic (mi-kro-tek'nik). The construction and manipulation of the microscope.

microtia (mi-kro'she-ah) [μικρός small + οὖς ear]. Undersize of the external ear.

microtome (mik'ro-tōm) [μικρός small + τέμνειν to cut]. An instrument for cutting thin slips for microscopical study. **freezing m.**, a microtome for cutting frozen sections. **rocking m.**, a microtome in which the specimen is held in the end of a lever which passes up and down over a stationary knife.

microtomy (mi-krot'o-me) [μικρός small + τέμνειν to cut]. The cutting of thin sections.

Microtroid'um akamu'shi. Same as *Trombicula akamushi*.

micro-unit (mi-kro-u'nit). A unit of small measurements.

Microsporon (Rivas.)

- microvivisection** (mi''kro-viv-is-ek'shun). Microdissection.
- microvolt** (mi''kro-volt) [μκρὸς small + volt]. One-millionth part of a volt.
- microvolumetry** (mi''kro-vol-u'met-re). Vierordt's term for the counting of the cells of any body's fluid.
- microxycyte** (mi-krok'se-sit) [μκρὸς small + δξύς sharp, acid + κύτος cell]. Any finely granular oxyphil cell.
- microxyphil** (mi-kroks'e-fil). Same as *microxycyte*.
- microzoaria** (mi-kro-zo-a're-ah) [μκρὸς small + ζῶον animal]. A general term for all microorganisms.
- microzoön** (mi-kro-zo'on), pl. *microzo'a* [μκρὸς small + ζῶον animal]. Any microscopical animal organism.
- microzyme** (mi''kro-zīm) [μκρὸς small + ζῶμα leaven]. See *micelle*.
- micturition** (mik-tu-rish'un) [L. *micturi're* to urinate]. The passage of urine.
- midaxilla** (mid-aks-il'ah). The center of the axilla.
- midbody** (mid'bod-e). A body or a mass of granules developed in the equatorial region of the spindle during the anaphase of mitosis.
- midbrain** (mid'brān). The mesencephalon.
- midcarpal** (mid-kar'pal). Between the two rows of bones of the carpus.
- middlepiece** (mid'el-pēs). 1. The part of a horse between the fore and hind quarters. 2. The portion of a spermatozoon between its head and flagellum.
- midfrontal** (mid-fron'tal). Pertaining to the middle of the forehead.
- midge** (miġ). A small dipterous insect. See also *mīle*. **owl m.** See *Phlebotomus*.
- midgracile** (mid-gras'il). Median and gracile: noting the median gracile sulcus.
- midgut** (mid'gut). The mesogaster; an embryonic structure whence the jejunum and ileum are developed.
- midoccipital** (mid-ok-sip'it-al). Pertaining to the middle of the occiput.
- midpain**. Pain occurring between the menstrual periods.
- midperiphery** (mid-per-if'er-e). The middle zone of the retina.
- midpiece** (mid'pēs). The precipitated globulin fraction in complement splitting.
- midriff** (mid'rif). The diaphragm.
- midrol** (mid'rol). A mydriatic in the form of white crystals, stated to be the idiomethylate of phenylpyrazon.
- midsection** (mid-sek'shun). A cut through the middle of any organ.
- midsternum** (mid-ster'num). See *mesosternum*.
- midtarsal** (mid-tar'sal). Between the two rows of bones of the tarsus.
- midtegmentum** (mid-teg-men'tum). The median or central part of the tegmentum.
- midventricle** (mid-ven'trik-el). The cavity of the midbrain or mesencephalon.
- midwife** (mid'wif). A woman who delivers parturient women.
- midwifery** (mid'wi-fer-e). See *obstetrics*.
- Mierzejewski effect** (mēr-ze-jew'ske). See under *effect*.
- Miescher's tubes** (me'sherz) [Johann Friedrich Miescher, Swiss pathologist, 1811-1887]. See under *tube*.
- Miescheria** (me-she're-ah) [after Miescher]. A genus of sarcosporidia. *M. mū'ris* infests the muscles and livers of domestic and other animals, and has been found in human subjects, producing what are called *Miescher's tubules*. See under *tubule*.
- migrainator** (mig-rān-a'tor). An instrument for the relief of migraine by compressing the head.
- migraine** (me-grān') [Gr.]. A nervous affection marked by a periodic headache, often one sided, and accompanied by nausea, vomiting, and various sensory disturbances. **fulgurating m.**, violent migraine developing abruptly. **ophthalmic m.**, migraine accompanied by amblyopia or other visual disturbance. **ophthalmoplegic m.**, periodic migraine followed by ophthalmoplegia.
- migrainin** (mig-rān'in). A proprietary headache remedy, said to contain antipyrine (85 per cent), caffeine (9 per cent), and citric acid (5 per cent). Dose, 15 grains (1 Gm.).
- migrating** (mi'grat-ing) [L. *mi'grans*]. Moving from place to place; occupying successively different parts of the same organ.
- migration** (mi-gra'shun) [L. *migra'tio*]. 1. An apparently spontaneous change of place. 2. The movement of leukocytes through the walls of the vessels. **external m.**, the passage of an ovum from the ovary to the oviduct of the opposite side without passing through the uterus. **internal m.**, the passing of an ovum from an ovary into the uterus in the normal way, followed by its entry into the opposite oviduct. **m. of leukocytes**, the passage of white corpuscles through the wall of a vessel. **m. of the ovum**, the passage of the ovum from the ovary.
- migrol** (mig'rol). A proprietary headache remedy said to be composed of caffeine, guaiaceticin, and sodium bicarbonate.
- migrophen** (mig'ro-fen). A proprietary combination of quinine and lecithin for headache.
- migosine** (mig'ro-sin). A proprietary remedy for migraine: menthol dissolved in acetic ether.
- mika operation** (mi'kah). See under *operation*.
- mikro-**. For words thus beginning, see *micro-*.
- mikron** (mi'kron), pl. *mi'kra*. Same as *micron*.
- Mikulicz's cells, disease, drain, operation**, etc. (mik'u-litsch) [Johann von Mikulicz-Radecki, Polish surgeon, 1850-1905]. See under the nouns.
- mil** (mil). A contraction for milliliter, the one-thousandth part of a liter. This term was used in the U. S. P. IX as equivalent to cubic centimeter, but a return was made in the U. S. P. X to the use of cc.
- millammeter** (mil-am'et-er). Same as *millimeter*.
- milanol** (mil'an-ol). Trade name for trichlorbutylmalonate of bismuth.
- milchlin** (miltsch'in). A preparation of skimmed milk approaching whole milk in composition.
- mildeo** (mil'du). A parasitic fungus of many species; also a plant disease caused by it.
- mildiol** (mil'de-ol). A disinfectant containing creosote and a petroleum derivative.
- milfoil** (mil'foil). Yarrow. See *Achillea*.
- Milian's sign** (meel-yaz') [*Milian*, contemporary French physician]. See *sign*.
- miliaria** (mil-e-a're-ah) [L. *mīlium* millet]. An acute inflammation of the sweat glands, characterized by the formation of patches of small red papules and vesicles, with intense itching and burning of the skin. The disease is due to excessive sweating, and occurs in hot weather. Called also *m. ru'bra* and *prickly heat*. **m. al'ba**, **m. crystalli'na**, miliaria in which the contents of the vesicles are opaque and white. Called also *sudamina crystallina*. **m. ru'bra**. See *miliaria*.
- miliary** (mil'e-a-re) [L. *mīlia'ris* like a millet seed]. 1. Resembling a millet seed. 2. Characterized by the formation of lesions resembling millet seeds.
- milieu** (mél-yew') [Fr.]. Surroundings; environment.
- miliūm** (mil'e-um), pl. *mil'ia* [L. "millet seed"]. A small whitish nodule in the skin, especially of the face. Milia are usually retention cysts of seba-

ceous glands or hair follicles. **colloid m.**, a small yellowish papule in the corium of the skin which is the seat of a colloid degeneration.

milk (mil'k) [L. *lac*]. The fluid secretion of the mammary gland forming the natural food of young mammals. **acidophilus m.**, milk fermented with cultures of *Lactobacillus acidophilus*: used in gastro-intestinal disorders to modify the bacterial flora of the intestinal tract. **adapted m.**, milk especially modified so as to adapt it to the child's digestive capacity. **after-m.**, the stripping, or last milk taken at any one milking. **albumin m.**, Finkelstein's specially prepared milk, poor in lactose and salts and rich in casein and fat. **arsphenamine m.**, the milk from a goat that has received injection of arsphenamine: used in treating syphilis in children. **m. of asafetida**, emulsion of asafetida. **bacillary m.**, a proprietary milk fermented with a pure culture of *Lactobacillus bulgaricus*. **m. of bismuth**, a 6 per cent suspension of basic bismuth carbonate. **bitter m.**, milk may be bitter in taste when first drawn because of bitter herbs in the feed or it may become bitter later from the growth of certain micro-organisms. **blue m.**, milk made blue in color by the action of bacteria, usually *Pseudomonas cyanogenes*. **Budd m., buddeized m.**, milk sterilized by adding hydrogen dioxide and heating, so as to decompose the dioxide and liberate the oxygen. **butter-m.** 1. The milk that is left after churning cream and removing the butter. 2. Milk that has been curdled by inoculating it with certain cultures of micro-organisms. If properly done it looks and tastes like true butter-milk. **cancer m.**, a viscid opaque granular fluid which may be scraped from the surface of a carcinoma which has undergone fatty degeneration. **casein m.**, a prepared milk containing very little salts and sugars and a large amount of fat and casein. **certified m.**, milk whose purity is certified by a committee of physicians or a medical milk commission. **condensed m.**, milk which has been partly evaporated and sweetened with sugar. **m. crust.** See *crusta lactea*. **m. cure**, the treatment of diseases by a diet of milk or of preparations of milk. **diabetic m.**, milk containing a small percentage of lactose. **dialyzed m.**, milk from which the sugar has been abstracted by being passed by dialysis through a parchment membrane. **fore-m.** 1. The first milk that is taken at any milking. 2. Same as *colostrum*. **fortified m.**, milk made more nutritious by the addition of cream or white of egg. **homogenized m.**, milk so treated that the fats become intimately combined with the general body of the milk: the emulsified particles of fat are made so minute that the cream does not separate. **m. of iron**, water which contains freshly precipitated ferric phosphate. **laboratory m.**, milk prepared according to a special formula. **m.-leg**, phlegmasia alba dolens. **m. of magnesia**, magnesium hydroxide held in permanent suspension in a liquid: used as an antacid and laxative. **modified m.**, the cream of cow's milk mixed with water and lactose in the proper proportions: used for infant feeding. **perhydrazine m.**, milk to which hydrogen dioxide has been added. **protein m.**, a modified milk preparation having a relatively low content of carbohydrate and fat and a relatively high protein content. **red m.** may be due to blood, to eating madder root, or to the growth of *Erythrobacillus prodigiosus* or other micro-organisms. **ropy m.**, milk which has become viscid so that it can be drawn out into threads. It is usually caused by the growth of *Bacillus lactis-viscosi* and is eaten as a delicacy in Norway. **salvarsan m.** See *arsphenamine m.* **Schloss m.**, a modified milk containing the same proportion of salts and fat as human milk. The formula is: 20 per cent cream, 140 cc.; full milk, 140 cc.; water, 700 cc.; potassium chloride, 0.2 Gm.; dextrin and maltose, 50-70 Gm.; nutrose, 5 Gm. **skimmed m.**, milk from which the cream has been removed. **sour**

m., milk containing lactic acid, produced by the action of lactic acid bacteria. **m. of sulphur**, precipitated sulphur. **uterine m.**, a white milky substance between the villi of the placenta of the gravid uterus. **uviole m.**, milk sterilized by the action of ultraviolet rays. **virgin's m.** See *lac virginale*. **Walker-Gordon m.**, a proprietary form of modified milk. **witch's m.**, milk secreted in the breast of the new-born child. **yoghurt m.**, a form of sour milk used in Bulgaria and containing lactic acid bacilli, the most important of which is the *Lactobacillus bulgaricus*. It is used in fermentative conditions of the digestive tract.

mil'kine (mil'kēn). A yellow powder prepared from cow's milk, malted cereals, beef, calcium hydroxide, and sodium chloride.

mil'king (mil'king). The pressing out of the contents of a tubular part; such as the urethra, by running the finger along it.

milk-leg. Phlegmasia alba dolens.

milkpox (mil'k'poks). See *amaas*.

milk sick. Poisoning by white snakeroot, *Eupatorium urticaefolium*.

milk sickness. See *trembles*.

milk spot (milk spot). 1. A white spot sometimes observed on serous membrane. 2. A white mucous patch of secondary syphilis.

milk-tooth. A deciduous tooth. See under *tooth*.

milkweed (mil'k'wed). Any plant of the genus *Asclepias*.

milkwort (mil'k'wert). See *Polygala*.

Mill's disease (milz) [Charles K. Mills, neurologist in Philadelphia, born 1845]. See *disease*.

Millar's asthma (mil'arz) [John Millar, British physician, 1735-1801]. See under *asthma*.

Millard's test (mil'ards) [Henry B. Millard, American physician, 1832-1893]. See under *tests*.

Millard-Gubler syndrome (me-yar-geb'ler) [August L. J. Millard, French physician, 1830-1915; see Gubler]. Hemiplegia alternans.

millefolium (mil-e-fō'le-um). A homeopathic preparation of *Achillea millefolium*.

milli-. A prefix denoting 1/1000.

milliampere (mil'l'e-am-pär') [Fr.]. One-thousandth part of an ampere.

milliampere-meter (mil'l'e-am-pär'mē-ter). An instrument for measuring the strength of an electric current in milliampères.

millibar (mil'ib-ar). One-thousandth part of a bar.

millicurie (mil-ik-u're). One thousandth of a curie; a unit of radioactivity which is the amount of radon equal to that of a milligram of radium.

m. hour, the action of one millicurie for one hour.

milligram (mil'ig-ram) [L. *mil'le* thousand + *gram*]. One-thousandth part of a gram. **m. hour**, the amount of radium exposure produced by the application of 1 milligram of radium for one hour. The American unit is based on 1 mg. of radium element, the English unit on 1 mg. of radium bromide (containing about 50 per cent of the element); the latter is therefore about half the strength of the American unit. Called also *milligramme*.

milligramme (mil'ig-ram-aj). Same as *milligram*.

millikan rays (mil'ik-an) [Robert Andrews Millikan, American physicist, born 1868]. See under *ray*.

millilambert (mil-e-lam'bert). See under *lambert*.

milliliter (mil'e-le-ter) [Fr. *millilitre* + L. *mil'le* + *liter*]. One-thousandth part of a liter, usually abbreviated *mil*.

millimeter (mil'im-e-ter) [L. *mil'le* thousand + *meter*]. One-thousandth part of a meter.

millimicro-. A prefix denoting 10⁻⁹.

millimicron (mil-im-i'kron). A thousandth part of a micron, a millionth part of a millimeter or 10⁻⁷ cm. It is usually abbreviated *mμ*.

- millimol** (mil'im-ol). One-thousandth part of a gram-molecule.
- millimu** (mil'e-mu). Same as *millimicron*.
- milling** (mil'ing). In dentistry, the securing of a proper occlusion of artificial dentures by having the patient grind the teeth.
- millinormal** (mil-in-or'mal) [L. *mil'le* thousand + *normal*]. Having one-thousandth part of what is normal.
- millions** (mil'yunz). A name applied to various small fish that devour mosquito larvae. See *Acanthopacetus*, *Girardinus*, *Lebistes*.
- milliphot** (mil'if-ot). The practical unit of illumination being 0.001 phot and approximately one foot-candle.
- Millon's reagent, test** (mil'onz) [Auguste N. E. Millon, French chemist, 1812-1867]. See under *reagent* and *tests*.
- Mills-Reincke phenomenon** (milz-rink'e) [Hiram F. Mills, American engineer; J. J. Reincke, German physician]. See *phenomenon*.
- milossin** (mil-lo'sin). A crystalline substance from the leaves of *Taxus baccata*, or yew tree.
- milphae** (mil'fe). Loss of eyebrows or eyelashes.
- milphosis** (mil-fo'sis). Milphae.
- Milroy's disease** (mil'roys) [W. F. Milroy, American physician, born 1855]. See under *disease*.
- milt-sickness** (milt'sik-nes). Splenic disease in cattle.
- Milzbrand** (milts'brahnt) [Ger.]. Anthrax.
- mimesis** (mim-e'sis). The simulation of one disease by another.
- mimetic** (mi-met'ik) [μυμητικός]. Marked by simulation of another disease.
- mimic** (mim'ik). Same as *mimetic*.
- mimnation** (mim-a'shun). The habitual insertion of the "m" sound in speech in places where it does not belong.
- mimosis** (mim-o'sis). Mimesis.
- min.** An abbreviation for L. *min'imum*, a minim.
- mind blindness**. See *blindness*.
- mind cure**. Treatment of disease by impression or influences directed toward the mind of the patient, without the use of medicine.
- mind deafness**. See *deafness*.
- Mindererus, spirit of** (min-der-e'rus) [Raimond Minderer, German physician, 1570(?) - 1621]. Solution of ammonium acetate.
- mind pain** (mind pān). Same as *psychalgia*.
- mineral** (min'er-al) [L. *minera*'le]. A nonorganic homogeneous substance. **crystal m.**, fused potassium nitrate. **kermes m.**, antimony oxysulphide. **turpeth m.**, yellow sub sulphate of mercury.
- miners' elbow**. See *elbow*. **m. phthisis**. See *phthisis*.
- mingin** (min'jin). A nitrogenous compound, C₁₈H₁₈N₂O₂, found in small amounts in the urine.
- minify** (min'if-i) [L. *mi'nus* less]. To render less; to diminish. The opposite of magnify.
- minim** (min'im) [L. *min'imum* least]. One-sixtieth part of a fluidrachm; often used as a synonym of drop.
- minimal** (min'im-al) [L. *min'imus* least]. The smallest or least; the smallest possible.
- minimum** (min'im-um) [L. "smallest"]. The smallest amount or lowest limit. **m. audible**, the auditory threshold. See under *threshold*. **light m.**, the minimum intensity of light which is visually perceptible in completely darkened surroundings: called also *liminal value*. **m. sensibile**, the threshold of consciousness. See under *threshold*.
- Minin light** (min'in) [A. V. Minin, contemporary Russian surgeon]. See *light*.
- minium** (min'e-um) [L.]. Lead tetroxide, Pb₃O₄: red lead.
- Minkowski's figure, method** (min-kov'skēz) [Oskar Minkowski, Russian physician, born 1858]. See *figure* and *method*.
- Minkowski-Chauffard syndrome** (min-kow'ske-sho-far'). See *hemolytic jaundice*, under *jaundice*.
- Minot-Murphy diet or treatment** [George R. Minot, William P. Murphy, contemporary Boston physicians]. See under *treatment*.
- minstra** (min-strah') [Ital.]. A liqueur, or cordial, prepared at Soresina, Italy.
- mint** (mint). See *Mentha*. **horse m.** See *Monarda*.
- minuthesis** (min-u'thes-is). A decrease in the psychophysical sensitivity of a sense organ due to continuous stimulation of that organ; fatigue.
- miocardia** (mi-o-kar'de-ah) [μειων less + καρδια heart]. The contraction of the heart; systole.
- mioididymus, miodymus** (mi-o-did'im-us, mi-od'im-us) [μειων less + διδυμος twin]. A fetus with two heads joined at the occiputs.
- mionectic** (mi-o-nek'tik) [μειονεκτικός disposed to take too little]. Taking up less than the average amount of oxygen, *i. e.*, less than 70 per cent. Cf. *mesectic* and *pleonectic*.
- miophone** (mi'o-fōn) [μειων less + φωνή sound]. A microphone for testing the muscles.
- mioplasma** (mi-o-plaz'me-ah) [μειων less + πλάσμα plasma]. Abnormal decrease in the amount of plasma in the blood.
- miopragia** (mi-o-pra'je-ah) [μειων less + πράσσειν to perform]. Decreased functional activity.
- miopus** (mi'o-pus) [μειων less + ὤψ face]. A fetal monster with two fused heads, one face being rudimentary.
- miosis** (mi-o'sis) [μειωσις]. 1. Excessive contraction of the pupil. 2. The process in the maturation of the germ cells by which the chromosome number is reduced from diploid to haploid. **irritative m.** Same as *spastic m.* **paralytic m.**, miosis due to paralysis of the dilator of the iris. **spastic m.**, miosis due to spasm of the sphincter pupillae. **spinal m.**, miosis occurring in spinal diseases.
- miostagmin** (mi-o-stag'min) [μειων less + στάγμα drop]. A specific substance in the blood serum of infected animals which will combine with antigen to lower the surface tension of the mixture. **m. reaction**. See *reaction*.
- miotic** (mi-o'tik). 1. Causing the pupil to contract. 2. An agent that causes the pupil to contract. The chief miotics are arecoline, eserine, morphine, muscarine, nicotine, physostigmine, and pilocarpine. 3. Affected with miosis. 4. Marked by miosis (2d def.).
- miracidium** (mi-ras'id'e-um), pl. *miracid'ia* [Gr. "a little boy"]. The ciliated, free swimming larva of a fluke.
- mire** (mēr) [Fr.; L. *mira're* to look at]. A reflector for use in an ophthalmometer.
- mirion** (mir'e-on). A proprietary yellow fluid, containing 1.7 per cent of iodine: used in the treatment of syphilis.
- mirmol** (mir'mol). A mixture of phenol and formaldehyde: used as an application to ulcers and cancerous growths.
- mirror** (mir'or) [Fr. *miroir*]. A polished surface that reflects light or creates visible images of objects in front of it. **concave m.**, one with a concave reflecting surface. **convex m.**, one with a convex reflecting surface. **frontal m.**, head m., a circular mirror strapped to the head: used especially in connection with the laryngoscope or rhinoscope. **plane m.**, one with a flat reflecting surface. **m. speech**, speech in which words are spoken backward. **m. writing**, the writing of letters and words in reversed form, as if they were seen in a mirror.

miryachit (mir-e'ah-shit) [Russ.]. A variety of palmus, or jumping disease, prevalent in Russia.

miscarriage (mis-kar'ij). Abortion; premature expulsion of the fetus; birth of the fetus before the twenty-eighth week.

miscarry (mis-kar'e). To give birth to a fetus before it is viable.

misce (mis'e). Latin for *mix*.

miscegenation (mis'e-jen-a'shun) [L. *misce're* to mix + *ge'nus* race]. The intermarriage or union of persons of different races, or the procreation of persons of mixed race.

miscible (mis'i-bl). Susceptible of being mixed.

miserere mei (miz-er-e're me'i) [L. "have mercy on me"]. An old name for volvulus or intestinal colic.

misocainia (mi-so-ki'ne-ah) [*μισέειν* to hate + *καίνομαι* new]. Hatred of new ideas.

misogamy (mi-sog'am-e) [*μισέειν* to hate + *γάμος* marriage]. Morbid aversion to marriage.

misogyny (mi-soj'in-e) [*μισέειν* to hate + *γυνή* woman]. Insane dislike of women.

misoneism (mi-so-ne'izm) [*μισέειν* to hate + *νέος* new]. Morbid dislike of new things or new ideas.

misopedia, misopedy (mi-so-pe'de-ah, mis-op'-e-de) [*μισέειν* to hate + *παῖς* child]. Morbid dislike of children.

Mist, mist. An abbreviation for L. *mist'ura*, a mixture.

mistletoe (mis-el-to). A parasitic plant, *Viscum album*, with nervous leaves. Dose, 10-60 grains (0.6-4 Gm.). An American species, *Phoradendron flavescens*, is aperient, antispasmodic, oxytocic, and vasodilator.

mistura (mis-tu'rah). Latin for *mixture*. **m. ammoniaci**, mixture or milk of ammoniac. Dose, 4-8 fluidrachms (16-32 cc.). **m. amygdalae**, mixture or milk of almonds. Dose, 2-4 fluidrachms (8-16 cc.). **m. asafetidae**, mixture or milk of asafetida. Dose, 4-8 fluidrachms (16-32 cc.). **m. chloroformi**, chloroform mixture: anodyne and stimulant. Dose, 1-2 fluidrachms (4-8 cc.). **m. copaiba**, mixture or emulsion of the resin of guaiacum. Dose, 1-4 fluidrachms (4-16 cc.). **m. cretae** (U. S. P.), chalk mixture: antacid. Dose, 2-4 fluidrachms (8-16 cc.). **m. ferri aromatici**, aromatic iron mixture. Dose, 1-1 f.oz. (16-32 cc.). **m. ferri composita**, compound mixture of iron. Dose, 1-2 f.oz. (32-64 cc.). **m. ferri et ammoniac acetatis**. See *liquor ferri*, etc. **m. glycyrrhizae composita** (U. S. P.), compound mixture of licorice; brown mixture. Dose, 1-2 f.oz. (32-64 cc.). **m. guaiaci**, mixture or emulsion of the resin of guaiacum. Dose, 1-2 f.oz. (16-64 cc.). **m. magnesia et asafetidae**, milk of magnesia and asafetida. Dose, 1-4 fluidrachms (2-16 cc.). **m. olei ricini**, castor oil mixture. Dose, 1-2 f.oz. (16-64 cc.). **m. oleobalsamica**, oleobalsamic mixture; Hoffmann's balsam; an alcoholic solution of balsam of Peru with aromatic oils and flavoring: used as a local stimulant. **m. pectoralis**, expectorant mixture; ammonium carbonate 1.75 per cent, fluid extract of senega and squill each 3.5 per cent, camphorated tincture of opium 17.5 per cent, water and syrup of tolu. **m. potassii citrat**, mixture of the citrate of potassium. Dose, 1-1 f.oz. (16-32 cc.). **m. rhei et sodae**, mixture of rhubarb and soda. Dose for children, 30-60 minims (2-4 cc.). **m. scammonii**, mixture of scammony. Dose, 1-2 f.oz. (32-64 cc.). **m. senae composita**, compound mixture of senna. **m. spiritus vini gallici**, mixture of brandy. Dose, 1-2 f.oz. (32-64 cc.). **m. splenetica**, Gadberry's mixture: quinine sulphate, 4.2; potassium nitrate and ferrous sulphate, each, 1.4; nitric acid, 1.4; water to make 100. It is tonic and antiperiodic. Dose, 1 drachm (4 Gm.).

Mit. Abbreviation for L. *mit'te*, send.

mitagglutinin (mit-ag-lu'tin-in). Same as *coagglutinin*.

mitapsis (mit-ap'sis) [*μῖτρος* thread + *ἄψις* joining]. The fusion of the chromatin granules in the final stage of cell conjugation.

Mitchell's disease, treatment [S. Weir Mitchell, Philadelphia neurologist, 1830-1914]. See under *disease and treatment*.

Mitchell's solution (mitsh'elz) [James F. Mitchell, American surgeon, born 1871]. See *solution*.

mittella (mitsh-el'ah) [John Mitchell, American botanist, 18th century]. The plant *Mittella repens*, squaw vine, partridge berry, of the U. S. and Canada: used as a uterine tonic. Dose 1/2-1 grain (0.03-0.06 Gm.).

mite (mit). Any member of the order Acarina except the ticks (Ixodidae). The mites are minute animals, related to the spiders, and are parasitic on man and domestic animals, producing various irritations of the skin (acariasis). Mites important in medicine are *Sarcoptes*, *Psoroptes*, *Demodex*, *Leptus*, *Trombidium*, *Trombicula*, *Dermanyssus*, *Pediculoides*, *Tyroglyphus*, *Chorioptes*, *Otodectes*, and *Cnemidocoptes*. **auricular m.** See *Otodectes*. **bird m., chicken m.** See *Dermanyssus*. **depluming m.** See *Cnemidocoptes gallinae*. **flour m.** See *Tyroglyphus*. **follicle m.** See *Demodex*. **fowl m.** See *Dermanyssus*. **harvest m.** See *Leptus*. **itch m.** See *Sarcoptes*. **kedani m.** See *Trombicula akamushi*. **louse m.** See *Pediculoides*. **mange m.** See *Sarcoptes*. **meal m.** See *Tyroglyphus*. **mower's m.** See *Leptus*. **poultry m.** See *Dermanyssus*. **red m.** See *bête rouge*. **scab m.** See *Psoroptes*. **snout m., Bdella cardinalis**. **spinning m., Bryobia praetiosa**. **straw m.** See *Pediculoides*.

mithradatism, mithridatism (mith-rad'ah-tizm, mith-rid'at-izm) [after *Mithridates*, king of Persia, who took poisons so as to become immunized against them]. Immunity against the effects of poisons procured by the administration of gradually increasing doses of the poison itself.

mitigate (mit'ig-at) [L. *mitigare* to soften]. To moderate; to render milder.

mitin (mi'tin). A liquid emulsion of fats to which additional unemulsified fat has been added: used in skin diseases.

mitis (mi'tis). Latin for *mild*.

mitochondria (mit-o-kon'dre-ah) [*μῖτρος* thread + *χόνδριος* cartilage]. Small granules or rod-shaped structures found in differential staining in the cytoplasm of cells. The granular forms are called *chondriosomes*; the rod-shaped or filamentous forms are *chondriocentes* or *chondriomites*. Similar terms are: *plastochondria*, *plastoconts*, *plastomeres*, *plastosomes*, *thread granules*.

mitokinetic (mit'o-kin-et'ik) [*μῖτρος* thread + *κίνησις* motion]. A term applied to the force existing in the kinoplasm of a cell which produces the achromatic spindle in karyokinesis.

mitoma, mitome (mit-o'mah, mi'tōm) [*μῖτρος* thread]. A thready network of the protoplasm of a cell; the more solid portion of cell protoplasm.

mitoplasim (mit'o-plazm) [*μῖτρος* thread + *πλάσσειν* to form]. The chromatic substance of a cell nucleus.

mitoschisis (mit-os'kis-is) [*μῖτρος* thread + *σχίζω* split]. Same as *karyokinesis*.

mitosis (mit-o'sis) [*μῖτρος* thread]. Indirect cell division, or karyokinesis; the typical mode of division of active somatic cells and germ cells. Mitosis is divided into four phases: 1. *Prophase*: Formation of spirem; disappearance of nuclear membrane (a); breaking up of spirem into chromosomes; appearance of centrosome and achromatic spindle (b); formation of polar bodies; arrangement of chromosomes in equatorial plane of central spindle to form the monaster (c). 2. *Metaphase*: Chromosomes split longitudinally into exactly

similar halves. 3. *Anaphase*: The two groups of daughter chromosomes separate (a) and move along the fibers of the central spindle, each toward one of the asters, forming the diaster (b). 4. *Tele-*

chancere, a syphilitic chancre resulting from a double infection with syphilitic virus and that from a chancroid, the chancroid being first developed, and changing in course of time to the syphilitic chancre. See *chancre*.

mixer (miks'er). A receptacle for diluting a drop of blood preparatory to counting the corpuscles.

mixoscopia (miks-o-sko'pe-ah) [*μίξος* mixed + *σκοπεῖν* to view]. Sexual perversion in which gratification is obtained by the sight of others engaged in sexual intercourse.

mixoscopy (miks-os'ko-pe). Mixoscopia.

mixture (miks'chur) [L. *mixtu'ra*, *mistu'ra*]. See under *mistura*. **A. C. E. m.**, an anesthetic mixture of 1 part alcohol, 2 parts chloroform, and 3 parts ether. **antifoaming m.**, saponify spermaceti in an alcoholic solution of sodium hydroxide (2 per cent), and recrystallize the acetyl alcohol from ethyl alcohol. **Arkóvy's m.**, a preparation for the treatment of putrescent root canals, containing 8 Gm. phenol, 4 Gm. camphor, 4 cc. oil of eucalyptus. **Baccelli's m.**, a mixture containing quinine sulphate, 3 Gm.; tartaric acid, 3 Gm.; sodium arsenate, .05 Gm.; water, 300 cc.: used in malarial fevers. **Bagot's m.**, a local anesthetic mixture of cocaine hydrochloride, 0.04 Gm., and spartein sulphate, 0.05 Gm., in 1 or 2 cc. of boiled water. **baryta m.**, one volume of a saturated solution of barium nitrate and two volumes of a saturated solution of barium hydroxide mixed. **Basham's m.**, liquor ferri et ammonii acetatis. **Bestucheff's m.**, ethereal tincture of ferric chloride. **Biedert's cream m.**, a food for young infants: cream, 4 fl.oz.; water, 10 fl.oz.; milk sugar, $\frac{1}{2}$ oz. **Billroth's m.**, chloroform, 3 parts; alcohol and ether, each, 1 part: anesthetic. **Bonain's m.**, a mixture of equal parts of phenol, cocaine, and menthol for anesthetizing the tympanic membrane in paracentesis. **brown m.**, *mistura glycyrrhizae composita*. **Carrel's m.**, a preparation for holding in place grafts on an ulcerated surface, consisting of 18 parts of paraffin melting at 52 C., 6 parts of paraffin melting at 20 C., 2 parts of beeswax, and 1 part of castor oil. **Castellani's m.**, a mixture for treating frambesia: 0.065 Gm. of tartar emetic, 0.65 Gm. of sodium salicylate, 4 Gm. of potassium iodide, 1 Gm. of sodium bicarbonate, 30 Gm. of water. This is given in one dose, diluted in 4 ounces of water, thrice daily. **C.-E. m.** See *E.-C. m.* **chalk m.**, *mistura cretae*: an antacid and mild astringent. **Chapman's m.**, a preparation for gonorrhea containing copaiba and spirit of nitrous ether, each, 25; tincture of opium, 3.2; compound tincture of lavender, 6.5; mucilage of acacia, 12.5, and water to make 100 parts. **Coley's m.** See *Coley's fluid*, under *fluid*. **Cowgill's salt m.**, sodium chloride, 38; magnesium citrate, 32.5; KH_2PO_4 , 12.2; $\text{CaHPO}_4 \cdot 2\text{H}_2\text{O}$, 7.8; potassium chloride, 7; ferric citrate, 1.8; potassium iodide, 0.5. **diabolic m.**, *mistura diabolica*: a nauseous preparation formerly given as a punishment and cure to supposed malingerers. **E.-C. m.**, ether modified by chloroform, usually in the proportion of 16 parts of ether to 1 of chloroform: it secures some of the advantages of chloroform and yet possesses the safety of pure ether. Called also *mitigated ether*. **Elzholtz's m.**, a solution of eosin in glycerin and water: used in leukocyte estimation. **Erlenmeyer's m.**, a mixture of equal parts of the bromides of sodium, potassium, and ammonium. **expectorant m.** See *mistura pectoralis*. **freezing m.**, a mixture for producing artificial cold. **Gadberry's m.**, *mistura splenetica*. **Griffith's m.**, compound mixture of iron. **Gunning's m.**, a mixture used in estimating the nitrogen in the urine: consisting of 15 cc. of concentrated sulphuric acid, 10 Gm. of potassium sulphate, and 0.5 Gm. of copper sulphate. **Hermann's m.**, 3 cc. of chloroform, 2 cc. of oil of eucalyptus, and 40 cc. of castor oil. This is divided into two doses and given at hour intervals

Stages of mitosis (McFarland's Biology).

phase: The daughter chromosomes resolve themselves into a reticulum and the daughter nuclei are formed; the cytoplasm divides, forming two complete daughter cells.

mitosome (mit'o-sōm) [*μίτος* thread + *σώμα* body]. A body formed from the spindle fibers of the secondary spermatocytes, giving rise to the middle piece of the spermatozoon.

mitotic (mit-ot'ik). Pertaining to mitosis, or karyokinesis.

mitral (mi'tral). 1. Shaped somewhat like a miter. 2. Pertaining to the mitral valve.

mitralism (mi'tral-izm). A tendency toward the development of mitral lesions in the heart.

mitro-arterial (mi'tro-ar-te're-al). Pertaining to or affecting the mitral valve and the arteries.

Mittel-schmerz (mit'el-shmārts) [Ger.]. Inter-menstrual pain.

mittor (mit'or) [L. *mit'tere* to send]. Any one of the terminals of a neuron which give off the impulse or stimulus to theceptors of the adjoining neuron. See *neuromittor*.

Mitt. sang. Abbreviation for L. *mit'te san'guinem*, bleed.

mixed (mixt). Affecting various parts at once; showing two or more different characteristics. **m.**

for intestinal parasites. **Hope's m.**, *mistura camphorae acida*, N. F.: an antidyenteric preparation. **Karr's salt m.**, sodium chloride, 10; calcium lactate, 4; magnesium citrate, 4; ferric citrate, 1; Lugol's solution, a few drops. **Lafayette m.**, a gonorrheal medicine containing spirit of nitrous ether, copaiba, compound tincture of lavender, potassium hydroxide, syrup, and mucilage of acacia. **Loomis' m.**, a diarrhea mixture containing oil of sassafras 1, tincture of opium 12, tincture of rhubarb 8, tincture of gambir 40, compound tincture of lavender to make 100. Dose, 30 minims (2 cc.). **magnesia m.**, dissolve 175 Gm. of magnesium sulphate and 350 Gm. of ammonium chloride in 1400 cc. of distilled water and add 700 Gm. of concentrated ammonium hydroxide. **Mencièr's m.**, a mixture of iodoform, guaiacol, eucalyptol, and Peruvian balsam in alcohol and ether: used as a wound dressing. **M. S. m.**, an anesthetic mixture containing 57 parts of ether and 43 parts of chloroform. **N. C. I. m.**, See *N. C. I. powder*, under *powder*. **neutral m.**, liquor potassii citratis. **oleobalsamic m.**, See *mistura oleobalsamica*. **Osborne and Mendel's salt m.**, CaCO_3 , 134.8; MgCO_3 , 24.2; Na_2CO_3 , 34.2; KI , 0.02; K_2CO_3 , 141.3; H_3PO_4 , 103.2; HCl , 53.4; MnSO_4 , 0.079; H_2SO_4 , 9.2; citric acid + H_2O , 111.1; iron citrate + $\frac{1}{2}\text{H}_2\text{O}$, 6.34; sodium fluoride, 0.248; $\text{KAl}(\text{SO}_4)_2$, 0.0245. **Parrish's camphor m.**, *mistura camphorae aromatica*, N. F.: aromatic camphor mixture. **pectoral m.**, See *mistura pectoralis*. **phosphate-carbonate-thiocyanate m.**, powder in a mortar 200 Gm. $\text{Na}_2\text{HPO}_4 \cdot 12\text{H}_2\text{O}$, sprinkle over it 50 Gm. of sodium thiocyanate (or 60 Gm. of potassium thiocyanate), and stir to a uniform semiliquid paste. Add 120 Gm. of monohydrated sodium carbonate (or 110 Gm. of anhydrous carbonate) and mix to a rather fluffy, granular powder. **phosphoric-sulphuric acid-copper sulphate m.**, mix 50 cc. of 5 per cent copper sulphate solution with 300 cc. of 85 per cent phosphoric acid and then add 100 cc. of concentrated sulphuric acid. **Ringer's m.**, See *Ringer's solution*, under *solution*. **Schleich's m.**, See *Schleich's anesthetic*, under *anesthetic*. **spleen m.**, *mistura splenetica*. **Squibb's rhubarb m.**, compound rhubarb mixture, N. F. **Startin's m.**, a mixture composed of 4 drachms of magnesium sulphate, 1 drachm of iron sulphate, 4 drachms of syrup of ginger, 3 oz. of dilute sulphuric acid, and enough water to make 3 oz. **Tellyesniczky's m.**, See *Tellyesniczky's fluid*, under *fluid*. **Thielmann's m.**, a diarrhea mixture containing 1 fl.oz. of wine of opium, $\frac{1}{2}$ fl.oz. of tincture of valerian, $\frac{1}{2}$ fl.oz. of ether, 60 minims of oil of peppermint, 15 minims of fluid-extract of ipecac, and enough alcohol to make 4 fl.oz. **Townsend's m.**, a mixture of 1 grain of red mercuric oxide, 300 grains of potassium iodide, 2 fl.oz. of syrup of orange peel, 2 fluidrachms of compound tincture of cardamom, and enough water to make 4 fl.oz. Dose, 1-4 teaspoonfuls. **toxin-antitoxin m.**, See *toxin-antitoxin*. **Veipeau's diarrhea m.**, tincture of opium 42, camphor 4, and compound tincture of gambir to make 100. **Vincent's m.** 1. Stearin, paraffin, and petrolatum in the proportion of 1-2-2: used for paraffining tubes used in blood transfusion. 2. A powder composed of an intimate mixture of sodium hypochlorite and boric acid: used as a wound dressing. **Wachsmuth's m.**, an anesthetic mixture of 5 parts of chloroform with 1 part of turpentine.

M. L. Abbreviation for *Licentiate in Medicine*.

ml. Abbreviation for *milliliter*.

M. L. A. Abbreviation for left mento-anterior position of the fetus.

M. L. D. An abbreviation for *minimum lethal dose*. See under *dose*.

M. L. P. Abbreviation for left mentoposterior position of the fetus.

Mm., mm. An abbreviation for *millimeter*.

Mmm. An abbreviation for *micromillimeter*.

Mn. The symbol for *manganese*.

mnemic (ne'mik) [*μνημων* mindfull]. Pertaining to memory or characterized by memory, as, *mnemic theory*.

mnemism (ne'mizm). Same as *mnemic theory*. See under *theory*.

mnemonics (ne-mon'iks) [*μνημονικός* pertaining to memory]. The art of cultivating or assisting the memory.

mnemotechnics (ne-mo-tek'niks). Mnemonics.

M. O. Abbreviation for *Medical Officer*.

Mo. The chemical symbol for *molybdenum*.

mobility (mo-bil'it-e) [*L. mobil'itas*]. Susceptibility of being moved.

mobilization (mob'il-iz-a'shun). The rendering of a fixed or ankylosed part movable.

Möbius' sign (me'be-us) [Paul Julius Möbius, German neurologist, 1853-1907]. See under *sign*.

mocezuolo (mo-se-zwa'lo). Trismus neonatorum.

mochras (mo'kras). A gum-resin from *Bom'box malabaricum*: astringent. Dose, 30-45 grains (2-3 Gm.).

mock-knee (mok'ne). A large swelling on the knees of horses and cattle, caused usually by repeated injury.

modality (mo-dal'it-e). 1. A homeopathic term signifying a condition which modifies drug action. 2. Any device used in the treatment of disease, particularly a physiotherapeutic procedure or method.

mode (mōd). The class which occurs with the greatest frequency in a series of variables.

modenol (mo'den-ol). A double salicylic-arsenious acid salt of mercury: used as a substitute for enesol in syphilis.

moderator band. The band of Reil.

modioliform (mo-de-o'lif-orm). Shaped like the hub of a wheel.

modiolus (mo-di'o-lus) [*L. "nave" or "hub"*]. [B N A] The central pillar or columella of the cochlea.

modiscop (mo'di-skop). A proprietary solution of iodine, 3 per cent; morphine, 2 per cent; and scopolamine, 0.025 per cent.

Mod. praesc. Abbreviation for *L. mo'do praescrip'tio*, in the way directed.

modus operandi (mo'dus op-er-an'di). The method of performing an operation or action.

Moeller's bacillus, reaction, stain (me'lerz) [Alfred Moeller, German bacteriologist, born 1868]. See under *bacillus, reaction, stain*, etc.

Moeller's disease, glossitis (me'lerz) [Moeller, German surgeon, 1829-1862]. See *disease and glossitis*.

Moeller-Barlow disease. See under *disease*.

mogigraphia (moj-ig-ra'fe-ah) [*μόγrys* with difficulty + *γράφειν* to write]. Writers' cramp.

mogilalia (moj-il-a'le-ah) [*μόγrys* difficulty + *λαλέει* chatter]. Difficulty in speech; stuttering.

mogiphonia (moj-if-o'ne-ah) [*μόγrys* difficulty + *φωνή* voice]. Difficulty in making vocal sounds.

mogitica (moj-it-o'she-ah) [*μόγrys* difficulty + *τόκος* birth]. Difficult parturition.

M. O. H. Abbreviation for *Medical Officer of Health*.

Mohr's test (mörz) [Francis Mohr, American pharmaceutical chemist]. See under *tests*.

Mohrenheim's fossa (mo'ren-himz) [Baron Joseph Jacob Freiherr von Mohrenheim, Austrian surgeon, died 1799]. See *fossa*.

moist (moist). Somewhat wet; damp.

Mojon's method (mo'e-onz) [Benedetto Mojon, professor of anatomy and physiology at Genoa, 19th century]. See under *method*.

mol (mol). A gram-molecule; the molecular weight in grams of any substance. **m. fraction.** See under *fraction*.

molality (mol-al'ti-e). The number of mols per 1000 grams of solvent. See *molarity*.

molar (mo'lar) [L. *mo'les* mass]. 1. Pertaining to a mass; not molecular. 2. [L. *mola'ris*.] Adapted for grinding; a grinding tooth; one of the back teeth, of which there are three on each side in both jaws. 3. Pertaining to a mole. 4. Same as *mol*. **Moon's m's**, small first molars, somewhat dome shaped, seen in hereditary syphilis. **second m.**, the permanent second molar tooth. **sixth-year m.**, the permanent first molar tooth. **third m.**, the permanent third molar tooth. **twelfth-year m.**, the permanent second molar.

molariform (mo-lar'if-orm). Shaped like a molar.

molarity (mol-ar'ti-e). The number of mols per liter of solution. See *molarity*.

molassquit (mo-las'kit). A horse and cattle food prepared from molasses and the bagasse from sugar mills.

molasses (mo-las'ez) [L. *mella'ceus* like honey]. A thick, sweet syrup, the residue left after the crystallization of sugar; treacle; syrupus fuscus. **sugar-house m.**, that which is left after the refining of sugar. **West India m.**, a variety obtained in making raw sugar.

mold, mould (möld). Any one of a large group of minute parasitic and saprophytic fungi which cause mold or moldiness; also the deposit or growth produced by such fungi. The common molds are usually *Mucor*, *Penicillium*, or *Aspergillus*. **white m.**, white or slightly wooly patches which form on the surface of meat in cold storage due to the growth of a fungus, *Sporotrichum carnis*.

moldine (mol'den). A material for taking small impressions in dental work, made of glycerin and potters' clay.

mole (mol) [L. *mo'les*]. 1. A fleshy mass or tumor formed in the uterus by the degeneration or abortive development of an ovum. 2. A nevus; also a brownish spot on the skin. See *nevus*. 3. Same as *mol*. **blood m.**, a mass made up of blood clots, the placenta, and fetal membranes retained after abortion. **Breus' m.**, a malformation of the ovum consisting of tuberosus subchorionic hematoma of the decidua. Called also *hematomole*. **carneous m.** Same as *fleshy m*. **cystic m.** Same as *hydatid m*. **false m.**, an intra-uterine mass formed from a polypus or tumor. **fleshy m.**, a blood mole which has assumed a fleshlike appearance; also a mole formed by a dead ovum in the uterus. **hydatid m.**, **hydatidiform m.**, a false mole formed by the proliferation of the chorionic villi, resulting in a mass of cysts that resembles a bunch of grapes. Called also *vesicular m*. **stone m.**, a mole which has undergone a calcareous degeneration. **true m.**, a mole which represents the degenerated ovum itself; one which is the actual remains of the degenerated ovum. **vesicular m.** Same as *hydatidiform m*.

molecular (mo-lek'u-lar). Of, pertaining to, or composed of, molecules.

molecule (mol'ek-ül) [L. *molec'ula* little mass]. A very small mass of matter; an aggregation of atoms. The smallest particle of a substance in which its chemical features inhere, or the smallest particle of a substance which can exist by itself. To break up the molecule into its constituent atoms is to change its character. The number of atoms in a molecule varies with the compound. **diatomic m.**, one containing two atoms. **gram-m.** See *gram-molecule*. **hexatomic m.**, one containing six atoms. **monatomic m.**, one which consists of a single atom. **nonpolar m.**, a molecule in which the electrical potential is symmetrically distributed over the molecule. **polar m.**, a molecule in which the electrical potential is not symmetrically distributed. **tetra-tomic m.**, a molecule made up of four atoms. **triatomic m.**, one composed of three atoms.

molilalia (mol-il-a'le-ah). Mogilalia.

molimen (mo'li-men) pl. *molim'ina* [L. "effort"]. A natural and normal effort made for the performance of any function; especially the monthly effort to establish the menstrual flow: the *menstrual m*.

Molisch's test (mol'ish-ez) [Hans *Molisch*, chemist in Vienna, born 1856]. See under *tests*.

mollescuse (mol-es'küis) [L. *mol'lis* soft]. Softening.

Möllgaard treatment (mel'gahrd) [Holger *Möllgaard*, contemporary Danish physician]. Treatment of tuberculosis with sanocrysin and convalescent serum. Cf. *sanocrysin*.

mollichthyolin (mol-ik'the-ol-in). A preparation of mollin and ichthyol for skin diseases.

mollin (mol'in). A glycerinated soft soap with excess of fats: used as a vehicle for medicines to be applied externally.

mollities (mol-ish'e-ez) [L.]. Softness; abnormal softening. **m. os'sium**, osteomalacia. **m. un'-guum**, abnormal softness of the nails.

mollosin (mol-o'sin). An ointment base made of liquid petrolatum (4 parts) and yellow wax (1 part).

Moll's glands [Jacob Antonius *Moll*, Dutch histologist, born 1849]. See under *gland*.

molluscous (mol-lus'kus). Pertaining to molluscum.

molluscum (mol-us'kum) [L. "soft"]. The name of various skin diseases. **m. contagio'sum**, **m. epithelia'le**, a disease marked by the formation of firm, rounded skin tubercles containing a semifluid caseous matter or solid masses made up of fat, epidermis, and peculiar capsulated bodies (*m. corpuscles*). The tubercles appear usually upon the face, are very chronic in their course, and are without general symptoms. The disease is due to a filtrable virus. **m. fibro'sum**, **m. pen'dulum**, **m. sim'plex**, diseases marked by the development of multiple fibromas of the skin, which often form pendulous growths. They arise from the corium or the subcutaneous tissue. **m. verruco'sum**, a late stage of molluscum contagiosum in which the growths have become wartlike masses.

molugram (mol'u-gram). A gram-molecule.

Mol. wt. Abbreviation for *molecular weight*.

molybdate (mo-lib'dät). Any salt of molybdic acid: some are used as tests.

molybdenum (mol-ib-de'nüm) [μόλυβδος lead]. A hard, silvery-white, metallic element; symbol, Mo; atomic weight, 96; specific gravity, 8.6.

molybdic (mo-lib'dik). Containing molybdenum as a hexad element.

molybdous (mo-lib'dus). Containing molybdenum as a tetrad element.

molyform (mol'if-orm). A proprietary molybdenum preparation: used as an antiseptic and bactericide.

molysmophobia (mol-is-mo-fo'-be-ah) [μόλυσμα filth + φόβος fear]. Mysophobia.

Momburg's belt [Fritz August *Momburg*, physician in Berlin, born 1870]. See under *belt*.

momentum (mo-men'tüm) [L.]. The quantity of motion; the product of mass by velocity.

monacid (mon-as'id). Containing one atom of hydrogen that is replaceable by a base: said of a salt or of an alcohol.

monad (mon'ad) [μονάς]. 1. A single-celled protozoön or a single-celled coccus. 2. A univalent radical or element.

Molluscum fibrosum (Gould and Pyle).

monadin (mon-'ad-in). Any micro-organism or species belonging to a group (Monadina) of rhizopod animal endoparasites. They are sometimes found in feces and sputum, but are not known to have any pathogenic influence.

Monadina (mon-ad-i-'nah). See under *monadin*.

Monakov's bundle (mon-ah-'kovz) [Konstantin von Monakov, neurologist in Zürich, born 1853]. See under *bundle*.

monamide (mon-am-'id). An amide which contains only one amide group.

monamine (mon-am-'in). An amine which contains only one amine group.

monamino acid. See under *acid*.

monaminuria (mon-am-in-u're-ah). The presence of a monamine in the urine.

Monarda (mo-nar-'dah). A genus of fragrant labiate plants, comprising *M. fistulo'sa*, wild bergamot; *M. did'yma*, bee-balm; *M. sylves'tris*, and *M. puncta'ta*, horsemint. The last is diaphoretic, carminative, stimulant, emmenagogue and rubefacient. Its volatile oil (*o'leum monar'dae*) is used like oil of peppermint. Dose of oil, 2-3 minims (0.133-0.2 cc.).

monardin (mo-nar-'din). A stearopten, like thymol, from oil of monarda.

monarson (mon-ar-'sön). Disodium monethyl-arsenate, $\text{CH}_3\text{CH}_2\text{O}.\text{AsO}(\text{ONa})_2$, an arsenical preparation for use in syphilis.

monarthric (mon-ar-'thrik). Pertaining to a single joint.

monarthrit (mon-ar-thri-'tis) [*μόνος* single + *arthrit*]. Inflammation of a single joint. **m. deformans**, arthritis deformans of a single joint.

monarticular (mon-ar-tik-'u-lar). Pertaining to a single joint.

Monas (mo-'nas) [*μόνας* monad]. Exceedingly minute, solitary, free-swimming, plastic organisms not yet classified. *M. lens* is found in sputum.

monaster (mon-as-'ter) [*μόνος* single + *ἀστήρ* star]. The single star-shaped figure in karyokinesis. See *mitosis*.

monathetosis (mon-'ath-et-o-'sis) [*μόνος* single + *athetosis*]. Athetosis of one part of the body.

monatomic (mon-at-om-'ik) [*μόνος* single + *ἄτομος* atom]. 1. Same as *univalent*. 2. Containing but one atom. **m. acid**. See under *acid*.

monavalent (mo-nav-'al-ent). See *monovalent*.

monavitaminosis (mon-'ah-vi-tam-in-o-'sis). A deficiency disease in which only one vitamin is lacking in the diet.

monaxon (mon-aks-'on) [*μόνος* single + *ἄξων* axis]. A neuron possessing only one axon.

monaxonic (mon-aks-on-'ik). Having one axon.

Monday-morning sickness. See under *sickness*.

Monera (mo-ne-'rah) [*μονήρης* solitary]. Protozoan organisms which have no nucleus.

monerula (mon-er-'u-lah), pl. *moner'ulae* [*μονήρης* single]. An impregnated ovum with as yet no nucleus.

monesia (mo-ne-'ze-ah) [L.]. An extract from monesia bark, the product of *Chrysophyl'lum glyci'phloe'um*, a tree of Brazil: astringent and stomachic. Dose, 5-10 grains (0.333-0.666 Gm.).

monesin (mon-'es-in). A glucoside from monesia, identical, or nearly so, with saponin: astringent and oxytocic. Dose, $\frac{1}{2}$ grain (0.033 Gm.).

monesthetic (mon-es-thet-'ik) [*μόνος* single + *αἰσθησις* sensation]. Pertaining to or affecting a single sense or sensation.

Mongolian idiocy, maculae, or spots (mon-go-'le-an). See under *idiocy* and *spot*.

mongolism (mon-go-'lizm). Mongolian idiocy. See under *idiocy*.

monilethricosis (mon-il-'e-thrik-o-'sis). Monilethrix.

monilethrix (mon-il-'e-thriks) [L. *monile* necklace + *θρίξ* hair]. A disease condition in which the hairs exhibit beadlike enlargements and become brittle.

Monilia (mo-nil-'e-ah). A genus of parasitic fungi characterized by fermenting sugar with the production of gas.

Fungi of this genus are the ones most frequently found in thrush. **M. albicans**, a species found in thrush and formerly known as *Oidium albicans*. **M. can'dida**. Same as *Oidium albicans*. **M. fructig'ena**, the organism causing the brown rot of plums and peaches.

M. psilo'sis, the organism that is thought to cause sprue. See *sprue*.

moniliasis (mon-il-'ias-'is). Infection with any species of Monilia; oidiumycosis.

moniliform (mon-il-'if-orm) [L. *monile* necklace + *forma* form]. Shaped like a necklace or string of beads.

Moniliformis (mon-il-if-or-'mis). Same as *Echinorhynchus*.

moniliosis (mo-nil-e-o-'sis). Moniliasis.

monium (mo-ne-'um) [*μόνος* single]. An earth metal discovered in 1898. Obsolete.

monk's-hood (munks'hud). See *aconite*.

Monneret's pulse (mon-ráz') [Jules Auguste Edouard Monneret, physician in Paris, 1810-1868]. See under *pulse*.

mono- [*μόνος* single]. A prefix denoting one or single; limited to one part; in chemistry, combined with one atom.

mono-amino acid. See under *acid*.

mono-aminodiphosphatide (mo-no-am-'in-o-di-fos'fat-id). A phosphatide containing 1 atom of nitrogen and 2 of phosphorus to the molecule.

mono-aminomonophosphatide (mo-no-am-'in-o-mo'-no-fos'fat-id). A phosphatide containing 1 atom of nitrogen and 1 of phosphorus to the molecule.

mono-anesthesia (mon-'o-an-es-the-'ze-ah) [*μόνος* single + *anesthesia*]. Anesthesia of a single part or organ.

mono-articular (mon-o-ar-tik-'u-lar). Same as *monarticular*.

monobacillary (mon-o-bas'il-a-re). Caused by or containing a single species of bacillus.

monobacterial (mon-o-bak-te-re-al). Monobacillary.

monobasic (mon-o-ba-'sik) [*μόνος* single + *βάσις* base]. Having but one base; containing one atom of hydrogen that is replaceable by a base. **m. acid**. See under *acid*.

monoblast (mon-o-blast) [*μόνος* single + *βλαστός* germ]. Same as *premonocyte*.

monoblepsia (mon-o-blep'se-ah) [*μόνος* single + *βλέψω* sight]. 1. A condition of the vision in which it is more distinct when only one eye is used. 2. A variety of color blindness in which only one color is perceived.

monobrachius (mon-o-bra-'ke-us) [*μόνος* single + L. *brachium* arm]. A fetus with but one arm.

monobromacetanilid (mon-'o-bro-'mas-et-an'il-id). See *antiseptin*.

monobromated (mon-o-bro-'mat-ed) [L. *monobromatus*]. Having a single atom of bromine in each molecule.

Monilia (Rivas).

monobromcamphor (mon''o-brom-kam'for). Monobromated camphor. See *camphor*.

monobromisovalerylglycolurea (mo''no-brōm-i-so-val'er-il-gli''kol-u-re'ah). Same as *achibromine*.

monobromphenol (mon''o-brom-fe'nol). A violet-colored liquid, $\text{OH.C}_6\text{H}_4\text{Br}$, of penetrating odor, soluble in water, alcohol, and ether, and used as an external antiseptic, especially in erysipelas, in 3 to 6 per cent ointment.

monocalcic (mon-o-kal'sik). Containing one atom of calcium in the molecule.

monocelled (mon'o-seld) [*monos* single + *cell*]. Unicellular; consisting of a single cell.

monocephalus (mon-o-sef'al-us) [*μόνος* single + *κεφαλή* head]. A monster fetus with two bodies and one head.

monochloralantipyrene (mon''o-klor-al-an-te-pi'-rin). See *hymal*.

monochlorethane (mon-o-klor-eth'ān). Methyl chloride, $\text{C}_2\text{H}_5\text{Cl}$.

monochloromethane (mon-o-klor-meth'ān). Methyl chloride, CH_3Cl .

monochloromethylchloroformate (mo''no-klor-meth''il-klor-o-for'māt). See *chloromethylchloroformate*.

monochlorphenol (mon''o-klor-fe'nol). A volatile liquid, $\text{C}_6\text{H}_4\text{ClOH}$: inhaled in lung diseases as an antiseptic.

monochord (mo'no-kord) [*μόνος* single + *χορδή* cord]. An instrument for testing upper tone audition. It consists of a long steel or silver wire fastened at the ends and having an intermediate movable clamp. The tone is produced by longitudinal friction. Called also *Schultze's monochord*.

monochorea (mon''o-ko-re'ah) [*μόνος* single + *chorea*]. Chorea affecting but one part.

monochorionic (mo''no-ko-re-on'ik) [*μόνος* alone + *chorionic*]. Having one common chorion: said of twins.

monochroic (mon-o-kro'ik) [*μόνος* single + *χρῶμα* color]. Having only one color.

monochromasy (mon-o-kro'mas-e). Blindness to all colors but one: color blindness, in which all colors are seen as one color.

monochromat (mon-o-kro'mat). A person totally color blind.

monochromatic (mon''o-kro-mat'ik) [*μόνος* single + *χρῶμα* color]. 1. Having but one color. 2. A person who is totally color blind, i. e., one to whom all colors have one hue. 3. Staining with only one dye at a time. Cf. *polychromatic*.

monochromatophil, **monochromophilic** (mon''o-kro-mat'o-fil, mon''o-kro-mo-fil'ik) [*μόνος* single + *χρῶμα* color + *φιλεῖν* to love]. 1. Stainable with only one kind of stain. 2. Any cell or other element that will take only one stain.

monoclinic (mon-o-klin'ik) [*μόνος* single + *κλίνειν* to incline]. A term applied to crystals in which the vertical axis is inclined to one lateral axis, but is at right angles to the other.

monococcus (mon-o-kok'us), pl. *monococ'ci* [*μόνος* single + *κόκκος* berry]. A coccus neither double nor formed into groups, pairs, or chains.

monocranium (mon-ok'ran-us) [*μόνος* single + *κρανίον* cranium]. Monocephalus.

monocrotic (mon-o-krot'ik). Characterized by monocrotism.

monocrotism (mo-nok'ro-tizm) [*μόνος* single + *κρότος* stroke]. The quality in a pulse wave of having neither a normal elastic elevation nor a dicrotic or tricrotic one.

monocular (mon-ok'u-lar) [*μόνος* single + *L. oc'ulus* eye]. Pertaining to or having but one eye.

monoculus (mon-ok'u-lus) [*μόνος* single + *L. oc'ulus* eye]. A bandage for but one eye.

monocyesis (mo-no-si-e'sis) [*μόνος* single + *κύσις* pregnancy]. Pregnancy with a single fetus.

Monocystis epithelialis (mo-no-sis'tis ep-e-the-la'lis). Pfeiffer's name for the protozoan bodies found by him in the cells of the skin.

monocyte (mon'o-sit) [*μόνος* alone + *κύτος* cell]. A nonlymphoblastic, mononuclear leukocyte. The term includes large mononuclear leukocytes and transitional leukocytes.

monocytic (mon-o-sit'ik). Characterized by or of the nature of monocytes.

monocytopenia (mon''o-si-to-pe'ne-ah) [*monocyte* + *πένια* poverty]. Abnormal decrease in the proportion of monocytes in the blood.

monocytopenia (mon-o-si-to-poi-e'sis) [*monocyte* + *ποιεῖν* to make]. The formation of monocytes; monocytic leukemia.

monocytosis (mon''o-si-to'sis). Increase in the proportion of monocytes in the blood.

monodactylism, **monodactyly** (mon-o-dak'til-izm, mon-o-dak'til-e) [*μόνος* single + *δάκτυλος* finger]. The congenital occurrence of one digit only on the hand or foot.

monodiplopia (mon-o-dip-lo'pe-ah) [*μόνος* single + *διπλός* double + *ὤψ* eye]. Double vision in either eye alone.

monoerg (mo'no-erg). A monogenic antiserum which reacts with its homologous antigen only.

monoganglial (mon-o-gang'le-al). Affecting a single ganglion.

monogastric (mon-o-gas'trik) [*μόνος* single + *γαστήρ* stomach]. Having but one belly or stomach.

monogen (mon'o-jen). 1. A univalent chemical element which combines in only one proportion. 2. An antiserum produced by the use of one antigen.

monogenesis (mon-o-jen'en-is) [*μόνος* single + *γένεσις* origin]. Nonsexual reproduction.

monogerminal (mon-o-je'r'min-al). Developed from one ovum: said of twin fetuses occupying a single chorionic sac.

monoglycol salicylate. See *spirosal*.

monogonium (mon-o-go'ne-um), pl. *monogonia*. Any one of the asexual forms of the malarial parasite as it occurs in the blood. These forms produce the febrile attacks.

monogony (mon-og'o-ne) [*μόνος* single + *γονή* seed]. Asexual reproduction.

monograph (mon'o-graf) [*μόνος* single + *γράφειν* to write]. An essay or treatise on one subject.

monohemerous (mon-o-hem'er-us) [*μόνος* one + *ἡμέρα* day]. Lasting only one day.

monohybrid (mon-o-hi'brid). The offspring of parents differing in one character.

monohydrated (mon-o-hi'dra-ted). United with a single molecule of water or of hydroxyl.

monohydric (mon-o-hi'drik). Containing one atom of replaceable hydrogen.

monoidaism, **monoidaism** (mon-o-i-de'ah-izm, -de'izm) [*μόνος* single + *ἰδέα* idea]. A condition in which the patient harps on one idea.

mono-infection (mon-o-in-fek'shun). Infection with a single kind of organism.

monol (mo'nol). Two parts of calcium permanganate dissolved in 1000 parts of water: it is used for purifying drinking water.

monolene (mon'o-lēn). A clear white, oily hydrocarbon.

monolepsis (mon-o-lep'sis) [*μόνος* single + *λήψις* a taking]. The transmission to the offspring of the characters of one parent, to the exclusion of those of the other.

monolocular (mon-o-lok'u-lar) [*μόνος* single + *L. loc'ulus* cell]. Having but one cell or cavity.

monoma (mo-no'mah) [*μόνος* one + *-ωμα* a tumor]. A solitary uterine tumor accompanied by pain and severe hemorrhage and ending fatally.

monomania (mon-o-ma'ne-ah) [*μόνος* single + *μανία* madness]. Insanity on a single subject or

class of subjects. **emotional m.**, monomania with respect to one or a few related emotions. **intellectual m.**, a monomania with respect to one or a few related delusions.

monomastigote (mon-o-mas'tig-ōt) [μόνος single + μάστιξ lash]. Having a single flagellum.

monomeric (mon-o-mer'ik) [μόνος single + μέρος part]. Pertaining to, made up of, or affecting, a single segment.

monometallic (mon'o-met-al'ik). Having one atom of a metal in the molecule.

monomethylxanthine (mon'o-meth-il-zan'thin). See *heteroxanthine*.

monomicrobial (mon'o-mi-kro'bik). Characterized by the presence of a single species of microbe.

monomania (mon-o-mo're-ah) [μόνος single + μωρία madness]. Monomania.

monomorphic (mon-o-mor'fik). Uniform in structure.

monomorphism (mon-o-mor'fizm) [μόνος single + μορφή form]. Uniformity in structure.

monomphalus (mon-om'fa-lus) [μόνος single + ομφαλός navel]. Two fetuses joined at the navel.

monomyoplegia (mo'no-mi-o-ple'je-ah) [μόνος single + μύς muscle + πλῆγῃ stroke]. Paralysis restricted to a single muscle.

monomyositis (mon-o-mi-o-si'tis) [μόνος single + μυοσίτις]. A myositis of the biceps muscle occurring periodically.

Mononchus (mon-ong'kus). A genus of nematodes found in urine in the Canal Zone.

mononephrous (mon-o-nef'rus) [μόνος single + νεφρός kidney]. Affecting one kidney only.

mononeural (mon-o-nu'ral). Pertaining to a single nerve.

mononeuric (mon-o-nu'rik) [μόνος single + νευρον nerve]. Having only one neuron.

mononeuritis (mon'o-nu-ri'tis) [μόνος single + νευρον nerve + -itis inflammation]. Inflammation of a single nerve. **m. multiplex**, simultaneous inflammation of several nerves remote from one another.

monont (mon'ont). Same as *schizont*.

mononuclear, mononucleate (mon-o-nu'kle-ar, -nu'kle-āt) [μόνος single + nucleus]. 1. Having but one nucleus; uninuclear. 2. A cell having a single nucleus.

mononucleosis (mon'o-nu-kle-o'sis). The presence of an abnormally large number of mononuclear leukocytes in the blood; mononuclear leukocytosis.

acute m., infectious m. See *glandular fever*, under *fever*.

mononucleotid (mo-no-nu'kle-o-tid). A product obtained by the digestion or hydrolytic decomposition of nucleic acid. It is a compound of phosphoric acid and a glucoside or a pentoside. These latter are combinations of dextrose or a pentose (ribose) with one of the following bases: guanine, adenine, cytosin, or uracil.

mono-osteitic (mon'o-os-te-it'ik). Denoting a type of osteitis which affects a single bone.

monoparesis (mon-o-par'es-is) [μόνος single + παρεσις weakness]. Paresis of a single part.

monoparesthesia (mon'o-par-es-the'ze-ah) [μόνος single + παρῆσθια]. Paresthesia of a single part or limb.

monopathy (mo-nop'ath-e) [μόνος single + πάθος disease]. A disease affecting a single part.

monophagia (mon-o-fa'je-ah) [μόνος single + φάγω to eat]. 1. Desire for one kind of food only. 2. The eating of only one meal a day.

monophagism (mo-nof'aj-izm). Monophagia.

monophasia (mon-o-fa'ze-ah) [μόνος single + φάσις speaking]. Aphasia with ability to utter but one word or phrase.

monophasic (mon-o-fa'zik). Exhibiting only one phase or variation. Cf. *diphasic, triphasic*.

monophenetidin (mon'o-fen-et'id-in). An antipyretic and analgesic substance analogous to phenacetin, but having the citric acid radical instead of that of acetic acid.

monophobia (mon-o-fō'be-ah) [μόνος single + φόβος fear]. Morbid dread of being left alone.

monophthalmus (mon-of-thal'mus) [μόνος single + οφθαλμός eye]. A monster fetus with only one eye.

monophyletic (mon'o-fi-let'ik) [μόνος single + φυλή race]. Arising or descended from a single source. **m. theory**. See under *theory*.

monophyletism (mon-o-fi'let-izm). Monophyletic theory.

monophyodont (mon-o-fi'o-dont) [μόνος single + φύν to grow + ὀδούς tooth]. Having only one set of teeth, and those permanent.

monoplasmatic (mon'o-plaz-mat'ik) [μόνος single + πλάσμα plasm]. Made up of a single substance.

monoplast (mon'o-plast) [μόνος single + πλαστός formed]. A single constituent cell.

monoplegia (mon-o-ple'je-ah) [μόνος single + πλῆγῃ stroke]. Paralysis of but a single part. Different varieties are distinguished according to the part affected or to the site of the lesion producing the disease; as, brachial, facial, central, peripheral, etc.

monoplegic (mon-o-ple'jik). Pertaining to or affected with monoplegia.

monops (mon'ops) [μόνος single + ὤψ eye]. A fetus having but a single eye.

monopsychosis (mon-o-si-ko'sis). Monomania.

monopus (mon'o-pus) [μόνος single + πούς foot]. A fetus having but a single foot or leg.

monorchid (mon-or'kid). A person having only one testicle.

monorchidic (mon-or-kid'ik) [μόνος single + ὄρχις testicle]. Having but one descended testicle.

monorchidism, monorchism (mon-or'kid-izm, mon-or-kizm). The condition of having only one descended testicle.

monorchis (mon-or'kis) [μόνος single + ὄρχις testicle]. A person having but a single testis.

monorchotrema (mon-or-ko-tre'mah). A genus of flukes found in Formosa.

monosaccharides (mon-o-sak'ar-idz). Carbohydrates of the class to which *d*-glucose, galactose, and levulose belong. They are sugars having six carbon atoms in the molecules, $C_6H_{12}O_6$. So called because they are supposed to contain one (hypothetical) saccharide group.

monose (mon'ōs). 1. A monosaccharide. 2. A hypothetical sugar containing only one oxygen atom.

monosome (mon'o-sōm) [μόνος alone + σῶμα body]. See *accessory chromosome*, under *chromosome*.

monosomian (mon-o-so'me-an) [μόνος single + σῶμα body]. A double fetus with only one body.

monospasm (mon'o-spazm) [μόνος single + spasm]. Spasm of a single limb or part. Different varieties are distinguished according to the part affected or to the site of the causal lesion; as, brachial, facial, lateral, peripheral, etc.

monospermy (mon'o-sper-me) [μόνος single + σπέρμα seed]. Fertilization in which only one spermatozoon enters the ovum.

Monostoma (mon-os'to-mah) [μόνος single + στόμα mouth]. A genus of trematode worms. One species occurs in the crystalline lens.

monostratal, monostratified (mon-o-strat'al, mon-o-strat'if-id). Disposed in a single layer or stratum.

monosubstituted (mon-o-sub'stit-u-ted). Having only one atom in the molecule replaced.

monosymptom (mon-o-simp'tom) [μόνος single + *symptom*]. A symptom occurring singly.

monosymptomatic (mon'o-simp-to-mat'ik) [μόνος single + *symptom*]. Expressed by a single symptom.

monosyphilid, monosyphilide (mo-no-sif'il-id) [μόνος single + *syphilid*]. Showing only a single syphilitic lesion.

monotal (mo'no-tal). A colorless, oily liquid, the guaiacol ester of ethylglycolic acid, $C_2H_5O.CH_2.CO.O.(C_6H_4.O.CH_2)_2$. It is used as an analgesic for various painful affections, in phlebitis and pulmonary tuberculosis. Dose, $\frac{1}{2}$ -1 fluidrachm (2-4 cc.), applied to the affected area.

monothermia (mo-no-ther'me-ah) [μόνος single + θερμη heat]. A condition in which the temperature of the body remains the same throughout the day.

monotocous (mo-not'o-kus) [μόνος single + τόκος birth]. Giving birth to but one offspring at a time.

Monotremes (mo'no-trēmz). The lowest order of mammals.

Monotricha (mo-not'rik-ah) [see *monotrichic*]. A group of bacteria including those forms which have one polar flagellum.

monotrichic, monotrichous (mon-o-trik'ik, mo-not'rik-us) [μόνος single + θρίξ hair]. Having but one flagellum.

monotropic (mo-no-trop'ik) [μόνος single + τροπή a turning]. Affecting only one particular species of bacterium or one variety of tissue. Cf. *polytropic*.

monoureid (mo-no-u're-id). See *ureid*.

monovalent (mo-nov'al-ent). 1. Having a valency or potency of one. 2. Capable of binding one complement only: said of an amboceptor.

monoxeny (mo-noks'en-e) [μόνος one + ξενος host]. Parasitism on one host only.

monoxide (mon-oks'id). An oxide containing but one atom of oxygen; vernacularly applied to carbon monoxide.

Monro's bursa, foramen, gland, line, etc. (mon-ro') [Alexander *Monro* (primus), English surgeon, 1697-1767]. See *bursa, foramen, gland, line, etc.*

mons (monz). Latin for "mountain." **m. pubis** [BNA], the public eminence; **mons veneris**. **m. ure'teris**, a papilla-like elevation of the mucosa of the bladder where the ureter enters the latter. **m. ven'eri** [L. "mount of Venus"], a rounded prominence at the symphysis pubis of a woman.

Monsel's salt, solution (mon'selz). See *salt and solution*.

monsol (mon'sol). A proprietary phenol germicidal preparation.

Monsonia (mon-so'ne-ah). A genus of African and Asiatic geraniaceous plants. Some of the species are used in medicine as astringents.

monster (mon'ster) [L. *mon'strum*]. A fetus malformed or with an excess or deficiency of parts; a teratism. **autositic m.**, one capable of independent life. **compound m.**, a monster made up of parts of more than one individual. **double m.** Same as *twin m.* **endocymic m.**, a monster which never comes to birth, but is retained and forms the basis of a dermoid tumor. **Gila m.**, a venomous lizard, *Heloder' ma hor'ridum*, of Mexico and the southwestern part of the United States. **parasitic m.**, an imperfect fetus attached to another and unable to exist alone. **triplet m.**, a monster containing parts of three individuals. **twin m.**, a monster consisting of two individuals joined at some point.

monstriparity (mon-stri-par'it-e) [*monster* + L. *par'ere* to give birth to]. The act of giving birth to a monster.

monstrosity (mon-stros'it-e) [L. *monstros'itas*]. 1.

Great congenital deformity. 2. A monster or teratism. **emmenic m.**, a female child that menstruates during infancy.

monstrucide (mon'stru-sid) [L. *mon'strum* monster + *ca'e're* to kill]. The destruction of a fetal monstrosity.

monstrum abundans (mon'strum ab-un'danz) [L.]. A monstrosity characterized by excess. **m. defici'ens**, a monstrosity by defect. **m. sire'nifor'me**, a monster having apparently only one leg and no arms.

Monteggia's dislocation (mon-tej'ahz) [Giovanni Battista *Monteggia*, Italian surgeon, 1762-1815]. See *dislocation*.

Montgomery's glands (mont-gom'er-ēz) [William Fetherstone *Montgomery*, Irish gynecologist, 1797-1859]. See *gland*.

monthlies (munth'lez). The menses, or monthly sickness of women.

monticulus (mon-tik'u-lus) [L.]. A small eminence. **m. cerebel'li**, the projecting or central part of the superior vermis (vermiform process); its anterior portion is the *culmen*, its posterior portion the *declive*.

moogrol (moo'grol). A light, oily fluid, being a mixture of the ethyl esters of the fatty acids of the chaulmoogra series of oils. They are used in the treatment of leprosy by intramuscular injection in doses of 1 cc. (16 minims) increasing to 6 cc. (1.62 fluidrachms).

moon blindness. Same as *nyctalopia*.

moonseed (moon'sēd). See *Menispermum*.

Moore's fracture (moorz) [Edward Mott *Moore*, American surgeon, 1814-1902]. See under *fracture*.

Mooren's ulcer (moor'eniz) [Albert *Mooren*, German oculist, 1828-1899]. See under *ulcer*.

moradine (mo-ra'din). An alkaloid from *Pogon'opus febrif'ugus*, a rutaceous tree.

morament (mōr-am'ent). A person who is feeble-minded and without moral sense; a low-grade moron.

moramentia (mōr-am-en'she-ah). The condition of being feeble-minded and without moral sense.

Morand's disease, foot, foramen, spur (mor-ahnz') [Sauveur François *Morand*, French surgeon, 1697-1773]. See *disease, foot, etc.*

Morax-Axenfeld conjunctivitis, diplococcus [Victor *Morax*, physician in Paris; Theodor *Axenfeld*, German ophthalmologist, born 1867]. See under *conjunctivitis* and *Hemophilus*.

morbicid (mor'bis-id). A disinfectant preparation consisting of a bactericidal soap containing 12 per cent of formaldehyde.

morbid (mor'bid) [L. *mor'bidus* sick]. Pertaining to or affected with disease; diseased.

morbidity (mor-bid'it-e). 1. The condition of being diseased or morbid. 2. The sick rate, or proportion of disease to health in a community.

morbific (mor-bif'ik) [L. *morbi'ficus*; *mor'bus* sickness + *fac'ere* to make]. Causing disease.

morbigenous (mor-bij'en-us). Producing disease.

morbilli (mor-bil'i). Latin for *measles*.

morbillous (mor-bil'us). Pertaining to measles.

morbus (mor'bus). Latin for *disease*. **m. ad-dis'o'nii**. See *Addison's disease*, under *disease*. **m. brig'h'tii**, Bright's disease. **m. cadu'cus**, epilepsy. **m. caeru'leus**, congenital cyanosis.

m. comitia'lis, epilepsy. **m. cox'ae seni'lis**, the hip joint disease of aged people. **m. coxa'rius**, hip joint disease. **m. divi'us**, epilepsy. **m. dormiti'vus**, sleeping sickness. **m. ele'phas**, elephantiasis. **m. gal'licus**, syphilis. **m. her-cu'leus**. 1. Elephantiasis. 2. Epilepsy. **m. maculo'sus verho'fi**. See *purpura haemor-rhagica*. **m. medico'rum**, a morbid propensity to consult physicians for trifling ailments. **m. mise'rae**, any disease due to want and neglect.

m. pediculo'sus, lousiness. **m. re'gius**,

jaundice. *m. sa'cer*, epilepsy. *m. seni'lis*, arthritis deformans. *m. strangulato'rius*. Same as *diphtheria*. *m. vagabon'dus*, vagabond's disease. See *disease*. *m. virgin'eus*, chlorosis. *m. vul'pis*, alopecia.

M. O. R. C. Abbreviation for *Medical Officers Reserve Corps*.

morcellation (mor-sel-a'shun) [Fr. *morcellement*]. The division of a tumor, followed by its removal piecemeal.

morcellement (mor-sel-maw'). Morcellation.

mordant (mor'dant) [L. *more'de* to bite]. A substance used to fix a stain or dye. The chief mordants are alum, aniline, oil, and phenol.

mordanting (mor'dant-ing). The operation of fixing the dye in a stained specimen.

Mor. dict. Abbreviation for *L. mo're dic'to*, in the manner directed.

Morel ear (mo'rel) [Benolt Augustin Morel, French alienist, 1809-1873]. See under *ear*.

Morrel-Kraepelin disease (mo-rel'-kra'pel-in) [B. A. Morel, 1809-1873; Emil Kraepelin, German psychiatrist, 1856-1926]. Dementia praecox.

Morelli's reaction (mo-rel'i'ez) [F. Morelli, Italian physician, died 1918]. See *reaction*.

Morestin's method or operation (mor-es-tāz') [Hippolyte Morestin, French surgeon, 1869-1919]. See under *operation*.

Moretti's test (mo-ret'e) [E. Moretti, contemporary physician in Milan]. See under *tests*.

Morgagni's cataract, hydatid, etc. (morgahn'yēz) [Giovanni Battista Morgagni, Italian anatomist, 1682-1771]. See *cataract, hydatid, etc.*

morgue (morg) [Fr.]. A place where dead bodies are sent for identification.

mori succus (mo'ri suk'us) [L.]. Mulberry juice; the juice of *Mo'rus nigra*, the black mulberry.

moria (mo're-ah) [μωπια folly]. Dementia or fatuity.

moribund (mor'ib-und) [L. *moribundus*]. In a dying state.

Moringa pterygosperma (mo-rin'gah). An East Indian plant called sajina: used in rheumatism and dyspepsia. Yields ben-oil (*q. v.*).

morioplasty (mo're-o-plas-te) [μωρον piece + πλασσειν to form]. The surgical restoration of lost parts.

Morison's method, paste, pouch (mor'is-unz) [Rutherford Morison, British surgeon]. See under *method, paste, and pouch*.

Mörner's test (mer'nerz) [K. A. H. Mörner, Stockholm chemist, 1855-1917]. See under *tests*.

morning sickness (mor'ning sik'nes). Nausea and vomiting occurring every morning on arising, and constituting one of the characteristic symptoms of pregnancy.

morococcus (mo-ro-kok'us) [L. *mo'rus* mulberry + *coccus*]. A form of coccus or microbial mass from the eczematous skin.

moron (mo'ron) [μωρος stupid]. A feeble-minded person whose mental age is between eight and twelve years. Cf. *idiot* and *imbecile*.

moronity (mo-ron'it-e). The condition of being a moron.

Moro's reaction or test (mo'rōz) [E. Moro, pediatricist in Munich, born 1874]. See under *reaction*.

morosis (mo-ro'sis). Moronity.

morphea, morphoea (mor-fe'ah) [μωρφή form]. A skin disease marked by the formation of pinkish patches or bands, bordered by a purplish areola. The lesions are firm, but not hard, and are usually elevated or depressed. They may atrophy and disappear, leaving cicatrix-like marks. The disease is probably a trophoneurosis. Called also *circumscribed scleroderma* and *Addison's heloid*. **acroteric m.**, a form specially affecting the extremities. **m. alba**, morphea

in which there is little pigmentation. **m. atro'phica**, morphea in which the patches are atrophied. **m. flam'mea**, naevus vascularis. **m. gutta'ta**. See *white-spot disease, under disease*. **herpetiform m.**, morphea in which the lesions are disposed as in herpes. **m. linea'ris**, morphea arranged in lines or bands. **m. ni'gra**, morphea with pigmented lesions.

morphina (mor-f'nah). See *morphine*.

morphinbromethylate (mor'fin-brom-et'il-āt). A white, crystalline substance, $C_{18}H_{22}NO_3Br + H_2O$, resulting from treating morphine with dimethyl sulphate: used like other morphine derivatives.

morphine (mor'fin) [L. *morphi'na*, *morphi'num*, *mor'phia*, *mor'phium*]. The principal and most active alkaloid of opium, $C_{17}H_{19}NO_3 + H_2O$, occurring in the form of colorless, shining crystals, having a bitter taste and an alkaline reaction. It is only sparingly soluble in water, and is therefore usually given in the form of its salts. Morphine has the properties of opium, but it has less tendency to produce constipation and narcotism, and is more likely to cause nausea and skin eruptions. Dose of morphine and its salts, $\frac{1}{10}$ - $\frac{1}{2}$ grain (0.003-0.033 Gm.). **m. acetate**, a yellowish-white powder, $C_{17}H_{19}NO_3 \cdot C_2H_3O_2 + 3H_2O$. It is used in the form of *li'quor morphi'nae aceto'lis*, in 20-40 minims (1.3-2.6 cc.) doses; also in the form of *injec'tio morphi'nae hypoder'mica*. **m. anisate**, a white, soluble, crystalline salt. **m. benzoate**, a salt in white prisms or in powder: recommended for the relief of asthma. **m. borate**, a salt used in eye treatment and for hypodermic injections. **diacetyl m.** See *heroin*. **m. hydrochloride**, a white, crystalline substance, $C_{17}H_{19}NO_3 \cdot HCl + 3H_2O$: used in the form of *li'quor morphi'nae hydrochlo'ras*, *linct'ura chloro'for'mi et morphi'nae*, *trochis'ci morphi'nae*, etc. Dose of hydrochloride, $\frac{1}{12}$ - $\frac{1}{2}$ grain (0.0054-0.032 Gm.). **m. meconate**, the meconic acid salt of morphine: used like other morphine salts. **m. methylbromide**. See *morphosan*. **m. phthalate**, a yellowish, crystalline salt recommended for hypodermic use. **saccharinated m.**, morphine, 60.9 parts, and glucose, 39.1 parts. **m. stearate**, a salt, $C_{17}H_{19}NO_3 \cdot C_{17}H_{35}COOH$. **m. sulphate**, a white, crystalline substance, $(C_{17}H_{19}NO_3)_2H_2SO_4 + 5H_2O$. Dose, $\frac{1}{12}$ - $\frac{1}{2}$ grain (0.0054-0.032 Gm.). **m. tartrate**, a salt adapted for use in subcutaneous injections, $(C_{17}H_{19}NO_3)_2 \cdot C_4H_6O_9 \cdot 3H_2O$.

morphinism (mor'fin-izm). A morbid state due to the habitual misuse of morphine; also the morphine habit.

morphinization (mor'fin-iz-a'shun). Subjection to the influence of morphine.

morphinomania, morphiomania (mor'fin-o-ma'ne-ah, mor'fe-o-ma'ne-ah). 1. A morbid and habitual craving for morphine. 2. Insanity due to the misuse of morphine.

morphiometry (mor-fe-om-et're) [*morphine* + μέτρον measure]. The measurement of the amount or proportion of morphine in a drug or preparation.

morphoea (mor-fe'ah). See *morphea*.

morphogenesis (mor'fo-jen-e'se-ah). Morphogenesis.

morphogenesis (mor-fo-jen-es-is) [μωρφή form + γενᾶν to produce]. The evolution and development of form.

morphogenetic (mor'fo-jen-et'ik). Producing growth; producing form or shape.

morphography (mor-fog'raf-e) [μωρφή form + γράφειν to write]. A description of organized beings, with special reference to their forms and structure.

morphologic, morphological (mor-fo-loj'ik, mor-fo-loj'ik-al). Pertaining to morphology.

morphology (mor-fol'o-je) [*μορφή* form + *λόγος* treatise]. The science of the forms and structure of organized beings.

morphometry (mor-fom'et-re) [*μορφή* form + *μέτρον* measure]. The measurement of the forms of organisms.

morphon (mor'fon) [*μορφούν* to form]. An individual organism or structural unit.

morphophyly (mor-fof'il-e) [*μορφή* form + *φυλόν* tribe]. The development of the form of body organs.

morphophysics (mor-fo-fiz'iks). The study of the physical and chemical causes of development.

morphoplasm (mor'fo-plazm) [*μορφή* form + *πλάσμα* anything formed]. The substance of the cellular reticulum.

morphosan (mor-fo'san). A proprietary name for morphine methylbromide: used like morphine. Dose of 5 per cent solution, 20 minims (1.33 cc.); hypodermically, $\frac{1}{12}$ – $\frac{1}{8}$ grain (0.005–0.01 Gm.).

morphosis (mor-fo'sis) [*μορφούν* to form]. The process of formation of a part or organ.

morphotic (mor-fot'ik). Pertaining to morphosis or formation: in a formative process.

morpio, mordion (mor'pe-o, mor'pe-on), pl. *morpio'nes* [L.]. The crab louse, *Phthirus pubis*.

morrhua (mor'u-ah) [L.]. The codfish, *Gadus morrhua*, which furnishes cod liver oil. See under oil.

morrhuate (mor'u-ät). A salt of morrhuc acid.

morrhuin (mor'u-in) [L. *morrhua* codfish]. A thick, oily ptomaine, $C_{19}H_{27}N_3$, from some samples of cod liver oil.

morrhuel (mor'u-ol) [L. *morrhua* cod + *oleum* oil]. A crystallizable, aromatic, and medicinal substance from cod liver oil. Dose, 4–12 grains (0.26–0.78 Gm.).

morrhvin (mor'u-vin). A trade name for a mixture of cod liver oil and peptonate of iron.

Morris' appendix, point [Robert T. Morris, New York surgeon, born 1857]. See under *appendix* and *point*.

mors (morz). Latin for *death*. **m. thymica**, thymic death; sudden death occurring in thymic asthma and status lymphaticus.

morsal (mor'sal) [L. *mor'sus* bite]. Taking part in mastication; a term applied to the masticating surface of a bicuspid or molar.

Mor. sol. Abbreviation for L. *more sol'ito*, in the usual way.

morsulus (mor'su-lus) [L. dim. of *mor'sus* bite]. A troche.

morsus diaboli (mor'sus di-ab'o-li) [L. "devil's bite"]. The fimbriae at the ovarian extremity of an oviduct.

mortal (mor'tal) [L. *mortalis*]. 1. Subject to death or destined to die. 2. Fatal; causing or terminating in death.

mortality (mor-tal'i-té). 1. The quality of being mortal. 2. The death rate. 3. In life insurance, the ratio of deaths that take place to expected deaths.

mortamin, mortamine (mor'tam-in) [L. *mors* death + *amine* as in vitamin]. A term applied to various faulty food factors, such as improperly prepared foods, excessively rich foods, etc.

mortar (mor'tar) [L. *mortarium*]. A bell-shaped or urn-shaped vessel of glass, iron, or porcelain, in which drugs are beaten, crushed, or ground with a pestle.

mortification (mor'tif-ik-a'shun). Gangrene or sphacelus; molar death.

mortinatility (mor'te-na-til'i-té) [L. *mors* death + *na'tus* birth]. The mortality of infants during pregnancy, labor, and the first twenty days after birth.

mortisemblant (mor-te-sem'blant). Apparently dead.

Morton's cough (mor'tunz) [Richard Morton, English physician, 1637–1698]. See *cough*.

Morton's current (mor'tunz) [William James Morton, American neurologist, 1845–1920]. See *current*.

Morton's disease, foot, neuralgia (mor'tunz) [Thomas George Morton, Philadelphia surgeon, 1835–1903]. See *disease, foot*, and *neuralgia*.

mortuary (mort'u-a-re) [L. *mortuarium* tomb]. 1. Pertaining to death. 2. A deadhouse or place of temporary burial.

morula (mor'u-lah) [L. *mo'rus* mulberry]. The segmented ovum in the mulberry stage, forming a solid mass of cells.

morulation (mor-u-la'shun). The process of formation of the morula.

moruloid (mor'u-loid) [L. *mo'rus* mulberry + *ēidos* form]. A bacterial colony in the form of a mulberry-like mass.

Morus (mo'rus). A genus of the family Urticaceae which contains the mulberry. **M. ni'gra**, the black mulberry from which mori succus is obtained. **M. tinctoria**, yellow-wood, which contains maclurin.

Morvan's chorea, disease (mor'vanz) [Augustin Marie Morvan, French physician, 1819–1897]. See *chorea* and *disease*.

morvin (mor'vin). Same as *mallein*.

mosaic inheritance (mo-sa'ik). See under *inheritance*.

moschatine (mos'kat-in). An alkaloid, $C_{21}H_{27}NO_7$, from *Achillea moschata*.

Moschcowitz's operation, test (mosh'kow-itz) [Alexis V. Moschcowitz, American surgeon, born 1865]. See *operation* and *tests*.

moschus (mos'kus). Latin for *musk*.

Mosetig-Moorhof bone wax (mös-et'ig-mör'hof) [Albert von Mosetig-Moorhof, German surgeon, 1838–1907]. See under *wax*.

Mosler's diabetes (mos'lerz) [Karl Friedrich Mosler, German physician, born 1831]. See under *diabetes*.

mosquito (mus-ke'to) [Sp. "little fly"]. 1. A popular name for gnatlike, blood-sucking and venomous insects of various genera, chiefly *Culex*, *Anopheles*, and *Stegomyia*. The bite of species of the genus *Anopheles* is a leading means of the transmission of malarial fevers. *Stegomyia* conveys yellow fever. *Anopheles* and *Culex* transmit the filaria and dengue, and *Janthinosoma* transports the eggs of Dermatobia. For the life history of the malarial parasite in the mosquito's body, see *Plasmodium malariae*. 2. An apparatus for drawing blood from a vessel in sterile condition. **house m.** See *Culex pipiens* and *C. quinquefasciatus*.

mosquitocide (mos-ke'to-sid) [*mosquito* + L. *caedere* to kill]. Fatal to mosquitos; an agent that is destructive to mosquitos.

moss. Any plant or species of the cryptogamic order *Musci*; also a material composed of or derived from such a plant. **m. board**, a kind of pasteboard for use in preparing surgical dressings: it is made principally of peat moss (*Sphagnum*). **Ceylon m.** See *agar*. **club m.** See *Lycopodium*. **Iceland m.** See *Cetraria*. **Irish m.** See *Chondrus*. **juniper m.** See *Polypodium*. **muskeag m., peat m.**, marsh-growing mosses, chiefly of the genus *Sphagnum*. They are considerably used in the preparation of moss board and surgical dressings. **running m., snake m.** See *Lycopodium*. **sphagnum m.** See *muskeag m.*

Mosso's ergograph, sphygmomanometer (mos'bz) [Angelo Mosso, Italian physiologist, 1846–1910]. See *ergograph* and *sphygmomanometer*.

mossy cell. See under *cell*. **m. foot**. See under *foot*.

Motais' operation (mot-áz') [Ernst Motais, French ophthalmologist, died 1913]. See *operation*.

motarium (mo-ta're-um) [L.]. Lint.

moth (mawth). See *chloasma*. **brown-tail m.** See *Euprocitis crysorrhoea*. **tussock m.** See *Hemerocampa leucostigma*.

mother (muth'er) [L. *ma'ter*]. 1. The female parent. 2. The vinegar fungus, *Mycoderma aceti*. **m. cell**. See under *cell*. **m. liquor**, the liquid from which any substance has been separated by crystallization. **m.'s mark**. See *nervus m. star*. Same as *monaster*.

motile (mo'til). Having a spontaneous but not conscious or volitional movement.

motiline (mo'til-in). A contraction-promoting hormone.

motility (mo'til'it-e). The ability to move spontaneously.

motoceptor (mo'to-sep-tor). Any muscle sense receptor.

motofacient (mo-to-fa'shent). Producing motion: a term applied to that phase of muscular activity by which the muscle produces actual motion, in contradistinction to the *nonmotofacient* phase in which the muscle is contracting without producing motion.

motoneuron (mo-to-nu'ron). A neuron possessing a motor function; a motor neuron.

motor (mo'tor) [L.]. 1. A muscle, nerve, or center that effects or produces movement. 2. Producing or subserving motion. **m. oc'uli**, the third cranial nerve. **plastic m.**, the tissues of an amputation stump used to secure motion in an artificial limb.

motorgraphic (mo-tor-graf'ik). Same as *kinetographic*.

motorial (mo-to're-al). Pertaining to motion or to a motorium.

motorium (mo-to're-um) [L.]. 1. A motor center; especially the common center (**m. commu'ne**) of motor influences. 2. The motor apparatus of the body.

motorius (mo-to're-us) [L.]. A motor nerve. **m. oc'uli commu'nis**. See *motor oculi*, in *nerves*, table of.

motorimeter (mo'tor-me'ter). A device for recording the mechanical movements of the stomach.

motorogenerative (mo'tor-o-je'r'min-a-tiv). Developing into the muscles: said of portions of the mesoderm.

motorpathy (mo-tor'path-e) [*motor* + *πάθος* disease]. Treatment of disease by gymnastics.

mouflage (moó-lahzh') [Fr.]. A wax model of a skin lesion.

mould (möld). See *mold*.

mounting (mown'ding). The rising in a lump of a wasting muscle when struck.

mountain anemia, fever, sickness, etc. (mown'ten). See under *sickness*.

mounting (mownt'ing). The preparation of specimens and slides for study. The chief mediums used in mounting large specimens are alcohol and glycerin jelly; for microscopical objects on a slide, Canada balsam and glycerin.

mouse fever or septicemia. See under *septicemia*.

mouth (mowth). The cavity which contains the tongue and teeth. **m. breathing**, habitual respiration through the mouth instead of the nose. **glass-blowers' m.**, swelling of the parotid gland in glass-blowers. **m. phenomenon**. See *lip reflex*, under *reflex*. **tapir m.** See *tapir mouth*. **trench m.**, Vincent's angina.

movement (moov'ment). 1. An act of moving; motion. 2. An act of defecation. **after-m.** See *after-movement*. **ameboid m.**, the movement of an ameba or leukocyte by the protrusion of a

pseudopodium, or a movement similar to it. See *ameba*. **angular m.**, a movement which changes the angle between two bones. **associated m.**, a movement of parts which act together, as of the eyes. **automatic m.**, a movement originating within the organism, but not by an act of the will. **Brownian m.**, **brunonian m.**, the dancing motion of minute particles suspended in a liquid. **Brownian-Zsigmondy m.** Same as *Brownian m.* **choreic m's**, **choreiform m's**, irregular, jerky movements of muscles or groups of muscles. **ciliary m.**, the lashing motion of cilia occurring in certain of the tissues. **circus m.** 1. A peculiar circular gait; an involuntary rolling or tumbling movement, the result of lesions of the brain and basal nerve centers. 2. A movement traveling continuously in circular fashion around a ring of muscle. **communicated m.**, one produced by a force acting from without. **m. cure**. See *kinesitherapy*. **elastic m.**, a movement due to the return of a stretched fiber to its natural length. **fetal m.**, that of a fetus in the womb. **forced m.**, a movement caused by an injury to a motor center or a conducting path. **Frenkel's m's**, a series of movements of precision to be performed by ataxic patients for the purpose of restoring lost coordination. **index m.**, a movement of the cephalic part of a body about the fixed caudal part. **Magnan's m.**, forward and backward movement of the tongue when it is drawn out in general paralysis of the insane. **molecular m.** Same as *Brownian m.* **nucleopetal m.**, the movement of a male pronucleus toward the female. **passive m.**, any movement of the body effected by a force entirely outside of the organism. **pendular m.**, one of the movements of the intestine in digestion, consisting of a gentle swinging to and fro of the different loops. These movements are ascribed to rhythmic contractions of the longitudinal muscles. **reflex m.**, an involuntary movement provoked by a remote external stimulus acting through a nerve center. **rolling m.**, the rolling of an animal on its long axis. **scissors m.**, a movement of the retinal reflex resembling the opening and shutting of scissors: indicative of irregular astigmatism. **spontaneous m.**, one which is originated within the organism. **Swedish m.** Same as *kinesitherapy*.

mowers' mite (mo'erz). The *Lep'tus autumnalis*.

moxa (moks'ah) [Japanese]. A tuft of soft, combustible substance to be burned upon the skin.

moxibustion (moks-ib-us'tshun). The burning of a moxa upon the skin.

Moynihan's test (moin'yanz) [Berkeley George Moynihan (Lord Moynihan), contemporary surgeon in Leeds, England]. See under *tests*.

moyrapuama (moi-rah-pu-am'ah). See *muirapauama*.

M. R. C. Abbreviation for *Medical Reserve Corps*.

M. R. C. P. Abbreviation for *Member of the Royal College of Physicians*.

M. R. C. S. Abbreviation for *Member of the Royal College of Surgeons*.

M. S. Abbreviation for *Master of Surgery*.

Ms. Symbol for *masrium*.

M. T., Mt. Abbreviation for *Membrana tympani*.

mu (mū) [the Gr. letter μ]. In micrometry, a micron or micromillimeter— $\frac{1}{1000}$ of a millimeter or $\frac{1}{25400}$ of an inch.

muavine (mu-a'vin). An alkaloid from muawi bark, an East African drug. Its hydrobromide, a yellowish powder, acts somewhat like digitalin.

Muc. Abbreviation for *L. mucila'go*, mucilage.

mucedin (mu'se-din). An amorphous protein derivable from gluten.

Much's bacillus, granules, reaction, stain (mooks) [Hans Much, German physician, born 1880]. See *bacillus*, *granule*, *reaction*, and *stain*.

Much-Holzmann reaction (mook-holts'man) [Hans Much and V. Holzmann, contemporary German physician]. See reaction.

Much-Weiss stain (mook-vis). Same as *Weiss stain*. See under *stain*.

mucematein (mu-kem'at-in). See *Mayer's mucematein*, under *staining methods*.

mucic acid (mu'sik). See under *acid*.

mucicarmine (mu-se-kar'min). A stain for mucin consisting of 1 Gm. of carmine, 0.5 Gm. of aluminum chloride, and 2 cc. of distilled water.

mucidin (mu'sid-in). A solution of the mucus of red snails: it is bactericidal, but not antitoxic.

muciferous (mu-sif'er-us) [*mucus* + L. *fer're* to 'bear']. Secreting mucus.

muciform (mu'sif-orm) [*mucus* + L. *for'ma* form]. Resembling mucus.

mucigen (mu'sij-en) [*mucus* + *γεννᾶν* to produce]. A substance found in the epithelial cells that secrete mucus: it is convertible into mucin and mucus.

mucigenous (mu-sij'en-us). Producing mucus.

mucilage (mu'sil-aj) [L. *mucila'go*]. 1. An artificial viscid paste of gum or dextrin: used in pharmacy as a vehicle or excipient, or in therapy as a demulcent. The principal mucilages are those of acacia (U. S. P.), elm, salep, sassafras-pith, starch, and tragacanth (U. S. P.). 2. A naturally formed viscid principle in a plant, consisting of a gum dissolved in the juices of the plant.

mucilaginous (mu-sil-aj'en-us). Of the nature of mucilage; slimy and adhesive.

muellago (mu-sil-a'go). See *mucilage*.

mucin (mu'sin). A conjugated protein (glycoprotein), the chief constituent of mucus. It is soluble in water and precipitated by alcohol, alum, and acids. Mucin is present in saliva, mucous secretions, the bile, and in certain cysts.

mucinase (mu'sin-ās). An enzyme secreted by the intestinal mucosa the function of which is to coagulate mucin.

mucinemia (mu-sin-e'me-ah) [*mucin* + *αἷμα* blood]. The presence of mucin in the blood.

mucinoblast (mu-sin'o-blast) [*mucin* + *βλαστὸς* germ]. A mast cell.

mucinogen (mu-sin'o-jen) [*mucin* + *γεννᾶν* to produce]. The principle from which mucin is derived.

mucinoid (mu'sin-oid) [*mucin* + *εἶδος* form]. 1. Resembling mucin. 2. Same as *mucoid*, 2d def.

mucinous (mu'sin-us). Resembling or marked by the formation of mucin.

mucinuria (mu-sin-u're-ah) [*mucin* + *οὐρὸν* urine]. The occurrence of mucin in the urine.

muciparous (mu-sip'ah-rus) [L. *mu'cus* mucus + *par'ere* to produce]. Secreting mucus.

mucitis (mu-si'tis). Inflammation of the mucous membrane.

Muck's test (mooks). See under *tests*.

muccocartilage (mu-ko-kar'til-aj). A soft cartilage the cells of which are in a mucus-like matrix.

mucocoele (mu'ko-sēl) [*mucus* + *κῆλη* tumor]. Dilatation of a cavity with accumulated mucous secretion, such as catarrhal dilatation of the lacrimal sac or a nasal retention cyst; also a mucous polypus. **suppurating m.**, a mucocoele whose contents are purulent; a pyocoele.

mucocolitis (mu-ko-ko-li'tis). Mucous colitis.

mucocutaneous (mu'ko-ku-ta'ne-us) [*mucus* + *cutaneous*]. Pertaining to the mucous membrane and the skin.

mucodermal (mu-ko-der'mal). Pertaining to the skin and mucous membrane.

muc-enteritis (mu'ko-en-ter-i'tis). Acute catarrhal enteritis.

mucofibrous (mu-ko-fi'brus). Composed of mucus and fibrous tissue.

mucoglobulin (mu-ko-glob'u-lin). Any one of the class of proteins in which plastic belongs.

mucoid (mu'koid). 1. Resembling mucus. 2. Any one of a group of mucus-like conjugated proteins of animal origin. The mucoids differ from mucins in solubility. They are precipitated by acetic acid. They include colloid and ovomucoid. Called also *mucinoid*. **serum m.**, a mucoid from the blood serum.

mucol (mu'kol). A proprietary saline preparation used in infectious diseases of the mouth and throat.

mucolysine (mu-kol'is-in) [*mucus* + *λῑσιν* dissolution]. A lysine which is capable of causing dissolution of mucus.

mucolytic (mu-ko-lit'ik). Destroying or dissolving mucus.

mucomembranous (mu-ko-mem'bran-us). Pertaining to or composed of mucous membrane.

mucoperiosteal (mu'ko-per-e-os'te-al). Consisting of mucous membrane and periosteum.

mucoperiosteum (mu'ko-per-e-os'te-um). Periosteum having a mucous surface, as in parts of the auditory apparatus.

mucopurulent (mu-ko-pu'ru-lent). Containing both mucus and pus.

mucopus (mu'ko-pus) [*mucus* + *pus*]. Mucus which has the appearance of pus on account of the presence of leukocytes.

Mucor (mu'kor) [L.]. A genus of molds forming delicate, white tubular filaments and spherical, black sporangia. *Mucors* together with *Thamnidium* form the profuse grayish-white growths upon the surface of meat in cold storage known as "whiskers." **M. corymbifer**. Same as *Lichtheimia corymbifera*. **M. mucedo**, a nonpathogenic species from feces or other nitrogenous substances. It produces a fatal disease in bees, and has twice been found as a parasite in man in cases of mycosis. **M. pusillus**, a species resembling *M. rhizopodiformis*, from moist bread. It is pathogenic for rabbits and is occasionally found in cases of otomycosis in man. **M. racemosus**, a mold from diseased pineapples; it sometimes causes intestinal inflammation. **M. ramosus**, an extremely malignant pathogenic species from white bread and from the ear in otomycosis. **M. rhizopodiformis**, a pathogenic organism which has been found in white bread and in the mouth in cases of hyperkeratosis. In rabbits it causes a fatal mycosis of the spleen, kidneys, bone marrow, etc.

Mucoraceae (mu-ko-ra'se-e). A family of the order Phycomyces in which the thallus is not segmented and ramified.

mucoriferous (mu-kor-i'er-us) [L. *mu'cor* mold + *fer're*, to carry]. Covered with mold.

mucorin (mu'ko-rin). An albuminous substance from certain molds.

mucormycosis (mu'kor-mi-ko'sis). A mycosis due to fungus of the genus *Mucor*.

mucosa (mu-ko'sah) [L. "mucus"]. The mucous membrane. **buccal m.**, the mucous tissue beyond the areolar gingiva on buccal surfaces. **labial m.**, the mucous tissue beyond the areolar gingiva on labial surfaces. **palatine m.**, the mucous tissue covering the palate. **sublingual m.**, the mucous tissue beyond the areolar gingiva on sublingual surfaces.

mucosal (mu-ko'sal). Pertaining to the mucous membrane.

mucosanguineous (mu'ko-san-gwin'e-us). Composed of mucus and blood.

mucosedative (mu-ko-sed'at-iv). Soothing to the mucous surfaces.

mucoserous (mu-ko-se'rus). Containing mucus and serum.

mucosin (mu-ko'sin). A form of mucin peculiar

- to the more tenacious varieties of mucus, as that of the nasal and uterine cavities.
- mucositis neuroticans agranulocytica.** Glandular fever.
- mucosolvene** (mu-ko-sol'vën). A proprietary disinfectant and germicide for use in diphtheria.
- mucous** (mu'kus) [L. *mucosus*]. Pertaining to or resembling mucus.
- mucro** (mu'kro) [L. "a sharp point"]. The pointed end of a part or organ. **m. cor'dis**, the apex of the heart.
- mucronate** (mu'kro-nät) [L. *mucro* a sharp point]. Having a spinelike tip or end.
- mucroniform** (mu-kron'if-orm). Spinelike.
- Mucuna** (mu-ku'nah) [Brazilian]. 1. The genus of leguminous plants. 2. Cowhage; the hairs of the pods of *M. pruriens* and *M. urens*: they are anthelmintic and irritant.
- mucus** (mu'kus) [L.]. The viscid watery secretion of the mucous glands. It is composed of water, mucin, inorganic salts, epithelial cells, leukocytes, and granular matter.
- mucusan** (mu'ku-san). Diboron-zinc-tetre-ortho-oxybenzoate: used in gonorrhea, leukorrhea, conjunctivitis, etc.
- mudar** (mu'dar). The root bark of *Calotropis gigantea*, a plant of India and other hot regions: alterative and sudorific. Dose, 2-5 grains (0.133-0.333 Gm.).
- mudarín** (mu'dar-in). A bitter extractive from the bark of mudar.
- mud bath.** See *bath*.
- mud fever.** See under *fever*.
- muffle, muffle furnace.** An oven in which material may be heated without exposing it to the direct action of the fire. It is employed in dental ceramics.
- muguet** (moo-gwa') [Fr.]. Thrush (1st def.).
- muhinyo** (mu-hin'yo). A fever endemic in Uganda, similar to Malta fever.
- muiracithin** (moo-e-ras'ith-in). A proprietary aphrodisiac combination of muirapuuama and lecithin.
- muirapuuama** (moo-e'rah-poo-ah'mah). A drug from Brazil, reputed to be an aphrodisiac and nerve stimulant.
- mulberry** (mul'ber-e). Any tree of the genus *Morus*. From the juice of the fruit a syrup is made which is used as a drink in fevers. The root of *M. ni-gra* is used for tapeworm. **m. calculus, m. mark.** See *calculus* and *nerves*.
- Mulder's angle** (mul'derz) [Johannes Mulder, Dutch anatomist, 1769-1810]. See under *angle*.
- Mulder's test** (mul'derz) [Gerard Jan Mulder, Dutch chemist, 1802-1880]. See under *tests*.
- mulene** (mul'ën). A preparation similar to ambrine.
- Mules' operation** (mülz) [Philip Henry Mules, English oculist, 1843-1905]. See *operation*.
- muliebria** (mu-le-eb're-ah) [L.]. The female generative organs.
- muliebrity** (mu-le-eb'ri-te) [L. *muliebritas*]. 1. Womanly quality; the sum of the peculiarities of the female sex. 2. The assumption of female qualities by the male.
- mull** (mul). A variety of thin, soft muslin, used in surgery. **plaster m.**, a sheet of mull coated with gutta-percha: used in surgery as a dressing and in skin diseases. **salve m.** See *mulla*.
- mulla** (mul'ah). An ointment in which the base is a mixture of salt and lard, spread on mull or soft muslin.
- mullein** (mul'in). See *Verbascum*.
- muller** (mul'er). A kind of pestle, flat at the bottom: used for grinding drugs upon a slab of similar material.
- mullerianoma** (mu-le-re-an-o'mah). A tumor developed from the duct of Müller.
- Müller's duct, fibers, muscle, etc.** (mil'erz) [1. Johannes Müller, German physiologist, 1801-1858. 2. Heinrich Müller, German anatomist, 1820-1864]. See *duct, fiber, muscle, etc.*
- Müller's fluid or liquid** (mil'erz) [Hermann Franz Müller, German histologist, 1866-1898]. See under *fluid*.
- Müller's sign** (mil'erz) [Koloman Müller, Hungarian physician, born 1849]. See under *sign*.
- Müller's test** (mil'erz) [Edward Müller, German physician, born 1876]. See under *tests*.
- multi-** [L. *multus* many, much]. A prefix signifying many or much.
- multi-articular** (mul'te-ar-tik'u-lar). Pertaining to or affecting many joints.
- multicapsular** (mul-te-kap'su-lar). Having many capsules.
- multicell** (mul'tis-el). Any organ made up of many cells; any group of functionally active cells.
- multicellular** (mul-te-sel'u-lar) [L. *multus* many + *cellula* cell]. Composed of many cells.
- Multiceps** (mul'tis-eps). A genus of tapeworms, the bladder worms of which are found in herbivorous animals and the adult forms in carnivorous animals.
- multicuspid, multicuspidate** (mul-te-kus'pid, mul-te-kus'pid-ät) [L. *multus* many + *cuspis* point]. Having many cusps.
- multifamilial** (mul'te-fam-il'e-al). Affecting the several successive generations of a family.
- multifid** (mul'tif-id) [L. *multifidus*; *multus* many + *fin'dere* to split]. Cleft into many parts.
- multiganglionic** (mul'te-gan-gle-on'ik). Pertaining to, affecting, or possessing many ganglia.
- multiglandular** (mul-te-glan'du-lar). Affecting many glands.
- multigravida** (mul-te-grav'id-ah) [L. *multus* many + *gravida* pregnant]. A woman who has often been pregnant.
- multi-infection** (mul'te-in-fek'shun). Infection with several varieties of organisms.
- multilobar** (mul-til-o'bar). Having numerous lobes.
- multilobular** (mul-be-lob'u-lar) [L. *multus* many + *lobulus* lobule]. Having many lobules.
- multilocular** (mul-te-lok'u-lar) [L. *multus* many + *loculus* cell]. Having many cells or loculi.
- multimammæ** (mul-te-man'e) [L. *multus* many + *mamma* breast]. The condition of having more than two breasts.
- multinodular** (mul-te-nod'u-lar). Composed of many nodules.
- multinuclear, multinucleate** (mul-te-nu'kle-ar, -nu'kle-ät) [L. *multus* many + *nucleus*]. Having several nuclei.
- multipara** (mul-tip'ar-ah) [L. *multus* many + *parere* to bear]. A woman who has borne several children.
- multiparity** (mul-tip-ar'it-e). The condition of being a multipara.
- multiparous** (mul-tip'ar-us). Having given birth to several children.
- multipartial** (mul-tip-ar'shal). Made from several strains of the same organism: said of serums.
- multiple** (mul'tip-l) [L. *multiplex*]. Manifold; occurring in various parts of the body at once.
- multipolar** (mul-te-po-lar) [L. *multus* many + *po-lus* pole]. Having more than two poles or processes.
- multitooted** (mul-te-roo'ted). Having many roots; said of molar teeth.
- multitotation** (mul-tir-o-ta'shun). See *multarotation*.
- multituberculate** (mul'te-tu-ber'ku-lät). Having many tubercles.

multivalent (mul-tiv'al-ent) [*L. mul'tus* many + *valere* to have value]. Having the power of combining with more than two univalent atoms.

muma (mu'mah). Myositis purulenta tropica.

mummification (mum'fik-a'shun). Dry gangrene; also the drying up and shriveling of the fetus.

mumps (mumps) [*L. parotidi'tis*]. Contagious parotitis; a contagious febrile disease marked by inflammation and swelling of the parotid gland. After an incubation period of about three weeks the symptoms appear with fever, headache, and pain beneath the ear. Soon there develops a tense, painful swelling in the parotid region, which interferes with mastication and swallowing and renders both actions painful. After a period of a few days to a week the symptoms gradually disappear. Sometimes the submaxillary and other salivary glands are involved, and occasionally the testicles, mammae, or the labia majora become swollen. One attack generally confers immunity from another. The causative organism is probably a filtrable virus. **meta-static m.**, that which involves the testis or a mammary gland and labium majus. **single m.**, that which affects only one of the parotid glands.

Mundinus (mun-di'nus). An Italian physician and anatomist, also known as Mondino da Luzzi, professor of medicine at Bologna. He is said to have been the first of his time to dissect the human body. Died 1326.

mung bean. A bean of China constituting an important part of the Chinese dietary.

munity (mu'nit-e). The state of being susceptible to infection.

Munro's point (mun-rōz) [John Cummings Munro, Boston surgeon, 1858-1910]. See under *point*.

mural (mu'ral) [*L. mura'lis*, from *mu'rus* wall]. Pertaining to or occurring in a wall.

Murchison's pill (mer'tshis-unz) [Charles Murchison, English physician, 1830-1879]. See under *pill*.

Murex purpurea. A gastropodous mollusk of the Mediterranean: from it a homeopathic remedy is prepared: used in uterine diseases.

murexide (mu-reks'id) [*L. mu'rex* purple sea snail]. Ammonium purpurate, $C_8H_4O_6N_6 \cdot NH_4 \cdot H_2O$, a brownish-red powder formerly used as a dye. **m. test.** See under *tests*.

muriate (mu're-ät) [*L. mu'ria* brine]. An obsolete synonym of *chloride*.

muriale (mu-re-at'ik) [*L. mural'icus*; *mu'ria* brine]. Derived from common salt. **m. acid.** See *acid*, *hydrochloric*.

murine (mu'r'in). A solution of borax, with a trace of berberin or some golden seal preparation: used in eye diseases.

murmekiasmosis amphilaphes (mer'me-ki-as-mo'sis am-fil'af-ēz) [μυρμεκίασμος outbreak of warts on the body and ἀμφίλαφς spreading]. A supposedly new disease of the tropics, consisting of cutaneous warts marked by extremely rapid growth, spreading to the whole side of the face and neck.

murmur (mur'mur) [*L.*]. A gentle blowing auscultatory sound. **accidental m.**, one due to some temporary and unimportant circumstance. **amphoric m.**, a respiratory murmur having an amphoric character. **anemic m.**, one due to a watery condition of the blood. **aneurysmal m.**, a vascular murmur caused by an aneurysm. **aortic m.**, a sound indicative of disease of the aortic valves. **apex m.**, a murmur heard over the apex of the heart. **arterial m.**, a murmur in an artery, sometimes aneurysmal and sometimes hemic. **attrition m.**, the sound produced by the friction of the pericardial surfaces in some cases of pericarditis. **bellows m.**, the bruit de soufflé, a puffing systolic heart sound. **blood m.**, one due to an abnormal, and commonly to anemic, condition of the blood. Called also *hemic m.* **Bright's m.** See *bruit de cuir neuf*. **bronchial m.**, a murmur heard over the large bronchi resembling a laryngeal respiratory murmur. **cardiac m.**, any adventitious sound heard over the region of the heart. **cardiopulmonary m.**, a murmur caused by the impact of the heart against the lung: sometimes also due to physical and histologic changes in the substance of the lung. **cardiorespiratory m.** Same as *cardiopulmonary m.* **crescendo m.**, a heart murmur marked by a pitch which rises progressively and a force which increases progressively and a sudden termination: it is heard in mitral stenosis. **deglutition m.**, a murmur heard on auscultation over the esophagus during the act of swallowing. **diastolic m.**, one occurring with and after the second sound of the heart. Heard at the apex, it is a sign of mitral obstruction; at the base of the heart, it is due to aortic regurgitation; more rarely to pulmonary regurgitation. **direct m.**, one due to a roughened endocardium and contracted valvular orifice. Called also *obstructive m.* **Duroziez's m.**, a double murmur in the femoral artery due to aortic regurgitation. **dynamic m.**, one caused by the irregular pulsation of the heart. **endocardial m.**, an abnormal sound produced within the cavity of the heart. **Eustace Smith's m.**, a venous hum heard over the manubrium when the patient's head is stretched backward in bronchial stenosis. **exocardial m.**,

A TABLE OF ENDOCARDIAL MURMURS.

TIME OF OCCURRENCE.	SITE OF GREATEST INTENSITY.	DIRECTION OF TRANSMISSION.	SEAT OF LESION.	NATURE OF LESION.
Systolic.	At cardiac apex.	Along left fifth and sixth ribs—in left axilla—in the back, at inferior angle of left scapula.	Mitral orifice.	Incompetency—Regurgitation.
Systolic.	At junction of right second costal cartilage with sternum.	To junction of right clavicle with sternum—in course of right carotid.	Aortic orifice.	Narrowing—Obstruction.
Systolic.	At ensiform cartilage.	Feebly transmitted.	Tricuspid orifice.	Incompetency—Regurgitation.
Systolic.	At left second intercostal space, close to sternum.	Feebly transmitted.	Pulmonary orifice.	Narrowing—Obstruction.
Diastolic.	At junction of right second costal cartilage with sternum.	To midsternum—in course of sternum.	Aortic orifice.	Incompetency—Regurgitation.
Diastolic.	At left second intercostal space, close to sternum.	In course of sternum.	Pulmonary orifice.	Incompetency—Regurgitation.
(Diastolic) presystolic.	Over body of heart.	To apex of heart.	Mitral orifice.	Narrowing—Obstruction.
(Diastolic) presystolic.	At ensiform cartilage.	Feebly transmitted.	Tricuspid orifice.	Narrowing—Obstruction.

a cardiac murmur produced outside of the heart's cavities. **expiratory m.**, a soft buzzing sound heard on expiration and caused by the current of air passing through the bronchi. **Fisher's m.**, a systolic murmur heard over the anterior fontanel or in the temporal region in rickets. **Flint's m.**, a loud presystolic murmur at the apex in aortic regurgitation. **Fraentzel m.**, a murmur louder at the beginning and the end of diastole than during the midperiod: heard in mitral stenosis. **friction m.**, one due to the rubbing together of two serous surfaces. **functional m.**, a cardiac murmur due to anemia or to excited action of the heart. **Graham Steele m.**, the murmur caused by relative pulmonary insufficiency; it is a soft diastolic murmur heard in the pulmonary area in the third left intercostal space near the border of the sternum and thence propagated down the sternum. **heart m.** Same as *cardiac m.* **hemic m.** See *blood m.* **humming-top m.** Same as *venous hum.* See *hum.* **indirect m.**, one that is caused by the reversal of the direction of the blood current. **inorganic m.**, any murmur not due to a valvular or other lesion. **inspiratory m.**, the murmur heard over the lungs during inspiration. **lapping m.**, a cardiac murmur resembling the sound of a cat lapping milk, heard in rupture of the aorta. **Makins' m.**, a reproduction in the heart of the systolic murmur heard over a wounded artery. **metallic m.**, a metallic musical sound heard over the lungs during inspiration. **mitral m.**, a murmur due to disease of the mitral valve. **muscle m.**, a murmur heard over a muscle in a state of contraction. **musical m.**, a cardiac murmur with a musical quality. **Nun's m.**, bruit de diable. **obstructive m.** See *direct m.* **organic m.**, one due to a structural change in the heart, in a vessel, or in the lung substance. **Parrot's m.**, a soft murmur heard instead of the cardiac sound in asystole. **pericardial m.**, a murmur produced in the pericardial sac. **pleuropericardial m.**, a pleural friction sound heard in the pericardial region and resembling a pericardial murmur. **prediastolic m.**, one that occurs just before and with the diastole. Heard at the apex, it is due to mitral obstruction; at the base of the heart, to aortic regurgitation; more rarely, to pulmonary regurgitation. **presystolic m.**, one occurring just before the systole, from mitral or tricuspid obstruction. **pulmonic m.**, one due to disease of the valves of the pulmonary artery. **reduplication m.**, a heart murmur in which the mitral and tricuspid first sound or the aortic and pulmonary second sounds are heard separately. **regurgitant m.**, that which is due to a dilated valvular orifice. **respiratory m.**, the murmur heard on auscultation over the normal lung during respiration. **Roger's m.** See *bruit de Roger.* **seesaw m.** Same as *to-and-fro m.* **spontaneous m.**, a cardiac murmur heard over a wide extent, and chiefly due to aortic valvular insufficiency. **stenosal m.**, a sound produced in an artery by artificial pressure or by a stenosis. **subclavicular m.**, a sound sometimes produced in the subclavian artery during systole, and due to a stenosis: mostly a symptom of tuberculous disease. **systolic m.**, one at the systole: due to aortic, tricuspid, or pulmonary obstruction. **to-and-fro m.**, a pericardial murmur occurring with both the systole and the diastole. **Traube's m.**, cantering rhythm. See *rhythm.* **tricuspid m.**, a murmur caused by disease of the tricuspid valves. **vascular m.**, a murmur occurring in a blood vessel. **venous m.**, a murmur occurring in a vein. **vesicular m.**, the murmur of normal breathing. **water-wheel m.** See *bruit de moulin.*

Murphy button, method, sign, treatment (mer'fe) [John Benjamin Murphy, Chicago surgeon, 1857-1916]. See *button, method, sign, treatment.*

murrain (mur'in). Any destructive cattle plague.

murrina (moo-re'nah). A form of trypanoso-

miasis among mules and horses in the Canal Zone (Darling, 1911). It is thought to be caused by the *Trypanosoma hip'picum*, and is marked by anemia, weakness, emaciation and edema, conjunctivitis, pyrexia, and some posterior paralyses.

Mus (mus) [L. "mouse"]. A genus of rats and mice. *M. alexandrinus*, the Egyptian or roof rat. *M. decumanus*. Same as *M. norvegicus*. *M. musculus*, the common house mouse. *M. norvegicus*, the brown or barn rat. *M. rattus*, the English black rat. See *rat*.

Musca (mus'kah) [L. "fly"]. A genus of flies of the family Muscidae which have their mouth parts adapted for suction only. *M. bra'va*, a South American fly which is probably instrumental in transmitting mal de Caderas. *M. domestica*, the common housefly. It may act as a mechanical carrier of the microorganisms of typhoid fever, cholera, dysentery, plague, and of pyogenic bacteria. The larvae may cause myiasis. *M. luteola*. See *Auchmeromyia*. *M. vomitoria*. See *Calliphora vomitoria*.

Musca domestica: A, Fly; B, larva; C, pupa.

muscae volitantes (mus'e vol-it-an'tēz) [L. "flying flies"]. Specks seen floating before the eyes.

muscardin (mus'kar-din). A disease of silkworms caused by *Botrytis bassia'na*.

muscarine (mus'kar-in) [L. *musca'rius* pertaining to flies]. A deadly alkaloid, $\text{OH}(\text{CH}_2)_n\text{N}(\text{CH}_2)_3\text{CHO} \cdot \text{H}_2\text{O}$, from various mushrooms, as the flyagaric, *Agaricus musca'rius*; also from rotten fish. Its nitrate is a cardiant, diaphoretic, and sialogogue. It has been used in hay-fever, bronchitis, and diabetes insipidus. Dose, $\frac{3}{10}$ -1 grain (0.002-0.066 Gm.), to be given with great caution.

muscarinism (mus'kar-in-izm). Poisoning by muscarine.

muscegenetic (mus'e-jen-et'ik). Giving rise to muscae volitantes.

muscid (mus'kis-id) [L. *mus'ca* fly + *ca'dere* to kill]. Destructive to flies; also any agent which destroys flies.

Muscidae (mus'id-e). A family of the Diptera. It includes the following genera: *Auchmeromyia*, *Calliphora*, *Chrysomyia*, *Cordylobia*, *Glossina*, *Lucilia*, *Musca*, and *Stomoxys*.

Muscina (mus-i'nah). The nonbiting stable-fly which breeds in dung and comes into the house.

muscle (mus'el) [L. *mus'culus*]. An organ which by contraction produces the movements of an animal organism. They are of two varieties: *striated*, or *striated*, including all the muscles in which contraction is voluntary and the heart muscle; *unstriated*, *smooth*, or *organic*, including all the involuntary muscles except the heart, such as the muscular layer of the intestines, bladder, blood vessels, etc. Striated muscles are covered with a thin layer of connective tissue (*epimysium*) from which septa (*perimysium*) pass, dividing the muscle into bundles of fibers, or *fasciculi*. Each fasciculus contains a number of parallel fibers separated by connective tissue septums (*endomysium*). Each fiber consists of an outer covering with transverse septums, the *sarcolemma*, containing *sarcous substance* and *nuclei*, or muscle corpuscles. The sarcous substance is marked by minute transverse lines, whence the name, *striated muscle*. Smooth muscles are composed of elongated, spindle-shaped nucleated cells arranged parallel to one another, and usually in bundles of varying size. *Muscle plasma* is the liquid obtained from fresh muscles by means of pressure. *Muscle rods* are minute longitudinal lines found by Schäfer in striated muscular tissue. *Muscle serum* is the liquid remaining after a clot has formed in muscle plasma. See *muscles*, table of.

A TABLE OF THE MUSCLES.

The descriptions of muscles in this table are given under the B N A names. The names of the old nomenclature are also included, but they are referred to the B N A terms.

MUSCLE.	ORIGIN.	INSERTION.	NERVE SUPPLY.	ACTION.
Abduc'tor dig'iti quin'ti (of hand).	Pisiform bone.	Ulnar side of first phalanx of little finger.	Deep palmar branch of ulnar nerve.	Abducts the little finger.
Abduc'tor dig'iti quin'ti (of foot).	Outer tubercle of calcaneus, plantar fascia, and intermuscular septum.	Outer side of first phalanx of little toe.	Lateral plantar; superficial branch.	Abducts and flexes the little toe.
Abduc'tor hallu'cis.	Inner tubercle of os calcis, plantar fascia, internal annular ligament.	Inner side of base of first phalanx of great toe.	Internal plantar nerve.	Abducts and flexes first phalanx of great toe.
Abduc'tor lon'gus pol'licis.	See <i>Abductor pollicis longus</i> .			
Abduc'tor min'imi dig'iti pe'dis.	Same as <i>Abductor digiti quinti (of foot)</i> .			
Abduc'tor pol'licis bre'vis.	Ridge of trapezium and anterior angular ligament.	Outer side of first phalanx of thumb.	Median.	Abducts thumb.
Abduc'tor pol'licis lon'gus.	Posterior surfaces of radius and ulna.	Outer side of base of first metacarpal bone	Radial.	Abducts and assists in extending thumb.
Abduc'tor pol'licis pe'dis.	Same as <i>Abductor hallucis</i> .			
Accelera'tor uri'nae.	See <i>Bulbocavernosus</i> .			
Accesso'rius ad accesso'rium.	See <i>Quadratus plantae</i> .			
Accesso'rius ad sacrolumba'lem.	See <i>Iliocostalis dorsi</i> .			
Adduc'tor bre'vis.	Body and ramus of pubes.	Proximal part of linea aspera of femur.	Obturator.	Adducts, rotates outward, and flexes thigh.
Adduc'tor hallu'cis.	Tarsal ends of middle metatarsal bones, etc.	Outside of base of first phalanx of great toe.	External plantar.	Adducts the great toe.
Adduc'tor lon'gus.	Crest of pubes and symphysis.	Linea aspera of femur.	Obturator.	Rotates outward, adducts, and flexes thigh.
Adduc'tor mag'nus.	Ramus of pubes and of ischium.	Linea aspera of femur and internal epicondyle.	Sciatic and obturator.	Adducts thigh and everts it.
Adduc'tor min'imus.	The anterior portion of the adductor magnus.	Ischium and body and ramus of pubes.	Obturator and great sciatic.	Adducts thigh.
Adduc'tor obli'quus hallu'cis.	See <i>Adductor hallucis</i> .			
Adduc'tor pol'licis.	Third metacarpal bone.	Base of first phalanx of thumb; inner side.	Ulnar.	Adducts thumb toward median line.
Adduc'tor quadra'tus.	See <i>Adductor minimus</i> .			
Adduc'tor transver'sus hallu'cis.	See <i>Adductor hallucis</i> .			
Ag'itator cau'dae.	An occasional muscle formed by fibers of the gluteus maximus arising from the coccyx.			
Amygdalogs'sus.	Pharyngeal aponeurosis over tonsil.	Continuous with palatoglossus.		Assists in lifting edge of tongue and in rendering the dorsum concave.
Ancone'us.	Back of external condyle of humerus.	Olecranon and shaft of ulna.	Radial (musculospiral).	Extends forearm.
Antitrag'icus.	Outer part of antitragus.	Caudate process of helix.	Temporal and posterior auricular.	
Arrecto'res pilo'rum.	Papillary layer of skin.	Hair follicles.	Sympathetic.	Elevates hairs of skin.
Articula'ris ge'nu.	Lower fourth of anterior surface of shaft of femur.	Synovial membrane of knee joint.	Femoral (anterior crural).	Lifts capsule of knee joint.
Aryepiglott'icus.	A portion of the arytaenoid obliquus from apex of arytenoid cartilage and extending in the aryepiglottic fold to the thyreo-epiglottic ligament.			
Arytaenoi'deus obli'quus.	Back part of arytenoid cartilage.	Corniculum laryngis.		Probably shortens the larynx.
Arytaenoi'deus transver'sus.	Base and outer border of arytenoid cartilage.	Apex of other arytenoid cartilage.	Recurrent laryngeal.	Closes posterior part of glottis.

A TABLE OF THE MUSCLES—*Continued.*

MUSCLE.	ORIGIN.	INSERTION.	NERVE SUPPLY.	ACTION.
Attol'lens au'rem.	See <i>Auricularis superior</i> .			
At'trahens au'rem.	See <i>Auricularis anterior</i> .			
Auricula'ris ante'rior.	Superficial temporal fascia.	Cartilage of auricle.	Facial.	Draws forward the pinna of ear.
Auricula'ris poste'rior.	Mastoid process.	Posterior part of root of auricle.	Facial.	Draws pinna backward.
Auricula'ris supe'rior.	Galea aponeurotica.	Upper margin of root of auricle.	Facial.	Raises pinna of ear.
Az'ygos pharyn'gis (occasional).	Pharyngeal tubercle of occipital bone.	Raphe of pharynx.	Glossopharyngeal.	Blended with superior constrictor.
Az'ygos u'vulae.	Same as <i>Uvulae</i> .			
Basioglos'sus.	Fibers of hyoglossus arising from base of hyoid bone.	Tongue.	Hypoglossal.	Depresses side of tongue.
Bi'ceps bra'chii	1. Long head upper margin of glenoid cavity. 2. Short head coracoid process.	Bicipital tubercle of radius and fascia of forearm.	Musculocutaneous.	Flexes and supinates forearm; flexes and adducts arm.
Bi'ceps fem'oris.	1. Long head from ischial tuberosity. 2. Short head from linea aspera.	Head of fibula and outer tuberosity of head of tibia.	Long head, tibial; short head, peroneal popliteal.	Flexes knee and rotates it outward.
Biven'ter cervi'cis.	Transverse processes and spines of 2-4 upper dorsal.	Superior curved line of occipital bone.	Upper cervical.	Retracts, lowers, and rotates head.
Bowman's.	Same as <i>Ciliary</i> .			
Brachia'lis.	Lower half of the shaft of humerus, front surface.	Coronoid process of ulna at junction with shaft.	Musculospiral; musculocutaneous.	Flexes the forearm.
Brachia'lis anti'cus.	Same as <i>Brachialis</i> .			
Brachioapsula'ris.	See <i>Subscapularis</i> .			
Brachioradia'lis.	External supracondylar ridge of humerus.	Front of base of styloid process of radius.	Musculospiral.	Flexes forearm and assists in supination.
Broncho-oesophage'us.	Fasciculi of muscle arising from wall of left bronchus reinforcing the muscles of the esophagus.			
Brücke's.	The longitudinal portion of ciliary muscle.			
Buccina'tor.	Buccinator ridge of mandible; alveolar process of maxilla; pterygomaxillary ligament.	Orbicularis oris.	Buccal branch of facial.	Compresses the cheeks and retracts the angles of the mouth.
Buccopharynge'us.	Part of constrictor pharyngis superior arising from pterygo-mandibular ligament.			
Bulbocaverno'sus.	Central point of perineum.	Under surface of triangular ligament membrane covering corpus cavernosum, and fascia of dorsum of penis.	Pudic.	Constricts bulbous urethra, in female constricts urethra.
Can'i'us.	Canine fossa of maxilla.	Orbicularis oris and skin at angle of mouth.	Facial.	Raises angle of mouth.
Cephalopharynge'us.	See <i>Constrictor pharyngis superior</i> .			
Ceratocricoi'deus.	A fasciculus from the interarytaenoideus inserted into the inferior cornu of thyroid cartilage.			
Ceratopharynge'us.	A portion of the constrictor pharyngeus medius arising from the greater cornu of the hyoid bone.			
Cervica'lis ascen'dens.	Same as <i>Iliocostalis cervicis</i> .			
Chondrocor'acoid (occasional).	First costal cartilage.	Coracoid process overlying the coracobrachialis.		
Chondroglos'sus (occasional).	Inner side and base of lesser cornu of hyoid bone.	Substance of tongue.	Hypoglossal.	Depresses and retracts tongue.

Smooth muscle cells from the intestine of a cat: In 1, isolated; in 2 and 3, in cross section. At *a* the cell is cut in the plane of the nucleus; at *b*, in the neighborhood of the pointed end. In 3 is seen the manner in which neighboring cells are joined to each other by intercellular bridges.

Transverse section through striated muscle fibers of a rabbit: 1 and 3, From a muscle of the lower extremity; 2, from a lingual muscle. In 2, Cohnheim's fields are distinct; in 1, less clearly shown; in 3 the muscle fibrils are more evenly distributed.

Cross section of a muscle fiber of the human heart: *a*, Contractile substance; *b*, nucleus.

Voluntary muscle: *A*, Three voluntary muscle fibers in long sections; *a*, three voluntary muscle fibers; *b*, nuclei of same; *c*, fibrous tissue between fibers (endomysium); *d*, fibers separated into sarcolemma. *B*, Structure of a muscle fiber (diagrammatic): *a*, dark band; *b*, light band; *c*, median line of Hensen; *d*, membrane of Krause; *e*, sarcolemma; *f*, nucleus. *C*, Diagram of the structure of the fibrils of a striated muscle fiber: *a*, light band; *b*, dark band; *c*, contractile elements; *d*, dots composing membrane of Krause; *e*, narrowing of contracting elements forming Hensen's line (Leroy).

From a striated muscle of man obtained by teasing: *h*, A median disk lying in the transverse disk; *Q*, *z*, the intermediate disk borders above and below on the light isotropic disks.

Heart muscle, semidiagrammatic: *a*, Nucleus; *b*, branch of fibers; *c*, cross striation (Leroy).

A TABLE OF THE MUSCLES—Continued.

MUSCLE.	ORIGIN.	INSERTION.	NERVE SUPPLY.	ACTION.
Chondropharynge'us.	A portion of the constrictor pharyngis medius arising from the lesser cornu of the hyoid bone.			
Choroid.	See <i>Ciliary</i> .			
Ciliary, cilia'ris.	<i>Longitudinal</i> division (Brücke's muscles), junction of cornea and sclera; <i>circular</i> division (Müller's muscle), fibers form a ring.	Outer layers of choroid and ciliary processes.	Short (oculomotor) ciliary.	Visual accommoda-tion.
Circumflexus pal'ati.	See <i>Tensor veli palatini</i> .			
Cleidopitrochlea'ris.	Clavicular portion of deltoid.	Internal condyle of the humerus.	Circumflex.	Raises arm and draws it forward.
Cleidomastoid.	A portion of the sternocleidomastoid between the clavicle and the mastoid process.			
Coccyg'us.	Ischial spine and lesser sacrosacral ligament.	Coccyx, sacrococcygeal ligament, and sacrum.	Third and fourth sacral.	Supports and raises coccyx, and closes pelvic outlet.
Complex'us.	Same as <i>Semispinalis capitis</i> .			
Compres'sor hemisphaer'icus bul'bi.	That portion of the bulbocavernosus which overlies the most prominent part of the bulb.			
Compres'sor na'rrium.	Superior maxilla.	Fellow muscle and nasal fibrocartilage.	Facial.	Compresses nostrils.
Compres'sor na'rrium mi'nor.	Cartilage of ala nasi.	Skin at end of nose.	Facial.	Compresses nostrils.
Compres'sor sac'culi laryn'gis.	Same as <i>Aryepiglotticus</i> .			
Compres'sor ure'thræ.	Same as <i>Sphincter urethrae membranacea</i> .			
Compres'sor vagi'nae.	The bulbocavernosus of the female.			
Constrictor isth'mi faucium.	See <i>Glossopalatinus</i> .			
Constrictor pharyn'gis infe'rior.	Cricoid and thyroid cartilages.	Posterior median raphe.	Glossopharyngeal, pharyngeal plexus, and external and recurrent laryngeal.	Contracts pharynx, as in swallowing.
Constrictor pharyn'gis me'dius.	Cornua of hyoid and stylohyoid ligament.	Posterior median raphe.	Pharyngeal plexus and glossopharyngeal.	Contracts pharynx, as in swallowing.
Constrictor pharyn'gis supe'rior.	Palate bone, internal pterygoid plate, pterygomaxillary ligament, alveolar process of jaw, and side of tongue.	Posterior median raphe.	Pharyngeal plexus.	Contracts pharynx, as in swallowing.
Constrictor ure'thræ.	See <i>Sphincter urethrae membranacea</i> .			
Constrictor vagi'nae.	The bulbocavernosus in the female.			
Coracobrachia'lis.	Coracoid process of scapula and intermuscular septum.	Middle of inner face of shaft of humerus.	Musculocutaneous.	Flexes and adducts arms.
Corrugator cutis a'ni.	Submucous tissue within the anus.	Skin surrounding anus.	Sympathetic.	Corrugates the skin around the anus.
Corrugator supercil'ii.	Inner end of superciliary ridge.	Under surface of orbicularis palpebrarum.	Facial.	Draws eyebrow down and inward; wrinkles forehead.
Crampton's.	See <i>Ciliary</i> .			
Cremas'ter.	Middle of Poupart's ligament.	Crest of pubic bone and sheath of rectus abdominis.	Genital branch of genitocrural.	Retracts testicle.
Cremas'ter, internal, of Henle.	Fibers of gubernaculum testis.	Elements of fetal spermatic cord.		
Crico-arytenoi'deus latera'lis.	Side of cricoid cartilage.	Outer angle of base of arytenoid cartilage.	Recurrent laryngeal.	Closes chink of glottis.
Crico-arytenoi'deus poste'rior.	Back of cricoid cartilage.	Outer angle of base of arytenoid cartilage.	Recurrent laryngeal.	Opens chink of glottis.
Cricopharyn'geus.	A portion of the constrictor pharyngis inferior arising from the cricoid cartilage.			

Muscles of the right side of the head and neck: 1, Frontalis; 2, superior auricular; 3, posterior auricular; 4, orbicularis oculi; 5, procerus; 6, compressor narium; 7, levator labii superioris alaeque nasi; 8, levator labii superioris; 9, zygomaticus; 10, orbicularis oris; 11, quadratus labii inferioris; 12, triangularis; 13, anterior belly of digastric; 14, mylohyoid; 15, hyoglossus; 16, stylohyoid; 17, posterior belly of digastric; 18, the masseter; 19, sternohyoid; 20, anterior belly of omohyoid; 21, thyrohyoid; 22, 23, lower and middle constrictors of pharynx; 24, sternocleidomastoid; 25, 26, splenius cervicis; 27, levator scapulae; 28, anterior scalenus; 29, posterior belly of omohyoid; 30, middle and posterior scalenus; 31, trapezius.

Muscles of the neck from the front. On the left side the platysma has been removed, and on the right the digastric, the stylohyoid, mylohyoid, sternohyoid, and omohyoid: 1, Posterior, and 1', anterior belly of digastric; 2, mylohyoid; 3, geniohyoid; 4, hyoglossus; 5, styloglossus; 6, stylohyoid; 7, stylopharyngeus; 8, sternocleidomastoid; 9, 9', omohyoid; 10, sternohyoid; 11, 12, sternothyroid; 13, levator scapulae.

Muscles of the trunk from before (left side superficial, and right side deep, muscles): 1, Pectoralis major; 2, deltoid; 3, portion of latissimus dorsi; 4, serratus anterior; 5, subclavius; 6, the pectoralis, sternocostal portion; 7, serratus anterior; 12, rectus abdominis; 13, internal oblique; 14, external oblique; 15, abdominal aponeurosis and tendinous intersections of rectus abdominis; 16, over symphysis pubis; 17, linea semilunaris; 18, gluteus medius; 19, tensor fasciae latae; 20, rectus femoris; 21, sartorius; 22, femoral part of the iliopsoas; 23, pectineus; 24, adductor longus; 25, gracilis.

Muscles of the trunk from behind (left side, superficial; right side, deep): 1, Sternocleidomastoid; 2, splenius cervicis; 3, trapezius; 4, latissimus dorsi; 5, infraspinatus; 6, teres minor; 7, teres major; 8, deltoid; 9, external oblique of abdomen; 10, gluteus medius; 11, gluteus maximus; 12, levator scapulae; 13, rhomboideus minor; 14, rhomboideus major; 15, part of longissimus dorsi; 16, tendons of insertion of iliocostalis; 17, supraspinatus; 18, infraspinatus; 19, teres minor; 20, teres major; 21, serratus anterior; 22, upper, and 22', lower, part of serratus posterior inferior; 23, internal oblique; 24, gluteus medius; 25, pyriformis and superior and inferior gemelli; 26, 26', portions of obturator internus; 27, tendon of obturator internus; 28, quadratus femoris.

A TABLE OF THE MUSCLES—Continued.

MUSCLE.	ORIGIN.	INSERTION.	NERVE SUPPLY.	ACTION.
Cricothyroi'deus.	Front and side of cricoid cartilage.	Thyroid cartilage at lower inner border.	Superior laryngeal.	Renders vocal cords tense.
Crure'us.	See <i>Vastus intermedius</i> .			
Cuculla'rius.	Same as <i>Trapezius</i> .			
Del'toid.	Clavicle, acromion, and spine of scapula.	Middle of outer side of shaft of humerus.	Circumflex.	Raises arm and aids in carrying it forward and backward.
Depres'sor a'lae na'si.	Incisive fossa of upper maxilla.	Septum and ala of nose.	Buccal branch of facial.	Contracts nostril and depresses ala.
Depres'sor an'guli o'ris.	Same as <i>Triangularis</i> .			
Depres'sor epiglot'tidis.	A portion of thyro-epiglottideus.	Epiglottis.	Recurrent laryngeal.	Depresses epiglottis.
Depres'sor la'bii inferioris.	Same as <i>Quadratus labii inferioris</i> .			
Depres'sor sep'ti.	Septally attached part of depressor alae nasi.			
Depres'sor thyroi'deus (anomalous).	Lower border first tracheal ring.	Lower border of thyroid cartilage.		Depresses thyroid cartilage.
Depres'sor ure'thrae.	Ramus of ischium near transversus perinei profundus.	Fibers of constrictor vaginae.		Depresses urethra.
Detru'sor uri'nae.	Same as <i>Pubovesicalis</i> .			
Diaphragm.	Ensiform and costal cartilages, 6 or 7 lower ribs, ligamenta arcuata and lumbar vertebrae.	Central tendon.	Phrenic.	Respiration and expulsive acts.
Digastric (anterior belly).	Intermediate tendon and hyoid bone.	Inner surface of mandible near symphysis.	Mylohyoid branch of inferior dental.	Elevates and retracts hyoid bone and tongue.
Digastric (posterior belly).	Digastric groove of mastoid process.	Hyoid bone and intermediate tendon.	Facial.	Elevates and retracts hyoid bone and tongue.
Dilata'tor pupil'lae.	Fibers extending radially from the sphincter pupillae to the ciliary margin.			
Dorsal interos'sei of hand, 4.	See <i>Interossei</i> .			
Dorsal interos'sei of foot, 4.	See <i>Interossei</i> .			
Ejac'ulator sem'inis.	Same as <i>Bulbocavernosus</i> .			
Epicra'nus.	The muscle of the scalp formed by two bellies, the frontalis and the occipitalis and by an aponeurosis, the galea aponeurotica.			
Epitrochleo-ancone'us.	Occasional: Back of internal condyle of humerus.	Inner side of olecranon process.		
Erec'tor clito'ridis.	Same as <i>Ischiocavernosus</i> .			
Erec'tor pe'nis.	Same as <i>Ischiocavernosus</i> .			
Erec'tor pi'li.	See <i>Arrectores pilorum</i> .			
Erec'tor spi'nae.	Same as <i>Sacrospinalis</i> .			
Exten'sor annula'ris (anomalous).	Posterior face of shaft of ulna.	Tendon of ring finger.		
Exten'sor car'pi radialis bre'vis or bre'vior.	External epicondyle of humerus.	Base of third metacarpal bone.	Musculospiral.	Extends and abducts wrist; helps to flex forearm.
Exten'sor car'pi radialis long'us or lon'gior.	External supracondylar ridge of humerus.	Base of metacarpal of index finger.	Musculospiral.	Extends and abducts wrist; helps to flex forearm.
Exten'sor car'pi ulna'ris.	External epicondyle of humerus.	Fifth metacarpal.	Radial (dorsal interosseous).	Extends and abducts wrist; helps to flex forearm.
Exten'sor coccy'gis.	Last bone of sacrum or first of coccyx.	Tip of coccyx.	Sacral branches.	Extends coccyx.
Exten'sor dig'iti quin'ti pro'prius.	External epicondyle of humerus.	Dorsum of first phalanx of little finger.	Radial (dorsal interosseous).	Extends little finger.
Exten'sor digito'rum bre'vis.	Os calcis; anterior annular ligament.	First phalanx of great toe and tendons of extensor digitorum longus.	Deep peroneal.	Extends first phalanges of toes.
Exten'sor digito'rum commu'nis.	Outer condyle of humerus; intermuscular septum.	Second and third phalanges of fingers.	Dorsal interosseous.	Extends fingers; helps extend forearm.

FIG. 1.

FIG. 2.

FIG. 3.

FIG. 1.—*Superficial Muscles of Shoulder and Arm, from before:* 1, Pectoralis major; 2, deltoid; 3, biceps brachii; 4, brachialis; 5, triceps; 6, pronator teres; 7, flexor carpi radialis; 8, palmaris longus; 9, flexor carpi ulnaris; 10, brachioradialis; 11, abductor pollicis longus; 12, extensor pollicis brevis; 13, flexor digitorum sublimis; 14, flexor pollicis longus; 15, flexor digitorum profundus; 16, palmaris brevis; 17, abductor pollicis brevis.

FIG. 2.—*Superficial Muscles of Shoulder and Arm, from behind:* 1, Trapezius; 2, deltoid; 3, rhomboideus major; 4, infraspinatus; 5, teres minor; 6, teres major; 7, latissimus dorsi; 8, triceps; 9, anconeus; 10, brachialis; 11, brachioradialis; 12, extensor carpi radialis longior; 13, extensor carpi radialis brevis; 14, extensor digitorum communis; 15, extensor carpi ulnaris; 16, flexor carpi ulnaris; 17, abductor pollicis longus; 18, extensor pollicis brevis; 19, tendon of extensor pollicis longus.

FIG. 3.—*Superficial Muscles of Hip and Thigh, from behind:* 1, Gluteus medius; 2, gluteus maximus; 3, vastus lateralis; 4, biceps femoris; 5, semitendinosus; 6, semimembranosus; 7, gracilis; 8, sartorius; 9, adductor magnus; 10, 11, gastrocnemius; 12, origin of plantaris.

FIG. 4.

FIG. 5.

FIG. 6.

FIG. 7.

FIG. 8.

FIG. 4.—*Muscles of Inner Side of Thigh and Interior of Pelvis:* 1, Iliacus; 2, psoas major; 3, obturator internus; 4, piriformis; 5, sacrospinous; 6, gluteus maximus; 7, sartorius; 8, adductor longus; 9, gracilis; 10, adductor magnus; 11, semimembranosus; 12, semitendinosus; 13, rectus femoris; 14, vastus medialis.

FIG. 5.—*Superficial Muscle of Leg from Inner Side:* 1, Vastus medialis; 2, sartorius; 3, gracilis; 4, semitendinosus; 5, semimembranosus; 6, inner head of gastrocnemius; 7, soleus; 8, tendon of plantaris; 9, tendon of tibialis posterior; 10, flexor digitorum longus; 11, flexor hallucis longus; 12, tibialis anticus; 13, abductor hallucis.

FIG. 6.—*Superficial Muscles of Front of Thigh:* 1, Insertion of external oblique into iliac crest; 2, aponeurosis of external oblique; 3, external abdominal ring; 4, gluteus medius; 5, tensor fasciae latae; 6, sartorius; 7, iliopsoas; 8, pectineus; 9, adductor longus; 10, gracilis; 11, adductor magnus; 12, vastus lateralis; 13, rectus femoris; 14, vastus medialis; 15, biceps femoris.

FIG. 7.—*Muscles of Leg and Foot, from before:* 1, Tendon of rectus femoris; 2, vastus medialis; 3, vastus lateralis; 4, sartorius; 5, iliotibial band; 6, inner head of gastrocnemius; 7, inner part of soleus; 8, tibialis anterior; 9, extensor proprius hallucis; 10, extensor digitorum longus; 11, peroneus longus; 12, peroneus brevis; 13, peroneus tertius; 14, origin of extensor digitorum brevis.

FIG. 8.—*Superficial Muscles of Leg, from behind:* 1, Vastus externus; 2, biceps femoris; 3, semitendinosus; 4, semimembranosus; 5, gracilis; 6, sartorius; 7, outer, and 8, inner head of gastrocnemius; 9, plantaris; 10, soleus; 11, peroneus longus; 12, peroneus brevis; 13, flexor digitorum longus; 14, tibialis posterior; 15, lower fibers of flexor hallucis longus.

A TABLE OF THE MUSCLES—Continued.

MUSCLE.	ORIGIN.	INSERTION.	NERVE SUPPLY.	ACTION.
Exten'sor digito'rum lon'gus.	Outer tuberosity of tibia, shaft of fibula, etc.	Second and third phalanges of four lesser toes.	Deep peroneal.	Extends toes; flexes foot and turns it out.
Exten'sor bre'vis.	That portion of extensor brevis digitorum that goes to great toe.			
Exten'sor hallu'cis lon'gus.	Front of tibia and interosseous membrane.	Base of terminal phalanx of great toe.	Anterior tibial.	Extends great toe.
Exten'sor in'dicis pro'prius.	Back of ulna; interosseous membrane.	Second and third phalanges of index finger.	Radial.	Extends index finger.
Exten'sor min'imi dig'iti.	Same as <i>Extensor digiti quinti proprius</i> .			
Exten'sor os'sis meta-car'pi pol'licis.	Same as <i>Abductor pollicis longus</i> .			
Exten'sor pol'licis bre'vis.	Dorsal surface of radius.	Base of first phalanx of thumb.	Radial.	Extends and abducts first phalanx of thumb.
Exten'sor pol'licis lon'gus.	Back of radius, ulna, and interosseous membrane.	Base of metacarpal of thumb, radial side.	Radial.	Extends metacarpal bone of thumb.
Exten'sor pri'mi interno'dii pol'licis.	Same as <i>Extensor pollicis brevis</i> .			
Exten'sor pro'prius hallu'cis.	Same as <i>Extensor hallucis longus</i> .			
Exten'sor secun'di interno'dii pol'licis.	Same as <i>Extensor pollicis longus</i> .			
Flex'or accesso'rius digito'rum.	Same as <i>Quadratus plantae</i> .			
Flex'or bre'vis digito'rum.	Same as <i>Flexor digitorum brevis</i> .			
Flex'or bre'vis hallu'cis.	Same as <i>Flexor hallucis brevis</i> .			
Flex'or bre'vis min'imi dig'iti.	Same as <i>Flexor digiti quinti brevis</i> .			
Flex'or car'pi radia'lis.	Internal condyle of humerus; intermuscular septum.	Metacarpal bone of index finger at base.	Median.	Flexes and abducts wrist; helps to pronate hand and flex forearm.
Flex'or car'pi ulna'ris.	2 heads—1. Internal condyle of humerus. 2. Olecranon, ulna, etc.	Fifth metacarpal and pisiform bone.	Ulnar.	Flexes and adducts wrists.
Flex'or cru'ris.	See <i>Biceps femoris</i> .			
Flex'or dig'iti quin'ti bre'vis.	Base of metacarpal of little toe and sheath of peroneus longus.	Outer side of base of first phalanx of little toe.	External plantar.	Flexes little toe.
Flex'or dig'iti quin'ti bre'vis (of hand).	Hamulus of unciform bone.	Inner side of first phalanx of little finger.	Ulnar.	Flexes first phalanx of little finger.
Flex'or digito'rum bre'vis.	Internal tubercle of calcaneus; plantar fascia.	Second phalanges of four outer toes.	Internal plantar.	Flexes toes.
Flex'or digito'rum lon'gus pe'dis.	Shaft of tibia, posterior surface.	Last phalanges of lesser toes.	Posterior tibial.	Flexes toes and extends foot.
Flex'or digito'rum profun'dus.	Shaft of ulna, coronoid process, etc.	Distal phalanges of fingers.	Ulnar and anterior interosseous.	Flexes distal phalanges.
Flex'or digito'rum subli'mis (3 heads).	1. Inner condyle of humerus, etc. 2. Coronoid process of ulna. 3. Oblique line of radius.	Second phalanges of fingers.	Median.	Flexes second phalanges; flexes forearm slightly.
Flex'or hallu'cis bre'vis.	Inner surface of cuboid and middle and external cuneiform bone.	Sides of base of first phalanx of great toe.	Plantar, external and internal.	Flexes great toe.
Flex'or hallu'cis lon'gus.	Inner surface of lower two thirds of shaft of fibula.	Base of distal phalanx of great toe.	Posterior tibial.	Flexes great toe and extends foot.
Flex'or in'dicis.	The indicial portion of the flexor profundus digitorum.			
Flex'or pol'licis bre'vis.	Superficial part of annular ligament of wrist; ulnar side of first metacarpal bone.	Base of first phalanx of thumb.	Median, ulnar.	Flexes first phalanx of thumb.
Flex'or pol'licis lon'gus.	Anterior surface of radius and coronoid process of ulna.	Base of distal phalanx of thumb.	Volar interosseous.	Flexes thumb.
Flex'or os'sis meta-car'pi pol'licis.	See <i>Opponens pollicis</i> .			
Fronta'lis.	The anterior part of epicranium; frontal bone above supra-orbital line.	Galea aponeurotica.	Facial.	Pulls scalp forward.

A TABLE OF THE MUSCLES—*Continued.*

MUSCLE.	ORIGIN.	INSERTION.	NERVE SUPPLY.	ACTION.
Gastrocnemius (2 heads).	Condyles of the femur.	Os calcis (calcaneus) by the Achilles tendon.	Tibial.	Extends foot; flexes leg, etc.
Gavard's.	The oblique muscular fibers of the stomach walls.			
Gemellus inferior.	Tuberosity of ischium; lesser sacrospinous notch.	Great trochanter.	Sacral plexus.	Rotates extended thigh; abducts it when flexed.
Gemellus superior.	Spine of ischium; lesser sacrospinous notch.	Great trochanter.	Sacral plexus.	Rotates extended thigh; abducts it when flexed.
Genioglossus.	Mental spine of mandible.	Hyoid bone and under surface of tongue.	Hypoglossal.	Retracts, depresses, and protrudes tongue; raises hyoid.
Geniohyoglossus.	Same as Genioglossus.			
Geniohyoid.	Mental spine of mandible.	Body of hyoid bone.	Hypoglossal.	Lifts and advances hyoid; aids in depressing jaw.
Glossopalatinus.	Under surface of soft palate.	Side of tongue.	Pharyngeal plexus.	Lifts back of tongue and narrows fauces.
Glossopharyngeus.	The part of the constrictor pharyngis superior arising from the floor of mouth.			
Gluteus maximus.	Superior curved line and crest of ilium, sacrum, and coccyx.	Fascia lata; femur below great trochanter.	Inferior gluteal and sacral plexus.	Extends, abducts, and rotates thigh outward.
Gluteus medius.	Ilium between superior and middle curved lines.	Great trochanter.	Superior gluteal.	Rotates, abducts, and extends thigh.
Gluteus minimus.	Ilium between middle and inferior curved lines, etc.	Great trochanter.	Superior gluteal.	Rotates, abducts, and extends thigh.
Gluteus quartus.	See <i>Scansorius</i> .			
Gracilis.	Ramus of pubes and ischium.	Inner surface of shaft of tibia.	Obturator.	Flexes and adducts leg and adducts thigh.
Guthrie's.	See <i>Transversus perinei, deep</i> .			
Hamstring.	The muscles of the posterior aspect of the thigh, including the biceps, semitendinosus, semimembranosus.			
Helicis major.	Tubercle on helix.	Spine of helix.	Auriculotemporal and posterior auricular.	Renders tense the skin of auditory canal.
Helicis minor.	Anterior rim of helix.	Concha.	Auriculotemporal and posterior auricular.	Renders tense the skin of auditory canal.
Henle's.	See <i>Prærectalis</i> .			
Hilton's.	See <i>Compressor sacculi</i> .	<i>laryngis.</i>		
Horner's.	See <i>Ciliary and Tensor tarsi</i> .			
Houston's.	See <i>Compressor vœnae</i> .	<i>dorsalis penis.</i>		
Hyoglossus.	Body and cornua of hyoid bone.	Side of tongue.	Hypoglossal.	Depresses side of tongue and retracts tongue.
Hyopharyngeus.	See <i>Constrictor pharyngis medius</i> .			
Iliacus.	Upper half of iliac fossa and crest, ala of sacrum, etc.	Lesser trochanter.	Lumbar plexus.	Flexes and rotates thigh outward, etc.
Iliacus minor.	The external fibers of the iliacus.	Capsule of hip joint.		
Iliocapsularis.	Same as <i>Iliacus minor</i> .			
Iliococcygeus.	A part of the levator ani attached to the sacrum and coccyx.			
Iliocostalis.	The outer division of the sacrospinalis which has three subdivisions given below.			
Iliocostalis cervicis.	Angle of middle and upper ribs.	Transverse process of middle cervical vertebra.	Branches of cervical.	Extends cervical spine.
Iliocostalis dorsalis.	Inner side of angles of twelfth to seventh ribs.	Angles of sixth to first ribs and transverse process of seventh cervical vertebra.	Branches of dorsal.	Keeps dorsal spine erect.
Iliocostalis lumborum.	Along with sacrospinalis.	Angles of fifth to twelfth ribs.	Branches of dorsal and lumbar.	Extends lumbar spine.

A TABLE OF THE MUSCLES—*Continued.*

MUSCLE.	ORIGIN.	INSERTION.	NERVE SUPPLY.	ACTION.
Iliopso'as.	A compound muscle consisting of iliacus and psoas, major and minor.			
Incisu'rae hel'icis.	Same as <i>Intertragicus</i> .			
Incisu'rae santori'ni.	See <i>Intertragicus</i> .			
Infracosta'les, 10.	Same as <i>Subcostales</i> .			
Infraspina'tus.	Infraspinous fossa.	Great tuberosity of humerus.	Suprascapular.	Rotates humerus outward, etc.
Interaryt'enoid.	Side of one arytenoid cartilage.	Side of other arytenoid cartilage.	Recurrent laryngeal.	Draws together the arytenoid cartilages.
Intercos'tals, external, 11.	Outer lip of inferior border of ribs.	Superior border of rib below.	Intercostal.	Probably depress ribs in expiration.
Intercos'tals, internal, 11.	Inner lip of inferior border of ribs.	Upper border of rib below.	Intercostal.	Probably raise ribs in inspiration.
Interos'sei dorsa'les of foot (4).	Surfaces of adjacent metatarsal bones.	Outer sides of bases of first phalanges.	External plantar.	Flex first, and extend second and third phalanges; abduct second, third, and fourth toes.
Interos'sei dorsa'les of hand (4).	Sides of metacarpal bones.	Sides of aponeurosis of extensor tendon; neighboring parts of first phalanges.	Ulnar.	Abduct fingers, flex first and extend second and third phalanges.
Interos'sei planta'res (3).	Inner and under surfaces of 3 outer metatarsal bones.	Inner sides of first phalanges of corresponding toes.	External plantar.	Adduct first phalanges of three outer toes; flex phalanges of first row, and extend the rest.
Interos'sei vola'res (palma'res) (3).	Sides of metacarpal bones.	Aponeurosis of extensor tendons, neighboring parts of first phalanges.	Ulnar.	Adduct fingers, flex first and extend second and third phalanges.
Interspina'les.	Under surface of spines of vertebrae near apex.	Posterior part of upper surface of spine below.	Internal posterior branches of spinal nerves.	Supports spinal column.
Intertra'gicus.	Anterior wall cartilaginous canal of ear.	Opposite side of larger fissure of ear.	Posterior auricular.	Dilates the concha.
Intertransversa'rii or intertransversa'les.	Between transverse process of contiguous vertebrae.		Spinal nerves.	Support and flex spinal column.
Ischiocaverno'sus.	Tuberosity of ischium and great sciatic ligament.	Corpus cavernosum of penis or clitoris.	Perineal.	Erects penis or clitoris.
Ischiococcy'geus.	Same as <i>Coccygeus</i> .			
Ischiocon'dyloid.	The portion of adductor magnus inserted into the internal condyle of femur.			
Ischiopu'bicus.	An occasional bundle of fibers from pubic ramus.	Median raphe on dorsum of membranous urethra.		
Jar'javay's.	See <i>Depressor urethrae</i> .			
Jung's m.	Same as <i>Pyramidalis auriculæ</i> .			
Keratocri'coid.	Near lower border of cricoid cartilage.	Inferior horn of thyroid cartilage.		
Keratoglos'sus.	Those fibers of the hyoglossus that arise from greater cornu of hyoid bone.			
Laryngopharyn'geus.	Same as <i>Constrictor pharyngis inferior</i> .			
Latis'simus col'li.	Same as <i>Platysma</i> .			
Latis'simus dor'si.	Spinous processes of 6 lower dorsal and lumbar and sacral vertebrae, crest of ilium, and 4 lowest ribs.	Bicipital groove of humerus.	Long subscapular.	Draws arm downward and backward and rotates it.
Laxa'tor tym'pani ma'jor.	Spinous process of sphenoid and anterior wall of tympanum.	Neck of malleus.	Tympanic.	Is probably ligamentous and not truly muscular.
Laxa'tor tym'pani mi'nor.	Upper and back part of external auditory canal.	Short process and handle of malleus.	Tympanic.	Is a ligament with no true muscular tissue.
Leva'tor an'guli o'ris.	Same as <i>Caninus</i> .			
Leva'tor a'ni.	Body and ramus of pubes, pelvic fascia, spine of ischium.	Rectum, coccyx, and raphe of perineum.	Sacral and perineal branch of pudic.	Supports rectum and vagina; aids in defecation.

A TABLE OF THE MUSCLES—*Continued.*

MUSCLE.	ORIGIN.	INSERTION.	NERVE SUPPLY.	ACTION.
Leva'tor clavic'ulae (<i>anomalous</i>).	Transverse processes of first and second cervical vertebrae.	Outer portion of clavicle.		
Leva'tor glan'dulae thyroi'deae (<i>anomalous</i>).	Isthmus or pyramid of thyroid gland.	Body of hyoid bone.		
Leva'tor la'bii infe'rio'ris.	Same as <i>Mentalis</i> .			
Leva'tor la'bii supe'rio'ris.	Inferior margin of orbit.	Upper lip.	Infraorbital branch of facial.	Lifts and protrudes upper lip.
Leva'tor la'bii supe'rio'ris alae que na'si.	Nasal process of maxilla.	Cartilage of ala nasi and upper lip.	Infraorbital branch of facial.	Raises upper lip and dilates nostril.
Leva'tor men'ti.	Same as <i>Mentalis</i> .			
Leva'tor pala'ti.	Same as <i>Levator veli palatini</i> .			
Leva'tor pal'pebrae superio'ris.	Lesser wing of sphenoid.	Upper tarsal plate.	Oculomotor.	Raises upper lid.
Leva'tor pharyn'gis.	See <i>Stylopharyngeus</i> .			
Leva'tor prosta'tae.	A part of the anterior portion of the levator ani muscle.			Supports and compresses prostate.
Leva'tor scap'ulae.	Transverse processes of 4 upper cervical vertebrae.	Posterior edge of scapula.	Third and fourth cervical.	Raises upper angle of scapula; aids in rotating head.
Leva'tor ve'li palati'ni.	Apex of petrous portion of temporal bone and cartilaginous eustachian tube.	Aponeurosis of soft palate.	Pharyngeal plexus.	Raises soft palate.
Leva'tores costa'rum (12 pairs).	Transverse processes of seventh cervical and 11 upper dorsal vertebrae.	Each to next two ribs below.	Intercostal.	Lift ribs in inspiration.
Lingua'lis infe'rior (<i>Longitudina'lis infe'rior</i> [B N A]).	Under surface of tongue at base.	Tip of tongue.	Chorda tympani.	Shortens tongue.
Lingua'lis supe'rior (<i>Longitudina'lis supe'rior</i> [B N A]).	Submucosa and septum of tongue.	Edges of tongue.	Hypoglossal.	Shortens tongue and raises its edges and tip.
Lingua'lis transver'sus.	Median septum of tongue.	Edges of tongue.	Hypoglossal.	Narrows and stretches tongue and lifts its edges.
Lingua'lis vertica'lis.	Upper surface of tongue near sides of tip.	Under surface of tongue.	Hypoglossal.	Flattens tip of tongue.
Longis'simus cap'itis.	Transverse processes of upper thoracic and transverse and articular processes of lower and middle cervical vertebrae.	Mastoid process.	Branches of cervical.	Keeps head erect and draws it backward and to one side.
Longis'simus cervi'cis.	Transverse processes of upper thoracic vertebrae.	Transverse processes of upper and middle cervical vertebrae.	Lower cervical and upper dorsal.	Extends cervical spine.
Longis'simus dor'si.	Transverse and articular processes of lumbar vertebrae and fascia.	Transverse processes of lumbar and dorsal vertebrae and lowest ribs.	Lumbar and dorsal.	Supports spine and bends trunk backward.
Longitudina'lis.	See <i>Lingualis</i> .			
Lon'gus atlan'tis.	The superior or upper oblique portion of the longus colli.			
Longus cap'itis.	Anterior tubercles of transverse processes of third and sixth cervical vertebrae.	Basilar process of occipital bone.	Cervical plexus.	Twists or bends neck forward.
Lon'gus col'li: 1. Upper oblique portion.	Transverse processes of third to fifth cervical vertebrae.	Anterior arch of atlas.		
2. Lower oblique portion.	Bodies of first to third dorsal.	Transverse processes of fifth to sixth cervical vertebrae.	Anterior cervical.	Flexes and supports cervical vertebrae.
3. Vertical portion.	Bodies of 3 dorsal and 3 cervical vertebrae.	Bodies of second to fourth cervical vertebrae.		
Lumbrica'les, 4, of foot.	Tendons of flexor longus.	First phalanges of lesser toes and tendons of extensor longus.	External and internal plantar.	Accessory to flexors and extensors.
Lumbrica'les, 4, of hand.	Tendons of flexor profundus.	Tendons of extensor communis.	Median and ulnar.	Aid in flexion and extension.

A TABLE OF THE MUSCLES—Continued.

MUSCLE.	ORIGIN.	INSERTION.	NERVE SUPPLY	ACTION.
Masse'ter.	Zygomatic arch and malar process of upper maxilla.	Angle and ramus of lower jaw.	Mandibular division of trigeminal.	Mastication.
Menta'lis.	Incision fossa of mandible.	Skin of chin.	Facial.	Raises lower lip and wrinkles skin of chin.
Merkel's.	See <i>Keratocricoid</i> .			
Midriff.	See <i>Diaphragm</i> .			
Müller's.	See <i>Ciliary</i> .			
Multif'idus.	Sacrum, posterior superior iliac spine, articular processes of lumbar and cervical and transverse processes of dorsal vertebrae.	Laminae and spinous processes of vertebrae.	Posterior divisions of spinal nerves.	Rotates and supports spinal column.
Multif'idus spi'nae.	Same as <i>Multifidus</i> .			
Mylohy'oid.	Mylohyoid ridge of mandible.	Hyoid bone and median raphe.	Mylohyoid branch of trigeminal.	Raises and advances hyoid; forms floor of mouth; aids in depressing jaw.
Mylopharynge'us.	A part of constrictor pharyngeus.	Mylohyoid ridge of mandible.		
Nasal or nasa'lis.	Maxilla, under cover of the quadratus.	A membrane stretching over the nose.	Facial.	Narrows nostrils.
Nasolabia'lis.	Septum of nose.	Upper lip.	Buccal branch of facial.	Raises lip.
Obli'quus auric'ulae.	Cranial surface of concha.	Cranial surface of pinna above concha.	Posterior annular and temporal.	
Obli'quus cap'itis infe'rior.	Spinous process of the axis.	Transverse process of atlas.	Suboccipital and occipitalis major.	Rotates atlas and head.
Obli'quus cap'itis supe'rior.	Transverse process of atlas.	Occipital bone below superior curved line.	Suboccipital.	Draws head back and rotates it.
Obli'quus exter'nus abdom'inis.	Eight lowest ribs.	Crest of ilium, Poupert's and Gimbernat's ligaments, linea alba, crest of pubes.	Lower thoracic.	Compresses viscera, flexes thorax, aids in expulsive acts.
Obli'quus infe'rior.	Orbital plate of maxilla.	Sclera.	Oculomotor.	Abducts and raises eyeball, and rotates it upward and outward.
Obli'quus inter'nus abdom'inis.	Crest of ilium, Poupert's ligament, and lumbar fascia.	Six lowest ribs, linea alba, crest of pubes.	Lower thoracic.	Compresses abdomen, flexes thorax, and aids in expiration.
Obli'quus supe'rior.	Lesser wing of sphenoid above optic foramen.	Sclera.	Trochlear.	Abducts and depresses eye, and rotates it downward and inward.
Obtura'tor exter'nus.	Rim of obturator foramen and membrane.	Digital fossa at base of great trochanter.	Obturator.	Rotates thigh outward.
Obtura'tor inter'nus.	Obturator foramen, pubes, ischium, etc.	Inner surface of great trochanter.	Sacral plexus.	Rotates and abducts thigh.
Occipita'lis.	Posterior portion of epicranium: arises from linea nuchae supra occipital bone.	Galea aponeurotica.	Facial.	Draws scalp backward.
Occipitofronta'lis.	Same as <i>Epicranium</i> .			
Omohy'oid.	Superior border of scapula.	Hyoid bone.	Upper cervical through ansa hypoglossi.	Retracts and depresses hyoid; contracts cervical fascia.
Oppo'nens dig'iti quinti.	Unciform (hamate) bone; annular ligament.	Fifth metacarpal bone.	Ulnar.	Flexes fifth metacarpal.
Oppo'nens min'imi dig'iti.	Same as <i>Opponens digiti quinti</i> .			
Oppo'nens pol'licis.	Ridge of trapezium; annular ligament.	Metacarpal bone of thumb.	Median.	Flexes and adducts thumb.
Orbicularis cilia'ris.	Palpebral portion of orbicularis oculi.			
Orbicularis la'tus.	Orbital portion of orbicularis oculi.			
Orbicularis oc'uli.	The oval sphincter muscle surrounding the eyelids; consists of three portions: 1, <i>pars orbitalis</i> from frontal process of maxilla; 2, <i>pars palpebralis</i> from inner canthus; 3, <i>pars lacrimalis</i> (Horner's muscle), posterior lacrimal ridge of lacrimal bone.	1. Near origin after encircling orbit. 2. outer canthus. 3. joins palpebral portion.	Facial.	Closes eye, wrinkles forehead, compresses lacrimal sac.

A TABLE OF THE MUSCLES—Continued.

MUSCLE.	ORIGIN.	INSERTION.	NERVE SUPPLY.	ACTION.
Orbicularis o'ris.	Nasal septum, canine fossa of mandible.	Angle of mouth.	Facial.	Closes mouth; wrinkles lips.
Orbicularis palpebra- rum.	Same as <i>Orbicularis oculi</i> .			
Or'bital.	Orbital periosteum.	Fascia of interorbital fissure.	Sympathetic.	Protrudes eye.
Orbitopal'pebral.	See <i>Levator palpebrae</i> .	<i>superioris</i> .		
Palatoglos'sus.	Same as <i>Glossopalatinus</i> .			
Palatopharyn'geus.	Same as <i>Pharyngopalatinus</i> .			
Palma'ris bre'vis.	Annular ligament and palmar fascia.	Skin or fascia of palm.	Ulnar.	Corrugates skin of hypothenar eminence.
Palma'ris lon'gus.	Inner condyle of humerus.	Palmar fascia.	Median.	Stretches palmar fascia; flexes wrist and forearm.
Papilla'ris.	Any one of a group of columnae carnae ending in the chordae tendinae of heart.			
Pectina'ti.	Muscular columns projecting from the inner walls of the auricles of the heart.			
Pectine'us.	Iliopectineal line; spine of pubes.	Linea aspera below lesser trochanter.	Obturator and femoral.	Flexes, adducts, and rotates outward thigh.
Pectora'lis ma'jor.	Sternum, clavicle, costal cartilages, etc.	Anterior bicipital ridge of humerus.	Anterior thoracic.	Draws arm downward and forward; aids to expand chest.
Pectora'lis min'imus.	Occasional: sternum and cartilage of first rib.	Coracoid process of scapula.	Anterior thoracic.	Depresses point of shoulder.
Pectora'lis mi'nor.	Third, fourth, and fifth ribs, and aponeurosis.	Coracoid process of scapula.	Anterior thoracic.	Depresses point of shoulder; lowers scapula.
Perone'us accesso'- rius.	Fibula between peroneus longus and brevis.	Metatarsal bone of great toe.	Superficial peroneal.	Extends, everts, and abducts foot.
Perone'us bre'vis.	Middle of shaft of fibula; intermuscular septum.	Base of fifth metatarsal bone.	Peroneal.	Extends and abducts foot.
Perone'us lon'gus.	Head and shaft of fibula; intermuscular septum.	Metatarsal bone of great toe.	Peroneal.	Extends, abducts, and everts foot.
Perone'us ter'tius.	Lower part of fibula; intermuscular septum.	Fifth metatarsal bone.	Deep peroneal.	Flexes and everts foot.
Pharyngopalati'nus.	Soft palate.	Posterior border of thyroid cartilage and aponeurosis of pharynx.	Pharyngeal plexus.	Narrows fauces and shuts off nasopharynx.
Phillips's.	External superior tuberosity of radius; external lateral ligament of ulnar articulation.	Proximal parts of phalanges.	Ulnar.	
Pirifor'mis.	Margins of anterior sacral foramina and great sacrosciatic notch.	Upper border of great trochanter.	Sciatic plexus.	Rotates thigh outward.
Planta'ris.	Femur at outer bifurcation of linea aspera; posterior ligament of knee.	Os calcis by tendo Achillis.	Tibial.	Extends foot; flexes leg.
Platys'ma myoi'des.	Clavicle, acromion, and fascia over deltoid, trapezius, etc.	Lower border of mandible, muscles of cheek, angle of mouth.	Facial and cervical plexus.	Wrinkles skin; depresses mouth and lower lip.
Pleuro-oesophage'us.	Fasciculi of muscle from the mediastinal pleura, reinforcing musculature of esophagus.			
Poplite'us.	External condyle of femur; posterior ligament of knee.	Above oblique line of tibia.	Tibial.	Flexes leg; rotates flexed leg inward.
Prerec'talis.	Rectovesical prolongation.	Prolongation of rectovesical fascia into perineum.		Sympathetic.
Prester'nal.	See <i>Sternalis</i> .			

A TABLE OF THE MUSCLES—Continued.

MUSCLE.	ORIGIN.	INSERTION.	NERVE SUPPLY.	ACTION.
Proce'rus.	Membrane covering bridge of nose.	Frontalis muscle.	Branch of facial.	Assists frontalis muscle.
Prona'tor pe'dis.	Same as <i>Quadratus plantae</i> .			
Prona'tor quadra'tus.	Lower fourth and anterior border of ulna.	Lower quarter shaft of radius.	Volar interosseous.	Pronates and rotates hand.
Prona'tor te'res.	Inner condyle of humerus; coronoid process of ulna.	Outer side of shaft of radius.	Median.	Pronates hand.
Prostat'icus.	The involuntary muscle tissue of the prostate.			
Pso'as ili'acus.	The psoas magnus and iliacus together.			
Pso'as ma'jor or mag'nus.	Last dorsal and all lumbar vertebrae.	Lesser trochanter of femur.	Second and third lumbar.	Flexes and rotates thigh outward; flexes trunk on pelvis; abducts and flexes lumbar spine.
Pso'as mi'nor or par'vus.	Last dorsal and first lumbar vertebrae.	Iliac fascia.	Lumbar.	Flexes pelvis on abdomen; tightens iliac fascia.
Pter'ygoid (external).	External pterygoid plate; great wing of sphenoid, etc.	Condyle of mandible.	External pterygoid.	Draws lower jaw forward.
Pter'ygoid (internal).	Pterygoid fossa of sphenoid bone, tuberosity of maxilla.	Inner surface of ramus and angle of mandible.	Internal pterygoid.	Raises and draws forward lower jaw.
Pterygopharyng'eus.	A portion of constrictor pharyngis superior arising from the internal pterygoid plate.			
Pubocaverno'sus.	An occasional muscular slip.	Pubic ramus.	Dorsum of penis.	
Pubococcyg'eus.	A portion of the levator ani inserted into the central point of the perineum.			
Pubovesica'lis.	The longitudinal muscular fibers of the bladder attached to the back of symphysis pubis.			
Pyramida'lis.	Pubes; anterior pubic ligament.	Linea alba.	Last thoracic.	Tightens linea alba; aids in inspiration.
Pyramida'lis auric'ulae.	An occasional prolongation of the fibers of tragus to the spina helix.			
Pyramida'lis na'si.	Same as <i>Procerus</i> .			
Pyrifor'mis.	Same as <i>Piriformis</i> .			
Quadra'tus fem'oris.	Tuberosity of ischium	Quadrate line near great trochanter.	Sciatic.	Outward rotator of thigh.
Quadra'tus la'bii inferioris.	Anterior portion of lower border of mandible.	Orbicularis oris and skin of lower lip.	Facial.	Depresses lower lip.
Quadra'tus la'bii superioris.	Composed of three muscles: <i>caput angulare</i> (levator labii superioris alique nasi), <i>caput infra-orbitale</i> (levator labii superioris), <i>caput zygomaticum</i> (zygomaticus minor).			
Quadra'tus lumbo'rum.	Crest of ilium, transverse processes of third, fourth, and fifth lumbar vertebrae.	Twelfth rib, transverse processes of third fourth, and lumbar vertebrae.	Lumbar and twelfth thoracic.	Flexes chest laterally and forward; aids in forced expiration.
Quadra'tus men'ti.	See <i>Quadratus labii inferioris</i> .			
Quadra'tus plan'tae.	Two heads from outer and inner borders of inferior surface of os calcis (calcaneus).	Tendons of flexor digitorum longus.	External plantar.	Assists flexor digitorum longus.
Quad'riceps fem'oris.	The rectus femoris vastus internus and externus, and crureus muscles together. Their common tendon surrounds patella, and ends on tuberosity of tibia.			

A TABLE OF THE MUSCLES—*Continued.*

MUSCLE.	ORIGIN.	INSERTION.	NERVE SUPPLY.	ACTION.
Quadrigem'inus cap'itis.	See <i>Sternocleidomastoid</i> .			
Radiocar'pus.	See <i>Flexor carpi radialis</i> .			
Rectococcyg'eus.	A band of fibers from anterior surface of second and third coccygeal segments, passing to posterior surface of rectum.			
Recto-uteri'nus.	A band running between cervix uteri and rectum in the plica retro-uterina.			
Rectovesica'lis.	In male only, connecting longitudinal musculature of rectum with external muscular coat of bladder.			
Rec'tus abdom'inis.	Crest of pubes and ligamentous tissues at symphysis.	Cartilages of fifth, sixth, and seventh ribs.	Branches of lower thoracic.	Compresses abdomen and flexes body.
Rec'tus cap'itis ante'rior (Rec'tus cap'itis anti'cus mi'nor).	Lateral mass of atlas.	Basilar process of occipital bone.	First and second cervical.	Flexes and aids in supporting head.
Rec'tus cap'itis anti'cus ma'jor.	Same as <i>Longus capitis</i> .			
Rec'tus cap'itis latera'lis.	Transverse process and lateral mass of atlas.	Jugular process of occipital bone.	First and second cervical.	Flexes head laterally and supports it.
Rec'tus cap'itis poster'ior ma'jor.	Spinous process of axis.	Below inferior curved line of occipital bone.	Suboccipital and occipitalis major.	Rotates head, and draws it back.
Rec'tus cap'itis poster'ior mi'nor.	Tubercle on dorsal arch of atlas.	Under inferior curved line of occipital.	Suboccipital and occipitalis major.	Draws head backward and rotates it.
Rec'tus fem'oris.	Anterior inferior iliac spine; brim of acetabulum.	Proximal border of patella.	Anterior crural.	Extends leg.
Rec'tus infe'rior.	Circumference of optic foramen.	Under side of sclera.	Oculomotor.	Adducts and rotates eye downward and outward.
Rec'tus latera'lis.	Outer margin of optic foramen; margin of sphenoidal fissure.	Outer side of sclera.	Abducens.	Abducts eyeball.
Rec'tus media'lis.	Circumference of optic foramen.	Inner side of sclera.	Oculomotor.	Adducts eye.
Rec'tus sterna'lis.	Same as <i>Sternalis</i> .			
Rec'tus supe'rior.	Upper border of optic foramen.	Upper aspect of sclera.	Oculomotor.	Adducts and elevates eye.
Rec'tus thora'cis.	See <i>Supracostalis</i> .			
Retract'o'res u'teri.	The sacro-uterine ligaments.			
Ret'rahens au'rem.	Same as <i>Auricularis posterior</i> .			
R h o m b o - a t ' l o i d (anomalous).	Sixth and seventh cervical and first thoracic spinous processes.	Transverse process of atlas.		
Rhomboi'deus ma'jor.	Spinous processes of first five thoracic vertebrae.	Inner border of scapula below spine.	Dorsal scapular.	Retracts and elevates scapula.
Rhomboi'deus mi'nor.	Spines of seventh cervical and first thoracic vertebrae.	Scapula.	Dorsal scapular.	Elevates and retracts scapula.
Rhombo-occip'ital.	See <i>Occipitoscapular</i> .			
Riolan's.	The ciliary part of the	orbicularis palpebra	rum,	
Riso'rius.	Fascia over masseter.	Angle of mouth.	Buccal branch of facial.	Draws angle of mouth out; compresses cheek.
Rotato'res spi'nae.	Transverse processes of second to twelfth dorsal vertebrae.	Lamina of vertebra next above.	Posterior branches of spinal.	Rotate spinal column and head.
Ruysch's.	The muscular tissue of the fundus uteri.			
Sacrococcyg'eus posti'cus.	See <i>Extensor coccygis</i> .			
Sacrolumba'lis.	Same as <i>Iliocostalis lumborum</i> .			

A TABLE OF THE MUSCLES—*Continued.*

MUSCLE.	ORIGIN.	INSERTION.	NERVE SUPPLY.	ACTION.
Sacrospina'lis.	Dorsal surface of sacrum, spines of lumbar vertebrae, crest of ilium.	Divides into iliocostalis and longissimus dorsi.	Posterior branches of spinal.	Extends spinal column.
Salpingopharyngeus.	Eustachian tube near nasopharynx.	Posterior part of palatopharyngeus.	Internal branch of spinal accessory.	Raises nasopharynx.
Santorini's.	See <i>Risorius</i> .			
Sartorius.	Anterior superior spinous process of ilium and notch below.	Upper part of inner side of shaft of tibia.	Femoral.	Flexes hip and knee; rotates leg in and hip out.
Scale'nus ante'rior (Scale'nus anti'cus).	Upper surface and inner edge of first rib.	Transverse processes of third to sixth cervical vertebrae.	Lower cervical brachial plexus.	Flexes neck sidewise; supports head, etc.
Scale'nus me'dius.	Upper surface of first rib.	Transverse processes of second to sixth cervical vertebrae.	Cervical and brachial plexus.	Flexes neck laterally.
Scale'nus min'imus (anomalous).	Transverse processes of lower cervical vertebrae.	First rib, behind subclavian artery.		
Scale'nus poste'rior (Scale'nus posti'cus).	Outer surface of second rib.	Transverse processes of two or three lower cervical vertebrae.	Lower cervical, brachial plexus.	Bends neck laterally.
Scansorius.	See <i>Accessorius gluteus minimus</i> .			
Semimembranosus.	Tuberosity of ischium; intermuscular septum.	Inner tuberosity of tibia; short internal ligament of knee; external condyle of femur.	Tibial.	Flexes leg and rotates it inward.
Semispina'lis cap'itis.	Transverse processes of five or six upper thoracic and four lower cervical vertebrae.	Occipital bone, between superior and inferior curved lines.	Suboccipital, great occipital, and branches of cervical.	Rotates head and draws it backward.
Semispina'lis cervi'cis (Semispina'lis col'li).	Transverse processes of four upper dorsal and articular processes of four lower cervical vertebrae.	Spinous processes of second to fifth cervical vertebrae.	Branches of cervical nerves.	Supports spinal column.
Semispina'lis dor'si.	Transverse processes of fifth to eleventh dorsal vertebrae.	Spinous processes of last two cervical and first four thoracic vertebrae.	Branches of cervical.	Erects spinal column.
Semitendinosus.	Tuberosity of ischium; intermuscular septum.	Upper and inner surface of tibia; fascia of leg.	Tibial.	Flexes leg on thigh; extends hip, etc.
Serratus ante'rior (Serratus mag'nus).	Eight upper ribs; intercostal fascia.	Angles and dorsal border of scapula.	Posterior thoracic.	Raises ribs in inspiration; rotates scapula, etc.
Serratus poste'rior infe'rior.	Spines of two thoracic and three lumbar vertebrae.	Lower border of four lower ribs.	Tenth and eleventh intercostal nerves.	Lowers ribs in expiration.
Serratus poste'rior supe'rior.	Spines of seventh cervical and two or three dorsal vertebrae.	Upper borders of second, third, fourth, and fifth ribs.	Second and third intercostals.	Lifts ribs in inspiration.
Soleus.	Shaft of fibula, oblique line and inner border of tibia.	Calcaneum by tendo Achillis.	Tibial.	Extends foot; rotates it in, etc.
Sphenoidalpin'gostaphyli'nus.	Same as <i>Tensor veli palati</i> .			
Sphincter a'ni, external.	Tip of coccyx and fascia near it.	Tendinous center of perineum.	Perineal, pudic, and fourth sacral.	Closes anus.
Sphincter a'ni, internal.	Circular unstriated fibers of intestine one inch above anus.		Hemorrhoidal nerves.	Closes anus; not voluntary.
Sphincter pupillae (or iridis).	Surrounds pupillary margin of iris.		Oculomotor.	Contracts pupil.
Sphincter pylo'ri.	A thickening of the middle layer of the stomach musculature surrounding the pylorus.			
Sphincter ure'thrae membrana'ceae.	Ramus of pubis.	Median raphe behind and in front of urethra.	Pudic.	Constricts the membranous urethra.
Sphincter vagi'nae.	Same as <i>Bulbocavernosus</i> .			
Sphincter vesi'cae.	Near urethral orifice of bladder.		Vesical nerves.	Closes internal orifice of urethra.

A TABLE OF THE MUSCLES—*Continued.*

MUSCLE.	ORIGIN.	INSERTION.	NERVE SUPPLY.	ACTION.
Spina'lis cap'itis.	Inconstant: from spines of upper thoracic and lower cervical vertebrae.	Blends with semispinalis capitis.		
Spina'lis cervi'cis (Spina'lis col'li).	Spinous processes of fifth, sixth, and seventh cervical and first two dorsal vertebrae.	Spinous processes of axis, and sometimes of third and fourth cervical vertebrae.	Branches of cervical nerves.	Steadies and erects neck.
Spina'lis dor'si.	Spinous processes of first two lumbar and last two thoracic.	Remaining dorsal spinous processes.	Branches of dorsal nerves.	Supports spinal column.
Sple'nus access'o'rius.	See <i>Rhombo-alloid</i> .			
Sple'nus cap'itis.	Lower half of ligamentum nuchae, spines of seventh cervical and first three dorsal vertebrae.	Mastoid process and outer third of middle oblique line of occiput.	External posterior branch of second cervical.	Rotates and extends head and neck and flexes sidewise.
Sple'nus cervi'cis (Sple'nus col'li).	Spinous processes of third or sixth dorsal vertebrae.	Transverse processes of upper three or four cervical vertebrae.	Posterior branches of lower cervical.	Extends, flexes sidewise, and rotates neck and head.
Stape'dius.	Interior of pyramid of tympanum.	Neck of stapes.	Tympanic branch of facial.	Retracts stapes.
Sterna'lis.	An occasional muscle, parallel to the sternum upon the sternocostal origin of pectoralis major.			
Sternoclavicula'ris.	An occasional slip from the subclavius, from upper part of sternum.	Clavicle beneath pectoralis minor.		
Sternocleidomas'toid.	Two heads, sternum and clavicle.	Mastoid process and outer portion of superior oblique line of occipital bone.	Spinal accessory and cervical plexus.	Depresses and rotates head; flexes head and neck, etc.
Sternofacia'lis (<i>anomalous</i>).	Upper piece of sternum.	Fascia of subclavian triangle.		
Sternohy'oid.	Manubrium sterni and clavicle.	Body of hyoid bone.	Upper cervical.	Depresses the hyoid and larynx.
Sternothy'roid.	Sternum and cartilage of first rib.	Ala of thyroid cartilage.	Upper cervical.	Depresses the larynx.
Stylo-auricula'ris.	The styloglossus, when it arises from external auditory meatus.			
Styloglos'sus.	Styloid process and stylomaxillary ligament.	Side of tongue.	Hypoglossal.	Raises and retracts tongue.
Stylohy'oid.	Styloid process of temporal bone.	Body of hyoid bone.	Facial.	Draws hyoid and tongue upward and backward.
Stylopharyn'geus.	Styloid process of temporal bone.	Side of pharynx.	Pharyngeal plexus; glossopharyngeal.	Raises and dilates pharynx.
Subancone'us.	Triceps muscle and humerus above olecranon fossa.	Posterior ligament of elbow.	Musculospiral.	Tensor of posterior ligament of elbow.
Subcla'vius.	First rib and its cartilage.	Lower surface of clavicle.	Fifth and sixth cervical.	Draws clavicle down and forward.
Subcos'tals.	Inconstant; inner surface of ribs.	Inner surface of first, second, or third rib below.	Intercostal.	Inspiration by raising ribs.
Subcrure'us.	Same as <i>Articularis genu</i> .			
Subscapula'ris.	Subscapular fossa of scapula.	Lesser tuberosity and neck of humerus.	Subscapular.	Rotates head of humerus inward; lowers the humerus.
Supina'tor.	Outer condyle of humerus, ligaments of elbow, oblique line of ulna.	Neck of radius, space outside bicipital tuberosity, and oblique line of radius.	Posterior interosseous.	Supinates hand.
Supina'tor lon'gus.	Same as <i>Brachioradialis</i> .			
Supina'tor ra'dii bre'vis.	Same as <i>Supinator</i> .			
Supracos'talis.	First rib.	Fourth rib.		

A TABLE OF THE MUSCLES—*Continued.*

MUSCLE.	ORIGIN.	INSERTION.	NERVE SUPPLY.	ACTION.
Supraspina'les.	Summits of spinous processes in cervical region.	To other like summits.	Branches of cervicals.	Aid in supporting neck and head.
Supraspina'tus.	Supraspinous fossa and fascia.	Greater tuberosity of humerus.	Suprascapular.	Supports shoulder joint, raises and adducts arm.
Suspensio'rius duode-ni.	A flat band of unstriped muscle from left crus of diaphragm and continuous with muscular coat of duodenum at its junction with jejunum.			
Tarsa'lis.	Slips from orbicularis oculi.	Tarsal borders of eyelids.		
Tem'poral.	Temporal fossa and fascia on side of head.	Coronoid process of mandible.	Mandibular of trigeminal.	Shuts mouth; retracts jaw.
Ten'sor fas'ciae la'tae.	Anterior superior spine and adjacent area of dorsum of ilium.	Iliotibial band of fascia lata.	Superior gluteal.	Makes tense the fascia lata.
Ten'sor pala'ti	See <i>Tensor veli palatini</i> .			
Ten'sor tar'si.	Crest of lacrimal bone.	Tarsal plates.	Infra-orbital branch of facial.	Compresses puncta lacrimalia and lacrimal sac.
Ten'sor tym'pani.	Petrous portion of temporal bone, eustachian tube and canal.	Handle of malleus.	Otic ganglion.	Makes tense the membrana tympani.
Ten'sor vagi'nae fem'-oris.	Same as <i>Tensor fasciae latae</i> .			
Ten'sor ve'li palati'ni.	Scaphoid fossa, spine of sphenoid, vaginal process of temporal.	About hamular process into palatine aponeurosis and palate bone.	Otic ganglion.	Renders soft palate tense.
Te'res ma'jor.	Dorsum of inferior angle of scapula; intermuscular septa.	Posterior bicipital ridge of humerus.	Subscapular.	Draws arm down and backward; rotates it inward.
Te'res mi'nor.	Axillary border of scapula; intermuscular septa.	Greater tuberosity of humerus and below it.	Circumflex.	Rotates humerus outward and abducts it.
Tetrago'nus.	Same as <i>Platysma</i> .			
Thyro-aryaenoi'deus.	Thyroid cartilage and cricothyroid membrane.	Arytenoid cartilage.	Recurrent laryngeal.	Relaxes and shortens vocal cords.
Thyro-epiglot'ticus.	Thyroid cartilage.	Sacculus laryngis and aryteno-epiglottidean folds.	Recurrent laryngeal.	Depresses epiglottis; compresses sacculus.
Thyrohy'oid.	Oblique line on side of thyroid cartilage.	Greater horn and body of hyoid bone.	Upper cervical.	Raises and changes form of larynx.
Tibia'lis ante'rior (an-ti'cus).	Outer tuberosity and upper part of shaft of tibia, interosseous membrane, fascia and intermuscular septum.	Internal cuneiform and metatarsal bone of great toe.	Anterior tibial.	Flexes tarsus and elevates inner border of foot.
Tibia'lis poste'rior (post'i'cus).	Shaft of tibia and fibula, interosseous membrane, intermuscular septum.	Tuberosity of scapoid, internal cuneiform, and bases of second to fourth metatarsal.	Posterior tibial.	Extends tarsus and turns in the foot.
Tibio-accesso'rius.	See <i>Flexor accessorius</i> .	<i>digitorum pedis.</i>		
Trachea'lis.	A transverse layer of unstriped fibers in the dorsal portion of the trachea.		Sympathetic.	Lessens caliber of trachea.
Trachelomas'toid.	Same as <i>Longissimus capitis</i> .			
Tra'gicus.	Outer surface of tragus.	Outer surface of tragus.	Temporal and posterior auricular.	
Transversa'lis col'li.	Same as <i>Longissimus capitis</i> .			
Transver'sus (trans-versa'lis) abdom'inis.	Poupart's ligament, crest of ilium, six lower ribs, lumbar vertebrae.	Linea alba, crest of pubes, pectineal line.	Intercostal, iliohypogastric, ilio-inguinal.	Compresses the viscera and flexes the thorax.
Transver'sus auricu-lae.	Cranial surface of concha.	Circumference of pinna.	Auricularis magnus and posterior auricular.	Retracts helix.

A TABLE OF THE MUSCLES—*Continued.*

MUSCLE.	ORIGIN.	INSERTION.	NERVE SUPPLY.	ACTION.
Transver'sus lin'guæ.	An intrinsic muscle of tongue, arising from the septum and radiating to sides and dorsum.			
Transver'sus men'ti.	Superficial fibers of triangularis which turn back and cross to the opposite side.			
Transver'sus nu'chæ.	An occasional muscle between the tendons of trapezius and sternocleidomastoid.			
Transver'sus pe'dis.	Inferior tarsal, metatarsal, and transverse metatarsal ligaments.	Base of first phalanx of great toe.	External plantar.	Adducts great toe.
Transver'sus perine'i profun'dus (deep).	Inferior ramus of ischium.	Median raphe of perineum.	Pudic.	Draws back central part of perineum.
Transver'sus perine'i superficia'lis.	Tuberosity of ischium.	Central tendon or sphincter vaginae.	Perineal branch of pudic.	Tensor of central tendon.
Transver'sus thora'cis.	Back of xiphoid cartilage and lower portion of sternum.	Costal cartilages of second to sixth ribs.	Intercostal.	Narrows the chest.
Trape'zius.	Superior curved line of occipital bone, ligamentum nuchæ, spinous processes of last cervical, and all thoracic vertebrae.	Clavicle, spine of scapula, and acromion.	Spinal accessory and cervical plexus.	Draws head backward or sidewise; rotates scapula, etc.
Triangula'ris.	Lower border of mandible.	Lower lip near angle of mouth.	Facial.	Pulls down corners of mouth.
Triangula'ris ster'ni.	Same as <i>Transversus thoracis</i> .			
Tri'ceps brach'ii (3 heads).	<i>External</i> head above and <i>internal</i> head below musculospiral groove, shaft of humerus; <i>middle</i> or <i>long</i> head, lower margin of glenoid cavity.	Tuberosity of olecranon process of ulna.	Musculospiral.	Extends arm and forearm.
Tri'ceps su'rae.	The gastrocnemius and soleus considered as one muscle.			
Triticeoglos'sus (<i>anomalous</i>).	Cartilago triticea in thyrohyoid ligament.	Side of tongue.		
U'vulae.	Posterior nasal spine.	Forms greater part of uvula.	Pharyngeal plexus.	Raises uvula.
Vas'tus exter'nus.	Same as <i>Vastus lateralis</i> .			
Vas'tus interme'dius.	Upper three fourths of anterior shaft of femur.	Common tendon of quadriceps femoris.		
Vas'tus inter'nus.	Same as <i>Vastus medialis</i> .			
Vas'tus latera'lis.	Tubercle of femur, great trochanter, and linea aspera.	Common tendon of quadriceps.	Anterior crural.	Extends knee.
Vas'tus media'lis.	Spiral line and inner lip of linea aspera of femur.	Common tendon of quadriceps.	Anterior crural.	Extends leg, draws patella inward.
Ventricula'ris.	Fibers of thyro-arytenoid running into false vocal cords.			
Vertica'lis lin'guæ.	An intrinsic muscle of tongue attached to dorsal fascia and passing to sides.			
Vesicopu'bic.	Pubic bones near symphysis.	External layer of longitudinal fibers in bladder.	Sympathetic.	Compresses bladder.
Voca'lis.	The depression between the two alae of thyroid cartilage.	Vocal process of arytenoid.	Recurrent laryngeal.	Shortens and relaxes vocal cords.
Wilson's.	A part of sphincter urethrae membranacea.			
Zygomati'cus (or zygomati'cus ma'jor).	Malar bone before zygomatic suture.	Angle of mouth.	Facial.	Draws upper lip upward and outward.
Zygomati'cus mi'nor.	Malar bone behind maxillary suture.	Orbicularis oris and levator labii superioris.	Facial.	Draws upper lip backward, upward, and outward.

antagonistic m., a muscle which counteracts the action of another muscle. **appendicular m.**, one of the muscles of a limb. **articular m.**, a joint muscle. **Bell's m's**, the muscoli pylori of the ureters. **bipennate m.**, a muscle in which the fibers converge on either side of a central tendon. **m. bound**, affected with decreased elasticity of the muscles, combined with increase in their bulk, as a result of overuse. **Bowman's m.**, the ciliary muscle. **Brücke's m.**, the longitudinal part of the ciliary muscle. **cardiac m.**, the muscle of the heart; its fibers are cross striated. **Casser's m.**, an incorrect name for the anterior ligament of the malleus. Called also *laxator tympani minor*. **Chassaignac's axillary m.**, an occasional fascicle of muscle tissue extending from the lower edge of the latissimus dorsi across the hollow of the axilla to the brachial fascia or to the lower border of the pectoralis minor. **m. columns**, in certain organisms, such as mollusks and worms, the contractile bundles within the central sarcoplasm. **Crampton's m.**, a striated eye muscle of birds, extending from the annular ligament to the sclera. **m. curve**. See *myogram*. **digastric m.**, a muscle having two fleshy bellies with a fibrous insertion between them. **eustachian m.**, the laxator tympani. **femoral m.**, the crureus. **Folius' m.**, the laxator tympani. **fusiform m.**, a spindle-shaped muscle. **Gavard's m.**, the oblique muscular elements of the stomach wall. **Guthrie's m.**, the transversus perinei profundus. **Hilton's m.**, the aryteno-epiglottideus. **Horner's m.**, the tensor tarsi. **Houston's m.**, the compressor venae dorsalis penis. **hypaxial m's**, the rectus anticus major, longus colli, the vertebral portion of the diaphragm, and the sarcococcygeus anticus. Called also *subvertebral m.* **infrahyoid m's**, the sternohyoid, sternothyroid, thyrohyoid, and omohyoid. **inspiratory m's**, the muscles which act in inspiration, such as the diaphragm, intercostals, and pectorals. **involuntary m.**, any muscle that is not under the control of the will: such muscles are, for the most part, nonstriated. **Koyter's m.**, the corrugator supercillii muscle. **Landström's m.**, minute muscle fibers in the fascia around and behind the eyeball, attached in front to the anterior orbital fascia and eyelids. **Langer's m.**, muscular fibers from the insertion of the pectoralis major muscle over the bicipital groove to the insertion of the latissimus dorsi. **Luschka's m's**, the uterosacral ligaments, which contain muscular tissue. **Merkel's m.**, the keratocricoid muscle. **Müller's m.**, the circular part of the ciliary muscle. **nonstriated m.**, **unstriated m.**, a variety without transverse striations upon its constituent fibers: such muscles are in almost every case involuntary. **Ochsner's m.**, a sphincter described by Ochsner in the duodenum, 2-4 cm. below the entrance to the common duct. **organic m.**, nonstriated muscle. **pennate m.**, a muscle with fibers converging on either one or both sides of a central tendon. **Phillips' m.**, a muscular slip from the lateral external ligament of the wrist and the styloid process of the radius to the phalanges. **Reisseisen's m's**, the muscular elements of the bronchial tubes. **rider's m's**, the adductor muscles of the thigh. **Riolan's m.**, a slip from the orbicularis palpebrarum, running along the free border of the eyelid. **Rouget's m.**, the circular portion of the ciliary muscle. **Santorini's m.**, the risorius. **Santorini's m.**, **circular**, the nonstriated fibers which encircle the urethra beneath the constrictor urethrae. **skeletal m's**, those which are attached to the bones: nearly always striated. **smooth m.**, a nonstriated muscle. **somatic m's**, skeletal muscles. **m. spindle**, a bundle of fine muscular fibers enclosed in a sheath of connective tissue. **striated m.**, **striped m.**, any muscle whose fibers are divided by transverse bands into striations: such muscles are, for the most part, voluntary. **synergic m's**, **synergistic m's**, muscles which assist one another in action. **the-**

nar m's, the abductor and flexor muscles of the thumb. **Treitz's m.**, a muscular suspensory that passes from the left crus of the diaphragm to the points of union of the duodenum and jejunum. **unipennate m.**, a muscle in which the fibers converge on one side of a tendon. **ventrolateral m.** See *ventrolateral mass*, under *mass*. **veratrinized m.** (Kölliker, 1856), frog muscle treated with veratrin, which on stimulation gives a double-summitted curve, with a normal period of shortening, followed by brief relaxation; second, slower contraction with prolonged relaxation. **visceral m's**, muscles not derived from the somites of the embryo; they may be voluntary or involuntary. **voluntary m.**, any muscle that is under the control of the will: nearly always striated.

musculamine (mus'ku-lam'in). A base isolated from hydrolyzed calf's muscle. It is the same as spermine.

muscular (mus'ku-lar) [L. *muscula'ris*]. 1. Pertaining to a muscle. 2. Having well-developed muscles.

muscularis (mus-ku-la'ris) [L. "muscular"]. The muscular coat of an organ. **m. mucosae**, a layer of nonstriated muscular fibers in a mucous membrane.

muscularity (mus-ku-lar'it-e). The condition or quality of being muscular.

muscularize (mus'ku-lar-iz). To change into muscle tissue.

musculation (mus-ku-la'shun). 1. The muscular system or apparatus. 2. The muscular activity or work.

musculature (mus'ku-la-tür). The muscular apparatus of the body, or of any part of it.

musculi (mus'ku-li). Latin plural of *musculus*, muscle. **m. papillares**, a name for some of the columnae carneaе of the heart ventricles. **m. pectina'ti**, the muscular columns within the auricles of the heart.

musculin (mus'ku-lin). A globulin or protein contained in muscle tissue. It is characterized by its low coagulation temperature—47 C.

musculine (mus'ku-lin). An extract of animal muscle: used as a medicine.

musculocutaneous (mus'ku-lo-ku-ta'ne-us). Pertaining to or supplying both muscles and skin.

musculodermic (mus'ku-lo-der'mik). Same as *musculocutaneous*.

musculo-elastic (mus'ku-lo-e-las'tik). Composed of muscular and elastic tissue.

musculo-intestinal (mus'ku-lo-in-tes'tin-al). Pertaining to the muscles and the intestines.

musculomembranous (mus'ku-lo-mem'bran-us) [L. *mus'culus* muscle + *membra'na* membrane]. Both muscular and membranous.

musculophrenic (mus'ku-lo-fren'ik) [*muscular* + *phrenic*]. Pertaining to or supplying both the muscles and the diaphragm.

musculoprecipitin (mus'ku-lo-pre-sip'it-in). Any one of a series of precipitins used in distinguishing various kinds of meat.

musculorachidian (mus'ku-lo-ra-kid'e-an). Pertaining to the spinal muscles.

musculospiral (mus'ku-lo-spi'ral) [L. *musculus* muscle + *spi'ra* coil]. Pertaining to muscles and having a spiral direction: said of nerves.

musculotegumentary (mus'ku-lo-teg-u-men'tar-e). Pertaining to the muscle and the integument.

musculotendinous (mus'ku-lo-ten'din-us). Pertaining to or composed of muscle and tendon.

musculotonic (mus'ku-lo-ton'ik). Pertaining to muscular contractility.

musculus (mus'ku-lus), pl. *musculi*. Latin for muscle. **m. accomodatorius**, the ciliary muscle. **m. amatorius**, the obliquus superior of the eye. **m. ciliaris** [B N A], the ciliary muscle. **m. dormitor**, the orbicularis palpe-

brarum. **m. hip'picus**, the tibialis anticus. **m. papil'lae op'tici**, Nicolai's name for the spindle cells of the optic disk, believed by him to be smooth muscle fibers. **m. pathet'icus**, the obliquus superior of the eye. **m. patien'tiae**, the levator scapulae. **m. religio'sus**, the rectus superior of the eye. **m. spira'lis papil'lae**, a spiral muscle running around the calix of the renal pelvis. **m. super'bus**, the rectus superior of the eye.

muscusan (mus'ku-san). A proprietary preparation of zinc dibordiortho-oxybenzoate: used as a bactericide.

musennine (mu'sen-in). See *mussanine*.

mushbite (mush'bit). In dentistry, the taking of a bite in one piece of wax so as to secure an impression of both upper and lower teeth.

mushroom (mush'room). See *agaric*.

musicomania (mu'zik-o-ma'ne-ah) [μουσική music + μανία madness]. Insane fondness for music.

musicotherapy (mu'zik-o-ther'ap-e) [μουσική music + θεραπεία treatment]. The treatment of disease by music.

musin (mu'sin). A proprietary laxative preparation of tamarinds.

musk (musk) [L. *mos'chus*]. A dried secretion from the preputial sac of the musk-deer, *Mos'chus moschi'ferus*, a mammal of central Asia. It is a fragrant restorative and stimulant, and is used in low fevers, in hysterical spasms, etc. Dose, 2-10 grains (0.133-0.66 Gm.); of the tincture, 15-60 minims (1-4 cc.). **artificial m.**, **Baur's m.**, trinitrobutyltoluene, C(CH₃)₃C₆H(NO₂)₃CH₃: a substance much resembling true musk. Dose, 10 grains (0.66 Gm.).

musomania (mu-zo-ma'ne-ah). Same as *musicomania*.

mussanine (mus'an-in). An alkaloid from *Acacia anthelmintica*: anthelmintic. Dose, 3-5 grains (0.2-0.3 Gm.).

mussel poisoning. See *mytilotoxism*.

Musset's sign (mu-sāz') [Louis Charles Alfred de Musset, French poet, 1810-1857, who died of aortic insufficiency]. See under *sign*.

mussitation (mus-it-a'shun) [L. *mussita're* to mutter]. The moving of the lips with no utterance of sounds.

must (must) [L. *mus'tum*]. The unfermented juice of grapes.

mustard (must'tard) [L. *sina'pis*]. 1. A plant of the genus *Brassica*. 2. The ripe seeds of *Brassica nigra* (black mustard) and of *Sinapis* (*Brassica*) *alba* (white mustard). When mustard seeds are crushed and moistened volatile oils (see *mustard oil*, under *oil*) are liberated from glucosides (see *siniigrin* and *sinalbin*). These oils give mustard its counterirritant, stimulant, and revulsant properties. It is used in internal pains and congestions, as gastric colic, abdominal pains, colic, neuralgia, rheumatism, headache, vomiting, and cerebral congestion: it is also employed as a condiment and as an emetic. Dose, as an emetic, 1-2 drachms (4-8 Gm.); of volatile oil of black mustard, $\frac{1}{2}$ - $\frac{1}{4}$ minim (0.008-0.0165 cc.). **brown m.**, *Brassica nigra*. **m. gas.** See under *gas*. **yellow m.**, *Brassica alba*.

mutacism (mu'tah-sizm). 1. The improper pronunciation of the sounds of mute letters. 2. Same as *myclacism*.

mutant (mu'tant) [L. *muta're* to change]. A sport or variation which breeds true.

mutarotation (mu'tah-ro-ta'shun). A change in the specific rotation of a solution of certain sugars which occurs on standing. Called also *multirrotation*, *birotation*, and *tairotation*.

mutase (mu'tās). A vegetable food preparation rich in proteins.

mutation (mu-ta'shun) [L. *muta'tio*, from *muta're* to change]. 1. Change; a change in form or qual-

ity. 2. In biology, a permanent transmissible change in the characters of an offspring from those of its parents; also, an individual showing such a change; a sport (De Vries). See *theory of mutation*, under *theory*.

mutational (mu-ta'shun-al). Pertaining to mutation (2d def.).

mute (mūt) [L. *mu'tus*]. 1. Unable to speak. 2. One who cannot speak.

muthanol (mu'than-ol). Trade name for bismuth hydroxide in oil.

mutilation (mu-til-a'shun) [L. *mutila'tio*]. The act of depriving of a limb, member, or important part; deprivation of an organ.

Mutisia viciaefo'lia (mu-tiz'e-ah). A composite-flowered plant of South America: extensively used there as a sedative and in various diseases of the heart, respiratory organs, and nervous system.

mutism (mu'tizm). Dumbness; inability to speak. In psychiatry, abnormal inhibition to speech.

mutton bird oil. See under *oil*.

mutualism (mu'tu-al-izm). The relation of mutual help between organisms that live in symbiosis.

mutualist (mu'tu-al-ist). Any organism or species associated with another, but neither commensal nor parasitic.

M. V. Abbreviation for *Med'icus Veterina'rius*, veterinary physician.

My. An abbreviation for *myopia*.

my. An abbreviation for *mayer*.

Myà's disease (me-āz') [Giuseppe Myà, Italian physician, 1857-1911]. See under *disease*.

myalgia (mi-al'je-ah) [μύς muscle + ἄλγος pain]. Pain in a muscle or muscles.

myameba, myamoeba (mi-am-e'bah). A muscle cell.

myasis (mi-a'sis). Same as *myiasis*.

myasthenia (mi-as-the'ne-ah, mi'as-the-ni'ah) [μύς muscle + ἀσθένεια weakness]. Muscular debility. **angiosclerotic m.**, excessive muscular fatigue due to vascular changes. **m. gas'trica**, weakness and loss of tone in the muscular coats of the stomach; atony of the stomach. **m. gra'vis**, a chronic progressive muscular weakness without atrophy; asthenobulbospinal paralysis. **m. gra'vis pseudoparalytica**, a disease marked by excessive tiring of the voluntary muscles, shown in rapid decrease of contractility (Willis, 1685; Erb, 1878; Goldflam, 1893).

myasthenic (mi-as-then'ik). Pertaining to or characterized by muscular weakness.

myatonia (mi-ah-to'ne-ah) [μύς muscle + α neg. + τόνος tone]. Deficiency or absence of muscular tone. **m. congen'ita** (Oppenheim, 1900), a disease of early childhood, marked by general hypotonia of the muscles. It is congenital, but not hereditary. Called also *amyotonia congenita*, *Oppenheim's disease*, and *congenital atonic pseudoparalysis*.

myatony (mi-at'o-ne). Same as *myatonia*.

myatrophy (mi-at'ro-fe) [μύς muscle + atrophy]. Atrophy of a muscle; muscular atrophy.

myautonomy (mi-aw-ton'o-me) [μύς muscle + αὐτός self + νόμος law]. A condition in which muscular contraction aroused by stimulation is so long delayed that it appears to occur independently of the stimulation.

mycelian (mi-se'le-an). Pertaining to mycelium.

mycelioid (mi-se'le-oid). Having the radiate filamentous appearance of mold colonies.

mycelium (mi-se'le-um) [μύκης fungus + ἦλος nail]. The vegetative body of a fungus composed of a mass of filaments called *hyphae*.

mycethemia (mi-seth-e-me-ah) [μύκης fungus + αἷμα blood]. The presence of fungi in the blood.

mycetism, mycetismus (mi'set-izm, mi-set-iz'-mus) [μύκης fungus]. Mushroom poisoning.

mycetocyte (mi-se'to-sit). One of the cells which make up a mycetoma.

mycogenetic, mycotoxigenous (mi'set-o-jen'ik, mi-set'en-us) [*mykōs* fungus + *γενῶν* to produce]. Caused by fungous growths.

mycetoma (mi-se-to'mah) [*mykōs* fungus + *-ωμα* tumor]. 1. A tumor caused by a fungus, especially fungus foot or Madura foot, a disease endemic in India, and marked by swelling of the foot, in which nodules and vesicles develop. The parts become filled with sinuses, which discharge pus and penetrate into the bone. The pus contains granules, red, black, or yellow in color, which are masses of the fungus producing the disease. It is now believed to be caused by the organism, *Actinomyces madurae*. 2. An organ-like mass of cells evolved for the purpose of harboring symbiotic organisms. They are found mostly in the arthropods. **white m.**, mycetoma in which the granules are colorless or nearly so.

Mycetoma (Brumpti).

Mycetozoa (mi-se-to-zo'ah) [*mykōs* fungus + *ζῶν* animal]. The slime molds; so called especially when classed as animals.

myclosene (mi'klo-zēn). A proprietary preparation of bone marrow used in treating deafness.

myco-agglutinin (mu'ko-ag-lu'tin-in). An agglutinin developed in the blood during mycogenic infections, which has the power of agglutinating the infecting fungi.

Mycobacteriaceae (mi'ko-bak-te-re-a'se-e). A systematic family under the order Actinomycetales. The members are parasitic, rod-shaped organisms which often show irregular forms and often take stains unevenly. The genera are: *Corynebacterium*, *Fusiformis*, *Mycobacterium*, and *Pfeifferella*.

Mycobacteriales (mi'ko-bak-te-re-a'ses). A systematic order under the class Schizomycetes. It includes the slime molds whose cells during the vegetative stage are united into a pseudoplasmodium.

Mycobacterium (mi'ko-bak-te-re-um). A genus of bacteria of the order Actinomycetales under which are now placed the bacilli of tuberculosis and of lepra and the smegma bacillus. They are slender rods, gram-positive, acid-fast, and sometimes show typical dichotomous branching. **M. butyricum**, an organism resembling *M. tuberculosis*, which is found in milk and in butter. **M. "grass bacillus,"** a nonpathogenic form of mycobacterium found on grass and in cow dung. **M. leprae**, an acid-fast organism resembling *M. tuberculosis* which is found in enormous numbers in cases of leprosy and is now generally accepted as the cause of that disease. **M. "Much's granules,"** granular forms of *M. tuberculosis* found in young cultures which are gram-positive, but not acid fast. **M. smegmatis**, an acid-fast organism found in the smegma praeputii and which resembles *M. tuberculosis*, but is not pathogenic. **M. "timothy bacillus,"** an acid-fast form isolated from timothy grass and from hay lofts. It grows readily on culture mediums and takes on a deep red or dark yellow color. **M. tuberculo'sis**, a slender, aerobic acid-fast organism which causes tuberculosis in man and in many animals. Called also *Bacillus tuberculosis* and *Koch's bacillus*. Tuberculosis is common among domestic animals and cultures from such sources closely resemble the human type, but differ chiefly in their pathogenic ability and in minor cultural characteristics. Hence the following self-explanatory names: *M. tuberculosis-avium*, *M. tuberculosis-bovium*, *M. tuberculosis-piscium*, and others.

mycocyte (mi'ko-sit) [*mykōs* mucus + *κύτος* cell]. A cell of mucous tissue; a mucus cell.

mycoderma (mi-ko-der'mah) [see *Mycoderma*]. Mucous membrane.

Mycoderma (mi-ko-der'mah) [*mykōs* fungus + *δέρμα* skin]. A genus of fungi. **M. acet'i**. See *Acetobacter*. **M. dermatitis**, an organism causing a blastomycetic infection in man. **M. im-mi'te**. See *Coccidioides*.

mycodermatitis (mi'ko-der-mat-i'tis). Inflammation of a mucous membrane.

mycodesmoid (mi-ko-des'moid) [*mykōs* fungus + *δέσμη* bundle + *εἶδος* like]. A colony of *Micrococcus ascor'mans* in the cut end of the spermatoc cord after castration in horses.

mycofibroma (mi'ko-fi-bro'mah). Same as *mycodesmoid*.

mycogastritis (mi'ko-gas-tri'tis) [*mykōs* fungus + *gastritis*]. Inflammation of the mucous membrane of the stomach.

mycohemia, mycohaemia (mi-ko-he'me-ah) [*mykōs* fungus + *αἷμα* blood]. The presence of bacteria in the blood.

mycolactine (mi-ko-lak'tin). A proprietary combination of bile extract, yeast, and lactic ferments for the treatment of constipation.

mycology (mi-kol'o-je) [*mykōs* fungus + *λόγος* discourse]. The science and study of fungi.

mycolysine (mi-kol'is-in). A preparation of plant cells, alcohol, milk ferments, and nonpathogenic bacteria: used to excite phagocytosis in the human body in the treatment of cancer and tuberculosis.

mycolysine-tuberculin. A mixture of tuberculin and yeast juices.

mycomyringitis (mi'ko-mi-rin-j'i'tis) [*mykōs* fungus + *μύριγγ* membrane + *-itis* inflammation] Myringomycosis.

Myconostoc (mi-ko-nos'tok). A genus of schizomycetic fungi.

myconucleo-albumin (mi'ko-nu'kle-o-al-bu'min). An offensive and defensive toxin of microbic life.

mycophylaxin (mi'ko-fil-aks'in) [*mykōs* fungus + *phylaxin*]. Any phylaxin that destroys microbes. See *phylaxin*.

mycoprecipitin (mi'ko-pre-sip'it-in) [*mykōs* fungus + *precipitin*]. A precipitin which will precipitate the proteins of yeast and fungi.

mycoprotein (mi-ko-pro'te-in) [*mykōs* fungus + *protein*]. The albuminous matter of bacterial cells. When set free in the tissues it is capable of producing the effects of the bacteria themselves.

mycoproteination (mi'ko-pro-te-in-a'shun). Inoculation with dead bacterial cells.

mycoproteinization (mi'ko-pro-te-in-iz-a'shun). Mycoproteination.

mycopus (mi'ko-pus). Mucus containing pus.

mycorrhiza (mi-kor-i'zah) [*mykōs* fungus + *ρίζα* root]. A peculiar mycelial growth seen on the roots of certain plants, and thought to be concerned with the fixation of nitrogen.

mycose (mi'kōs) [*mykōs* fungus]. Ergot sugar or trehalose. See *trehalose*.

mycosin (mi'ko-sin) [*mykōs* fungus]. A compound thought to exist in the cell wall of fungi.

mycosis (mi-ko'sis) [*mykōs* fungus]. Any disease caused by a fungus. **m. cutis chronica**, a chronic skin disease caused by a fungus. **m. favo'sa**. Same as *favus*. **m. framboesioides**, yaws. **m. fungoi'des**, a very fatal skin disease marked by the development upon the face, scalp, and chest of firm, reddish tumors that are painful and have a tendency to spread and ulcerate. The disease leads to cachexia, and usually ends fatally after continuing a number of years. It is probably due to bacterial infection. Called also *granuloma fungoides*, *granuloma sarcomatodes*, *inflammatory*

jungoid neoplasm, eczema scrofuloderma, and ulcerative scrofuloderma. **m. intestinalis**, anthrax. **m. leptothrica**, a disease of the tonsil and pharynx produced by *Leptothrix buccalis*.

mycosozin (mi-ko-so'zin) [*μύκης* fungus + *sozin*]. Any sozin that destroys microbes.

mycotic (mi-kot'ik). Pertaining to a mycosis or caused by vegetable micro-organisms.

mycoticopeptic (mi-kot'ik-o-pep'tik). Both mycotic and peptic.

mycotoxination, mycotoxinization (mi-kotoks-in-a'shun, mi-ko-tok-sin-iz-a'shun). Inoculation with bacterial products.

mycterix (mik-ter'ik) [*μυκτήρ* nose]. Pertaining to the nasal cavities.

mycteroxerosis (mik'ter-o-ze-ro'sis) [*μυκτήρ* nose + *ξηρόσις* dry]. Dryness of the nostrils.

mydalaïne (mi-da'le-in) [*μυδαλός* putrid]. A poisonous ptomaine from putrefied viscera. Poisoning by it is attended with salivation, dilatation of the pupils, rise of temperature followed by a fall, and arrest of the heart in diastole.

mydatoxine (mi-dat-oks'in) [*μυδάειν* to be damp + *toxin*]. A deadly ptomaine, $C_6H_{13}NO_2$, from decaying flesh; also obtained from human intestines kept for a long time at a low temperature.

mydine (mi'din) [*μυδάν* to be damp]. A non-poisonous ptomaine, $C_6H_{11}NO_2$, from viscera of dead bodies, and found also in cultures of the typhoid bacillus.

mydriasis (mid-ri'as-is) [*μυδρίασις*]. Extreme or morbid dilatation of the pupil; dilatation of the pupil as the effect of a drug. **alternating m.**, varying inequality of the pupils, mydriasis occurring now on one side, now on the other. Called also *springing m.* **bounding m.**, alternating mydriasis. **paralytic m.**, that caused by paralysis of the oculomotor nerve. **spasmodic m.**, **spastic m.**, that due to spasm of the dilator of the iris or to overaction of the sympathetic. **spinal m.**, that due to lesion of the ciliospinal center of the spinal cord. **springing m.** See *alternating m.*

mydriatic (mid-re-at'ik). 1. Dilating the pupil. 2. Any drug that dilates the pupil. The principal mydriatics are daturine, conine, cocaine, eucaine, gelsemine, atropine, homatropine, hyoscyamine, phenacaine, and ephedrine.

mydrine (mid'rin). A proprietary mydriatic composed of 1 part of homatropine and 100 parts of ephedrine. It is a white powder, soluble in water, and is used especially where an evanescent mydriatic is desired.

mydrol (mid'rol). Iodomethylphenylpyrazolon; a bitter, soluble, mydriatic powder.

myectomy (mi-ek'to-me) [*μύς* muscle + *ἐκτομή* excision]. Excision of a portion of muscle.

myectopia, myectomy (mi-ek'to-pe-ah, mi-ek'to-pe) [*μύς* muscle + *ἐκτοπος* displaced]. Displacement of a muscle.

myel (mi'el) [*μυελός* marrow]. The spinal cord.

myelalgia (mi-el-al'je-ah) [*μυελός* marrow + *ἄλγος* pain]. Pain in the spinal cord.

myelanolosis (mi'el-an-al-o'sis) [*μυελός* marrow + *ἀνάλωσις* wasting]. Wasting of the spinal marrow; tabes dorsalis.

myelapoplexy (mi-el-ap'o-pleks-e) [*μυελός* marrow + *apoplexy*]. Hemorrhage within the spinal cord.

myelasthenia (mi'el-as-the-ne-ah) [*μυελός* marrow + *asthenia*]. Neurasthenia due to some cause which affects the spinal cord.

myelatelia (mi'el-at-e'le-ah) [*μυελός* marrow + *ἀτέλεια* imperfection]. Imperfect development of the spinal cord.

myelatrophy (mi-el-at-ro-fe) [*μυελός* marrow + *atrophy*]. Atrophy of the spinal cord.

myelauze (mi-el-awks'e) [*μυελός* marrow + *αὐξή* increase]. Morbid increase in size of the spinal cord.

myelemia, myelaemia (mi-el-e'me-ah) [*μυελός* marrow + *αἷμα* blood]. The occurrence of myelocytes or neutrophil leukocytes in the blood; myeloid leukemia, splenomedullary leukemia.

myelen (mi'el-en). A red, syrup-like extract of the bone marrow of oxen: used for rickets, leukemia, and tuberculosis.

myelencephalon (mi'el-en-sef'al-on) [*μυελός* marrow + *ἐγκέφαλος* brain]. 1. The cerebrospinal axis. 2. The after-brain; the posterior part of the rhombencephalon or posterior cerebral vesicle of the embryo, from which are developed the medulla oblongata and the lower part of the fourth ventricle.

myelencephalospinal (mi'el-en-sef'al-o-spi'nal). Pertaining to the brain and the spinal cord; cerebrospinal.

myelencephalous (mi'el-en-sef'al-us). Cerebrospinal.

myelenterosis (mi'el-et-er-o'sis) [*μυελός* marrow + *ἐντέρωσις* alteration]. Morbid alteration of the spinal cord.

myelic (mi-el'ik) [*μυελός* marrow]. Pertaining to the spinal cord.

myelin (mi'el-in) [*μυελός* marrow]. 1. The white substance of Schwann; the fatlike substance forming a sheath around the medullated (myelinated) nerve fibers. See *myelin sheath*, under *sheath*. 2. Any one of a certain group of lipid substances found in various normal and pathologic tissues and differing from fats in being doubly refractive. 3. A monaminomonophosphate found in small quantities in the brain.

myelinated (mi'el-in-a-ted). Medullated.

myelination (mi'el-in-a'shun). Same as *myelinization*.

myelinic (mi-el-in'ik). Pertaining to, or of the nature of, myelin.

myelinization (mi-el-in-iz-a'shun). The act of furnishing with or taking on myelin.

myelinogenesis (mi-el-in-o-jen'es-is). Myelinization.

myelinogenetic (mi-el-in'o-jen-et'ik). Producing myelin; producing myelinization.

myelinogeny (mi'e-lin-o-jen-e) [*myelin* + *γενν* to produce]. The development of the myelin of nerve fibers; the myelinization of nerve fibers.

myelinosis (mi'el-in-o'sis). A form of fatty necrosis in which myelin is formed.

myelitic (mi-el-it'ik). Pertaining to myelitis.

myelitis (mi-el-i'tis) [*μυελός* marrow]. 1. Inflammation of the bone marrow. See *osteomyelitis*. 2. Inflammation of the spinal cord. See *leukomyelitis*, *poliomyelitis*. The symptoms of myelitis vary with the location of the lesion, and include pain in the back, girdle sensation, hyperesthesia, formation, anesthesia, motor disturbances, paralysis, increase of the reflexes, paralysis of the sphincters, bed sores, and, in the later stages, spasmodic contractions of the paralyzed limbs. **acute m.**, simple myelitis due to exposure, disease, or injury. **apoplectiform m.**, myelitis in which the paralysis comes on suddenly. **ascending m.**, that which moves cephalad along the cord. **bulbar m.**, that which involves the oblongata. **cavitary m.**, that which is accompanied by the formation of cavities. **central m.** affects chiefly the gray substance of the cord. **m. cervicalis**, myelitis affecting the cervical portion of the cord, and marked by muscular atrophy of the arms and spastic paralysis of the legs. **chronic m.**, a slowly progressing form. **compression m.**, a form due to pressure on the cord, as of a tumor. **concussion m.**, a form due to spinal concussion. **cornual m.**, that which affects the horns of gray matter in the cord. **descending m.**, a myelitis that progresses caudad along the

cord. **diffuse m.**, involves large and variously placed sections of the cord. **disseminated m.**, a form with several distinct foci. **focal m.**, myelitis affecting a small area only, or in other cases several small areas. **foudroyant m.** Same as *central m.* **funicular m.**, myelitis involving the white matter, especially the posterior funiculus; it is characteristic of pernicious anemia. **hemorrhagic m.**, a form associated with hemorrhage. **interstitial m.**, a variety in which the neuroglia is chiefly involved, resulting in increase of the interstitial matter and atrophy of the nervous tissue. Called also *sclerosing m.* **parenchymatous m.**, a variety in which mainly the proper nerve substance of the myelon is affected. **periependymal m.**, myelitis surrounding the central canal of the cord. **sclerosing m.**, a form characterized by hardening of the cord and overgrowth of the interstitial tissue. Called also *interstitial m.* **systemic m.**, myelitis which affects distinct tracts or systems in the cord. **transverse m.**, a form which extends across the cord. **traumatic m.**, myelitis which follows injury to the cord. **m. vaccin'ia**, myelitis which sometimes follows vaccination.

myeloblast (mi'el-o-blast) [μυελός marrow + βλαστός germ]. One of the large mononuclear non-granular cells of bone marrow which develop into myelocytes.

myeloblastemia (mi'el-o-blas-te'me-ah) [*myeloblast* + αἷμα blood]. Presence of myeloblasts in the blood.

myeloblastoma (mi'el-o-blas-to'mah). A tumor composed of myeloblasts. The term includes myelogenous leukemia and chloroma.

myelobrachium (mi'el-o-bra'ke-um) [μυελός marrow + βραχίων arm]. The inferior tubercle of the cerebellum.

myelocoele (mi'el-o-sēl). 1. [μυελός marrow + κοιλία cavity]. The central canal of the spinal cord. 2. [μυελός marrow + κήλη tumor]. Spina bifida with protrusion of the spinal cord.

myelocene (mi'el-o-sēn). A preparation of bone marrow: used in chronic ear diseases, psoriasis, and other affections.

myelocone (mi'el-o-kōn) **Myelocoele** (Babcock). [μυελός marrow + κόνις dust]. A fatty matter from the brain.

myelocyst (mi'el-o-sist) [μυελός marrow + κύστις cyst]. Cysts that are developed from rudimentary medullary canals.

myelocystic (mi'el-o-sis'tik). Both myeloid and cystic in structure.

myelocystocoele (mi'el-o-sis'to-sēl) [μυελός marrow + κύστις cyst + κήλη tumor]. A cystic tumor of the spinal cord.

myelocystomeningocoele (mi'el-o-sis'to-men-ing'o-sēl). Myelocystocoele blended with meningocoele.

myelocyte (mi'el-o-sit) [μυελός marrow + κύτος cell]. 1. A marrow cell; one of the typical cells of red bone marrow. They are slightly larger than leukocytes, having vesicular nuclei and a cytoplasm containing neutrophil, eosinophil, or basophil granules. From them are developed the granular leukocytes of the blood. Myelocytes occur in the blood in certain forms of leukemia. 2. Any cell of the gray matter of the nervous system.

myelocythemia, myelocytosis (mi'el-o-si-the-me-ah, mi'el-o-si-to'sis) [*myelocyte* + αἷμα blood]. Excess of myelocytes in the blood.

myelocytic (mi'el-o-sit'ik). Relating to or of the nature of myelocytes.

myelocytoma (mi'el-o-si-to'mah). Chronic myelocytic leukemia.

myelocytosis (mi'el-o-si-to'sis). The presence of myelocytes in the blood.

myelodiastasis (mi'el-o-di-as'tas-is) [μυελός marrow + διάστασις separation]. Disintegration of the spinal marrow.

myelodysplasia (mi'el-o-dis-pla'se-ah) [μυελός marrow + δυσ- ill + πλάσσειν to form]. Defective development of any part (especially the lower segments) of the spinal cord (Fuchs, 1909).

myelo-encephalic (mi'el-o-en-sef-al'ik). Pertaining to the spinal cord and the brain.

myelo-encephalitis (mi'el-o-en-sef-al-i'tis) [μυελός marrow + ἐγκέφαλος brain + -ιτις inflammation]. Inflammation of the spinal cord and brain. **epidemic m.**, acute anterior poliomyelitis. See *poliomyelitis*.

myeloganglitis (mi'el-o-gan-gli'tis). A disease with choleraic symptoms attributed to ganglitis of the solar and the hepatic plexus.

myelogenesis (mi'el-o-jen'es-is). The development of the nervous system, especially of the brain and cord.

myelogenic, myelogenous (mi'el-o-jen'ik, mi-el-oj'en-us) [μυελός marrow + γενᾶν to produce]. Produced in the bone marrow.

myelogeny (mi-el-oj'en-e). The maturation of the myelin sheaths of nerve fibers in the development of the central nervous system.

myelogone (mi'el-o-gōn). A white blood cell of the myeloid series having a reticulate violaceous nucleus, well-stained nucleolus, and a deep blue rim of cytoplasm.

myelogenic (mi-el-o-go'nik). Characterized by the presence of myelogenes.

myelogonium (mi'el-o-go'ne-um). Myelogene.

myelography (mi-el-og'raf-e) [μυελός spinal cord + γράφειν to write]. Roentgenographic demonstration of the spinal cord.

myeloid (mi'el-oid) [μυελός marrow + εἶδος form]. 1. Pertaining to, derived from, or resembling bone marrow. 2. Pertaining to the spinal cord. 3. Having the appearance of myelocytes, but not derived from bone marrow.

myeloidin (mi-el-oi'din) [μυελός marrow + εἶδος form]. A substance resembling myelin, occurring in the pigmented epithelial cells of the retina.

myeloidosis (mi'el-oi-do'sis). The development of myeloid tissue, especially hyperplastic development of such tissue.

myelolymphangioma (mi'el-o-lim-fan-je-o'mah). Elephantiasis.

myelolymphocyte (mi'el-o-lim'fo-sit). An abnormal form of lymphocyte occurring in bone marrow.

myeloma (mi-el-o'mah) [μυελός marrow + ωμα tumor]. 1. A tumor-like hyperplasia of the bone marrow tissue. 2. Any medullary tumor. 3. Giant cell sarcoma. 4. A slow-growing tumor of a tendinous sheath containing myeloplaxes. **giant cell m.**, a tumor of bone marrow containing many giant cells. **multiple m.**, a disease marked by circumscribed or diffuse tumor-like hyperplasia of the bone marrow, and usually associated with Bence-Jones protein in the urine. The patient complains of neuralgic pains; later painful swellings appear on the ribs and skull and spontaneous fractures may occur. Called also *Kahler's disease*, *Huffer's disease*, *myelopathic albumosuria*, *Bence-Jones' albumosuria*, and *lymphadenia ossea*.

myelomalacia (mi'el-o-mal-a'se-ah) [μυελός marrow + μαλακία softening]. Morbid softening of the spinal cord.

myelomatoid (mi-el-o-mat-oid). Resembling myeloma.

myelomatosis (mi'el-o-mat-o'sis). Multiple myeloma. See *myeloma*.

myelomenia (mi'el-o-me'ne-ah) [μυελός marrow

- + μήν month]. Metastasis of the menstrual discharge to the spinal cord.
- myelomeningitis** (mi'el-o-men-in-jī'tis) [*myelitis* + *meningitis*]. Inflammation of the spinal cord and its membranes.
- myelomeningocele** (mi'el-o-men-ing'o-sēl) [*myelōs* marrow + *meningocele*]. Spina bifida with hernial protrusion of the cord and its meninges.
- myelomere** (mi'el-o-mēr) [*myelōs* marrow + *μέρος* part]. One of the segments, corresponding to a pair of mesoblastic somites, in the brain and spinal cord of the embryo.
- myelomyces** (mi-el-om'is-ēs) [*myelōs* marrow + *μύκης* fungus]. Encephaloid cancer.
- myelon** (mi'el-on) [*myelōs* marrow]. The spinal cord.
- myeloneuritis** (mi'el-o-nu-ri'tis). Multiple neuritis in which there is also myelitis.
- myelonic** (mi-el-on'ik). Pertaining to the myelon.
- myeloparalysis** (mi'el-o-par-al'is-is) [*myelōs* marrow + *paralysis*]. Spinal paralysis.
- myelopathic** (mi'el-o-path'ik). 1. Caused by disease of the spinal cord. 2. Same as *myelogenous*.
- myelopathy** (mi-el-op'ath-e) [*myelōs* marrow + *πάθος* sickness]. Any disease of the spinal cord.
- myelopetal** (mi-el-op'e-tal) [*myelōs* marrow + *πέτερε* to seek for]. Moving toward the spinal cord.
- myelophthisis** (mi'el-of'thi-sis) [*myelōs* marrow + *φθίσις* wasting]. 1. Wasting of the spinal cord. 2. Reduction of the cell-forming functions of the bone marrow. See *aleukia hemorrhagica*.
- myeloplague** (mi'el-o-plak). Same as *myeloplax*.
- myeloplast** (mi'el-o-plast) [*myelōs* marrow + *πλαστος* formed]. Any leukocyte of the bone marrow.
- myeloplax** (mi'el-o-plaks) [*myelōs* marrow + *πλάξ* plate]. Any multinuclear giant cell of the bone marrow. **Robin's m's**, the osteoclasts.
- myeloplaxoma** (mi'el-o-plaks-o'mah) [*myeloplax* + *-ωμα* tumor]. A tumor containing myeloplaxes.
- myeloplegia** (mi'el-o-ple'je-ah) [*myelōs* marrow + *πληγή* stroke]. Spinal paralysis.
- myelopoiesis** (mi'el-o-poi-e'sis) [*myelōs* marrow + *ποιεῖν* to form]. The formation of marrow or of myelocytes.
- myelopore** (mi'el-o-pōr) [*myelōs* marrow + *πόρος* opening]. A canal or opening in the spinal cord.
- myelorrhagia** (mi'el-o-ra'je-ah) [*myelōs* marrow + *ρηνύναι* to burst forth]. Spinal hemorrhage.
- myelorrhaphy** (mi-el-or'af-e) [*myelōs* marrow + *ράφή* suture]. Suture of a severed spinal cord.
- myelosarcoma** (mi'el-o-sar-ko'mah). A sarcoma of the bone marrow.
- myelosclerosis** (mi'el-o-skle-ro'sis) [*myelōs* marrow + *sclerosis*]. Sclerosis of the spinal cord.
- myelosis** (mi-el-o'sis). 1. The formation of a tumor of the spinal cord. 2. Multiple myeloma. See *myeloma*. 3. Myelocytosis. 4. The formation of myeloid tissue.
- myelospasm** (mi'el-o-spazm) [*myelōs* marrow + *σπασμ*]. Spasm of the spinal cord.
- myelospongium** (mi'el-o-spon'je-um) [*myelōs* marrow + *σπόγγος* sponge]. The network whence the neuroglia is developed: it pervades the embryonic cord, and is composed of the spongioblasts and their branching processes.
- myelossyphilis** (mi'el-o-sif'il-is). Syphilis of the myelon.
- myelossyphilosis** (mi'el-o-sif-il-o'sis). Any syphilitic affection of the spinal cord.
- myelosyringosis** (mi'el-o-si-rin-go'sis) [*myelōs* marrow + *σύριγξ* pipe]. Same as *syringomyelia*.
- myelotherapy** (mi'el-o-ther'ap-e) [*myelōs* marrow + *therapy*]. The therapeutical use of marrow, or of the substance of the spinal cord.
- myelotome** (mi-el-o-tōm) [*myelōs* marrow + *τέμνειν* to cut]. 1. An instrument for making sections of the spinal cord. 2. An instrument used for cutting the spinal cord squarely across in removing the brain in postmortem examinations.
- myelotoxic** (mi-el-o-toks'ik) [*myelōs* marrow + *τοξικόν* poison]. 1. Destructive to bone marrow. 2. Arising from diseased bone marrow.
- myelotoxin** (mi'el-o-toks'in). A cytotoxin which causes destruction of the marrow cells.
- myenteric** (mi-en-ter'ik). Pertaining to the myenteron.
- myenteron** (mi-en'ter-on) [*μῦς* muscle + *ἐντερον* intestine]. The muscular coat of the intestine.
- myesthesia** (mi-es-the'zhe-ah) [*μῦς* muscle + *αἰσθησις* sensation]. Muscle sensibility; sensibility to impressions coming from the muscles.
- Myg.** Abbreviation for *myriagram*.
- myiasis** (mi-i'as-is) [*μῦα* fly]. Any disease caused by maggots or flies. **m. dermatosa**, infection of the skin with the larvae of flies. **m. imago'sa**, myiasis produced by the imago, or full-grown fly. **intestinal m.**, the presence of living larvae in the intestines. **m. larvo'sa**, a myiasis produced by larvae or maggots. **m. musco'sa**, a myiasis produced by the common house fly. **m. oestro'sa**, one produced by a bot fly or gad fly (*Oes'trus*).
- myiocephalon, myiocephalum** (mi-e-o-sef'al-on, -um) [*μῦα* fly + *κεφαλή* head]. Projection of the iris through a rent in the cornea.
- myiodesopsia** (mi'i-o-des-op'se-ah) [*μυῖωδης* fly-like + *ὄψις* vision]. The appearance of muscae volitantes.
- myiosis** (mi-i-o'sis). See *myiasis*.
- myitis** (mi-i'tis) [*μῦς* muscle + *-ιτις* inflammation]. Inflammation of a muscle; myositis.
- myko-**. For words thus beginning, see under *myco-*.
- mykol** (mi'kol). An alcohol existing in the bodies of certain bacteria.
- Myl.** Abbreviation for *myrialiter*.
- mylohyoid** (mi-lo-hi'oid) [*μύλη* mill + *hýoid*]. Pertaining to the molar teeth and hyoid bone.
- mylohyoideus** (mi'lo-hi-oid'e-us). See *muscles, table of*.
- Mym.** Abbreviation for *myriameter*.
- myo-**. A prefix denoting some relation to a muscle or to muscles.
- myo-albumin** (mi-o-al-bu'min). Muscle albumin.
- myo-albumose** (mi-o-al'bu-mōs). A protein from muscle juice.
- myo-architectonic** (mi'o-ar-ke-tek-ton'ik) [*μῦς* muscle + *architectonic*]. Pertaining to the structure of muscle.
- myo-atrophy** (mi-o-at'ro-fe). Myatrophy.
- myoblast** (mi'o-blast) [*μῦς* muscle + *βλαστός* germ]. An embryonic cell which becomes a cell of the muscle fiber.
- myoblastic** (mi-o-blas'tik). Pertaining to a myoblast.
- myobradia, miobradia** (mi-o-bra'de-ah) [*μῦς* muscle + *βραδύς* slow]. A slow, sluggish reaction of muscle to electric stimulation.
- myocardiac, myocardial** (mi-o-kar'de-ak, mi-o-kar'de-al). Pertaining to the muscular tissue of the heart.
- myocardiogram** (mi-o-kar'de-o-gram). A tracing made by the myocardiograph.
- myocardiograph** (mi-o-kar'de-o-graf) [*μῦς* muscle + *καρδία* heart + *γράφειν* to record]. An instrument for making a tracing of the movements of the heart muscles.

myocardism (mi-o-kar'dizm). A tendency toward the development of myocardial weakness and degeneration.

myocarditis (mi'o-o-kar-dit'ik). Pertaining to myocarditis.

myocarditis (mi'o-o-kar-di'tis) [μῦς muscle + καρδία heart + -itis inflammation]. Inflammation of the myocardium; inflammation of the muscular walls of the heart. **fragmentation m.**, fragmentation of the myocardium. **indurative m.**, myocarditis causing hardening of the heart muscle. **m. scarlatino'sa**, myocarditis sometimes seen associated with scarlet fever.

myocardium (mi-o-kar'de-um) [μῦς muscle + καρδία heart]. The muscular substance of the heart; the heart muscle.

myocardol (mi-o-kar'dol). A proprietary preparation of caffeine citrate and ergotine: used subcutaneously in cardiac neuroses, arteriosclerosis, etc.

myoele (mi'o-sēl) [μῦς muscle + κήλη hernia]. Hernia of muscle; protrusion of a muscle through its ruptured sheath.

myocelialgia (mi'o-se-le-al'je-ah) [μῦς muscle + κοιλία belly + ἄλγος pain]. Pain in the abdominal muscles.

myocelitis (mi'o-se-li'tis) [μῦς muscle + κοιλία belly + -itis inflammation]. Inflammation of the muscles of the abdomen.

myocellulitis (mi'o-sel-u-li'tis). Myositis conjoined with cellulitis.

myoeceptor (mi'o-sep-tor) [μῦς muscle + cap'ere to take]. The structure in a muscle fiber that receives the nerve stimulus from the motor end-organ of the nerve.

myocerosis (mi'o-se-ro'sis) [μῦς muscle + κηρός wax]. Waxy degeneration of muscle. **m. angiot'ica haemorrhag'ica**. Same as *angiohyalinosi haemorrhagica*.

myochorditis (mi'o-kor-di'tis) [μῦς muscle + χορδή cord + -itis inflammation]. Inflammation of the muscles of the vocal cords.

myochrome (mi'o-krōm) [μῦς muscle + χρώμα color]. Any member of a group of muscle pigments. See *histohematin* and *myohematin*.

myochronoscope (mi'o-kron'os-kōp) [μῦς muscle + χρόνος time + σκοπεῖν to view]. A device for measuring the time required for a motor impulse to become effective.

myoclonia (mi-o-clō-ne-ah). That condition which is characterized by myoclonus. **m. epilept'ica**. See *myoclonus epilepsys*, under *epilepsy*. **m. fibrillaris multiplex**. See *myokymia*, *fibrillary m.*, the twitching of the fibrils of a muscle. See *fibrillation*. **infectious m.**, chorea.

myoclonic (mi-o-klon'ik). Relating to or marked by myoclonus.

myoclonus (mi-ok'lo-nus) [μῦς muscle + κλόνος contraction]. Clonic spasm of a muscle or of various muscles. **m. multiplex**. See *paramyoclonus multiplex*.

myocoele (mi'o-sēl) [μῦς muscle + κοῖλος hollow]. The cavity enclosed by a myotome; the cavity of a myotome.

myocolpitis (mi'o-kol-pi'tis) [μῦς muscle + κόλπος vagina + -itis inflammation]. Inflammation of the muscular layers of the vaginal wall.

myocomma (mi-o-kom'ah) [μῦς muscle + κόμμα cut]. A sclerotomy; the septum between any two myotomes.

myocrismus (mi-o-kris'mus) [μῦς muscle + κρίζειν to speak]. A sound heard on auscultation over a contracting muscle.

myoctonine (mi-ok'to-nin) [μῦς mouse + κτόνος killing]. A poisonous alkaloid, $C_{36}H_{42}N_{2}O_{10}$, from *Aconitum Lycoc'tonum*.

myocyte (mi'o-sīt) [μῦς muscle + κύτος cell]. 1. A cell of the muscular tissue. 2. The inner

contractile layer of the ectoplasm of a protozoon.

myocytoma (mi'o-si-to'mah). A tumor made up of myocytes or muscle cells.

myodegeneration (mi'o-de-jen-er-a'shun) [μῦς muscle + degeneration]. Degeneration of muscle.

myodemia (mi-o-de'me-ah) [μῦς muscle + δημός fat]. Fatty degeneration of muscle.

myodesopsia (mi'o-des-op'se-ah) See *myiodesopsia*.

myodiastasis (mi'o-di-as'tas-is) [μῦς muscle + διάστασις separation]. Rupture of a muscle.

myodioter (mi-o-di-op'ter). The force of ciliary muscle contraction necessary to raise the refraction of the emmetropic eye by 1 diopter from a state of rest.

myodynamic (mi'o-di-nam'ik). Relating to muscular force.

myodynamometer (mi'o-di-nam-om'et-er) [μῦς muscle + δύναμις power + μέτρον measure]. A device for testing the power of the muscles.

myodynia (mi-o-din'e-ah) [μῦς muscle + ὀδὴν pain]. Pains in a muscle; myalgia.

myo-edema, myo-oedema (mi'o-e-de'mah) [μῦς muscle + οἰδημα swelling]. 1. Edema of a muscle. 2. Same as *moulding*.

myo-electric (mi'o-e-lek'trik). Pertaining to the electric or electromotive properties of muscle.

myo-endocarditis (mi'o-en-do-kar-di'tis). Combined myocarditis and endocarditis.

myo-epithelial (mi'o-ep-e-the'le-al). Pertaining to or composed of muscle and epithelium.

myo-epithelium (mi'o-ep-ith-e'le-um) [μῦς muscle + epithelium]. Muscle epithelium.

myofascitis (mi'o-fas-i'tis) [μῦς muscle + fasciitis]. Inflammation of a muscle and its fascia, particularly of the fascial insertion of muscle to bone.

myofibril, myofibrilla (mi-o-fi'bril, mi'o-fi-bril'ah), pl. *myofibrillae*. A muscle fibril; especially one of the fine fibrils traversing longitudinally the cells of smooth muscular tissue and supposed to form the contractile element.

myofibroma (mi'o-fi-bro'mah). Myoma combined with fibroma.

myofibrosis (mi'o-fi-bro'sis) [μῦς muscle + fibra fiber]. Degeneration of muscular tissue into fibroid tissue. **m. cor'dis**, myofibrosis of the heart.

myogelosis (mi-o-je-lo'sis) [μῦς muscle + gelo're to freeze]. An area of hardening in a muscle.

myogen (mi'o-jen) [μῦς muscle + γεννᾶν to produce]. An albumin-like protein of muscle plasma. It is spontaneously coagulable, passing first into soluble myogen fibrin, and then into *myogen fibrin*. Cf. *myosin*.

myogenetic, myogenic, myogenous (mi-o-jen-et'ik, mi-o-jen'ik, mi-of'en-us) [μῦς muscle + γεννᾶν to produce]. Originating in the muscular tissue.

myoglia (mi-og'le-ah) [μῦς muscle + γλία glue]. A fibrillar substance formed by muscle cells and bearing the same relation to muscle that neuroglia bears to nerve cells.

myoglobulin (mi-o-glob'u-lin) [*myo-* + *globulin*]. A globulin found in muscle serum.

myognathus (mi-og'na-thus) [μῦς muscle + γνάθος jaw]. A supernumerary lower jaw having a muscular attachment to the normally placed lower jaw.

myogram (mi'o-gram) [μῦς muscle + γράμμα writing]. The record or tracing made by a myograph.

myograph (mi'o-graf) [μῦς muscle + γράφειν to record]. An apparatus for recording the effects of a muscular contraction.

myographic (mi-o-graf'ik) [μῦς muscle + γράφειν to record]. Pertaining to a myograph.

myography (mi-og'raf-e) [$\mu\upsilon\varsigma$ muscle + $\gamma\rho\acute{\alpha}\phi\epsilon\iota\nu$ to write]. 1. The use of the myograph. 2. A description of the muscles.

myohematin (mi-o-hem'at-in) [*myo-* + *hematin*]. MacMunn's name for a pigment occurring in the muscles in association with hemoglobin.

myohypertrophia kymoparalytica. A muscular dystrophy, with paralysis, described by Oppenheim (1914).

myohysterectomy (mi'o-his-ter-ek'to-me). Partial removal of the uterus, the cervix being left in place.

myohysteropexy (mi'o-his'ter-o-pek-se) [$\mu\upsilon\varsigma$ muscle + $\upsilon\sigma\tau\epsilon\rho\alpha$ uterus + $\pi\eta\chi\iota\varsigma$ fixation]. An operation for uterine prolapse in which intra-abdominal muscles are utilized to form the support.

myoid (mi'oid) [$\mu\upsilon\varsigma$ muscle + $\epsilon\iota\delta\omicron\varsigma$ form]. Resembling or like a muscle.

myoidem, myoidema (mi-oi'dem, mi-oi-de'mah). Same as *myo-edema*.

myoideum (mi-oid'e-um). Myoid tissue.

myoidism (mi-o-id'izm) [$\mu\upsilon\varsigma$ muscle + $\iota\delta\iota\omicron\varsigma$ own]. Idiomuscular contraction.

myoischemia (mi'o-is-ke'me-ah) [$\mu\upsilon\varsigma$ muscle + $\iota\sigma\chi\epsilon\mu\iota\alpha$]. Local deficiency of blood supply in muscle.

myokerosis (mi'o-ke-ro'sis) [$\mu\upsilon\varsigma$ muscle + $\kappa\eta\rho\acute{o}\varsigma$ wax]. Waxy degeneration of muscle tissue.

myokinesis (mi-o-kin'e-sis) [$\mu\upsilon\varsigma$ muscle + $\kappa\iota\nu\eta\sigma\iota\varsigma$ motion]. Movement of muscles; especially, displacement of muscle fibers in operation.

myokinetic (mi-o-kin-et'ik). Pertaining to the motion or kinetic element of muscle, as contrasted with the myotonic or tonicity element.

myokymia (mi-o-kim'e-ah) [$\mu\upsilon\varsigma$ muscle + $\kappa\upsilon\mu\alpha$ wavel]. Persistent quivering of the muscles (Schultze); myoclonus fibrillaris multiplex (Kny).

myokynin (mi-o-ki'nin). A base, $C_{11}H_{23}N_2O_3$, found in muscle.

myolemma (mi-o-lem'ah) [$\mu\upsilon\varsigma$ muscle + $\lambda\acute{\epsilon}\mu\mu\alpha$ sheath]. The sarcolemma.

myolin (mi'o-lin). The supposed material of the muscular fibrils.

myelipoma (mi'o-li-po'mah) [$\mu\upsilon\varsigma$ muscle + $\lambda\iota\pi\omicron\varsigma$ fat + $\omega\mu\alpha$ tumor]. Myoma containing fatty or lipomatous elements.

myology (mi-ol'o-je) [$\mu\upsilon\varsigma$ muscle + $\lambda\acute{o}\gamma\omicron\varsigma$ word]. The sum of knowledge regarding the muscles.

myolysis (mi-ol'is-is) [$\mu\upsilon\varsigma$ muscle + $\lambda\upsilon\sigma\iota\varsigma$ solution]. Disintegration or degeneration of muscle tissue. **m. cardiotoxica**, degeneration of the heart muscle due to systemic intoxication, as in infectious diseases.

myoma (mi-o'mah), pl. *myomas* [$\mu\upsilon\varsigma$ muscle + $\omega\mu\alpha$ tumor]. Any tumor made up of muscular elements: if they are striated, it is a *rhabdomyoma*; if not, it is a *leiomyoma*. **m. laevicellulare**, leiomyoma. **m. sarcomatodes**, myoma in which the muscle tissue has been transformed into sarcomatous tissue. **m. striocellulare**, rhabdomyoma. **m. telangiectodes**, a tumor consisting of a coil of blood vessels surrounded by a network of muscular fibers; angiomyoma.

myomalacia (mi'o-ma-la'se-ah) [$\mu\upsilon\varsigma$ muscle + $\mu\alpha\lambda\alpha\kappa\iota\alpha$ softening]. Morbid softening of a muscle. **m. cordis**, morbid softening of the muscular substance of the heart.

myomatosis (mi'o-mat-o'sis). The formation of multiple myomas.

myomatous (mi-o'mat-us). Pertaining to or of the nature of a myoma.

myomectomy (mi-o-mek'to-me) [*myoma* + $\acute{\epsilon}\kappa\tau\omicron\mu\eta$ excision]. 1. Surgical removal of a myoma. 2. Same as *myectomy*.

myomelanosis (mi'o-mel-an-o'sis) [$\mu\upsilon\varsigma$ muscle + $\mu\epsilon\lambda\alpha\nu\omicron\sigma\iota\varsigma$ blackening]. Melanosis, or black pigmentation of a portion of the muscular substance.

myomere (mi'o-mēr) [$\mu\upsilon\varsigma$ muscle + $\mu\acute{\epsilon}\rho\omicron\varsigma$ share]. 1. A protovertebra or embryonic muscular segment. 2. A muscular segment.

myometer (mi-om'et-er) [$\mu\upsilon\varsigma$ muscle + $\mu\acute{\epsilon}\tau\rho\nu$ measure]. An apparatus for measuring muscle contraction.

myometrial gland. See under *gland*.

myometritis (mi'o-me-tri'tis) [$\mu\upsilon\varsigma$ muscle + $\mu\eta\tau\epsilon\rho\alpha$ womb + $\iota\tau\iota\varsigma$ inflammation]. Inflammation of the muscular substance of the uterus.

myometrium (mi-o-me'tre-um) [$\mu\upsilon\varsigma$ muscle + $\mu\eta\tau\epsilon\rho\alpha$ womb]. The muscular substance of the uterus.

myomohysterectomy (mi'o-mo-his-ter-ek'to-me) [*myoma* + $\upsilon\sigma\tau\epsilon\rho\alpha$ uterus + $\acute{\epsilon}\kappa\tau\omicron\mu\eta$ excision]. Myomectomy combined with hysterectomy; surgical removal of a myomatous uterus.

myomotomy (mi-o-mot'o-me). Same as *myomectomy*.

myon (mi'on) [$\mu\upsilon\varsigma$ muscle]. A muscle; a muscular unit.

myoneme (mi'o-nēm) [$\mu\upsilon\varsigma$ muscle + $\nu\eta\mu\alpha$ thread]. One of the muscular fibrils in the surface of certain protozoa.

myonephropexy (mi-o-nef'ro-pek-se) [$\mu\upsilon\varsigma$ muscle + $\nu\epsilon\phi\rho\acute{o}\varsigma$ kidney + $\pi\eta\chi\iota\varsigma$ fixation]. The operation of fixing a movable kidney by suturing it to a strap of muscle tissue.

myoneural (mi-o-nu'al) [$\mu\upsilon\varsigma$ muscle + $\nu\epsilon\upsilon\rho\omicron\nu$ nerve]. Pertaining to both muscle and nerve: said of the nerve terminations in muscles.

myoneuralgia (mi'o-nu-ra'l'je-ah) [$\mu\upsilon\varsigma$ muscle + *neuralgia*]. Muscular neuralgia.

myoneurasthenia (mi'o-nu-ras-the'ne-ah) [$\mu\upsilon\varsigma$ muscle + *neurasthenia*]. The relaxed state of the muscular system in neurasthenia.

myoneure (mi'o-nūr) [$\mu\upsilon\varsigma$ muscle + $\nu\epsilon\upsilon\rho\omicron\nu$ nerve]. A nerve cell which supplies a muscle.

myoneuroma (mi'o-nu-ro'mah) [$\mu\upsilon\varsigma$ muscle + $\nu\epsilon\upsilon\rho\omicron\nu$ nerve + $\omega\mu\alpha$ tumor]. A neuroma containing muscular tissue; especially a cyst of the pituitary body containing muscular elements.

myoneurosis (mi'o-nu-ro'sis) [$\mu\upsilon\varsigma$ muscle + *neurosis*]. Any neurosis of muscle. **colic m., intestinal m.**, mucous colitis. See *colitis*.

myonosis (mi-on'os-us) [$\mu\upsilon\varsigma$ muscle + $\nu\acute{o}\sigma\omicron\varsigma$ disease]. Disease of a muscle.

myonymy (mi-on'im-e) [$\mu\upsilon\varsigma$ muscle + $\delta\nu\omicron\mu\alpha$ name]. Nomenclature of the muscles.

myopachynsis (mi'o-pak-in'sis) [$\mu\upsilon\varsigma$ muscle + $\pi\acute{\alpha}\chi\nu\omega\sigma\iota\varsigma$ thickening]. Hypertrophy of muscle.

myoparalysis (mi'o-par-al'is-is) [$\mu\upsilon\varsigma$ muscle + *paralysis*]. Paralysis of a muscle.

myoparesis (mi-o-par'es-is). Myoparalysis.

myopathic (mi-o-path'ik). Of the nature of a myopathy.

myopathy (mi-op'ath-e) [$\mu\upsilon\varsigma$ muscle + $\pi\acute{\alpha}\theta\omicron\varsigma$ suffering]. Any disease of a muscle.

myope (mi'op) [$\mu\upsilon\beta\epsilon\iota\nu$ to shut + $\acute{\omega}\psi$ eye]. A near-sighted person; one affected with myopia.

myopericarditis (mi'o-per-ik-ar-di'tis). Myocarditis combined with pericarditis.

myoperitonitis (mi'o-per-it-o-ni'tis) [$\mu\upsilon\varsigma$ muscle + *peritonitis*]. Inflammation of the muscular elements of the peritoneum.

myophage (mi'o-faj) [see *myophagism*]. A phagocyte which consumes muscle tissue.

myophagism (mi-o-faj-izm) [$\mu\upsilon\varsigma$ muscle + $\phi\alpha\gamma\acute{\epsilon}\iota\nu$ to eat]. The atrophy or wasting away of muscular tissue.

myophone (mi'o-fōn) [$\mu\upsilon\varsigma$ muscle + $\phi\omega\eta\eta$ voice]. A device which renders audible the sound of a muscular contraction.

myopia (mi-o-pe-ah) [$\mu\upsilon\beta\epsilon\iota\nu$ to shut + $\acute{\omega}\psi$ eye]. Near-sightedness, or short sight; defective eyesight due to too great refractive power of the eye, so that the rays coming from an object beyond a

certain distance are focused in front of the retina. **axial m.**, that which is caused by elongation of the axis of the eye. **chronic m.**, color blindness for objects at a distance. **curvature m.**, a form due to changes in the curvature of the refracting surfaces of the eye. **index m.**, a form due to abnormal refractivity of the mediums of the eye. **malignant m.**, **pernicious m.**, progressive myopia, associated with grave disease of the choroid and leading to retinal detachment and blindness. **prodromal m.**, a condition in which the patient is able to read with glasses; sometimes seen in incipient cataract. **progressive m.**, myopia that continues to increase in adult life.

myopic (mi-op'ik). Pertaining to or affected with myopia. **m. crescent.** See *crescent*.

myoplasm (mi'ō-plazm) [μῦς muscle + πλάσμα something formed]. The contractile part of the muscle cell.

myoplastic (mi-o-plas'tik) [μῦς muscle + πλάσσειν to form]. Performed by the plastic use of muscle; said of operations.

myoplasty (mi'ō-plas-te). Plastic surgery on muscle; an operation in which portions of partly detached muscle are utilized, especially in the field of defects or deformities.

myopolar (mi-o-po'lar) [μῦς muscle + polar]. Applied to a muscle between the electrodes of a battery.

myoprotein (mi-o-pro'te-in). A protein obtained from muscle tissue.

myoproteose (mi-o-pro'te-ōs). Same as *myoalbumose*.

myopsin (mi-op'sin) [μῦς muscle + ψιέν to chew up]. A proteolytic enzyme occurring along with trypsin in the pancreatic juice.

myopsis (mi-op'sis). Myiodesopsia.

myopsychic (mi-o-si'kik) [see *myopsychosis*]. Pertaining to the muscles and the mind—noting the memory images of muscular activity.

myopsychosis, myopsychopathy (mi'ō-si-ko'-sis, mi'ō-si-kop'ah-t-e) [μῦς muscle + ψυχή mind + πάθος disease]. Any one of those neuromuscular affections that are associated with mental troubles, as Sydenham's chorea, paralysis agitans.

myorrhaphy (mi-or'af-e) [μῦς muscle + ράφη suture]. Saturation of divided muscle.

myorrhexis (mi-or-eks'is) [μῦς muscle + ῥήξις rupture]. The rupture of a muscle.

mysalgia (mi-o-sal'je-ah). Muscular pain.

mysalpingitis (mi'ō-sal-pin-jī'tis) [μῦς muscle + σάλπιγξ]. Hypertrophic inflammation of the muscular tissue of the oviduct.

mysalvarsan (mi-o-sal'var-san). An arsphenamine preparation for use in syphilis; said to be dioxydiaminoarsenobenzol-di-formaldehyde-sodium sulphide.

mysan (mi'ō-san). A protein derived from myosin.

mysarcoma (mi'ō-sar-ko'mah). Myoma blended with sarcoma.

mysclerosis (mi'ō-skle-ro'sis) [μῦς muscle + σκληρός hard]. Hardening or sclerosis of muscle.

myscope (mi'ō-skōp) [μῦς muscle + σκοπεῖν to view]. An instrument for observing muscle contraction.

myoseism (mi'ō-sizm) [μῦς muscle + σεισμός shake]. Jerky, irregular muscular contractions.

myoseptum (mi-o-sep'tum). Same as *myocomma*.

myoserum (mi-o-se'rum). Muscle juice; the juice expressed from meat.

myosin (mi'ō-sin). A globulin-like protein of muscle plasma. It is soluble, but on long standing it coagulates into an insoluble protein called *myosin fibrin*. Cf. *myogen*. **Furth's m.**, paramyosinogen. **vegetable m.**, a substance resembling myosin, from seeds of various plants.

myosinogen (mi-o-sin'ō-jen) [myosin + γεννᾶν to produce]. Kühne's name for the protein now called *myogen*.

myosinose (mi-os'in-ōs). A protease produced by the digestion of myosin.

myosinuria (mi'ō-sin-u're-ah) [myosin + οὖρον urine]. The presence of myosin in the urine.

myosis (mi-o'sis). Same as *miosis*.

myositic (mi-o-sit'ik). Pertaining to myositis.

myositis (mi-o-si'tis) [μῦς muscle]. Inflammation of a voluntary muscle. **acute disseminated m.** Same as *primary multiple m.* **acute progressive m.**, a rare disease in which the inflammation gradually involves the whole muscular system and ends in death by asphyxia and pneumonia. **m. fibro'sa**, a type in which there is a formation of connective tissue within the muscle substance. **infectious m.**, **interstitial m.**, inflammation of the connective and septal elements of muscular tissue. **m. ossificans**, myositis which is characterized by bony deposits or by ossification of muscles. **m. ossificans circumscripta**, a form marked by the formation of muscular osteomas, such as riders' bone. **m. ossificans progressiva**, a progressive disease, beginning in early life, in which the muscles are gradually converted into bony tissue. **m. ossificans traumatica**, myositis ossificans due to injury. **parenchymatous m.**, that which affects the essential substance of a muscle. **primary multiple m.**, an acute febrile disease characterized by edema and inflammation of the skin and muscles in various parts of the body. Called also *pseudotrachinosis*. **m. purulenta**, a suppurative and gangrenous type, due to a bacterial infection. **m. purulenta tropica**, a disease of Samoa and the African tropics, characterized by fever, pain in the limbs, and abscesses in the muscles. **m. serosa**, muscle inflammation characterized by a serous exudation. **suppurative m.**, inflammation of muscle resulting in muscular abscesses or in diffuse suppuration of muscles. **trichinous m.**, that which is caused by the presence of trichinae.

myospasia (mi-o-spa'ze-ah). Clonic contraction of muscles; paramyoclonus.

myospasm (mi'ō-spazm) [μῦς muscle + σπασμός spasm]. Spasm of a muscle.

myospasmia (mi-o-spaz'me-ah). Disease characterized by uncontrollable muscular spasm. See *tic*.

myosteoma (mi-os-te-o'mah) [μῦς muscle + ὄστέον bone + -ωμα tumor]. A bony tumor in muscle.

myosthenine (mi-os'then-in). Epinephrine.

myosthenometer (mi'ō-s'then-om'et-er) [μῦς muscle + σθένος strength + μέτρον measure]. An instrument for measuring the power of muscle groups.

myostroma (mi-o-stro'mah) [μῦς muscle + stroma]. The stroma or framework of muscle tissue.

myostromin (mi-o-stro'min). A protein occurring in muscle stroma.

myosuria (mi-o-su're-ah) [μῦς muscle + οὖρον urine]. Myosin in the urine.

myosuture (mi-o-sūt'ūr) [μῦς muscle + L. suture sewing]. The sutured of a muscle.

myosynizesis (mi'ō-sin-iz-e'sis) [μῦς muscle + συνίησις sitting together]. Adhesion of muscles.

myotactic (mi-o-tak'tik) [μῦς muscle + L. tactus touch]. Pertaining to the muscular sense of touch.

myotatic (mi-ot'as-is) [μῦς muscle + τάσις stretching]. Stretching of muscle.

myotatic (mi-o-tat'ik) [μῦς muscle + τείνειν to stretch]. Performed or induced by stretching or extending a muscle.

myotendonoplasty (mi'ō-ten-on'to-plas-te). Tendonotomy.

myotenositis (mi-o-ten-o-si'tis) [$\mu\upsilon\varsigma$ muscle + $\tau\acute{\epsilon}\nu\omega\nu$ tendon + $-itis$ inflammation]. Inflammation of a muscle and its tendon.

myototomy (mi'o-ten-ot'o-me) [$\mu\upsilon\varsigma$ muscle + $\tau\acute{\epsilon}\nu\omega\nu$ tendon]. Surgical division of the tendon of a muscle.

myotherapy (mi-o-ther'ap-e) [$\mu\upsilon\varsigma$ muscle + $\theta\epsilon\rho\alpha\pi\epsilon\iota\alpha$ treatment]. Treatment by administration of muscle tissue and muscle juice.

myothermic (mi-o-ther'mik) [$\mu\upsilon\varsigma$ muscle + $\theta\acute{\epsilon}\rho\mu\eta$ heat]. Pertaining to temperature changes in muscle produced by its activity.

myotic (mi-ot'ik). Same as *miotic*.

myotility (mi-o-til'it-e). Muscular contractility.

myotome (mi'o-tōm) [$\mu\upsilon\varsigma$ muscle + $\tau\acute{\epsilon}\mu\nu\epsilon\iota\nu$ to cut]. 1. An instrument for performing myotomy. 2. Same as *somite*. 3. A myocomma.

myotomy (mi-ot'o-me) [$\mu\upsilon\varsigma$ muscle + $\tau\acute{\epsilon}\mu\nu\epsilon\iota\nu$ to cut]. The cutting or dissection of muscular tissue or of a muscle.

myotone (mi'o-tōn). Same as *myotonia*.

myotonia (mi-o-to'ne-ah) [$\mu\upsilon\varsigma$ muscle + $\tau\acute{\omicron}\nu\upsilon\varsigma$ tension]. Inhibition of voluntary movements due to an increase of muscle tonus. **m. acquis'ita**, tonic muscular spasm developed after injury or in consequence of disease. Called also *Talma's disease*. **m. atroph'ica**, a slowly progressive form of muscular atrophy involving special muscles and marked by delayed relaxation of muscle contractions; called also *dystrophia myotonica*. **m. congen'ita**, **m. heredita'ria**. See *Thomsen's disease*, under *disease*. **m. neonato'rium**, tetanism.

myotonic (mi-o-ton'ik). 1. Pertaining to or characterized by myotonia. 2. Pertaining to the tonic function of muscles as contrasted with the *myokinetic* or motion function.

myotonometer (mi'o-to-nom'et-er) [*myotonia* + $\mu\acute{\epsilon}\tau\rho\nu$ measure]. An instrument for measuring muscular tonus.

myotonus (mi-ot'o-nus). Tonic spasm of a muscle.

myotomy (mi-ot'o-ne). See *myotonia*.

myotrophy (mi-ot'ro-fe) [$\mu\upsilon\varsigma$ muscle + $\tau\rho\omicron\varphi\acute{\eta}$ nutrition]. Nutrition of muscle.

myovascular (mi'o-o-vas'ku-lar) [$\mu\upsilon\varsigma$ muscle + *vascular*]. Pertaining to the heart muscle and the blood vessels.

myrcene (mer'sēn). An essential oil from the oil of bay. It is an olefinic terpene, $C_{10}H_{16}$, and probably $CH_2(CH)_3(CH_2)_2CH:C(CH_3)_2$.

Myrcia (mer'she-ah) [L.]. A genus of myrcaeous trees and shrubs. The leaves of *M. a'ris* afford oil of bay (*o'leum myr'ciae*), whence bay-rum (*spir'itus myr'ciae*) is prepared, which is used as a perfume and as a local application in headache.

myria- [$\mu\upsilon\rho\lambda\omicron\varsigma$ numberless]. A prefix signifying a great number.

myriachit (mir-e'ah-shit) [Russian]. A form of palmus with jumping movements and infirm will, endemic in Siberia. See *lata*, *palmus*.

Myriapoda (mir-e-ap'o-dah) [$\mu\upsilon\rho\lambda\omicron\varsigma$ numberless + $\pi\omicron\delta\iota\varsigma$ foot]. A class of arthropods, including the millepedes and centipedes.

myriapodiasis (mir'e-ap-o-di'as-is). Infestation by one of the Myriapoda or centipedes.

myrica (mir-i'kah). The dried bark of the root of *Myr'ca cerif'era*, bayberry or wax myrtle: used in diarrhea and jaundice. Dose, 8 grains (0.5 Gm.).

myricin (mir-i'sin) [L. *myr'ica* myrtle]. 1. A crystallizable principle, $C_{30}H_{51}.C_{19}H_{31}O_9$, from beeswax. 2. A medicinal concentration prepared from *Myr'ca cerif'era*, or wax myrtle; astringent, antilutic. Dose, 1-3 grains (0.06-0.198 Gm.).

myricyl (mir-is-il). The radical, $C_{30}H_{51}$.

myringectomy (mi-rin-jek'to-me). Same as *myringodectomy*.

myringitis (mir-in-j'i'tis) [L. *mirin'ga* drum membrane + $-itis$ inflammation]. Inflammation of the membrana tympani. **m. bullo'sa**, myringitis with the formation of blebs.

myringodectomy (mir-in'go-dek'to-me) [L. *myr-in'ga* membrana tympani + $\acute{\epsilon}\kappa\tau\omicron\upsilon\eta$ excision]. Surgical removal of the membrana tympani.

myringodermatitis (mir-in'go-der-mat-i'tis) [L. *myr-in'ga* drum membrane + $\delta\acute{\epsilon}\rho\mu\alpha$ skin]. Inflammation of the outer layer of the membrana tympani, with the formation of blebs.

myringomycosis (mir-in'go-mi-ko'sis) [L. *myr-in'ga* drum membrane + $\mu\omicron\kappa\eta\varsigma$ fungus]. Disease of the membrana tympani caused by the growth of fungi. **m. aspergilli'na**, that which is caused by an aspergillus. See *Otomycosis*.

myringoplasty (mir-in'go-plas-te) [L. *myr-in'ga* drum membrane + $\pi\lambda\acute{\alpha}\sigma\tau\epsilon\iota\nu$ to form]. Surgical restoration of the membrana tympani.

myringoscope (mi-ring'o-skōp) [L. *myr-in'ga* drum membrane + $\sigma\kappa\omicron\pi\acute{\epsilon}\iota\nu$ to view]. An instrument for inspecting the drum membrane.

myringotome (mir-in'go-tōm) [L. *myr-in'ga* drum membrane + $\tau\acute{\epsilon}\mu\nu\epsilon\iota\nu$ to cut]. A knife for use in operating upon the membrana tympani.

myringotomy (mir-in-got'o-me) [L. *myr-in'ga* drum membrane + $\tau\acute{\epsilon}\mu\nu\epsilon\iota\nu$ to cut]. Surgical incision of the membrana tympani.

myristic acid (mi-ris'tik). See under *acid*.

Myristica (mi-ris'tik-ah) [L.; $\mu\upsilon\rho\iota\tau\acute{\iota}\kappa\epsilon\omega\nu$ to anoint]. A genus of trees of tropical countries. *M. fra-grans* affords nutmegs and mace. See *nutmeg*.

myristicene (mi-ris'tis-ēn). A fragrant eleopten, $C_{10}H_{14}$, from the volatile oil of nutmeg.

myristicol (mi-ris'tik-ol). A stearopten, or camphor, $C_{10}H_{16}O$, from the volatile oil of nutmeg.

myristin (mi-ris'tin). Myristate of glyceryl, $C_3H_5(C_{14}H_{27}O_2)_3$: found in nutmeg butter, spermaceti, and other fats.

myrobalan (mi-rob'al-an) [$\mu\iota\omicron\rho\upsilon\nu$ ointment + $\beta\acute{\alpha}\lambda\alpha\nu\omicron\varsigma$ nut]. The dried fruit of several species of *Terminalia* of India: used as an astringent in diarrhea. Dose, 30-60 grains (2-4 Gm.).

myronate (mi'ron-āt). Any salt of myronic acid (derivable from black mustard). **potassium m.** Same as *sinigrin*.

myronic acid (mi-ron'ik). See *acid*.

myronin (mi-ro'nin). A proprietary ointment base, composed of stearin soap, carnauba wax, and doegling oil.

myrosin (mi'ro-sin). A ferment found in black mustard seed which decomposes the glucoside sinigrin.

myrrh (mur) [L. *myr'ra*; $\mu\iota\omicron\rho\pi\alpha$]. A gum-resin from *Commiph'ora myr'ra*, an old world burseraceous tree, containing a volatile oil, the resin myrrhin, and a gum. It is stimulant and astringent, and is used in dyspepsia, chronic bronchitis, leukorrhea, amenorrhea, and as a local application in stomatitis, carious teeth, and inflammation of the gums. Dose, 5-30 grains (0.333-2 Gm.); of tincture (U. S. P.), 10-30 minims (0.666-2 cc.).

myrrholin (mer'o-lin). A mixture of myrrh and fat in equal parts: used as a vehicle for the administration of creosote.

myrtiform (mer'tif-orm) [L. *myrtifor'mis*; *myr'tus* myrtle + *for'ma* shape]. Shaped like the leaf or berry of the myrtle.

myrtillin (mer-til'in). 1. An extractive from the leaves of blueberries: has been used experimentally in diabetes to aid carbohydrate metabolism. 2. An extractive from huckleberries: said to be useful in the local treatment of eczema; also internally in intestinal catarrh.

myrtle (mer'tl). See *Myrtus*.

myrtol (mer'tol) [L. *myr'tus* myrtle + *o'leum* oil]. A light, volatile oil obtainable from the oil of *Myr'tus commu'nis*: given in bronchial and pul-

- monic affections as a stimulant antiseptic. Dose, 1-2 minims (0.06-0.13 cc.).
- myrtomel** (mer'to-mel). A proprietary extract of blueberry leaves: has been used experimentally in diabetes.
- Myrtophyllum** (mir-to-fil'um) [*L. myrtus* myrtle + φύλλον leaf]. A genus of protozoan organisms. **M. hepatis**, a species found in hepatic abscess. It is shaped like a myrtle leaf.
- Myrtus** (mer'tus) [*L.; μύρτος*]. A genus of myrtaceous trees. *M. communis*, the old world myrtle, affords leaves which are antiseptic and astringent, and are used as a dressing for wounds. Dose, 5-20 grains (0.33-1.33 Gm.). See also *cheken*.
- mysophobia** (mi-so-fo-be-ah) [μύσος filth + φόβος fear]. Insane dread of filth or contamination.
- mystin** (mis'tin). A milk preservative, consisting of formaldehyde and sodium nitrite.
- mytacin** (mi'tas-izm) [μυτακισμός]. Too free use of *m* sounds in utterance.
- mythomania** (mith-o-ma'ne-ah) [μῦθος myth + μανία madness]. A morbid propensity to lie or to exaggerate.
- mythophobia** (mith-o-fo-be-ah) [μῦθος myth + φόβος fear]. Morbid fear of stating an untruth.
- mytilite** (mi'til-it). An alcohol from the muscle of *Mytilus edulis*, $C_6H_{12}O_5 \cdot 2H_2O$. It is isomeric with quercite.
- mytilocongestin** (mi-til-o-kon-jes'tin) [μυτίλος mussel + congestion]. A toxic substance obtained by Richet from mussels.
- mytilotoxin** (mit'il-o-toks'in) [μυτίλος mussel + τοξικόν poison]. A poisonous leukomaine, $C_6H_{18}NO_2$, from mussels.
- mytilotoxism** (mit'il-o-toks'izm). Mussel poisoning; poisoning from eating mussels.
- myurous** (mi-u'rus) [μῦς mouse + οὐρά tail]. Gradually tapering like a mouse's tail: said of the pulse when it grows gradually more feeble, and also of certain symptoms.
- myxadenitis** (miks'ad-en-i'tis) [μύξα mucus + ἀδήν gland + -itis inflammation]. Inflammation of a mucous gland. **m. labialis**. Same as *Baelz's disease*, under *disease*.
- myxadenoma** (miks-ad-en-o'mah) [μύξα mucus + adenoma]. An epithelial tumor with the structure of a mucous gland.
- myxangitis** (miks-an-ji'tis) [μύξα mucus + ἀγγεῖον vessel + -itis inflammation]. Inflammation of the ducts of mucous glands.
- myxangoitis** (miks'an-go-i'tis) [μύξα mucus + ἀγγεῖον vessel + -itis inflammation]. Mucous inflammation of vessels.
- myxasthenia** (miks-as-the-ne'ah) [μύξα mucus + ἀσθένεια weakness]. Deficiency in the secretion of mucus.
- myxedema**, **myxoedema**, (miks-e-de'mah) [μύξα mucus + οίδημα swelling]. A disease, probably due to hypofunction of the thyroid gland, and marked by dropsy-like swelling, especially of the face and hands, smallness of the thyroid gland, slowing of the pulse rate, dryness and wrinkling of the skin, falling of the hair, dulling of mental activity, sluggishness of movement, and retardation of the rate of basal metabolism. Called also *Gull's disease*, **congenital m.**, cretinism, **infantile m.**, Brissaud's infantilism; myxedema beginning during infancy from acquired disorder of the thyroid gland. **operative m.**, cachexia strumipriva.
- myxedematoid** (mix-e-dem'at-oid). Resembling myxedema.
- myxedematous** (mix-e-dem'at-us). Pertaining to or characterized by myxedema.
- myxemia** (miks-e-me-ah) [μύξα mucus + αἷμα blood]. Mucinemia.
- myxidlocy** (miks-id'e-o-se). Same as *myxidiotie*.
- myxidiotie** (miks-id'e-o-te). Myxedema marked by defective mental development.
- myxo-adenoma** (mik'so-ad-en-o'mah). See *myxadenoma*.
- Myxobacteriales** (miks'o-bak-te-re-a'lēz) [μύξα slime + bacteria]. An order of Schizomycetes comprising the slime mold bacteria.
- myxoblastoma** (miks'o-blas-to'mah). A tumor composed of mucous connective tissue cells.
- Myxobolus cypri'ni**. A protozoan parasite causing the pox disease of carp.
- myxochondrofibrosarcoma** (miks'o-kon'dro-fi'bro-sar-ko'mah). A tumor containing myxomatous, cartilaginous, fibrous, and sarcomatous elements.
- myxochondroma** (miks'o-kon-dro'mah). Myxoma blended with chondroma.
- myxochondrosarcoma** (mik'so-kon'dro-sar-ko'mah). A mixed tumor containing elements of myxoma, cartilage, and connective tissue.
- Myxococcidium stegomy'iae**. A sporozoon found in the body of the mosquito, *Stegomyia fasciata*.
- myxocylindroma** (mik'so-sil-in-dro'mah). Same as *cylindroma*.
- myxocystitis** (mik'so-sis-ti'tis) [μύξα mucus + cystitis]. Inflammation of the mucosa of the bladder.
- myxocystoma** (miks'o-sis-to'mah). Myxoid cystoma.
- myxocyte** (miks'o-sit) [μύξα mucus + κύτος cell]. One of the characteristic cells of mucous tissue.
- myxodermia** (miks-o-der-me-ah) [μύξα mucus + δέρμα skin]. An acute disease marked by ecchymoses, softening of the skin, and contraction of certain muscles.
- myxodema** (miks-e-de'mah). See *myxedema*.
- myxo-enchondroma** (mik'so-en-kon-dro'mah). A chondroma in which some of the elements have undergone mucous degeneration.
- myxo-endothelioma** (mik'so-en-do-the-le-o'mah). An endothelioma containing myxomatous tissue.
- myxofibroma** (miks'o-fi-bro'mah). Myxoma blended with fibroma.
- myxofibrosarcoma** (miks'o-fi'bro-sar-ko'mah). A sarcoma with myxomatous and fibromatous elements.
- myxoglioma** (miks'o-gli-o'mah). A glioma which has undergone myxomatous degeneration.
- myxoid** (miks'oid) [μύξα mucus + εἶδος form]. Resembling mucus. **m. cystoma**, a proliferating cyst of the ovary; so called because its inner surface resembles a mucous membrane.
- myxoidedema** (miks'oid-e-de'mah). Influenza of a severe type; American grip.
- myxoinoma** (miks'o-in-o'mah). Myxoma blended with inoma.
- myxolipoma** (miks'o-lip-o'mah). Myxoma blended with lipoma.
- myxoma** (miks-o'mah) [μύξα mucus + ωμα tumor]. A tumor made up of mucous tissue. It forms a soft, translucent growth, made up of variously shaped cells of connective tissue and capillary vessels encased in a jelly-like matrix. **cystic m.**, one which contains cavities. **enchondromatous m.**, one containing cartilage in the intercellular substance. **erectile m.**, one which contains an excess of vessels, so as to resemble an angioma. **m. fibrosum**, myxoinoma. **infectious m.**, a disease of rabbits produced by a filtrable virus or a chlamydozoon. **lipomatous m.**, one which contains a deposit of fat within the cells. **m. sarcomatous**, myxosarcoma. **vascular m.**, a myxoma containing many blood vessels.
- myxomatosis** (miks-o-mat-o'sis). 1. A condition marked by the development of multiple myxomas. 2. Myxomatous degeneration.

myxomatous (miks-o'mat-us). Of the nature of a myxoma.

myxomycetes (miks''o-mi-se'tēz), pl. [*μύξα* mucus + *μύκης* fungus]. A group of fungus-like organisms, the slime molds, now recognized as belonging to the animal kingdom.

myxomyoma (miks-o-mi-o'mah). A myoma that has undergone mucous degeneration.

myxoneuroma (miks''o-nu-ro'mah). Myxoma blended with neuroma.

myxoneurosis (miks''o-nu-ro'sis) [*μύξα* mucus + *νευρίσις*]. A neurosis characterized by deranged mucous secretion. **m. intestinalis**, an intestinal neurosis arising from the passage of mucous shreds in the stools.

myxopapilloma (miks''o-pap-il-o'mah). Myxoma combined with papilloma.

myxopod (miks'o-pod) [*μύξα* mucus + *πούς* foot]. An amebula; the youngest stage of a malarial parasite living within the red blood corpuscles. Some become sporocytes, others gametocytes.

myxopoiesis (mik''so-poi-e'sis) [*μύξα* mucus + *ποίησις* to make]. The formation of mucus.

myxorrhoea (miks-o-re'ah) [*μύξα* mucus + *ῥοία* flow]. Blennorrhoea.

myxosarcoma (miks''o-sar-ko'mah). A sarcoma containing mucous elements.

myxosarcomatous (miks''o-sar-ko'mat-us). Relating to or affected with myxosarcoma.

myxospore (miks'o-spōr) [*μύξα* mucus + *σπόρος* seed]. A spore embedded in a jelly-like mass.

Myxosporidia (miks''o-spo-ri'de-ah) [*μύξα* mucus + *sporidia*]. An order of endoparasitic ameboid sporozoa, many species of which infest insects, fishes, and higher animals. Myxosporidian infestation of the human subject is said to occur.

myzesis (mi-ze'sis) [*μύζειν* to suck]. Sucking.

Myzomyia (mi-zo-mi'e-ah). A genus of anopheline mosquitoes, several species of which act as the carriers of malarial parasites. *M. funes'ta*, an African species. *M. superpic'ta*, an old world species, which serves as the intermediate host of *Filaria immitis*. *M. culicifacies*, *M. ros'si*, and *M. turkhu'di* are found in India.

Myzorhynchus (mi-zo-ring'kus). A genus of anopheline mosquitoes, several species of which act as the carriers of malarial parasites. *M. barbiros'tris*, a species which transmits malaria and filariasis in the Orient. *M. pal'udis*, an African species. *M. pseudopic'tus*, a European species. *M. sinen'sis*, a Japanese species.

N

N. 1. Abbreviation for *nasal* and *Norih Pole*. 2. Chemical symbol for *nitrogen*. This symbol is also used as a prefix to denote combination with the nitrogen atom of organic compounds.

n. 1. The symbol for index of refraction. 2. A chemical symbol for *normal*.

N. A. Abbreviation for *numeric aperture*.

Na [L. *na'trium* sodium]. Symbol for *sodium*.

N. A. B. Abbreviation for *novarsenobillon*.

Nabalus al'bus (nah'al-us). A composite-flowered plant; also its homeopathic preparation which is used as a bitter tonic.

Na₂B₂O₇ + 10H₂O. Borax.

nabothian (na-bo'the-an). Described by or named in honor of Martin *Naboth*, a Saxon anatomist, 1675-1721. See under *cyst* and *follicle*.

NaBr. Sodium bromide.

NaCl. Sodium chloride.

NaClO. Sodium hypochlorite.

NaClO₃. Sodium chlorate.

Na₂CO₃. Sodium carbonate.

Na₂C₂O₄. Sodium oxalate.

nacreous (nak're-us). Having a grayish-white, translucent color, with a pearlike luster: said of bacterial colonies.

N. A. D. Abbreviation for *no appreciable disease*.

nadisan (nad'is-an). A solution of potassium bismuth tartrate in oil: used in syphilis.

Naegeli's maneuver (na'ga-lēz) [Otto *Naegeli*, Swiss physician, born 1871]. See *maneuver*.

naehrsalz (nayr'sahlz) [Ger. "nutrient salt"]. A proprietary mixture of sodium phosphate and ammonium phosphate: used as a blood nutrient and purifier.

naevoid, **naevus**, etc. (ne'void, ne'vus). See *nevus*, *nevus*, etc.

naftalan (naf'tal-an). A rectified petrolatum from Russian petroleum, containing about 3 per cent of a hard soap. It is antiseptic, and is used as a vehicle in external medication.

Naga sore [*Naga*, a region in British India]. See under *sore*.

nagana (na-gah'nah). A disease of horses and

cattle of Central Africa, due to the presence of the parasite, *Trypanosoma bru'cei*. The parasite is conveyed to the animals by the bite of the tsetse fly, *Glossi'na mor'sitans*, and other species of *Glossina*. Called also *tsetse disease*.

Nagel's test (nah'gelz) [Wilhelm *Nagel*, German physiologist, born 1870]. See under *tests*.

Nägele's obliquity, pelvis, etc. (na'ge-lēz) [Franz Karl *Nägele*, German obstetrician, 1777-1851]. See *obliquity*, *pelvis*, etc.

Nageotte cell (nazh-yot'). See under *cell*.

nagphani (nahg-fan'e) [East Indian]. The East Indian name of a cactus, *Opun'ia dille'nii*: the juice is purgative.

NaHCO₃. Sodium bicarbonate.

NaH₂PO₄. Monosodium acid phosphate (sodium biphosphate U. S. P.).

Na₂HPO₄. Disodium acid phosphate (sodium phosphate U. S. P.).

nail (nāl). The horny dorsal plate on the distal phalanx of a finger or toe. The nail is made up of flattened epithelial scales developed from the stratum lucidum of the skin. **n. bed**, the surface covered by a nail. **n. bound**, the condition in which the nail of a horse's shoe is driven too near the sensitive structures: marked by lameness. Called also *bind* or *tight nailing*. **n. culture**. See *culture*. **egg-shell n.**, a nail which has become thin and curved upward at its anterior edge. **n. fold**, the fold of tissue around the base of the nail. **fracture n.**, a steel nail used to fasten together the fragments of a broken bone. **hang n.**, an agnail; a shred of epidermis at one side of a nail. **hippocratic n.** See *hippocratic finger*, under *finger*. **ingrowing n.**, the overlapping of a nail by the flesh. **n. matrix**, the nail bed. **parrot beak n.**, a curvature of the finger-nail like that of a parrot's beak. **reedy n.**, a nail marked by longitudinal furrows.

Nail (Hill).

- spoon n.**, depression of the central portion of the nail, with raising of the edges at the sides.
- n. tread**, injury of the sole of a horse's hoof from treading on a nail.
- turtle back n.**, a nail greatly distorted.
- n. wall**, the skin that covers the lateral and proximal edges of the nail.
- naja** (nah'jah) [Arabic]. The cobra di capello, *Na'ja tripu'dians*, a venomous snake of India; also a homeopathic preparation of its venom.
- nalicin** (nal'is-in). A proprietary local anesthetic for dental work.
- nambi-uvu** (nam'be-u'vu). A disease of dogs in Brazil marked by icterus and bleeding from the ear and caused by a blood parasite, *Rangelia Vitalii*; called also *bleeding ear* and *blood plague*.
- nandhiroba** (nand-he-ro'ah). A seed from a tree of South America, having emetic, purgative, and febrifuge properties.
- nanism** (na'nizm) [L. *na'nus* dwarf]. Dwarfishness; marked undersize. **Paltau's n.**, nanism associated with lymphatism. **symptomatic n.**, nanism with defective ossification, dentition, and sexual development.
- nanoccephalia, nanoccephaly** (nan-o-sef-a'le-ah, na-no-sef-al-e). Abnormal smallness of the head.
- nanoccephalous** (na-no-sef-al-us) [*ῥᾶνος* dwarf + *κεφαλή* head]. Having a small head.
- nanocormia** (na-no-kor'me-ah) [*ῥᾶνος* dwarf + *κορμός* trunk]. Dwarfishness of the body or trunk.
- nanoid** (na'noid) [*ῥᾶνος* dwarf + *εἶδος* form]. Dwarfish; resembling a dwarf.
- nanomelia** (na-no-me'le-ha). Teratism or monstrosity characterized by undersized limbs.
- nanomelous** (na-nom'el-us). Having undersized legs and arms.
- nanomelus** (na-nom'el-us) [*ῥᾶνος* dwarf + *μέλος* limb]. A monster fetus with undersized limbs.
- nanosoma, nanosomia** (na-no-so'mah, na-no-so'me-ah) [*ῥᾶνος* dwarf + *σῶμα* body]. A dwarfish habit of body; nanism.
- nanosomus** (na-no-so'mus) [*ῥᾶνος* dwarf + *σῶμα* body]. A person of dwarfish stature and size; a dwarf.
- nanous** (na'nus). Dwarfish; stunted.
- nanukayami** (nah-nu-kah-yah'me). Seven-day fever; a fever with symptoms resembling those of Weil's disease, occurring in Japan, caused by *Spirochaeta hebdomadis*, the host of which is probably the field mouse. *Microtus montebelli*.
- nanus** (na'nus) [L.; *ῥᾶνος*]. 1. A dwarf. 2. Dwarfed or dwarfish; stunted.
- NaOH**. Sodium hydroxide.
- nape** (nāp). The back or scruff of the neck.
- napeline** (na-pel'in) [L. *napel'us* aconite]. An analgesic alkaloid, $C_{26}H_{36}NO_7(OH)_4$, from aconite. Dose, $\frac{1}{2}$ – $\frac{1}{2}$ grain (0.033–0.048 Gm.).
- napha** (na'fah) [L.]. Orange-flowers; flores aurantii.
- naphthalin** [naf'tah-lin]. Same as *naphthalene*.
- naphthalinum, naphthalinum** (naf'tah-li'num, naf-tha-li'num). Latin for *naphthalene*.
- naphtha** (naf'thah) [L. from Arabic]. A colorless, inflammable oil distilled from petroleum. **n. acet'i**, ethyl acetate. **n. salicin**, a proprietary disinfectant solution of salicylic acid, borax, and naphthol. **n. vitri'oli**, ethyl ether. **wood n.**, methyl alcohol.
- naphthalan** (naf'thal-an). A black, unctuous substance obtained by the distillation of Armenian naphtha. It is used as an antiplogistic and parasiticide in burns, skin diseases, etc.
- naphthalene, naphthalin** (naf'thal-ēn, naf'thal-in) [L. *naphthali'num*]. A silvery, crystalline hydrocarbon, $C_{10}H_8$, from coal tar oil. It is insoluble in cold water, but soluble in hot water, alcohol, ether, chloroform, and benzene. It is used as an antiseptic in diarrhea of typhoid fever, and locally in pruritus, scabies, etc. Dose, 2–10 grains (0.133–0.66 Gm.).
- naphthalol** (naf'thal-ol). Same as *betol*.
- naphthamine** (naf'tham-in). Methenamine.
- naphthionic acid** (naf-the-on'ik). See under *acid*.
- naphthocresol** (naf-tho-kre'sol). A brown antiseptic fluid.
- naphthoform** (naf'tho-form). A compound of beta-naphthol and formaldehyde; used as an antiseptic in skin diseases.
- naphthoformin** (naf-tho-for'min). An antiseptic powder, being a compound of alpha-naphthol and beta-naphthol with formaldehyde and ammonia.
- naphthol** (naf'thol). A crystalline, antiseptic substance, $C_{10}H_7OH$, from coal tar, occurring in two forms: alpha-naphthol and beta-naphthol. **alpha-n.** is a white or pinkish, crystalline compound, soluble in alcohol, ether, and hot water; slightly soluble in cold water. It is an antiseptic and antifermentative, and is used mainly in the arts. **n. aristol**, beta-naphthol diiodide, $C_{10}H_6I_2O_2$; a yellow-green powder, used as an antiseptic wound dressing. **beta-n.** occurs in the form of colorless or pale-buff crystals, having the odor of carbolic acid. It is soluble in alcohol, ether, chloroform, oils, etc., and in 75 parts of boiling water and in 1000 parts of cold water. It is an antiseptic and parasiticide; used as an intestinal antiseptic in typhoid fever and in a 1 per cent solution or 10 per cent ointment in eczema, psoriasis, and other skin diseases. Dose, 3–7½ grains (0.2–0.5 Gm.). **beta-n. benzoate**. Same as *benzonaphthol*. **beta-n. bismuth**. See *betanaphthol bismuth*. **n.-camphor**, 1 part of beta-naphthol fused with 2 parts of camphor: an antiseptic for use in tuberculosis and in furunculosis.
- naphtholate** (naf'tho-lāt). A naphthol compound in which a base takes the place of hydrogen in the hydroxyl.
- naphthol-carboxylic acid**. See under *acid*.
- naphtholism** (naf'thol-izm). The toxic condition brought on by the excessive or continued use of naphthol.
- naphtholum, naphtholum** (naf-tho'lum, naf-to'lum). Latin for *naphthol*.
- naphthopyrine** (naf'tho-pi'rin). A derivative of beta-naphthol: it is antiseptic.
- naphthoquinone** (naf'tho-kwin'ōn). A derivative of quinone, $C_{10}H_6O_2$, having cathartic properties.
- naphthoresorcine** (naf'tho-re-sor'in). A principle in transparent crystals derived from naphthol and resorcinol.
- naphthosalicin** (naf-tho-sal'is-in). A disinfectant compound of naphthol and salicylic acid.
- naphthosalol** (naf-tho-sal'ol). Same as *betol*.
- naphthoxol** (naf-thok'sol). A solution of naphthol in oxygenated water: antiseptic and deodorant.
- naphthyl** (naf'thil). The radical, $C_{10}H_7$. **n. alcohol**, naphthol. **n. benzoate**, benzonaphthol. **n. lactate**, lactol. **n. phenol**, naphthol. **n. salicylate**, betol.
- naphthylpararosaniline** (naf'thil-par-ah-ro-san'il-in). A dye, isamine blue, which has been used experimentally in the treatment of malignant tumors.
- naphthol** (naf'tol). Same as *naphthol*.
- naphtoxol** (naf-tok'sol). A proprietary solution of naphthol in alcohol and hydrogen dioxide.
- napiform** (na'pif-orm) [L. *na'pus* turnip + *for'ma* shape]. Having the shape or form of a turnip.
- naprapath** (nap'rap-ath). A person who practises naprapathy.
- naprapathy** (nap-rap'ath-e) [Bohemian *napraviti* to correct + *πάθος* disease]. A system of therapy which attributes all disease to disorder in the ligaments and connective tissue.
- narceine** (nar'se-in) [*νάρκη* stupor]. 1. A bitter, crystalline, hypnotic alkaloid, $C_{23}H_{29}NO_9$, from opium: slightly soluble in water and alcohol. It is used as a hypnotic like morphine, and is said not

to cause constipation. Dose, $\frac{1}{10}$ – $\frac{1}{2}$ grain (0.008–0.033 Gm.). 2. An acid azo dye, $C_{10}H_6(OH).N(SO_2ONa).NH.C_6H_4SO_2ONa$. **n. hydrochlorate**, a salt in white needles, $C_{22}H_{22}NO_3.HCl$: soluble in boiling water, slightly so in cold. It is hypnotic, sedative, anodyne, etc. Dose, $\frac{1}{4}$ –3 grains (0.01–0.2 Gm.). **n. meconate**, a salt in pale yellow crystals. Hypodermic dose, $\frac{1}{10}$ – $\frac{1}{2}$ grain (0.006–0.04 Gm.).

narcisistic (nar-sis-is'tik). Marked by narcism.

narcism (nar'sizm). Same as *narcissism*.

narcissine (nar-sis'in). A crystalline alkaloid, $C_{16}H_{17}NO_4$, from the bulb of *Narcissus pseudonarcissus* and many other plants of the order Amaryllidaceae.

narcissism (nar-sis'izm) [from *Narcissus*, a character in Greek mythology who fell in love with his own image reflected in water]. Sexual excitement through admiration of one's own body; sexual attraction toward oneself.

narco-anesthesia (nar'ko-an-es-the'ze-ah) [*νάρκη* stupor + *anesthesia*]. Anesthesia by the production of a stupor condition by the hypodermic injection of scopolamine and morphine.

narcofine (nar'ko-fin). A proprietary double salt of morphine and narcotine: used like morphine.

narcoleptia (nar-ko-hip'ne-ah) [*νάρκη* stupor + *ύπνός* sleep]. Numbness felt on waking from sleep.

narcolepsy (nar'ko-lep-se) [*νάρκη* stupor + *λαμβάνειν* to seize]. A condition marked by an uncontrollable desire for sleep occurring at intervals. Called also *paroxysmal sleep* and *sleep epilepsy*.

narcology (nar-kol'is-is) [*νάρκη* stupor + *λόγος* loosening]. Psychoanalysis under light anesthesia.

narcomania (nar-ko-ma'ne-ah) [*νάρκη* stupor + *μανία* madness]. 1. An insane desire for narcotics. 2. Alcoholic insanity.

narcomaniac (nar-ko-ma'ne-ak). One who is affected with narcomania.

narcophine (nar'ko-fin). Narcotine.

narcosan (nar'ko-san). A proprietary preparation of plant extracts put forward as a cure for narcotic addiction.

narcosis (nar-ko'sis) [*νάρκωσις*]. A state of profound unconsciousness produced by a drug. **insufflation n.** See *insufflation anesthesia*, under *anesthesia*. **medullary n.**, spinal cocaineization. **Nussbaum's n.**, general narcosis by the use of ether or chloroform after an injection of morphine.

narcosomania (nar-ko-so-ma'ne-ah). An insane or pathologic craving for narcosis.

narcostimulant (nar-ko-stim'u-lant). Having both narcotic and stimulant properties.

narcotic (nar-kot'ik) [L. *narcot'icus*]. 1. Producing sleep or stupor. 2. Any drug that produces sleep or stupor and at the same time relieves pain.

narcoticism (nar-kot'is-izm). Same as *narcotism*.

narcotico-acrid (nar-kot'ik-o-ak'rid). Both acrid and narcotic.

narcotico-irritant (nar-kot'ik-o-ir'it-ant). Both narcotic and irritant.

narcotile (nar'ko-til). Methylene bichloride, a colorless, transparent, and inflammable liquid: used as a general anesthetic.

narcotine (nar'ko-tin). A crystalline alkaloid, $C_{22}H_{23}NO_7$, from opium. It is used as an antipruritic and tonic, and has no narcotic effects. Dose, 1–3 grains (0.066–0.2 Gm.); hypnotic dose, $\frac{3}{4}$ –15 grains (0.25–1 Gm.).

narcotism (nar'kot-izm). A condition of stupor or sleep produced by a drug.

narcotize (nar'kot-iz). To put under the influence of a narcotic.

narcyl (nar'sil). Ethylnarceine hydrochloride: used as a general analgesic. Dose, 1 grain (0.066 Gm.).

narcylen (nar'sil-en). A mixture of purified acetylene, oxygen, and oil of pine: used as a general anesthetic.

nard (nard). See *spikenard*. **n. Celtic**, *Valeriana cel'tica* and *V. salu'm'ca*, Alpine plants of Europe: valued locally as a medicine and perfume.

Nardostachys (nar-dos'tak-is). See *spikenard*.

Naregamia (nah-re-ga'me-ah) [L.]. 1. A genus of meliaceous plants. 2. The root of *N. ala'la*, of the East Indies: emetic and used like ipecac. Dose of tincture, 15–30 minims (1–2 cc.).

naregamine (nah-rej'am-in). An amorphous alkaloid from naregamia: used like emetine; expectorant and emetic.

nares (na'rēz). See *naris*.

nargol (nar'gol). A therapeutical preparation of silver and nucleic acid, containing 10 per cent of metallic silver. It is employed in 0.25–1 per cent solution in gonorrhea; in 5 per cent solution in conjunctivitis, and as a 10 per cent ointment for burns, ulcers, etc.

naringin (nar-in'jin). A crystalline glucoside, $C_{21}H_{35}O_{11}+4H_2O$, from the flowers of the shaddock, *Cit'rus decur'ma*.

naris (na'rīs), pl. *na'res* [L.]. A nostril, especially the anterior naris [B N A]. **anterior n.**, a nostril proper. **posterior n.**, either one of the posterior openings of the nasal fossae.

narkine (nar'kin). A proprietary opium preparation.

narphoquine (nar'fo-kwin). A proprietary narcotine-morphine lactate with quinine and urea hydrochloride: used as an analgesic. Called also *amnesin*.

narry (nar'e). A stomach disease of the Mongols, due to excessive use of alcoholic drinks.

narzylen (nar'zil-en). A proprietary analgesic and anesthetic: used in obstetrical practice.

nasal (na'zal) [L. *nasa'tis*]. Pertaining to the nose.

nascent (nas'ent) [L. *nas'cens*]. 1. Just born; just coming into existence. 2. Just liberated from a chemical combination.

nasio-iniac (na'ze-o-in'e-ak). Pertaining to the nasion and theinion.

nasion (na'ze-on) [L. *na'sus* nose]. The middle point of the frontonasal suture.

nasitis (naz-i'tis) [L. *na'sus* nose]. Inflammation of the nose.

Nasmyth's membrane (nas'miths) [Alexander Nasmyth, Scotch dental surgeon in London, died 1847]. See *membrane*.

Na₂S₂O₃. Sodium thiosulphate.

Na₂SO₄. Disodic sulphate.

naso-antral (na-zo-an'tral). Pertaining to the nose and the maxillary antrum.

naso-antritis (na'zo-an-tri'tis). Inflammation of the nose and antrum of Highmore.

nasobronchial (na-zo-brong'ke-al). Pertaining to the nasal cavities and the bronchi.

nasociliary (na-zo-sil'e-a-re). Affecting the eyes, brow, and root of the nose.

nasofrontal (na-zo-fron'tal). Pertaining to the nasal and frontal bones.

nasolabial (na-zo-la'be-al) [L. *na'sus* nose + *la'bium* lip]. Pertaining to the nose and lip.

nasolabialis (na'zo-la-be-a'lis) [L.]. See *muscles*, table of.

nasolacrimal (na-zo-lak'rim-al). Pertaining to the nose and lacrimal apparatus.

nasomanometer (na'zo-man-om'et-er). A manometer for measuring the degree of permeability of the nostril.

nasonnement (na-zaw-maw') [Fr.]. A nasal quality of voice.

nasopalatine (na-zo-pal'at-in) [L. *na'sus* nose + *palatum* palate]. Pertaining to the nose and palate.

nasopharyngeal (na'zo-far-in'je-al). Pertaining to the nasopharynx.

nasopharyngitis (na'zo-far-in-ji'tis). Inflammation of the nasopharynx.

nasopharynx (na-zo-far'inks) [L. *na'sus* nose + *pharynx*]. The part of the pharynx above the soft palate. See *pharynx*.

nasorostral (na-zo-ro'stral). Pertaining to the rostrum of the nose.

nasoscope (na'zo-sköp) [L. *na'sus* nose + *σκοπεῖν* to examine]. An electrically lighted instrument for inspecting the nasal cavity.

nasoseptal (na-zo-sep'tal). Pertaining to the nasal septum.

nasoseptitis (na'zo-sep-ti'tis). Inflammation of the nasal septum.

nasosinuitis, nasosinusitis (na'zo-si-nu-i'tis, na'zo-si-nu-si'tis). Inflammation of the accessory sinuses of the nose.

nasoturbinial (na-zo-ter'bin-al). Pertaining to the nose and turbinate bone.

nasrol (naz'rol). Same as *sympthorol*.

nastin (nas'tin) [*ψαρός* solid]. A fatty substance from cultures of the streptothrix of leprosy; said to produce active immunity against leprosy. Cf. *tuberculonastin*.

nasus (na'sus) [L.]. The nose. **n. exter'nus**, the external nose.

natal (na'tal). 1. [L. *na'tus* birth]. Pertaining to birth. 2. [L. *na'tes* buttocks]. Pertaining to the buttocks.

Natal boil, sore (na'tal). See *furunculus orientalis*.

natality (na-tal'it-e) [L. *nata'lis* pertaining to birth]. The birth rate in any community.

nataloin (na-tal'o-in). An aloin, $C_{25}H_{28}O_{11}$, derived from *Natal aloes*.

nates (na'tēz) [L.]. The buttocks; also the two—superior and anterior—prominences of the corpora quadrigemina.

natimortality (na'tim-or-tal'it-e) [L. *na'tus* birth + *mortality*]. The proportion of stillbirths to the general birth rate; called also *stillbirth rate*.

National Formulary. See under *formulary*.

natri (nah'tre). The leaves and shoots of *Sola'nium cris'pum*, *S. guga'nium*, and *S. tomati'lo*, a popular remedy in Chile for measles and scarlatina.

natrimum (na'tre-um). Latin for *sodium*.

natron (na'tron). Native sodium carbonate; also soda or sodium hydroxide.

natrum (na'trum). The homeopathic name for *sodium*.

natuary (na'tu-a-re) [L. *na'tus* birth]. A ward for women during childbirth.

natural (na'tu-ral) [L. *natura'lis*, from *natu'ra* nature]. Neither artificial nor pathologic.

naucleine (naw'kle-in). An alkaloid, $C_{21}H_{28}N_2O_4$, from *Nau'clea excel'sa*, a Japanese plant: used as a remedy for the opium habit.

Nauheim treatment (naw'hīm). See under *treatment*.

naupathia (naw-pa'the-ah, naw-pa-the'ah) [*ναῦς* ship + *πάθος* suffering]. Seasickness.

nausea (naw'se-ah) [L.; *ναύα* seasickness]. Tendency to vomit; sickness at the stomach. **creatic n.**, abnormal aversion to flesh as food. **n. gravidarum**, the morning sickness of pregnancy.

n. mari'na, seasickness. **n. nava'lis**, seasickness.

nauseant (naw'se-ant). 1. Inducing nausea. 2. An agent which causes nausea.

nauseate (naw'se-āt). To affect with nausea.

nauseous (naw'se-us). Producing nausea or disgust.

navel (na'vel). The umbilicus. **n. ill.** See *omphalophlebitis* (2). **n. string**, the umbilical cord.

navicula (na-vik'u-lah) [L.]. Fossa navicularis.

navicular (na-vik'u-lar) [L. *navic'ula* boat]. 1. Boat shaped. 2. The scaphoid bone of the carpus or of the tarsus.

navicularthrititis (na-vik'u-lar-thri'tis). Inflammation of the navicular joint of the horse's fore-foot.

Nb. Symbol of *niobium*.

N. C. A. Abbreviation for *neurocirculatory asthenia*. See *asthenia*.

N. C. I. mixture or powder. See under *powder*.

Nd. Symbol of *neodymium*.

N. D. A. Abbreviation for *National Dental Association*.

Ne. Symbol of *neon*.

nealogy (ne-al'o-je) [*νεάλης* young + *λόγος* treatise]. The study of the early infant stages of animals.

Neapolitan fever. Undulant fever. See under *fever*.

near-point (nēr'point). See under *point*.

near-sight (nēr'sit). Same as *myopia*.

near-sighted (nēr-sit'ed). Same as *myopic*.

nearthrosis (ne-ar-thro'sis) [*νέος* new + *άρθρον* joint]. A false joint; pseudarthrosis.

nebenagglutinin (na'ben-ag-lu'tin-in) [Ger.]. A nonspecific and collateral agglutinin.

nebenkern (na'ben-kern) [Ger. "near nucleus"]. 1. A name given to several structures of the cell, but especially to the paranucleus. 2. The body which forms the envelop of the axial filament in the flagellum of the spermatozoon.

Nebinger-Fraun operation (neb-in-ger-prown). See under *operation*.

nebula (neb'u-lah) [L. "mist"]. 1. A slight corneal opacity. 2. Cloudiness in urine. 3. An oily preparation for use in an atomizer.

nebulium (ne-bu'le-um) [L. *neb'ula* mist]. A hypothetical chemical element which exists in the nebulæ of astronomical space.

nebulization (neb'u-li-za'shun) [L. *neb'ula* mist]. 1. Conversion into a spray. 2. Treatment by a spray.

nebulizer (neb'u-li-zer). An atomizer; a device for throwing a spray.

Necator americanus (ne-ka'tor am-er-ik-a'nus). The American hookworm, a nematode parasite, resembling, but shorter and more slender than, *Ankylostoma duodenale*. It is characterized by its buccal cavity containing four plates, four pharyngeal lancets, and a dorsal conic tooth. Infection by this parasite produces the disease ankylostomiasis. Called also *Ankylostoma americanum* and *Uncinaria americana*. See also *ankylostomiasis*.

neck (nek). 1. The part between the head and thorax.

2. The part near the extremity of an organ or bone.

anatomical n., the constriction of the humerus just below the proximal articular surface. **Derbyshire n.** See *goiter*. **limber n.**, a disease of chickens in which they remain quiet, refuse to eat, develop weakness of the neck, wings, and legs, and die in a day or two. It is probably a form of botulism.

Madelung's n., a neck affected with diffuse lipoma. **Nithsdale n.**, goiter. **surgical n.**, the constricted part of the humerus below the tuberosities. **n. of a tooth**, the narrowed part of a tooth between the crown and the root. **n. of the womb**, the cervix uteri.

necrectomy (ne-krek'to-me) [*νεκρός* dead + *ἐκτομή* excision]. The cutting away of necrosed material.

necremia, necraemia (nek-re'me-ah) [*νεκρός* dead + *αἷμα* blood]. Loss of vitality of the blood.

necrencephalus (nek-ren-sef'al-us) [*νεκρός* dead + *ἐνέφαλος* brain]. Softening of the brain.

necrobacillosis (nek''ro-bas-il-o'sis). Any disease of animals caused by *Bacillus necrophorus*.

necrobiosis (nek''ro-bi-o'sis) [νεκρός dead body + βίωσις life]. Progressive degeneration and death of a tissue.

necrobiotic (nek''ro-bi-ot'ik). Necrotic.

necrocytosis (nek''ro-si-to'sis) [νεκρός dead + κύτος cell]. Death and decay of cells.

necrocytotoxin (nek''ro-si-to-toks'in). A toxin that produces death of cells.

neurogenic (nek-ro-jen'ik) [νεκρός corpse + γεννάω to produce]. Having origin in dead matter.

necrogenous (nek-roj'en-us). Neurogenic.

necrohormone (nek-ro-hôr'môn) [νεκρός dead + hormone]. A substance present in dead cells and tissue extracts which excite cell division or kill living cells.

neurologic (nek-ro-loj'ik). Pertaining to necrology.

neurologist (ne-krol'o-jist). An expert in necrology.

necrology (ne-krol'o-je) [νεκρός dead body + λόγος discourse]. The statistics or records of deaths.

neomania (nek-ro-ma'ne-ah) [νεκρός dead + μανία madness]. A morbid or insane pleasure in death or dead persons.

necrometer (nek-krom'et-er) [νεκρός corpse + μέτρον measure]. An instrument for measuring the organs of the dead body.

necronectomy (nek-ro-nek'to-me) [νεκρός dead + ἐκτομή excision]. The excision of necrotic ossicles or of any other necrotic part.

necroparasite (nek-ro-par'as-it) [νεκρός dead + παράσιτον parasite]. An organism which flourishes in dead rather than in living tissue; a saprophyte.

necrophagous (nek-rof'ag-us) [νεκρός dead + φαγείν to eat]. Devouring or subsisting on dead bodies.

necrophilism (nek-rof'il-izm) [νεκρός dead body + φιλέω to love]. Insane love for dead bodies; intense intercourse with a dead body; in some cases it becomes a form of sexual perversion.

necrophilous (nek-rof'il-us). Living on dead tissues.

necrophily (nek-rof'il-e). Necrophilism.

necrophobia (nek-ro-fô-be-ah) [νεκρός dead + φόβος fear]. 1. Insane or morbid fear of death. 2. Morbid dread of dead bodies.

necropneumonia (nek''ro-nu-mo'ne-ah) [νεκρός dead + πνεύμων lung]. Gangrene of the lung.

necropsy (nek'rop-se) [νεκρός dead + ὄψις view]. A postmortem examination; autopsy.

necropyoculture (nek-ro-pi'o-kul-tshur) [νεκρός dead + πύον pus + culture]. A pyoculture in which the leukocytes of the pus have been killed.

necrosadism (nek-ro-sa'dism) [νεκρός dead + sadism]. Mutilation of a corpse for the purpose of exciting or gratifying sexual feelings.

necroscopy (ne-kros'ko-pe) [νεκρός corpse + σκοπέω to view]. A postmortem examination.

necrose (nek'rôs). To be necrotic or become affected with necrosis.

necrosis (ne-kro'sis) [νεκρωσις deadness]. Death of a circumscribed portion of tissue. **Balser's fatty n.**, gangrenous pancreatitis with omental bursitis and disseminated patches of necrosis of the fatty tissues. **caseous n.**, cheesy necrosis. **central n.**, that which affects the central portion of a cell or of a bone. **cheesy n.**, tuberculous necrosis, as of the lung, with the formation of a cheesy deposit. **coagulation n.**, necrosis of a portion of some organ or tissue, with the formation of fibrous infarcts, in which a relatively small part seems to have been deprived of the afflux of blood by the plugging of its vessels with coagula. **colliquative n.**, **liquefactive n.**, necrosis in an organ marked by the collection of a fluid exudate. **dental n.**, nonmolecular decay

of a tooth. **dry n.**, that in which the dead bone becomes dry. **embolic n.**, coagulation necrosis of an anemic infarct following embolism. **fat n.**, necrosis of the fatty tissue in small white areas. **focal n.**, the presence of small foci of necrosis often seen in the course of an infection. **icteric n.**, necrosis of the liver in icterus. **liquefaction n.**, colliquative necrosis. **mercurial n.**, a form due to mercurial poisoning. **moist n.**, that in which the dead bone becomes wet and soft. **mummification n.**, dry gangrene. **phosphorus n.**, necrosis of the upper jaw bone due to exposure to the fumes of phosphorus. **n. progrediens**, progressive sloughing. **progressive emphysematous n.**, gas phlegmon. See *phlegmon*. **radium n.**, necrosis of the jaw bone occurring in workers in radium plants. **simple n.**, degeneration of the protoplasm and nucleus of the cells of a tissue without change in the appearance of the tissue. **superficial n.**, that which affects the outer layers only of a bone. **syphilitic n.**, necrosis of a bone caused by syphilis. **total n.**, that which affects all parts of a bone. **n. ustilagin'ea**, dry gangrene from ergot poisoning. **Zenker's n.**, Zenker's degeneration.

necrospermia (ne-kro-sper'me-ah). The presence of a urethral discharge in which the spermatozoa are nonmotile.

necrotic (ne-krot'ik). Pertaining to or affected with necrosis.

necrotomy (ne-krot'o-me) [νεκρός corpse + τέμνειν to cut]. The dissection of a dead body; also the excision of a sequestrum. **osteoplastic n.**, removal of a sequestrum from a bone after first lifting a flap of the bone, which is replaced after the operation.

Nectandra (nek-tan'drah) [νεκταρ nectar + ἀνθή man, anther]. See *bebeeru*.

nectrianin (nek-tri'an-in). An extractive from the fungus of tree cancer, *Nectria ditis'sima*. It is injected for cancer.

needle (né'dl) [L. *acus*]. A sharp instrument for sewing or puncturing. **aneurysm n.**, a needle with a handle; used in ligating blood vessels. **artery n.**, **aspirating n.**, a long, hollow needle for removing fluid from a cavity. **Babcock's n.**, a large hypodermic needle, provided with a stilet, for spinal puncture. **cataract n.**, a needle for use in removing a cataract. **Deschamp's n.**, one with the eye near the point; used in ligation of deep-seated arteries. **dipping n.**, a magnetic needle so hung that it can move freely in a vertical plane. **discission n.**, a special form of cataract needle. **Emmet's n.**, a strong, curved needle set in a handle and having an eye in its point. **exploring n.**, a flattened and grooved needle to be thrust into a part where fluid is believed to exist. **Hagedorn's n's**, surgical needles which are flat from side to side, and have a straight cutting edge near the point and a large eye. **harelip n.**, a cannula introduced by a trocar through the lips of the wound in harelip operation, a figure-of-8 suture being applied over the cannula. **hypodermic n.**, a form of hollow needle used in injecting medicines beneath the skin. **knife n.**, a slender knife with a needle-like point; used in discission of a cataract. **ligature n.**, a slender steel needle having an eye in its curved end, used for passing a ligature underneath an artery. **Reverdin's n.**, a surgeon's needle having an eye which can be opened and closed by means of a slide. **stop n.**, a needle with a shoulder that prevents it from being plunged in more than a certain distance.

needling (néd'ling). Discission or puncture, chiefly of a cataract, with a needle.

neem batti. A little plague packet which contains leaves of the neem (*Margosa*) tree and pepper. It is allowed to burn in rat holes to kill or drive out the rats.

neencephalon (ne-en-sef'al-on) [*νέος* new + *ἐγκέφαλος* brain]. The new brain; the cerebral cortex and its dependencies.

Neftel's disease (nef-telz') [William Basil *Nefel*, American physician of Russian birth, 1830-1906]. See under *disease*.

negativism (neg'at-iv-izm). A morbid propensity in a patient to do the opposite of what he is directed to do, or to oppose his normal physiologic desires.

negatoscope (neg'at-o-skōp). An apparatus for showing radiographic negatives.

Nègre antigen (na'gr). See under *antigen*.

Negri bodies (na'gre) [Adelchi *Negri*, Italian physician, 1876-1912]. See under *body*.

Negro's phenomenon (na'grōz) [Camillo *Negro*]. See *cogwheel phenomenon*, under *phenomenon*.

Neisser's coccus (ni'serz) [Albert Ludwig Siegmund *Neisser*, German physician, 1855-1916]. *Neisseria gonorrhoeae*.

Neisser's stain (ni'serz) [Max *Neisser*, German bacteriologist, born 1869]. See under *stain*.

neisserbacterin (nis-er-bak'ter-in). See *gonococcus vaccine*, under *vaccine*.

Neisseria (nis-e're-ah) [Albert L. S. *Neisser*, physician in Breslau, 1855-1916, the discoverer of the gonococcus]. A genus of Coccaceae made up of biscuit-shaped hemispheres with the flattened sides adjacent. They are gram-negative, nonmotile and very strictly parasitic. **N. albicans**, a nonmotile species from the vaginal secretion, often in groups; it is much larger than the gonococcus, which it resembles. **N. babe'sii**, a pathogenic species composed of flattened cocci girdled with a yellowish zone; from the blood, red blood corpuscles, and flesh of cattle, with epidemic hemoglobinuria. **N. catarrhalis**, a gram-negative coccus found in the nasopharynx of healthy persons as well as persons suffering from colds and other respiratory affections. At times it excites catarrhal inflammation and pneumonia and has occurred as a secondary invader in influenza. **N. cit'rea**, a nonmotile species from the pus of gonorrhea and from the dust of air; forming coherent masses of tetrads; it produces a lemon-hued pigment. **N. edinto'ni**, a nonpathogenic and nonmotile species found in the blood and desquamated epidermis of scarlatina. The cocci are hyaline. **N. fla'va liquefa'ciens tar'da**, a nonmotile and nonpathogenic form from the skin in seborrhea; it produces a sulphur-yellow or yellowish-green pigment. **N. franklandi'rum**, a nonmotile species from soil. **N. gonorrhoe'ae**, the specific cause of gonorrhea. It is found particularly inside the pus cells from the genital tract and the eye. They are gram-negative biscuit-shaped organisms with the flattened sides adjacent. Called also *Micrococcus gonorrhoeae*, *gonococcus*, *Diplococcus of Neisser*, *Diplococcus gonorrhoeae*. **N. intracellula'ris**. Same as *N. meningitidis*. **N. lac'tea**, a nonpathogenic species from sputum and from vaginal secretions. **N. lys'sae**, a hyaline species from the brain and spinal cord in rabies. **N. meningit'idis**, the micro-organism which causes epidemic cerebrospinal meningitis. It is also known as *meningococcus*, *Diplococcus intracellularis-meningitidis*, *Micrococcus meningitidis*, *Micrococcus weichselbaumii*, and *Streptococcus meningitidis*. **N. miche'lli**, a species somewhat like the gonococcus, derived from the follicles of trachoma. **N. petechia'lis**, a species from the blood and petechiae of typhus fever. **N. pharyn'gis sic'ci**, a species found in the mucous membrane of the respiratory tract. **N. rebel'lis**, a species from the follicles of trachoma. **N. rosa'cea**, a nonpathogenic species from the air. **N. ro'sea**, a nonpathogenic and nonmotile species from the air, producing a rose-red pigment. **N. subfla'va**, a nonmotile species from the healthy urethra and from vaginal secretions and lochia. Subcutaneously injected it causes large abscesses. **N.**

tardis'sima, a nearly nonmotile species from urethral pus. **N. weichselbaum'ii**. Same as *Neisseria meningitidis*. **N. winck'lori**, a species in hyaline diplococci from beriberi.

Neisser-Doering phenomenon (ni'ser-de'ring) [Ernst *Neisser*, German physician, born 1863; Hans *Doering*, German physician, born 1871]. See under *phenomenon*.

Neisser-Wechsberg phenomenon (ni'ser-veks'-berg) [Max *Neisser*, German bacteriologist, born 1869; Friedrich *Wechsberg*, German physician]. See *deviation of the complement*.

neisserosis (nis-er-o'sis). Gonorrhea.

neko (ne'ko). A proprietary antiseptic derived from coal tar.

nekro-. For words beginning thus see those beginning *necro-*.

Nélaton's catheter, line, probe, etc. (na-lah-tawz') [Auguste *Nélaton*, French surgeon, 1807-1873]. See *catheter, line, probe*, etc.

nelavan (nel'ah-van). The African lethargy, or sleeping disease. See *Congo trypanosomiasis*, under *trypanosomiasis*.

neologism (ne'lo-jism). Neologism.

nem (nem) [term coined from initial letters of Nahrungs Einheit Milch (nutritional unit milk)]. The unit of nutrition in Pirquet's system of feeding, equivalent to the nutritive value of 1 Gm. of breast milk. The term has not been extensively adopted.

N. E. M. A. Abbreviation for *National Electric Medical Association*.

nematelminth, nemathelminth (nemat-el'minth, nem-ath-el'minth) *νήμα* thread + *ἔλμυς* worm]. A nematode worm.

Nematelminthes, Nemathelminthes (nem-at-el-min'thēz). The phylum of round worms. It includes Acanthocephala, Gordiacea, and Nematoda.

nematelminthiasis, nemathelminthiasis (nem-at-el-min-thi'as-is). Infestation by nematodes or round worms.

nematoblast (nem'at-o-blast) *νήμα* thread + *βλαστός* germ]. Same as *spermatid*.

Nematocera (nem-at-os'er-ah) *νήμα* thread + *κέρας* horn]. A suborder of *Diptera* characterized by having long antennae and comprising the gnats, mosquitoes, midges, craneflies, gallflies, etc.

nematocide (nem'at-o-sid) [nematoid + *L. cae'dere* to kill]. 1. Destructive to nematoid worms. 2. An agent which destroys nematodes.

Nematoda, Nematodes (nem-at-o'dah, -o'des) *νήμα* thread + *εἶδος* form]. An order of the Nematelminthes. It includes the following very important families parasitic in man: Angiostomidae, Anguillulidae, Ascaridae, Filariidae, Gnathostomidae, Mermithidae, Strongylidae, and Trichinelidae.

nematode, nematoid (nem'at-ōd, nem'at-oid). 1. Like a thread. 2. Any endoparasite or species belonging to the *Nematoda*.

nematodiasis (nem'at-o-di'as-is). Infestation by a nematode parasite.

Nematodirus (nem-at-o'di-rus). A genus of nematode parasites found in the duodenum of ruminants.

nematospermia (nem'at-o-sper'me-ah) *νήμα* thread + *σπέρμα* sperm]. Spermatozoa having elongated tails.

Nencki's test (nents-kēz) [Marcellus von *Nencki*, Polish physician, 1847-1901]. See under *tests*.

neo- [*νέος* new]. A prefix signifying *new*.

neo-antilueticin (ne'o-an-te-lu'et-in). Antimony hydrargyrate, a combination of luetin with neutral sulphonic acid, sodium salicylate, and mercury.

neocarphenamine (ne'o-o-ars-en'am-in). Sodium diaminodihydroxyarsenobenzenemethanalsulphoxylate, $\text{NH}_2(\text{OH}).\text{C}_6\text{H}_3\text{As}:\text{As}.\text{C}_6\text{H}_3(\text{OH}).\text{NH}(\text{CH}_2\text{O}).\text{OSNa}$; it is used like arspenamine, from which it differs in being neutral in reaction, less toxic,

and more soluble. Called also *neosalvarsan*, "914," *neodiarsenol* (Canada), *neokharsivan* (England), *neovarsenobenzol* (France), and *nearsaminol* (Japan).

neo-arsycodil (ne'-o-ar-sik-o'-dil). See *arrhenal*.

neo-arthritis (ne'-o-ar-thr'i-sis). Same as *nearthrosis*.

neoblastic (ne-o-blas'tik) [*néos* new + *βλαστός* germ]. Originating in, or of the nature of, new tissue.

neoby (ne'-o-be). A proprietary preparation of iodobismuthate of vanadium in oil: for syphilis.

neocaine (ne'-o-kān). A French brand of procaine hydrobromide.

neocerebellum (ne'-o-ser-e-bel'um). The more recently developed part of the cerebellum, comprising the lateral lobes. Cf. *paleocerebellum*.

neochinamyl (ne-o-kin'am-il). A combination of chinidine, chloral hydrate, and isovalerianic acid: used in cardiac neuroses.

neocinchophen (ne-o-sin'ko-fen). A pale yellow odorless and tasteless powder, the ethyl ester of methyl-phenyl-quinolin-carboxylic acid, $\text{CH}_3\text{C}_9\text{H}_4\text{N}(\text{C}_6\text{H}_5)\text{CO}_2\text{C}_2\text{H}_5$: used like cinchophen.

neocinetic (ne'-o-sin-et'ik). Neokinetic.

neocyte (ne'-o-sit) [*néos* new + *κύτος* cell]. An immature form of leukocyte.

neocytosis (ne'-o-si-to'sis). The presence of neocytes or immature form of leukocytes in the blood.

neodermin (ne-o-der'min) [*néos* new + *δέρμα* skin]. A vulnerary ointment containing fluor-pseudocumol.

neodiarsenol (ne'-o-di-ar'sen-ol). A Canadian brand of nearsphenamine.

neodymium (ne-o-dim'e-um). A rare element of atomic weight 144.3; symbol, Nd.

neo-encephalon (ne'-o-en-sef'al-on). Neencephalon.

neoferrum (ne-o-fer'um). A proprietary preparation of maltopeptonate of iron and manganese with arsenic, maltine, and sherry wine.

neofetal (ne-o-fe'tal). Pertaining to the neofetus, or to the eighth and ninth weeks of intra-uterine life.

neofetus (ne-o-fe'tus). The embryo during the eighth and ninth weeks of intra-uterine life.

neoforn (ne'-o-form). Basic triiodophenol bismuth: used as a dusting powder in ulcers, etc.

neofornans-bacterin (ne-o-for'manz-bak'te-rin). See *bacterial vaccine*, under *vaccine*.

neofornation (ne'-o-for-ma'shun). A new growth or neoplasm.

neofornative (ne-o-for'mat-iv). Concerned in the formation of new tissue.

neogala (ne-og'al-ah) [*néos* new + *γάλα* milk]. The first milk developed after childbirth. See also *colostrum*.

neogenesis (ne-o-jen'es-is) [*néos* new + *γένεσις* production]. A form of regeneration that is slower than anagenesis.

neogenetic (ne'-o-jen-et'ik). Pertaining to neogenesis.

neohymen (ne-o-hi'men) [*néos* new + *ὕμην* membrane]. A false membrane.

neokharsivan (ne-o-kar'siv-an). A British-made nearsphenamine.

neokinetic (ne-o-kin-et'ik) [*néos* new + *κινητικός* pertaining to movement]. A term applied to the nervous motor mechanism regulating voluntary muscular control. It is associated with the motor area of cerebral cortex, and receives its name because of the fact that it was developed more recently than the older paleokinetic system. Cf. *paleokinetic*.

neologism (ne-ol'o-jism) [*néos* new + *λόγος* word]. The invention of new words; also a meaningless word uttered by an insane patient.

neomembrane (ne-o-mem'brān). A false membrane.

neomorph (ne'-o-morf) [*néos* new + *μορφή* form]. A recently acquired part or organ.

neomorphism (ne-o-mor'fizm). Same as *neomorph*.

neon (ne'on) [*néos* new]. An inert gaseous element discovered in the air in 1898; symbol, Ne; atomic weight, 20.2.

neonal (ne'-o-nal). A proprietary brand of butyl-ethylbarbituric acid. See under *acid*.

neonatal (ne-o-na'tal) [*néos* new + L. *na'tus* born]. Pertaining to the new-born.

neopallium (ne-o-pal'e-um) [*néos* new + L. *pallium* cloak]. The nonolfactory portion of the cerebral cortex; so called because it is of later development than the archipallium. Cf. *archipallium*.

neopathy (ne-op'ath-e) [*néos* new + *πάθος* disease]. 1. A new disease. 2. A new condition or complication of disease in a patient.

neophilism (ne-of'il-izm) [*néos* new + *φιλεῖν* to love]. Morbid or abnormal love of novelty.

neophobia (ne-o-fō'be-ah) [*néos* new + *φόβος* fear]. Insane dread of new things.

neophrenia (ne-o-fre'ne-ah) [*néos* new + *φρήν* mind]. Mental disorder occurring in early youth.

neopine (ne'-o-pin). An amorphous opium alkaloid, $\text{C}_{18}\text{H}_{21}\text{NO}_3$ (or 4).

neoplasia (ne-o-pla'ze-ah). The formation of a neoplasm.

neoplasm (ne'-o-plazm) [*néos* new + *πλάσμα* formation]. Any new and abnormal formation, such as a tumor, infarct, or false membrane. **histoid n.**, any neoplasm whose structure resembles that of the tissues in which it is situated. **organoid n.**, a neoplasm whose structure resembles that of some organ of the body.

neoplastic (ne-o-plas'tik). Pertaining to or like a neoplasm.

neoplasty (ne-o-plas-te) [*néos* new + *πλάσσειν* to mold]. The formation of new parts by plastic methods.

neoprotosil (ne-o-pro'to-sil). A proprietary colloidal silver preparation; an external antiseptic.

Neopsylla mus'culi. The mouse flea.

neopyrenol (ne-o-pi'ren-ol). An expectorant, sedative, and antirheumatic preparation of thymol, benzoic acid, and sodium benzoate and oxybenzoate.

neopyrine (ne-o-pi'rīne). Valeryl-amido-antipyrin, a white crystalline compound, antipyretic and antineuralgic.

neorobin (ne-o-ro'bin). A proprietary product obtained by the reduction of chrysarobin: used as an ointment in psoriasis and dandruff.

neosalvarsan (ne-o-sal'var-san). Nearsphenamine.

neosidone (ne-o-si'dōn). A yellow powder, a combination of iodine and catechin: used as a nonirritating means of administering iodine.

neossilvol (ne-o-sil'vol). A form of colloidal silver iodide containing 18 to 22 per cent of silver iodide in a soluble gelatin base. It is used as a prophylactic against and as a treatment for infections of the mucous membranes in 5 to 50 per cent solutions.

neosin (ne'-o-sin). A base, $\text{C}_6\text{H}_{17}\text{NO}_2$, found in muscle.

Neosporidia (ne'-o-spo-rid'e-ah) [*néos* new + *σπόρος* seed]. A division of sporozoa in which growth and sporulation proceed together and simultaneously.

neossin (ne-o'sin). A glucoprotein derived from edible birds' nests; also from Liebig's extract of beef.

neostomy (ne-os'to-me) [*néos* new + *στόμα* mouth]. The operation of making an artificial opening into an organ or between two organs.

neostriatum (ne-o-stri-a'tum) [*neos* new + *striatum*]. The more recently developed portion of the corpus striatum represented by the caudate nucleus and the putamen. Cf. *paleostriatum*.

neothalamus (ne-o-thal'am-us) [*neos* new + *thalamus*]. New thalamus; the phylogenetically new part of the thalamus, *i. e.*, the more lateral, cortical part. Cf. *paleothalamus*.

neotropol (ne-o-tre'pol). Trade name for precipitated bismuth in oil: for intramuscular injection in syphilis.

neottin (ne'o-tin). A yellow powdered proprietary food consisting of nitrogen, albumin, lecithin, and phosphorus.

nenpenthe (ne-pen'the) [*νη- neg.* + *πένθος* grief]. A deodorized opium preparation.

nepeta (nep'et-ah). Catnip. See *cataria*.

nephelometer (nef-el-om'et-er) [*νεφέλη* mist + *μέτρον* measure]. An apparatus for performing nephelometry.

nephelometry (nef-el-om'et-re) [*νεφέλη* mist + *μέτρον* measure]. A method of chemical and bacterial analysis made by measuring the brightness of light reflected by the particles in suspension in a tube.

nephelopia (nef-el-o'pe-ah) [*νεφέλη* cloud + *ὤψ* eye]. Defect of vision from cloudiness of the cornea.

nephradenoma (nef'rad-en-o'mah) [*νεφρός* kidney + *adenoma*]. Adenoma of the kidney.

nephralgia (nef-ral'je-ah) [*νεφρός* kidney + *ἄλγος* pain]. Pain in a kidney.

nephralgic (nef-ral'jik). Characterized by pain in the region of the kidneys.

nephrapostasis (nef-rap-os'tas-is) [*νεφρός* kidney + *ἀπόστασις* suppurative]. Abscess or suppurative inflammation of a kidney.

nephratonia, nephratony (nef-rat-o'ne-ah, nef-rat'o-ne) [*νεφρός* kidney + *ατονία*]. Atony of the kidney.

nephrauxe (nef-rawks'e) [*νεφρός* kidney + *αὐξή* increase]. Enlargement of the kidney.

nephrectasia (nef-rek-ta'ze-ah) [*νεφρός* kidney + *ἐκτασις* distention]. Dilatation of a kidney.

nephrectasis (nef-rek-ta'sis) [*νεφρός* kidney + *ἐκτασις* distention]. Distention of the kidney; saciform kidney.

nephrectasy (nef-rek'tas-e). Nephrectasis.

nephrectomize (nef-rek'to-miz). To remove the kidney from.

nephrectomy (nef-rek'to-me) [*νεφρός* kidney + *ἐκτομή* excision]. Excision of the kidney. **abdominal n.**, **anterior n.**, nephrectomy through an incision in the abdominal wall. **lumbar n.**, nephrectomy through an incision in the loin. **paraperitoneal n.**, the surgical removal of a kidney by a cut through the side along the false rib. **posterior n.**, Same as *lumbar n.*

nephrelosis (nef-rel-ko'sis) [*νεφρός* kidney + *ἑλκωσις* ulceration]. Ulceration of the kidney.

nephremia (nef-re'me-ah) [*νεφρός* kidney + *αἷμα* blood]. Congestion of the kidney.

nephremphraxis (nef-rem-fraks'is) [*νεφρός* kidney + *ἐμφραξις* obstruction]. Obstruction of the vessels of the kidney.

nephria (nef're-ah) [*νεφρός* kidney]. Bright's disease.

nephric (nef'rik) [*νεφρός* kidney]. Pertaining to the kidney.

nephridium (nef-rid'e-um). The excretory organ of the embryo; the embryonic tube whence the kidney is developed.

nephtrin (nef'rin). Same as *cystine*.

nephriism (nef'rizm). Cachexia due to kidney disease.

nephritic (nef-rit'ik). 1. Pertaining to or affected with nephritis. 2. Pertaining to the kidneys. 3. A drug or agent useful in kidney disease.

nephritides (nef-rit'id-ez). The plural of nephritis; a general term for the varieties of nephritis.

nephritin (nef'rit-in). A proprietary preparation of the enzymes and hormones of the kidney for use in renal disease.

nephritis (nef-ni'tis), pl. *nephritides* [*νεφρός* kidney + *itis* inflammation]. Inflammation of the kidney; a diffuse progressive degenerative or proliferative lesion affecting in varying proportion the renal parenchyma, the interstitial tissue, and the renal vascular system. **acute n.**, suppurative nephritis with a short and severe course, constituting the acute form of Bright's disease. There are two forms: *acute parenchymatous n.* and *acute diffuse n.*, caused by exposure to wet and cold, or by pneumonia or pregnancy, or resulting from scarlet fever or other exanthems. The kidney becomes soft and enlarged, with fatty degeneration of the tubular epithelium and the formation of tube casts. It is attended with pain in the lumbar region, fever, dropsy, frequent and painful urination, with presence of casts and of blood in the urine. **albuminous n.**, nephritis in which albuminuria occurs. **arteriosclerotic n.**, chronic interstitial n. **azotemic n.**, nephritis in which nitrogen retention is the important feature; contrasted with hydremic nephritis. **bacterial n.**, nephritis which is caused by micro-organisms. **capsular n.**, that which specially affects Bowman's capsules. **catarrhal n.**, nephritis in which the pyramids are of a reddish hue, from the plugging of the tubular canals with cells. **cheesy n.**, a chronic suppurative form with caseous deposits. **chloro-azotemic n.**, nephritis in which there is retention of chlorides and urea, but not of water. **chronic n.**, any variety having a relatively slow course. **clostridial n.**, chronic nephritis believed to be due to the presence of clostridia. It is characterized by nervousness, sleeplessness, dyspnea, dyspepsia, and albuminuria. **croupous n.** Same as *acute n.* **desquamative n.**, acute catarrhal nephritis. **diffuse n.**, nephritis affecting both the parenchyma and the stroma. **diffuse n., acute.** See under *acute n.* **diffuse n., chronic.** See *interstitial n., chronic.* **dropsical n.**, renal disease accompanied by dropsy (edema). **exudative n.**, nephritis with exudation of the blood serum. **fibrolipomatous n.**, perinephritis in which the perirenal fat has become enmeshed in the scar. **fibrous n.**, that which specially affects the stroma. **focal n.**, multiple foci of inflammation scattered through the kidney. **glomerular n.**, that which principally affects the glomeruli. **glomerulocapsular n.**, a form which primarily affects the glomeruli and Bowman's capsules. **hemorrhagic n.**, nephritis characterized by hematuria. **hydremic n., hydropigenous n.**, nephritis in which dropsy is the predominating feature; contrasted with azotemic nephritis. **hypogenetic n.**, nephritis due to an unusual strain upon kidneys that are congenitally underdeveloped. **idiopathic n.**, nephritis the cause of which is not discoverable. **indurative n.**, chronic nephritis with atrophy of the secreting parts of the kidney and hypertrophy of the connective tissue stroma. **interstitial n., chronic**, a form resulting from acute nephritis or from alcohol and lead poisoning, or from gout. The kidney becomes small, cystic, nodulated, and adherent to its capsule. The interstitial tissue is increased, and there is thickening of the vessel walls and of the malpighian corpuscles: the heart becomes hypertrophied, and the walls of the small arteries thickened; the malpighian tubules contain hyaline casts. The disease is attended with progressive loss of strength, dyspnea, headache, dyspepsia, diarrhea, and the frequent passage of large quantities of light-colored urine containing albumin and casts. Called also

- chronic diffuse n.*, atrophic kidney, arteriosclerotic kidney, senile kidney, contracted kidney, gouty kidney, and granular kidney. **Lance-reaux's n.**, interstitial nephritis of rheumatic origin. **parenchymatous n.**, nephritis which specially affects the parenchyma of the kidney. **parenchymatous n., acute.** See under *acute n.* **parenchymatous n., chronic**, is marked by changes similar to those of the acute form, without congestion. The kidney becomes soft and white, and the disease is attended by anemia, dropsy, anasarca, gastro-intestinal disorder and dyspnea, with secretion of small amounts of high-colored urine containing albumin and casts. Called also *chronic tubal n.*, *large white kidney*, and *branny kidney*. **pneumococcus n.**, nephritis from infection with pneumococci, occurring usually as a complication of pneumonia or empyema. **productive n.**, nephritis with the development of serous exudate and hypertrophy of the connective tissue stroma. **saturnine n.**, a form due to chronic lead poisoning. **scarlatinal n.**, acute nephritis due to scarlet fever. **sub-acute n.**, chronic parenchymatous n. **suppurative n.**, a form accompanied by abscess of the kidney. **suppurative n., acute**, is due to septic infection, generally from operations on the genito-urinary tract (then called *surgical kidney*), and marked by the development of multiple abscesses. **suppurative n., chronic**, is caused by infection with the tubercle bacillus. In this disease cavities are found in the kidney, filled with puslike, cheesy masses and tubercle bacilli. Called also *tubercular n.* and *cheesy n.* **tartrate n.**, acute nephritis produced by the subcutaneous injection of racemic tartaric acid. **trench n.**, acute nephritis affecting soldiers in the trenches. **tubal n.**, **tubular n.**, a variety that affects principally the tubules. **tuberculous n.**, a variety of chronic interstitial nephritis due to the bacillus of tuberculosis.
- nephro-abdominal** (nef'ro-ab-dom'in-al). Pertaining to the kidney and the abdominal wall.
- nephrocapsectomy**, **nephrocapsacectomy** (nef'ro-kap-sek'to-me, nef'ro-kap-sas-ek'to-me) [νεφρός kidney + *L. capsula* capsule + *ἐκτομή* excision]. Excision of the renal capsule.
- nephrocardiac** (nef-ro-kar'de-ak). Pertaining to the kidney and the heart.
- nephrocele** (nef'ro-sēl) [νεφρός kidney + *κῆλη* hernia]. Hernial protrusion of a kidney.
- nephrocolic** (nef-ro-kol'ik) [νεφρός kidney + *κολῖς*]. 1. Pertaining to the kidney and the colon, as *nephrocolic* ligament. 2. Renal colic.
- nephrocolopexy** (nef-ro-ko'lo-peks-e) [νεφρός kidney + *κόλον* colon + *πῆξις* fixation]. Operative suspension of the kidney and colon by means of the nephrocolic ligament.
- nephrocoloptosis** (nef'ro-ko-lop-to'sis) [νεφρός kidney + *κόλον* colon + *πτῶσις* fall]. Downward displacement of the kidney and colon.
- nephrocystanastomosis** (nef'ro-sis-tan-as-to-mo'sis) [νεφρός kidney + *κύστις* bladder + *ἀναστόμισις* anastomosis]. The surgical formation of a passage between the kidney and the urinary bladder.
- nephrocystitis** (nef'ro-sis-ti'tis) [νεφρός kidney + *κύστις* bladder + *-itis* inflammation]. Inflammation of the kidneys and bladder.
- nephrocystosis** (nef'ro-sis-to'sis) [νεφρός kidney + *κύστις* cyst]. Development of cysts in the kidney.
- nephro-erysipelas** (nef'ro-ēr-is-ip'el-as). Erysipelas complicated with acute nephritis.
- nephrogastric** (nef-ro-gas'trik). Pertaining to the kidney and the stomach.
- nephrogenic**, **nephrogenous** (nef-ro-jen'ik, nef-roj'en-us) [νεφρός kidney + *γενᾶν* to produce]. Arising in or from a kidney; forming kidney tissue.
- nephrohemia** (nef-ro-he'me-ah) [νεφρός kidney + *αἷμα* blood]. Congestion of the kidney.
- nephrohydro-sis** (nef'ro-hi-dro'sis). Hydro-nephrosis.
- nephrohypertrophy** (nef'ro-hi-per'tro-fe) [νεφρός kidney + *hypertrophyl*. Hypertrophy of the kidney.
- nephrolith** (nef'ro-lith) [νεφρός kidney + *λίθος* stone]. A renal calculus; gravel in a kidney.
- nephrolithiasis** (nef'ro-lith-i-as-is). A condition marked by the presence of renal calculi.
- nephrolithotomy** (nef'ro-lith-ot'o-me) [νεφρός kidney + *litotomy*]. The removal of renal calculi by cutting through the body of the kidney.
- nephrologist** (nef-rol'o-jist). An expert, or specialist, in diseases of the kidney.
- nephrology** (nef-rol'o-je) [νεφρός kidney + *λόγος* discourse]. Scientific study of the kidney and its diseases.
- nephrolysine** (nef-rol'is-in) [νεφρός kidney + *lysine*]. Same as *nephrotoxin*.
- nephrolysis** (nef-rol'is-is) [νεφρός kidney + *λύσις* solution]. 1. Solution of kidney substance produced by a nephrotoxin. 2. The operation of separating the inflamed kidney from paranephritic adhesions.
- nephrolytic** (nef-ro-lit'ik). Producing nephrolysis; nephrotoxic.
- nephromalacia** (nef'ro-mal-a'se-ah) [νεφρός kidney + *μαλακία* softness]. Softening of the kidney.
- nephromegaly** (nef-ro-meg'al-e) [νεφρός kidney + *μέγας* great]. Enlargement of the kidney.
- nephromere** (nef'ro-mēr) [νεφρός kidney + *μέρος* part]. A metamere of the embryo having relation with the kidney.
- nephroncus** (nef-ronf'kus) [νεφρός kidney + *ὄγκος* mass]. Tumor of the kidney.
- nephroparalysis** (nef'ro-par-al'is-is) [νεφρός kidney + *paralysis*]. Paralysis of the kidney.
- nephropathic** (nef'ro-path'ik). Due to disease of the kidneys; also causing disease of the kidneys.
- nephropathy** (nef-rop'ath-e) [νεφρός kidney + *πάθος* disease]. Disease of the kidneys. **drop-sical n.**, hypochloruric nephropathy. **hyp-azoturic n.**, kidney disease in which insufficient nitrogen is eliminated. **hypochloruric n.**, kidney disease with sodium chloride retention.
- nephropexy** (nef'ro-peks-e) [νεφρός kidney + *πῆξις* fastening]. The fixation of a floating kidney, especially that which is effected by packing with asepticized gauze.
- nephrophthisis** (nef-rof'this-is) [νεφρός kidney + *φθίσις* wasting]. Same as *nephrotuberculosis*.
- nephropoietic** (nef'ro-poi-et'ik) [νεφρός kidney + *ποιεῖν* to make]. Forming kidney tissue.
- nephropoietin** (nef'ro-poi-e'tin). A substance thought to exist in the blood serum, in embryonic kidney, and in kidneys undergoing regeneration, and to stimulate the formation of kidney tissue.
- nephroptosis**, **nephroptosia** (nef-rop-to'sis, nef-rop-to-se-ah) [νεφρός kidney + *πτῶσις* falling]. Downward displacement of the kidney.
- nephropyelitis** (nef'ro-pi-el-i'tis) [νεφρός kidney + *pyelitis*]. Parenchymatous inflammation of the kidney and of its pelvis.
- nephropyeloplasty** (nef-ro-pi-el-o-plas-te) [νεφρός kidney + *πύελος* pelvis + *πλασσειν* to form]. Plastic operation on the pelvis of the kidney.
- nephropyosis** (nef'ro-pi-o'sis) [νεφρός kidney + *πύσις* suppuration]. Suppuration of the kidney.
- nephrorosein** (nef-ro-ro'ze-in). A urinary pigment identified spectroscopically by its showing an absorption spectrum between the *b* and *F* lines.
- nephrorrhagia** (nef-ro-ra'je-ah) [νεφρός kidney + *ῥήγνυται* to burst forth]. Hemorrhage from the kidney.

nephrorrhaphy (nef-ro-rá-fe) [*νεφρός* kidney + *ράφη* stitch]. The suture of a displaced kidney in its normal place.

nephrosclerosis (nef-'ro-skle're-ah). Nephrosclerosis.

nephrosclerosis (nef-'ro-skle-ro'sis) [*νεφρός* kidney + *σκληρώσις* hardening]. Sclerosis, or hardening of the kidney.

nephrosis (nef-ro'sis), pl. *nephroses* [*νεφρός* kidney]. Any disease of the kidney, especially any disease of the kidneys characterized by degenerative lesions of the renal parenchyma. **amyloid n.**, chronic nephrosis with amyloid degeneration of the renal epithelium; amyloid kidney. **chronic n.**, renal disease characterized by chronic degeneration of the renal epithelium. **Epstein's n.**, a type of chronic tubular nephritis resulting from systemic metabolic disorder, occurring usually in young persons and in women, and frequently associated with hyperthyroidism or other endocrine disturbance. **larval n.**, a condition in which the renal lesions are slight and manifested clinically by albuminuria. **lipoid n.**, a nephrosis marked by changes in the protein and lipoids of the blood and the deposit of lipoids in the kidney. **necrotizing n.**, renal disease characterized by necrosis of the tubular epithelium of the kidney.

nephrosen (nef-ro-sōn). A proprietary diuretic preparation.

nephrospasis (nef-ro-spas'is) [*νεφρός* kidney + *σπᾶν* to draw]. Movable kidney in which the natural supports of the organ are so weakened that the organ hangs by its pedicle.

nephrostoma (nef-rost'-mah) [*νεφρός* kidney + *στόμα* mouth]. Any one of the funnel-shaped and ciliated orifices connected with the wolffian tubules.

nephrostome (nef-ro-stōm). Nephrostoma.

nephrostomy (nef-rost'-to-me) [*νεφρός* kidney + *στόμα* mouth]. The creation of a permanent fistula leading directly into the pelvis of the kidney.

nephrotic (nef-rot'ik). Pertaining to or caused by nephrosis.

nephrotome (nef-ro-tōm) [*νεφρός* kidney + *τομή* cutting, section]. One of the segments of tissue in the embryo from which are developed the excretory tubules of the kidney.

nephrotomy (nef-rot'-o-me) [*νεφρός* kidney + *τέμνειν* to cut]. A surgical incision into the kidney. It is called *abdominal* when performed through an incision into the abdomen, and *lumbar* when through an incision into the loins.

nephrotoxic (nef-ro-tok'sik). Toxic or destructive to the kidney, as, *nephrotoxic* serum.

nephrotoxin (nef-ro-tok'sin) [*νεφρός* kidney + *τοξικόν* poison]. A toxin which has a specific destructive effect on kidney cells.

nephrotresis (nef-ro-tre'sis) [*νεφρός* kidney + *τρήσις* boring]. The surgical formation of a permanent opening into the kidney through the loin.

nephrotresis (nef-ro-tri-e'sis) [*νεφρός* kidney + *τρήσις* piercing]. The operation of establishing a fistula into the kidney by stitching the edges of the kidney incision to the parietal muscles.

nephrotuberculosis (nef'-ro-tu-ber-ku-lo'sis) [*νεφρός* kidney + *tuberculosis*]. Disease of the kidney due to the tubercle bacillus.

nephrotypoid (nef-ro-ti'foid). Typhoid fever complicated with acute nephritis.

nephrotypus (nef-ro-ti'fus) [*νεφρός* kidney + *typhus*]. Typhus fever with renal hemorrhage.

nephro-ureterectomy (nef'-ro-u'-re-ter-ek'-to-me) [*νεφρός* kidney + *ureterectomy*]. Excision of a kidney and a whole or part of the ureter.

nephro-ureterocystectomy (nef'-ro-u-re'ter-o-sis-tek'-to-me) [*νεφρός* kidney + *οὐρητήρ* ureter + *κύστις* bladder + *ἐκτομή* excision]. Excision of the kidney, ureter, and a portion of the bladder wall.

nephrozymase (nef-ro-zi'mās) [*νεφρός* kidney + *ζύμη* leaven]. A ferment, like diastase, found in the urine.

nephrozymosis (nef'-ro-zi-mo'sis). Zymotic or fermentative disease of the kidney.

nephrosis (nef-id-ro'sis) [*νεφρός* kidney + *ἕδωρ* water]. The accumulation of urine in the pelvis of the kidney; hydronephrosis.

nephrotic (nef-id-rot'ik). Pertaining to nephrosis.

nepiology (nep-e-ol'-o-je) [*νέπιος* infant + *λόγος* treatise]. The department of pediatrics treating of young infants.

neptunium (nep-tu'-ne-um). An element belonging to the tantalum group occurring in certain rare earths associated with tantalum and niobium; atomic weight, 118.

nercibus (ner-si'bus). A nervine preparation of glycerophosphates, iron, strychnine, etc.

Neri's sign (na'rēz). See under *sign*.

nerianthin (ne-re-an'thin). A glucoside from oleander; therapeutically less active than oleandrin.

neriin (ne're-in). One of the active principles of oleander; a cardiac stimulant and tonic.

Nerium (ne're-um) [*νήριον* oleander]. A genus of apocynaceous trees. See *oleander*.

Nernst lamp, theory (nernst) [Walther H. Nernst, German physicist, born 1864]. See *lamp* and *theory*.

neroli (neh-ro'-le). An essential oil distilled from orange blossoms.

nerolin (ne-ro'-lin). Betanaphthol-ethyl-ether, C₁₀H₇O.C₂H₅.

neropathy (ne-ro-path-e). That part of the system of weltmerism known as the laying on of hands; manual gerokomy.

nervanin (ner-van'in). A local anesthetic, said to be safer than cocaine. Dose, 4-8 grains (0.266-0.533 Gm.).

nerve (nerv) [*L. nervus; νεῦρον*]. A cordlike structure which conveys impulses from one part of the body to another. A nerve consists of a connective tissue sheath (*epineurium*) enclosing bundles (*fasciculi*) of nerve fibers, each bundle being surrounded by its own sheath of *perineurium*, the various bundles being separated by septa of connective tissue known as the *endoneurium*. Nerve fibers are of two kinds: the medullated and the nonmedullated. A *medullated nerve fiber* consists of a central core or axis-cylinder, which is sometimes enclosed in a sheath, or axilemma, surrounded by a layer of white, fatty matter (*myelin, white substance of Schwann, medulla, etc.*), which is enclosed in a sheath (*neurilemma, or primitive sheath*). The myelin is separated by constrictions (*nodes of Ranvier*) into segments of about one millimeter in length, each segment containing a nucleus. In the *nonmedullated nerve fibers* the axis-cylinder is surrounded only by the neurilemma, but the fibers contain nuclei. See *table of nerves*. **accelerator n.**, the cardiac sympathetic nerve: when it is stimulated, the heart's action is accelerated. **accessory n.** Same as *spinal accessory n.* See *table of nerves*. **accessory phrenic n.**, an anomalous branch of the phrenic nerve, cephalad to the hilum of the lung, found in about 20 per cent of human beings. **acoustic n.**, the auditory nerve. See *table of nerves*. **afferent n.**, any nerve which transmits impulses from the periphery intrad. See *sensory n.* **anabolic n.**, any nerve, like the vagus or accelerans, whose stimulation promotes the anabolic processes. **n. of arrest**. Same as *inhibitory n.* **n. avulsion**, operation of tearing a nerve from its central origin by traction. **n. block**, stoppage of the passage of impulses through a nerve by pressure or by the injection of anesthetics. **n. broach**. See *broach*. **calorific n.**, any nerve whose stimulation increases heat. **n.**

A TABLE OF THE NERVES.

The nerves are described under the BNA terms anglicised; the names of the old nomenclature are given also, but they are referred to the BNA terms.

NERVE.	FUNCTION.	ORIGIN.	DISTRIBUTION.	BRANCHES.
Abducens (sixth cranial).	Motion.	Fasciculus teres.	External rectus of the eye.	
Accessorius or accessory (eleventh cranial).	Motion.	Medulla and spinal cord.	Sternocleidomastoid, trapezius; larynx and pharynx.	
Acoustic or acusticus (eighth cranial).	Hearing and equilibrium.	Two roots, vestibular and cochlear.	Cochlea, vestibule, body canals.	Cochlear, vestibular.
Alveolar, inferior.	Sensation.	One of the terminal branches of mandibular.	Teeth of lower jaw.	
Alveolar, superior.	Sensation.	A branch of maxillary.	Gums and molar teeth of upper jaw.	
Ampullar.	Hearing.	Acoustic.	Superior, lateral, and inferior semicircular canals.	
Anococcygeal.	Motion.	Lower part of pudendal plexus.	Levator ani muscle and skin over coccyx.	
Arnold's.	The auricular branch of the vagus.			
Auditory.	Same as <i>Acoustic</i> .			
Auricular, posterior.	Motion.	Facial.	Retrahens aurem, occipitofrontalis.	Auricular; occipital.
Auricularis magnus.	Sensation.	Cervical plexus, second and third cervical.	Face, ear, neck, parotid.	Facial, mastoid, and auricular.
Auriculotemporal.	Sensation.	Mandibular.	Temple and pinna.	Articular, branches to meatus auditorius, parotid, posterior auricular.
Axillary.	Sensation and motion.	Brachial plexus.	Deltoid and teres minor muscles.	
Bell's.	The long thoracic nerve.			
Of Bock.	See <i>Pharyngeal</i> .			
Buccal.	Same as <i>Buccinator</i> .			
Buccinator.	Sensation.	Masticator.	Cheek, buccinator, etc.	Superior and inferior buccinator and external pterygoid.
Canalis pterygoidei (pterygoid canal) (O. T. vidian nerve).	Motor and sympathetic.	Union of superficial and deep petrosal.	Meckel's ganglion.	
Cardiac, great or middle.		Middle cervical ganglion.	Heart and deep cardiac plexus.	
Cardiac, inferior or minor.		Inferior cervical or first thoracic ganglion.	Heart and deep cardiac plexus.	
Cardiac, right and left superior.	Vasomotor and inhibitory.	Superior cervical ganglion.	Heart, arteries of thorax, and superficial cardiac plexus.	
Caroticotympanic.		Internal carotid plexus.	Tympanic plexus.	
Carotid, external.	Sympathetic fibers.	Superior cervical ganglion.	Forms external carotid plexus.	
Carotid, internal.	Sympathetic cord.	Superior cervical ganglion.	Forms internal carotid plexus.	
Of Casser.	See <i>Perforating</i> and <i>Musculocutaneous</i> .			
Cavernous.	Sensation; vasomotion.	Cavernous plexus.	Erectile structures of penis in male and clitoris in female.	
Cerebral (O.T. cranial).	Any one of the twelve nerves given off from the brain. They are: 1. olfactory, 2. optic, 3. oculomotor, 4. trochlear, 5. trigeminus, 6. abducens, 7. facial, 8. acoustic, 9. glossopharyngeal, 10. vagus, 11. accessory, 12. hypoglossal.			
Cervical, eighth.	Sensation and motion.	Spinal cord.	Thorax, neck, and upper extremities.	Dorsal and ventral divisions.
Cervical, first (ventral division).	Sensation and motion.	Spinal cord.	Rectus capitis lateralis and anterior recti.	Filaments to vagus, hypoglossal, etc.

NERVES

NERVES

Longitudinal nerve fiber, diagrammatic: *a*, axis-cylinder; *b*, medullary sheath; *c*, neurilemma; *d*, nucleus; *e*, node of Ranvier. (Leroy.)

Transverse section of a nerve: *a*, Epineurium; *b*, perineurium; *c*, endoneurium; *d*, section of a single fiber. (Leroy.)

Longitudinal section through a nerve fiber: *a*, Fibrils of axis-cylinder; *b*, neurilemma; *c*, segments of myelin sheath.

Nerve cell with dendrites ending in clawlike telodendria: *a*, Neuraxis; *b*, telodendrium.

Superficial Distribution of Facial, Trigeminal, and Other Nerves of Head: 1, Trunk of facial nerve after its exit from stylomastoid foramen; 2, posterior auricular branch; 3, filament of great auricular nerve; 4, occipital branch; 5, auricular branch; 6, twig to superior auricular muscle; 7, nerve to digastric; 8, that to stylohyoid muscle; 9, superior or temporofacial division of the nerve; 10, 11, temporal branches; 12, zygomaticofacial; 13, 14, infra-orbital; 15, inferior or cervicofacial division of nerve; 16, mandibular, and above this buccal branches; 17, cervical branch; 18, auriculo-temporal uniting with facial, giving anterior auricular and parotid branches; 19, 20, supra-orbital; 21, lacrimal; 22, infra-trochlear; 23, malar twig of the zygomatic; 24, superficial branch of nasal; 25, infra-orbital; 26, buccinator; 27, mental; 28, great occipital; 29, great auricular; 30, 31, lesser occipital; 32, cutaneous coli.

Branches of Inferior Maxillary Nerve from Outer Side: 1, Masseteric nerve; 2, posterior deep temporal nerve; 3, buccinator nerve; 4, branch of facial; 5, anterior deep temporal nerve; 6, filaments given by the buccinator to external pterygoid muscle; 7, middle deep temporal nerve; 8, auriculotemporal nerve; 9, its temporal branches; 10, its branches to meatus and auricle; 11, its union with facial; 12, lingual nerve; 13, mylohyoid nerve; 14, inferior alveolar nerve; 15, its twigs to teeth; 16, mental branch; 17, branch of the facial uniting with the mental.

A TABLE OF THE NERVES—*Continued.*

NERVE.	FUNCTION.	ORIGIN.	DISTRIBUTION.	BRANCHES.
Cervical, first (dorsal division).	Sensation and motion.	Spinal cord.	Obliqui, recti, complexus, etc.	Cutaneous and communicating filaments.
Cervical, fourth (ventral division).	Sensation and motion.	Spinal cord.	Shoulder.	Muscular and communicating filaments, etc.
Cervical, second (ventral division).	Sensation and motion.	Spinal cord.	Sternomastoid, etc.	Ascending, descending, communicating, small occipital, etc.
Cervical, second (dorsal division).	Sensation and motion.	Spinal cord.	Obliquus inferior, complexus, splenius, trachelomastoid, scalp, ear.	Occipitalis major and external.
Cervical, third (ventral division).	Sensation and motion.	Spinal cord.		Ascending, descending, communicating, and muscular filaments.
Cervical, third (dorsal division).	Sensation and motion.	Spinal cord.	Complexus, splenius, occiput, trachelomastoid.	External, internal, third occipital, etc.
Cervical, superficial.	Same as <i>Cutaneus colli</i> .			
Cervicals, (fifth to eighth ventral divisions).	Sensation and motion.	Spinal cord.	Brachial plexus.	Communicating.
Cervicals (fourth to eighth dorsal divisions).	Sensation and motion.	Spinal cord.	Skin and muscles of neck.	External and internal branches.
Cervicofacial.	Motion.	Facial.	Muscles of lower face and neck.	Supramaxillary, infra-maxillary, buccal.
Chor'da tym'pani.	Taste, secretion, vasodilation, sensation.	Facial.	Tympanum, submaxillary gland, inferior lingualis, tongue.	
Ciliary, short (six to ten).	Motion, sensation, nutrition.	Ciliary ganglion.	Ciliary body, iris, cornea.	
Ciliary, long (two or three).	Motion, sensation, etc.	Nasal nerve.	Ciliary body, iris, cornea.	
Circumflex.	See <i>Axillary</i> .			
Clunical, middle.		Terminal branches of sacral nerves.	Skin of middle gluteal region.	
Clunical, superior.		Terminal branches of lumbar nerves.	Skin of upper gluteal region.	
Coccygeal.	Motion and sensation.	Spinal cord.	Coccygeus and skin.	Filaments.
Cochlear.	Audition.	Acoustic.	Cochlea.	Filaments.
Colli, superficialis.	Sensation.	Second and third cervical.	Platysma and side of neck, throat, and chin.	Descending and ascending branches.
Commu'nicans hypoglos'si (communicans noni).	Sensation and motion.	Second and third cervical.	Descendens hypoglossi, depressor muscles of hyoid bone.	Ansa hypoglossi, omohyoid, etc.
Commu'nicans perone'i.	See <i>Ramus anastomoticus peroneus</i> .			
Commu'nicans poplite'i.	Same as <i>Cutaneus surae medialis</i> .			
Of Cotunnus.	See <i>Nasopalatine nerve</i> .			
Crural, anterior.	Same as <i>Femoral</i> .			
Cutaneous, external.	Same as <i>Cutaneus femoris lateralis</i> .			
Cutaneous, internal.	Same as <i>Cutaneus antibrachii medialis</i> .			
Cutaneous, lesser internal (of Wrisberg).	Same as <i>Cutaneus brachii medialis</i> .			
Cuta'neus antibrachii dorsa'lis.		Radial.	Skin of dorsal surface of forearm.	
Cuta'neus antibrachii latera'lis.	Sensory.	Musculocutaneous.	Radial side of forearm.	
Cuta'neus antibrachii media'lis.		Brachial plexus.	Skin of flexor and ulnar surface of forearm.	
Cuta'neus tra'chii latera'lis.	Sensory.	Axillary.	Skin over lower portion of deltoid.	
Cuta'neus bra'chii media'lis.		Brachial plexus.	Skin on inner side of arm.	
Cuta'neus bra'chii posterior.		Radial.	Skin of posterior surface of arm.	
Cuta'neus col'i.		Second and third cervical.	Skin over anterior triangle of neck.	
Cuta'neus dorsa'lis interme'dius.		Superficial peroneal.	Supplies dorsal nerves to the toes.	
Cuta'neus dorsa'lis media'lis.		Superficial peroneal.		

A TABLE OF THE NERVES—*Continued.*

NERVE.	FUNCTION.	ORIGIN.	DISTRIBUTION.	BRANCHES.
Cutaneus femoris lateralis		Second and third lumbar.	Skin of front of thigh and outer side of buttock.	
Cutaneus femoris posterior (small sciatic nerve).	Sensation.	First three sacral.	Skin of posterior surface of thigh and of popliteal region.	
Cutaneus surae lateralis.		Peroneal.	Skin of calf.	
Cutaneus surae mediae.	Sensation.	Tibial.	To saphenous nerve and skin of foot.	
Cyon's.	Lowering of the blood pressure.	Vagus (rabbit).	Heart.	Filaments.
Dental, inferior.	Same as <i>Alveolar, inferior.</i>			
Dental, posterior.	Same as <i>Alveolar, superior.</i>			
Depressor.	The cardiac branch of the vagus.			
Descendens hypoglossi.	Motor.	Hypoglossal.	Sternohyoid, omohyoid, sternohyoid, etc.	Muscular.
Descendens noni.	See <i>Descendens hypoglossi.</i>	<i>glossi.</i>		
Digastric.	Motion.	Facial.	Posterior belly of digastric, glossopharyngeal nerve, etc.	
Dorsal, 1, 12 (anterior and posterior divisions).	Sensation and motion.	Spinal cord.	Skin and muscles of chest, trunk, and limbs.	External, internal, cutaneous.
Dorsal (of clitoris).	Sensation, etc.	Pudic.	Clitoris.	
Dorsal (of penis).	Sensation, etc.	Pudic.	Corpus cavernosum, dorsum of penis, etc.	
Dorsalis scapulae.	Motion.	Fifth to seventh cervical.	Levator anguli scapulae and rhomboidei muscles.	
Esophageal.	Motion, etc.	Pneumogastric.	Muscular and mucous coats of esophagus, esophageal plexus, etc.	
Ethmoidal, anterior and posterior.		Branches of nasociliary.		
Facial (seventh cranial).	Motion, secretion, vasomotion, etc.	Floor of fourth ventricle, fasciculus teres.	Face, ear, palate, tongue.	Tympanic, chorda tympani, posterior auricular, digastric, stylohyoid, temporal, malar, infra-orbital, buccal, supramaxillary, inframaxillary.
Femoral (femoralis).		Second, third, and fourth lumbar.	Muscles of skin and thigh.	Terminal branches.
Frontal.	Sensation.	Ophthalmic.	Forehead, eyelids, pericranium, skin of temples, etc.	Supratrochlear, supra-orbital.
Furcal.	The fourth lumbar nerve.	Lumbar portion or cord.	Forked to enter into formation of lumbar and sacral plexuses.	
Genital.	Same as <i>Spermatic, external.</i>			
Genitocrural.	Same as <i>Genitofemoral.</i>			
Genitofemoral.	Sensation and motion.	First and second lumbar.	Cremaster, skin of thigh, etc.	Femoral, external spermatic, etc.
Glossopharyngeal (ninth cranial).	Taste and sensation, vasomotion, motor, the pharynx, etc.	Floor of fourth ventricle.	Middle ear, pharynx, meninges, tonsils, tongue.	Tympanic, carotid, pharyngeal, muscular, tonsillar, lingual, etc.
Gluteal, inferior.	Motion.	Fifth lumbar, second and third sacral.	Gluteus maximus.	Articular, cutaneous.
Gluteal, superior.	Motion.	Sacral plexus.	Glutei, tensor vaginae femoris.	Inferior and superior branches.
Gustatory.	See <i>Lingual.</i>			
Hemorrhoidal, inferior and superior.	Sensation and motion.	Pudendal plexus.	External sphincter ani and skin of perineum.	
Hepatic.	Influences glycogenic function.	Pneumogastric.	Liver.	Hepatic plexus,
Hirschfeld's.	Motion.	Facial.	Palatoglossus and styloglossus.	
Hypogastric.	Sensation.	Iliohypogastric.	Skin of hypogastrium.	
Hypoglossal (twelfth cranial).	Motion, vasomotion.	Floor of fourth ventricle.	Hyoglossus and subhyoid muscles.	Descendens noni or hypoglossi, muscular, thyrohyoid, geniohyoid, and meningeal.

NERVES

Maxillary Nerve: 1, Gasserian ganglion; 2, lacrimal nerve; 3, trunk of maxillary nerve; 4, its zygomatic branch; 6, origin of its zygomaticofacial twig; 7, its zygomaticotemporal twig, joined by 5, communicating branch from lacrimal nerve; 8, sphenopalatine ganglion; 9, vidian (canalis pterygoidei) nerve; 10, its upper branch or great superficial petrosal nerve proceeding to join 11, facial nerve; 12, its lower branch or deep petrosal nerve joining sympathetic; 13, 14, superior alveolar nerves; 15, terminal branches of infra-orbital nerve in the face; 16, a branch of facial uniting with some of the twigs of infra-orbital.

NERVES

Nerves of Nose and Sphenopalatine Ganglion, from Inner Side: 1, Network of external branches of olfactory nerve; 2, nasociliary nerve, giving its external branch to outer wall of nose; the septal branch is cut short; 3, sphenopalatine ganglion; 4, ramification of large palatine nerve; 5, small, and 6, external palatine nerve; 7, inferior nasal branch; 8, superior nasal branch; 9, nasopalatine nerve cut short; 10, vidian (canalis pterygoidei) nerve; 11, great superficial petrosal nerve; 12, great deep petrosal nerve; 13, the sympathetic nerves ascending on internal carotid artery.

Distribution and Connection of Vagus Nerve of Left Side in Neck and Upper Part of Thorax: 1, Vagus nerve; 2, ganglion of its trunk; 3, accessory; 4, union of vagus with hypoglossal; 5, pharyngeal branch of vagus; 6, superior laryngeal; 7, external laryngeal; 8, communication of external laryngeal with superior cardiac branch of sympathetic; 9, recurrent, 10, superior, and 11, inferior cervical cardiac branches; 12, 13, posterior pulmonary plexus; 14, lingual branch of mandibular; 15, distal part of hypoglossal nerve; 16, glossopharyngeal nerve; 17, accessory nerve; 18, second cervical nerve; 19, third; 20, fourth; 21, origin of phrenic nerve; 22, 23, fifth, sixth, seventh, and eighth cervical nerves, forming with the first dorsal the brachial plexus; 24, superior cervical ganglion of sympathetic; 25, middle cervical ganglion; 26, inferior cervical ganglion; 27, 28, 29, 30, second, third, fourth, and fifth dorsal ganglia.

Superficial Branches of Cervical Plexus: 1, Cutaneous colli nerve; 2, its inferior branch; 3, its superior branch; 4, its union with facial; 5, great auricular nerve; 6, one of its facial branches; 7, its branch to lobule; 8, twig which pierces the auricle; 9, branch to deep surface of pinna; 10, its union with posterior auricular of the facial; 11, small occipital nerve; 12, its branches; 13, a mastoid branch; 14, twigs from this to back of neck; 15, inner; 16, 17, middle; 18, outer branches of supraclavicular nerves; 19, branch of cervical nerves passing into trapezius muscle; 20, accessory distributed to same, and receiving a uniting branch from the cervical nerves; 21, branch to levator scapulae; 22, trunk of the facial nerve; 23, its posterior auricular branch; 24, its cervical branch; 25, great occipital nerve.

A TABLE OF THE NERVES—*Continued.*

NERVE.	FUNCTION.	ORIGIN.	DISTRIBUTION.	BRANCHES.
Iliac.	Sensation.	Iliohypogastric.	Skin of gluteal region.	Iliac, hypogastric, communicating.
Iliohypogastric.	Sensation and motion.	First lumbar.	Skin of hypogastrium and gluteal region.	
Ilio-inguinal.	Sensation and motion.	First lumbar.	Internal oblique muscle and skin of upper thigh, labium, and scrotum.	Muscular, cutaneous, and communicating.
Incisive.	Sensation.	Inferior alveolar.	Incisor and canine teeth of lower jaw.	Communicating.
Inframandibular.	Same as <i>Mandibular</i> .			
Inframaxillary.	Same as <i>Mandibular</i> .			
Infra-orbital.	Sensation and motion.	Facial.	Cheek muscles, nose, and lip.	Nasal, labial, palpebral.
Infratrochlear.	Sensation.	Nasociliary.	Conjunctiva of part of eye, lacrimal sac, side of nose, eyelid, etc.	
Intercostal.	Sensation and motion.	Thoracic nerves.	Muscles and skin of thorax and abdomen.	Muscular, anterior, and lateral cutaneous.
Intercostobrachial.		Branches of the intercostal nerves.		
Intercostohumeral.	Sensation.	Second intercostal.	Skin of upper half of inner and back part of arm.	
Interme'dius.	Sensation.	The sensory portion of facial.	Lies between facial and acoustic.	
Interosseous, anterior or volar.	Motion.	Median.	Deep muscles on palmar side of forearm.	
Interosseous, posterior or dorsal.	Sensation and motion.	Radial.	Back of forearm and wrist.	
Ischiadic.	Same as <i>Sciatic, great</i> .			
Jacobson's.	See <i>Tympanic</i> .			
Jugular.		A communicating branch between superior cervical ganglion and ganglion nodosum and petrosal ganglion.		
Labial.	Motion and sensation.	Superior maxillary.	Mucous membrane and muscles of lips and mouth.	
Lacrimal.	Sensation.	Ophthalmic.	Lacrimal gland, conjunctiva, upper lid.	
Of Lancisi.	Longitudinal striations on upper surface of callosum.			
Laryngeal, inferior or recurrent.	See <i>Recurrent</i> .			
Laryngeal, superior.	Sensation, motion.	Pneumogastric.	Muscles and mucous membrane of larynx.	External, internal.
Lingual.	Taste, sensation.	Mandibular.	Tongue, mouth.	Sublingual.
Lumbar (5).	Sensation and motion.	Spinal cord.	Lumbar and genital structures.	Anterior and posterior divisions, lumbar plexus.
Lumbo-inguinal.	Sensation and motion.	Genitofemoral.	Skin of anterior aspect of upper half of thigh.	
Malar.	Motion.	Facial.	Corrugator supercilii, orbicularis palpebrarum, and eyelids.	
Malar.	The zygomaticofacial branch of maxillary.			
Mandibular.	Motion, taste, sensation.	Trigeminus.	Muscles of lower jaw, cheek, tongue, teeth.	Inferior alveolar and lingual.
Masseteric.	Motion.	Masticator.	Masseter.	
Masticator.	Motion.	Mandibular.		Masseteric, temporal, buccinator, pterygoid.
Mastoid.	Sensation.	Auricularis magnus.	Skin behind ear.	Filaments.
Maxillary.	Sensation.	Trigeminus.	Face, teeth.	Orbital, infra-orbital, sphenopalatine, dentals.
Maxillary, inferior.	Same as <i>Mandibular</i> .			
Maxillary, superior.	Same as <i>Maxillary</i> .			
Meatus auditivus externus.	Sensation.	Auriculotemporal.	Lining of external auditory meatus.	
Median.	Sensation and motion.	Brachial plexus.	Pronator radii teres, fingers, flexors, palms, two lumbricales.	Muscular, palmar cutaneous, anterior interosseous.

A TABLE OF THE NERVES—*Continued.*

NERVE.	FUNCTION.	ORIGIN.	DISTRIBUTION.	BRANCHES.
Membra'nae tym'pani.	Sensation.	Auriculotemporal.	Drumhead.	
Meningeal, middle or recurrent.	Vasomotion.	Maxillary.	Dura and mastoid cells.	
Mental.	Motion and sensation.	Inferior alveolar.	Skin and mucous membrane of lower lip and chin.	
Mo'tor oc'uli (third cranial).	Same as <i>Oculomotor</i> .			
Musculocutaneous.	Sensation, motion.	Outer cord of brachial plexus.	Coracobrachialis, biceps, brachialis anticus, skin of forearm.	Anterior, posterior, muscular, articular.
Musculocutaneous of leg.	See <i>Peroneal, superficial</i> .			
Musculospiral.	Same as <i>Radial</i> .			
Mylohyoid.	Motion.	Inferior alveolar.		
Nasal.	Same as <i>Nasociliary</i> .			
Nasociliary.	Sensation.	Ophthalmic.	Ciliary ganglion, iris, conjunctiva.	Ganglionic, ciliary, infratrochlear.
Nasopalatine (of Cottenius).	Sensation.	Meckel's ganglion.	Mucosa of nose and mouth.	
Obturator.	Motion, sensation.	Second, third, and fourth lumbar nerves.	Obturator externus, adductors, joint, and skin.	Anterior, posterior, articular.
Occipital, third.	Sensation.	Third cervical.	Skin of occiput.	
Occipita'lis mi'nor.	Sensation.	Second cervical.	Skin behind ear, etc.	Communicating, articular.
Occipita'lis ma'jor or mag'nus.	Sensation, motion.	Second cervical.	Semispinalis capitis and multifidus cervicis.	
Oculomo'tor (third cranial).	Motion.	Floor of aquaeductus cerebri.	All muscles of eye except external rectus and superior oblique.	
Olfactory (first cranial).	Smell.	Olfactory bulb.	Nasal mucous membrane.	Twenty branches.
Ophthalmic.	Sensation.	Trigeminus.	Eyes, forehead, nose.	Lacrimal, frontal, nasociliary, etc.
Optic (second cranial).	Sight.	Cortical center in occipital lobe.	Retina.	None.
Orbital.	Same as <i>Zygomatic</i> .			
Orbitotemporal.	Same as <i>Zygomatic</i> .			
Palatine, anterior.	Sensation.	Sphenopalatine ganglion.	Hard palate, upper gum, etc.	Two inferior nasal.
Palatine, external.	Sensation.	Sphenopalatine ganglion.	Tonsil and soft palate.	
Palatine, posterior.	Motion.	Sphenopalatine ganglion.	Levator palati and azygos uvulae.	
Palpebral.	Sensation.	Superior maxillary.	Lower lid.	
Parotid.	Sensation, vasodilation.	Auriculotemporal.	Parotid gland.	
Patellar cutaneous.	Sensation.	Long saphenous.	Skin over patella and plexus patellae.	
Patheticus (fourth cranial).	Same as <i>Trochlear</i> .			
Perforating (of Casser).	See <i>Musculocutaneous</i> .			
Perineal.	Sensation and motion.	Pudendal.	Perineum, genitalia, muscles, and skin of perineum.	Muscular and cutaneous.
Peroneal, common.	Motion and sensation.	Sciatic.	Knee joint, extensors of foot, fascia, skin.	Superficial and deep peroneal.
Peroneal, deep.	Motion and sensation.	Common peroneal.	Anterior tibial, extensor proprius hallucis, extensor longus digitorum, peroneus tertius, skin of toes.	Articular, muscular, cutaneous, recurrent.
Peroneal, superficial.	Motion and sensation.	Common peroneal.	Peroneal muscles, skin of dorsum of foot and toes.	
Petrosal, large, superficial.		Facial.	To Meckel's ganglion and Vidian nerve.	
Petrosal, small, deep.		Tympanic branch of eighth.	Carotid plexus.	
Petrosal, small, superficial.		Facial.	Otic ganglion.	
Petrosal, superficial.	Sensation and motion.	Common peroneal.	Peroneal muscles, skin of foot and toes.	
Pharyngeal (three or four).	Sensation and motion.	Glossopharyngeal.	Mucosa and muscles of pharynx.	To pharyngeal plexus.

NERVES

Anterior Cutaneous Nerves of Shoulder and Arm: 1, 1, Supraclavicular nerves from cervical plexus; 2, 2, cutaneous branches of axillary nerve; 3, 4, upper branches of lateral brachial cutaneous nerve; 5, posterior cutaneous branch of musculospiral; 6, medial cutaneous nerve; 7, its posterior branches; 8, communicating twig with one of anterior branches; 9, 10, anterior branches of this nerve; 11, musculocutaneous nerve; 12, lower external cutaneous branch of musculospiral nerve.

Deep View of Anterior Nerves of Shoulder and Arm: 1, Musculocutaneous nerve, giving off; 2, branch to coracobrachialis muscle; 3, branch to biceps; 4, branch to brachialis anticus; 5, communicating branch from median to musculocutaneous nerve; 6, continuation of the nerve to its cutaneous distribution; 7, radial nerve; 8, inferior external cutaneous branch of radial; 9, large and small internal cutaneous nerve divided; 10, anterior branch of internal cutaneous; 11, median nerve; to the inner side of this the ulnar nerve is crossed by line from 11.

NERVES

Anterior Cutaneous Nerves of Forearm and Hand: 9, 10, 13, Distribution of anterior division of medial cutaneous nerve; 14, union of one of these with a twig of ulnar nerve; 15, distribution of lateral cutaneous nerve; 16, union of one of its branches with 17, radial nerve; 18, volar cutaneous branch of median nerve; 19, 20, internal and external digital branches from median nerve; 21, external digital to the index finger; 22, 23, digital branches to index, middle, and ring fingers; 24, 25, digital branches from ulnar nerve to ring and little fingers.

Deep View of Anterior Nerves of Forearm and Hand: 12, Median nerve; 13, its branch to pronator teres; 14, branch to superficial flexor muscles; 15, branch to flexor profundus digitorum; 16, branch to flexor longus pollicis; 17, anterior interosseous nerve; 18, volar cutaneous branch cut short; 19, branch to short muscles of thumb; 20, 21, digital branches to thumb; 22, 23, 24, third, fourth, and fifth digital branches; 25, branch from ulnar nerve to flexor carpi ulnaris; 26, branch to flexor profundus digitorum; 27, cutaneous twig; 28, dorsal branch of ulnar; 29, superficial palmar portion; 30, 31, digital branches to ring and little fingers; 32, deep volar branch; 33, its branch to short muscles of little finger; 34, 35, 36, twigs given by deep branch of ulnar to third and fourth lumbricals, all the interosseous muscles, and the adductors of thumb.

A TABLE OF THE NERVES—Continued.

NERVE.	FUNCTION.	ORIGIN.	DISTRIBUTION.	BRANCHES.
Pharyngeal.	Motion and sensation.	Vagus.	Pharynx and soft palate.	Pharyngeal plexus, muscles, and mucosa.
Pharyngeal.	Vasomotion.	Sympathetic.	Pharynx.	To pharyngeal plexus.
Phrenic.	Sensation and motion.	Third, fourth, and fifth cervical.	Pericardium, pleura, diaphragm.	
Plantar, external or lateral.	Sensation and motion.	Tibial.	Deep muscle of foot; little toe.	Deep and superficial.
Plantar, internal or medial.	Sensation and motion.	Tibial.	Adductor pollicis, flexor brevis digitorum, toes, sole.	Cutaneous, articular, muscular, digital.
Pneumogastric (tenth cranial, "par vagum").	See <i>Vagus</i> .			
Popliteal, external.	Same as <i>Peroneal</i> , common.			
Popliteal, internal.	Same as <i>Tibial</i> .			
Pterygoid, external.	Motion.	Buccinator.	External pterygoid muscle.	
Pterygoid, internal.	Motion.	Buccinator.	Internal pterygoid muscle.	
Pudendal, long (nerve of Soemmering).	Sensation.	Small sciatic.	Skin of genitalia.	
Pudendal or pudic.	Sensation and motion.	Sacral plexus.	Perineum, sphincter of anus, genitalia.	Inferior hemorrhoidal, perineal, cutaneous, dorsalis penis.
Pulmonary (anterior and posterior).	Sensation.	Vagus.	Lungs.	To pulmonary plexuses.
Radial.	Sensation and motion.	Posterior cord of brachial plexus.	Back of arm and forearm, skin of back of hand.	
Radial (superficial).	Sensation.	Radial.	Thumb, three fingers.	External, internal.
Recurrent.	Motion.	Vagus.	Muscles of larynx, larynx, etc.	Esophageal, tracheal, cardiac.
Saccular.	Audition.	Cochlear.	Macula acustica.	
Sacral (five).	Motion and sensation.	Spinal cord.	Multifidus spinæ, skin, gluteal region, leg, foot.	Filaments and sacral plexus.
Saphenous, external or short.	Same as <i>Sural</i> .			
Saphenous, long or internal.	Sensation.	Femoral.	Knee, ankle, foot, leg.	Cutaneous, patellar, communicating, etc.
Scapular, posterior.	Same as <i>Dorsalis scapulae</i> .			
Of Scarpa.	See <i>Nasopalatine</i> .			
Sciatic (great).	Sensation and motion.	Sacral plexus.	Skin of leg, muscles of thigh, leg, and foot.	Articular, muscular, external, and popliteal, etc.
Sciatic (small).	Same as <i>Cutaneus femoris posterior</i> .			
Scrotal, anterior.	Sensation.	Ilio-inguinal.	Skin of root of penis and anterior surface of scrotum.	
Scrotal, posterior.		Perineal.	Skin of posterior portion of scrotum.	
Of Soemmering.	See <i>Pudendal</i> , long.			
Spermatic, external.	Sensation and motion.	Genitofemoral.	Cremaster muscle in male and round ligament in female.	
Sphenopalatine.	Sensation.	Maxillary.	Meckel's ganglion.	
Spinal.	Sensation and motion.	Spinal cord.	Trunk, neck, arms, leg.	
Spinal accessory (eleventh cranial).	Same as <i>Accessory</i> .			
Spinous.		Mandibular.	Dura mater.	
Splanchnic (great sympathetic).	Vasomotor.	Thoracic ganglia.	Semilunar ganglion, renal and suprarenal plexuses, abdominal organs.	Communicating and distributing.
Splanchnic (lesser sympathetic).	Vasomotor.	Tenth and eleventh thoracic ganglia, great splanchnic.	Celiac plexus and great splanchnic.	Communicating and filaments.
Splanchnic (lowest, renal or smallest, sympathetic).	Vasomotor.	Last thoracic ganglion.	Renal and celiac plexus.	Communicating and filaments.
Stapedial.	Motion.	Facial (tympanic).	Stapedius muscle.	
Stylohyoid.	Motion.	Facial.	Stylohyoid muscle.	
Subclavian.	Motion.	One of the anterior thoracic nerves.	Subclavius muscle.	

A TABLE OF THE NERVES—*Continued.*

NERVE.	FUNCTION.	ORIGIN.	DISTRIBUTION.	BRANCHES.
Sublingual.		Lingual.	Sublingual gland and mucous membrane of floor of mouth.	
Suboccipital.	Motion and sensation.	First cervical, posterior division.	Recti and oblique muscles, complexus, etc.	
Subscapular (upper, middle, lower).	Motion.	Brachial plexus.	Subscapular muscle.	
Superficialis colli.	Sensation.	Cervical plexus.	Skin of neck and chest.	
Supra-acromial.	Sensation.	Cervical plexus.	Skin over deltoid.	
Supraclavicular.	Sensation.	Third and fourth cervical.	Skin of neck and chest.	Sternal, clavicular, acromial.
Supramandibular.	See <i>Maxillary</i> .			
Supramaxillary.	See <i>Maxillary</i> .			
Supra-orbital.	Sensation.	Frontal.	Upper lid, forehead; pericranium.	Muscular, cutaneous, and the pericranial branches.
Suprascapular.	Sensation and motion.	Fifth and sixth cervical.	Scapular muscles, etc.	
Supratrochlear.	Sensation.	Frontal.	Upper eyelid, forehead.	Muscular, cutaneous.
Sural.	Sensation.	Common peroneal and tibial.	Dorsum of foot.	
Sympathetic.	See <i>System, sympathetic</i> .			
Temporal.	Sensation.	Orbital.	Skin over temporal muscle.	
Temporal, deep.	Motion.	Mandibular.	Temporal muscle.	
Temporal, superficial.	Sensation.	Auriculotemporal.	Skin over temporal fascia.	
Temporomalar.	See <i>Zygomatic</i> .			
Tensoris tympani.	Motion.	Otic ganglion.	Tensor tympani muscle.	
Tensoris veli palati.	Motion.	Otic ganglion.	Tensor palati muscle.	
Thoracic, posterior or long.	Motion.	Brachial plexus; fifth and sixth cervical.	Serratus magnus.	
Thoracic, spinal.	Sensation and motion.	Cord.	Muscles and skin of chest.	
Thoracics, anterior and exterior.	Motion.	Brachial plexus.	Pectoralis major and minor.	
Tibial.	Sensation and motion.	Sciatic.	Knee, muscles of calf, and skin of leg.	
Tibial, anterior.	Same as <i>Peroneal, deep</i> .			
Tiedeman's.	A plexus of nerve fibers around the central artery of the retina, derived from the ciliary nerves.			
Tonsillar.	Sensation.	Glossopharyngeal.	Fauces, tonsil, soft palate.	
Trigeminus or trifacial (fifth cranial).	Motion, sensation, taste.	Oblongata and floor of fourth ventricle.	Skin of face, tongue, and teeth.	Ophthalmic, maxillary and mandibular divisions.
Trochlear (fourth nerve).		Floor of aquaeductus cerebri.	Superior oblique muscle of lip.	Recurrent terminal.
Tympanic (<i>Jacobson's nerve</i>).	Sensation.	Glossopharyngeal.	Tympanum; fenestra rotunda and ovalis; eustachian tube.	Communicating, tympanic, and petrosal.
Ulnar.	Sensation and motion.	Inner cord of brachial plexus.	Muscles, shoulder joint, wrist joint, and skin of wrist, palm, and little finger.	Two articular, muscular, palmar, cutaneous, dorsal, superior palmar, deep palmar.
Utricular.	Hearing.	Vestibular.	Macula, acustica of utricle.	
Vaginal.		Pudendal plexus.	Vagina.	
Vagus (tenth cranial).	Sensation and motion.	By small cords from side of medulla oblongata.	Larynx, lungs, heart, esophagus, stomach, and most of abdominal viscera.	
Vesical.		Pudendal plexus.	Bladder.	
Vestibular.	Sensation.	Acoustic.	Utricle and ampullae of semicircular canals.	Superior, middle, inferior.
Vidian.	Same as <i>Canalis pterygoidei</i> .			
Of Willis.	See <i>Spinal accessory</i> .			
Wrisberg's.	Same as <i>Cutaneus brachii medialis</i> .			
Zygomatic.	Sensation.	Maxillary.	Skin of temporal and over malar bone.	

NERVES

NERVES

A.—*Cutaneous Nerves of Anterior and Inner Part of Thigh:* 1, Lateral cutaneous nerve; 2, 3, medial cutaneous; 4, filament to sartorius; 5, internal cutaneous nerve; 6, its anterior division; 7, one of its upper branches; 8, a cutaneous twig from the nerve to pectineus; 9, infrapatellar branch of saphenous nerve; 10, continuation of saphenous to leg.

B.—*Deep Nerves of Anterior and Inner Part of Thigh:* 1, Femoral nerve; 2, branches to iliacus muscle; 3, branch to psoas; 4, internal and middle cutaneous nerves; 5, 6, nerves to the pectineus; 7, cutaneous filament from the last; 8, posterior branch of the internal cutaneous nerve; 9, branch to rectus; 10, branch to vastus externus; 11, branch to vastus internus; 12, saphenous nerve; 13, its patellar branch; 14, its continuation to leg; 15, obturator nerve; 16, branch to adductor longus; 17, branch to adductor brevis; 18, branch to gracilis; 19, deep branch of obturator nerve to adductor magnus; 20, lumbosacral cord; 21, its union with first sacral nerve; 22, 22, lumbar and sacral parts of sympathetic nerve; 23, external cutaneous nerve.

C.—*Deep Posterior Nerves of Hip and Thigh:* 1, Superior gluteal nerve; 2, 2, 2, ramifications of inferior gluteal nerve; 3, pudendal nerve; 3, its farther course; 4, inferior pudendal; 5, points to the divided posterior cutaneous nerve of thigh; 6, sciatic nerve; 6', 6', some of its muscular branches to hamstrings; 7, tibial nerve; 7', its muscular or sural branches; 8, common peroneal nerve; 8', its external cutaneous branch; 9, medial sural cutaneous; 9', communicating peroneal branch to external saphenous (sural) nerve.

Cutaneous Nerves of Outer Side of Leg and Foot: 1, Common peroneal nerve; 2, its lateral cutaneous branch; 3, peroneal communicating branch which unites with 4, the medial sural cutaneous in 5, the external saphenous (sural) nerve; 6, calcaneal branch of sural; 7, external dorsal digital branch of fifth toe; 8, dorsal digital branch of fourth and fifth toes; 9, 9, superficial peroneal nerve; 10, 10, its two divisions; 11, union with external saphenous; 12, communication between outer and inner branches; 13, deep peroneal nerve; 14, its inner terminal branch; 15, recurrent articular nerve.

Distribution of Branches of Common Peroneal Nerve on Front of Leg and Dorsum of Foot: 1, Common or peroneal nerve; 1', its recurrent articular branches; 2, 2, superficial peroneal; 2', 2', twigs to long and short peroneal muscles; 3, 3', internal branch of superficial peroneal (sural) nerve, uniting at two places with outer branch of superficial peroneal; 4, 4', 4', its external branch; 5, external branch of superficial peroneal; 5', its branch to the outer side of the fifth toe; 6, deep peroneal nerve; 6', 6', its muscular branches in leg; 6'', of the deep peroneal nerve after it has passed into the foot; 7, its inner branch uniting with a twig of the superficial peroneal and giving the dorsal digital nerves; 8, distribution of its outer branch to extensor digitorum brevis and tarsal articulations.

cavity, the pulp cavity of a tooth. **n. cell**, any cell of the nervous system, especially a ganglion cell or one of the special cells of nerve centers; a neuron or neurodendron. A nerve cell is an ovoid, pear-shaped, or polygonal mass of protoplasm, containing a spherical nucleus, and giving off one axis-cylinder process (*neurite, neuraxon, axon, Delters' process*, etc.) and several branching protoplasmic processes (*dendrites or cytodendrites*). According to the number of protoplasmic processes given off, cells are distinguished as *unipolar, bipolar, or multipolar*. Nerve cells are of two types. Those of the first type have an axis-cylinder which is continuous with the axis-cylinder of a nerve fiber. In cells of the second type the axis-cylinder process (*dendraxone*) does not extend into the white matter, but, remaining in the white substance, eventually undergoes division into a mass of delicate fibrillae (*neuropodia or telodendrons*). In both types delicate *collateral branches (axodendrites)* are given off from the axis-cylinder processes. The protoplasmic processes, or dendrites, end in arborizations of treelike, branching terminations, known as *end-branches, or telodendrons*. **n. center**, any group of cells of gray nerve substance having a common function. **centrifugal n.**, any nerve which carries impulses to the periphery. **centripetal n.** Same as *afferent n.* **cranial n.**, any peripheral nerve connected with the brain. The cranial nerves are arranged in twelve pairs. **crotaphitic n.**, the upper maxillary portion of the fifth cerebral nerve. **cubital n.**, the ulnar nerve. **depressor n. 1.** Any afferent nerve whose stimulation depresses a motor center. **2.** A nerve which lowers the activity of an organ. **effluent n., exodic n.** Same as *centrifugal n.* **eighth n.**, the auditory nerve. See *table of nerves*. **eleventh n.**, the spinal accessory nerve. **n. ending**, any terminus of a nerve, especially if peripheral. **esodic n.** Same as *afferent n.* **exciter n.**, a nerve which transmits stimuli that increase functional activity. **excito-reflex n.**, a visceral nerve which produces reflex action. **fifth n.**, the trigeminus. See *table of nerves*. **first n.**, the olfactory nerve. See *table of nerves*. **fourth n.**, the trochlear nerve. See *table of nerves*. **frigorific n.**, the sympathetic nerve, stimulation of which lowers the temperature. **furcal n.** [*L. fur'ca* fork], the fourth lumbar nerve; so called because it is divided between the lumbar and the sacral plexus. **gangliated n.**, any nerve of the sympathetic system. **n. grafting**, the replacement of a piece of defective nerve by a segment from a sound one. **inhibitory n.**, any nerve whose stimulation lowers or inhibits the activity of an organ or center. **intermediary n. 1.** The lesser internal cutaneous nerve. **2.** The smaller of the two roots of the seventh cranial nerve. Called also *nerve of Wrisberg, pars intermedia facialis, and portio intermedia facialis*. **mixed n.**, one which is both sensory and motor. **motor n.**, one which contains wholly or chiefly motor fibers. **ninth n.**, the glossopharyngeal nerve. See *table of nerves*. **pain n.**, a sensory nerve whose function is the conduction of painful stimuli. **peroneal n.**, the common peroneal nerve is the external popliteal nerve; deep peroneal nerve is the same as the anterior tibial nerve; the superficial peroneal nerve is the same as the musculocutaneous nerve. **pressor n.**, any afferent nerve whose irritation stimulates a vasomotor center and increases intravascular tension. **Scarpa's n.**, the nasopalatine nerve. **second n.**, the optic nerve. See *table of nerves*. **secretory n.**, any efferent nerve whose stimulation increases vascular activity. **sensory n.**, a peripheral nerve which conducts afferent impulses from a sense organ to the spinal cord or brain; an afferent nerve. **seventh n.**, the facial nerve. See *table of nerves*. **sixth n.**, the abducens nerve. See *table of nerves*. **somatic n's**, the sensory and motor nerves. **Soemmering's n.**, the long pudendal nerve. **space n's**, fibers of the audi-

tory nerve going to the semicircular canals. **spinal n.**, any nerve which makes its exit from the vertebral column. **splanchnic n's**, the nerves of the blood vessels and viscera; in man they arise from the thoracic ganglia of the sympathetic. **n. storm**, a sudden outburst of nervous disorder. **n. stretching**, the stretching of a nerve, chiefly to relieve pain. **sympathetic n.**, one of the nerves of the sympathetic nervous system. See *sympathetic system, under system*. **tenth n.**, the vagus nerve. See *table of nerves*. **thermic n.** Same as *calorific n.* **third n.**, the oculomotor nerve. See *table of nerves*. **thoracodorsal n.**, the middle subscapular nerve. **Tiedemann's n.**, a plexus of nerve fibrils around the central artery of the retina, arising from the ciliary nerves. **n. tire**. Same as *neurasthenia*. **triplanchnic n.**, the sympathetic nerve; a general name for the nerves of the sympathetic system. **trophic n.**, one which aids in regulating nutrition. **twelfth n.**, the hypoglossal nerve. **vasoconstrictor n.**, one whose stimulation contracts blood vessels. **vasodilator n.**, one whose stimulation dilates blood vessels. **vasomotor n.**, any nerve concerned in controlling the caliber of vessels, whether as a vasodilator or a vasoconstrictor. **vasosensory n.**, any nerve supplying sensory filaments to the vessels. **Wrisberg's n.** See *intermediary n.*

nervi (ner'vi) [pl. of *L. ner'vus* nerve]. Nerves. **n. erigentes** [*L. 'erecting nerves'*], minute nerve fibers going to the rectum, bladder, and genital organs from the second and third sacral nerves. **n. nervo'rum**, nerve filaments going to the nerves and nerve sheaths. **n. vaso'rum**, the nerves that supply the blood vessels. They are located in the sheath of the vessels.

nervimotility (ner'vim-o-til'ti-e). Susceptibility to nervimotion.

nervimotion (ner-vim-o'shun). Motion effected through the agency of a nerve.

nervimotor (ner-vi-mo'tor). Pertaining to a motor nerve.

nervimuscular (ner-vi-mus'ku-lar). Pertaining to the nerve supply of muscles.

nervine (ner'vin). **1.** Affecting the nerves; allaying nervous excitement. **2.** A remedy for nervous disorders; a nerve tonic. **3.** A therapeutical preparation of the gray substance of the brains of sheep. **4.** A proprietary remedy for gout, rheumatism, and neuralgia.

nervitone (ner'vit-on). A proprietary preparation of phosphorus, iron, asafetida, sumbul, and nux vomica.

nervocidine (ner-vo-si'din) [*L. ner'vus* nerve + *ca'e'dere* to kill]. An alkaloid from the Indian plant, gasu-basu. It is a powerful local anesthetic and is used in dentistry.

nervol (ner'vol). A sedative preparation claimed to be sodium-vanadium citrochloride and lithium bromide: used in hysteria.

nervomuscular (ner-vo-mus'ku-lar). Same as *nervimuscular*.

nervosin (ner'vo-sin). A proprietary mixture of reduced iron with valerian and aromatics: for neurasthenia and hysteria. Dose, 4-8 grains (0.25-0.5 Gm.), in a pill.

nervosism (ner'vo-sizm). **1.** Neurasthenia. **2.** The theory that disease is dependent on variations in nerve force.

nervosity (ner-vos'it-e). Morbid nervousness.

nervous (ner'vus) [*L. ner'vus*]. **1.** Pertaining to a nerve or to nerves. **2.** Unduly excitable. **n. system**. See *under system*.

nervousness (ner'vus-nes). Morbid or undue excitability; a state of excessive irritability, with great mental and physical unrest.

nervus (ner'vus), pl. *ner'vi*. Latin for nerve.

- nesain** (nes'a-in). A yellowish powder, a compound of arsenic and protein, used hypodermically in a 10 per cent solution in cancer.
- Nessler's reagent** (nes'lerz) [German chemist, born 1827-1905]. See *reagent*.
- nesslerization** (nes-ler-iz-a'shun). Treatment with Nessler's reagent.
- nesslerize** (nes'ler-iz). To treat with Nessler's reagent.
- neosteotomy** (nes-te-os'to-me) [*neōstis* + *στόμα* mouth]. Operation of forming a permanent opening into the jejunum through the abdominal wall.
- nestiatria** (nes-ti-a'tre-ah). See *hunger cure*.
- neostiostomy** (nes-te-os'to-me) [*νήστις* jejunum + *στόμα* mouth]. Jejunostomy.
- nestis** (nes'tis) [*νήστις*]. An old name for the jejunum.
- nestithrapy** (nes-te-ther'ap-e). Nestotherapy.
- nestotherapy** (nes-to-ther'ap-e) [*νήστις* hunger + *therapy*]. Hunger cure; the therapeutical use of fasting or of a restricted diet.
- nests, Brunn's epithelial**. Solid or branched clusters of cells occurring in the healthy ureter. Called also *cell nest*. **cancer n's**, masses of concentrically arranged cells seen in cancerous growths.
- net, achromatic**. The network within the cell which does not stain with dyes. **chromidial n.**, a network of chromatin staining material in the protoplasm of certain cells. It has the properties of active nuclear material.
- net knot** (net not). One of the larger masses of chromatin of a cell nucleus which appear to be merely thickened portions of the chromatic network; a karyosome.
- Ne tr. s. num.** Abbreviation for L. *ne tr'a das si'ne num'mo*, do not deliver unless paid.
- nettle** (net'l). See *Urtica*.
- nettle rash** (net'l rash). See *urticaria*.
- network** (net'werk). A rete, reticulum, or retiform structure; also a mitome. **cell n.** Same as *mitoma*. **Chiari's n.**, a network of fine fibers which sometimes extend across the interior of the right auricle of the heart. **Gerlach's n.**, an apparent (but not real) interlacement of the dendritic processes of the ganglion cells of the spinal cord. **n. of Gessest**, a reticular appearance sometimes seen on the myelin sheath, perhaps artificial. **neurofibrillar n.**, the network formed by the neurofibrils of a nerve cell. **peritarsal n.**, a set of lymphatics in the eyelid. **Purkinje's n.**, a reticulation of immature muscle fibers in the subendocardial tissue of the ventricles of the heart. **subpapillary n.**, the layer of capillaries underlying the skin.
- neu** (nu). Same as *neurilemma*.
- Neubauer's artery** (noi'bow-erz) [Johann Ernst Neubauer, German anatomist, 1742-1777]. The deep thyroid artery.
- Neumann's cells, sheath** (noi'manz) [Ernst Neumann, German pathologist, 1834-1918]. See under *cell* and *sheath*.
- Neumann's disease** (noi'manz) [Isador Neumann, dermatologist in Vienna, 1832-1906]. Pemphigus vegetans.
- Neumann's law** (noi'manz) [Franz Ernst Neumann, German physicist, 1798-1895]. See under *law*.
- neuracatin** (nu-ras'et-in). A proprietary analgesic compound allied to phenacetin.
- neurad** (nu'rad). Toward a neural axis or aspect.
- neuradynamia** (nu'rad-in-a'me-ah) [*νεῦρον* nerve + a priv. + *δύναμις* power]. Same as *neurasthenia*.
- neuragmia** (nu-rag'me-ah) [*νεῦρον* nerve + *ἀγμός* break]. The tearing of a nerve trunk from its ganglion.
- neural** (nu'al) [L. *neurālis*; *νεῦρον* nerve]. Pertaining to a nerve or to the nerves.
- neuralgia** (nu-ral'je-ah) [*νεῦρον* nerve + *ἄλγος* pain]. Pain in a nerve or in nerves, or radiating along the course of a nerve; a name applied to pain, which may result from any one or more of a great variety of morbid conditions. Neuralgic pain is of a severe darting or throbbing character, intermittent, and is attended by sensitiveness of the skin and by the presence of tender points (*puncta dolorosa*) where the cutaneous branches of the nerve are given off from the deeper parts. Many varieties of neuralgia are distinguished according to the part affected or to the cause, as bronchial, facial, occipital, supra-orbital, etc., and anemic, diabetic, gouty, malarial, syphilitic, etc. **cardiac n.**, angina pectoris. **degenerative n.**, that which occurs in persons of advanced age, and is marked by signs of degeneration in the central nervous system. **epileptiform n.**, tic douloureux. **n. facialis vera**, geniculate neuralgia. **geniculate n.**, neuralgia involving the geniculate ganglion which is the sensory mechanism of the facial nerve. The pain is limited to the middle ear and the auditory canal. It is called also *geniculate otalgia*, *Hunt's n.*, and *n. facialis vera*. **hallucinatory n.**, a mental impression of pain without any actual peripheral pain. **Hunt's n.**, geniculate neuralgia. **idiopathic n.**, neuralgia that is not accompanied by any structural change. **intercostal n.**, neuralgia of the intercostal nerves causing pain in the side. **mammary n.**, neuralgic pain in the breast. **Morton's n.**, neuralgia in the metatarsophalangeal joint of the third and fourth toes. It is caused by slight dislocation producing pressure on the digital branch of the external plantar nerve. **nasociliary n.**, pain in the eyes, brow, and root of the nose. **otic n.**, geniculate neuralgia. **red n.**, erythromelalgia. **reminiscent n.**, a mental impression of neuralgic pain persisting after the actual pain has ceased. **sciatic n.**, sciatica. **Sluder's n.**, neuralgia of the sphenopalatine ganglion, causing a burning and boring pain in the area of the superior maxillary and a radiation of the pain into the neck and shoulder. **stump n.**, neuralgia in the seat of an amputation. **supra-orbital n.**, neuralgia of the supra-orbital nerve. **symptomatic n.**, neuralgia in which there is slight structural change.
- neuralgic** (nu-ral'jik). Pertaining to or of the nature of neuralgia.
- neuralgiform** (nu-ral'je-form). Like neuralgia.
- neuralgin** (nu-ral'jin). A proprietary mixture of caffeine, acetanilid, and sodium salicylate: antirheumatic. Dose, 8-45 grains (0.5-3 Gm.).
- neuralthein** (nu-ral'the'in). Sodium paraethyl-oxyphenyl aminomethane, $C_2H_5O.C_6H_4.NH.CH_2.SO_2.ONa$: used as a febrifuge. Dose, 4-8 grains (0.25-0.5 Gm.).
- neuralward** (nu'ral-ward). Same as *neurad*.
- neuramebimeter** (nu'ram-e-bim'et-er) [*νεῦρον* nerve + *ἀνοδοί* response + *μέτρον* measure]. An instrument for measuring the reaction time of the nerves.
- neuranagenesis** (nu'ran-ah-jen'es-is) [*νεῦρον* nerve + *ἀναγεννᾶν* to regenerate]. Regeneration or renewal of nerve tissue.
- neurangiosis** (nu'ran-je-o'sis) [*νεῦρον* nerve + *ἄγγειον* vessel]. A neurosis of the blood vessels.
- neurapophysis** (nu-rap-of'is-is) [*νεῦρον* nerve + *ἀποφύσις*]. The structure forming either side of the neural arch; also the part supposedly homologous with the above in a so-called cranial vertebra.
- neurarchy** (nu'rar-ke) [*νεῦρον* nerve + *ἀρχή* rule]. The control of the cerebrospinal system over the body.
- neurarthropathy** (nu-rar-throp'ath-e). Joint disease combined with disease of the nerves.

neurasthenia (nu-rās-the'ne-ah, nu''ras-the-ni'ah) [*νεῦρον* nerve + *ἀσθένεια* debility]. Nervous prostration; a nervous disorder characterized by abnormal fatigability. The name for a group of symptoms resulting from some functional disorder of the nervous system, with severe depression of the vital forces. It is usually due to prolonged and excessive expenditure of energy, and is marked by tendency to fatigue, lack of energy, pain in the back, loss of memory, insomnia, constipation, loss of appetite, etc. **acoustic n.**, neurasthenia marked by deafness of varying degrees. **adrenal n.**, neurasthenia due to defective or disordered adrenal activity. **angioparalytic n.**, **angio-pathic n.**, a condition in neurasthenic patients in which there is a constant sense of the pulse beat. **cardiac n.** See *cardioneurosis*. **cardio-vascular n.**, phrenocardia. **cerebral n.**, a variety characterized by mental and visual disturbances and other head symptoms. **gastric n.**, a form characterized by functional stomach complications. **n. gra'vis**, a severe form of neurasthenia with great exhaustion on the slightest exertion. **grippal n.**, neurasthenia occurring as a sequel of influenza. **obsessive n.**, psychasthenia. **optic n.**, neurasthenia attended with contraction of the field of vision. **n. prae'cox**, neurasthenia occurring during adolescence. **prostatic n.**, a neurasthenic condition due to prostatic hyperemia and hyperesthesia. **pulsating n.** Same as *angioparalytic n.* **n. pu'ta**, true neurasthenia. **sexual n.**, a variety associated with disorders of the sexual function. **spinal n.**, neurasthenia with marked spinal cord symptoms. **traumatic n.**, neurasthenia following shock or injury; accident neurosis.

neurastheniac (nu-ras-the'ne-ak). A person suffering from neurasthenia.

neurasthenic (nu-ras-the'n'ik). Pertaining to or affected with neurasthenia.

neurataxia, neurataxy (nu-rat-aks'e-ah, nu'rat-aks-e) [*νεῦρον* nerve + *ataxia*]. Neurasthenia.

neuratrophia, neuratrophy (nu-rat-ro'fe-ah, nu'rat-ro-fe) [*νεῦρον* nerve + *ἀτροφία* atrophy]. Impaired nutrition of the nervous system.

neuratrophic (nu-rat-rof'ik). 1. Characterized by atrophy of the nerves. 2. A person affected with atrophy of the nerves.

neuraxial (nu-raks'e-al). Pertaining to the neuraxis.

neuraxis (nu-raks'is) [*νεῦρον* nerve + *ἄξίς* axis]. 1. An axis-cylinder process. See *axon*. 2. The cerebrospinal axis.

neuraxitis (nu-rak-si'tis) [*νεῦρον* nerve + *ἄξίς* axis + *itis* inflammation]. Encephalitis. **epi-demic n.**, epidemic encephalitis.

neuraxon (nu-raks'on) [*νεῦρον* nerve + *ἄξων* axis]. Any axis-cylinder process. See *axon*.

neure (nūr). A nerve cell with all its processes; a neuron.

neurectasia, neurectasis, neurectasy (nu-rek-ta'ze-ah, nu-rek-tas-is, nu-rek-tas-e) [*νεῦρον* nerve + *ἔκτασις* stretching]. The surgical stretching of a nerve.

neurectomy (nu-rek'to-me) [*νεῦρον* nerve + *ἐκτομή* excision]. The excision of a part of a nerve. **optociliary n.**, excision of the optic and ciliary nerves.

neurectopia, neurectopy (nu-rek-to'pe-ah, nu-rek-to-pe) [*νεῦρον* nerve + *ἐκτοπος* out of place]. Displacement of a nerve or abnormal situation of a nerve.

neurenergen (nu-ren'er-jen) [*νεῦρον* nerve + *ἔργον* work + *γενῆναι* to produce]. A substance which, it is supposed, is absorbed by the neurons from the bodily fluids and serves to maintain their energy.

neurenteric (nu-ren-ter'ik) [*νεῦρον* nerve + *ἐντερὸν* bowel]. Pertaining to the medullary tube of the embryo and to the archenteron.

neurepithelial (nu-rep-e-the'le-al). Pertaining to neurepithelium.

neurepithelium (nu-rep-e-the'le-um) [*νεῦρον* nerve + *ἐπιθήμιον*]. 1. The epithelium forming the nerve terminations of the organ of Corti and the retina. 2. The epiblast, which becomes the cerebrospinal axis.

neurgic (nu-rer'jik) [*νεῦρον* nerve + *ἔργον* work]. Pertaining to or dependent on nerve action.

neurexairesis (nu'rek-si-re'sis) [*νεῦρον* nerve + *ἐξαίρειν* to extract]. Operation of tearing out nerves.

neurhypnology (nūr-hip-nol'o-je). Same as *neurhypnology*.

neuriatry (nu-ri'at-re) [*νεῦρον* nerve + *ιατρία* medication]. The treatment of nervous diseases.

neuricity (nu-ris'it-e) [*νεῦρον* nerve]. The specific energy peculiar to the nervous system.

neuridin (nu'rid-in). Spermine isolated from fresh human brain.

neurilemma (nu-ri-em'ah) [*νεῦρον* nerve + *λέμμα* sheath]. The thin membranous outer covering surrounding the myelin sheath of a nerve fiber or the axis-cylinder of a nonmedullated nerve fiber. Called also *primitive sheath*, *sheath of Schwann*, and *nucleated sheath*. See under *nerve*.

neurilemmitis (nu'ri-em-i'tis). Inflammation of the neurilemma.

neurility (nu-ri'it-e). The sum of the attributes and functions of nerve tissue.

neurilla (nu-ri'ah). A proprietary nerve tonic said to contain scutellaria.

neurimotility (nu'ri-mo-til'it-e). See *nervimotility*.

neurimotor (nu-rim-o'tor). Same as *nervimotor*.

neurin (nu'rin) [*νεῦρον* nerve]. 1. The most important of the albuminoid constituents of the nervous tissues. 2. A poisonous ptomaine, vinyl trimethyl ammonium hydroxide, $\text{CH}_2\text{CH.N.-(CH}_2)_3\text{OH}$, found in decaying fish, fungi, etc., and produced by the decomposition of protagon. 3. A therapeutical extract of nerve tissue. Neurin has been strongly recommended as an injection in treatment of cancer.

neurinoma (nu-rin-o'mah) [*νεῦρον* nerve + *-ωμα* tumor]. A benign tumor of a nerve originating in the sheath of Schwann and composed of glia tissue.

neurinomatosiis (nu'rin-o-mat-o'sis). Same as *neurinoma*.

neurin-tuberculin (nu'rin-tu-ber'ku-lin). A solution of tuberculin in neurin.

neurit, neurite (nu'rit, nu'rit'). Any axis-cylinder process from a nerve cell; a neuron.

neuritic (nu-rit'ik). Pertaining to or affected with neuritis.

neuritis (nu-ri'tis). Inflammation of a nerve. The condition is attended by pain and tenderness over the nerves, anesthesia, disturbances of sensation, paralysis, wasting, and disappearance of the reflexes. **adventitial n.**, that which affects the sheath of a nerve. **alcoholic n.**, a form due to alcoholism. **ascending n.**, that which progresses centrad or centripetally toward the brain or spinal cord. **axial n.**, inflammation of the central part of a nerve. **central n.**, parenchymatous neuritis. **degenerative n.**, neuritis in which there is degeneration of the proper nerve substance. **descending n.**, that which progresses centrifugally or away from the brain and spinal cord. **diabetic n.**, that which is associated with diabetes. **diphtheritic n.**, a form resulting from diphtheria. **disseminated n.**, parenchymatous neuritis. **Eich-horst's n.**, neuritis fascians. **endemic n.** See *beriberi*. **facial n.**, Bell's palsy. **fallopian n.**, neuritis of the facial nerve in the fallopian canal.

n. fas'cians, neuritis in which the lesions of the nerve sheath seem to affect also the interstitial tissue of the muscles. Called also *Eichhorst's n.*
interstitial n., inflammation of the connective tissue of a nerve trunk. **intra-ocular n.**, neuritis of the retinal part of the optic nerve. **leprous n.**, a form associated with true leprosy. **Leyden's n.**, lipomatous neuritis. **lipomatous n.**, that in which the nerve fibers are destroyed and a fatty connective tissue takes their place. **lymphatic n.** See *mesoneuritis*. **malarial n.**, a form due to malarial poisoning. **malarial multiple n.**, a disease endemic in Jamaica. **n. mi'grans, migrating n.**, a form which ascends one nerve to a center and then descends another nerve. **multiple n.**, that which affects several nerves at once. It is due to various causes, especially to alcoholic or other poisoning, to diphtheria, pneumonia, and other infectious diseases. See *polyneuritis*. **n. nodo'sa**, a form characterized by the formation of nodes on the nerves. **optic n.**, inflammation of the optic nerve. It may affect the part of the nerve within the eyeball (*papillitis*) or the portion behind the eyeball (*retrobulbar n.*). **parenchymatous n.**, neuritis affecting principally the medullary substance and axis-cylinders of the central nervous system (cerebral cortex): called also *central n.* **peripheral n.**, inflammation of the nerve endings or of terminal nerves. **postfebrile n.**, that which mostly follows an attack of severe exanthematous disease. **postocular n.**, retrobulbar optic neuritis. **pressure n.**, a form due to compression. **n. puerperalis traumatica**, traumatic maternal birth paralysis. **retrobulbar n.** See *optic n.* **rheumatic n.**, a form associated with rheumatic symptoms. **sciatic n.** Same as *sciatica*. **segmental n.**, **segmentary n.**, parenchymatous neuritis existing in segments which are separated by portions of nearby healthy nerves. **senile n.**, a form that attacks the legs and feet of aged people. **sympathetic n.**, that form which involves an opposite nerve without invading a nerve center. **tabetic n.**, a form associated with locomotor ataxia. **toxic n.**, that which is due to some poison. **traumatic n.**, that which is caused by an injury.

neuro-amebiasis (nu''ro-am-e-bi'as-is). Neuritis due to amebic dysentery.

neuro-anatomy (nu''ro-an-at-o-me) [*νεῦρον* nerve + *anatomy*]. The anatomy of the nervous system.

neuro-arthritis (nu-ro-ar-thrit-izm). The nervous and gouty diathesis.

neuro-arthropathy (nu''ro-ar-throp'ath-e) [*νεῦρον* nerve + *ἄρθρον* joint + *πάθος* disease]. Any disease of joint structures associated with disease of the central nervous system.

neurobiology (nu''ro-bi-o'-o-je). The biology of the nervous system.

neurobion (nu-ro-bi'on) [*νεῦρον* nerve + *bios* life]. 1. Any one of the delicate granules filling the nerve cells. 2. Any one of the hypothetical ultramicroscopic particles of living matter concerned in the regeneration of nerves.

neurobiotaxis (nu''ro-bi-o-taks'is) [*νεῦρον* nerve + *biotaxis*]. The tendency of cell bodies during development to migrate in the direction from which they habitually receive their stimuli.

neuroblast (nu''ro-blast) [*νεῦρον* nerve + *βλαστός* germ]. Any embryonic cell from which nervous tissue is formed; an immature nerve cell.

neuroblastoma (nu''ro-blas-to'mah). A tumor consisting of cells which tend to differentiate into nerve cells. Called also *neurocytoma*. **n. sympath'icum, n. sympatheticum**, a tumor of sympathetic nerve cell origin located in the adrenals.

neurocaine (nu-ro-ka'in). Billets of cocaine hydrochloride containing $\frac{1}{2}$ grain (0.005 Gm.) each. Used for pressure anesthesia and in dental practice.

neurocanal (nu-ro-kan-al') [*νεῦρον* nerve + *canal*]. The central canal of the spinal axis.

neurocardiac (nu-ro-ka'r'de-ak) [*νεῦρον* nerve + *καρδία* heart]. Pertaining to the nervous system and the heart.

neurocele (nu-ro-sēl) [*νεῦρον* nerve + *κοῖλον* hollow]. The ventricles of the brain and the central canal of the cord taken together.

neurocentrum (nu-ro-sen'trum). One of the embryonic vertebral elements from which the spinous processes of the vertebrae are developed.

neuroceptor (nu''ro-sep-tor) [*νεῦρον* nerve + *L. cap'ere* to take]. One of the terminal elements of a dendrite which receives the stimulus from the neuromittor of the adjoining neuron. Called also *ceptor*.

neuroceratin (nu-ro-ser'at-in). Neurokeratin.

neurochitin (nu-ro-ki'tin) [*νεῦρον* nerve + *χίτων* tissue]. The substance that forms the framework support of nerve fibers.

neurochondrite (nu-ro-kon'drit) [*νεῦρον* nerve + *χόνδρος* cartilage]. One of the embryonic cartilaginous elements which develop into the neural arch of a vertebra.

neurochondrous (nu-ro-kon'drus) [*νεῦρον* nerve + *χόνδρος* cartilage]. Fibrocartilaginous.

neurochorioretinitis (nu''ro-ko're-o-ret-in'i'tis) [*νεῦρον* nerve + *chorioretinitis*]. Inflammation of the optic nerve, choroid, and retina.

neurochoroiditis (nu''ro-ko-roid-i'tis). Inflammation of the choroid coat and ciliary nerves.

neurocirculatory asthenia (nu-ro-cir'cu-la-to-re). See under *asthenia*.

neuroclonic (nu-ro-klon'ik) [*νεῦρον* nerve + *κλόνος* spasm]. Characterized by nervous spasms.

neurocranial (nu-ro-kra'ne-al). Pertaining to the neurocranium.

neurocranium (nu-ro-kra'ne-um). The portion of the cranium which encloses the brain.

neurocrine (nu''ro-krin) [*νεῦρον* nerve + *κρίνειν* to secrete]. Noting an endocrine influence on the nerves.

neurocyte (nu''ro-sit) [*νεῦρον* nerve + *κύτος* cell]. A nerve cell of any kind; a neuron.

neurocytoma (nu''ro-si-to'mah). Neuroblastoma.

neurodealgia (nu-ro-de-al'je-ah) [*νευρώδης* retina + *ἄλγος* pain]. Pain in the retina.

neurodeatrophia (nu-ro'de-at-ro'fe-ah) [*νευρώδης* retina + *atrophia*]. Retinal atrophy.

neurodegenerative (nu''ro-de-jen'er-a-tiv). Relating to or marked by nervous degeneration.

neurodendrite, neurodendron (nu-ro-den'drit, nu-ro-den'dron) [*νεῦρον* + *dendron*]. Any process of a nerve cell combining the features of a neuron and a dendron.

neuroderm (nu''ro-derm). The ectoderm or epiblasts.

neurodermatitis (nu''ro-der-mat-i'tis) [*νεῦρον* nerve + *δέρμα* skin]. A skin inflammation of nervous origin.

neurodermatosis (nu''ro-der-mat-o'sis). Dermato-neurosis; any nervous manifestation in the cutaneous structures.

neurodermite (nu-ro-der'mit). A skin lesion in neurodermatitis.

neurodermitis (nu''ro-der-mi'tis). Same as *neurodermatitis*.

neurodiagnosis (nu''ro-di-ag-no'sis) [*νεῦρον* nerve + *diagnosis*]. The diagnosis of diseases of the nervous system.

neurodin (nu-ro'din). 1. A base, $C_6H_{19}N_2$, one of the products of the decomposition of flesh. 2. Acetyl para-oxyphenyl-urethane, $C_6H_4(OCO-CH_3)NH.COOC_2H_5$, a patented remedy in colorless crystals, soluble in 1400 parts of water and 140 parts of water at 100 C. It is used as an antineuralgic in rheumatism, sciatica, mi-

grains, etc., and as an antipyretic in pneumonia, typhoid fever, scarlatina, etc. Antipyretic dose, 7½ grains (0.5 Gm.); antineuralgic dose, 15-23 grains (1-1.5 Gm.).

neurodocitis (nu-ro-do-si'tis). Inflammation of nerve roots resulting from compression in osseous or aponeurotic canals outside of the meninges (Sicard).

neurodokon (nu-ro-do'kon). The part of a nerve which lies in the intervertebral foramen or in an osseous canal.

neurodynamic (nu'ro-di-nam'ik) [νεῦρον nerve + δύναμις force]. Relating to nervous energy.

neurodynia (nu-ro-din'e-ah) [νεῦρον nerve + ὀδὴν pain]. Pain in a nerve or in nerves.

neuro-electrotherapeutics (nu'ro-e-lek'trother-ap-u'tiks). The treatment of nervous diseases by electricity.

neuro-enteric (nu-ro-en-ter'ik). Neurenteric.

neuro-epidermal (nu'ro-ep-id-er'mal) [νεῦρον nerve + ἐπίδερμις]. Pertaining to or giving origin to the nervous and epidermal tissues.

neuro-epithelial (nu'ro-ep-i-the'le-al). Pertaining to or composed of neuro-epithelium.

neuro-epithelioma (nu'ro-ep-i-the-le-o'mah). A tumor composed of neuro-epithelium.

neuro-epithelium (nu'ro-ep-i-the'le-um) [νεῦρον nerve + ἐπίθελιον]. 1. A specialized epithelium forming the perceptive elements of the organs of special sense, as the hair cells of the organ of Corti or the rods and cones of the retina. 2. The epithelium of the epiblast whence the cerebrospinal axis is developed.

neuro-equilibrium (nu'ro-e-kwi-lib're-um). The condition of even tension in the nervous system favorable to a ready response to stimuli.

neurofebrin (nu-ro-feb'rin). A mixture of neuro-nal and acetanilid.

neurofibril, neurofibrilla (nu-ro-fi'bril, nu-ro-fi-bril'ah). The supposed conducting element of the nerve fibers and nerve cells; a fiber forming a delicate network in the nerve cells, and passing out of their processes and ending in or around a muscle or sense cell.

neurofibrillar (nu-ro-fi-bril'ar). Of or relating to the neurofibrils.

neurofibroma (nu'ro-fi-bro'mah) [neuroma + fibroma]. A connective tissue tumor of the nerve fiber fascicle, formed by proliferation of the perineurium and endoneurium.

neurofibromatosis (nu'ro-fi-bro-mat-o'sis). A condition marked by the formation of multiple pedunculated soft tumors (neurofibromas) distributed over the entire body associated with areas of pigmentation. Called also *multiple neuroma*, *neuromatosis*, and *Recklinghausen's disease*.

neurofibrositis (nu'ro-fi-bro-si'tis). Inflammation of nerve filaments; also inflammation of muscle fibers (fibrositis) involving sensory nerve filaments.

neurofil (nu'ro-fil) [νεῦρον nerve]. A network of processes springing from the beginning of the axis-cylinder and surrounding the cells.

neurofixation (nu'ro-fik-sa'shun). Development of syphilis of the nervous system following the successful treatment of a syphilitic skin lesion by one of the arsenical preparations.

neurogangliitis (nu'ro-gan-gle-i'tis). Inflammation of a neuroganglion.

neuroganglion (nu-ro-gan'gle-on). A ganglion, or mass of nervous matter.

neurogastric (nu-ro-gas'trik). Involving the nerves of the stomach.

neurogen (nu'ro-jen). A substance supposed to exist at the synapse and liberate nervous energy.

neurogenesis (nu-ro-jen'es-is) [νεῦρον nerve + γένεσις production]. The development of nervous tissue.

neurogenetic (nu'ro-jen-et'ik). Pertaining to neurogenesis.

neurogenic (nu-ro-jen'ik) [νεῦρον nerve + γεννᾶν to produce]. Forming nervous tissue, or stimulating nervous energy.

neurogenous (nu-roj'en-us). Arising in the nervous system; arising from some lesion of the nervous system.

neuroglia (nu-ro-gle-ah) [νεῦρον nerve + γλία glue]. The supporting structure of nervous tissue (Virchow, 1854). It consists of a fine web of tissue made up of modified ectodermic elements, in which are enclosed peculiar branched cells known as *glia cells*. Called also *bind web*. **n. holes**, certain perforations in Purkinje's cells.

neurogliar, neuroglic (nu-ro-gle-ar, nu-ro-g'lik). Pertaining to the neuroglia.

neuroglioma (nu'ro-gli-o'mah) [neuroma + glioma]. Glioma containing nerve cells; a tumor made up of neuroglial tissue. **n. ganglionaire**, a glioma in which ganglion cells are embedded.

neurogliosis (nu-ro-gle-o'sis). A condition marked by diffuse formation of neurogliomas. **n. gangliocellularis diffusae**, epilepsia.

neurogram (nu'ro-gram) [νεῦρον nerve + γράμμα mark]. Prince's name for residua of past cerebral activities which make up the brain disposition and thus take part in the formation of personality.

neurography (nu-ro-g'raf-e) [νεῦρον nerve + γράφω to write]. A treatise on or description of the nerves.

neurohematology (nu'ro-hem-at-ol-o-je). The study of blood changes occurring in diseases of the nervous system.

neurohistology (nu'ro-his-tol-o-je). The histology of the nervous system.

neurohypnologist (nu'ro-hip-nol'o-jist). An expert in neurohypnology.

neurohypnology (nu'ro-hip-nol-o-je) [νεῦρον nerve + ὕπνος sleep + λόγος discourse]. The sum of knowledge concerning hypnotic conditions.

neurohypophysis (nu'ro-hi-pof'is-is). The pars nervosa or main part of the posterior lobe of the pituitary body. See *pituitary body*, under *body*.

neuroid (nu'roid) [νεῦρον nerve + εἶδος form]. Resembling a nerve.

neuro-induction (nu'ro-in-duk'shun) [νεῦρον nerve + ἰνδύω to persuade]. Mental suggestion.

neuroinidia (nu'ro-in-id'e-ah). Deficient nerve cell nutrition.

neuro-inoma (nu'ro-in-o'mah). Neurofibroma.

neuro-inomatosis (nu'ro-in-o-mat-o'sis) [νεῦρον nerve + ἴς fiber + -ωμα tumor]. Neurofibromatosis.

neurokeratin (nu-ro-ker-at'in) [νεῦρον nerve + κέραν horn]. A variety of keratin forming the supporting network of the myelin sheath of medullated nerve fibers.

neurokinet (nu-ro-kin'et) [νεῦρον nerve + κινεῖν to move]. An apparatus for stimulating the nerve by percussion.

neurokym, neurokyme (nu'ro-kim). A nervous process in general; a nervous process.

neuro labyrinthitis (nu'ro-lab-ir-in-thi'tis). Inflammation of the nervous structures of the labyrinth.

neurolecithin (nu-ro-les'ith-in). A proprietary preparation containing lecithin with fats and cholesterol.

neurolemma (nu-ro-lem'ah) [νεῦρον nerve + λήμμα sheath]. 1. Neurilemma. 2. The retina.

neurologist (nu-ro-l'o-jist). An expert in neurology or in the treatment of nervous diseases.

neurology (nu-ro-l-o-je) [νεῦρον nerve + λόγος discourse]. The sum of knowledge regarding the nervous system, both normal and in disease.

- neurolues** (nu-ro-lu'ez). Neurosyphilis.
- neurolymph** (nu'ro-limf). The cerebrospinal fluid.
- neurolysin** (nu-ro-lis-in). A cytolytic which has a specific destructive action upon nerve cells.
- neurolysis** (nu-ro-lis'is) [νεῦρον nerve + λύσις solution]. 1. The liberation of a nerve from adhesions. 2. The relief of tension upon a nerve obtained by stretching. 3. Exhaustion of nervous energy. 4. Destruction or dissolution of nerve tissue.
- neurolytic** (nu-ro-lit'ik). Destructive of nerve substance.
- neuroma** (nu-ro'mah) [νεῦρον nerve]. A tumor or new growth largely made up of nerve substance; a tumor growing from a nerve. **amputation n.**, neuroma of a stump after amputation. **amyelinic n.**, one containing only nonmedullated nerve fibers. **n. cutis**, neuroma seated in the skin. **cystic n.**, a false neuroma, or a myxoma which has become cystic. **false n.**, one which does not contain genuine nerve fibers. **fascicular n.**, **medullated n.**, a neuroma made up of medullated nerve fibers. **ganglionated n.**, **ganglionic n.**, one made up of true nerve cells. **malignant n.**, sarcoma of a nerve structure, usually spindle celled. **multiple n.** See *neuro-matosis*. **myelinic n.**, one that contains medullated nerve fibers. **nevoid n.**, neuroma telangiectodes. **plexiform n.**, a form consisting of nodulous enlargements along the course of the cutaneous nerves. **n. telangiectodes**, one which contains an excess of blood vessels. **traumatic n.**, a neuroma seen in wounds and in amputation stumps. **true n.**, a neuroma made up of nerve tissue. **Verneuil's n.**, plexiform neuroma.
- neuromalacia, neuromalakia** (nu'ro-mal-a'-se-ah, nu'ro-mal-a'-ke-ah) [νεῦρον nerve + μαλακία softening]. Morbid softening of the nerves.
- neuromast** (nu'ro-mast) [νεῦρον nerve + μαστός hill]. A nerve hillock; a mass of neuro-epithelium constituting a sense organ.
- neuromatosis** (nu-ro-mat-o'sis). A disease condition characterized by the presence of many neuromas.
- neuromatous** (nu-rom'at-us). Affected with or of the nature of neuroma.
- neuromechanism** (nu-ro-mek'an-izm). The structure and arrangement of the nervous system in relation to function.
- neuromere** (nu'ro-mēr) [νεῦρον nerve + μέρος share]. One of the segments of the embryonic neural tube.
- neuromimesis** (nu'ro-mi-me'sis) [νεῦρον nerve + mimesis]. Hysterical simulation of organic disease.
- neuromittor** (nu-ro-mit'or) [νεῦρον nerve + L. mittere to send]. One of the terminal elements at the peripheral end of a neuron which transfers a stimulus to the neuroceptor of the adjoining neuron. Called also *mittor*.
- neuromuscular** (nu-ro-mus'ku-lar). Pertaining to nerves and muscles.
- neuromyelitis** (nu'ro-mi-el-i'tis) [νεῦρον nerve + μυελός marrow + -itis inflammation]. Inflammation of nervous and medullary or myelonic substance; myelitis attended with neuritis. **n. optica**, acute myelitis with optic neuritis.
- neuromyic** (nu-ro-mi'ik) [νεῦρον nerve + μῦς muscle]. Neuromuscular.
- neuromyon** (nu-ro-mi'on) [νεῦρον nerve + μῦς muscle]. The neural elements in a muscle.
- neuromyositis** (nu'ro-mi-o-si'tis) [νεῦρον nerve + myositis]. Neuritis complicated with myositis.
- neuron, neurone** (nu'ron, nu'rōn) [νεῦρον nerve]. 1. A nerve cell with its processes, collaterals, and terminations regarded as a structural unit of the nervous system. See *nerve cell*. 2. A neuraxon. 3. The cerebrospinal axis. **afferent n.**, a neuron which conducts a nervous impulse from a receptor to a center. **bipolar n.**, a neuron having two axons. **correlation n.**, a neuron which takes part in the function of correlating various stimuli into the appropriate response. See *correlation*. **efferent n.**, a neuron which conducts a nervous impulse from a center to an organ of response. **intercalary n.**, a neuron forming the second portion of a peripheral reflex arc. It is situated within the central nervous system and receives the nerve impulse from the peripheral sensory neuron and transmits it to the peripheral motor neuron. **long n.** Same as *axis-cylinder*. **lower motor n's**, the peripheral neurons whose cell bodies lie in the ventral gray columns of the spinal cord. Cf. *upper motor n.* **multiform n.** Same as *polymorphic n.* **peripheral motor n.**, the third neuron in a peripheral reflex arc, receiving the impulse from the intercalary neuron and transmitting it to a voluntary muscle. **peripheral sensory n.**, a neuron forming the receptive part of a peripheral reflex arc. It is situated outside the central nervous system. It has a peripheral branch forming a sensory nerve fiber and a central branch which enters the central nervous system. Together with the intercalary neuron and the peripheral motor neuron it forms a peripheral reflex arc. Called also *protoneuron*. **polymorphic n.**, a neuron of irregular shape. **postganglionic n.**, an efferent sympathetic neuron which is excited by a preganglionic neuron. **preganglionic n.**, an efferent sympathetic neuron whose cell body lies in the central nervous system. **premotor n.**, a neuron not connected directly with muscle, but serving as a connecting center to command excitation in one or more motor neurons. **projection n.**, one which serves for the transmission of nervous impulses, whether motor or sensory. **pyramidal n.** See *pyramidal cell*, under *cell*. **sensory n.**, one which transmits impulses from the skin to the cerebral cortex. **short n.**, a local process from a nerve cell or brain cell reaching only to a nearby gray mass. **unipolar n.**, a neuron having only one axon. **upper motor n's**, the neurons in the cerebral cortex which conduct impulses from the motor cortex to the motor nuclei of the cerebral nerves or to the ventral gray columns of the spinal cord. Cf. *lower motor n's*.
- neuronagenesis** (nu'ro-naj-en'es-is) [neuron + a neg. + γέναν to produce]. Lack of development of neurons.
- neuronal** (nu'ro-nal). 1. Pertaining to a neuron or neurons. 2. A gray powder, bromdiethylacetamide, slightly soluble in water: used as a hypnotic in doses of 7-15 grains (0.5-1 Gm.).
- neuronatrophie** (nu-ron-at'ro-fe). Southard and Solomon's term for any nervous disease due to sclerosis of neurons.
- neurone** (nu'rōn). See *neuron*.
- neuronephric** (nu-ro-nef'rik). Pertaining to the nervous and renal systems.
- neuronic** (nu-ron'ik). Pertaining to or affecting a neuron.
- neuronidia** (nu-ro-nid'e-ah). A proprietary preparation for nervous insomnia.
- neuronomist** (nu'ro-nist). An anatomist who considers the nervous system as a mass of neurons.
- neuronitis** (nu-ro-ni'tis). Inflammation of neurons; degeneration of neurons.
- neuronophagy** (nu-ron'of-aj) [νεῦρον nerve + φαγεῖν to eat]. A phagocyte which destroys nerve cells.
- neuronophagia, neuronophagy** (nu'ron-p-fa'-je-ah, nu-ron-of-aj-e) [νεῦρον nerve + φαγεῖν to eat]. The destruction of nerve cells by phagocytic action.
- neuronophagocytosis** (nu'ro-no-fag-o-si-to'sis). Same as *neuronophagia*.

neuronosis (nu-ro-no'sis) [νεῦρον nerve + νόσος disease]. Any disease of nervous origin.

neuronyxis (nu-ro-niks'is) [νεῦρον nerve + νύξις puncture]. The surgical puncture of a nerve.

neuro-otology (nu''ro-o-tol'o-je). Neurotology.

neuroparalysis (nu''ro-pa-ra'l'is-is). Paralysis due to disease of a nerve or nerves.

neuroparalytic (nu''ro-par-al-it'ik). Pertaining to or caused by paralysis of a nerve.

neuropath (nu''ro-path). A person with a hereditary tendency to neurosis.

neuropathic (nu-ro-path'ik). Pertaining to or characterized by a nervous disorder.

neuropathist (nu-rop'ath-ist). A neurologist.

neuropathogenesis (nu''ro-path-o-jen'es-is) [νεῦρον nerve + pathogenesis]. The development of nervous disease.

neuropathology (nu''ro-path-ol'o-je) [νεῦρον nerve + pathology]. The pathology of the nerves and nerve centers.

neuropathy (nu-rop'ath-e) [νεῦρον nerve + πάθος disease]. 1. Any nervous disease. 2. A system of treatment whereby the activity of the cells of the body can be controlled through the nerve mechanisms governing the given areas.

neurophage (nu''ro-fāj). Same as *neurophage*.

neurophilic (nu-ro-fil'ik) [νεῦρον nerve + φιλεῖν to love]. Same as *neurotropic*.

neurophonia (nu-ro-fō'ne-ah) [νεῦρον nerve + φωνή voice]. A form of nervous disorder in which the patient utters peculiar cries, sometimes like those of certain animals.

neurophthisis (nu-rof'this-is) [νεῦρον nerve + φθίσις wasting]. Wasting of nerve tissue.

neurophysiology (nu''ro-fiz-e-ol'o-je) [νεῦρον nerve + physiology]. The physiology of the nervous system.

neuropil, neuropile (nu''ro-pil) [νεῦρον nerve + πῖλος felt]. A network of delicate unmyelinated fibers permeating the entire central nervous sys-

cylinder processes of the second type. See *nerve cell*.

neuropore (nu''ro-pōr) [νεῦρον nerve + πόρος pore]. An opening in the anterior end of the neural canal of the embryonic brain.

neuropotential (nu-ro-po-ten'shal). Nerve energy; nerve potential.

neuropin (nu''ro-prin). A proprietary extract from nervous tissue; said to be a specific nerve tonic.

neuropsychiatry (nu''ro-si-ki'at-re). The branch of medicine which deals with cases that are both neurologic and mental or on the borderland between.

neuropsychic (nu-ro-si'kik) [νεῦρον nerve + ψυχή mind]. Pertaining to the nerve center concerned in mental processes.

neuropsychopathy (nu''ro-si-kop'ath-e) [νεῦρον nerve + ψυχή mind + πάθος disease]. A disease condition of the nerves and mind.

neuropsychosis (nu''ro-si-ko'sis) [νεῦρον nerve + ψυχosis]. Nervous disease complicated with mental disorder.

neuropyræ (nu-ro-pi'rah) [νεῦρον nerve + πῦρ fever]. Nervous fever.

neuropyretic (nu''ro-pi-ret'ik). Pertaining to nervous fever.

neurorecidive (nu''ro-ra-se-dēv). Neurorelapse.

neurorecurrence (nu''ro-re-kur'ens). Neurorelapse.

neurorelapse (nu''ro-re-laps'). A peculiar outburst of neurosyphilis precipitated by insufficient treatment with arsphenamine, and characterized by various nervous symptoms. Called also *neurorecidive* and *neurorecurrence*.

neuroretinitis (nu''ro-ret-in'itis). Inflammation of the optic nerve and retina.

neurorrhaphy (nu-ro-r'af-e) [νεῦρον nerve + ραφή stitch]. The suturing of a cut nerve.

neurorrhæma (nu-ror-u'mah) [νεῦρον nerve + ρεῖμα flow]. Nervous energy.

Neurorrhætes hydrophobæ (nu-ro-rik'tēs hīdro-fō-be-e). Same as *Negri bodies*. See under *body*.

neurosals (nu-ro'sal). Pertaining to a neurosis.

neurosarcokleisis (nu''ro-sar-ko-klī'sis) [νεῦρον nerve + σάρξ flesh + κλείσις closure]. An operation performed for neuralgia, done by relieving pressure on the affected nerve by partial resection of the bony canal through which it passes, and transplanting it (the nerve) among the soft tissues.

neurosarcoma (nu''ro-sar-ko'mah). A sarcoma with neuromatous elements.

neuroscclerosis (nu''ro-skle-ro'sis) [νεῦρον nerve + σκληρός hard]. The hardening of the substance of a nerve or nerve center.

neuroesine (nu-ro'sin). A proprietary hypnotic and anodyne mixture of ten or more drugs, and containing considerable amount of bromides.

neurosis (nu-ro'sis) [νεῦρον nerve]. 1. A nervous disease; more especially a functional disorder of the nervous system; a disorder of the nervous system not dependent on any discoverable lesion. 2. The neural process corresponding to a mental phenomenon. **accident n.**, a neurosis with hysterical symptoms caused by accident or injury. **anxiety n.**, a form of neurosis characterized by anxious apprehensions. **association n.**, a condition in which an abnormal mental experience tends to be reproduced, with all its original mental and physical phenomena, when an idea related to the original experience is brought into the mind. **craft n.** Same as *occupation n.* **crampus n.**, a neurosis marked by tonic spasms and cramps on attempts at motion. Called also *conversion hysteria*. **cyclists' n.**, a sensitive condition of the skin of the thighs, perineum, and scrotum from excessive riding of the bicycle.

To illustrate the conception of the neuropil (Stiles).

tem. It is believed to diffuse and irradiate nervous impulse. Called also *molecular substance* and *dotted substance*.

neuropilem (nu-ro-pi'lem) [νεῦρον nerve + πῖλος felt]. Same as *neuropil*.

neuroplasm (nu''ro-plazm) [νεῦρον nerve + πλάσμα something formed]. The undifferentiated basophil protoplasm of a nerve cell. Same as *axoplasm*. **chorda n.**, the rudiment in the embryo which develops into the chorda, notochord, and medullary plate.

neuroplasmic (nu-ro-plaz'mik). Of or relating to neuroplasm.

neuroplasty (nu''ro-plas-te) [νεῦρον nerve + πλασσειν to form]. Plastic surgery of a nerve or of the nerves.

neuroplex, neuroplexus (nu''ro-pleks, nu-ro-pleks'us). A plexus of nerves.

neuroploca (nu-ro-p'lo-kah) [νεῦρον nerve + πλοκή web]. A nerve ganglion.

neuropodium (nu-ro-po'de-on). Neuropodium.

neuropodium (nu-ro-po'de-um), pl. *neuropodia* [νεῦρον nerve + ποῖς foot]. Any one of the delicate fibrils forming the termination of axis-

- expectation n.**, a neurotic condition in which the expectation of an occurrence induces mental tension, etc. **fatigue n.**, a neurosis due to nerve tire, as neurasthenia or psychasthenia. **gas n.**, a condition similar to shell shock seen in persons who have been gassed. **occupation n., professional n.**, a nervous disease due to the patient's employment. See *copodyskinesia*. **sexual n.**, a neurosis of the sexual function. **torsion n.**, a dysbasia lordotica progressiva. **traumatic n.**, one which results from an injury. **war n.**, shell shock, or any nervous disease or condition brought on by war conditions. **Westphal's n.**, hysteria with symptoms that simulate multiple sclerosis.
- neurosism** (nu'-ro-sizm). Neurasthenia.
- neuroskelton** (nu-ro-skel'-et-on) [νεῦρον nerve + σκελετόν skeleton]. The true bony or vertebrate skeleton; the endoskeleton.
- neurosome** (nu'-ro-sōm) [νεῦρον nerve + σῶμα body]. 1. The body of a nerve cell. 2. Any one of a set of minute particles in the ground substance of the protoplasm of the neurons, and especially in that of the axis-cylinder and its terminal branches.
- neurospasm** (nu'-ro-spazm) [νεῦρον nerve + σπασμός spasm]. The nervous twitching of a muscle.
- neurosplanchnic** (nu-ro-splangk'-nik). Pertaining to the cerebrospinal and sympathetic nervous system.
- neurospongium** (nu-ro-spon'-je-um) [νεῦρον nerve + σπόνγγος sponge]. A meshwork or feltwork of nerve fibrils; neuroglia.
- neurostearic** (nu'-ro-ste-ar'ik) [νεῦρον nerve + στέαρ fat]. Derived from the fatty elements of the nerve substance.
- neurosthenia** (nu-ro-sthe'-ne-ah) [νεῦρον nerve + σθένος strength]. Great nervous power and excitement.
- neurosurgeon** (nu-ro-sur'-jun). A surgeon who specializes in work on the nervous system.
- neurosurgery** (nu-ro-ser'-jer-e). Surgery of the nervous system.
- neurosuture** (nu-ro-su'tchur). Same as *neurorrhaphy*.
- neurosyphilis** (nu-ro-sif'il-is). Syphilis of the central nervous system.
- neurosystemitis epidem'ica**. Encephalitis lethargica.
- neurotabes** (nu-ro-ta'bēz) [νεῦρον nerve + ἵαβες]. Multiple peripheral neuritis with symptoms like those of locomotor ataxia. See *pseudotabes n.* **diabetica**. See *tabes diabetica*.
- neurotagma** (nu-ro-tag'mah) [νεῦρον nerve + τάγμα arrangement]. A linear arrangement of the structural elements of a nerve cell.
- neurotendinous** (nu-ro-ten'-din-us). Pertaining to both nerve and tendon.
- neurotension** (nu-ro-ten'shun). Same as *neurcelasis*.
- neurothecitis** (nu'-ro-the-si'tis) [νεῦρον nerve + θήκη sheath]. Inflammation of a nerve sheath.
- neurothele** (nu-ro-the'le) [νεῦρον nerve + θηλή nipple]. A nervous papilla.
- neurotheletis, neurothelitis** (nu'-ro-the-le-i'tis, nu-ro-the-li'tis) [see *neurothele* + -itis inflammation]. Inflammation of a nervous papilla.
- neurotherapeutics** (nu'-ro-ther-ap-u'tiks). Neurotherapy.
- neurotherapy** (nu-ro-ther'ap-e) [νεῦρον nerve + θεραπεία treatment]. 1. The treatment of nervous disorders. 2. A term proposed for psychotherapy on the ground that the basis of such treatment is the employment of all sources of nervous activity.
- neurothlipsis** (nu-ro-thlip'sis) [νεῦρον nerve + θλίψις pressure]. Pressure on a nerve or irritation of a nerve.
- neurotic** (nu-ro't'ik). 1. Pertaining to or affected with a neurosis. 2. Pertaining to the nerves. 3. A nervous person in whom emotions predominate over reason.
- neurotica** (nu-ro't'ik-ah) [νεῦρον nerve]. Functional nervous disorders.
- neuroticism** (nu-ro't'is-izm). A state of perverted or excessive nervous action.
- neurotization** (nu'-rot-iz-a'shun). 1. The regeneration of a nerve after its division. 2. The operation of implanting a nerve into a paralyzed muscle.
- neurotology** (nu-ro-tol'o-je) [νεῦρον nerve + ὁτολογία]. The branch of otology which deals with the internal ear and its associated intracranial nerve pathways; the neurological phase of otology.
- neurotome** (nu'-ro-tōm) [νεῦρον nerve + τέμνειν to cut]. 1. A needle-like knife for dissecting the nerves. 2. Same as *neurotome*.
- neurotomy** (nu-ro't'o-me) [νεῦρον nerve + τέμνειν to cut]. 1. The dissection or anatomy of the nerves. 2. The surgical cutting of a nerve. **ophticociliary n.**, division of the optic and ciliary nerves for prevention of sympathetic ophthalmia. **retrogasserian n.**, division of the posterior root of the gasserian ganglion for facial neuralgia.
- neurotone** (nu'-ro-tōn). Spermonuclein salicylate, used as a tonic and in the treatment of morphinism.
- neurotonic** (nu-ro-ton'ik) [νεῦρον nerve + tonic]. Having a tonic effect upon the nerves.
- neurotonogenic** (nu-ro't'o-no-jen'ik). Producing nerve tonus.
- neurotony** (nu-ro't'o-ne) [νεῦρον nerve + τείνειν to stretch]. Same as *nerve stretching*.
- neurotoxia** (nu-ro-toks'-eh). A toxic condition of the nervous system; neurasthenia regarded as an auto-intoxication.
- neurotoxic** (nu-ro-tok'sik). Poisonous or destructive to nerve tissue: applied especially to an antibody produced by injecting nerve cells into an animal.
- neurotoxin** (nu-ro-tok'sin) [νεῦρον nerve + toxine]. A toxin antagonistic to nerve cells.
- neurotrauma** (nu-ro-traw'mah) [νεῦρον nerve + trauma]. Wounding of a nerve.
- neurotripsy** (nu-ro-trip'se) [νεῦρον nerve + τριβεῖν to rub]. The crushing or bruising of a nerve.
- neurotrophasthenia** (nu'-ro-tro-fas-the'-ne-ah) [νεῦρον nerve + τροφή nutrition + ἀσθένεια weakness]. Defective nutrition of the nervous system.
- neurotrophic** (nu-ro-trof'ik). Relating to nutrition and due to nervous influence.
- neurotrophs** (nu-ro'tro-fe) [νεῦρον nerve + τροφή nutrition]. Nutrition of nerve tissue.
- neurotropic** (nu-ro-trop'ik). Having a chemical affinity for nervous tissue.
- neurotropism** (nu-ro'tro-pizm) [νεῦρον nerve + τρέπειν to twist]. Special affinity for nervous tissue, particularly the attractive influence which nervous tissue exerts upon certain nutritive and other substances.
- neurotrophy** (nu-ro'tro-pe). Same as *neurotrophism*.
- neurotrolosis** (nu-ro-tro'sis) [νεῦρον nerve + τρώωω wound]. Neurotrauma.
- neurovaccine** (nu-ro-vak'sin). Vaccine virus prepared by growing the virus on the brain of a rabbit; said to have the advantage over calf lymph of being free from secondary contamination.
- neurovaricosis** (nu'-ro-var-ik-o'sis) [νεῦρον nerve + varicose]. A varicose state of the fibers of a nerve.
- neurovascular** (nu-ro-vas'ku-lar). Both nervous and vascular.
- neurovisceral** (nu-ro-vis'er-al). Same as *neurosplanchnic*.
- neuro-vita** (nu-ro-vi'tah). A proprietary pulp-protecting preparation for dental work.

neurula (nu-'ru-lah) [νεύρον nerve + dim. -ula]. The first appearance of the nervous system in the developing embryo.

neururgic (nu-rer-'jik) [νεύρον nerve + ἔργον work]. Pertaining to nerve action.

neurypnology (nu-rip-nol'o'-je). Same as *neurohypnology*.

Neusser's granules (noi'zers) [Edmund von Neusser, Austrian physician, 1852-1912]. See *granule*.

neutral (nu-'tral) [L. *neut'ralis*; *neut'ler* neither]. Neither acid nor basic. **n. acriflavine**. See *acriflavine base*. **n. red**. See under *red*.

neutralite (nu-'tral-it). A proprietary asbestos preparation used in soldering in prosthetic dental work.

neutrality (nu-'tral-'it-e). The state of being neutral.

neutralize (nu-'tral-iz). To render neutral or ineffective.

neutralon (nu-'tral-ōn). A proprietary preparation of aluminum silicate: intended to neutralize excess of hydrochloric acid in the stomach.

neutroclusion (nu-trok-lu'zhun). Normal occlusion. See *occlusion*.

neutron (nu-'tron). A hypothetical electrically neutral, massless molecule.

neutropenia (nu-tro-pe'ne-ah) [*neutrophil* + πείνια poverty]. Abnormal deficiency of neutrophil cells in the blood.

neutrophil (nu-'tro-fil) [L. *neut'ler* neither + φιλέω to love]. 1. Stainable by neutral dyes. 2. A cell or structural element stainable by neutral dyes.

neutrophilia (nu-tro-fil'e-ah). Increase in the number of neutrophil leukocytes in the blood.

neutrophilic (nu-tro-fil'ik). Same as *neutrophil*.

neutrotaxis (nu-tro-taks'is) [*neutrophil* + τάξις arrangement]. The attractive or repellant influence exerted by neutrophil leukocytes.

nevocarcinoma (ne-'vo-kar-sin-o'mah). Carcinoma developing on nevi or moles.

nevoid (ne-'void). Resembling a nevus.

nevelipoma (ne-'vo-lip-o'mah). A nevus containing a large amount of fibrofatty tissue.

nevose (ne-'vōs). Having nevi; spotted with nevi.

nevus (ne-'vus) [L. *nae'vus*]. 1. A mole; a pigmented spot on the skin, either congenital or acquired. 2. A congenital angioma of the skin; a reddish swelling or patch on the skin formed by dilated blood vessels; a mother's mark. **n. angiecto'des**. Same as *n. vascularis*. **n. angiomato'des**, angioelephantiasis. **n. araneo'sus**, a nevus with radiating processes like the legs of a spider.

n. araneus. Same as *acne rosacea*. **capillary n.**, one that involves the capillaries of the skin. **n. caverno'sus**, cavernous angioma. **n. cor'neum**, ichthyosis hystrix. **cutaneous n.**, a nevus of the skin. **n. elasticus**. See *pseudoxanthoma elasticum*. **n. flam'meus**, a reddish patch on the skin—the ordinary strawberry mark.

hepatic n., hemorrhagic infarct of the liver. **n. lichen'o'des**, linear ichthyosis. **linear n.**, an eruption occurring in elongated streaks, consisting of papillary elevations, and due to hypertrophy of the papillary and corneous layers of the skin. **n. lipomato'sus**. Same as *nevelipoma*.

n. lymphat'icus, lymphangioma of the skin. **n. mater'nus**, congenital angioma; mother's mark or birth mark. See *nevus* (2d def). **n. molluscifor'mis**, a mole forming a protruding, fatlike tumor. **n. nervo'sus**. Same as *linear n.*

n. papilla'ris, linear ichthyosis. **n. papillomato'sus**, a wartlike mole. **n. pigmento'sus**, a pigmented mole; a congenital pigment spot in the skin, varying in color from light brown to blackish. **pilose n.** [L. *naevus pilo'sus*], a hairy cutaneous patch. **n. sanguin'eus**. Same as *n. vascularis*. **spider n.** Same as *n. araneosus*.

n. spi'lus, a mole having a smooth surface. **n.**

vascula'ris, **n. vasculo'sus**, a reddish swelling or patch on the skin due to hypertrophy of the skin capillaries. **venous n.**, one composed mainly of veins. **n. verruco'sus**, a mole with a warty surface. **n. vino'sus**, a strawberry mark.

New and Nonofficial Remedies. See *N. N. R.* **Newbouldia lae'vis** (nu-bōl'de-ah). A plant said to be a good venous astringent.

newglucose. See under *glucose*.

N. F. Abbreviation for *National Formulary*. See under *formulary*.

n'gana (nag-ag'nah). See *nagana*.

.NH. The imide group.

-NH₂. The amino and also the amide group.

NH₃. Ammonia.

NH₄Br. Ammonium bromide.

NH₄Cl. Ammonium chloride.

NH₄CNO. Ammonium cyanate.

(NH₂)₂CO. Urea.

(NH₄)₂CO₃. Ammonium carbonate.

(NH₄)₂HS. Ammonium hydrosulphide.

NH₄NO₃. Ammonium nitrate.

NH₄O.CO.NH₂. Ammonium carbamate.

(NH₄)₂SO₄. Ammonium sulphate.

Ni. The symbol of *nickel*.

niani (ne-an'e). A varioloid of Senegal riflemen.

Nicander, Nicandros (nik-an'der, nik-an'dros). A celebrated Greek physician and poet who flourished about 175-135 B. C. Two of his toxicologic works, the "Theriaca" and the "Alexipharmica," have survived.

niccolum (nik-o-lum) [gen. *nic'colū*]. Latin for *nickel*.

niche (nitsh). A budlike prominence on the roentgenographic contour of the stomach caused by the crater of a penetrating gastric ulcer: called also *Haudek's niche*.

nichochrome (nik-o-krōm). An alloy of nickel and chromium, very resistant to oxidation and the action of acids, and used for chemical apparatus.

nichrome (nik'rōm). Same as *nicochrome*.

nickel (nik'el) [L. *nic'colum*]. A silver-white metallic element: symbol, Ni; specific gravity, 8.8; atomic weight, 58.6. See *elements, table of*. **n. bromide**, a hypnotic and sedative agent, NiBr₂: used in epilepsy. Dose, 2-8 grains (0.13-0.52 Gm.). **n. carbonoxide**, a poisonous liquid: injected hypodermically, it lowers the temperature. **n. chloride**, nickelous chloride, NiCl₂.6H₂O, a remedy for anemia and atonic conditions. Dose, 1-3 grains (0.066-0.2 Gm.). **n. oleate**, a waxy solid: used externally in chronic eczema. **n. salipyrrine**, the salicylate of nickel and antipyrine; in whitish needles or in a pale-green powder. **n. sulphate**, a salt of nickel, NiSO₄.7H₂O: used in neuralgia, rheumatism, and heart disease. Dose, 1-3 grains (0.066-0.2 Gm.).

Nicklès' test (ne-klēz') [François Joseph J. Nicklès, a French chemist, 1821-1869]. See under *tests*.

nico (ni'ko). Same as *symphorol*.

Nicol prism (nik'ol) [William Nicol, English physicist, 1768-1851]. See *prism*.

Nicolaier's bacillus (nik-o'li-erz) [Arthur Nicolaier, Berlin physician, born 1862]. The *Clostridium tetani*.

nicolicin (nik-ol'is-in). A morphine preparation said to be a cure for the morphine habit.

Nicollia (nik-ol'e-ah) [Charles Nicolle, French physician, born 1866]. A genus of protozoan blood parasites which resemble *Piroplasma*, but are grouped in fours.

nicomors (ni'ko-morz). Tablets containing magnesium dioxide and tannic acid, for use by smokers to counteract the effect of nicotine.

Nicotiana (nik-o-she-a'nah). See *tobacco*.

- nicotianine** (nik-o'she-a-nin). A volatilizable and fragrant crystalline principle from tobacco.
- nicotine** (nik'o-tin) [*L. nicotia'na* tobacco]. A colorless, soluble fluid alkaloid with a pyridine-like odor and a burning taste, $C_8H_4N.CH(CH_2)_3N.CH_3$, exceedingly poisonous. Nicotine has been prescribed as an antitetic agent. Dose, $\frac{2}{10}$ – $\frac{1}{10}$ minim (0.003–0.006 cc.); but even with much smaller doses it is a dangerous remedy. **n. bitartrate**, a salt in white crystals: used in strychnine poisoning and in tetanus. **n. salicylate**, endermol. **n. tartrate**, a salt, $C_{10}H_{14}N_2(C_4H_6O_6) + 2H_2O$: used in tetanus and in strychnine poisoning.
- nicotinism** (nik'o-tin-izm). Poisoning by tobacco or by nicotine.
- nicoulin** (nik'oo-lin). A highly poisonous substance, C_8H_4O , which has been employed in acute tetanus.
- nictation** (nik-ta'shun). Same as *nictitation*.
- nictitation** (nik-tit-a'shun) [*L. nictita're* to wink]. The act of winking.
- nidal** (ni'dal). Pertaining to a nidus.
- nidation** (ni-da'shun) [*L. ni'dus* nest]. The development of the decidua capsularis in the pregnant uterus.
- nidus** (ni'dus) [*L. "nest"*]. 1. A nest; the point of origin or focus of a morbid process. 2. Same as *nucleus* (2d def.). 3. A depression on the ventral surface of the cerebellum. **n. hirun'dinis** [*L. "swallow's nest"*], a depression in the cerebellum between the posterior velum and the uvula. Called also *n. a'vis*.
- Niemann's disease** (ne'manz). See under *disease*.
- Niemeyer's pill** (ne'mi-erz) [Felix von *Niemeyer*, German physician, 1820–1871]. See *pill*.
- Niewenglowski's ray** (nya-ven-glov'ske) [Gaston Henri *Niewenglowski*, contemporary French physicist]. See under *ray*.
- night blindness** (nit blind-nes). See *nyctalopia*.
- nightmare** (nit'mär). An oppressive dream attended with fright and a sense of suffocation.
- night palsy** (nit pawl-ze). Numbness of the extremities in women, seen in the night about the climacteric period; acroparesthesia.
- night-soil** (nit'soil). The ordure of a privy.
- night-sweats** (nit'swets). Copious sweating in bed at night, as in tuberculosis.
- night-terrors** (nit-ter'erz). Pavor nocturnus; a kind of nightmare in children.
- nigricans** (ni'grik-ans) [*L.*]. Blackish.
- nigrities** (nig-rish-e-ēz) [*L.*]. Blackness. **n. lin'guae**. See *black tongue*, under *tongue*.
- nigrosin** (ni'gro-sin) [*L. ni'ger* black]. Aniline black, $C_{16}H_7N_3$; a microscopic stain. See under *stains*, *table of*.
- nigua** (ne'gwah). Same as *chigger*.
- nihilism** (ni'hil-izm) [*L. ni'hil* nothing]. 1. Therapeutic nihilism; skepticism as to the therapeutic value of drugs. 2. A form of delusion in which, to the patient, everything no longer exists.
- niin** (ni'in). A fatty substance thought to be identical with axin.
- nikalgin** (ni-kal'jin). A local anesthetic preparation of quinine hydrochloride and urea.
- niketol** (nik'et-ol). A proprietary local anesthetic: said to be a combination of ethylphthalamate and para-aminobenzoic ester.
- Nikiforoff's method** (ne-ke-for'ofs) [Mikhail *Nikiforoff*, Russian dermatologist, born 1858]. See *method*.
- Nikolsky's sign** (nik-ol'skēz) [Pyotr Vasilyevich *Nikolsky*, Russian dermatologist, born 1855]. See *sign*.
- nile blue**. See under *blue*.
- nimetti** (nim-et'e). See *Simulium griseicollis*.
- ninhydrin** (nin-hi'drin). Triketohydrindenhydrate, $C_8H_4(CO)_2.C(OH)_2$: used as a reagent for proteins and amino-acids, and for diagnosing pregnancy. See under *reaction*.
- ninserin** (nin-se'rin). A preparation used in the Kiutsi-Malone reaction for pregnancy. See *Kiutsi-Malone reaction*, under *reaction*.
- ninsi** (nin'se). The root of *Si'um nin'si*: used in Corea and China as a substitute for ginseng.
- ninth nerve** (ninth). The glossopharyngeal nerve.
- niobium** (ni-o'be-um). A metallic element, having an atomic weight of 94 and the symbol Nb. It was formerly known as columbium.
- nioform** (ni'o-form). See *vioform*.
- niopo-snuff** (ni-o'po-). An intoxicating snuff made from the seeds of *Pioplade'nia peregrina*, a tree of tropical America.
- niphablepsia** (nif-ab-lep'se-ah) [*νιφα* snow + *ἀβλεψία* blindness]. Same as *snow blindness*.
- niphophthalmia** (ni'f'o-tif-lo'sis) [*νιφα* snow + *τὸ φθῶσις* blindness]. Snow blindness.
- nipiology** (nip-e-ol-o-je). Nepiology.
- nipper** (nip'er). An incisor tooth of a horse.
- nipple** (nip'l). The conic organ which gives outlet to the milk; the mammilla, or teat. **crater n.**, a cavity in the place where the nipple should be.

Nipple: faulty development (Dickinson).

nirvanine (ner-van'in) [from *Nirva'na*, the Buddhist state of freedom from worldly evils]. A local anesthetic, the hydrochloride of the diethyl-glycol derivative of the methyl ester of meta-amino-ortho-hydroxy-benzoic acid, $(C_2H_5)_2N.CH_2.CO.NH.C_6H_3(OH).CO.OCH_3$, in colorless crystals; soluble in water. It is about one tenth as powerful as cocaine, and is used in 2–5 per cent solution.

nirvanol (ner'van-ol) [see *nirvanin*]. A white crystalline soluble hypnotic, the sodium salt of phenyl-ethyl-hydantoin, $C_6H_5(C_2H_5)C(CO.NH)_2$. Dose, $\frac{1}{2}$ –30 grains (0.05–2 Gm.) subcutaneously or intravenously.

Nisbet's chancre (nis'betz) [William *Nisbet*, English physician, 1859–1882]. See *chancre*.

Nissl's bodies, degeneration, method of staining (nis'elz) [Franz *Nissl*, neurologist in Heidelberg, 1860–1910]. See under *body*, *degeneration*, and *stains*, *table of*.

nisus (ni'sus) [*L.*]. An effort, strong tendency, or molimen.

nit (nit). The egg of a louse.

niter (ni'ter) [*L. ni'trum*; *νίτρον*]. Potassium nitrate, or saltpeter. **cubic n.**, sodium nitrate. **sweet spirit of n.**, the spirit of nitrous ether (*L. spir'itus ætheris nitro'si*).

niton (ni'ton). Radium emanation. See under *emanation*.

nitragin (ni'traj-in). A nitrifying bacterial soil ferment from leguminous root tubercles: said to be a valuable fertilizer.

nitramine (ni-tram'in). A nitro derivative of an amine.

nitrate (ni'trät) [*L. nitra'tum*]. Any salt of nitric acid.

nitremia, nitraemia (ni-tre'me-ah). Excess of nitrogen in the blood.

nitric acid (ni'trik). See *acid*.

nitride (ni'trid). A compound of nitrogen with a metal.

nitridation (ni-trid-a'shun). Combination with nitrogen to form a nitride.

nitrication (ni'trif-ik-a'shun) [*nitric acid* + *L. facere* to make]. Conversion of the nitrogen contained in ammonia into nitrous and nitric acid.

nitriifer (ni'trif-i-er). A nitrifying micro-organism.

nitrifying (ni'trif-i-ing). Forming nitrous and nitric acids out of ammonia: said of certain bacteria.

nitride (ni'tril). An organic compound containing trivalent nitrogen. Nitrides may be *nitride bases*, which are tertiary amines, or acid *nitrides*, which may be considered esters of HCN or as acids in which carboxyl is replaced with cyanogen, or as ammonia whose hydrogen atoms have been replaced by a trivalent radical.

nitrilase (ni'tril-ās). An enzyme which splits nitrides.

nitrilease (ni'tril-ēs). An enzyme which synthesizes nitrides.

nitrite (ni'trit). Any salt of nitrous acid. The nitrites act as antispasmodics and lessen the arterial tension. The principal medicinal nitrites are those of amyl, ethyl, potassium, and sodium. Glyceryl trinitrate yields nitrate reactions in the body.

nitritoid crisis or reaction (ni'trit-oid). See under *crisis*.

nitrituria (ni-tri-tu're-ah) [*nitrite* + *oûpov* urine]. The presence of nitrites in the urine.

nitro-. A prefix indicating the presence of the group $-NO_2$.

nitro-amine (ni-tro-am'in). Same as *nitramine*.

nitro-anisol (ni-tro-an'is-ol). A nitro derivative of anisol, $NO_2.C_6H_4.O.CH_3$.

Nitrobacter (ni'tro-bak-ter). A genus of bacterial organisms capable of securing energy for growth by oxidizing nitrites to nitrates (Winogradsky, 1918).

Nitrobacteraceae (ni'tro-bak-te're-e). A systematic tribe under the family Nitrobacteriaceae. They derive their life energy from the oxidation of hydrogen or simple compounds of carbon or nitrogen. The genera are: Acetobacter, Carboxydomonas, Hydrogenomonas, Methanomonas, Nitrobacter, and Nitrosomonas.

nitrobacteria (ni'tro-bak-te're-ah), pl. Soil bacteria or other micro-organisms which convert ammonia and other nitrogenous substances into nitrogen acids.

Nitrobacteriaceae (ni'tro-bak-te-re-a'se-e). A systematic family of the order Eubacteriales. They are rod shaped, asporogenic, aerobic and capable of securing growth energy by the direct oxidation of carbon, hydrogen or nitrogen, or of simple compounds of these. There are two tribes: Azotobacteraceae and Nitrobacteraceae.

nitrobenzene (ni-tro-ben'zēn). A poisonous benzol derivative, $C_6H_5NO_2$. It is a sweet, oily liquid, used in perfuming soap and as a flavoring agent. It is an active poison. Called also *nitrobenzol*, *oil of mirbane*, and *artificial oil of bitter almond*.

nitrobenzol (ni-tro-ben'zol). See *nitrobenzene*.

nitrocellulose (ni-tro-sel'u-lōs). Pyroxylin.

nitrochloroform (ni-tro-klo'ro-form). See *chloropicrin*.

nitrodextrose (ni-tro-deks'trōs). Dextrose nitrate: used like nitroglycerin.

nitro-erythrol (ni-tro-er'ith-rol). Erythrol nitrate: used like nitroglycerin, but slower and more lasting in its action.

nitroform (ni'tro-form). Trinitromethane, $CH_3(NO_2)_3$, a crystalline explosive substance.

nitrogen (ni'tro-jen) [*nitron* niter + *γεννάν* to generate]. A colorless, gaseous element found free in the air; symbol, N; specific gravity, 0.9713; atomic weight, 14.008. It constitutes part of the atmosphere, forming about four fifths of common air. Chemically, it is almost inert, but forms by combination nitric acid and ammonia. It is a gas unfitted to support respiration; not a poison, but proving fatal if breathed alone, because of the want of oxygen. It is soluble in the blood and body fluids and when released as bubbles of gas by reduction of atmospheric pressure causes serious symptoms. See *caisson disease*, *alloxuric n.*, nitrogen in the form of alloxur bases. See *purine bases*, under *purine*. **amide n.**, **amino n.**, that portion of the nitrogen in protein that exists in the form of acid amides. **authentic n.** Same as *legitimate n.* **filtrate n.** See *nonprotein n.* **illegitimate n.**, that part of administered nitrogen which is not found in the excreta and the retention of which in the organism is not justifiable. **justifiable n.** Same as *legitimate n.* **legitimate n.**, that part of administered nitrogen which is used by the organism in building up its own tissues or else is excreted. **n. monoxide**, a colorless gas, N_2O , or nitrous oxide, having a sweetish taste and a pleasant odor. It causes a condition of temporary asphyxiation and unconsciousness when inhaled, and is administered to produce this condition for the performance of minor operations. Called also *laughing gas* and *nitrous oxide*. **nomadic n.**, free nitrogen from the air which enters into plant and animal growth. **nonprotein n.**, the nitrogenous constituents of the blood exclusive of the protein bodies. It consists of the nitrogen of urea, uric acid, creatine, creatinine, amino-acids, polypeptides, and an undetermined part known as *rest nitrogen*. **n. pentoxide**, a crystalline compound, N_2O_5 , or nitric anhydride, which combines with water to form nitric acid. **n. peroxide**, **n. tetroxide**, a poisonous volatile liquid, N_2O_4 , giving off brownish irritant fumes. **rest n.** See under *nonprotein n.*

nitrogen lag. The time elapsing after the administration of a protein before there appears in the urine nitrogen equal in amount to that contained in the protein.

nitrogen partition. The percentage of total nitrogen in the urine represented by each of the nitrogenous constituents.

nitrogenization (ni'tro-jen-iz-a'shun). The act of impregnating with nitrogen.

nitrogenous (ni-troj'en-us). Containing nitrogen.

nitroglucose (ni-tro-glu'kōs). Nitrodextrose.

nitroglycerin (ni-tro-glis'er-in). See *glyceryl trinitrate*.

nitrohydrochloric acid (ni'tro-hi-dro-klo'rik). See under *acid*.

nitrolevulose (ni-tro-lev'u-lōs). Levulose nitrate: used like glyceryl trinitrate.

nitromannitol (ni-tro-man'it-ol). Mannitol nitrate: used like nitroglycerin.

nitrometer (ni-trom'et-er) [*nitrogen* + *μέτρον* measure]. An apparatus for measuring the quantity of nitrogen given off in a reaction.

nitromonas (ni-tro-mo'nas). Same as *nitrosomonas*.

nitron (ni'tron). The name suggested by Sir W. Ramsay and R. W. Gray for the molecular weight of a radium emanation.

nitronaphthalin (ni-tro-naf'thal-in). A substance, $C_{10}H_7NO_2$, whose vapors may cause vesication and opacity of the cornea.

nitrophenol (ni-tro-fe'no). An indicator, para-nitro-phenylic acid, $C_6H_4(NO_2)OH$, with a *pH* range of 5 to 7; being colorless at 5 and yellow at 7.

nitropropiol (ni-tro-pro'pe-ol). Orthonitrophenylpropionic acid, $NO_2.C_6H_4.C:C.COOH$: used as a test for sugar.

nitroprotein (ni-tro-pro'te-in). A protein made by treating serum protein with nitric acid.

nitrosaccharose (ni-tro-sak'ar-ös). Nitrated saccharose; an explosive and vasodilator: used like nitroglycerin.

nitrosalol (ni-tro-sal'ol). An ester, $C_6H_4(OH) \cdot CO_2 \cdot C_6H_4 \cdot NO_2$, in a yellowish, crystalline powder.

nitroscleran (ni-tro-skler'an). A proprietary preparation recommended for arteriosclerosis.

nitrose (ni'trös). A term used to include nitric and nitrous acids.

nitrosin (ni'tro-sin). A preparation for treating cancer prepared by Ehrlich.

nitroso-. A prefix indicating a compound which contains the group $-N : O$.

nitrosobacteria (ni-tro'/'so-bak-te're-ah). Bacteria which oxidize ammonia into nitrites.

nitrosococcus (ni-tro-so-kok'us). A micrococcus with nitrifying powers.

nitroso-indol (ni-tro-so-in'dol). A compound which gives a red reaction when indol is treated with sulphuric acid and potassium nitrite.

Nitrosomonas (ni-tro-som'o-nas). A genus of bacterial organisms capable of securing growth energy by oxidizing ammonia to nitrites (Winoogradsky, 1892).

nitrosophenyldimethylpyrazol (ni-tro'/'so-fen'-il-di-meth'il-pi-ra-zol). Same as *isonitrosoantipyrene*.

nitrososubstitution (ni-tro'/'so-sub-sti-tu'shun). The substitution of the radical nityrl for some other radical or atom in a compound.

nitro-sugars (ni-tro-shug'erz). A class of bodies which have been used as vasodilators.

nitrosyl (ni'tro-sil). The univalent radical NO .

nitrous (ni'trus). Pertaining to nitrogen in its lowest valency. **n. acid**. See *acid*. **n. oxide**, nitrogen monoxide.

nitrox (ni'troks). A proprietary germicide for local use.

nitroxyl (ni-troks'il). The radical NO_2 .

nityrl (ni'tril). The nitrose group.

niveau diagnosis (ne-vo'). See under *diagnosis*.

nizin (ni'zin). A proprietary antiseptic and astringent, being a zinc salt of sulphanic acid, $(NH_2 \cdot C_6H_4 \cdot SO_3)_2Zn$: used in gonorrhea and in eye lotions.

njalline (nj'al'in). An alkaloid from the njalla bean.

Nm. Abbreviation for *L. nux moscha'ta*, nutmeg.

N:N. The azo group.

N. N. N. medium [Nicolle, Novy, McNeal]. See under *medium*.

N. N. R. An abbreviation for *New and Nonofficial Remedies*, a book containing a description (action, uses, standards) of proprietary articles which have been accepted as conforming to the rules of the Council on Pharmacy and Chemistry of the American Medical Association; of such simple nonproprietary and nonofficial substances as seem of sufficient importance to warrant their inclusion, and of simple pharmaceutical preparations the inclusion of which is believed to give useful information to physicians.

No. An abbreviation of *L. nu'mero*, "to the number of."

No. 102. Luargol.

No. 132. Eparseno.

No. 190. Stovarsol.

No. 205. See *Bayer 205*.

No. 309. Fournéau. See *Fournéau 309*.

No. 592. Dioxidyamidoarsenobenzol.

No. 606. Arsphenamine.

No. 914. Neoarsphenamine.

No. 1116. Galyl.

No. 1151. Ludyl.

No. 1495. A proprietary preparation suggested for use in syphilis.

N₂O. Nitrogen monoxide.

N₂O₃. Nitrogen trioxide.

N₂O₅. Nitrogen pentoxide.

Nocard's bacillus [see *Nocardia*]. The bacillus of psitticosis.

Nocardia (no-kar'de-ah) [Edmond Isidore Étienne Nocard, French veterinarian, 1850-1903]. A genus of trichomyces characterized by true branching and the formation of spores. Under this genus are included various organisms formerly included under the genera *Oospora*, *Discomyces*, *Streptothrix*, and *Cladothrix*. **N. asteroides**, *Cladothrix asteroides*. **N. bo'vis**, *Actinomyces bovis*. **N. farcin'ica**, *Actinomyces farcinica*. **N. foers'teri**, *Streptothrix foersteri*. **N. israe'li**, *Streptothrix israeli*. **N. madu'rae**, *Streptothrix madurae*. **N. minutis'sima**, *Microsporum minutissimum*. **N. poncet'i**, a species causing pseudo-actinomycosis. **N. pulmona'lis**, a species causing pseudotuberculosis. **N. ten'uis**. See under *trichonocardiasis*.

nocardia (no-kar'de-al). Caused by *Nocardia*.

nocardiasis (no-dar'di-as-is). Nocardiosis.

nocardiosis (no-kar-de-o'sis). Infection with *Nocardia*; a disease caused by *Nocardia*. The most frequent point of attack is the respiratory tract, where it causes lesions and symptoms resembling pulmonary tuberculosis. Called also *pseudo-tuberculosis* and *streptothricosis*.

Nocht's stain (nokts). See under *stain*.

nocl-association (no-se-as-o-se-a'shun). The unconscious discharge of nervous energy under the stimulus of trauma, as in surgical shock.

nociceptive (no-sis-ep'tiv) [*L. nocere* to injure + *capere* to receive]. Receiving injury: said of a receptive neuron.

nociceptor (no-sis-ep'tor) [see *nociceptive*]. The nervous mechanism by which stimuli of injury or pain are received (receptors).

nocl-influence (no-se-in'flu-ens). Injurious or traumatic influence.

nocl-perception (no-se-per-sep'shun). The perception by the system of injurious (traumatic) stimuli.

Noct. Abbreviation for *L. noc'te*, at night.

noctambulation (nok'tam-bu-la'shun) [*L. noctambula'tio*; *nox* night + *ambula're* to walk]. Sleep walking; somnambulism.

noctiphobia (nok-ti-fo-be-ah) [*L. nox* night + *phobos* fear]. Morbid dread of night and its darkness and silence.

Noct. maneq. Abbreviation for *L. noc'te mane'que*, at night and in the morning.

nocturia (nok-tu're-ah) [*L. nox* night + *ovov* urine]. Excessive urination at night.

nocturnal (nok-tur'nal) [*L. noctur'nus*]. Pertaining to the night.

nodal (no'dal). Pertaining to a node, particularly the atrioventricular node.

node (nöd) [*L. nodus* knot]. A swelling or protuberance. **Aschoff's n.**, **n. of Aschoff** and **Tawara**. Same as *atrioventricular n. atrioventricular n.*, *auriculoventricular n.*, a remnant of primitive fibers found in all mammalian hearts at the base of the interauricular septum, and forming the beginning of the auriculoventricular bundle or bundle of His. Called also *atrioventricular n.* and *n. of Tawara*. **Bouchard's n's**, nodules on the second joints of the fingers, believed to be symptomatic of gastrectasis. **Féréol's n's**, subcutaneous nodes sometimes occurring in acute rheumatism. **gouty n.**, one due to gouty inflammation. **Haygarth's n's**, joint swellings in arthritis deformans. **Heberden's n's**, nodes on the fingers in advanced life, usually ascribed to gout, but often seen when the general health seems perfect. **hemal n's**, **hemolymph n's**. See *hemolymph glands*, under *gland*. **Hensen's**

n., an area of cell proliferation in the impregnated ovum in which the primitive streak begins. **Keith's n.**, **n. of Keith and Flack**. See *sino-auricular n.* **Koch's n.**, atrioventricular node. **Legendrè's n's.** Same as *Bouchar'd's n's.* **lymph n's, lymphatic n's**, the glandlike structures arranged in groups interposed throughout the lymphatic circulation. Called also *lymph glands* or *lymphatic glands*. **Meynet's n's**, nodules in the capsules of joints and in tendons in rheumatic conditions, especially of children. **Parrot's n.**, a syphilitic node on the outer table of the skull. **pedric n's**, the nodes seen on the hair in piedra. **n's of Ranvier**, nodes produced by constrictions on medullated nerve fibers at intervals of about 1 millimeter. **Rosenmüller's n.**, Rosenmüller's gland. See *gland*. **Schmidt's n.**, the medullated interannular segment of a nerve fiber. **singers' n.**, hypertrophy of the edge of the vocal cords from continued irritation, -as in singers. **sino-atrial n., sino-auricular n.**, a well-defined collection of cells, a remnant of primitive fibers found in all mammalian hearts, at the junction of the superior vena cava with the terminal band of the right auricle. The cardiac rhythm normally takes its origin in this node which has been called the *pace-maker of the heart*. Called also **n. of Keith and Flack**. **sinus n.** Same as *sino-auricular n.* **syphilitic n.**, a swelling upon a bone due to syphilitic periostitis. **n. of Tawara**. See *atrioventricular n.* **teachers' n.**, singers' node. **Virchow's n.**, Virchow's glands. See under *gland*. **vital n.**, Flourens' term expressing the old conception that there is a minute node under the lowest point of the fourth ventricle which is the respiratory center.

nodose (no'dôz) [L. *nodosus*]. Having nodes or projections.

nodosity (no-dos'it-e) [L. *nodositas*]. 1. The quality or fact of being nodose. 2. A node. For varieties, see *node*.

nodular (nod'u-lar). 1. Like a nodule or node. 2. Marked with nodules.

nodulate, nodulated (nod'u-lât, nod'u-la-ted). Characterized by nodules.

nodulation (nod-u-la'shun). The presence of nodules.

nodule (nod'ül) [L. *nodulus* little knot]. 1. A small boss or node. 2. The anterior segment of the inferior vermis of the cerebellum in the fourth ventricle. **Albini's n's**, gray nodules of the size of sage grains, sometimes seen on the free edges of the auriculoventricular valves of infants. They are remains of fetal structures. **apple jelly n's**, light reddish elevations on the surfaces of leprosy ulcers. **n. of Arantius**. Same as *corpus arantii*. **Aschoff's n's**, nodules in the myocardium in rheumatism. **Bianchi's n's**, corpora arantii. **Bouchar'd's n's**, nodes sometimes seen on the joints of the fingers and toes in cases of gastrastasia. **epicardial n's**, nodules over the vessels of the epicardium, probably due to high pressure. **Gamna n's**, brown or yellow pigmented nodules seen in the spleen in certain cases of enlargement and called by Gamna *nodules tabac*. **Jeanselme's n's**, nodules on the limbs near the joints due to nocardia infection; called also *juxta-articular n's* and *Steiner's tumors*. **juxta-articular n's**, Jeanselme's nodules. **Kerkring's n., Köster's n.**, a tubercle composed of one giant cell enclosed by a double layer of cells. **Leishman's n's**, the pinkish nodules seen in the nonulcerative keloid-like type of oriental sores. **lymph n.** See *lymph nodes*, under *node*. **Morgagni's n's**, the corpora arantii. **pearly n.**, one of the nodules of bovine tuberculosis. **pulp n.**, a mass of dentin found in the pulp cavity of a tooth. Called also *pulp stone*. **n. tabac**. See *Gamna n's*. **triticeous n.** See *corpus triticeum*.

nodule disease. See under *disease*.

noduli (nod'u-li). Pl. of *nodulus*.

nodulosus (nod'u-lus). Same as *nodose*.

nodulus (nod'u-lus), pl. *nod'uli* [L.]. A nodule. **nod'uli laqueati**, a knotted appearance of the hair. **n. lymphaticus**, a lymph nodule. **nod'uli lymphatici aggregati** (*peyeri*) [B N A], Peyer's patches. **nod'uli lymphatici laryngei** [B N A], the laryngeal tonsils. **nod'uli lymphatici lineales** (*malpighii*) [B N A], malpighian corpuscles. **nod'uli lymphatici solitarii** [B N A], Peyer's glands. **nod'uli lymphatici tubarii** [B N A], eustachian tonsils. See under *tonsil*. **n. thymicus**, a clump of cells at the upper end of the third pharyngeal pouch in the embryo developing into the inferior pair of parathyroid glands. Called also *epithelial body*. **nod'uli valvulorum semilunarium** (*arantii*) [B N A], corpora arantii.

nodus (no'dus) [L.]. Node. **n. cer'e'bri**, the pons varolii. **n. cor'dis**, the trigonum fibrosum. **n. cursorius**, a point in the corpus striatum of some animals, as the rabbit, stimulation of which causes the animal to rush forward.

noed vital (ne ve-tal') [Fr. "vital knot"]. The supposed respiratory center in the medulla oblongata.

noematachograph (no-e-mah-tak'o-graf) [*νόημα* thought + *ταχύς* swift + *γράφειν* to write]. A device for registering the time required in a mental operation.

noematachometer (no-e-mah-tak-om'et-er) [*νόημα* thought + *ταχύς* swift + *μέτρον* measure]. A device for measuring and registering the time required in a mental operation.

noematic (no-e-mat'ik) [*νόημα* thought]. Pertaining to thought or the operation of the mind.

Noguchi's test (no-goo'tshe) [Hideyo *Noguchi*, Japanese pathologist in New York, 1876-1928]. See under *tests*.

noli-me-tangere (no'li-me-tan'jer-e) [L. "touch me not"]. Rodent ulcer; malignant ulcer.

noma (no'mah) [*νόμη* a spreading]. Gangrenous sore mouth; gangrenous stomatitis; a severe variety of stomatitis affecting especially young children, and marked by the development of a spreading ulcer on the mucous membrane of the mouth. It is attended by progressively increasing prostration, and is generally fatal. Called also *cancreum oris*. **n. puden'di, n. vul'vae**, ulceration of the pudendum of young children.

nomadic (no-mad'ik). Wandering; unsettled; free. **n. nitrogen**. See *nitrogen*.

nomenclature (no'men-kla-tür) [L. *no'men* name + *calô're* to call]. Terminology; especially a system of names of diseases.

nomogenesis (nom-o-jen'es-is) [*νόμος* law + *γένεσις* generation]. The theory of evolution according to which the course of evolution is fixed and predetermined by law, no place being left for chance.

nomogram (nom'o-gram) [*νόμος* law + *γράμμα* mark]. The graphic representation produced in nomography; a chart or diagram on which a number of variables are plotted.

nomography (nom-og'raf-e) [*νόμος* law + *γράφειν* to write]. A graphic method by which the relation between any number of variables may be represented graphically on a plane surface, such as a piece of paper.

nomotopic (nom-o-top'ik) [*νόμος* law + *τόπος* place]. Occurring at a normal place; occurring normally.

nona (no'nah). A condition resembling lethargic encephalitis which appeared in epidemic form in southern Europe in 1889-1890.

nonadherent (non-ad-he'rent). Not adherent to or connected with adjacent structures.

nonan (no'nan) [L. *no'nus* ninth]. Recurring every ninth day, or at intervals of eight days.

nonantigenic (non-an-te-jen'ik). Not producing antigens.

non compos mentis (non kom'pos men'tis) [L.]. Not of sound mind.

nonconductor (non-kon-duk'tor). Any substance that does not readily transmit electricity, light, or heat.

nonigravida (no-ne-grav'id-ah) [L. *no'nus* ninth + *grav'ida* pregnant]. A woman pregnant for the ninth time.

nonipara (no-nip'ar-ah) [L. *no'nus* ninth + *par'ere* to bear]. A woman who has borne nine children.

nonmetal (non-met'al). Any chemical element that is not a metal.

Nonne's syndrome (non'ez) [Max Nonne, German physician]. See *syndrome*.

Nonne-Apel reaction (non'eh-ah'pelt) [Max Nonne and F. Apelt, Contemporary German physicians]. See under *reaction*.

non-nucleated (non-nu'kle-a-ted). Without a nucleus.

nonocclusion (non-ok-lu'zhun). Open bite malocclusion. See under *malocclusion*.

nonose (non'os) [L. *no'nus* ninth]. A carbohydrate containing nine atoms of carbon in the molecule.

nonparous (non-par'us). Having borne no children: said of a woman.

nonprotein nitrogen. See under *nitrogen*.

nonradiable (non-ra'de-a-bl). Impervious to rays, such as roentgen rays, cathode rays, etc.

Non repetat. Abbreviation for L. *non repeta'tur*, do not repeat.

nonrestraint (non-re-strant'). Treatment of insanity without physical restraint.

nonspecific therapy. See under *therapy*.

nontoxo (non-tok'so). A proprietary local anesthetic containing procaine, epinephrine, duatol, and thymol.

nonus (no'nus) [L. for *ninth*]. The hypoglossal nerve, formerly regarded as the ninth cranial nerve.

nonvalent (non'va-lent) [L. *non* not + *vale're* to be able]. Having no chemical valency: not capable of entering into chemical composition: used of argon, helium, and the other inert gases.

nonviable (non-vi'ab-l) [L. *non* not + *viable*]. Not capable of living: used of the fetus after delivery.

nonyl (no'nil). The monovalent radical C_9H_{19} .

noopsyche (no'o-si-ke) [*no'us* mind + *ψυχη* soul]. Intellectual processes.

noothymopsychic (no'o-thi-mo-si'kik). Pertaining to the intellectual and the affective processes of the mind. *n. ataxia*. See under *ataxia*.

nopalin G (no'pal-in). Bluish eosin. See *eosin*.

N. O. P. H. N. Abbreviation for *National Organization for Public Health Nursing*.

noratropine (nor-at'ro-pin). A mydriatic alkaloid obtained when norhyoscyamine is racemized with alkali.

Nordau's disease, nordauism (nor'dowz, nor-dow'izm) [Max Simon Nordau, German scientist, 1849-1923]. Degeneracy.

norhyoscyamine (nor'hi-o-si-am'in). A mydriatic alkaloid, $NH_2C_6H_{10}CH_2O.CO.CH(C_6H_5)CH_2OH$, from certain solanaceous plants.

nori (no're). A Japanese culture gelatin.

noridal (no'rid-al). A proprietary suppository used for bleeding piles.

norleucine (nor-lu'sin). An amino-acid, alpha-amino normal caproic acid, $CH_3(CH_2)_3CH(NH_2).CO_2H$, extracted from the leucine fraction of the decomposition of the proteins of nervous tissue (Abderhalden and Weil, 1913).

norm (norm) [L. *nor'ma* rule]. A fixed or ideal standard.

norma (nor'mah) [L.]. A line established to define the aspects of the cranium.

normacol (nor'mak-ol). A proprietary laxative which acts by increasing the indigestible bulk of the intestinal contents. It contains vegetable mucins which absorb large quantities of water and swell accordingly.

normal (nor'mal). 1. Agreeing with the regular and established type. 2. In chemistry, noting aliphatic hydrocarbons in which no carbon atom is combined with more than two other carbon atoms the term is also applied to salts formed from acids and bases in such a way that no acidic hydrogen of the acid remains nor any of the basic hydroxyl of the base. 3. In bacteriology, not immunized or otherwise bacteriologically treated.

normalin (nor'mal-in). A proprietary preparation of iron and arsenic.

normalization (nor'mal-iz-a'shun). The process of bringing or restoring to the normal standard.

normoblast (nor'mo-blast) [L. *nor'ma* rule + *βλαστός* germ]. An erythroblast having the diameter of a normal red blood corpuscle (erythrocyte), *i. e.*, from 5 to 10 μ . It has a round nucleus with dense, heavily staining chromatin. Normoblasts occur in the blood in secondary anemias and especially in myelogenous leukemia. They have been called *sauroid cells* because they are like the red blood cells of reptiles. Cf. *erythroblast*.

normoblastic (nor-mo-blas'tik). Relating to or having the character of a normoblast.

normochromasia (nor'mo-kro-ma'ze-ah) [*normal* + *χρῶμα* color]. A normal staining reaction in a cell or tissue.

normocyte (nor'mo-sit) [L. *nor'ma* rule + *κύτος* cell]. A normal non-nucleated erythrocyte.

normocytic (nor-mo-sit'ik). Relating to or having the character of a normocyte.

normocytosis (nor'mo-si-to'sis) [see *normocyte*]. A normal state of the blood in respect to the leukocytes.

normolineal (nor-mo-lin'e-al). Built on normal lines; enmorphic.

normomastic (nor-mo-mas'tik). See *Kafka's test*, under *tests*.

normonormocytosis (nor'mo-nor'mo-si-to'sis). See *isonormocytosis*.

normo-orthocytosis (nor'mo-or'tho-si-to'sis) [*normal* + *ὀρθός* correct + *κύτος* cell]. A condition of the blood leukocytes in which the total number is increased, but the proportion between the different varieties remains normal.

normal (nor'mo-sal). An artificial serum designed to replace normal salt solution for transfusion, etc.

normoskeocytosis (nor'mo-ske'o-si-to'sis) [*normal* + *σκαῖός* left + *κύτος* cell]. A condition of the leukocytes of the blood in which the number is normal, but many immature forms (deviation to the left) are present.

normotonic (nor-mo-ton'ik). Having normal tonus.

normovolemia (nor'mo-vo-le'me-ah) [*normal* + *αἷμα* blood]. Normal blood volume.

normarcotine (nor-nar'ko-tin). An active principle said to exist in opium.

Norris' corpuscles (nor'is-iz) [Richard Norris, English physician, 1831-1916]. See *corpuscle*.

northovan (nor'tho-van). A proprietary name for sodium orthovanadate: has been used in syphilis.

nortropinon (nor-tro'pin-on). A solid, fusible ketone, $C_8H_{11}NO$, derived from tropin.

Norwegian itch (nor-we'jan). See *itch*.

Norwood's tincture (nor'woodz) [Wesley C. Norwood, an American physician of the 19th century]. See *tincture*.

nosazontology (nos-az-on-to'l-o-je). Nosetiology.

nose (nōz) [L. *nasus*]. The special organ of the sense of smell. It consists of a hollow structure occupying the middle of the face, the upper part of which (*olfactory region*) forms the organ of smell; the lower part (*respiratory region*), or beginning of the respiratory tract, acts as a filter and warmer of the inspired air. **cone n.** See *Lamus. hammer n.*, rhinophyma. **saddle n.**, **saddle-back n.**, **swayback n.**, a nose with a sunken bridge.

nosebleed (nōz'blēd). See *epistaxis*.

nosegay, Riolan's (nōz'gā). The group of muscles that take their origin from the styloid process of the temporal bone.

nosema (no-se'mah), pl. *nose'mas* or *nosem'ata* [*νόσσημα* disease]. 1. Any illness or disease. 2. A genus of microsporidia. *N. a'pis* causes the nosema disease of bees. *N. bom'bycis* causes the disease pébrine in silkworms.

nosencephalus (no-sen-sef'al-us) [*νόσος* disease + *ἐγκέφαλος* brain]. A fetus with a defective cranium and brain.

nosepiece (nōz'pēs). A device for applying several objectives in rapid succession to a microscope without disturbing the focus.

nosetiology (nos-e-te-o'l-o-je) [*νόσος* disease + *αἰτία* cause + *λόγος* treatise]. The study of the causation of disease.

nosochthonography (nos'ok-tho-nog'raf-e) [*νόσος* disease + *χθών* earth + *γράφειν* to write]. The geography of endemic or other diseases; the study of the geographical distribution of diseases; nosogeography.

nosocomial (nos-o-ko'me-al). Pertaining to a hospital or an infirmary.

nosocomium (nos-o-ko'me-um) [*νόσος* disease + *κομείν* to take care of]. A hospital or an infirmary.

nosode (nos'od). Any disease product used as a remedy.

nosogenesis (no-so-jen'es-is). Nosogeny.

nosogenic (nos-o-jen'ik) [see *nosogeny*]. Causing disease.

nosogeny (no-soj'en-e) [*νόσος* disease + *γεννᾶν* to produce]. Same as *pathogenesis*.

nosogeography (nos'o-je-og'rah-fe) [*νόσος* disease + *γῆ* earth + *γράφειν* to write]. Same as *nosochthonography*.

nosographer (no-sog'raf-er). A writer of nosography.

nosography (no-sog'raf-e) [*νόσος* disease + *γράφειν* to write]. A written account or description of diseases.

nosohemia, nosohaemia (nos-o-he'me-ah) [*νόσος* disease + *αἷμα* blood]. Blood disease.

noso-intoxication (nos'o-in-toks-ik-a'shun). Intoxication by the harmful products of disease.

nosologic, nosological (nos-o-loj'ik, -loj'ik-al). Pertaining to nosology.

nosology (no-sol'o-je) [*νόσος* disease + *λόγος* discourse]. The science of the classification of diseases.

nosomania (nos-o-ma'ne-ah) [*νόσος* disease + *μανία* madness]. The insane and incorrect belief of a patient that he has some special disease.

nosometry (nos-om'et-re) [*νόσος* disease + *μέτρον* measure]. The measurement of the morbidity rate.

nosomycosis (nos'o-mi-ko'sis) [*νόσος* disease + *μύκης* fungus]. A disease caused by a parasitic fungus.

nosonomy (no-son'o-me) [*νόσος* disease + *νόμος* law]. The classification of diseases.

nosoparasite (nos-o-par'as-it) [*νόσος* disease + *παράσιτε*]. An organism found in conjunction with a disease which it is able to modify, but not to produce.

nosophen (nos'o-fen). Tetraiodophenolphthalein; a yellow, antiseptic powder, $\text{CO}_2\text{C}_6\text{H}_4\text{C}(\text{C}_6\text{H}_5)_2\text{OH}$, soluble in alkalis, slightly so in alcohol, ether, and chloroform, but insoluble in water: used externally as a substitute for iodoform.

nosophobia (nos-o-fō-be-ah) [*νόσος* disease + *φοβός* fear]. Morbid dread of sickness or of any special disease.

nosophyte (nos'o-fit) [*νόσος* disease + *φυτόν* plant]. A pathogenic plant micro-organism.

nosopoietic (nos'o-poi-et'ik) [*νόσος* disease + *ποιεῖν* to make]. Causing or producing disease.

nosotaxy (nos'o-tak-se) [*νόσος* disease + *τάξις* arrangement]. The classification of disease.

nosotoxic (nos-o-toks'ik). Producing nosotoxicosis.

nosotoxicity (nos'o-toks-is'te-e). The quality of being nosotoxic.

nosotoxicosis (nos'o-toks-ik-o'sis) [*νόσος* disease + *τοξικός*]. Poisoning by retained bodily wastes.

nosotoxin (nos-o-toks'in) [*νόσος* disease + *τοξίνη*]. Any toxin that is the result of a disease process.

nosotrophy (no-sot'ro-fe) [*νόσος* disease + *τροφή* nourishment]. The care and nursing of the sick.

nosotropic (no-so-trop'ik) [*νόσος* disease + *τρόπος* turning]. Directed against or opposed to a disease, especially as distinguished from *eliotropic*.

nostalgia, nostalgia (nos-tal'je-ah, nos-tal-je) [*νοστέιν* to return home + *ἄλγος* pain]. Homesickness; longing to return home or to one's native land.

nostology (nos-to'l-o-je) [*νοστέιν* to return + *λόγος* treatise]. Same as *gerontology*.

nostomania (nos-to-ma'ne-ah) [*νοστέιν* to go home + *μανία* madness]. Intense or insane nostalgia.

nostrils (nos'trilz). The anterior nares.

nostrum (nos'trum) [L.]. A quack, patent, or secret remedy.

notal (no'tal) [*νωτον* back]. Pertaining to the back; dorsal.

notalgia (no-tal'je-ah) [*νωτον* back + *ἄλγος* pain]. Pain in the back.

notancephalia (no'tan-se-fa'le-ah) [*νωτον* back + *αν* priv. + *κεφαλή* head]. Congenital absence of the back of the skull.

notanencephalia (no'tan-en-sef-a'le-ah) [*νωτον* back + *ἐγκέφαλος* head]. Absence of the cerebellum.

notch (notsh). An indentation or depression; chiefly one on the edge of a bone or other organ. The B.N.A term for notch is *incisura*. **acetabular n.**, a notch at the lower part of the margin of the acetabulum opposite the obturator foramen: called also *cotyloid notch*. **aortic n.** See *dicrotic n.* **auricular n.** Same as *incisura santorini*. **cardiac n.**, a depression in the anterior border of the left lung for the apex of the heart. **cerebellar n.** See *incisura cerebelli*. **clavicular n.** See *incisura clavicularis*. **coracoid n.** See *scapular n.* **cotyloid n.** See *acetabular n.* **craniofacial n.**, an opening in the bony partition between the orbital and nasal cavities. **dicrotic n.**, the depression on the sphygmogram of a dicrotic pulse wave which separates the primary from the dicrotic elevation. It is caused by closure of the aortic valves, and is also called *aortic n.* **ethmoid n.** See *incisura ethmoidalis*. **fibular n.**, a depression in the lower end of the tibia for articulation with the fibula. **frontal n.** See *incisura frontalis*. **iliosciatic n.**, the greater sciatic notch. **interclavicular n.**, the median depression in the upper border of the sternum. **intercondyloid n.**, the notch between the condyles of the femur. **interlobar n.**, the notch on the ventral border of the liver between the right and left lobes. **intertragic n.**, the notch between the tragus and the antitragus.

- intervertebral n.** See *incisura vertebralis*.
ischiatric n. See *incisura ischiadica*.
jugal n., an indentation that forms the posterior boundary of the jugular foramen.
lacrimal n., the notch in the edge of the orbital surface of the superior maxillary bone which receives the lacrimal bone.
mandibular n. See *incisura mandibulae*.
marsupial n., the *incisura cerebelli* posterior.
mastoid n., the digastric fossa.
nasal n., the interval between the internal angular processes of the frontal bone.
pancreatic n., a depression on the posterior surface of the pancreas for the superior mesenteric vessels.
parietal n. See *incisura parietalis*.
parotid n., the notch between the ramus of the mandible and the mastoid process of the temporal bone.
popliteal n., a depression of the posterior surface of the head of the tibia, between the two tuberosities.
preoccipital n., a notch on the lower edge of the external surface of a cerebral hemisphere, between the occipital and temporal lobes.
pre-sternal n., the interclavicular notch.
pterygoid n., the notch between the pterygoid processes of the sphenoid bone.
radial n. See *incisura radialis*.
n. of Rivinus. See *incisura tympanica*.
sacrosciatic n., either one of two notches (greater and lesser) on the posterior border of the innominate bone.
scapular n., a notch, converted into a foramen by a ligament, on the upper border of the scapula at the base of the coracoid process: called also *incisura scapulae* [BNA], *suprascapular notch*, and *coracoid notch*.
sciatic n., sacrosciatic notch.
semilunar n. 1. *Incisura semilunaris*. 2. *Incisura cerebelli anterior*.
Sibson's n., an inward bend of the left upper limit of precordial dullness in acute pericardial effusion.
sigmoid n. 1. See *incisura mandibulae*. 2. The intersigmoid fossa. See under *fossa*.
sphenopalatine n., the space between the orbital and sphenoid processes of the palate bone.
sternal n., the interclavicular notch.
supra-orbital n. See *incisura supra-orbitalis*.
suprascapular n. See *scapular n.*
suprasternal n., a depression at the top of the manubrium.
trigeminal n., a notch in the superior border of the petrosal near the apex, transmitting the trigeminal nerve.
tympanic n. See *incisura tympanica*.
ulnar n. See *incisura ulnaris*.
umbilical n., the anterior notch of the liver.
vertebral n. See *incisura vertebralis*.
- note blindness** (nōt'blind-nes). Loss of the power of recognizing musical notes by the eye.
- notencephalocele** (no'ten-se-fal'os-ēl) [*νῶτον* back + *ἐγκέφαλος* brain + *κῆλη* hernia]. Hernial protrusion of the brain from the back of the head.
- notencephalus** (no-ten-sef'al-us) [*νῶτον* back + *ἐγκέφαλος* brain]. A fetal monster affected with notencephalocele.
- Nothnagel's bodies, sign, test** (nōt'nah-gelz) [Hermann Nothnagel, German physician, 1841-1905]. See under *body*, *sign*, and *testis*.
- no threshold body or substances.** See under *substance*.
- notifiable** (no'ti-fi-a-bl). That should be made known: said of diseases that are required to be made known to the board of health.
- notochord** (no'to-kord) [*νῶτον* back + *χορδή* cord]. The rod-shaped body, composed of cells derived from the mesoblast, below the primitive groove of the embryo, defining the primitive axis of the body. Called also *chorda dorsalis*.
- Notoedres ca'ti.** An itch mite which causes a very persistent and often fatal mange in cats and temporarily infests man.
- notogenesis** (no-to-jen-es-is) [*νῶτον* back + *-γεν* to produce]. The development of the notochord.
- notomelus** (no-tom-el-us) [*νῶτον* back + *μέλος* limb]. A fetus with accessory limbs.
- notomyelitis** (no'to-mi-el-i'tis) [*νῶτον* back + *myelitis*]. Inflammation of the spinal cord.
- noumenal** (nu'men-al). Pertaining to the noumenon; pertaining to rational intuition independent of sensual perception.
- noumenon** (nu'men-on) [νοούμενον, a thing perceived]. An object of intuition by the understanding independent of sensual perception.
- novain** (no-va'in). See *carnitin*.
- novargan** (no-var'gan). A yellow powder; a protein preparation of silver containing 10 per cent of silver: used in gonorrhea.
- novarsenobenzol** (nōv-ar-sen-o-ben'zol). Same as *nearsphenamine*.
- novarsenobillon** (nov-ar-sen-o-be'yon). A French make of nearsphenamine.
- novaspirin** (no-vas'pir-in). Anhydromethylene citryldisalicylate, $\text{CO}_2(\text{OCH}_2)\text{C}(\text{CH}_2\text{CO}_2)\text{C}_6\text{H}_4\text{CO}_2\text{H}$, a grayish-white powder: used like acetylsalicylic acid. Dose, 10-15 grains (0.66-1 Gm.).
- novasurol** (no-vas'u-rol). A trade name for merbaphen.
- novatopan, novatophan** (no-vat'o-pan, -vat'o-fan). A brand of neocinchophen.
- novepithel** (no-vep'ith-el). A preparation of the skin of young turtles: has been tried in skin disorders, such as pruritis senilis, with the object of stimulating epithelial regeneration.
- noviform** (no'vif-orm). Novoform.
- novocaine** (no-vo-ka'in). A brand of procaine hydrochloride. Called also *Kapp's serum*.
- novocol** (no'vo-kol). Sodium guaiacol monophosphate: used in tuberculosis, chronic bronchitis, and respiratory catarrh.
- noviform** (no'vo-form). A combination of bismuth oxide with tetra-pyrocatechin: used like iodoform.
- novoiiodine** (no-vo-i'o-din). A proprietary disinfectant hexamethylene amine diiodide, which is said, on contact with wound secretion, to liberate iodine and formaldehyde.
- novoprotein** (no-vo-pro'tin). A sterile solution of a crystalline plant protein used by intravenous injection in inflammatory diseases of the female genitals.
- novorenal** (no-vo-re'nal). A preparation of procaine hydrochloride and epinephrine hydrochloride: used as a local anesthetic.
- novoscope** (no'vo-skōp) [L. *novus* new + *scope*]. Fournai's instrument for auscultatory percussion.
- novozone** (no'vo-zōn). Magnesium peroxide.
- novrenin** (nōv-ren'in). A proprietary preparation of procaine hydrochloride in a solution of epinephrine hydrochloride.
- noxa** (noks'ah), pl. *nox'ae* [L. "harm"]. An injurious agent, act, or influence.
- noxious** (nok'shus) [L. *nox'ius*]. Hurtful; not wholesome; pernicious.
- noyau** (nwo-yō') [Fr.]. A liqueur, or cordial, flavored with the kernels of *Cerasus occidentalis*, a cherry; made in the West Indies; elsewhere flavored with peach kernels, etc.
- N-phenylglycinamide-p-arsonic acid.** See under *acid*.
- N. P. N.** Abbreviation for *nonprotein nitrogen*.
- N. and Q.** Abbreviation for "*Nostrums and Quackery*," a book published by the Bureau of Investigation of the American Medical Association.
- n. rays.** See under *ray*.
- Nt.** The symbol of *niton*.
- nubecula** (nu-bek'u-lah) [L. dim. of *nu'bes* cloud]. Slight cloudiness of the cornea or of the urine.
- nubility** (nu-bil'it-e) [L. *nubil'itas*; from *nube're* to marry]. Marriageableness; fitness to marry: used of the female.
- nucha** (nu'kah) [L.]. The back, nape, or scruff of the neck.
- nuchal** (nu'kal). Pertaining to the nucha.

nucin (nu'sin) [L. *nux*, *nu'cis*, nut]. Same as *juglandic acid*.

nucis (nu'sis) [L. gen. of *nux* nut]. Of a nut.

Nuck's canal, hydrocele (nuks) [Anton Nuck, Dutch anatomist, 1650-1692]. See *canal* and *hydrocele*.

nuclear (nu'kle-ar). Pertaining to a nucleus. **n. sap.** See *karyolymph*.

nuclease (nu'kle-ās). An enzyme or a group of enzymes which split nucleic acid into mononucleotides and other products. They are present as digestive enzymes in the intestinal tract and as autolytic enzymes in many cells. Similar enzymes are found in bacterial cultures. Cf. *phosphonuclease* and *purine nuclease*.

nucleated (nu'kle-a-ted) [L. *nucleatus*]. Having a nucleus or nuclei.

nuclei (nu'kle-i). Plural of *nucleus*.

nucleic acid (nu'kle-ik). See under *acid*.

nucleicacidase (nu'kle-ik-as'id-ās). An enzyme which splits nucleic acid into nucleotides.

nucleide (nu'kle-id). Any compound of nucleic acid with a metallic element.

nucleiform (nu'kle-if-orm). Shaped like a nucleus.

nuclein (nu'kle-in). A decomposition product of nucleoprotein intermediate between native nucleoprotein and nucleic acid (F. Miescher, 1874). It is a colorless, amorphous compound, soluble in dilute alkalis, but insoluble in dilute acids. The nucleins consist of nucleic and acid bases which vary in the different nucleins. Yeast nucleus yields two purines, adenine and guanine, and two pyrimidins, cytosin and uracil. The nucleins include *cell nucleins* or *true nucleins*, which split up into protein and nucleic acids; *pseudonucleins* and *paranucleins*, or *nucleo-albumins*. The nuclein of various glands is sometimes given therapeutically. Dose, 30-45 grains (2-3 Gm.). **n. animal**, an animal into whose blood a certain amount of nuclein has been injected. **n. bases**, the bases formed by the chemical decomposition of nuclein. **yeast n.**, a nuclein extracted from the cells of the yeast (*Saccharomyces*) which differs somewhat from that obtained from the thymus gland.

nucleinase (nu'kle-in-ās). Nuclease.

nucleinic acid (nu'kle-in-ik). Same as *nucleic acid*.

nucleinotherapy (nu'kle-'in-o-ther'ap-e). Treatment with sodium nucleinate, *e. g.*, in paralysis agitans.

nucleo-albumin (nu'kle-o-al-bu'min). A conjugated protein which differs from nucleoproteins by containing paranucleic acid, which forms no xanthine bodies. Called also *paranuclein* and *pseudonuclein*.

nucleo-albuminuria (nu'kle-o-al-bu-min-u're-ah). The presence of nucleo-albumin in the urine.

nucleo-albumose (nu'kle-o-al-bu-mōs). Nucleo-albumin which has been partly hydrolyzed; it has been found in the urine of osteomalacia.

nucleo-analysis (nu'kle-o-an-al-'is-is). Analysis of the blood from the point of view of the nucleated leukocytes.

nucleo-analytic (nu'kle-o-an-al-it'ik). Pertaining to or based on nucleo-analysis.

nucleochylema (nu'kle-o-ki-le'mah) [*nucleus* + *χυλός* juice]. The ground substance of the nucleus of a cell as distinguished from that of the cytoplasm; karyochylema.

nucleochyme (nu'kle-o-kim) [*nucleus* + *χυμός* juice]. Same as *karyenchyma*.

nucleocytoplasmic (nu'kle-o-si-to-plaz'mik). Pertaining to the nucleus and the cytoplasm of cells; as *nucleocytoplasmic ratio*.

nucleofugal (nu'kle-of-u-gal) [*nucleus* + L. *fugere* to flee]. Moving away from a nucleus.

nucleogen (nu'kle-o-jen). A proprietary preparation of iron, arsenic, and phosphorus: used as a roborant.

nucleoglucoprotein (nu'kle-o-glu'ko-pro-te'in). A combination of a nucleoprotein with a carbohydrate.

nucleohexyl (nu'kle-o-hex'il). A compound of nucleic acid and methenamine used in 10 per cent solution for intravenous injections in non-specific protein therapy.

nucleohiston (nu'kle-o-his'ton). 1. A nucleoprotein from the nuclei of lymphocytes, composed of nuclein and histon. 2. A therapeutical extract of the lymphatic glands and spleen of animals: bactericide and antituberculous.

nucleohyaloplasm (nu'kle-o-hi-al'o-plazm). Same as *linin*.

nucleoid (nu'kle-oid). 1. Resembling a nucleus. 2. The granular substance in the erythrocytes formed from the original nucleus.

nucleokeratin (nu'kle-o-ker'at-in). A variety of keratin found in the nervous system.

nucleol (nu'kle-ol). A protein forming soluble compounds with metallic salts.

nucleolar (nu'kle-o-lar). Pertaining to a nucleolus.

nucleoliform (nu'kle-ol-if-orm). Shaped like a nucleolus.

nucleolin (nu'kle-o-lin). The substance composing the nucleolus of a cell; plastine.

nucleolinus (nu'kle-o-li'nus). A deeply staining granule in the nucleolus.

nucleoloid (nu'kle-o-loid). Resembling a nucleolus.

nucleololus (nu'kle-ol'o-lus). A nucleolonucleus.

nucleolonucleus (nu'kle-o-lo-nu'kle-us). A nuclear mass within a nucleus.

nucleolus (nu'kle-o-lus), pl. *nucle'oli* [L. dim. of *nucleus*]. A round achromatic body within the nucleus of a cell. Called also *plasmosome*, *chromatin n.*, and *karyosome*. **false n.** See *karyosome*. **secondary n.**, a mass sometimes seen near a nucleolus, and looking like a separated portion of the latter.

nucleomicrosome (nu'kle-o-mi'kro-sōm) [*nucleus* + *μικρός* small + *σώμα* body]. Any one of the minute segments of a chromatin fiber.

nucleon (nu'kle-on). Same as *phosphocarnic acid*. See under *acid*.

nucleonic (nu'kle-on'ik). Pertaining to a nucleus. Consisting of compounds of one or more protein molecules with nucleic acid.

nucleopetal (nu'kle-op-et'al) [L. *nu'cleus* nucleus + *petere* to seek]. Directed toward a nucleus.

Nucleophaga (nu'kle-of-ag-ah) [*nucleus* + *φάγειν* to eat]. An organism which is parasitic in amebas, destroying the nucleus of the latter.

nucleoplasm (nu'kle-o-plazm) [*nucleus* + *plasma*]. The protoplasm composing the nucleus of a cell; karyoplasm.

nucleoprotamine (nu'kle-o-pro-tam'in). A compound of protamine and nucleic acid found chiefly in fish sperm.

nucleoproteid (nu'kle-o-pro'te-id). Same as *nucleoprotein*.

nucleoprotein (nu'kle-o-pro'te-in). The conjugated protein found in the nuclei of cells. It is a combination of nucleic acid with simple proteins. In digestion a protein fraction is first broken off, thus producing nuclein, and on further digestion the rest of the protein is removed, leaving nucleic acid. It is the most important constituent of nuclei and of chromatin.

nucleoreticulum (nu'kle-o-re-tik'u-lum) [*nucleus* + *reticulum*]. Any intranuclear network.

nucleose (nu'kle-ōs). Any albumose of the class to which the vegetable nucleo-albumins belong. The nucleoses are foods, and are also antiseptic, bactericidal, phagocytic, and diuretic.

nucleosidase (nu'kle-o-sid-ās). A ferment which splits nucleoside into a carbohydrate portion

(pentose) and a base. The nucleosidases are adenosin-hydrolase, guanosin-hydrolase, inosin-hydrolase, and xanthosin-hydrolase.

nucleoside (nu'kle-o-sid). One of the glucosidic compounds into which a nucleotide is split by the action of nucleotidase or by chemical means. It is a combination of a sugar (a hexose or pentose) with a purine or a pyrimidin base.

nucleosin (nu'kle-o-sin). Same as *thymin*.

nucleospindle (nu'kle-o-spin'dl). The spindle-shaped body in mitosis.

nucleotherapy (nu'kle-o-ther'ap-e) [*nuclein* + *therapy*]. The treatment of disease with nucleins.

nucleothyminic acid (nu'kle-o-thi-min'ik). See *under acid*.

nucleotidase (nu-kle-ot'id-ās). An enzyme which splits nucleotides into nucleosides and phosphoric acid; called also *phosphonuclease*.

nucleotide (nu-kle-o-tid). One of the compounds into which nucleic acid is split by the action of nuclease. See *mononucleotide*.

nucleotoxin (nu'kle-o-toks'in). A toxin from cell nuclei; also any toxin which affects the cell nuclei.

nucleus (nu'kle-us), pl. *nu'clei* [L.]. 1. A spheroid body within a cell, forming the essential and vital part. It is distinguished from the rest of the cell by its denser structure and by containing nuclein. It is made up of a network of threads (*chromatin*) contained in a clear liquid (*achromatin*). 2. A group of nerve cells in the central nervous system. 3. In chemistry, the central element in the molecule of a compound; the framework of a molecule. 4. The center of an atom made up of alpha particles, protons, and electrons. It contains an excess of positive electricity, the exact amount depending on the atomic number, and constitutes almost all of the mass of the atom. **abducens n.**, **n. abducentis**, the nucleus of origin of the abducens nerve, a gray mass within the lower part of the pons, near the floor of the fourth ventricle. **accessory auditory n.**, a mass of gray matter in the oblongata at the junction of the lateral and median roots of the auditory nerve. **n. acus'ticus**, the auditory nucleus. **n. a'lae cine'reae** [B N A], the sensory nucleus of the vagus and glossopharyngeal nerves situated below the acoustic area in the floor of the fourth ventricle. **n. ambigu'us** [B N A], the nucleus of origin of the vagus and glossopharyngeal nerves, consisting of a column of cells in the floor of the rhomboidal fossa posterior to the olive. **n. amygd'alae** [B N A], **amygdaloid n.**, a small mass of subcortical gray matter under the tip of the temporal lobe, anterior to the lateral end of the descending cornu of the lateral ventricle of the brain. **n. angula'ris**. See *Bechterew's n.* **n. anterior thal'ami** [B N A], a nucleus in the dorsal part of the thalamus penetrating like a wedge between the medial and lateral nuclei. **n. arcifor'mis**, a small mass of gray matter on the surface of the anterior pyramid of the oblongata. **n. arcua'tus** [B N A], a gray nucleus within the thalamus, situated dorsad from the red nucleus. **atomic n.**, **n. of atom**. See *nucleus*, 4th def. **auditory n.**, any one of the nuclei in the oblongata whence the auditory nerves arise. See *accessory auditory n.*, *Bechterew's n.*, *Deiters' n.* **Balbani's n.** See *yolk n.* **n. basa'lis**, the inferior olivary nucleus. **Bechterew's n.**, a nucleus of gray matter situated within the lateral wall of the fourth ventricle, above Deiters' nucleus. It gives origin to fibers of the median and vestibular roots of the auditory nerve. Called also *n. angularis* and *n. vestibuli*. **Béclard's n.**, a vascular lenticular-shaped nucleus of bone seen in the cartilage of the lower epiphysis of the femur during the thirty-seventh week of fetal life. **Blumenau's n.**, the lateral portion of the cuneate nucleus. **Burdach's n.**, the cuneate nucleus. **caudal n.**, the ocu-

lomotor nucleus. **caudate n.**, **n. cauda'tus** [B N A], a part of the corpus striatum which projects anteriorly into the lateral ventricle. **n. cerebel'li**, dentate nucleus. **n. cerebel'lo-acus'ticus**, a mass of nerve cells in the wall of the fourth ventricle. **cervical n.**, a nucleus in the spinal cord opposite the third and fourth cervical nerves. **n. cine'reum**, the gray matter of the restiform bodies. **Clarke's n.**, an aggregation of nerve cells at the level of the third cervical nerve. **cleavage n.** See *segmentation n.* **cochlear n.**, the ventral part of the auditory nucleus. **n. collic'uli inferio'ris** [B N A], a mass of gray matter in the center of the testis of the corpora quadrigemina. **conjugation n.** Same as *segmentation n.* **n. cor'poris genicula'ti latera'lis** [B N A], a mass of gray matter in the lateral geniculate body. **n. cor'poris genicula'ti media'lis** [B N A], a mass of gray matter in the medial geniculate body. **n. cor'poris mamilla'ris** [B N A], three masses of cells in the mammillary body, fibers from which constitute the thalamo-mammillary and pedunculomammillary fasciculi. **cuneate n.**, the continuation of the cuneate fasciculus into the oblongata. **Darkschewitsch's n.**, a mass of cells in the upper part of the aqueduct above the third nucleus, and extending into the walls of the third ventricle. The cells are connected with the posterior commissure and the posterior longitudinal fasciculus. **Deiters' n.**, a mass of gray matter in the oblongata on the inner side of the restiform body: it gives origin to the median root of the auditory nerve. **dentate n.**, **n. denta'tis** [B N A], a large nucleus embedded within the hemisphere of the cerebellum from which the fibers of the brachium conjunctivum arise: called also *corpus dentatum* and *superior olive*. **n. de reliquat**, rest body. **diploid n.**, a nucleus containing the fundamental somatic number of chromosomes. **dorsal n.**, **n. dorsa'lis**, a group of cells in the posterior gray column of the spinal cord, running longitudinally from the 7th and 8th cervical masses to the level of the 2nd lumbar nerve: called also *Clarke's column* and *posterior vesicular column*. **dorsal vagoglossopharyngeal n.**, a long cell column placed dorsad to the hypoglossal nucleus. **Duval's n.**, an assemblage of multipolar ganglion cells situated ventrolaterad from the hypoglossal nucleus in the oblongata. **Edinger's n.** 1. Same as *Westphal's n.* 2. A nucleus at the beginning of the sylvian aqueduct in the third ventricle. **emboliform n.**, a small mass between the dentate nucleus and the nucleus fastigii. **n. facia'lis**, a nucleus of the pons which supplies the orbicularis palpebrarum and frontalis muscles. **n. fasti'gii** [B N A], a flat mass of gray matter in the cerebellum over the roof of the fourth ventricle. Called also *fastigiatum* and *roof nucleus*. **fertilization n.** See *syngaryon*. **free n.**, a cell nucleus from which the other parts of the cell have disappeared, the nucleus retaining its functional activity. **n. funic'uli cuneate'ti** [B N A], a nucleus of the medulla in the funicular cuneatus at the level of the upper end of the decussation of the pyramids. **n. funic'uli gra'cilis** [B N A], the nucleus gracilis. **gametic n.**, the gonad of sarcodina. **germ n.**, **germinal n.** Same as *pronucleus*. **gingival n.**, a part of the cerebellum in the third and fourth months of fetal life. **n. globo'sus** [B N A], a mass of gray matter in the cerebellum between the nucleus dentatus and nucleus fastigii. **Goll's n.**, a nucleus in the basal part of the posterior pyramid of the oblongata. **gonad n.**, the reproductive nucleus of a cell as distinguished from the trophonucleus. **n. gra'cilis**, a column of gray substance in the dorsal pyramid of the oblongata. **gray n.**, the gray substance of the spinal cord. **n. haben'ulae** [B N A], the nuclear mass of the habenula (see *habenula*); it is a center for the correlation of olfactory sensory impulses. Called also *ganglion habenulae*, *habenula*, and *habenular body*. **haploid n.**, a nucleus con-

taining the reduced or gametic number of chromosomes. **hypoglossal n.**, the nucleus of origin of the hypoglossal nerve situated in the medulla, anterior to the central canal and between the level of the decussation of the pyramids and the calamus scriptorius. **n. hypothalamicus** [B N A], Luys' body; a lens-shaped collection of gray matter in the subthalamic portion of the hypothalamus. See *subthalamus*. **n. intercalatus**, a group of ganglion cells between the dorsal nucleus of the vagus nerve and that of the hypoglossal nerve. Called also *Staderini's n.* **interpeduncular n.**, a nucleus situated between the cerebral peduncles which receives the habenulopeduncular tract. **intraventricular n.**, the nucleus caudatus. **Kaiser's n.**, longitudinal motor nuclei in the cervical and lumbar enlargements of the cord, between the intermediolateral column and the median column. **Klein-Gumprecht n.**, unstainable nuclei seen in degenerating lymphocytes in leukemia. **Kölliker's n.**, the gray matter surrounding the central canal of the spinal cord. **large cell n.** See *n. ambiguus*. **large cell auditory n.** See *Deiters' n.* **laryngeal n.**, the nucleus of origin of the nerve fibers going to the larynx. **n. lateralis** [B N A], a mass of cells in the medulla oblongata between the olive and the substantia gelatinosa of Rolando. **n. lateralis thalami** [B N A], a mass of gray matter between the internal and external medullary laminae of the thalamus. **Laura's n.**, the external auditory nucleus. **n. lemnisci lateralis** [B N A], a collection of nerve cells in the upper part of the lateral lemniscus. **lenticular n.**, the part of the corpus striatum external to the third ventricle. **n. lentiformis** [B N A], the lenticular nucleus. **n. lentis**, the nucleus of the crystalline lens. **Luys' n.**, the hypothalamus or, more correctly, its ventral layer. **n. medialis thalami** [B N A], a nucleus of the thalamus situated between the central gray matter of the third ventricle and the internal medullary lamina. **medullary n.**, the white matter of the cerebellum. **merocyte n.** Same as *merocyte*. **mesencephalic n.** Same as *Spitzka's n.* **Monakow's n.**, the lateral part of the cuneate nucleus. **motion n.**, kinetonucleus. **motor n.**, any collection of cells of the central nervous system giving origin to a motor nerve. **nerve n.**, a nucleus of the nervous system connected with the roots of a cranial nerve. **n. nervi abducentis** [B N A]. See *abducent n.* **n. nervi acustici** [B N A], the auditory nucleus. **n. nervi cochlearis** [B N A], the cochlear nucleus. **n. nervi facialis** [B N A], the facial nucleus. **n. nervi hypoglossi** [B N A], the hypoglossal nucleus. **n. nervi oculomotorii** [B N A], the oculomotor nucleus. **n. nervi trochlearis** [B N A], the trochlear nucleus. **n. nervi vestibularis** [B N A], the vestibular nucleus. **nutrition n.**, trophonucleus. **oculomotor n.**, the nucleus of the oculomotor nerve under the aqueduct of Sylvius. **olivary n.**, accessory, either of two bands (*medial and dorsal*) of gray matter lying mesially or dorsally to the inferior olivary nucleus. **olivary n.**, inferior, a layer of gray matter below the surface of the olive in the medulla oblongata. **olivary n.**, superior, a mass of gray matter lying to the inner side of the facial nucleus in the dorsal part of the pons. **n. of origin**, any collection of ganglion cells giving origin to the fibers, or a part of the fibers, of a nerve. **Pander's n.**, a lentil-shaped mass of gray matter between the tegmental nucleus and the corresponding corpus albicans, beneath the optic thalamus. **Perlia's n.**, an oculomotor center situated in the cinerea below the aqueduct of Sylvius. **Piorry's n.**, an area of dullness to percussion on the back over the liver. **polymorphic n.**, a nucleus that assumes an irregular form or splits up into more or less completely separated lobes. **n. pontis** [B N A], numerous small masses of gray matter within the pons. **n. pulposus**, a pulpy

mass in the center of the intervertebral disks. **pyramidal n.**, the inner accessory olivary nucleus. **n. quintus**, the nucleus of origin of the trigeminal nerve. **red n.** See *tegmental n.* **reproductive n.**, *micronucleus*. **Roller's n.**, a nucleus near the hilum of the olivary body. **Roller's central n.**, a nucleus in the oblongata near the raphe, and between the posterior longitudinal fasciculus and the lemniscus. **roof n.** See *n. fastigii*. **n. ruber** [B N A]. See *tegmental n.* **sacral n.**, a mass of gray substance in the spinal cord opposite the origin of the second and third sacral nerves. **segmentation n.**, the nucleus of a fertilized ovum formed by the union of a male with a female pronucleus and undergoing segmentation. Called also *cleavage n.* **sensory n.**, a nucleus of nerve cells forming the origin of the sensory portion of the trigeminal nerve. **shadow n.**, a nucleus without any staining properties; an unstainable nucleus. **Siemering's n.**, one of the anterior group of oculomotor nuclei in the cinerea under the aqueduct of Sylvius. **somatic n.**, macronucleus. **sperm n.**, the male pronucleus. **spherical n.** Same as *n. globosus*. **Spitzka's n.**, one of a group of oculomotor nuclei in the cinerea below the aqueduct of Sylvius. **Staderini's n.** See *n. intercalatus*. **Stilling's n.** 1. The deep origin of the hypoglossal nerve in the floor of the fourth ventricle. 2. The tegmental nucleus. **Stilling's sacral n.**, the sacral nucleus. **subependymal n.**, the internal nucleus of the auditory nerve. **subthalamic n.**, nucleus hypothalamicus. **superior n.** Same as *Deiters' n.* **n. taeniaefornis**. See *claustrum*. **tegmental n.**, a nucleus of gray matter containing numerous ganglion cells of a red color, in the tegmental region of the crus cerebri near the optic thalamus. Called also *n. tegmenti*, *red n.*, *roof n.*, *Stilling's n.*, and *tectorial cerebellar n.* **n. of termination**, **terminal n.**, a nucleus into which a fiber tract discharges. **n. tractus solitarius** [B N A], the nucleus of termination of the vagus and glossopharyngeal nerves. **triangular n.**, the cuneate nucleus. **trophic n.**, trophonucleus. **vagolosso-pharyngeal n.**, the common nucleus of deep origin of the vagus and glossopharyngeal nerves. **vesicular n.**, a form of cell nucleus the membrane of which stains deeply, while the central part is rather pale. **n. vestibularis**. Same as *Bechterew's n.* **vitelline n.**, a nucleus produced by the fusion of the male and female pronuclei in the vitellus. **Voit's n.**, a cerebellar nucleus accessory to the corpus dentatum. **Westphal's n.**, a small gray nucleus beneath the aqueduct of Sylvius, the origin of some of the fibers of the trochlear nerve. **white n.**, the white part of the dentate body of the olive. **yolk n.**, a large dark body of radiate structure within the vitellus of the developing oocyte; called also *vitelline body*, *Balbani's body*, and *Balbani's n.* **zygote n.**, the nucleus of the fertilized egg.

Nuel's space (ne-elz') [J. P. Nuel, Belgian oculist, 1847-1920]. See under *space*.

nuforal (nu'fo-ral). A proprietary remedy for tuberculosis containing formic acid, nucleic acid, and allyl sulphide.

Nuhn's glands (noonz) [Anton Nuhn, German anatomist, 1814-1886]. See under *gland*.

nullipara (nul-ip-'ar-ah) [L. *nullus* none + *par'ere* to bear]. A woman who has never borne a child.

nulliparity (nul-ip-ar'it-e). The condition or fact of being nulliparous.

nulliparous (nul-ip-'ar-us). Having never given birth to a child.

numal (nu'mal). Pneumal.

number, acetyl. The number of milligrams of KOH necessary to neutralize the acetic acid saponified from 1 gram of acetylated fat. It represents the extent to which the fatty acids are

oxidized. **acid n.**, the number of milligrams of potassium hydroxide necessary to neutralize the free fatty acids in 1 gram of substance. It represents a measure of the amount of free fatty acids in the fat. **atomic n.**, the amount of positive charge on the nucleus expressed as protons. In a neutral atom the surrounding electrons represent a corresponding amount of negative electricity. When arranged according to the atomic numbers the atoms form a series very similar to the periodic table, but without some of its difficulties. **Avogadro's n.**, 6.06×10^{23} being the number of molecules contained in one mol of any substance. **Hegner n.**, the percentage of water-insoluble fatty acids obtainable from a fat. **Hittorf n.**, the portion of the current conducted by an ion in electrolysis; called also *transport n.* **Hübl n.**, iodine number. **hydrogen n.**, the amount of hydrogen that fats can take up. It represents the amount of unsaturated fatty acids present. **iodine n.**, the amount of iodine which 1 gram of the fat can take up. It indicates the amount of unsaturated fatty acids present in the fat. **isotopic n.**, the number which added to twice the atomic number gives the atomic weight. **Loschmidt's n.** 1. Avogadro's number. 2. The number of molecules per unit volume of an ideal gas at 0 C. and normal pressure. **polar n.**, the number of valences (positive or negative) possessed by an atom in any particular compound. **Reichert-Meissl n.**, the number of cubic centimeters of tenth normal KOH required to neutralize the volatile fatty acids distilled from 5 grams of fat after it has been saponified with KOH and then made acid with H_3PO_4 or H_2SO_4 . **saponification n.**, the number of milligrams of potassium hydroxide required to neutralize the fatty acids in 1 gram of a fat or oil. It indicates the average size of the fatty acid molecules or the amount of the lower fatty acids present. **transport n.** See *Hittorf n.* **wave n.**, in light waves the reciprocal of the wavelength expressed as a fraction of a centimeter.

nummiform (num'if-orm) [L. *num'mus* coin + *for'ma* form]. Shaped like a coin or round disk.

nummular (num'u-lar) [L. *nummular'is*]. 1. Coin shaped. 2. Made up of round, flat disks. 3. Piled, like coins, in a rouleau.

nummulation (num-u-la'shun). The assumption of a nummular form.

numoquin (nu'mo-kwin). Same as *ethylhydrocupreine*. **n. hydrochloride**. Same as *ethylhydrocupreine hydrochloride*. See under *hydrocupreine*.

Nun's murmur (nunz). Same as *bruit de diable*.

nunnation (nun-a'shun) [Heb. *nun* letter N]. The too frequent use of *n* sounds, or the nasalizing of sounds or words.

Nuphar (Nym'phaea) ad'vena, **N. kalmia'na** (nu'far). The yellow pond lily, or spatter-dock, of North America; the roots are used in preparing poultices for carbuncles.

nupharine (nu'far-in). An alkaloid, $C_{18}H_{24}N_2O_2$, from *Nuphar luteum*.

nuptiality (nu-shal'it'e) [L. *nuptus* married]. The proportion of marriages to the population.

nurse (ners). A person who takes care of the sick, wounded, or enfeebled, especially one who makes a profession of it. **district n.**, the name given in Great Britain to a visiting nurse, from the fact that such a nurse was placed in charge of each one of the districts into which the city or community was divided. **graduate n.**, a nurse who is a graduate of a training school. **public health n.**, a graduate nurse employed in a community to safeguard the health of its people. She gives care to the sick or their homes, promotes health by teaching families how to keep well, and assists in the prevention of disease. **Queen's n.**, in Great Britain, a district nurse who has been trained at

or in accordance with the regulations of the Queen Victoria Jubilee Institute for Nurses. **registered n.**, a graduate nurse who has been registered and licensed to practice by a State Board of Nurses, Examiners or other state authority. Such a nurse is legally entitled to place the letters R. N. after her name. **school n.**, a trained nurse whose duties are to visit the elementary public schools and supplement the work of the physician in medical inspection of schools. **trained n.**, a nurse who has been trained in and graduated from a training school. **visiting n.**, a trained nurse, employed by an association whose duties consist in visiting and caring for the sick poor in their homes. **wet n.**, a woman who furnishes breast feeding for the infants of others.

nurses' contracture (ner'sez). See under *contracture*.

Nussbaum's cells, experiment (noos'bowms) [Moritz Nussbaum, German histologist, 1850-1915]. See under *cell* and *experiment*.

Nussbaum's narcosis (noos'bowms) [Johann Nepomuk von Nussbaum, German surgeon, 1829-1890]. See *narcosis*.

nutarian (nu-ta're-an). One who lives chiefly on nuts.

nutiation (nu-ta'shun) [L. *nuta'tio*]. The act of nodding; a to-and-fro movement.

nutgall (nut'gal) [L. *gal'la*]. An excrescence growing upon oak trees, especially the *Quercus infectio'ria*, and produced by the puncture on the leaf bud and by the deposited ova of an insect, *Cynips tinctoria*. Nutgalls contain tannic and gallic acids, and are used as astringents in diarrhea and relaxed mucous membranes. Dose, 8 grains (0.5 Gm.); of tincture, 30-60 minims (2-4 cc.). They are also used in preparing *unguentum gal'lae* and *unguentum gal'lae cum o'lio*.

nutmeg (nut'meg) [L. *myrs'tica*]. The kernel of the seed of *Myrs'tica frag'rans*, a tree of various hot regions, a native of the East Indies. From it are derived a volatile and a fixed oil, the latter being a thick, butter-like substance, which is used as a demulcent and expellent. Nutmeg and its volatile oil are used as flavoring agents. Dose of spirit, 30-60 minims (2-4 cc.). Nutmeg is used in aromatic powder (*pul'vis aromaticus*). Dose, 10-30 grains (0.66-2 Gm.); also in *pul'vis cre'tae aromaticus*. Dose, 30-60 grains (2-4 Gm.).

nutmeg liver. The liver of cirrhosis.

nutmeggy (nut'meg-e). Resembling a nutmeg in cross section.

nutone (nu'ton). A proprietary nutritive tonic.

nutrabin (nu'trab-in). A proprietary food preparation of beef and milk proteins.

nutramin, nutramine (nu-tram'in). Same as *vitamin*.

nutrescin (nu-tres'in). A substance supposed to be split off from the bioplasmin molecule and to supply the nutrition of the cell.

nutriant (nu'tre-ant). A drug which affects the nutritive or metabolic processes of the body.

nutriceptor (nu-tri-sep'tor). A receptor or side chain which combines with nutritive matter to serve the nutrition of a cell.

nutricia (nu-trish'e-ah). A proprietary milk preparation for infants' food.

nutrient (nu'tre-ent) [L. *nut'riens*]. Nourishing; affording nutriment.

nutriment (nu'tre-ment) [L. *nutrimentum*]. Nourishment; nutritious material.

nutrin (nu'trin). A proprietary food preparation of meat.

nutrition (nu-trish'un) [L. *nutri'tio*]. 1. The process of assimilating food. 2. Nutriment. **adequate n., optimal n.** See under *diet*.

nutritional (nu-trish'un-al). Relating to or affecting nutrition.

nutritious (nu-trish'us) [L. *nutri'tius*]. Affording nourishment.

nutritive (nu'trit-iv). Pertaining to nutrition.

nutritorium (nu-trit-o're-um) [L. *nutrito'rius* nourishing]. The apparatus of nutrition.

nutriving flour (nu'triv-oid). A proprietary non-nutritive flour used to give bulk to food in restricted diets.

nutrolactis (nu-tro-lak'tis). A proprietary galactagogue composed of the fluidextracts of *Gal'ga officina'lis*, *G. appolin'ea* (each, 3 parts), and *G. lephro'sia* (1 part).

nutrole (nu'tröl). A proprietary food preparation containing animal and vegetable fats emulsified with eggs and preserved with brandy.

nutrose (nu'trös). Neutral casein sodium; a dry food preparation of milk for the use of invalids.

Nuttallia (nut-tal'e-ah) [George H. F. Nuttall, biologist, Cambridge University, born 1862]. A genus of protozoa resembling *Piroplasma*. **N. equi**, a species causing a disease of horses in South Africa. It is probably transmitted by the tick, *Rhipicephalus everti*. Called also *Babesia equi* and *B. caballi*.

nuttalliosis (nut-al-e-o'sis). Infection with *Nuttallia*.

nux moschata (nuks mos-ka'tah). In homeopathy a tincture made from powdered nutmeg: used in nervous and mental disorders, insomnia, flatulence, etc., in doses of sixth, thirtieth, and two-hundredth potencies.

nux vomica (nuks vom'ik-ah). The poisonous seed of *Strychnos nux-vom'ica*, a loganiaceous tree of the East Indies. It contains several alkaloids, the principal ones being strychnine and brucine, on which the properties of the drug depend. It is a bitter tonic, stimulating the gastric secretion. It is a heart stimulant and a stimulant to the respiration and the motor centers of the cord. In large doses it causes tetanic convulsions. *Nux vomica* is used in dyspepsia and loss of appetite, in chronic constipation from atony of the intestine, in acute infectious diseases, in shock, in conditions attended with dyspnea, in poisoning by opium, lead, tobacco, or alcohol, in bronchitis, and in incontinence of urine from atony of the bladder. Dose, 1-5 grains (0.066-0.333 Gm.); of abstract, $\frac{1}{4}$ - $\frac{1}{2}$ grain (0.016-0.033 Gm.); of extract (U. S. P.) $\frac{1}{8}$ - $\frac{1}{2}$ grain (0.008-0.033 Gm.); of fluidextract, 1-5 minims (0.066-0.033 cc.); of tincture (U. S. P.), 5-20 minims (0.333-1.333 cc.).

Nuzum's micrococcus [John W. Nuzum, American pathologist, born 1890]. See under *micrococcus*.

Nv. Abbreviation for *naked vision*.

nyctalga (nik-tal'je-ah) [νύξ night + ἄλγος pain]. Pain that occurs in sleep only.

nyctalope (nik-tal-öp). A person affected with nyctalopia.

nyctalopia (nik-tal-o'pe-ah) [νύξ night + ἄλσος blind + ὤψ eye]. 1. Night blindness; failure or imperfection of vision at night or in a dim light, with good vision only on bright days (Heberden, 1767). 2. Less correctly, day blindness, or hemeralopia, a condition in which the patient sees better in an obscure light than in bright sunlight.

nycterine (nik'ter-in) [νύκτερος at night]. 1. Occurring at night. 2. Obscure.

nyctophobia (nik-to-fo'be-ah) [νύξ night + φόβος fear]. Morbid dread of darkness.

nyctophonia (nik-to-fo'ne-ah) [νύξ night + φωνή voice]. Loss of voice during the day.

Nyctotherus (nik-toth'er-us). A genus of infusorian microparasites. *N. africa'nus* was found in large numbers in the cecum of a case of sleeping sickness. *N. ja'ba* has been found in the diarrheal discharges of the human subject. *N. gigan'tus*, a

large species found in the intestines of a man in Germany.

nyctophthalmosis (nik''to-tif-lo'sis) [νύξ night + τῦφλωσις blindness]. Nyctalopia.

nycturia (nik-tu're-ah) [νύξ night + οὔρον urine]. Nocturnal incontinence of urine; frequent urination during the night, i. e., between 7 P. M. and 7 A. M.

N. Y. D. Abbreviation for *not yet diagnosed*.

Nyiri's test. See under *tests*.

Nylander's test (ni'lan-derz) [Claes Wilhelm Gabriel Nylander, Swedish chemist, born 1835]. See under *tests*.

Nylic (ni'lik). An abbreviation for New York Life Insurance Co., and applied to a standard of body weight in relation to age and height.

nympha (nim'fah), pl. *nym'phae* [L.; νύμφη maiden]. A labium minus.

Nymphaea (nim-fe'ah). See *Nuphar*.

nymphectomy (nim-fek'to-me) [νύμφη nymph + ἐκτομή excision]. Excision of the nymphae.

nymphitis (nim-fi'tis). Inflammation of the nymphae.

nymphocaruncular sulcus (nim''fo-kar-unk'ular). See under *sulcus*.

nymphohymenal sulcus (nim''fo-hi'men-al). See under *sulcus*.

nympholepsy (nim'fo-lep-se) [νύμφη nymph + λήψις seizure]. 1. Ecstatic frenzy; morbid exaltation. 2. Surgical removal of the nymphae.

nymphomania (nim-fo-ma'ne-ah) [νύμφη nymph + μανία madness]. Insane sexual desire in the female.

nymphomaniac (nim-fo-ma'ne-ak). 1. Affected with nymphomania. 2. One who is affected with nymphomania.

nymphoncus (nim-fong'kus) [νύμφη nymph + ὄγκος tumor]. Swelling of the nymphae.

nymphotomy (nim-fot'o-me) [νύμφη nymph + τομή cutting]. Excision of the nymphae, or clitoris.

Nyssa (nis'ah) [L.]. See *tupelo*.

Nyssorhynchus (nis-o-ring'kus). A genus of anopheline mosquitos, several species of which act as carriers of the malarial parasite.

nystagmic (nis-tag'mik). Pertaining to or characterized by nystagmus.

nystagmiform (nis-tag'mif-orm). Resembling nystagmus.

nystagmograph (nis-tag'mo-graf) [nystagmus + γράφειν to write]. An instrument for recording the movements of the eyeball in nystagmus.

nystagmoid (nis-tag'moid). Resembling nystagmus.

nystagmus (nis-tag'mus) [νυστάζειν to nod]. An involuntary rapid movement of the eyeball,

which may be either lateral, vertical, rotary, or mixed, i. e., composed of two varieties. **n.**

against the rule, miners' nystagmus, coming on when the eyes are moved downward. **aural n.**, nystagmus due to disturbances in the labyrinth. **caloric n.**, the nystagmus produced in *Bárány's sign*, which see. **Cheyne's n.**, a peculiar

rhythmical eye movement resembling Cheyne-Stokes respiration in its rhythm. **congenital n.**, nystagmus which begins in very early life.

hereditary n., nystagmus which extends through several generations. **jerking n.** See *rhythmical n.*

lateral n., a rolling of the eyes horizontally, or from right to left. **miners' n.**, an occupation neurosis of the eyes peculiar to miners.

oscillating n. See *undulatory n.* **palatal n.**, spasm of the levator palati muscle. **resilient n.** See *rhythmical n.*

rhythmical n. **rhithmical n.**, nystagmus which consists of a slow movement in one direction, followed by a rapid return movement in the opposite direction. Called also *resilient n.*

and *jerking n.* **rotatory n.**, the rotation of the eyes about the visual axis. **undulatory n.**, one which consists of to-and-fro movements of equal velocity. Called also *vibrating n.* and *oscillating n.* **vertical n.**, an up-and-down movement of the eyes. **vestibular n.**, nystagmus due to aural disturbance. **vibratory n.** See *undulatory n.*

nystagmus-myoclonus. A rare congenital condition in which there is nystagmus together with abnormal involuntary movements of the extremities and trunk.

nystaxis (nis-tak'sis). Nystagmus.

nyxis (nik'sis) [*vûxis* pricking]. Puncture, or paracentesis.

O

O. 1. The symbol for *oxygen*. 2. An abbreviation for *L. oculus*, eye; *octarius*, pint; *opening*.

o-. An abbreviation for *ortho-*.

O₂. 1. Symbol for *both eyes*. 2. The diatomic gas, oxygen.

O₃. Symbol for *ozone*.

oak (ôk). A cupuliferous tree of the genus *Quercus*. The bark of all species contains a large proportion of tannin. Decoctions of the bark of *white oak* (*Quercus alba*) and that of *Quercus robur*, of Europe, are used as astringents in hemorrhoids, leukorrhea, ulcers, relaxation of the pharynx and uvula, etc. **dyers' o.** (*Quercus lusitanica*) affords nutgall.

oakum (o'kum). Prepared fiber from old ropes: used in surgery as a dressing for wounds and in the making of pads to absorb lochial discharges.

oarialgia (o'a-re-al'je-ah) [*ôápiov* ovary + *άλγος* pain]. Pain in the ovary; ovariagia.

oaric (o-a'rik) [*ôápiov* ovary]. Pertaining to the ovary; ovarian.

oario-. For words beginning thus, see those beginning *ovario-*.

oariopathy (o-a-re-op'ath-e) [*ôápiov* ovary + *πάθος* disease]. Ovarian disease.

oariotomy (o'a-re-ot'o-me) [*ôápiov* ovary + *τέμνειν* to cut]. Same as *ovariotomy*.

oaritis (o-a-ri'tis) [*ôápiov* ovary + *ιτις* inflammation]. Ovaritis.

oarium (o-a're-um), pl. *oa'ria* [L.; *ôápiov* little egg]. An ovary.

oasis (o-a'sis), pl. *oa'ses*. An island or spot of healthy tissue in a diseased area.

oat (ôt). See *Avena*.

oatmeal (ôt'mêl). A meal made from oats and used in the preparation of a bland, nutritious food.

ob- [*L. ob* against]. A prefix signifying *against*, *in front of*, etc.

obdormition (ob-dor-mish'un) [L. *obdormi'tio*]. Numbness and anesthesia of a part from nerve pressure; the condition of a part of a limb when it is said to be "asleep."

obduction (ob-duk'shun) [L. *obduc'tio*]. A medico-legal autopsy.

O'Beirne's sphincter, tube (o-birnz') [James O'Beirne, Irish surgeon, 1786-1862]. See *sphincter, tube*.

obeliac (o-be'le-ak). Pertaining to the obelion.

obeliad (o-be'le-ad). Toward the obelion.

obelion (o-be'le-on) [dim. of *ὀβελός* spit]. A point on the sagittal suture where it is crossed by a line which connects the parietal foramina.

Obermayer's test (o'ber-mi-erz) [Fritz Obermayer, physiologic chemist in Vienna, 1861-1925]. See under *tests*.

Obermeier's spirillum (o'ber-mi-erz) [Otto Hugo Franz Obermeier, German physician, 1843-1873]. *Spironema recurrentis*.

Obermüller's test (o'ber-mil-erz) [Kuno Obermüller, German physician, born 1861]. See under *tests*.

Oberst's method, operation (o'bersts) [M. Oberst, German surgeon, 1849-1925]. See *method and operation*.

obese (o-bês') [L. *obe'sus*]. Excessively fat; corpulent.

obesitas (o-be'sit-as) [L.]. Obesity; adiposis.

obesitine (o-bes'it-in). A proprietary antifat.

obesity (o-bes'it-e) [L. *obe'sitas*]. An excessive accumulation of fat in the body; corpulence; fatness. **hyperplasmic o.**, obesity due to increase in the body protoplasm, as distinguished from that due to accumulation of fat and water. **hypoplasmic o.**, obesity due to increase of fat and water and marked by decrease of the body protoplasm.

obex (o'beks) [L. "barrier"] [B N A]. A thickening of the ependyma at the point of the calamus scriptorius.

obfuscation (ob-fus-ka'shun) [L. *obfusca'tio* a darkening]. The act of rendering or process of becoming obscure; a darkening.

object blindness (ob'jekt blind'nes). See *blindness*.

object glass (ob'jekt glas). The lens of a microscope nearest the object.

objective (ob-jek'tiv) [L. *objecti'vus*]. 1. Pertaining to things that are the objects of the external senses. 2. Perceptible to the senses. 3. The lens or system of lenses at the end of a microscope (or telescope) that is nearest to the object under examination. **achromatic o.**, **apochromatic o.**, an objective in which the lenses are so chosen and designed that the natural chromatic aberration is partly eliminated. The achromatic objective is corrected for two colors, the apochromatic for three. **fluorite o.**, an objective in which some of the lenses are made from fluorite instead of glass. **immersion o.**, an objective designed to have its tip and the object connected by a liquid instead of by air. The liquid may be water (water immersion) or a specially prepared cedar oil (oil immersion) with an index of refraction the same as glass (homogenous oil immersion).

obligate (ob'lig-at) [L. *obligatus*]. Necessary; compulsory; not facultative.

oblique (ob-lek', ob-lik') [L. *obli'quus*]. Slanting; inclined; between a horizontal and a perpendicular direction.

obliquimeter (ob-lik-wim'et-er) [*oblique* + *μέτρον* measure]. An instrument for measuring the obliquity of the pelvic brim.

obliquity (ob-lik'wit-e). The state of being oblique, or slanting. **Litzmann's o.**, inclination of the fetal head so that the posterior parietal bone presents to the parturient canal. **Naegele's o.** See *Naegele's pelvis*, under *pelvis*. **Roederer's o.**, the position of the fetal head with the occiput presenting at the brim of the pelvis.

obliquus (ob-li'kwus) [L.]. See *muscles, table of*.

obliteration (ob-lit-er-a'shun) [L. *oblitera'tio*]. Complete removal, whether by disease and degeneration or by a surgical operation.

oblitin (ob'lit-in). A nitrogenous body, the diethyl ester of carnitin, obtained from Liebig's extract

- of meat. It causes vomiting, purging, salivation, and mydriasis when injected into cats.
- oblongata** (ob-long-a'tah). Same as *medulla oblongata*.
- oblongatal** (ob-long-a'tal). Pertaining to the medulla oblongata.
- obmutescence** (ob-mu-tes'ens) [*L. obmutes'cere* to be dumb]. Loss of voice.
- obnubilation** (ob-nu-bil-a'shun). A clouded state of the mind.
- obverserscope** (ob-zer'ver-sköp). A form of endoscope with two branches, enabling two persons to inspect the same spot at the same time.
- obsession** (ob-sesh'un) [*L. obses'sio*]. An idea which morbidly dominates the mind constantly, suggesting irrational action.
- obsidial** (ob-sid-i'o-nal) [*L. obsid'ium* siege]. Occurring in trench warfare; as obsidional infection.
- obsolescence** (ob-so-les'ens) [*L. obsoles'cere* to grow old]. The cessation or the beginning of the cessation of any physiologic process.
- obsolete** (ob'so-lét) [*L. obsole'tus*, from *obsole're* to go out of use]. Indistinct; faded; gone out of use.
- obstetric, obstetrical** (ob-stet'rik, ob-stet'rik-al) [*L. obstetric'ius*]. Pertaining to midwifery.
- obstetrician** (ob-stet-rish'un) [*L. obstet'rix* midwife]. One who practises obstetrics.
- obstetrics** (ob-stet'riks) [*L. obstetri'cia*]. The art of managing childbirth cases; that branch of surgery which deals with the management of pregnancy and labor.
- obstipation** (ob-stip-a'shun) [*L. obstipa'tio*]. Intractable constipation.
- obstruction** (ob-struk'shun) [*L. obstruc'tio*]. 1. The act of blocking or clogging. 2. The state or condition of being clogged. **aortic o.**, adhesion or thickening of the cusps of the aortic valves, obstructing the flow of blood from the left ventricle into the aorta. **intestinal o.**, any hindrance to the passage of the intestinal contents.
- obstruent** (ob'stru-ent) [*L. ob'struens*]. 1. Causing obstruction. 2. An astringent remedy.
- obtund** (ob-tund') [*L. obtun'dere*]. To render dull or blunt; to render less acute.
- obtundent** (ob-tun'dent) [*L. obtun'dens*]. 1. Having the power to dull sensibility or to soothe pain. 2. A soothing or partially anesthetic medicine.
- obtundo** (ob-tun'do). A preparation of chloretone, cocaine, nitroglycerin, thymol, menthol, and oils of eucalyptus, cloves, and wintergreen: used as a dental anesthetic.
- obturation** (ob-tu-ra'shun). A form of intestinal obstruction.
- obturator** (ob'tu-ra-tor) [*L.*]. A disk or plate, natural or artificial, which closes an opening. **Cripps' o.**, an instrument for closing a gastric fistula. **o. muscle**. See *muscles, table of*. See also *foramen, nerve, plexus*, etc.
- obtuse** (ob-tüs') [*L. obtus'sus*]. 1. Blunt; dull. 2. Stupid; having a dull intellect.
- obtusio** (ob-tu'zhun) [*L. obtu'sio*]. Morbid bluntness or dulness of sensibility.
- O. C.** Abbreviation for *occlusocervical*.
- occalcarine** (ok-kal'kar-in). Same as *occipitocalcarine*.
- occipital** (ok-sip'it-al) [*L. occipita'lis*]. Pertaining to the occiput.
- occipitalis** (ok'sip-it-a'lis) [*L.*]. The posterior part of the occipitofrontalis muscle.
- occipitalization** (ok-sip-it-al-iz-a'shun). Synostosis of the atlas with the occipital bone.
- occipito-anterior** (ok-sip'it-o-an-te're-or). Having the occiput directed ventrad (used of the fetus at the time of labor).
- occipito-atloid** (ok-sip'it-o-at'loid). Pertaining to the occipital bone and the atlas.
- occipito-axoid** (ok-sip'it-o-aks'oid). Pertaining to the occipital bone and the axis.
- occipitobasilar** (ok-sip'it-o-ba'sil-ar). Pertaining to the occiput and the base of the skull.
- occipitobregmatic** (ok-sip'it-o-breg-mat'ik). Pertaining to the occiput and the bregma.
- occipitocalcarine** (ok-sip'it-o-kal'kar-in). Both occipital and calcareine. See *fissure*.
- occipitocervical** (ok-sip'it-o-ser'vik-al). Pertaining to the occiput and neck.
- occipitofacial** (ok-sip'it-o-fa'shal). Pertaining to the occiput and the face.
- occipitofrontal** (ok-sip'it-o-fron'tal). Pertaining to the occiput and the forehead.
- occipitofrontalis** (ok-sip'it-o-fron-ta'lis) [*L.*]. See *muscles, table of*.
- occipito-iliac position** (ok-sip'it-o-il'e-ak). See under *position*.
- occipitomastoid** (ok-sip'it-o-mas'toid). Pertaining to the occipital bone and the mastoid process.
- occipitomenal** (ok-sip'it-o-men'tal). Pertaining to the occiput and the chin.
- occipitoparietal** (ok-sip'it-o-par'iet-al). Pertaining to the occipital bones or lobes.
- occipitoposterior** (ok-sip'it-o-pos-te're-or). Having the occiput directed dorsad (used of the fetus in labor).
- occipitotemporal** (ok-sip'it-o-tem'po-ral). Pertaining to the occipital and the temporal bones.
- occipitothalamic** (ok-sip'it-o-thal-am'ik). Pertaining to the occipital lobe and thalamus.
- occiput** (ok'sip-ut) [*L.*]. The back part of the head.
- occlude** (ok-lüd'). To fit close together; to close tight.
- occlusal** (ok-lu'sal). Pertaining to closure: applied to the masticating surfaces of molar and bicuspid teeth.
- occlusion** (ok-lu'zhun) [*L. occlu'sio*]. 1. The act of closure or state of being closed. 2. A state of molecular adhesion between a precipitate and a soluble substance or between a gas and a metal. 3. The contact of the teeth of both jaws when closed or during those excursive movements of the mandible which are essential to the function of mastication (A. D. A.). **abnormal o.**, occlusion when any of the teeth are not in a position to meet normally. **afunction o.**, dental malocclusion which prevents mastication. **anatomic o.**, occlusion in which all the teeth are present and occlude normally according to the anatomical standard. **buccal o.**, Angle's term for the position of a buccal tooth when it is outside the line of occlusion. **capsular o.**, operative closure of the perinephritic capsule for the relief of floating kidney. **central o.**, **centric o.**, occlusion of the teeth when the jaws are closed in the normal position. **distal o.**, Angle's term for the position of a tooth when it is posterior to the line of occlusion. **eccentric o.**, the occlusion of the teeth when the lower jaw has moved from the position of rest. **functional o.**, such contact of the teeth of both jaws as will provide the highest efficiency during all the excursive movements of the jaws which are essential to the function of mastication without producing trauma (A. D. A.). **hyperfunctional o.**, traumatic occlusion. **labial o.**, Angle's term for the position of a labial tooth when it is anterior to the line of occlusion. **lateral o.**, the occlusion of the teeth when the lower jaw is moved to the right or left of central occlusion. **line of o.** See under *line*. **lingual o.**, Angle's term for the position of a tooth when it is inside or behind the line of occlusion. **mesial o.**, the position of a tooth when it is too mesial to be normal. **neutral o.**, normal o. **normal o.**, the meeting of the teeth when they are in the normal position and relationship. **postnormal o.**, mesial o. **prenormal o.**, distal o. **protrusive o.**, occlusion of the teeth when the mandible is an-

- terior to central occlusion. **o. of pupil**, closure of the pupil by an opaque membrane. **retrusive o.**, occlusion of the teeth when the mandible is posterior to central occlusion. **supra o.**, occlusion in which one of the teeth is longer than normal. **traumatic o.**, the occlusal condition that exists when normal occlusion is absent, resulting in abnormal and injurious distribution of stress.
- occlusive** (ok-lu'siv). Effecting a complete occlusion.
- occlusocervical** (ok-lu'so-ser'vik-al). Pertaining to the occlusal surface and the neck of a tooth.
- occlusometer** (ok-lu-som'et-er). Same as *gnathodynamometer*.
- occult** (ok-ult') [L. *occultus*]. Obscure; difficult to be understood.
- occupation neurosis** (ok-u-pa'shun nu-ro'sis). See *neurosis*.
- ocellus** (o-sel'us) [L. dim. of *oculus* eye]. 1. A small simple eye in insects and other invertebrates. 2. Less frequently, one of the elements of a compound eye. 3. A roundish, eyelike patch of color.
- Ochlerotatus** (ok-ler-o-ta'tus). A genus of mosquitos, species of which are regarded as transmitters of African horse sickness.
- ochlesia** (ok-le'sis) [δχλησις crowding]. Any disease due to overcrowding.
- ochlophobia** (ok-lo-fō'be-ah) [δχλος crowd + φόβος fear]. Insane fear of crowds.
- ochrodermatosis** (o'kro-der-mat-o'sis). A condition marked by yellowness of the skin, sometimes occurring in Europeans who live in tropical India.
- ochrodermia** (o-kro-der-me-ah) [δχρός yellow + δέρμα skin]. Yellowness of the skin; anemia with pallor.
- ochrometer** (o-krom-e'ter) [ώχρος pallor + μέτρον measure]. An instrument for measuring the capillary blood pressure by registering the force necessary to compress a finger by a rubber balloon until blanching of the skin occurs.
- Ochromy'a anthropoph'aga**. A fly of Senegal whose larva, the cayar worm, attacks man.
- ochronosis** (o-kro-no'sis) [ώχρος yellow]. A condition marked by gray, brown, and black pigmentation of the ligaments, cartilages, epidermis, and fibrous tissues (Virchow, 1866). It is further marked by dark color of the urine. The condition is probably dependent on disordered metabolism of phenol or some of its derivatives.
- ochronosus** (o-kro-no'sis) [ώχρος yellow + νόσος disease]. Ochronosis.
- ochronotic** (o-kron-ot'ik). Pertaining to or caused by ochronosis.
- Ochsner's ring, solution, treatment** (oks'-nerz) [Albert John Ochsner, surgeon in Chicago, 1858-1925]. See *ring, solution, and treatment*.
- Ocimum ca'num** (os'im-um). A labiate herb of tropical America; also its homeopathic preparation.
- octad** (ok'tad). Any octavalent chemical element.
- octamylose** (ok-tam'il-os). A polymerized form of diamylose. See *hexamylose*.
- octan** (ok'tan) [L. *octo* eight]. Recurring every eighth day, or at intervals of seven days.
- octane** (ok'tan). An oily hydrocarbon, $\text{CH}_3(\text{CH}_2)_6\text{CH}_3$, occurring in petroleum.
- octaploid** (ok'tap-loid). See *polyloid*.
- octarius** (ok-ta're-is) [L.; from *octo* eight]. A pint; the eighth part of a gallon.
- octavalent** (ok-tav'al-ent) [L. *octo* eight + *valens* able]. Having a valency of eight.
- octet** (ok'tet). The group of eight electrons in the outer shell of an atomic kernel.
- octigravida** (ok-tig-rav'id-ah) [L. *octo* eight + *gravida* pregnant]. A woman pregnant for the eighth time.
- octipara** (ok-tip'ah-rah) [L. *octo* eight + *parere* to produce]. A woman who has borne eight children.
- Octom'itus hom'inis**. A minute flagellate protozoan found in the human intestine.
- octoroon** (ok-to-roon'). The offspring of a white person and a quadroon.
- octose** (ok'tōs) [L. *octo* eight]. Any sugar containing eight atoms of carbon in the molecule.
- ocular** (ok'u-lar) [L. *ocula'ris*; *oculus* eye]. 1. Pertaining to the eye. 2. The lens or combination of lenses in a microscope (or telescope) which is nearest to the eye and which serves to magnify the image made by the objective. **compensating o.**, an ocular so designed that it partly corrects the spherical aberration produced by the objective. **huygenian o.**, an eyepiece consisting of two planoconvex lenses, the convexities being toward the object. **Ramsden's o.**, a microscopical eyepiece made of two planoconvex lenses with the convexities turned toward each other. **working o.**, an ordinary ocular for microscopical observation; distinguished from *finding* ocular.
- oculin** (ok'u-lin) [L. *oculus* eye]. A preparation of the hyaloid membrane and ciliary body of the eyes of oxen: said to be useful in eye affections, especially decortication of the retina.
- oculist** (ok'u-list). One who is expert in diseases of the eye.
- oculocephalogyric reflex** (ok'u-lo-sef'al-o-j'i'rik). See under *reflex*.
- oculofacial** (ok'u-lo-fa'she-al). Pertaining to the eyes and the face.
- oculogration** (ok'u-lo-ji-ra'shun). The movement of the eye.
- oculogyric** (ok'u-lo-ji'rik) [L. *oculus* eye + *gyrus* a turn]. Causing movements of the eye.
- oculometroscope** (ok'u-lo-met'ro-skōp). An instrument for performing retinoscopy in which the trial lenses are rotated before the eyes without effort on the part of the examiner.
- oculomotor** (ok'u-lo-mō'tor) [L. *oculus* eye + *motor* mover]. Pertaining to the movements of the eye.
- oculomotorius** (ok'u-lo-mo-to're-us) [L.]. The oculomotor nerve (*q. v.* under *nerve*).
- oculomycosis** (ok'u-lo-mi-ko'sis) [L. *oculus* eye + *mycosis*]. Any eye disease caused by a fungus.
- oculonasal** (ok'u-lo-na'zal). Pertaining to the eye and the nose.
- oculopupillary** (ok'u-lo-pu'pil-a-re). Pertaining to the pupil of the eye.
- oculoreaction** (ok'u-lo-re-ak'shun). The ophthalmic reaction. See under *reaction*.
- oculospinal** (ok'u-lo-spi'nal). Pertaining to the eye and the spinal cord.
- oculozygomatic** (ok'u-lo-zi-go-mat'ik). Pertaining to the eye and the zygoma.
- oculus** (ok'u-lus), pl. *oculi*. Latin for *eye*.
- oculustro** (ok-u-lus'tro). Soap made of oleate of potassium, glycerin, and turpentine.
- ocydinic** (o'si-o-din'ik) [ώκυς swift + ώδης labor]. Same as *oxytocic*.
- O. D.** Abbreviation for L. *oculus dexter*, right eye.
- od** (od) [ὀδός way]. The influence exerted upon the nervous system by magnetic agents.
- O. D. A.** Right occipito-anterior position of the fetus.
- odaxesmus** (o-daks-ez'mus) [ὀδαξήσμός a biting]. 1. The biting of the tongue or cheek in an epileptic fit. 2. Same as *odontocnemesis*.
- odaxetic** (o-daks-et'ik). Causing a biting or itching sensation.
- Oddi's sphincter** (od'ēz). See *sphincter*.
- odinopean** (o-din-o-pe-an) [ὀδῖς pain + ποιέω to make]. Causing pain.
- odol** (o'dol). A proprietary mouth wash containing phenylsalicylate, gluside, alcohol, and volatile oils.

odon-eki ["'icteric pestilence"]. The Japanese name for a disease resembling Weil's disease.

odontagra (o-don-ta'grah, o-don'tag-rah) [δούς tooth + ἄγρα seizure]. Toothache associated with gout.

odontalgia (o-don-tal'je-ah) [δούς tooth + ἄλγος pain]. Toothache; pain in a tooth. **phantom o.**, pain in the place from which a tooth has been extracted.

odontalgic (o-don-tal'jik). Pertaining to or marked by toothache.

odontalgicum (o-don-tal'jik-um). Toothache remedy of the N. F. containing oil of cinnamon 10, phenol 20, methyl salicylate 30.

odontalysis (o-don-tal'is-is). An improper term for examination of the teeth.

odontatrophia (o-don-tat-ro'fe-ah). [δούς tooth + ἀτροφία atrophy]. Atrophy or imperfect development of the teeth.

odontectomy (o-don-tec'to-me) [δούς tooth + ἐκτομή excision]. Removal of a tooth by a cutting operation.

onterism (o-don'ter-izm) [δούς tooth + ἐρισμός quarrel]. Chattering of the teeth.

odontexesis (o-don-teks'e-sis) [δούς tooth + ἔξεσιs scarping]. The cleaning, scraping, and polishing of the teeth.

onthemodia (o-don-them-o'de-ah) [δούς tooth + αἰμωδία state of having the teeth on edge]. Great sensitiveness of the teeth.

odontiasis (o-don-ti'as-is) [δούς tooth + -ιτιs inflammation]. Dentition; also any disorder caused by dentition.

odontic (o-don'tik) [δούς tooth]. Pertaining to the teeth.

odontinoid (o-don'tin-oid) [δούς tooth + εἶδος form]. A tumor composed of tooth substance.

odontitis (o-don-ti'tis). Inflammation of a tooth.

odonto- [δούς tooth]. A prefix implying some relation to a tooth.

odontoblast (o-don'to-blast) [δούς tooth + βλαστόs germ]. One of the connective tissue cells forming a layer upon the inner wall of the dentin of a tooth, and sending processes into the canaliculi of the dentin. From them the dentin is developed.

odontoblastoma (o-don'to-blas-to'mah). A tumor made up of odontoblasts; a congenital epulis.

odontobothrion (o-don'to-both're-on). A tooth socket.

odontobothritis (o-don'to-both-ri'tis) [δούς tooth + βοθρίον pit + -ιτιs inflammation]. Inflammation of the alveoli of the teeth.

odontocoele (o-don'to-sēl) [δούς tooth + κήλη hernia]. An alveolodental cyst.

odontoceramic (o-don'to-se-ram'ik) [δούς tooth + κέραμος pottery]. Pertaining to porcelain teeth.

odontoceramotechny (o-don'to-se-ram'o-tek-ne) [δούς tooth + κέραμος potter's clay + τέχνη art]. The art of making porcelain teeth; dental ceramics.

odontochirurgic (o-don'to-ki-rer'jik). Pertaining to dental operations.

odontoclamis (o-don-to-kla'mis) [δούς tooth + κάλυμμα hood]. The condition in which the alveolus forms a hood of gingival tissue over an erupted tooth. Called also *tooth hood*.

odontoclasis (o-don-tok'las-is) [δούς tooth + κλάσιs fracture]. Fracture or breaking of a tooth.

odontoclast (o-don'to-klast) [δούς tooth + κλάν break]. One of the cells that help to absorb the roots of a milk tooth. They occur between the milk tooth and the coming permanent tooth.

odontocnesis (o-don-tok-ne'sis) [δούς tooth + κνήσιs itching]. Itching of the gums.

odontodol (o-don'to-dol) [δούς tooth]. A proprietary dental anodyne.

odontodynia (o-don-to-din'e-ah) [δούς tooth + ὀδύνη pain]. Toothache; odontalgia.

odontogen (o-don'to-jen) [δούς tooth + γεννάν to produce]. The substance which develops into the dentin of the teeth.

odontogeny (o-don-toj'en-e) [δούς tooth + γεννάν to produce]. The development of the teeth.

odontoglyph (o-don'to-glif) [δούς tooth + γλύφειν to carve]. An instrument used for scraping the teeth.

odontogram (o-don'to-gram) [δούς tooth + γράμμα mark]. The tracing made by an odontograph.

odontograph (o-don'to-graf) [δούς tooth + γράφειν to write]. An instrument for recording the unevenness of surface of tooth enamel.

odontography (o-don-tog'ra-fe) [δούς tooth + γράφειν to write]. 1. A description of the teeth. 2. The use of the odontograph.

odontohyperesthesia (o-don'to-hi-per-es-the'ze-ah) [δούς tooth + hyperesthesia]. Sensitiveness of a tooth.

odontoid (o-don'toid) [δούς tooth + εἶδος form]. Like a tooth.

odontolith (o-don'to-lith) [δούς tooth + λίθος stone]. The tartar on the teeth; dental calculus.

odontology (o-don'tol'o-je) [δούς tooth + λόγος discourse]. The sum of knowledge regarding the teeth.

odontoloxia, odontoloxys (o-don-to-loks'e-ah, o-don'tol'oks-e) [δούς tooth + λοξός slanting]. Irregularity of the teeth.

odontoma (o-don-to'mah) [δούς tooth + ωμα tumor]. An exostosis on a tooth; a tumor of toothlike structure arising from the teeth. **composite o.**, an odontoma composed of the various tooth structures. **coronary o.**, one attacking the crown of a tooth. **epithelial o.**, an odontoma on the horizontal part of the mandible. **fibrous o.**, an odontoma contained in a fibrous sac. **mixed o.**, an odontoma composed of more than one of the tooth structures. **radicular o.**, one attacking the root of a tooth.

odontome (o-don'tóm). Same as *odontoma*.

odontonecrosis (o-don'to-ne-kro'sis) [δούς tooth + necrosis]. Necrosis, or massive decay of a tooth.

odontoneuralgia (o-don'to-nu-ra'je-ah) [δούς tooth + neuralgia]. Neuralgia from disease of the teeth, or neuralgic pain in the teeth.

odontonomy (o-don-ton'o-me) [δούς tooth + ὄνομα name]. Dental nomenclature.

odontonosology (o-don'to-no-sol'o-je) [δούς tooth + nosology]. The branch of medicine that treats of diseases of the teeth.

odontoparallaxis (o-don'to-par-al-ak'sis) [δούς tooth + παράλλαξιs alteration]. Irregularity of the teeth.

odontopathy (o-don-top'ath-e) [δούς tooth + πάθος illness]. Any disease of the teeth.

odontoperiosteum (o-don'to-per-e-os'te-um) [δούς tooth + periosteum]. Same as *pericementum*.

odontophobia (o-don-to-to'fe-ah) [δούς tooth + φόβος fear]. A nervous condition in which the sight of an animal's tooth produces fear.

odontoplast (o-don'to-plast). Same as *odontoblast*.

odontoplerosis (o-don'to-ple-ro'sis) [δούς tooth + πλήρωσιs filling]. The operation of filling a tooth cavity.

odontopraxis (o-don-to-pri'sis) [δούς tooth + πρίσιs sawing]. The grinding of the teeth.

odontoradiograph (o-don'to-ra'de-o-graf). A radiograph of a tooth or of the teeth.

odontorrhagia (o-don-to-ra'je-ah) [δούς tooth + ῥηγνύναι to burst forth]. Hemorrhage following extraction of a tooth.

- odontorthosis** (o-don-tor-tho'sis) [*ὀδούς* tooth + *ὀρθός* straight]. The correction of dental irregularities.
- odontoschism** (o-don'to-skizm) [*ὀδούς* tooth + *σχίσμα* cleft]. Fissure of a tooth.
- odontoscope** (o-don'to-skōp) [*ὀδούς* tooth + *σκοπεῖν* to see]. A dental mirror for examining the teeth.
- odontoscopy** (o-don-tos'ko-pe). The taking of prints of the cutting edges of the teeth, used as a method of personal identification.
- odontosis** (o-don-to'sis) [*ὀδούς* tooth]. Dentition; also odontogeny.
- odontostephyte** (o-don-tos'te-o-fit) [*ὀδούς* tooth + *ὀστέον* bone + *φυτόν* plant]. A bony tumor on a tooth.
- odontotechny** (o-don'to-tek-ne) [*ὀδούς* tooth + *τέχνη* art]. Dentistry.
- odontotherapy** (o-don-to-ther'ap-e) [*ὀδούς* tooth + *θεραπεία* cure]. The treatment of diseased teeth.
- odontotomy** (o-don-tot'o-me) [*ὀδούς* tooth + *τομή* cut]. The operation of cutting into a tooth, especially incision into the dental canal.
- odontotrimma** (o-don-to-trim'ah) [*ὀδοντοτρίμμα*]. A tooth powder.
- odontotripsis** (o-don-to-trip'sis) [*ὀδούς* tooth + *τρίψις* wearing]. Wearing away of the teeth.
- odontotrypy** (o-don-tot'rip-e) [*ὀδούς* tooth + *τρύπειν* to bore]. The boring or drilling of a tooth.
- odor** (o'dor). A volatile emanation that is perceived by the sense of smell. **butcher shop o.**, a smell like that of a butcher shop given off by yellow fever patients.
- odoriferous** (o-dor-if'er-us) [L. *o'dor* smell + *ferre* to bear]. Fragrant; emitting an odor.
- odorimeter** (o-do-rim'et-er). An instrument for performing odorimetry.
- odorimetry** (o-do-rim'et-re). The measurement of olfactory stimuli.
- odorography** (o-dor-og'raf-e) [L. *o'dor* odor + *γράφειν* to write]. A description of odors.
- O. D. P.** Right occipitoposterior position of the fetus.
- O'Dwyer's tubes** (o-dwi'erz) [Joseph O'Dwyer, American surgeon, 1841-1898]. See *tube*.
- odylis** (od'il-is). Terpin resorcinate, a yellow, oily liquid: used as an antiseptic and cicatrizing.
- odynacusic** (o'din-ak-u'sis) [*ὀδύνη* pain + *ἀκουσις* hearing]. Painful hearing.
- odynolysis** (o-din-ol'is-is) [*ὀδύνη* pain + *λύσις* solution]. Relief of pain.
- odynometer** (o-din-om'et-er) [*ὀδύνη* pain + *μέτρον* measure]. An instrument for measuring pain.
- odynophagia** (od'in-o-fa'je-ah) [*ὀδύνη* pain + *φαγείν* to eat]. The painful swallowing of food.
- odynophobia** (od'in-o-f'o-be-ah) [*ὀδύνη* pain + *φόβος* fear]. A morbid dread of pain.
- odynopoeia** (o'din-o-pe'ah) [*ὀδύνη* pain + *ποιεῖν* to make]. The induction of labor pains.
- odynphagia** (o-din-fa'je-ah) [*ὀδύνη* pain + *φαγείν* to eat]. Pain on deglutition.
- oecoid, oedema**, and other words in *oe*. See *ecoid, edema*, etc.
- oecology** (e-kol'o-je). See *ecology*.
- oecomania** (e-ko-ma'ne-ah). Ecomania.
- oedipism** (e'dip-izm) [*ὀιδίπους* oedipus]. Self-inflicted injury to the eyes.
- Oedipus complex** (e'dip-us) [*Oedipus* Tyrannus, a character in Greek tragedy who married his mother after killing his father]. See *complex*.
- Oehl's layer** (elz) [Eusebio Oehl, Italian anatomist, 1827-1903]. The stratum lucidum.
- Oehler's symptom** (e'lerz) [Johannes Oehler, German physician, born 1879]. See *symptom*.
- oenanthol** (e-nan'thol). Heptoic aldehyde, $\text{CH}_3(\text{CH}_2)_5\text{CHO}$.
- oenanthotoxin** (e'nan-tho-toks'in). A poisonous resin, $\text{C}_{17}\text{H}_{20}\text{O}_6$, from *Oenanthe crocata*, a poisonous plant of Europe.
- Oerbiss** (er'bis). See *larbiss*.
- Oertel's treatment** (er'telz) [Max J. Oertel, physician in Munich, 1835-1897]. See under *treatment*.
- oesee** (e'ze) [Ger. "loop"]. A platinum wire and loop with a glass handle; used in bacteriological culture experiments.
- Oesophagostoma** (e-sof-ag-os'to-mah). A genus of nematode worms of the family Strongylidae, parasitic in the intestines of various animals. The larvae often encyst in the intestinal wall, while the adults are mostly free in the lumen. **O. apios'tomum**, a parasite which forms tumors in the large intestine of monkeys and occasionally of man in Africa and the Philippines. **O. brumpt'i**, a parasite commonly present in monkeys in Africa and occasionally found in man. **O. columbia'num** infests sheep in the southern United States. See *nodule disease*, under *disease*. **O. dentat'um** is found in the pig. **O. infla'tum**, one found in cattle. **O. stephanos'tomum**, a species, normally parasitic in gorillas, which has been found in man in Brazil.
- oesophagostomiasis** (e-sof'ag-o-sto-mi-as-is). The state of being infested with *Oesophagostoma*.
- Oesophagostomum** (e-sof-ag-os'to-mum). Same as *Oesophagostoma*.
- oesophagus**, and other words in *oesoph-*. See *esophagus* and *esoph-*.
- oestriasis** (es-tri-as-is). Infection with larvae of flies of the genus *Oestrus*.
- Oestridae** (es'trid-e). The family of the "bot" or "warble" flies. They are very hairy diptera with rudimentary mouth parts and with the antennae inserted into round pits. The family includes the following genera: *Gastrophilus*, *Oestrus*, *Hypoderma*, *Dermatobia*, and *Cuterebra*.
- oestrin** (es'trin). See *estrin*.
- oestrum** (es'trum). See *estrum*.
- oestrus** (es'trus). See *estrus*.
- Oestrus hom'inis** (es'trus). A bot fly whose larvae sometimes infest the human body. **O. o'vis**, a species of bot fly whose larvae infest nasal cavities and sinuses of sheep: they may cause ocular myiasis in man.
- oesypus** (es'ip-us) [*οἶστρος* suint]. A proprietary name for suint, or unrefined wool fat.
- Of.** Abbreviation for *official*.
- official** (of-fish'al) [L. *officia'lis*; *offici'um* duty]. Authorized by the current U. S. Pharmacopeia, or National Formulary.
- officialinal** (of-fis'in-al) [L. *officina'lis*; *offici'na* shop]. Regularly kept for sale in the shops of druggists.
- Ogata's method** (o-gah'tahz) [M. Ogata, Japanese physician]. See under *method*.
- ogive** (o'jiv). An S-shaped curve; a term used in biometry.
- ogo** (o'go). See *gangosa*.
- Ogston's line, operation** (og'stonz) [Alexander Ogston, Scottish surgeon, 1844-1929]. See under *line* and *operation*.
- Ogston-Luc operation** [Alexander Ogston; H. Luc, French surgeon, born 1855]. See under *operation*.
- OH.** A symbol for the hydroxyl ion in solution; a hydroxide.
- OH.** The hydroxyl group.
- O'Hara's forceps** [Michael O'Hara, Jr., Philadelphia surgeon, born 1869]. See *forceps*.
- Ohara's disease** (o-hah'rahz) [Hachiro Ohara, contemporary Japanese physician]. See *disease*.
- ohm** (ōm) [named for George S. Ohm, 1787-1854, a German physicist]. The electric resistance of a

column of mercury one square millimeter in diameter and one hundred and six centimeters long; the unit of electric resistance.

ohmmammeter (õm'am-e-ter). An ohmmeter and ammeter combined.

ohmmeter (õm'me-ter). An instrument for measuring electric resistance in ohms.

oicomania (oi-ko-ma'ne-ah). Ecomania.

Oidiomycetes (o-id'ë-o-mi-se'tes). A group of fungi characterized by having mycelial threads in their cultures. The group includes oidium and similar genera.

oidiomycetic (o-id'ë-o-mi-set'ik). Pertaining to or caused by oidiomycetes.

oidiomycosis (o-id'ë-o-mi-ko'sis) [*oidium* + *μύκωσις* fungus]. A disease condition due to the presence of an oidium.

oidiomycotic (o-id'ë-o-mi-ko't'ik). Pertaining to oidiomycosis.

Oidium (o-id'ë-um) [dim. of *ὄνυξ* egg]. A genus of fungi intermediate between the molds and the yeasts, and showing forms that resemble both. **O. albicans**. See *Monilia albicans*. **O. coccidioides**, a fungus which forms spherical bodies resembling tubercles in the tissues. Cf. *Coccidioides*. **O. dermatitidis**. Same as *Blasatomyces dermatitidis*. **O. hektetii**, an organism causing a blastomycetic infection in man. **O. lactis**, a nonpathogenic species which forms a white moldlike growth in bread, sour milk, etc. It is an important factor in the ripening of Camembert cheese, probably giving it the flavor. **O. porriginis**. Same as *Achorion schoenleinii*. **O. pulmonium**, a Brazilian fungus causing pulmonary mycosis (Magalhaes, 1914). **O. tropicale**, a species producing broncho-oidiosis.

oikoid (oi'koid). Same as *ecoid*.

oikology (oi-ko-lo-je) [*oikos* house + *λόγος* treatise]. The science of houses and homes, considered especially in respect to their sanitary conditions.

oikomania (oi-ko-ma'ne-ah). Same as *ecomania*.

oikophobia (oi-ko-fõ-be-ah) [*oikos* house + *φόβος* fear]. Morbid aversion to home surroundings (A. Verga, 1882).

oikosite (oi'ko-sit). A fixed or stationary commensal organism.

oil (oil) [*L. oleum*]. 1. A fat which is liquid at 20 C.; the fatty oils. 2. Volatile, usually aromatic substances of varied chemical nature mostly found in plants; the volatile or essential oils. 3. A liquid petroleum. **o. of allspice**, the fragrant volatile oil of pimenta (see *Pimenta*); aromatic and stimulant. Dose, 1-5 minims (0.06-0.33 cc.). **allyl mustard o.**, a volatile oil, allyl-iso-thiocyanate, C₆H₅NCS, from the seeds of black mustard. **o. of almonds**. 1. The fixed oil of sweet almonds (*L. oleum amygdalae expressum*). 2. The volatile oil of bitter almonds (*L. oleum amygdalae amaræ*): used like hydrocyanic acid. Dose, ¼ minim (0.016 cc.). **o. of amber**, an irritant stimulant and antispasmodic oil distilled from amber. Dose, 5-10 minims (0.33-0.666 cc.). **animal o.** 1. Any oil of animal origin. 2. See *Dippel's o.* **o. of anise**, a volatile oil from *Pimpinella anisum*. Dose as a carminative, 2-5 minims (0.133-0.333 Gm.). **anthos o.**, oil of rosemary. **Bamber o.**, a mixture of 1½ parts citronella, 1 part kerosene (paraffin), and 2 parts coconut oil: used as a repellent for mosquitos. **o. of bay**, a volatile oil from *Myrcia cruris*: used in making bay-rum; also that of *Laurus nobilis*. **beetle o.**, an African oil derived from a species of beetle. **o. of ben**, a fixed oil from *Moringa pterygosperma*. **o. of benné** (ben'ne) [*L. oleum sesami*]. Same as *o. of sesamum*. **o. of bergamot** (*L. oleum bergamiae*), a fragrant volatile oil from *Citrus aurantium bergamia* containing about 36 per cent of linalyl acetate. **o. of birch**. 1. The tarry fixed oil of white birch. 2. *L. oleum betulæ volatile*, the volatile oil of sweet or black birch bark (*Betula*

len'ta): used for rheumatism, etc.; it contains methyl salicylate and is identical with oil of wintergreen. Dose, 1-5 minims (0.065-0.33 cc.). **boiled o.**, linseed oil that has been exposed to a heat of 130 C. or more. **British o.**, a mixture of petroleum and of various oils. **o. of cade** (*L. oleum cadi'num*), a tarry fixed oil from *Juniperus oxycedrus*: used in skin diseases. **o. of cajuput**, a volatile oil (*L. oleum cajuputi*) from *Melaleuca leucadendron*: anodyne, antiseptic, carminative, and anthelminthic. Dose, 2-10 minims (0.133-0.66 cc.). **o. of camphor**, a solution of camphor in a hydrocarbon. **camphorated o.**, a liniment of olive oil and camphor; linimentum camphoræ. **candle-nut o.**, a cathartic oil afforded by *Aleurites triloba*, a tree of the Pacific islands. Dose, ¼-1 fl.oz. (15-30 cc.). **o. of caraway** (*L. oleum car'i*), the volatile oil of caraway: carminative. Dose, 1-10 minims (0.066-0.666 cc.). **carbolic o.**, that part of the distillate from coal tar which passes over between 170 and 230 C. **o. of cardamom**, a volatile oil distilled from the seeds of *Elemaria cardamum*. **carron o.** See *lime liniment*, under *liniment*. **o. of cassia**, a fragrant volatile oil from *Cassia lignea* (*Cinnamomum cassia*), consisting mostly of cinnamic aldehyde. **castor o.** (*L. oleum ricini*), a thick, purgative, fixed oil from the seeds of *Ricinus communis*. It stimulates intestinal peristalsis, causing purgation in four or five hours, and is used to expel irritant matter from the intestine in diarrhea and intestinal inflammation. This action is probably due to a glyceride of ricinoleic acid found in the oil. Dose, 4-8 fluidrachms (16-32 cc.). **chaulmoogra o.**, a fixed oil obtained from the seeds of a tree of southern Asia (*Taraktogenus kurzii*). It has been used in the treatment of leprosy; ethyl esters of the fatty acids obtained from this oil are now so used. **o. of chenopodium**, a volatile oil obtained by the distillation of *Chenopodium ambrosioides*. It contains 45-70 per cent of ascaridol, which is the active anthelmintic principle. Dose, 1-2 cc. for hookworms. **o. of cinnamon**, a fragrant, volatile oil derived from cinnamon bark and consisting mostly of cinnamic aldehyde: stimulant, etc. Dose, 1-5 minims (0.6-0.3 cc.). **o. of citronella**, a volatile oil of various grasses, *Andropogon nar'dus*, etc. **o. of cloves** (*L. oleum caryophylli*), an aromatic and stimulant volatile oil from cloves (*q. v.*). Dose, 2-5 minims (0.133-0.333 cc.). **coconut o.**, the fixed oil of the coconut. **cod liver o.** (*L. oleum morrhue*), a fixed oil from the livers of the codfish (*Gadus morrhua*). It contains gaduin, olein, and other glycerides, with small and variable quantities of phosphorus, bromine, iodine, sulphur, morrhucic acid, and various vitamins. It acts by increasing the red corpuscles of the blood, and thus improving the weight of the body. It is used in pulmonary and other varieties of tuberculosis, catarrh, conjunctivitis, anemia, syphilis, and rheumatism. The cold-pressed oil seems to have specific curative properties in cases of rickets. Dose, 2-4 fluidrachms (8-16 cc.). The U. S. P. X describes two types, the assayed and the nonassayed, based on vitamin A content. **colza o.**, the fixed oil of the seeds of colza (*Brassica campestris*). **o. of copaiba** (*L. oleum copaiba*), a volatile oil derived from copaiba, and used for the same purposes as that drug. Dose, 5-15 minims (0.3-1 cc.). **o. of coriander** (*L. oleum coriandri*), the fragrant volatile oil of coriander seed: aromatic and carminative. Dose, 2-5 minims (0.12-0.3 cc.). **cotton seed o.** (*L. oleum gossypii seminis*), the fixed oil of the seeds of the cotton plant. **croton o.** (*L. oleum tiglii*, *L. oleum crotonis*), the thick, fixed oil of the seeds of *Croton tiglium*: a strong irritant and hydragogue cathartic. It is used as a cathartic in constipation from intestinal atony, lead colic, and nervous disorder; in the form of a liniment as a counterirritant in rheumatism, neuralgia, bronchitis, and meningitis; and as a revulsant in coma from apoplexy and uremia.

Dose, 1 minim (0.06 cc.). **o. of cubebs** (L. *o'leum cu'bebae*), the volatile oil of cubebs: diuretic. Dose, 10-15 minims (0.6-1 cc.). **cypress o.**, an oil distilled from the leaves and young branches of *Cupressus sempervirens*: used in whooping cough by inhalation. **dead o.**, a black liquid obtained in the rectification and distillation of coal tar: disinfectant. **o. of dill**, a volatile oil from the fruit of *Anethum graveolens*. **Dippel's animal o.**, an oil procured by destructive distillation of bone, horn, or other animal substances. **doegling o.** See *doegling*. **drying o.**, an oil which thickens and hardens on exposure to the air, especially when spread out in a tin layer, as in paint. **em-pyreumatic o's**, volatile oils formed by the destructive distillation of organic matters. **es-sential o.** Same as *volatile o.* **etheral o.** 1. *o'leum aethereum*, U. S. P., a compound of strong ether with heavy oil of wine. 2. Same as *volatile o.* **eucalyptus o.** (L. *o'leum eucalypt'i*), a volatile oil from the leaves of *Eucalyptus globulus*: deodorant and disinfectant. Dose, 2-5 minims (0.133-0.333 cc.). **eulachon o.**, the fixed oil of the candle-fish, *Thaleichthys pacificus*: used like cod liver oil. **expressed o's**, fixed oils obtained by expression. **fatty o.**, a fat which is liquid at 20 C. **fennel o.**, a volatile oil from the ripe fruit of *Poeniciculum vulgare*. **ferment o's**, volatile oils formed by fermentation. **fixed o.**, any oil that is not volatilizable. Called also *fatty o.* **flaxseed o.** See *linseed o.* **o. of fleabane** (L. *o'leum erigeron'is*), a thick, volatile oil from *Erigeron canadensis*: hemostatic, and useful in various catarrhal affections. Dose, 5-30 minims (0.333-2 cc.). **fusel o.**, amyl alcohol. **o. of gaultheria**. See *o. of wintergreen*. **o. of gomenol**. See *gomenol*. **gray o.**, olive oil and lanolin containing mercury: used hypodermically in syphilis. **o. of gurjun**. See *gurjun*. **Haarlem o.**, a proprietary diuretic and stimulant oil. **heavy o.**, the oily product of the action of sulphuric acid on alcohol. **o. of hemlock**, a volatile oil distilled from the leaves of the hemlock tree, *A'bies* (or *Tsu'ga*) *canadensis*. **her-ring o.**, the fixed oil of herrings. **Hungarian o.**, ananthic (oenanthic) ether, $(CH_3)(CH_2)_5CH_2O$: used to give to blended spirits the flavor of French brandy. **hydnocarpus o.**, an oil obtained from *Hydnocarpus wightiana*, *H. subulcata*, and other species. It resembles chaulmoogra oil in physical and chemical properties and is used in the same way (including the use of its ethyl esters) in the treatment of leprosy. **o. of jasmine**, an essential oil from *Jasminum odoratissimum*. **joint o.**, the synovial fluid. **juniper o.** (L. *o'leum junip'eri*), the volatile oil of juniper berries: stimulant and diuretic. Dose, 5-15 minims (0.333-1 cc.). **lard o.** (L. *o'leum ad'ipis*), oil from hogs' lard. **o. of lavender** (L. *o'leum lavan'dulae flo'rum*), the volatile oil of lavender flowers: stimulant, antispasmodic. Dose, 1-5 minims (0.06-0.3 cc.). **o. of lemon** (L. *o'leum limo'nis*), the volatile oil of the rind of lemons: aromatic and stimulant. **linseed o.** (L. *o'leum li'ni*), the fixed drying oil of flaxseed: laxative. Dose, 1-2 floz. (30-60 cc.). **o. of lumes**, a volatile oil from the fruit of *Citrus luma*, the lume, or sweet lime, of Italy. **o. of male fern**, a fixed oil from the root of the male fern: anthelmintic when freshly prepared. **margosa o.**, an oil from the seeds of the Indian lilac tree: said to be useful in rheumatism, leprosy, mange, ulcers, etc. **o. of marjoram**, the volatile oil of *Origanium majorana* and *O. vulgare*: stimulant, carminative, anodyne, and vulnerary; used also in microscopy. **menhaden o.**, a fixed oil from menhaden fish. **mineral o.**, an oil derived from minerals. The mineral oils include petroleum and its products. The term is generally used when referring to liquid petrolatum U. S. P. It sometimes refers to lubricating oils. **o. of mirbane**. Same as *nitrobenzol*. **o. of mustard** (L. *o'leum sin'apis vola'tile*), a volatile oil, allyl-isothiocyanate, C_3H_5NCS , from the seeds of black mustard; also

a volatile oil, methyl-phenyl-isothiocyanate, $OH-C_6H_4-CH_2-CNS$, from the seeds of white mustard: stimulant. Dose, $\frac{1}{4}$ -1 minim (0.0075-0.015 cc.). **mutton bird o.**, a stomach oil from the sooty petrel: used as a substitute for cod liver oil. **o. of myrcia**. See *oil of bay*. **o. of myristica**, nutmeg oil. **neat's-foot o.** (L. *o'leum bu'bulum*), a fixed oil from the feet of neat-cattle. **Neisser's o.**, a preparation of 20 parts of mercury, 5 parts of ethereal tincture of benzoin, and 40 parts of liquid petrolatum: used in syphilis by injection. **o. of neroli** (L. *o'leum auran'tii flo'rum*), the volatile oil of orange flowers. **nutmeg o.** (L. *o'leum myris'ticae*), the volatile oil of nutmegs: an aromatic stimulant. Dose, 1-3 minims (0.06-0.18 cc.). **oleo o.**, the commercial name of an oil prepared from beef fat. **olive o.** (L. *o'leum oli'vae*), a fixed oil from the fruit of the olive tree, *Olea europaea*: much used in liniments and plasters. **o. of orange flowers**, a volatile oil distilled from the fresh flowers of the bitter orange. **o. of orange peel** (L. *o'leum auran'tii cor'ticis*), a volatile oil from the rind of the orange. **palm o.**, a fixed oil from the fruit of *Elaeis guineensis*, an African palm. **paraffin o.** See *liquid petrolatum*. **o. of patchouli**, the volatile oil of *Pogostemon patchouli*, a mint of the East Indies: used mainly as a perfume. **o. of peanut**, the fixed oil expressed from the seeds of the common peanut, *Arachis hypogaea*. **o. of pennyroyal** (L. *o'leum pule'gii* or *o. hedeo'mae*), the volatile oil of *Men'tha pulegioides*, *M. canadensis*, and of *Hedeo'ma pulegioides*: carminative, anodyne, deobstruent, and emmenagogue. Dose, 1-5 minims (0.06-0.33 cc.). **o. of peppermint** (L. *o'leum men'thae piper'itae*), the volatile oil of *Men'tha piper'ita*: carminative, anodyne, stimulant, and diuretic. Dose, 1-5 minims (0.06-0.33 cc.). **o. of petit-grain**, a volatile oil from the leaves, buds, and young shoots of the orange. **phosphorated o.** (L. *o'leum phosphora'tum*), oil of sweet almonds, containing ether and phosphorus, and having the therapeutic properties of the latter drug. Dose, 1-5 minims (0.06-0.33 cc.). **o. of pimenta**. See *o. of allspice*. **o. of pine needles**, the oil distilled from the fresh leaves of *Pinus pumilio*. It is administered as a vapor to be inhaled. **o. of poppy seed**, the fixed oil of the seeds of opium poppy. **porpoise o.**, a fixed oil from the blubber of porpoises. **puffer fish o.**, oil from the common puffer fish, *Spheroides maculatus*. It contains vitamins. **o. of rape**, a fixed oil from the seeds of rape (*Brassica campestris*, var. *Na'pus*). **red o.**, fuchsin. **o. of rhodium**, the volatile oil from the roots of *Convolvulus scoparia* and *C. flor'ida*; also from *Am'yris balsamifera*; also a factitious mixture resembling the above: used mainly by veterinarians. **rock o.**, petroleum. **o. of rose** (L. *o'leum ro'sae*), the volatile oil or attar of the fresh petals of *Rosa damascena*. **rosemary o.** (L. *o'leum rosmari'ni*), the volatile oil of rosemary (*q. v.*): a stimulant much used in liniments. Dose, 1-5 minims (0.06-0.33 cc.). **rosin o.**, the volatile oil distilled from rosin. **o. of rue**, a volatile oil from *Ruta graveolens*. It consists mostly of methyl-nonyl-ketone, $CH_3CO-(CH_2)_8CH_3$, and is used as a vermicide for hookworms. **sandalwood o.** (L. *o'leum san'tali*), a fragrant volatile oil distilled from sandalwood (*q. v.*): used in bronchitis and gonorrhea. Dose, 10-30 minims (0.6-2 cc.). **sapucainha o.**, the oil of *Carpotroches brasiliense*: used in the treatment of leprosy. **o. of sassafras** (L. *o'leum sas'safra's*), a fragrant volatile oil distilled from the root bark of sassafras (*q. v.*): aromatic and carminative. Dose, 1-5 minims (0.06-0.3 cc.). **o. of savin** (L. *o'leum sabi'nae*), a volatile oil distilled from the leaves of savin (*q. v.*): stimulant and emmenagogue. Dose, 1-5 minims (0.06-0.3 cc.). **o. of sessamum**, a fixed oil from the seeds of *Sesamum orientale*. **shale o.**, an oil distilled from bituminous shales. **shark o.**, a fixed oil obtained from the liver of sharks. **shore o.**, a

variety of cod liver oil. **Smith's o.**, a remedy for cuts and wounds in veterinary practice, consisting of turpentine and linseed oil, 1 pint each; tincture of aloes, 8 ounces; nitric acid and sulphuric acid, each, 4 ounces. **spearmint o.** (*L. o'leum menthae viridis*), the volatile oil of *Mentha viridis*, or spearmint; carminative, stimulant: used also like menthol. Dose, 1-5 minims (0.06-0.33 cc.). **o. of spike**, the volatile oil of *Lavandula spica*. **o. of spruce**, a volatile oil distilled from the leaves and twigs of the spruce tree. **stomach o.**, an oily material in the stomach of certain marine birds which can be ejected when the birds are disturbed. **straits o.**, a variety of cod liver oil. **o.-sugar**. See *eleosaccharum*. **sunflower o.**, a fixed drying oil from the seeds of the sunflower, *Helianthus annuus*. **sweet o.**, olive oil. **tambor o.**, a purgative oil from the seeds of *Omphalea oleifera*, a euphorbiaceous tree of tropical America. **o. of tar** (*L. o'leum piceis liquidae*), a volatile oil distilled from tar, the medicinal properties of which it represents. **o. of teaberry**. Same as *o. of wintergreen*. **teel o.** Same as *o. of ssesamum*. **templin o.**, oil of turpentine from pine cones. **o. of theobroma**. See *cacao butter*, under *butter*. **o. of thyme** (*L. o'leum thymis*), the volatile oil of thyme: tonic, stimulant, and carminative. Dose, 1-5 minims (0.06-0.33 cc.). **o. of turpentine** (*L. o'leum terebinthinae*), a volatile oil from the resinous juice of various pine trees: stimulant, diuretic, and counterirritant. Dose of the rectified oil, 5-30 minims (0.333-2 cc.). **o. of vitriol**, an old name for sulphuric acid. **volatile o.**, any one of a class of oils that volatilize at ordinary temperatures. The volatile oils occur in aromatic plants, to which they give their odor. Most volatile oils consist of a mixture of two or more terpenes or of a mixture of an eleopten with a stearopten. Called also *essential o.* and *ethereal o.* **walpurgis o.**, a petroleum from Eichstädt, in Germany; a popular polychrest remedy. **o. of wine**. See *Hungarian o.* **o. of wintergreen** (*L. o'leum gaultheriae*), a fragrant volatile oil from *Gaultheria procumbens*. It consists mostly of methyl-salicylate, $\text{OH.C}_6\text{H}_4\text{CO}_2\text{CH}_3$, and is used in rheumatism. Dose, 5-30 minims (0.333-2 cc.). **wood o.** Same as *gurjun balsam*. **wormseed o.** (*L. o'leum chenopodii*), the volatile oil of the seeds of *Chenopodium anthelminticum*, or American wormseed: anthelmintic. Dose, 3-10 minims (0.18-0.6 cc.). **zachun o.**, the oil afforded by seeds of *Balanites aegyptiaca*, a tree of Africa. See *zachun*.

oil breakfast. Two hundred cc. of olive oil (*Voldhard's*) or 100-200 cc. of a 2 per cent solution of oleic acid in olive oil (*Boldiref's breakfast*), given in the early morning, fasting. In one half to one hour the stomach contents are drawn off. The oil breakfast having caused the duodenal contents to regurgitate into the stomach, the contents contain pancreatic juice from the duodenum.

oinomania (oi-no-ma'-ne-ah). Same as *enomania*.

ointment (oint'ment) [*L. unguen'tum*]. A fatty medicated preparation for external use, of such consistence that it melts when applied to the skin. See *unguentum*. **ammoniated mercury o.**, 10 per cent in hydrous wool fat and white petrolatum. **Bayer's o.**, an ointment containing calomel, 2 drachms; lead carbonate and burnt alum, each, 4 drachms; Venice turpentine, 6 drachms; spermaceti ointment, 1½ oz.: used for chronic eczema. **basilicon o.**, an ointment made of 1 pound each of yellow wax, Burgundy pitch, and yellow pitch, 16 fl.oz. of olive oil, and 3 fl.oz. of turpentine. **belladonna o.**, extract of belladonna leaves, 10 per cent in hydrous wool fat and lard. **blue o.** See *unguentum hydragryi*. **o. of boric acid**, 10 per cent in a petrolatum base. **brown o.**, a discutient ointment containing camphorated brown plaster, olive oil, and suet. **calomel o.** See *Metchnikoff's o.* **camiofen**

o., an ointment containing camiofen in an emollient base. **o. of carbolic acid**. See *phenol o.* **casein o.**, a water-soluble varnish used in applying medicines to the skin, and consisting of 14 parts of casein, 0.43 part of sodium and potassium hydroxides, 7 parts of glycerin, 21 parts of petrolatum, 1 part of boric or salicylic acid, and 56 parts of water. **chrysarobin o.**, 6 per cent in benzoinated lard. **citrine o.**, an ointment of nitrate of mercury. **Cooper's o.**, 1 part each of arsenic and sulphur in 8 parts of spermaceti ointment. **Crede's o.**, one containing 15 per cent of collargol, 5 per cent of water, 10 per cent of white wax, and 70 per cent of benzoinated lard: used in septicemia, pyemia, boils, carbuncles, etc. **Cyrillo's o.**, an ointment used in syphilis, and composed of mercurous chloride, 4 parts, and lard, 32 parts. **diachylon o.**, a mixture of white petrolatum and lead plaster. **Dupuytren's o.**, a cantharides ointment, 1:80. **Gauducheau's o.**, an ointment for prophylaxis of venereal disease: mercuric cyanide, 0.075 Gm.; thymol, 1.75 Gm.; mild mercurous chloride, 25 Gm.; wool fat, 50 Gm.; petrolatum to make 100 Gm. **Hebra's o.**, diachylon ointment. **iodine o.**, iodine, 4 per cent, and potassium iodide, 4 per cent, in glycerin and wool fat. **iodoform o.**, 10 per cent in benzoinated lard. **Jarisch's o.**, an ointment for psoriasis, consisting of 1 part of pyrogallallic acid and 8 parts of lard. **kentish o.**, turpentine liniment. **Lister's o.**, an ointment containing white wax, paraffin, boric acid, and oil of almond. **Maury's o.**, one containing 1 drachm of mercury nitrate and ½ drachm each of powdered opium and rhubarb mixed with 1 oz. of simple ointment: used for ulcers. **mercurial o.** See *unguentum hydragryi*. **Metchnikoff's o.**, calomel, 35 to 50 per cent, with hydrous wool fat, petrolatum, or a mixture of them. **Moro's o.**, a mixture of hydrous wool fat and tuberculin: used in performing Moro's reaction. **nutgall o.**, 20 per cent in simple ointment. **Pagenstecher's o.**, ointment of yellow oxide of mercury: used in eye diseases. **paraffin o.** (*L. unguen'tum paraffini*), a mixture of solid and liquid petrolatum. **phenol o.**, 2½ per cent in simple ointment. **o. of rose water**, rose water in a suitable base. **Schwimmer's o.**, an ointment for preventing pitting in smallpox, consisting of carbolic acid, chalk, and olive oil. **seleniovanadic o.**, a preparation of selenium and vanadium, applied locally for relieving pain in malignant disease. **simple o.** (*L. unguen'tum* or *u. sim'plex*), lard 4 parts and white wax 1 part. **o. of tannic acid**, 20 per cent in glycerin and ointment. **tar o.**, 50 per cent in lard and wax. **wax o.** (*L. unguen'tum cerae*). Same as *cerate*, *simple*. **Wertheim's o.**, an ointment for chloasma, containing ammoniated mercury, 2 drachms; bismuth, 2 drachms; and glycerin ointment, 1 oz. **White's o.**, an ointment for psoriasis: crude coal tar ½ drachm (2 Gm.), zinc oxide ½ drachm (2 Gm.), petrolatum 1 oz. (10 Gm.). **Whitfield's o.**, an ointment composed of 1 Gm. salicylic acid, 2 Gm. benzoic acid, and 30 Gm. of petrolatum. **Wilkinson's o.**, compound sulphur ointment. **yellow mercuric oxide o.**, 10 per cent in hydrous wool fat and petrolatum. **zinc o.**, unguentum zinci oxid.

o-iodoxybenzoic acid. See *iodoxybenzoic acid*, under *acid*.

Oken's body (o'kenz) [Lorenz Oken, German physiologist, 1779-1851]. Wolfian body.

O. L. Abbreviation for *L. oculus lae'vus*, left eye.

Ol. Abbreviation for *L. o'leum*, oil.

-ol. A suffix indicating that the substance is an alcohol, i. e., a hydroxyl derivative of a hydrocarbon.

O. L. A. An abbreviation for *L. occipito laevo anterior*, or the left occipito-anterior position of the fetal head in labor.

olan (o'lan). A paraffin ointment base forming an emulsion with water.

- olea** (o'le-ah). 1. L. for *olive*. 2. Pl. of *o'leum*, oil.
- oleaginous** (o-le-aj'in-us) [L. *oleag'inus*]. Oily; greasy; unctuous.
- oleander** (o-le-an'der). An evergreen apocynaceous shrub, *Nerium odoratum*, a poisonous cardiac tonic, diuretic, and aperient. Dose of extract, $\frac{1}{4}$ – $\frac{3}{4}$ grain (0.016–0.05 Gm.); daily dose of tincture, 5 minims (0.33 cc.).
- oleandrin** (o-le-an'drin). 1. A glucoside from oleander. Subcutaneous dose, $\frac{1}{4}$ – $\frac{3}{4}$ grain (0.006–0.015 Gm.). 2. An alkaloid from oleander: therapeutically active.
- oleandrism** (o-le-an'drizm). Poisoning by oleander.
- olease** (o'le-ās). An enzyme from olive oil which produces rancidity and discoloration of the oil.
- oleaster** (o-le-as'ter). 1. The true wild olive, *Olea oleaster*. 2. Any plant of the genus *Elaeagnus*.
- oleate** (o'le-āt). 1. Any salt of oleic acid. 2. [L. *oleatum*]. A solution of a chemical substance or drug in oleic acid. The oleates are used as ointments.
- olecco** (o-lek'o). A proprietary laxative preparation of castor oil.
- olecranal** (o-lek'ran-al). Pertaining to the olecranon.
- olecranarthritis** (o'lek-ran-ar-thri'tis) [*olecranon* + *arthritis*]. Inflammation of the elbow joint.
- olecranarthrocace** (o-lek'ran-ar-throk'-as-e) [ὀλέκ-κρανον elbow + ἄρθρον joint + κάκη badness]. Tuberculosis of the elbow joint.
- olecranarthropathy** (o-lek'ran-ar-throp'-ath-e) [ὀλέκκρανον elbow + ἄρθρον joint + πάθος disease]. Disease of the elbow joint.
- olecranoid** (o-lek'ran-oid). Resembling the olecranon.
- olecranon** (o-lek'ran-on; properly, o-lek-ra'non) [ὀλέκκρανον] [B N A]. A curved process of the ulna at the elbow; olecranon process.
- olefin** (o'le-fin) [L. *o'leum* oil + *fa'cere* to make]. An unsaturated aliphatic hydrocarbon.
- oleic acid** (o-le'ik). See under *acid*.
- olein** (o'le-in) [L. *o'leum*]. An oleate (especially the trioleate) of glyceryl, $C_3H_5(CH_2)(CH_2)_7CO_2$; found in various fixed oils and fats. It is a colorless, oily liquid, insoluble in water, but freely soluble in ether and alcohol.
- oleobalsamic** (o'le-o-bawl-sam'ik). See *mixture*.
- oleo-Bi-Roche** (o'le-o-bi-roth). A suspension of finely divided bismuth oleate in olive oil: used in the treatment of syphilis. Dose, 32.4 minims (2 cc.) intramuscularly two or three times a week.
- oleobismuth** (o'le-o-biz'muth). See *oleo-Bi-Roche*.
- oleocreosote** (o'le-o-kre'o-sōt). The oleic acid ester of creosote. It is a yellowish liquid containing 33 per cent of creosote, and is used in phthisis. Dose, 10–15 minims (0.65–1 cc.).
- oleogen** (o'le-o-jen). An ointment base containing oleic acid, petroleum, and ammonia.
- oleoguaiacol** (o'le-o-gwi'ak-ol). The oleic acid ester of guaiacol.
- oleo-infusion** (o'le-o-in-fu'zhun). A preparation made by infusing a drug in oil.
- oleomargarine** (o'le-o-mar'jar-in). An artificial butter made from tallow, lard, etc.
- oleomargariscope** (o'le-o-mar'jar-is-kōp). A pocket polariscope for the inspection of oleomargarine or butter.
- oleometer** (o-le-om'et-er) [L. *o'leum* oil + μέτρον measure]. An instrument for testing the purity of oil.
- oleonucleoprotein** (o'le-o-nu'kle-o-pro'te-in). The caseinogen and fat of milk regarded as forming one complex substance.
- oleopalmitate** (o'le-o-pal'mit-āt). An oleate and a palmitate of the same base.
- oleoresin** (o'le-o-rez'in) [L. *oleoresin'a*]. 1. Any natural combination of a resin and a volatile oil such as occurs in certain plants. 2. Ethereal extracts. The official oleoresins are those of aspidium and capsicum.
- oleosaccharum** (o'le-o-sak'ar-um). See *eleosaccharum*.
- oleostearate** (o'le-o-ste'ar-āt). An oleate and a stearate of the same base.
- oleosus** (o-le-o'sus) [L.]. Oily; greasy.
- oleothorax** (o'le-o-tho'rax) [L. *o'leum* oil + *thorax*]. Intrapleural injection of oil in order to compress the lung in pulmonary tuberculosis.
- oleotine** (o-le-o'tin). A peptonized fat: for use as a butter substitute.
- oleum** (o'le-um), gen. *o'lei* [L. for *oil*]. See *oil*.
- o. animal'e**, a homeopathic preparation of the vulvar mucus of a mare in heat. **o. animal'e aethe'reum**, Dippel's animal oil (*q. v.*); also its homeopathic preparation. **o. chaenoceti**, the oil of a whale, *Balaen'na rostra'ta*: recommended for pharmaceutical use. **o. jec'oris**, **o. jec'oris asel'i**, cod liver oil. **o. lig'ni san'tali**, the oil of white sandalwood; also its homeopathic preparation. **o. mor'rhuæ**, cod liver oil. **o. rici'ni**, castor oil. **o. san'tali**, sandalwood oil. **o. tig'lii**, croton oil.
- olfactive** (ol-fak'te). The unit of smell; the normal stimulus threshold for a given odor.
- olfaction** (ol-fak'shun) [L. *olfa'cere* to smell]. The act of smelling; the sense of smell.
- olfactology** (ol-fak-to'l-o-je). The science of the sense of smell.
- olfactometer** (ol-fak-tom'et-er) [L. *olfa'ctus* smell + μέτρον measure]. An apparatus for testing the sensitiveness of the nose to odors.
- olfactometry** (ol-fak-tom'et-re). The study of the sense of smell.
- olfactory** (ol-fak'to-re) [L. *olfa'cere* to smell]. Pertaining to olfaction, or the sense of smell.
- olfactus** (ol-fak'tus). A unit of acuity of smell.
- olfacty** (ol-fak'te). Same as *olfactive*.
- olibanum** (o-lib'an-um) [L.]. True frankincense; a gum-resin from various species of *Boswel'lia*. It is a stimulant emmenagogue, and has been used also in bronchial and laryngeal affections, and locally for chilblains, etc.
- oligemia, oligæmia** (ol-ig-e'me-ah) [δύλιγος little + αἷμα blood]. Deficiency in the volume of the blood.
- oligergastic** (ol'ig-er-gas'tik) [δύλιγος scanty + ἔργον work]. Meyer's term for psychic disorders based on brain deficiency from lack of development.
- olighydria** (ol-ig-hid're-ah). See *oligidria*.
- oligidria** (ol-ig-id're-ah) [δύλιγος scanty + ἰδρῶς sweat]. A deficiency in the secretion of the sweat.
- oligoamnios** (ol'ig-o-am'ne-os) [δύλιγος little + ἀμνιος]. Oligohydramnios.
- oligocardia** (ol'ig-o-kar'de-ah) [δύλιγος few + καρδία heart]. Same as *bradycardia*.
- oligochoilia** (ol'ig-o-ko'le-ah) [δύλιγος scanty + χολή bile]. A lack or deficiency of the bile.
- oligochromemia** (ol'ig-o-kro-me'me-ah) [δύλιγος scanty + χρώμα color + αἷμα blood]. Insufficiency of hemoglobin in the blood.
- oligochylia** (ol'ig-o-ki'le-ah) [δύλιγος few + χυλός chyle]. Deficiency of chyle.
- oligochymia** (ol'ig-o-ki'me-ah) [δύλιγος few + χυμός juice]. Deficiency of chyme.
- oligo cystic** (ol'ig-o-sis'tik) [δύλιγος few + κύστις cyst]. Containing only a few cysts.
- oligocythemias** (ol'ig-o-si-them'ik). Relating to or affected with oligocythemia.

oligocytosis (ol'ig-o-si-to'sis). Same as *oligocythemia*.

oligodactylia (ol'ig-o-dak-til'e-ah) [ὀλίγος few + δάκτυλος digit]. A condition in which the fingers or toes are congenitally fewer than is normal.

oligodendria (ol'ig-o-den'dre-ah). Oligodendrogliia.

oligodendroglia (ol'ig-o-den-drog'le-ah) [ὀλίγος few + δένδρον dendron + νευρογλία]. Non-neural cells of ectodermal origin forming part of the adventitious structure of the central nervous system. Their vine-like prolongations form an incomplete investment for the myelin sheaths in the white matter, and with microglia they form the perineuronal satellites in the gray matter. Called also *mesoglia*.

oligodendrogloma (ol'ig-o-den-drog-le-o'mah). A tumor made up of oligodendroglia.

oligodipsia (ol'ig-o-dip'se-ah) [ὀλίγος few + δίψα thirst]. Abnormal absence of thirst.

oligodynamic (ol'ig-o-di-nam'ik) [ὀλίγος few + δύναμις power]. Active in very minute quantities.

oligo-erythrocythemia (ol'ig-o-er'ith-ro-si-the'-me-ah) [ὀλίγος few + ἐρυθρός red + κύτος cell + αἷμα blood]. Deficiency of coloring matter in the red blood corpuscles; also deficiency of red blood corpuscles.

oligogalactia (ol'ig-o-gal-ak'she-ah) [ὀλίγος few + γάλα milk]. Deficient secretion of milk.

oligogenics (ol'ig-o-jen'iks) [ὀλίγος few + γεννᾶν to produce]. Limitation of the number of offspring; birth control.

oligoglobulia (ol'ig-o-glo-bu'le-ah). Same as *oligocythemia*.

oligohemia (ol'ig-o-he'-me-ah). Same as *oligemia*.

oligohydramnios (ol'ig-o-hi-dram'ne-os) [ὀλίγος few + ὕδωρ water + ἀμνιον amnion]. Scantiness of the liquor amni.

oligohydruria (ol'ig-o-hi-dru're-ah) [ὀλίγος few + ὕδωρ water + οὖρον urine]. Abnormally high concentration of the urine.

oligolecithal (ol'ig-o-les'ith-al) [ὀλίγος few + λεῖκος yolk]. Possessing only a little yolk; the human ovum is oligolecithal.

oligoleukocythemia (ol'ig-o-lu'ko-si-the'-me-ah) [ὀλίγος little + λευκocyte + αἷμα blood]. Same as *leukopenia*.

oligoleukocytosis (ol'ig-o-lu'ko-si-to'sis). Same as *leukopenia*.

oligomania (ol'ig-o-ma'ne-ah) [ὀλίγος few + μανία madness]. Insanity on a few subjects; impairment of a few of the mental faculties.

oligomastigata (ol'ig-o-mas'tig-at) [ὀλίγος few + μάστιξ lash]. Having only two flagella.

oligomenorrhea (ol'ig-o-men-or'e-ah) [ὀλίγος few + μήν month + ροία flow]. Scantiness of the menstrual discharge.

oligomorphic (ol'ig-o-mor'fik) [ὀλίγος few + μορφή form]. Passing through only a few forms of growth: said of micro-organisms.

oligonerospermia (ol'ig-o-nek-ro-sper'me-ah) [ὀλίγος few + νεκρός dead + σπέρμα sperm]. A condition of the spermatid fluid in which there is diminution of the number of spermatozoa, some of which are dead.

oligonitrophilic, oligonitrophilous (ol'ig-o-ni-tro-fil'ik, ol'ig-o-ni-tro-fil'us) [ὀλίγος few + νίτροgen + φιλεῖν to love]. A term describing organisms that absorb nitrogen from the air and from media containing combined nitrogen.

oligopepsia (ol'ig-o-pep'se-ah) [ὀλίγος little + πέψις digestion]. Feeble digestion.

oligophosphaturia (ol'ig-o-fos-fat-u're-ah). Deficiency in the excretion of phosphates by the urine.

oligophrenia (ol'ig-o-fre'ne-ah) [ὀλίγος scanty + φρήν mind]. Defective mental development.

oligoplasmia (ol'ig-o-plaz'me-ah) [ὀλίγος scanty + πλάσμα thing formed]. A deficient quantity of plasma in the blood.

oligoplastic (ol'ig-o-plas'tik) [ὀλίγος scanty + πλάσμα]. Deficient in plasma.

oligopnea, oligopnoea (ol'ig-op-ne'ah) [ὀλίγος few + πνοία breath]. Retarded breathing.

oligoposy (ol-ig-o'-op-se) [ὀλίγος scanty + πόσις drink]. The disordered state resulting from too little drinking of fluids.

oligopsychia (ol'ig-o-si'ke-ah) [ὀλίγος few + ψυχή mind]. Mental weakness.

oligoptyalism (ol'ig-o-ti'al-izm) [ὀλίγος few + πτύαλον saliva]. Diminished secretion of saliva.

oliguria (ol-ig-o're-ah) [ὀλιγורία apathy]. A form of melancholia (Snell).

oligosialia (ol'ig-o-si-a'-le-ah) [ὀλίγος few + σίαλον saliva]. Pathologically diminished secretion of saliva.

oligospermatism (ol'ig-o-sper'mat-izm). Same as *oligospermia*.

oligospermia (ol'ig-o-sper'me-ah) [ὀλίγος scanty + σπέρμα seed]. Scantiness of the seminal secretion, or paucity of spermatozoa in the semen.

oligosporidia (ol'ig-o-spo-rid'e-ah). A suborder of protozoan micro-organisms, or coccidia, forming spores which divide, each one producing several sickle-shaped reproductive bodies. Some are pathogenic.

oligotrichia (ol'ig-o-trik'e-ah) [ὀλίγος scanty + τρίξ hair]. Congenital thinness of the growth of hair.

oligotrichosis (ol'ig-o-trik-o'sis). Oligotrichia.

oligotrophy (ol-ig-o't-ro-fe) [ὀλίγος deficient + τροφή nourishment]. Insufficient nutrition.

oligozoospermatism, oligozoospermia (ol'ig-o-zo-o-sper'mat-izm, ol'ig-o-zo-o-sper'me-ah) [ὀλίγος few + ζῶον animal + σπέρμα seed]. A deficient supply of spermatozoa in the semen.

oliguresis, oliguria (ol'ig-u-re'sis, ol-ig-u're-ah) [ὀλίγος scanty + οὖρον urine]. Deficient secretion of the urine; abnormally diminished frequency of micturition.

olikaguria (ol'ik-ag-u're-ah) [ὀλικ- infrequent + οὖρον urine]. A condition in which urination occurs at very long intervals.

olintal (o'-lin-tal). A liquid soap containing 2.8 per cent of myrrh, 0.5 per cent of camphor, and 0.5 per cent of menthol: used locally in diphtheria.

oliophen (o-li'o-fen). An antigonorrheal solution of phenyl salicylate and linseed oil in olive oil. Dose, 30 minims (2 cc.).

olive (o-li'vah) [L. "olive"] [B N A]. The olivary body. See *body*.

olivary (ol'iv-a-re) [L. *oliva'rius*]. Shaped like an olive. **o. bodies**. See under *body*.

olive (ol'iv) [L. *olī'va*]. 1. The tree *Olea europaea*; also its fruit. The latter affords a fixed oil (*olive oil, sweet oil*), which consists chiefly of olein and palmitin, and is employed as a food, as a mild laxative, and as an application to wounds, bruises, etc. 2. Any olive-shaped body, especially the olivary body. See *body*. **inferior o.**, the inferior olivary body. **spurge o.**, mezereon. **superior o.**, the superior olivary body.

olivenol-iodate (ol-iv-e'-nol-i'o-dāt). A compound of iodine with olive oil containing 7.6 per cent of iodine: used in asthma, bronchitis, and subcutaneously in syphilis.

Oliver's sign (ol'iv-erz) [Sir Thomas Oliver, English physician, born 1853]. See under *sign*.

Oliver's test [George Oliver, English physician, 1841-1915]. See under *tests*.

Oliver-Cardarelli sign (ol'iv-er-kar-dar-el'e). See under *sign*.

olivifugal (ol-iv-if'u-gal) [*olive* + L. *fugere* to flee]. Moving from or going away from the oliva.

- olivipetal** (ol-iv-ip-et'al) [*olive* + *L. pē'tere* to seek]. Passing or conducting toward the oliva.
- Ollier's disease** (ol-e-āz') [Léopold Louis Xavier Edouard Ollier, a French surgeon, 1830-1901]. Achondroplasia.
- Ol. lini s. i.** Abbreviation for *L. oleum li'ni si'ne igne*, cold-drawn linseed oil.
- Ol. oliv.** Abbreviation for *L. oleum oli'vae*, olive oil.
- olophonia** (ol-o-fō-ne-ah) [δολος ill + φωνή voice]. Defective speech due to malformed vocal organs.
- O. L. P.** An abbreviation for *L. occipito laevo posterior*, or the left occipitoposterior position of the fetal head in labor.
- Ol. res.** Abbreviation for *oleoresin*.
- Olshausen's method, operation** (ols'how-zenz) [Robert von Olshausen, obstetrician in Berlin, 1835-1915]. See under *method* and *operation*.
- O. m.** Abbreviation for *L. om'ni ma'ne*, every morning.
- oma** [-ωμα]. A Greek suffix or termination implying a morbid condition, especially a tumor, of the part indicated by the word to which it is attached.
- omacephalus** (o-mas-ef'al-us) [ὤμος shoulder + κεφαλή head]. A monster fetus with deficient head and no upper extremities.
- omagra** (o-ma'grah, o-mag-rah) [ὤμος shoulder + ἄγρα seizure]. Gout in the shoulder.
- omal** (o'mal). Trichlorophenol, OH.C₆H₂.Cl₃; a colorless, crystalline derivative of phenol and chlorine: used by inhalation in diseases of the air passages, and in 5 to 10 per cent ointment.
- omalgia** (o-mal'je-ah) [ὤμος shoulder + ἄλγος pain]. Pain in the shoulder.
- omarthrits** (o-mar-thri'tis) [ὤμος shoulder + ἄρθρον joint + -itis inflammation]. Inflammation of the shoulder joint.
- omasitis** (o-ma-si'tis). Inflammation of the omasum.
- omasum** (o-ma'sum). The third division of the stomach of ruminant animals. Called also *manifold* *manipules* and *psalterium*.
- omatidium** (o-mat-id'e-um). One of the elongated units of a compound eye of an arthropod.
- ombrophobia** (om-bro-fō-be-ah) [ὄμβρος rain + φόβος fear]. Fear of rain.
- ombrophore** (om'bro-fōr) [ὄμβρος rain + φόρος bearer]. An apparatus for applying a douche bath of water containing carbon dioxide.
- omega melanchoilium** (o'me-gah mel-an-ko'le-um). A folding of the skin between the eyebrows like the Greek letter omega (ω); a sign of melancholia.
- omeire** (o-mi're). A native drink of southwest Africa, made by permitting milk to ferment.
- omental** (o-men'tal). Pertaining to the omentum.
- omentectomy** (o-men-tek'to-me) [omentum + ἐκτομή excision]. Excision of a portion of the omentum.
- omentitis** (o-men-ti'tis). Inflammation of the omentum.
- omentofixation** (o-men'tō-fiks-a'shun). Same as *omentopexy*.
- omentopexy** (o-men'to-peks-e) [omentum + πήξις fixation]. The operation of suturing the omentum to the abdominal wall, securing anastomotic communication between the portal system and that of the vena cava.
- omentoplasty** (o-men'to-plas-te) [omentum + πλάσσειν to form]. The use of omental grafts.
- omentorhaphy** (o-men-tor'af-e) [omentum + ραφή suture]. The operation of suturing the omentum.
- omentosplenopexy** (o-men-to-sple'no-peks-e). Combined omentopexy and splenopexy.
- omentotomy** (o-men-tot'o-me) [omentum + τομή cut]. Incision of the omentum.
- omentovolvulus** (o-men-to-vol'vu-lus). Volvulus of the omentum.
- omentulum** (o-men'tu-lum). The lesser omentum.
- omentum** (o-men'tum) [L.]. A reduplication of the peritoneum going from the stomach to the adjacent organs. **gastrocolic o.**, **great o.**, a fold of omentum connected with the great curvature of the stomach and enfolding the transverse colon. **gastrohepatic o.**, **lesser o.**, the omental fold joining the lesser curvature of the stomach to the transverse fissure of the liver. **gastrosplenic o.**, a fold of peritoneum which connects the spleen with the stomach. **Haller's colic o.**, a process from the greater omentum, which sometimes in fetal life becomes attached to the testis, and may be included in an inguinal hernia. **o. ma'jus** [B N A], the great omentum. **o. mi'nus** [B N A], the lesser omentum. **pancreaticosplenic o.**, the peritoneum connecting the tail of the pancreas with the inner surface of the spleen.
- omitis** (o-mi'tis) [ὤμος shoulder + -itis inflammation]. Inflammation of the shoulder.
- Omn. bih.** Abbreviation for *L. om'ni biho'ra*, every two hours.
- Omn. hor.** Abbreviation for *L. om'ni ho'ra*, every hour.
- omnadin** (om'nad-in) [L. *om'nis* all + ὀδὴν gland]. A proprietary mixture of partial antigens containing the metabolic products of various bacteria, lipoids from bile, and neutral fats. On injection it is supposed to nonspecifically increase the production of any or all antibodies.
- omnivit** (om'niv-it). A proprietary vitamin preparation.
- omnivorous** (om-niv'o-rus) [L. *om'nis* all + *vora're* to eat]. Subsisting upon food of every kind.
- Omn. noct.** Abbreviation for *L. om'ni noc'te*, every night.
- omnopon** (om'no-pon) [L. *om'nis* all + ὀπίum]. Pantopon.
- omo-** [ὤμος shoulder]. A prefix denoting some relation to the shoulder.
- omocephalus** (o-mo-sef'al-us) [ὤμος shoulder + κεφαλή head]. A fetus with no arms and an incomplete head.
- omoclavicular** (o'mo-klav-ik'u-lar). Pertaining to the shoulder and the clavicle.
- omodynia** (o-mo-din'e-ah) [ὤμος shoulder + ὀδὴν pain]. Pain in the shoulder.
- omohyoid** (o-mo-hi'oid). Pertaining to the shoulder and the hyoid bone. See *muscles*, table of.
- omophagia** (o-mo-fa'je-ah) [ὤμός raw + φαγεῖν to eat]. The eating of raw food.
- omorol** (o'mo-rol). An organic silver preparation for local application in diphtheria.
- omosternum** (o-mo-ster'num). The interarticular cartilage at the joint between the sternum and clavicle.
- omphalectomy** (om-fal-ek'to-me) [ὄμφαλός navel + ἐκτομή excision]. Excision of the navel.
- omphalelcosis** (om'fal-el-ko'sis) [ὄμφαλός navel + ἔλκωσις ulceration]. Ulceration of the umbilicus.
- Omphalia** (om-fa'le-ah). See *tambor oil*, under *oil*.
- omphalic** (om-fal'ik) [ὄμφαλός]. Pertaining to the umbilicus.
- omphalitis** (om-fal-i'tis) [ὄμφαλός navel + -itis inflammation]. Inflammation of the navel.
- omphalo-angiopagous** (om'fal-o-an-je-op-ag-us) [ὄμφαλός navel + ἄγγειον vessel + παγός fixed]. Joined by the vessels of the umbilical cords: said of enzygotic twins.
- omphalocele** (om-fal-o-sēl) [ὄμφαλός navel + κήλη hernia]. An umbilical hernia.
- omphalochorion** (om'fal-o-ko're-on). The structure in the embryo formed by fusion of the yolk sac with the chorion.

omphalogenesis (om-fal-o-jen'es-is) [ὀμφαλός navel + γενεῖς formation]. Development of the umbilicus in the embryo.

omphaloma (om-fal-o'mah) [ὀμφαλός navel + -μα tumor]. A tumor of the umbilicus.

omphalomesaraic (om'fal-o-mes-ar-a'ik). Same as *omphalomesenteric*.

omphalomesenter (om'fal-o-mes-en-ter'ik). Pertaining to the navel and mesentery.

omphalocus (om-fal-ong'kus) [ὀμφαλός navel + ὄγκος tumor]. A tumor or swelling of the umbilicus.

omphalopagus (om-fal-op'ag-us) [ὀμφαλός navel + πηγύναι make fast]. Same as *monomphalus*.

omphalophlebitis (om'fal-o-fle-bi'tis) [ὀμφαλός navel + φλέψ vein]. 1. Inflammation of the umbilical veins. 2. Navel ail; a condition of markedly suppurative lesions in young animals, due to infection through the umbilicus.

omphalorrhagia (om'fal-o-ra'je-ah) [ὀμφαλός navel + ῥήγνυμι to burst forth]. Hemorrhage from the umbilicus.

omphalorrhoea (om'fal-o-re'ah) [ὀμφαλός navel + ῥοία flow]. An effusion of lymph at the navel.

omphalorrhexis (om'fal-o-reks'is) [ὀμφαλός navel + ῥήξις rupture]. Rupture of the umbilicus.

omphalosite (om'fal-o-sit) [ὀμφαλός navel + σίτος food]. A monster fetus with no heart and which dies when the navel string is cut.

omphalosotor (om-fal-o-so'tor) [ὀμφαλός navel + σωτήρ preserver]. An instrument for replacing the prolapsed umbilical cord in childbirth.

omphalospinous (om'fal-o-spi'nus) [ὀμφαλός navel + σπῖνος]. Pertaining to the umbilicus and the anterior spine of the ilium.

omphalotomy (om-fat-ot'o-me) [ὀμφαλός navel + τέμνειν to cut]. The cutting of the navel string.

omphalotribe (om-fal'o-trib). An instrument for crushing the umbilical cord.

omphalotripsy (om-fal-o-trip'se) [ὀμφαλός navel + τρίβειν to crush]. The separation of the navel string by a crushing operation.

omphalus (om'fal-us) [Gr.]. The navel or umbilicus.

Om. quar. hor. Abbreviation for L. *om'ni quadran'te ho'ra*, every quarter of an hour.

omunono (om-u-no'no). A native name for frambesia.

O. n. Abbreviation for L. *om'ni nocte*, every night.

onanism (o'n-an-izm) [*Onan* son of Judah]. Masturbation; more correctly, withdrawal of the penis before the completion of the sexual act.

Onanoff's reflex or sign (on-ah'nofs) [Jacques Onanoff, French physician, born 1859]. See *reflex*.

onaye (o-nah'ye). An exceedingly virulent poison from the seeds of *Strophanthus hispidus*.

Onchocerca (ong-ko-ser'kah) [ὄγκος tumor + κέρκος tail]. A genus of filariform worms. **O. coecutiens**, a species that causes subcutaneous nodules on the heads of natives in Guatemala. The disease is known locally as coast erysipelas. **O. gibso'ni** infests the subcutaneous tissues of cattle, producing nodular swellings on the flanks, knees, and shoulders. **O. volvulus**, a species widely distributed in western and central Africa; transmitted by *Glossina palpalis* and by *Simulium demnosum*. It causes subcutaneous fibrous tumors. It is also found in elephantiasis in the Congo.

onchocerciasis (ong'ko-ser-ki'as-is). The condition produced by infection with *Onchocerca*.

Oncocerca (ong-ko-ser'kah). *Onchocerca*.

oncogenous (on-koi'en-us) [ὄγκος tumor + γενν to produce]. Causing or tending to cause tumor formation.

oncograph (ong'ko-graf) [ὄγκος tumor + γράφειν to record]. A recording device attached to the oncometer.

oncography (ong-kog'raf-e). The graphic recording of the outlines of organs.

oncoides (ong-koi'déz) [ὄγκος tumor + εἶδος form]. Turgid swelling; intumescence.

oncology (ong-kol'o-je) [ὄγκος tumor + λόγος discourse]. The sum of knowledge concerning tumors.

oncolysis (ong-kol'is-is) [ὄγκος tumor + λύσις dissolution]. The lysis or destruction of cancer cells.

oncolytic (ong-ko-li'tik) [see *oncolysis*]. Destroying tumor cells.

oncoma (ong-ko'mah) [ὄγκωμα]. An ancient name for a tumor.

oncometer (ong-kom'et-er) [ὄγκος mass + μέτρον measure]. An instrument for measuring variations in the size of viscera.

oncometric (ong-ko-met'rik). Pertaining to the oncometer.

oncometry (ong-kom'et-er). The measurement of variations in the size of viscera.

oncosis (ong-ko'sis) [ὄγκος tumor]. The disease condition characterized by the development of tumors.

oncosphere, oncosphaera (ong'ko-sfēr, ong-ko-sfē'rah) [ὄγκος hook + σφαῖρα sphere]. The larva of the tapeworm in the spherical stage, enclosed in a thick ciliated membrane and armed with six hooks. It may be found in the feces.

oncothrips (ong-ko-thlip'sis) [ὄγκος tumor + θλίψις pressure]. Pressure caused by a tumor.

oncotic (ong-kot'ik). Pertaining to, or marked by, swelling.

oncotomy (ong-kot'o-me) [ὄγκος tumor + τέμνειν to cut]. The incision of a tumor, abscess, or swelling.

oncotropic (on-ko-trop'ik) [ὄγκος tumor + τροπή a turn]. Having a special affinity or attraction for tumor cells; called also *tumoraffin*.

ondometer (on-dom'et-er). An apparatus for measuring the frequency of the oscillations in high frequency currents.

102. See *huagol*.

oneiric, oniric (on-ir'ik) [ὄνειρος dream]. Pertaining to dreams.

oneirism, onirism (o-ni'rizm) [ὄνειρος dream]. A dreamlike waking hallucination; cerebral automatism, as in a dream prolonged into the waking state.

oneirodynia (o'ni-ro-din'e-ah) [ὄνειρος dream + ὀδύνη pain]. Nightmare.

oneirogmus (o-ni-rog'mus) [ὄνειρος sleep]. Emission of semen accompanying dreams.

oneirology (on-i-ro'l'o-je) [ὄνειρος dream + λόγος treatise]. The science of dreams.

oneiroscopy (o-ni-ros'ko-pe) [ὄνειρος dream + σκοπεῖν to examine]. Analysis of dreams for the purpose of diagnosing the patient's mental state.

one-two-three. A local anesthetic for dental use, containing 1 part oil of cassia, 2 parts carbolic acid, 3 parts oil of wintergreen.

oniomania (o'ne-o-ma'ne-ah) [ὄνιος for sale + μανία madness]. An insane desire to make purchases.

onion (un'yun) [L. *u'nio*; *ce'pa*]. The plant *Allium ce'pa* and its edible bulb. It is expectorant, diuretic, and stimulant, and the syrup is used in bronchitis in doses of 1 fluidrachm (4 cc.).

Oniscus asellus (o-nis'kus). The sowbug, an insect-like isopod found in cellars, etc.: diuretic and stimulant. It is principally used in homeopathic practice.

onkinocele (on-kin'o-sēl) [ὄγκος swelling + ἴς fiber + κήλη tumor]. A swollen condition of a tendon sheath.

onobaio (o-no-ba'yo). A powerful arrow poison from Obok, in Africa. It has a depressant action on the heart.

onomatology (on-o-mat-ol'-o-je) [ὄνομα name + λόγος treatise]. The science of names and nomenclature.

onomatomania (on-o-mat-o-ma'ne-ah) [ὄνομα name + μανία madness]. Mental derangement with regard to words or names, marked by persistent dwelling on some particular word, by perplexed effort to recall some word, by attaching some special significance to certain words, or by showing disgust for certain words (Charcot and Magnan, 1885).

onomatophobia (on-o-mat-o-fo'be-ah) [ὄνομα name + φόβος fear]. Morbid dread of hearing a certain name or word.

onomatopoeisis (on-o-mat'-o-poi-e'-sis) [ὄνομα name + ποιέω to make]. The formation of meaningless words by the insane.

ononin (o-no'nin). A glucoside, $C_{30}H_{54}O_{13}$, from the root of *Ono'nis spinosa*.

Ononis spino'sa (o-no'nis). A leguminous plant of Europe. It is diuretic: used mainly in homeopathic practice.

onotoxin (on-o-tok'sin). A proprietary remedy for gonorrhea.

ontogenesis, ontogeny (on-to-jen'es-is, on-toj'en-e) [ὄν existing + γενῶν to beget]. The evolution or developmental history of the individual organism. Cf. *phylogeny*.

ontogenetic, ontogenic (on'to-jen-et'ik, on-to-jen'ik). Pertaining to ontogenesis.

onyalai, onyalia (o-ne-al'a-e, o-ne-a'le-ah). A disease occurring among the blacks of Portuguese West Africa, and marked by the formation, on the palatal and buccal mucous membrane, of blebs containing semicoagulated blood and without signs of constitutional disorder.

onychatrophia, onychatrophly (o'nik-at-ro'-fe-ah, o-nik-at-ro-fe) [ὄνυξ nail + α priv. + τροφή food]. Atrophy of a nail or of the nails.

onychauxis (o-nik-awks'is) [ὄνυξ nail + αἰξω to increase]. Overgrowth of the nails.

onychexallaxis (on-ik-ex-al-ax'is). Degeneration of the nails.

onychias (o-nik'e-ah) [ὄνυξ nail]. Inflammation of the matrix of the nail resulting in loss of the nail. See *paronychia*. **o. latera'lis**, paronychia. **o. malig'na**, onychia with fetid ulceration and loss of the nail. **o. parasit'ica**, onychomycosis. **o. periungua'lis**, paronychia. **o. sic'ca**, syphilitic inflammation of the nail matrix in which the nail becomes thick and brittle.

onychitis (o-nik-i'tis) [ὄνυξ nail + -itis inflammation]. Inflammation of the matrix of a nail.

onychoclasia (on-ik-ok'las-is) [ὄνυξ nail + κλάω breaking]. Breaking of the nail.

onychocryptosis (on'ik-o-krip-to'sis) [ὄνυξ nail + κρύπτω to conceal]. Ingrowing toe-nail.

onychogram (o-nik'o'-gram). A tracing made by the onychograph.

onychograph (o-nik'o'-graf) [ὄνυξ nail + γράφω to write]. An instrument for observing and recording the nail pulse and capillary circulation.

onychogryphosis (on'ik-o-grif-o'sis). Onychogryposis.

onychogryposis (on'ik-o-gri-po'sis) [ὄνυξ nail + γρύπτω bending]. A hooked or incurved state of the nails.

onychohelcosis (on'ik-o-hel-ko'sis) [ὄνυξ nail + ἔλκος ulceration]. Ulceration of the nail.

onychoid (on'ik-oid) [ὄνυξ nail + εἶδος form]. Resembling a finger-nail.

onycholysis (o-nik-ol'is-is) [ὄνυξ nail + λύω loosening]. Loosening of the nails.

onychoma (o-nik-o'mah) [ὄνυξ nail + ὤμα tumor]. A tumor of the nail or nail bed.

onychomadesis (on'ik-o-mad-e'sis). Onychop-tosis.

onychomalacia (on'ik-o-ma-la'se-ah) [ὄνυξ nail + μαλακία softness]. Softening of the finger-nail.

onychomycosis (on'ik-o-mi-ko'sis) [ὄνυξ nail + μύκωσις fungus]. A disease of the nails due to the presence of the ringworm or the favus fungus. The nails become opaque, white, thickened, soft, and brittle. Called also *o. favo'sa*. **o. favo'sa**, that due to the favus fungus. **o. tonsu'rans**, a disease produced by the growth of *Trichoph'ylon* in the nails. **o. trichophyti'na**, that due to the fungus of ringworm.

onychonusus (o-nik-on'-o-sus) [ὄνυξ nail + νόσος disease]. Disease of the nails.

onychopathic (on-ik-o-path'ik). Pertaining to onychopathy or any disease of the nails.

onychopathology (on'ik-o-path-ol'-o-je) [ὄνυξ nail + παθολογία]. The pathology of diseases of the nails.

onychopathy (o-nik-op'ath-e) [ὄνυξ nail + πάθος disease]. Disease of the nails.

onychophagist (o-nik-of-a-jist). One who habitually bites the finger-nails.

onychophagy (o-nik-of-a-je) [ὄνυξ nail + φαγέω to eat]. The morbid habit of eating or biting the nails.

onychophosis (on'ik-o-fo'sis) [ὄνυξ nail]. A horny growth beneath the toe-nails.

onychophyma (on'ik-o-fi'mah) [ὄνυξ nail + φύμα growth]. Thickening or enlargement of the nail.

onychoptosis (on'ik-op-to'sis) [ὄνυξ nail + πῶσις falling]. Falling off of the nails.

onychorrhexis (on'ik-o-reks'is). Spontaneous splitting of the nail.

onychosis (on-ik-o'sis) [ὄνυξ nail]. Disease or deformity of a nail or of the nails.

onychotrophy (on-ik-o't-ro-fe) [ὄνυξ nail + τροφή nutrition]. Nutrition of the nails.

onym (on'im) [ὄνυμα name]. A technical name or term.

onyx (o'niks) [ὄνυξ nail]. 1. A nail of a finger or toe. 2. A variety of hypopyon.

onyxis (o-niks'is) [ὄνυξ nail]. Ingrowing nail.

onyxitis (o-niks-i'tis) [ὄνυξ nail + -itis inflammation]. Same as *onychitis*.

ooblast (o'o-blast) [ὄβον egg + βλαστός germ]. The cell whence the ovum is developed.

oocenter (o'o-sen-ter). Ovocenter.

oocinesia (o'o-sin-e'ze-ah). Same as *ookinesis*.

oocinete (o-o-sin'et). Same as *ookinete*.

oocyanin (o-o-si'an-in) [ὄβον egg + κύανος blue]. A bluish coloring matter from birds' eggs.

oocyesis (o'o-si-e'sis) [ὄβον egg + κίσις pregnancy]. Ovarian pregnancy.

oocyst (o'o-sist) [ὄβον egg + κύστις bladder]. The tough membrane surrounding a sporont after the union of the gametes; also the protozoan individual in this stage of development.

oocytase (o-o-si'tas). A cytase or enzyme having a destructive effect on ovarian cells.

oocyte (o'o-sit) [ὄβον egg + κύτος cell]. The original cell of the ovarian egg before the formation of the polar bodies. The oocyte splits up into the first polar body and the secondary oocyte, the latter dividing to form the second polar body and the mature egg.

oocytin (o-o-si'tin). A substance obtained from spermatozoa, leukocytes, and red blood cells which will cause the formation of fertilization membranes in ova.

oodeocele (o-o'de-o-sēl) [ὄοδης egg shaped + κήλη hernia]. Obturator hernia.

oogenesis (o-o-jen'is-is) [ὄβον egg + γένεσις production]. The origin and development of the ovum; meiosis in the female.

oogonium (o-o-go'-ne-um) [ὄον egg + γονή generation]. 1. The primordial cell from which the ovarian egg arises. 2. Any one of the elements derived from the germ cell which give rise to the oocytes.

ookinesis (o'o'-kin-e'-sis) [ὄον egg + κίνησις motion]. The mitotic movements of the egg during maturation and fertilization.

ookinete (o-o-kin-ét) [see *ookinesis*]. The motile free stage of the malarial parasite (zygote) in the mosquito during which it penetrates the wall of the gut and becomes the oocyst.

oolemma (o-o-lem-ah) [ὄον egg + λέμμα sheath]. The limiting membrane of the ovum; the zona pellucida.

oophoralgia (o'o'-of-or-al'-je-ah) [ὄον egg + φέρειν to bear + ἄλγος pain]. Pain in an ovary.

oophoraphy (o-o'-of-or-af-e) [oophororrhaphy]. Anchoring of a prolapsed ovary by suturing its hilus to the relaxed infundibulopelvic ligaments (Imlach-Tait, 1885).

oophorauxie (o'o'-for-awks'e) [oophoron + αὐξή increase]. Enlargement of the ovary.

oophorectomy (o'o'-of-or-ek'-to-me) [ὄον egg + φέρειν to bear + ἐκτομή excision]. The surgical removal of an ovary.

oophorin (o-o'-of-o-rin). A therapeutical preparation of the fresh ovaries of cows and swine. Dose, 5 grains (0.3 Gm.).

oophoritis (o'o'-of-o-ri'tis) [ὄον egg + φέρειν to bear + -ιτις inflammation]. Inflammation of an ovary. **o. sero'sa**, edema of the ovary.

oophorocystosis (o-o'-of-o-ro-sis-to'sis) [ὄον egg + φέρειν to bear + κύστις cyst]. The formation of an ovarian cyst.

oophoro-epilepsy (o-o'-of-o-ro-ep'il-ep-se) [oophoron + ἐpilepsy]. Epilepsy due to ovarian disease.

oophorohysterectomy (o-o'-of-o-ro-his-ter-ek'-to-me) [ὄον egg + φέρειν to bear + ὀστέρα womb + ἐκτομή excision]. Surgical removal of the uterus and ovaries.

oophoroma (o'o'-of-or-o-mah). A malignant tumor of the ovary.

oophoromalacia (o-o'-of-or-o-mal-a-se-ah) [ὄον egg + φέρειν to bear + μαλακία softness]. The morbid softening of an ovary.

oophoromania (o-o'-of-or-o-ma-ne-ah) [ὄον egg + φέρειν to bear + μανία madness]. Insanity due to ovarian disorder.

oophoron (o-o'-of-o-ron) [ὄον egg + φέρειν to bear]. An ovary.

oophoropeliopexy (o-o'-of-o-ro-pe'le-o-pek-se) [L. oophoron + πηλός pelvis + πήξις fixation]. Same as *adnexopexy*.

oophoropexy (o-o'-of-o-ro-pek-se). Same as *adnexopexy*.

oophororrhaphy (o-o'-of-or-or-af-e) [ὄον egg + φέρειν to bear + ραφή suture]. The stitching of an ovary to the pelvic wall.

oophorosalingectomy (o-o'-of-or-o-sal-pin-jek'-to-me) [ὄον egg + φέρειν to bear + σάλπιγγξ tube + ἐκτομή excision]. Surgical removal of an ovary and oviduct.

oophorostomy (o-o-fo-ro-s-to-me) [ὄον egg + φέρειν to bear + στόμα mouth]. The making of an opening into an ovarian cyst for drainage purposes.

oophorotomy (o'o'-fo-rot'-o-me) [oophoron + τομή cutting]. The operation of splitting the ovary.

ooplasm (o'o-plazm). The cytoplasm of the egg.

oorhodein (o-o-ro'-de-in) [ὄον egg + ῥόδον red]. A red coloring matter from birds' eggs.

oosome (o'o-sōm) [ὄον egg + σόμα body]. A cytoplasmic body in the ovum which passes into the germ cells.

oosperm (o'os-perm) [ὄον egg + σπέρμα seed]. The recently fertilized ovum.

Oospora (o-os'-po-rah). A genus of fungi. **O. lac'tis**, a species found on the surface of milk, cheese, etc., and forming a white mold. **O. tozen'ri**, a species cultivated from black mycetozoma. It produces a brown or dark color in cultures and may be responsible for the black color of the lesions in man.

oosporangium (o'o-spo-ran'-je-um). The female element in the sexual formation of oospores.

oospore (o'o-spōr) [ὄον egg + spore]. A spore formed by the conjugation of two sexually differentiated elements.

oosporosis (o'o-spo-ro'sis). Infection by an oospore; e. g., in chronic bronchitis.

ootheca (o-o-the'kah) [ὀοθήκη ovary]. An ovary.

oothecalgia (o'o-the-kal'-je-ah). Ovarialgia.

ootheco- [ὀοθήκη ovary]. For words beginning thus see those beginning *ovario-*.

oothecocele (o'o-the'ko-sēl). Ovariocele.

oothectomy (o-o-thek'-to-me). Surgical excision of an ovary.

ootid (o'o-tid). One of four cells derived from the two consecutive divisions of the primary oocyte, and corresponding to the spermatids derived from division of the primary spermatocyte.

ootype (o'o-tip) [ὄον egg + τύπος impression]. In some trematodes, a dilated portion of the uterus into which the oviduct opens and where the ovum is fertilized, invested with the yolk and provided with a shell.

ooxanthine (o-o-zan'thin) [ὄον egg + ξανθός yellow]. A yellow pigment found in egg shells.

opacification (o'-pas-if-ik-a'shun). A growing opaque, as of the cornea or lens.

opacity (o-pas'-it-e) [L. *opac'itas*]. 1. The condition of being opaque. 2. An opaque spot or area.

opalescin (o-pal-es'in). An albuminoid derivable from milk: its solutions are opalescent.

opalgia (o-pal'-je-ah) [ὤψ face + ἄλγος pain]. Facial neuralgia.

opaline (o'pal-ēn) [L. *o'palus* opal]. Having the appearance of an opal.

opalinin (o-pal'-is-in). An opalescent protein, obtainable from human milk.

opaque, opake (o-pāk') [L. *opa'cus*]. Impervious to light rays, or by extension to roentgen rays of other electromagnetic vibrations; neither transparent nor translucent. **o. meal**. See under *meal*.

opeidoscope (o-pi'do-skōp) [ὤψ voice + εἶδος form + σκοπεῖν to view]. An apparatus for studying the vibrations of the voice by means of light reflected from a mirror.

open (o'pen). 1. Exposed to the air; attended with exposure to the air; not covered by unbroken skin. 2. So interrupted (as a circuit) that an electric current cannot pass.

open bite malocclusion. See under *malocclusion*.

opening (o'pen-ing). An aperture. **saphenous o.**, an oval opening in the fascia of the upper thigh, below Poupart's ligament, transmitting the internal saphenous vein. Called also *fossa ovalis*.

operable (op'er-ab-l). That can be operated upon with reasonable hope of improvement.

operaphone (op'er-af-ōn). A proprietary aid for impaired hearing.

operation (op-er-a'shun) [L. *opera'tio*]. 1. Any act performed with instruments or by the hands of a surgeon. 2. The specific effect of any drug. **Abbe's o.** 1. A lateral intestinal anastomosis made with rings of catgut. 2. Division of an esophageal stricture by string friction. 3. Intracranial resection of the second and third divisions of the fifth nerve for tic douloureux. **Abernethy's o.**, an operation for ligation of the external iliac artery, with a curved incision running from a point one inch within and above the ante-

rior superior spine to a point one and a half inches above and outside of the center of Poupart's ligament. **Adams' o.** 1. Subcutaneous intracapsular division of the neck of the femur for ankylosis of the hip. 2. Subcutaneous division of the palmar fascia at various points for Dupuytren's contraction. 3. Excision of a wedge-shaped piece from the eyelid for relief of ectropion. 4. Operation of crushing the projecting portion of a deflected nasal septum with forceps and inserting a splint. 5. Advancement of the round ligaments. **Affleck's o.**, rachiotomy followed by forcible podalic version. **Aitken's o.**, double pleviotomy for narrow pelvis. **Albee's o.** 1. Operation for ankylosis of the hip, consisting of cutting off the upper surface of the head of the femur and freshening a corresponding point on the acetabulum, and permitting the two freshened surfaces to rest in contact. 2. Transplantation of a portion of the tibia into the split spinous processes of the vertebrae for tuberculous spondylitis. **Albee-Delbet o.**, an operation for fracture of the neck of the femur, done by drilling a hole through the trochanter and the neck and head of the femur and inserting a bone peg in this hole. **Albert's o.**, excision of the knee to secure ankylosis for the cure of flail joint. **Alexander's o.** 1. The shortening of the round ligaments of the uterus for displacement of that organ. 2. Ligation of the vertebral arteries for the cure or relief of epilepsy. 3. Prostatectomy by median suprapubic and median perineal incisions. **Alexander-Adams o.** Same as *Alexander's o.* (1). **Allarton's o.**, median lithotomy. **Allingham's (H.) o.**, inguinal colotomy by an incision parallel with and one half inch above Poupart's ligament. **Allingham's (W.) o.**, excision of the rectum by an incision into the ischiofemoral fossae, about the rectum, and extending backward to the coccyx. **Alouette's o.** See *amputation*. **Alquié's o.**, **Alquié-Alexander o.**, extraperitoneal shortening of the round ligaments. **Ammon's o.** 1. Blepharoplasty by a flap from the cheek. 2. Dacryocystotomy. **Amussat's o.**, lumbar colotomy by an incision across the outer border of the quadratus lumborum. **Anagnostakis' o.**, an operation for entropion; also an operation for trichiasis. **Anderson's o.**, longitudinal splitting of a tendon followed by sliding along of the cut surfaces to produce lengthening of the tendon. **Andrews' o.** 1. An operation for inguinal hernia by the use of an imbricating or an overlapping suture. 2. An operation for hydrocele, including complete eversion of the lining without the use of stitches. **Anel's o.** 1. Ligation of an artery close to an aneurysm and on the cardiac side. 2. Dilatation of the lacrimal duct with a probe, followed by an astringent injection. **Annandale's o.** 1. The removal of the condyles of the femur for genu valgum. 2. The fixation of displaced cartilages of the knee joint by stitches. **Antyllus' o.**, the ligation of an artery on both sides of an aneurysm, followed by evacuation of the contents through an incision. **Apostoli's o.**, electrolysis of uterine fibroids by using a broad abdominal electrode and a pointed electrode which is thrust into the fibroid through the vaginal wall. **Appollito's o.**, enterorraphy by a right-angled continuous suture. **Arlt's o.**, any one of several operations on the eye and the eyelid. **Arlt-Jaesche o.**, the transplantation of the ciliary bulbs from the edge of the lid for the cure of distichiasis. **Armsby's o.**, an operation for inguinal hernia, consisting of invagination of the sac and the introduction of a single thread, as a seton, through the sac and the inguinal canal. **Asch's o.**, an operation for the correction of deflection of the nasal septum, consisting of making a crucial incision over the deflection, taking up the segments, reducing the deflection, and inserting a tube to keep the segments in place. **Baccelli's o.**, introduction of a wire thread into the sac of an aneurysm. **Badal's o.**, laceration of the infratrochlear nerve for the

pain of glaucoma. **Baker's o.**, removal of a transverse wedge from the posterior wall of the cervix uteri, done for the cure of ante flexion. **Baldwin's o.**, formation of an artificial vagina by transplantation of a piece of the ileum between the bladder and the rectum. **Baldy's o.**, **Baldy-Webster o.** Same as *Webster's o.* **Ball's o.** 1. Cure of inguinal hernia by an obliteration of the sac, which is partially dissected out and then twisted around its own axis; the fundus is then cut off and the stump made fast in the ring. 2. A special method of iliac colotomy by incision in the left linea semilunaris, the gut being secured by clamps above and below the site for the artificial anus until after suturing and opening the bowel. 3. Cutting of the sensory nerve trunks of the anus for the relief of pruritus ani. **Bardenheuer's o.**, ligation of the innominate artery by partial bony resection through transverse and vertical incisions. **Barker's o.** 1. An excision of the hip joint by an anterior cut. 2. A special method of excising the astragalus by an incision extending from just above the external malleolus forward and inward to the dorsum of the foot. **Barraquer's o.** See *phaco-erisis*. **Barton's o.**, an operation for ankylosis consisting of sawing through the bone and removing a V-shaped piece. **Barwell's o.**, a method of osteotomy for genu valgum by division of the upper end of the tibia below and the lower end of the tibia above their respective epiphyses. **Bassett's o.**, a method of dissecting the inguinal glands in operation for cancer of the vulva. **Bassini's o.**, a method for the radical cure of inguinal hernia. After twisting and removal of the sac, a layer is formed by stitching the edge of the rectus muscle to that of the internal oblique, and by fastening these to the transversalis muscle and its fascia and to Poupart's ligament. Over this pad the spermatic cord is placed, and then covered by the external oblique, which is stitched to Poupart's ligament. **Bates' o.**, the division of a urethral stricture from within outward by means of a special form of urethrotome. **Battey's o.**, normal ovariectomy, or the induction of the menopause by oophorectomy. **Battle's o.**, an appendix operation in which temporary displacement of the rectus is done. **Baudelocque's o.**, removal of the ovum in extra-uterine pregnancy by an incision through the posterior culdesac of the vagina. **Baum's o.**, the stretching of the facial nerve by an incision below the ear. **Baynton's o.**, application of adhesive straps and a bandage to indolent leg ulcers. **Beatson's o.**, ovariectomy in cases of inoperable cancer of the breast, on the theory that lack of the internal secretion of the ovary will produce atrophy of the tumor. **Beer's o.**, a flap method for cataract. **Belfield's o.**, vasotomy. **Belmas' o.**, introduction of gold-beaters' skin into the neck of an inguinal hernia. **Bennett's o.**, operation for varicocele by partial excision of the pampiniform plexus, followed by suture of the divided ends of the plexus. **Bent's o.**, a form of shoulder excision with flap taken from the deltoid region. **Bergenheim's o.**, an operation for implanting the ureter into the rectum. **Berger's o.**, interscapulothoracic amputation. **Best's o.**, subcutaneous suture of the abdominal ring for hernia. **Bevan's o.**, an operation for undescended testicle, by which the testicle is brought down permanently into the scrotum. **Beyea's o.**, gastroplication. **Bier's o.** See *Bier's amputation*, under *amputation*. **Bigelow's o.**, litholapaxy or rapid lithotomy. **Billroth's o.** 1. Pylorotomy performed through a transverse incision. 2. Pylorogastrostomy with anterior gastroenterostomy. 3. Excision of the tongue by making a transverse incision below the symphysis of the jaw and joining it by two incisions, one on each side, parallel to the body of the mandible, with preliminary ligation of the lingual arteries. **Bircher's o.**, suturing together a portion of the anterior and posterior walls of a dilated stomach in order to re-

duce its size. **Bischoff's o.**, complete excision of the pregnant uterus through the abdomen. **Bissell's o.**, excision of a section of the round and the broad ligaments for uterine retroversion. **Boari's o.**, transplantation of the vasa deferentia so that they will empty into the urethra. **Bobbs' o.**, cholecystotomy for the removal of gall stones. **Bobroff's o.** 1. An osteoplastic operation for spina bifida. 2. Excision of the lining membrane of a cyst of the liver, followed by closure of abdomen without drainage. **Bogue's o.**, multiple ligation of the veins with catgut in varicocele. **Böhm's o.**, tenotomy of an ocular muscle for strabismus. **Bonzel's o.**, iridodialysis performed with a hook inserted through a corneal incision. **Borthen's o.**, iridotomy. **Bose's o.**, a method of performing tracheotomy. **Bottini's o.**, the operation of making a channel through the prostate with the galvanocautery for the cure of prostatic enlargement. **Bouilly's o.**, excision of a part of the mucous membrane of the neck of the uterus, preserving the mucous membrane of the sides: done for atresia of the cervix. **Bozeman's o.**, hysterocystoceleisis. **Brailey's o.**, stretching of the supratrochlear nerve to relieve pain in glaucoma. **Braquehay's o.**, operation for vesicovaginal fistula by freshening and invaginating the mucous membrane of the vagina. **Brasdor's o.**, distal ligation for aneurysm. **Brewer's o.**, closure of wounds of arteries by application of a special rubber plaster. **Brophy o.**, an operation for cleft palate. **Bryant's o.**, lumbar colotomy by an oblique incision between the lowest rib and the crest of the ilium. **Buck's o.**, cuneiform excision of the patella and the ends of the tibia and fibula. **Burckhardt's o.**, incision into a retropharyngeal abscess from the outside of the neck. **(von) Burow's o.**, a plastic operation for removal of tumors without scars. **Buzzi's o.**, the creation of an artificial pupil by a needle passed through the cornea. **Caldwell-Luc o.**, the operation of opening into the antrum of Highmore by way of an incision into the supradental fossa opposite the second molar tooth. **Callisen's o.**, lumbar colotomy by a vertical incision. **Calot's o.**, forcible reduction of gibbus by stretching under narcosis. **capital o.**, one that involves a risk of life. **Carnochan's o.** 1. The ligation of a large artery for elephantiasis. 2. Removal of Meckel's ganglion and a considerable part of the fifth nerve for neuralgia; incision is made below the orbit, and the ganglion is reached by trephining through the maxillary antrum. **Carpue's o.**, the Indian method of rhinoplasty. **Carter's o.** 1. Formation of an artificial pupil by making a small opening in the cornea and doing an iridotomy. 2. Construction of an artificial bridge of the nose by transplanting a piece of bone from the rib. **Cassel's o.**, excision of exostoses of the ear through the external auditory meatus by means of a gouge. **celisian o.** 1. Perineal lithotomy. 2. Embryotomy by decapitation. 3. Excision of epithelioma of the lip by a V-shaped incision. 4. Circular amputation. **Chaput's o.**, an operation for artificial anus and for intestinal anastomosis. **Cheever's o.**, complete tonsillectomy through the neck. **Cheyne's o.**, a radical cure of femoral hernia by covering the orifice with a flap of the pectineus muscle. **Chiazzi's o.**, epiploxy. **Chiene's o.** 1. The removal of a wedge from the inner condyle of the femur for the cure of knock knee. 2. Exposure of the retropharyngeal space by lateral cervical incision along the posterior border of the sternocleidomastoid. **Chopart's o.** 1. See under *amputation*. 2. A plastic operation on the lip. **Civiale's o.** 1. Mediobilateral lithotomy. 2. Lithotripsy. **Clark's o.**, a plastic operation for urethral fistula. **Coakley's o.**, an operation for disease of the frontal sinus by incising through the cheek, removing the anterior wall, and curetting away the mucous membrane. **Cock's o.**, urethrotomy by a cut along

the median line of the perineum. **Codivilla's o.**, an operation for pseudarthrosis by surrounding the pseudarthrosis with thin osteoperiosteal plates taken from the internal face of the tibia. **o. of complaisance**, an operation which need not be done immediately. **Cooper's o.**, a method of tying the external iliac artery in a cut parallel with Poupart's ligament and 1 inch above it. **Corradi's o.** Same as *Moore-Corradi o.* **cosmetic o.**, one intended to effect the removal of a deformity. **Cotting's o.**, operation for ingrowing toe-nail, consisting in cutting off the side of the toe down to and including the ingrowing edge of the nail. **Credé's o.**, resection of the pelves, followed by hysterectomy. **Crile and Matas' o.**, production of regional anesthesia by intraneural infiltration. **Cripps' o.**, a method of colotomy in the iliac region. **Critchett's o.**, excision of the anterior part of the eyeball. **Cushing's o.** 1. Exposure of the gasserian ganglion and three divisions of the fifth nerve by the direct infra-arterial route. 2. A method of performing ureterorrhaphy without support. **Czerny's o.**, a method for the radical cure of inguinal hernia. The sac is cut away after tying its neck with catgut; the stump is thrust into the abdominal cavity, and the wound closed with catgut sutures. **Dallas' o.**, an operation for the obliteration of the canal of an inguinal or femoral hernia by the mechanical incitement of an inflammation. **Dana's o.**, resection of the posterior roots of the spinal nerves to relieve pain, athetosis, spastic paralysis, etc. **Davat's o.**, cure of varicocele by compressing the veins by acupressure. **Daviel's o.**, extraction of cataract through a corneal incision without cutting the iris. **Davies-Colley o.**, the removal of a wedge of bone from the outer side of the tarsus for the correction of talipes. **de Grandmont's o.**, an operation for ptosis of the lid. **Delorme's o.** Same as *Fowler's o.* **Delpech's o.**, ligation of the axillary artery between the pectoralis major and deltoid muscles. **Del Toro's o.**, the destruction of the apex of a conical cornea by a white-hot knife. **Denans' o.**, the joining of a divided intestine over metallic cylinders. **Denonvillier's o.**, plastic correction of a defective ala nasi by transferring a triangular flap from the side of the nose. **Dieffenbach's o.** 1. Amputation at the hip by a circular incision, with application of an elastic ligature, followed by removal of the ligature, securing of the vessels, and the making of an incision on the outer aspect from a point two inches above the great trochanter to the circular incision. 2. Plastic closure of triangular defects by displacing a quadrangular flap toward one side of the triangle. **Dittel's o.**, the enucleation of the lateral lobes of an enlarged prostate through an external incision. **Doléris' o.**, for retrodeviation of the uterus by shortening the round ligaments and fixing them on either side by an opening in the rectus muscle just above the spine of the ilium. **Doppler's o.**, injection of phenol into the tissues around the sympathetic nerve leading to the gonads with the object of increasing hormone production and producing sexual rejuvenation. Called also *sympathicodiaphoresis*. **Dowell's o.**, the radical cure of hernia by thrusting the fundus of the sac into its neck and suturing it there. **Doyen's o.**, eversion of the sac for the relief of hydrocele. **Dudley's o.** 1. A method of suturing a retroverted uterus to the round ligaments through an abdominal opening. 2. Posterior sagittal incision of the cervix for the relief of dysmenorrhea and sterility. **Dührssen's o.**, vaginofixation of the uterus. **Duplay's o.**, a designation for several plastic operations upon the congenitally deformed penis (epispadias and hypospadias). **Dupuytren's o.**, decapsulation of the kidney for Bright's disease. **Elliot's o.**, a method of trephining the sclerocornea for

the relief of increased tension in glaucoma. **Ely's o.**, skin grafting performed on the granulating surfaces in chronic suppurative otitis media. **Emmet's o.** 1. A method of repairing a lacerated perineum. 2. Trachelorrhaphy, or suture of the edges of a lacerated cervix uteri. 3. Artificially formed vesicovaginal fistula to secure drainage of the bladder in cystitis. **equilibrating o.**, tenotomy of the direct antagonist of a paralyzed eye muscle. **Estlander's o.**, the resection of one or more ribs in empyema so as to allow the chest wall to collapse and close the abnormal cavity. **Everbusch's o.**, an operation for ptosis. **Farabeuf's o.**, ischiopubiotomy. **Fehling's o.**, operation for prolapse of the uterus by uniting with silver wire the edges of two denuded ovals on each side of the median line of the anterior vaginal wall. **Fergusson's o.**, an operation for excising the maxilla. **Finney's o.**, a method of performing gastroduodenostomy. **Flajani's o.**, iridodialysis performed with a needle thrust through the cornea. **flap o.**, amputation with the formation of flaps which are rounded over the end of the stump. **Foerster's o.** 1. The operation of cutting intradurally the seventh, eighth, and ninth dorsal nerve roots on both sides in locomotor ataxia. 2. An operation to produce rapid artificial ripening of cataract (1884). **Fowler's o.**, decortication of the lung in empyema in order to allow the lung tissue to expand and fill the pleural space; pleurectomy. **Franco's o.**, suprapubic cystotomy. **Frank's o.**, a method of performing gastrotomy by forming a valve out of a cone of the stomach and suturing it to the incision in the chest wall and inserting a tube. **Frank's o.**, removal of the intercostal nerves for the visceral crises of tabes. **Fredet-Rammstedt o.**, the operation for congenital stenosis of the pylorus by incising the thickened serosa and muscularis down to the mucosa. **Freund's o.** 1. See *laparohysterectomy*. 2. Chondrotomy for congenital funnel breast. **Freyer's o.**, a method of performing suprapubic enucleation of the hypertrophied prostate. **Friedrich's o.**, pleuropneumonolysis. **Frommel's o.**, shortening of the uterosacral ligaments for retrodeviation. **Frost-Lang o.**, insertion of a gold ball to take the place of an enucleated eyeball. **Fukala's o.**, removal of the lens of the eye for marked myopia. **Galbaiti's o.**, ischiopubiotomy performed on both sides with a chain saw, the fetus being delivered with the forceps; employed in contracted pelvis. **Gant's o.**, a division of the shaft of the femur below the lesser trochanter for ankylosis of the hip joint. **Gersuny's o.**, an operation for incontinence of feces, done by loosening the rectum from its adhesions, twisting three fourths of a turn on its long axis, and then suturing it in place. The name is also applied to a similar operation on the female urethra for incontinence of urine. **Gifford's o.**, destruction of the lacrimal sac by instilling trichloroacetic acid into it. **Gigli's o.**, lateral section of the os pubis for difficult labor. **Gillespie's o.**, excision of the wrist by a lengthwise dorsal incision between the extensor communis and extensor medii digiti. **Gilliam's o.**, an operation for retroversion of the uterus by drawing a loop of each round ligament through the abdominal wall and fixing the loops to the abdominal fascia. **Gillies' o.**, operation for ectropion by forming the skin of the eyelids by an epithelial flap. **Goffe's o.**, an operation for vaginal cystocele. **Gottschalk's o.**, shortening of the uterosacral ligaments by the vaginal route. **Grant's o.**, excision of tumors of the lip by removing a square block of tissue containing the tumor, and then making oblique incisions extending down and out from each angle of the wound. The triangular flaps thus formed are drawn toward the center and sutured. **Gritti's o.** See under *amputation*. **Grossmann's o.**, treatment of retinal detachment by aspiration of the subretinal fluid and the slow injection of warm salt solution into the vitreous. **Gussenbauer's o.**, the cutting

of an esophageal stricture through an opening above the stricture. **Guyon's o.**, amputation of the foot by an elliptical incision just above the malleoli. **Hagner's o.**, drainage of gonorrheal epididymitis through an incision into the epididymis. **Hahn's o.** Same as *Loreta's o.* (1). **Halpin's o.**, extirpation of the lacrimal gland by a curved incision through the middle of the eyebrow. **Halsted's o.**, a modification of *Bassini's o.* **Hancock's o.** See under *amputation*. **Handy-side's o.**, ovariectomy in which the ligatures of the pedicle are carried into the vagina through Douglas' pouch. **Hartley-Krause o.**, excision of the gasserian ganglion and its roots to relieve facial neuralgia. **Haynes' o.**, the operation of draining the cysterna magna for acute suppurative meningitis. **Heath's o.**, division of the ascending rami of the lower jaw with a saw for ankylosis; performed within the mouth. **Heaton's o.**, an operation for inguinal hernia. **Hegar's o.**, perineorrhaphy by denuding a triangular area on the center of the posterior wall of the vagina and suturing from above downward. **Heine's o.**, cyclodialysis in glaucoma. **Heineke's o.**, operation for cancer of the rectum by a T-shaped incision. **Heineke-Mikulicz o.**, pyloroplasty; enlargement of the pyloric opening by an incision through its walls in a direction parallel to the long axis of the stomach, and closure of this by suture at right angles to the original incision. **Heisrath's o.**, excision of the tarsal folds for trachoma. **Herbert's o.**, displacement of a wedge-shaped flap of sclera in order to form a filtering cicatrix in glaucoma. **Hey's o.** See under *amputation*. **Hibbs' o.**, an operation for Pott's disease by fracturing the spinous processes of the vertebrae and pressing the tip of each downward to rest in the denuded area caused by the fracture of its fellow below. **Hochenegg's o.**, an operation for rectal cancer. **Hoffa-Lorenz o.** Same as *Lorenz's o.* **Holmes' o.**, a method of excising the os calcis by an incision along its upper border and at the outer border of the foot to the calcaneocuboid joint, and another across the sole, the peroneal tendons being divided. **Hotchkiss' o.**, operation for epithelioma of the cheek, with resection of part of the mandible and maxilla and plastic restoration of the defect from the tongue and side of the neck. **Huguier's o.**, right lateral or lumbar colotomy. **Hunter's o.**, ligation of an artery in the proximal side of an aneurysm and at a distance from it. **Indian o.**, the formation of an artificial nose by a flap from the forehead, with its pedicle at the root of the nose. **interval o.**, an operation performed during the interval between two attacks of a disease such as appendicitis. **Italian o.**, the formation of an artificial nose by a flap from the arm, to which it remains attached until union has taken place. Called also *tagliacottian o.* **Jaboulay's o.**, interpelviabdominal amputation. **Jansen's o.**, operation for disease of the frontal sinus by removing the lower wall and a part of the anterior wall and curetting away the mucous membrane. **Jarvis' o.**, removal of the hypertrophied portion of the lower turbinated bone with a special wire snare écraseur (W. C. Jarvis, 1880). **Jobert's o.**, autoplasmic closure of a vesicovaginal fistula. **Joly's o.**, a method of total hysterectomy for prolapse of the uterus. **Jonnesco's o.**, sympathectomy. **Kader's o.**, gastrotomy by which the feeding tube is introduced through a valvulike flap which closes on withdrawal of the tube. **Keegan's o.**, a modification of the Indian operation for forming an artificial nose: the flap is taken mainly from one side of the forehead. **Keen's o.**, omphalectomy. **Kehr's o.**, removal of the gallbladder and cystic duct with drainage of the hepatic duct. **Kehr's o.**, an operation for depressed nipple, consisting of excision of a piece of the surrounding skin so as to set up cicatricial contraction. **Key's o.**, the lateral operation for lithotomy done with a straight staff. **Killian's o.**, excision of the

anterior wall of the frontal sinus, removal of the diseased tissue, and formation of a permanent communication with the nose. **Kirmisson's o.**, transplantation of the Achilles tendon to the peroneus longus muscle in clubfoot. **Kirschner's o.**, treatment of hemorrhage from the spleen by suturing the rupture and covering it with omentum. **Knapp's o.**, for cataract, by a peripheral opening in the capsule behind the iris, without iridectomy. **Kocher's o.** 1. A method of excising the ankle joint by a cut below the outer malleolus, division of the peroneal tendons, removal of the diseased tissues, and suturation of the divided tendons. 2. A method of removing the thyroid gland by one median incision and two lateral ones, the latter being carried upward almost to the angle of the jaw. 3. A method of reducing a subcoracoid dislocation of the humerus. 4. Excision of the tongue through an incision extending from the symphysis of the jaw to the hyoid bone and thence to the mastoid process. **Kock's o.**, shortening of the base of the broad ligament by the vaginal route for uterine retroversion or prolapse. **Koerberle's o.** See *Olshausen's o.* **Kolomnin's o.**, cauterization of the diseased tissues in hip joint disease by ignipuncture. **Kondoleon o.**, treatment of elephantiasis by the removal of strips of subcutaneous tissue. **König's o.**, operation for congenital dislocation of hip by reducing the dislocation and forming an edge on the upper border of the acetabulum by an osteoperiosteal flap from the ilium. **Kortzeborn's o.**, an operation to relieve ape-hand due to median nerve paralysis. The extensor tendons of the thumb are lengthened and the thumb is tied to the ulnar side of the hand by means of a strip of fascia. **Kraske's o.**, removal of the coccyx and of a part of the sacrum for access to a carcinomatous rectum. **Krause's o.**, extracardial excision of the gasserian ganglion for trigeminal neuralgia. **Krimer's o.**, uranoplasty in which mucoperiosteal flaps from each side of the palatal cleft are sutured together at the median line. **Krönlein's o.** 1. Exposure of the third branch of the trigeminal nerve for facial neuralgia. 2. Resection of the outer wall of the orbit for the removal of an orbital tumor without excising the eye. **Kuhnt's o.**, an operation for disease of the frontal sinus by removing the anterior wall of the sinus and curetting away the mucous membrane. **Küster's o.**, an operation for draining the pus in mastoiditis by exposing the attic, antrum, and tympanum. **Labbé's o.**, gastrotomy in which a parietal incision is made along the margin of the lowest left rib. **Lagrange's o.** See *sclerecto-iridectomy.* **Lancereaux's o.**, treatment of aneurysm of the aorta by subcutaneous injections of gelatin. **Landolt's o.**, the formation of a lower eyelid from materials taken from the upper lid. **Lane's o.**, the operation of dividing the ileum near the cecum, closing the portion attached to the cecum and anastomosing the other end with the upper part of the rectum or lower part of the sigmoid, thus eliminating the colon from taking any part in the fecal current. **Lane-Lannelongue o.**, removal of portions of bone from the skull for cerebral decompression. **Lange's o.**, artificial tendon transplantation with strands of silk. See *silk implantation*, under *implantation.* **Lannelongue's o.**, a designation of various methods of craniotomy in cases of microcephalus, etc. **Lanz's o.**, an operation for elephantiasis of the leg in which the strips of fascia lata are inserted into an opening made in the femur. **Laroyenne's o.**, puncture of Douglas' pouch to secure drainage in pelvic suppuration. **Larry's o.** See under *amputation.* **Laurens's o.**, a plastic operation for closure of a cicatricial opening following mastoid operation. **Le Fort's o.**, the operation of uniting the anterior and posterior vaginal walls along the middle line for the repair of prolapse of the uterus. **Lennander's o.**, removal of the

inguinal glands, including those in the pelvis, as far as the bifurcation of the aorta. **Leriche's o.** See *periarterial sympathectomy*, under *sympathectomy.* **Lexer's o.**, removal of the gasserian ganglion. **Lisfranc's o.** See under *amputation.* **Liston's o.**, an operation for excision of the upper jaw. **Littre's o.**, a method of inguinal colotomy. The sigmoid flexure is opened on the left side, in a cut parallel to Poupart's ligament and half an inch above it. **Lizar's o.**, excision of the upper jaw by a curved incision extending from the angle of the mouth to the malar bone. **Longuet's o.**, extraneous transplantation of the testicle for varicocele and hydrocele. **Lorenz's o.**, for congenital dislocation of the hip, consisting in reduction of the dislocation, and keeping the head of the femur fixed against the rudimentary acetabulum until a socket is formed. **Loreta's o.** 1. Gastrotomy with division of either orifice of the stomach for stenosis. 2. The insertion of a wire into an aneurysm, followed by electrolysis. **Lossen's o.**, removal of the second division of the fifth nerve by a method in which the masseter is not divided. **Luc's o.** See *Caldwell-Luc o.* **Lund's o.**, removal of the astragalus for the correction of talipes. **MacDowell's o.**, the removal of an ovarian cyst or of an ovary by abdominal section. **Macawen's o.** 1. The scarification of the interior of an aneurysmal sac with a needle. 2. Supracondyloid division of the femur from within for genu valgum. 3. An operation for the radical cure of hernia by closing the internal ring by a pad made of the hernial sac. **Mackenrodt's o.**, vaginal fixation of the round ligaments for retrodisplacement of the uterus. **Madelung's o.**, lumbar colotomy in which the distal end of the colon is detached, and then closed by invagination and by two rows of stitches. **magnet o.**, removal of a fragment of steel or iron from the eyeball by means of a powerful magnet. **major o.**, a surgical procedure which involves the risk of life. **Makka's o.**, an operation for ectopia of the bladder in which the cecum is utilized as a bladder and the appendix as a ureter. **Marckwald's o.**, excision of two wedge-shaped pieces from opposite sides of the vaginal portion of the cervix uteri for stenosis of the external os uteri. **Marian's o.**, a perineal median operation for stone in the bladder. **Marwedel's o.**, a method of gastrotomy similar to *Witzel's o.* **mastoid o.** Same as *mastoidotomy.* **Matas's o.** See *endo-aneurysmorrhaphy.* **Maydl's o.** 1. Colostomy in which the colon is exposed and drawn out of the wound, being kept in place until adhesions have been formed by means of a glass rod placed beneath it. 2. Insertion of the ureters into the rectum for extrophy of the bladder. **Mayo's o.** 1. Excision of more or less of the pyloric end of the stomach, followed by closure of the proximal end of the duodenum and the making of an independent posterior gastrojejunostomy. 2. For radical cure of umbilical hernia by excision of the hernial mass and overlapping the abdominal aponeuroses transversely and suturing them. 3. Subcutaneous treatment of varicose veins with a blunt curet. **McArthur's o.**, catheterization of the common bile duct for making effusions into the duodenum. **McBurney's o.**, an operation for the radical cure of inguinal hernia: the sac is exposed, ligated, and cut off at the internal ring; the skin is turned in and stitched to the underlying tendinous and ligamentous structures. **McGill's o.**, suprapubic prostactectomy. **Meller's o.**, an operation for excision of the tear sac. **Mercier's o.**, prostactectomy. **mika o.**, the making of a permanent fistula in the bulbous urethra for the purpose of preventing or avoiding procreation. **Mikulicz's o.** 1. Removal of the sternocleidomastoid muscle for torticollis. 2. See *Heineke-Mikulicz o.* 3. Tarsectomy in which the heel, os calcis, and astragalus are removed, the articular surfaces of the tibia, fibula, cuboid, and scaphoid are sawn

away, and the foot brought into line with the leg. Same as *Wladimiroff's o.* **Mingazzini-Foerster o.** Same as *Foerster's o.* **minor o.**, a surgical operation which is not serious in its extent or severity. **Moore's o.**, introduction of a coil of small wire into the sac of an aortic aneurysm to effect coagulation. **Moore-Corradi o.**, Moore operation in which a strong galvanic current is passed through the wire. **Morestin's o.**, disarticulation of the knee with intracondyloid division of the femur. **Morischi's o.**, circum-cision of the leg for varicose veins. **Moschcowitz's o.**, a femoral hernia operation by the inguinal route. **Motais' o.**, an operation for ptosis, consisting of transplanting the middle portion of the tendon of the superior rectus muscle of the eyeball into the upper lid. **Mules' o.**, eversion of the eyeball, with insertion of an artificial vitreous. **Müller's o.** 1. A method of vaginal hysterectomy: the uterus is split into lateral halves, which are brought down in succession and removed. 2. Cesarean section in which the uterus is lifted out of the abdomen and then opened. 3. Resection of the sclera for detachment of the retina. **Nebinger-Fraun o.**, an operation for disease of the frontal sinus. **Nélaton's o.**, excision of the shoulder joint by a transverse incision. **Neuber's o.**, the operation of filling a cavity in bone with skin flaps taken from the sides of the wound. **Northcott o.**, the use of the electrolytic galvanic current on the blood stream with the object of stimulating the endothelium to increased output of sex stimulating hormones. **Oberst's o.**, an operation for ascites in which a flap of skin from the abdomen is buried so that the end projects into the abdomen, thus providing drainage. **Ogston's o.** 1. Removal of the inner condyle of the femur for knock knee. 2. Excision of the wedge of the tarsus for the purpose of restoring the arch in flatfoot. **Ogston-Luc o.**, an operation for frontal sinus disease, the incision being made from the edge of the orbit, the sinus being opened on the outer side of the median line. **Olshausen's o.**, the operation of fixing or suturing the uterus to the abdominal wall for the cure of retroversion. Called also *Koerber's o.* **open o.**, an operation in which the parts operated on are exposed to the air. **Ord's o.**, an operation for breaking up fresh adhesions in joints. **Paci's o.**, a modification of Lorenz's bloodless operation for congenital dislocation of the hip. **palliative o.**, one which aims simply to relieve untoward symptoms. **Panas' o.** 1. Linear proctotomy. 2. The attachment of the upper eyelid to the occipitofrontalis muscle for ptosis. **Péan's o.** 1. Vaginal hysterectomy bit by bit. 2. Laparotomy for uterine fibroids. 3. Hip joint amputation in which the vessels are ligated as the operation goes on. **Perier's o.**, eversion of the uterus and amputation by an elastic ligature. **Petersen's o.**, a modification of high lithotomy. **Phelps' o.**, for talipes: an open and direct incision through the sole and inner side of the foot. **Physick's o.**, the removal of a circular piece of the iris by means of a cutting forceps. **Pirogoff's o.** 1. See under *amputation*. 2. An operation for hernia by inserting a bag of gold-beaters' skin into the sac and allowing it to remain. **Pitts' o.**, the stretching of the inferior dental nerve in an incision within the mouth, along the inner border of the ascending ramus of the lower jaw. **plastic o.**, one in which the shape of a part or the character of its covering is altered by transplantation of tissue, etc. **Politzer's o.** 1. The creation of an artificial opening in the membrana tympani by incision and galvanocautery. 2. Division of the anterior ligament of the malleus. **Pollock's o.**, amputation at the knee joint by a long anterior and short posterior flap, the patella being left. **Polya's o.**, gastrojejunostomy following pylorotomy. **Ponset's o.** 1. Lengthening of the Achilles ten-

don for talipes equinus. 2. Perineotomy. 3. Perineal urethrostomy. **Porro's o.**, cesarean section followed by removal of the uterus, ovaries, and oviducts. **Porro-Müller o.**, cesarean section in which the uterus is lifted from the abdominal cavity before the fetus is extracted. **Porro-Veit o.**, cesarean section by Porro's method, in which the stump is ligated and returned to its place. **Pow-er's o.**, removal of a corneal leukoma, followed by the insertion of a rabbit's cornea. **Pozzi's o.**, the operation of creating and suturing an artificial bilateral laceration of the cervix uteri for the relief of anteversion. **Prévot's o.**, the removal by an abdominal incision of a uterus ruptured in labor. **Quaglino's o.**, sclerotomy done with a small knife and a spatula. **Quénu's o.** Same as *quenu-thoracoplasty*. **Quénu-Mayo o.**, excision of the rectum, together with the neighboring lymph glands, for cancer. **radical o.**, one which is intended to extirpate the disease completely. **Rammstedt's o.**, operation for congenital stenosis of the pylorus by a transverse incision through the thickened serosa and muscularis down to, but not through, the mucosa. **Ramsden's o.**, the tying of the subclavian arteries at a point one-half inch above the clavicle in a transverse cut three inches long in the posterior triangle of the neck. **Ranschoff's o.**, the making of several cross incisions of the pleura for empyema. **Recamier's o.**, curettement of the uterus. **Reclus' o.**, making of an artificial anus in the iliac region in cancer of the rectum. **Reed's o.**, an operation for tubovarian varicocele, consisting in ligating the veins in sections. **Regnoli's o.**, excision of the tongue through a median opening below the lower jaw, reaching from the chin to the hyoid bone. **Reverdin's o.**, a process of skin grafting. **Ridell's o.**, excision of the anterior and inferior walls of the frontal sinus for chronic inflammation. **Rigaud's o.**, a plastic operation for urethral fistula: a square flap is taken from below the fistula, turned over it, and reinforced by flaps from each side. **Roberts' o.**, a method of correcting a deflected nasal septum. The deflection is corrected by manipulation in a linear incision, after which a steel pin is introduced to hold the septum in place. **Robinson's o.**, section of the veins between two ligatures for varicose veins. **Rodman's o.**, a method of excising the breast with wide dissection of the lymphatics for cancer. **Rose's o.**, removal of the gasserian ganglion; gasserectomy. **Rouge's o.**, a method of opening the nasal sinuses by freeing the upper lip and the nasal cartilages from the maxilla. **Routier's o.**, a method of operating for Dupuytren's contraction. **Route's o.**, venoperitoneostomy; the operation of suturing the saphenous vein so that it will open into the peritoneal cavity, so as to drain that cavity in cases of ascites with cirrhosis of the liver. **Rour's o.**, cutting of the maxilla in the middle line in the operation for removal of the tongue. **Rovsing's o.**, an operation for gastrocoloptosis. **Ruggi's o.**, gastrojejunostomy, with a double opening between the jejunum and stomach. **Rydygier's o.**, a method for excision of the rectum in which the bowel is reached by dividing the sacrum and turning it back; the portion turned back is replaced after the operation. **Saemisch's o.**, transfixion of the cornea and of the base of the ulcer for the cure of hypopyon. **Sänger's o.**, cesarean section in which the uterus is taken out through a long abdominal cut before the fetus is removed. **Sayre's o.**, the application of a plaster-of-paris jacket in the treatment of spondylitis and Pott's disease. **Scanzoni's o.**, pulling the occiput to an anterior position with the forceps to hasten delivery. **Scarpa's o.**, the tying of the femoral artery in Scarpa's triangle. **Schauta's o.**, extended vaginal hysterectomy for cancer of the cervix uteri. **Schauta-Wertheim o.** See *Wertheim-Schauta o.* **Schede's o.** 1. Resection of the thorax for chronic emphysema. 2. An operation for varicose veins of the leg: done

by a circular incision, rolling one cuff up and another down, so as to reach and remove the varices. 3. Excision of the necrosed part of a bone, allowing the cavity to fill with blood, which clots and eventually becomes organized. **Schiassi's o.** 1. Formation of a collateral circulation for the portal blood by making an omental anastomosis. 2. Treatment of varicose veins of the leg by injecting into the vein an aqueous solution of iodine made of 1 Gm. of iodine, 1.1 Gm. potassium iodide, and 100 Gm. distilled water, the object being to produce adhesion of the internal surfaces of the veins. **Schlatter's o.**, total excision of the stomach for cancer. **Schmalz's o.**, the introduction of a thread into the lacrimal duct for the cure of stricture. **Schönbein's o.**, staphyloplasty in which a flap of mucous membrane from the posterior wall of the pharynx is stitched to the velum palati, shutting off the nose from the mouth. **Schröder's o.**, a method of colporrhaphy; also one for trachelorrhaphy; also one for the removal of the uterus by celiotomy; also excision of the mucous membrane of the cervix uteri for chronic endometritis. **Schuchardt's o.**, paravaginal hysterectomy. **Schücking o.**, a special method of vaginal hysterectomy for prolapsed uterus. **Schwartz's o.**, the opening of the mastoid cells with a hammer and chisel in disease of the middle ear. **Sédillot's o.** 1. A method of staphyloplasty. 2. A flap operation for restoring the upper lip. 3. A method of ligating the innominate artery. **Senn's o.**, intestinal anastomosis by lateral approximation and the use of bone plates. **Siebold's o.**, hebotomy. **Sigault's o.**, delivery of the fetus by symphysiotomy in cases of contracted pelvic outlet. **Simon's o.** 1. [John Simon.] Repair of lacerated perineum by suturing the vaginal mucous membrane first and the cutaneous surface afterward. 2. [Gustav Simon.] Colpocleisis. Called also *Marckwald's operation*. **Sluder's o.**, removal of the tonsil along with its capsule. **Smith's o.** 1. The crushing of hemorrhoids by means of clamps, and subsequent application of the Paquelin cautery. 2. Extraction of an immature cataract with an intact capsule. **Socin's o.**, enucleation of a goitrous or thyroidal tumor from the healthy part of the gland to avoid cachexia strumipriva. **Sonneberg's o.**, excision of the inferior maxillary nerve by deep dissection beneath the angle of the jaw. **Sotteau's o.**, the closure of the inguinal canal for hernia by a double fold of the scrotum. **Spinelli's o.**, the operation of splitting the anterior wall of the prolapsed uterus, reversing the organ, and restoring it to the correct position. **Ssabanajew-Frank o.** See *Frank's o.* **Stacke's o.**, the removal of the mastoid and the contents of the tympanum, so that the antrum, attic, tympanum, and meatus form a single cavity. **Steinach o.**, ligation of the vas deferens with resection of a portion of the vas; done with a view to rejuvenating the patient by causing atrophy of the spermatogenic apparatus and proliferation of the interstitial tissue of the testicle, and thus increasing the patient's output of gonadal hormone. **Stoffel's o.**, resection of a part of the bundles of a nerve trunk supplying a group of muscles affected by spastic paralysis. **Stokes' o.**, amputation through the articular end of the femur. **Stoltz's o.**, operation for cystocele, done by denuding a patch on the anterior vaginal wall and running a purse-string suture around the edge. **Stromeyer-Little o.**, operation for abscess of the liver; the pus is located by a cannula and the abscess opened by a knife following the cannula as a guide. **subcutaneous o.**, an operation on a part without opening the skin over it. **Surmay's o.**, jejunostomy. **Syme's o.** 1. See under *amputation*. 2. A method of external urethrotomy. **tagilacotian o.** See *Italian o.* **Tait's o.**, operation for lacerated perineum; the laceration is closed by two flaps taken from either side. **Talma's o.**, the operation of forming arti-

ficial adhesions between the liver and spleen and the omentum and abdominal wall in cases of ascites due to cirrhosis of the liver. **Talma-Morison o.**, omentopexy. **Tansini's o.** 1. Amputation of the breast with all the skin over it, the denuded area being covered by a flap from the back. 2. A method of removing a cyst of the liver. **Teale's o.** See under *amputation*. **Terrillon's o.**, excision of hydatids by constriction with elastic ligatures. **Textor's o.**, excision of the knee joint by a transverse curved anterior cut. **Thiersch's o.**, a method of preparing skin grafts by means of a razor. **Thomas' o.**, laparo-elytrotomy: the removal of the fetus by an opening in the abdominal wall and in the vagina without wounding the uterus. **Toti's o.**, the operation of causing the tear sac to open into the nasal cavity: dacryocystorhinostomy. **Trendelenburg's o.** 1. Excision of varicose veins. 2. Ligation of the great saphenous vein for varicose veins. 3. Synchrondrosotomy. **Treves' o.**, operation for Pott's disease by opening the abscess through the loin, irrigating and curetting the sac, and scraping away dead bone. **Tuffer's o.**, vaginal hysterectomy in which the broad ligaments are treated by angiotripsy without ligation. **van Buren's o.**, the treatment of prolapsus ani with the Paquelin cautery. **van Hook's o.**, uretero-ureterostomy. **Veit's o.** See *Porro-Weit o.* **Verhoeff's o.**, posterior sclerotomy followed by electrolytic punctures, for detachment of the retina. **Vermale's o.**, amputation by double-flap transfexion. **Verneuil's o.**, iliac colotomy by a nearly vertical cut; the exposed gut is pinned to the edges of the wound and stitched there, after which the protruding knuckle of the bowel is cut off. **Vicq d'Azyr's o.**, cricothyroid laryngotomy. **Vidal's o.**, subcutaneous ligation of the veins for varicocele. **Volkmann's o.**, incision of the tunica vaginalis for hydrocele. **von Bergmann's o.**, incision of the tunica vaginalis, with removal of its parietal layer, performed for hydrocele. **von Graefe's o.**, removal of the cataractous lens by a scleral cut, with laceration of the capsule and iridectomy. **von Hacker's o.**, an operation for balanitic hypospadias. **Voronoff's o.**, transplantation into man of the testes of an anthropoid ape. **Wagner's o.**, osteoplastic resection of the skull. **Wardrop's o.**, distal ligation of an artery for aneurysm. **Watkins' o.**, an operation for prolapse and procidentia uteri in which the bladder is separated from the anterior wall of the uterus so that the uterus is left in a position to support the entire bladder. **Webster's o.**, for retroposition of the uterus: the round ligaments are passed through the perforated broad ligaments and fixed to the back of the uterus. **Weir's o.**, appendicostomy. **Wertheim's o.** 1. An operation for cancer of the uterus in which there is removed with the uterus as much of the parametrial tissue as possible and a wide margin of the vagina. 2. A modification of Watkins' operation for uterine prolapse in which the bladder is stitched to the posterior wall of the uterus at the level of the internal os; in closing the vaginal wound a portion of the anterior uterine wall is left exposed in the vagina. **Wertheim-Schauta o.**, an operation for cystocele, consisting in the interposition of the uterus between the base of the bladder and the anterior vaginal wall. **Wheelhouse's o.**, a method of perineal section for impermeable stricture of the urethra. **White's o.**, castration for hypertrophy of the prostate. **Whitehead's o.** 1. Treatment of hemorrhoids by excision. 2. Removal of the tongue with the scissors, the operation being performed within the mouth. **Whitman's o.**, a method of astragalectomy. **Wieting's o.**, anastomosis of the femoral vein to the femoral artery for the relief of arteriosclerotic gangrene. **Wilms' o.**, resection of the ribs so as to produce depression of the chest wall and compression of the

lungs thereby: done in tuberculosis of the lungs. **Winiwarter's o.**, cholecystenterostomy. **Witzel's o.**, gastrotomy by drawing a cone of the stomach wall through a thoracic incision, and inserting a tube which is buried in the stomach wall by sutures. The stomach cone is replaced and the wound sutured. **Wladimiroff's o.**, a method of tarsectomy. Same as *Mikulicz's o.* **Wölfler's o.**, the formation of a permanent opening between the stomach and lower part of the duodenum in cases of obstructed pylorus. **Wood's o.** 1. Closure of exstrophy of the bladder by a flap of skin cut from the abdominal wall and turned over so that the cutaneous surface forms the inner wall of the bladder. 2. The closure of a hernial canal by subcutaneous sutures through the tendinous tissues surrounding it. **Wutzer's o.**, a process for the radical cure of inguinal hernia by stopping up the hernial canal by invaginating the scrotum. **Wyeth's o.**, amputation at the hip joint, hemorrhage being controlled by an elastic cord or tube fastened above large needles which transfix the tissues on each side of the articulation. **Wylie's o.** 1. Operation of shortening the round ligaments for the relief of uterine retroflexion, done by folding the ligaments on themselves and suturing. 2. An operation for appendicitis by pulling aside the rectus, incising its posterior sheath, and making a small incision through the peritoneum. **Yankauer's o.**, curettement of the bony end of the eustachian tube for the purpose of shutting off infection from the nasopharynx and thereby curing chronic suppurative of the middle ear. **Young's o.**, total excision of the seminal vesicles and partial excision of the ejaculatory ducts by a suprapubic T-shaped incision. **Ziegler's o.**, V-shaped iridectomy for forming artificial pupil.

operative (op'er-a-tiv) [L. *operativus*]. 1. Pertaining to an operation. 2. Effective; not inert.

opercular (o-per'ku-lar). Pertaining to an operculum.

operculum (o-per'ku-lum) [L.]. 1. Any lid or cover. 2. [B N A]. The part of the cerebrum above the insula, or island of Reil. Called also *o. insulae*. 3. A plug of mucus that shuts off the contents of the gravid uterus from the vagina. **Arnold's o.**, the operculum of the island of Reil. **Burdach's o.**, the operculum insulae. **frontoparietal o.**, the operculum formed by parts of the frontal and parietal lobes. **o. in'insulae**. See *operculum*, 2d def. **occipital o.**, a part of the occipital lobe of the brain separated from the main portion by the ape fissure. **orbital o.**, that part of the operculum formed by the orbital surface of the frontal lobe.

ophiasis (o-f'as-is) [*ὀφιασις*; *δφης* snake]. Baldness in one or more winding streaks across the head.

ophidiiasis (o-fid-i'as-is). Same as *ophidism*.

ophidiophobia (o-fid'ē-o-fō-be-ah) [*ὀφιδιον* serpent + *φῶβος* fear]. A morbid dread of snakes.

ophidism (o'fid-izm) [*δφης* snake]. Poisoning by snake venom.

Ophiophagus e'laps. The largest variety of Indian cobra.

ophiotoxemia (o'fe-o-tok-se-me-ah) [*δφης* snake + *toxemia*]. Poisoning by snake venom.

ophiotoxin (o-fe-o-toks'in) [*δφης* snake + *τοξικόν* poison]. A nonprotein nitrogen-free poison found in cobra venom.

ophioxylil (o-fe-oks'il-in). An anthelmintic and a cathartic principle, $C_{16}H_{18}O_6$, from the root of *Ophioxylon* (*Rauwolfia serpenti'num*, an apocynaceous plant of southern Asia).

ophitoxemia (o'fe-tok-se-me-ah). Ophiotoxemia.

ophritis, ophryitis (of-ri'tis, of-re-i'tis) [*ὀφρύς* eyebrow + *-itis*]. Dermatitis in the eyebrow region.

ophryon (o'fre-on) [*ὀφρύς* eyebrow]. The middle point of the transverse supra-orbital line.

ophryosis (of-re-o'sis) [*ὀφρύς* eyebrow]. Spasm of the eyebrow.

ophryospinal angle (of're-o-spi'nal). See under *angle*.

ophthalmagra (of-thal-mag'rah) [*ὀφθαλμός* eye + *ἄγρα* seizure]. Sudden pain in the eye.

ophthalmalgia (of-thal-mal'je-ah) [*ὀφθαλμός* eye + *ἄλγος* pain]. Pain in the eye.

ophthalmatrophia (of'thal-mat-ro'fe-ah) [*ὀφθαλμός* eye + *ἀτροφία* atrophy]. Atrophy of the eye.

ophthalmectomy (of-thal-mek'to-me) [*ὀφθαλμός* eye + *ἐκτομή* excision]. The surgical removal of an eye.

ophthalmencephalon (of-thal-men-sef'al-on) [*ὀφθαλμός* eye + *ἐγκέφαλον* brain]. The retina, optic nerve, and visual apparatus of the brain.

ophthalmia (of-thal'me-ah) [from *ὀφθαλμός* eye]. Severe inflammation of the eye or of the conjunctiva. **catarrhal o.**, a severe form of simple conjunctivitis. **caterpillar o.**, inflammation of the conjunctiva and cornea, due to penetration by caterpillars' hairs. **o. eczematosa**, phlyctenulosis. **Egyptian o.** See *trachoma*. **electric o.**, conjunctivitis due to the effect of bright electric light. **o. externa**, paralysis of the extrinsic or external ocular muscles. **gonorrheal o.**, acute and severe purulent conjunctivitis due to gonorrheal infection. **granular o.**, an acute and severe form of purulent conjunctivitis. **jequirity o.**, a form due to poisoning by jequirity. **metastatic o.**, chorioiditis due to metastasis or to pyemia. **migratory o.** Same as *sympathetic o. mucosus*. Same as *catarrhal o.* **o. neonatorum**, purulent blennorrhoea of the new-born. **neuroparalytic o.**, keratitis due to lesion of branches of the fifth nerve or of the gasserian ganglion. **o. nodo'sa**, inflammation of the conjunctiva produced by caterpillar hairs, and marked by the formation of a round, gray swelling where each hair is embedded. **periodic o.**, a form of uveitis affecting horses, and similar to iridociliary inflammation in man. **phlyctenular o.**, a form of conjunctivitis and keratitis with vesicles on the epithelium. **purulent o.**, a form with a purulent discharge, commonly due to gonorrheal infection. **scrofulous o.**, phlyctenular conjunctivitis. **spring o.**, a variety chiefly prevailing in the spring of the year. **sympathetic o.**, iridocyclitis following disease or injury of the fellow eye. **transferred o.** Same as *sympathetic o.* **varicose o.**, a variety associated with varicosity of the veins of the conjunctiva.

ophthalmiac (of-thal'me-ak). A person affected with ophthalmia.

ophthalmiatrics (of'thal-me-at'riks) [*ὀφθαλμός* eye + *ιατρεια* treatment]. The treatment of eye diseases.

ophthalmic (of-thal'mik) [*ὀφθαλμικός*]. Pertaining to the eye.

ophthalmin (of-thal'min). 1. The virus of purulent ophthalmia. 2. A name proposed for vitamin A.

ophthalmitic (of-thal-mit'ik). Pertaining to ophthalmitis.

ophthalmitis (of-thal-mi'tis) [*ὀφθαλμός* eye]. Inflammation of the eye.

ophthalmo- [*ὀφθαλμός* eye]. A prefix denoting some relation to the eye.

ophthalmoblennorrhoea (of-thal'mo-blen-or-e'-ah) [*ὀφθαλμός* eye + *βλέννα* mucus + *ροία* flow]. Gonorrheal or purulent ophthalmia.

ophthalmocarcinoma (of-thal'mo-kar-sin-o'-mah). Carcinoma of the eyeball.

ophthalmocoele (of-thal'mo-sēl) [*ὀφθαλμός* eye + *κῆλη* tumor]. Same as *exophthalmos*.

ophthalmocopia (of-thal-mo-ko'pe-ah) [*ὀφθαλμός* eye + *κόπος* weariness]. Asthenopia, or eye-strain; fatigue of the eyes.

ophthalmodesmitis (of-thal'-mo-dez-mi'tis) [*ὀφθαλμός* eye + *δεσμός* ligament + *-ιτις* inflammation]. Inflammation of the ocular tendons.

ophthalmodiagnosis (of-thal'-mo-di-ag-no'sis). Diagnosis by the aid of the ophthalmic reaction. See under *reaction*.

ophthalmodiaphanoscope (of-thal'-mo-di-af-an'o-skōp) [*ὀφθαλμός* eye + *διαφανοσκόπε*]. An instrument for examining the back of the eye (retina) by transillumination through the buccal cavity.

ophthalmodiastimeter (of-thal'-mo-di-as-tim'et-er) [*ὀφθαλμός* eye + *διάστημα* interval + *μέτρον* measure]. An instrument for determining the proper distance at which to place lenses for the two eyes.

ophthalmodonesis (of-thal'-mo-don-e'sis) [*ὀφθαλμός* eye + *δόνεισις* trembling]. A trembling motion of the eyes.

ophthalmodynamometer (of-thal'-mo-di-nam-om'et-er). An instrument for determining the near point of convergence.

ophthalmodynia (of-thal-mo-din'e-ah) [*ὀφθαλμός* eye + *δύνη* pain]. Pain in the eye.

ophthalmofunduscope (of-thal-mo-fun'do-skōp). An apparatus for observing the fundus of the eye.

ophthalmography (of-thal-mog'raf-e) [*ὀφθαλμός* eye + *γράφειν* to write]. Description of the eyes.

ophthalmogyric (of-thal-mo-'ji'rik) [*ὀφθαλμός* eye + *L. gy'rus* a turn]. Oculogyric.

ophthalmol (of-thal'mol). A proprietary preparation for use locally in granular lids.

ophthalmoleukoscope (of-thal'-mo-lu'ko-skōp) [*ὀφθαλμός* eye + *λευκός* white + *σκοπεῖν* to view]. An apparatus for testing color perception by means of colors produced by polarized light.

ophthalmolith (of-thal'mo-lith) [*ὀφθαλμός* eye + *λίθος* stone]. A lacrimal calculus.

ophthalmologist (of-thal-mol'o-jist). One who is versed or expert in ophthalmology.

ophthalmology (of-thal-mol'o-je) [*ὀφθαλμός* eye + *λόγος* discourse]. The sum of knowledge concerning the eye and its diseases.

ophthalmomalacia (of-thal'-mo-ma-la'se-ah) [*ὀφθαλμός* eye + *μαλακία* softness]. Abnormal softness and shrinkage of the eye, with less than the normal tension; essential phthisis of the eye.

ophthalmometer (of-thal-mom'et-er) [*ὀφθαλμός* eye + *μέτρον* measure]. Any instrument for measuring the eye, especially one for determining its refractive powers and defects by measuring the size of the images reflected from the cornea and lens. Called also *Javel's o.*

ophthalmometroscope (of-thal-mo-met'ro-skōp). An ophthalmoscope with an attachment for measuring the refraction of the eye.

ophthalmometry (of-thal-mom'et-re). Determination of the refractive powers and defects of the eye.

ophthalmomycosis (of-thal'-mo-mi-ko'sis) [*ὀφθαλμός* eye + *μύκης* fungus]. Any disease of the eye caused by a fungus.

ophthalmomyitis (of-thal'-mo-mi-i'tis) [*ὀφθαλμός* eye + *μύς* muscle + *-ιτις* inflammation]. Inflammation of the muscles that move the eyeball.

ophthalmomyositis (of-thal'-mo-mi-o-si'tis). Inflammation of the eye muscles.

ophthalmomyotomy (of-thal'-mo-mi-ot'o-me) [*ὀφθαλμός* eye + *μυοτομή*]. Surgical division of the muscles of the eye.

ophthalmoneuritis (of-thal'-mo-ne-ri'tis). Inflammation of the ophthalmic nerve.

ophthalmopathy (of-thal-mop'ath-e) [*ὀφθαλμός* eye + *πάθος* disease]. Any disease of the eye.

external o., any affection of the eyelids, cornea, conjunctiva, or eye muscles. **internal o.**, any affection of the deep or more essential parts of the eye.

ophthalmophacometer, ophthalmophakometer (of-thal'-mo-fak-om'et-er) [*ὀφθαλμός* eye + *φακός* lens + *μέτρον* measure]. A kind of ophthalmometer for measuring the two surfaces of the lens and the posterior surface of the cornea.

ophthalmophantom (of-thal-mo-fan'tom). A model of the eye used in demonstration; or an apparatus for holding animals' eyes for operation.

ophthalmophlebotomy (of-thal'-mo-fleb-ot'o-me) [*ὀφθαλμός* eye + *phlebotomy*]. Phlebotomy to relieve congestion of the conjunctival veins.

ophthalmophthisis (of-thal-mof'this-is) [*ὀφθαλμός* eye + *φθίσις* wasting]. Phthisis bulbi, or ophthalmomalacia; shriveling of the eyeball.

ophthalmoplasty (of-thal'mo-plas-te) [*ὀφθαλμός* eye + *πλάσσειν* to mold]. Plastic surgery of the eye or of its appendages.

ophthalmoplegia (of-thal-mo-ple'je-ah) [*ὀφθαλμός* eye + *πληγή* stroke]. Paralysis of the eye muscles. **basal o.**, ophthalmoplegia due to a lesion at the base of the brain. **o. externa**, paralysis of the external ocular muscles. **fascicular o.**, ophthalmoplegia due to lesion in the pons varolii. **infectious o.** See *encephalitis lethargica*. **o. interna**, paralysis of the iris and ciliary apparatus. **nuclear o.**, that which is due to some lesion of the nuclei of the motor nerves of the eye. **orbital o.**, ophthalmoplegia due to lesion in the orbit. **Parinaud's o.**, paralysis of the external rectus muscle of one eye, together with spasm of the internal rectus of the other. **o. partialis**, paralysis of either one or two of the muscles of the eye. **o. progressiva**, gradual paralysis affecting first one eye muscle and then another. **Sauvigney's o.**, paralysis of the internal rectus of one eye and spasm of the external rectus of the other. **o. totalis**, that which affects both the extrinsic and the intrinsic muscular apparatus of the eye.

ophthalmoplegic (of-thal-mo-ple'jik). Pertaining to ophthalmoplegia.

ophthalmoptosis (of-thal-mop-to'sis) [*ὀφθαλμός* eye + *πτῶσις* fall]. Same as *exophthalmos*.

ophthalmoreaction (of-thal'-mo-re-ak'shun). See *ophthalmic reaction*, under *reaction*.

ophthalmorrhagia (of-thal-mo-ra'je-ah) [*ὀφθαλμός* eye + *ῥηγνύναι* to burst forth]. Hemorrhage from the eye.

ophthalmorrhoea (of-thal-mo-re'ah) [*ὀφθαλμός* eye + *ῥοία* flow]. Oozing of blood from the eye.

ophthalmorrhexis (of-thal-mor-eks'is) [*ὀφθαλμός* eye + *ῥήξις* rupture]. Rupture of the eyeball.

ophthalmoscope (of-thal-mo-skōp) [*ὀφθαλμός* eye + *σκοπεῖν* to see]. A perforated mirror used in inspecting the interior of the eye. **ghost o.**, a form in which a portion of the reflected rays are deflected by a mirror. **Loring's o.**, an ophthalmoscope with tilting mirror, complete disk of lenses, and supplemental quadrant of lenses.

ophthalmoscopy (of-thal-mos'ko-pe). The examination of the interior of the eye with the ophthalmoscope. **direct o.**, the observation of an upright or erect mirrored image of the interior of the eye. **indirect o.**, the observation of an inverted image of the interior of the eye. **medical o.**, that which is performed for diagnostic purposes. **metric o.**, that which is performed for the measurement of refraction.

ophthalmostasis (of-thal-mos'tas-is) [*ὀφθαλμός* eye + *στάσις* standing]. Fixation of the eye with the ophthalmostat.

ophthalmostat (of-thal'mo-stat) [*ὀφθαλμός* eye + *ιστάναι* to halt]. An instrument for holding the eye steady during operation.

ophthalmostatometer (of-thal'-mo-sta-tom'-et-er) [ὀφθαλμός eye + ἰσθάναι to set + μέτρον measure]. An instrument for determining the degree of protrusion of the eyeball.

ophthalmothermometer (of-thal'-mo-ther-mom'-et-er) [ὀφθαλμός eye + thermometer]. An apparatus for recording the temperature of the eye.

ophthalmotomy (of-thal-mot'-o-me) [ὀφθαλμός eye + τομή cut]. The operation of incising the eyeball.

ophthalmotonometer (of-thal'-mo-to-nom'-et-er) [ὀφθαλμός eye + τόνος tone + μέτρον measure]. An instrument used in measuring the intra-ocular tension.

ophthalmotonometry (of-thal'-mo-to-nom'-et-re). The measurement of the intra-ocular tension.

ophthalmotoxin (of-thal-mo-tok'-sin) [ὀφθαλμός eye + τοξίν]. A toxin formed on injection of emulsion of the ciliary body.

ophthalmotrope (of-thal'mo-trōp) [ὀφθαλμός eye + τρέπειν to turn]. An artificial eye that moves like a real eye.

ophthalmotropometer (of-thal'-mo-tro-pom'-et-er) [ὀφθαλμός eye + τρόπος turning + μέτρον measure]. An instrument for measuring eye movements.

ophthalmoxyster (of-thal-moks-is'-ter) [ὀφθαλμός eye + ξυστρα scraper]. An instrument for scraping the conjunctiva.

opianine (o-pi'-an-in). An alkaloid from opium, perhaps an impure narcotine, resembling morphine in its physiologic action.

opiate (o'-pe-āt). A remedy containing or derived from opium; also any drug that induces sleep.

opilação, opilago (o-pil-ah-sa'-o). A form of trypanosomiasis occurring in Brazil. See *Chagas' disease*, under *disease*.

opiomania (o'-pe-o-ma'-ne-ah) [ὄπιον opium + μανία madness]. An insane craving for opium.

opiomaniac (o'-pe-o-ma'-ne-ak). A person affected with opiomania.

opiophagism, opiophagy (o-pe-of'-aj-izm, o-pe-of'-aj-e) [ὄπιον opium + φαγείν to eat]. The habitual use or eating of opium.

opisthenar (o-pis'-the-nar) [ὀπισθεν behind + θέναρ palm of the hand]. The dorsum of the hand.

opisthencephalon (o-pis-then-sef'-al-on) [ὀπισθεν backward + κέφαλη head]. The cerebellum.

opisthobasial (o-pis'-the-o-ba'-se-al). Pertaining to or connecting the opisthion and basion.

opisthion (o-pis'-the-on) [ὀπίσθιον rear]. The midpoint of the lower border of the foramen magnum.

opisthionasial (o-pis'-the-o-na'-ze-al). Connecting the opisthion and nasion.

opisthoreia (o-pis'-tho-po-re'-ah) [ὀπισθεν backward + πορεία walk]. Involuntary walking backward.

opisthorchiasis (o-pis-thor-ki'-as-is). A disease condition of the liver due to the presence of flukes of the genus *Opisthorchis*.

Opisthorchis (o-pis-thor'-kis). A genus of trematodes or flukes characterized by having the testicles near the posterior end of the body. **O. felin-eus**, or Siberian liver fluke is found in the liver of cats and dogs and sometimes in man. Infection takes place through eating fish (*Leuciscus rutilis* and *Idus melanotus*). **O. noverca**, the Indian liver fluke found very commonly in the pariah dogs and also in man. **O. sinensis**, or Asiatic liver fluke, causes the liver fluke disease of Asiatic countries, which affects man as well as cats and dogs. Called also *Distoma sinense* and *Distoma japonicum*. **O. viverini**, a species found in Siam.

opisthotic (o-pis-thot'-ik) [ὀπισθεν behind + οὖς ear]. Situated behind the ear.

opisthotonos (o-pis-thot'-o-nos) [ὀπισθεν behind + τόνος stretching]. A form of tetanic spasm in

Opisthotonos (Littre).

which the head and heels are bent backward and the body bowed forward.

opium (o'-pe-um) [L.; ὄπιον]. The concrete juice of the poppy, *Papaver somniferum*, obtained from slits in the cortex of its capsule: sold in brown cakes and lumps of a strong and peculiar taste and odor. It contains morphine, codeine, narcotine, narceine, thebaine, papaverine, cryptopine, and many other alkaloids, many of them narcotic or otherwise medicinally active. **Medium dose:** Arrests secretions; stimulates the brain; increases cardiac action, and raises arterial tension; contracts the pupil; first stimulates the mind, and then causes sleep. Headache, depression, and constipation follow the sleep. **Pull dose:** Arrests digestion; causes nausea, vomiting, and diaphoresis; lowers nerve conduction; depresses the heart, respiration, and temperature; causes pruritus; contracts the pupil; causes profound stupor (succeeding in some cases to delirium). The after-effects are nausea, pruritus, depression, constipation, vertigo, and anorexia. **Toxic dose:** Cold sweat; slow heart; abolished reflexes; profound coma; pinpoint pupil (which dilates before death), death occurring from paralysis of the respiratory center. Opium is narcotic, soporific, and astringent, and is used to relieve pain of all forms; in insomnia; to check excessive secretions; in inflammation of serous membranes, in spasmodic and irritable conditions; to slow the respiration in heart disease, pleurisy, etc.; to promote perspiration in rheumatism and acute catarrhal conditions; it is also employed locally as an astringent and anodyne. In large doses it is poisonous. Dose of the drug, $\frac{1}{4}$ -1 grain (0.016-0.066 Gm.); of vinegar (*acetum o'pii*), 5-15 minims (0.333-1 cc.); of extract, $\frac{1}{4}$ -1 grain (0.016-0.066 Gm.); of compound solution (*li'quor o'pii compos'itus*), 5-15 minims (0.333-1 cc.); of tincture (*tinctura o'pii*, or laudanum), 5-20 minims (0.333-1.333 cc.); of camphorated tincture, or elixir paregoric, 5-15 minims (0.333-1 cc.); of powder (*opium pulv'eratum*, U. S. P.), $\frac{1}{4}$ -1 grain (0.033-0.066 Gm.); of compound powder, 2-5 grains (0.13-0.33 Gm.); of powdered ipecac and opium (*pul'vis ipecacuan'hae et o'pii*, Dover's powder), which contains 10 per cent each of opium and ipecac, 3-10 grains (0.19-0.66 Gm.); of deodorized tincture, 5-20 minims (0.333-1.333 cc.); of wine (*vinum o'pii*), 5-20 minims (0.333-1.333 cc.). **deodorized o.**, opium deodorized by extracting it with petroleum benzine. **granulated o.**, opium reduced to a coarse powder. **lettuce o.**, lactucarium. **o. pulv'eratum**, the U. S. P. name for powdered opium.

opium habit (o'-pe-um hab'-it). Opiumism.

opiumism (o'-pe-um-izm). The habitual misuse of opium or its consequences.

opo- [ὀπός juice]. A prefix implying a derivation from a juice or serum, usually one of animal origin.

opobalsamum (o-po-bal'sam-um) [ὀπός juice + βάλσαμον balsam]. The true balm of Gilead, or Mecca balsam, produced by *Balsamodendron gileaden'se* or *B. opobal'samum*.

opocephalus (o-po-sef'-al-us) [ὤψ face + κεφαλή head]. A monster with the ears fused, one orbit, no mouth, and no nose.

opocerebrin (o-po-se'-er-brin). A patented therapeutical preparation of the gray brain substance:

used in many nervous and other diseases. Dose, 3-6 grains (0.2-0.4 Gm.).

opodeldoc (o-po-del'dok). Camphorated soap liniment. **liquid o.**, soap liniment.

opodidymus, opodymus (o-po-did'im-us, o-pod'im-us) [ὄψ face + ὀδύμος twin]. A fetus with two fused heads and with the sense organs partly fused.

opophepatoidin (o'po-hep-at-oi'din) [ὄπος juice + ἥπαρ liver]. A proprietary therapeutical preparation of the liver of animals: used in liver diseases. Dose, 8 grains (0.5 Gm.).

opohypophysin (o'po-hi-pof'is-in) [ὄπος juice + ὑπόφυσις]. A proprietary preparation of the hypophysis cerebri: used in acromegaly. Dose, $\frac{3}{4}$ grain (0.04 Gm.).

opoidine (o-poi'din). A preparation containing the mixed alkaloids of opium.

opolaxyl (o-po-lak'sil). A combination of the secretions of the liver, pancreas, and intestines with vegetable extracts: used for constipation.

opolienin (o-po-li'en-in) [ὄπος juice + L. *li'en* spleen]. A proprietary spleen extract: used in leukemia, spleen enlargement, and malarial cachexia. Dose, 20-30 grains (1.3-2 Gm.).

opomammin (o-po-mam'in) [ὄπος juice + L. *mam'ma* breast]. A proprietary extract of animal udders: used in uterine diseases. Dose, 23 grains (1.5 Gm.).

opomedullin (o'po-me-dul'in) [ὄπος juice + L. *medulla* marrow]. A proprietary extract of red bone marrow: used in pernicious anemia, leukemia, chlorosis, etc. Dose, 3-15 grains (0.2-1 Gm.).

opoorchidin (o-po-or'kid-in) [ὄπος juice + ὄρχις testicle]. A proprietary extract of the testicles of animals: used in spinal and nervous diseases. Dose, 8-15 grains (0.5-1 Gm.).

opossein (o-po-os'e-in) [ὄπος juice + L. *os* bone]. A proprietary preparation of yellow bone marrow: for use in rickets and osteomalacia. Dose, 3-15 grains (0.2-1 Gm.).

opovariin (o'po-o-va're-in) [ὄπος juice + *ovary*]. A proprietary extract of animal ovaries: for use in hysteria, chlorosis, and ovarian disease. Dose, 3-12 grains (0.2-0.8 Gm.).

opopancreatin (o-po-pan'kre-at-in) [ὄπος juice + *pancreas*]. A proprietary extract of the pancreas: used for diabetes mellitus. Dose, 3-12 grains (0.2-0.8 Gm.).

opoprostatin (o-po-pros'tat-in) [ὄπος juice + *prostate*]. A proprietary preparation of animal prostate glands: used in hypertrophy of the prostate. Dose, 3 grains (0.2 Gm.).

oporenin (op-o-re'nin) [ὄπος juice + L. *ren* kidney]. A proprietary preparation of animal kidneys: used in uremia and nephritis. Dose, 8-12 grains (0.5-0.8 Gm.).

oposuprarenalin (o'po-su-prah-re-na'lin) [ὄπος juice + *suprarena*]. A proprietary preparation of the suprarenal capsules of animals: used in diabetes mellitus, suprarenal melasma, etc. Dose, 3-6 grains (0.2-0.4 Gm.).

opotherapy (o-po-ther'ap-e) [ὄπος juice + *θεραπεία* treatment]. 1. Treatment by juices. 2. Organotherapy; treatment of disease by the administration of extracts from animals' organs.

opothymmin (o-po-thi'min) [ὄπος juice + *thymus*]. A proprietary preparation of the thymus of young animals: for infantile paralysis, leukemia, etc. Dose, 3-8 grains (0.2-0.5 Gm.).

opothyroidin (o'po-thi-roid'in) [ὄπος juice + *thyroid*]. A proprietary preparation of thyroid glands: used in myxedema, goiter, cretinism, obesity, etc. Dose, $\frac{3}{4}$ -1 $\frac{1}{2}$ grains (0.05-0.1 Gm.).

Oppenheim's disease, sign, syndrome (op'en-himz) [Hermann Oppenheim, neurologist in Berlin, 1858-1919]. See under *disease, sign*.

Oppenheimer treatment (op'en-hi-mer) [Isaac Oppenheimer, physician in New York]. See *treatment*.

opillation (op-il-a'shun) [L. *oppila'tio*]. See *constipation*.

oppilative (op'il-a-tiv). Closing the pores; also constipating.

opponens (op-o'nenz) [L.]. Opposing. See *muscles, table of*.

oppositipolar (o-poz'it-i-po'lar). Having two poles on opposite sides of a cell.

opsialgia (op-se-al'je-ah) [ὄψ face + ἄλγος pain]. Facial neuralgia.

opsinogen (op-sin'o-jen). A substance having the power of forming opsonins.

opsinogenous (op-sin-oj'en-us). Able to form opsonins.

opsiometer (op-se-om'et-er) [ὄψις vision + μέτρον measure]. Same as *opsiometer*.

opsiuria (op-se-u're-ah) [ὄψις food + οὔρον urine]. The condition in which more urine is excreted during fasting than during digestion.

opsogen (op'so-jen). Same as *opsinogen*.

opsonania (op-so-ma'ne-ah) [ὄψον dainty + *mania* madness]. A craving for some special food.

opsone (op'son). Same as *opsonin*.

opsonic (op-son'ik). Pertaining to opsonins. **o. action**, the action opsonins exert on bacteria by which they become subject to phagocytosis. **o. index**. See under *index*.

opsoniferous (op-so-nif'er-us). Bearing opsonin.

opsonification (op-son-if-ik-a'shun). Raising of the opsonic index by inoculation with specific opsonins, thus rendering the organisms more subject to phagocytosis.

opsonify (op-son'if-i). To subject to opsonification.

opsonin (op-so'nin) [ὄψωνεῖν to prepare food for]. A constituent of the blood serum of an animal or of man which by acting on micro-organisms or on red blood corpuscles makes them more liable to be engulfed by the phagocytes. **common, normal, or thermolabile o.**, opsonin normally present in the serum of an uninfected person or an untreated animal. **immune or specific o.**, opsonin developed in the blood serum as a result of infection or injection of organisms. It is more heat resistant than the normal opsonins.

opsonist (op'son-ist). One who is expert in opsonic technic.

opsonization (op-son-iz-a'shun). Same as *opsonification*.

opsonize (op'son-iz). To form opsonins in; to treat with opsonins.

opsonogen (op-son'o-jen). Same as *opsinogen*.

opsonoid (op'so-noid). An opsonin in which the opsonophoric or active element has been destroyed.

opsonology (op-so-no'l'o-j-e). The study of opsonins and opsonic action.

opsonometry (op-so-nom'et-re). The measurement of the amount of opsonin present.

opsonophilia (op'so-no-fil'e-ah) [opsonin + φιλεῖν to love]. Affinity for opsonins.

opsonophilic (op'son-o-fil'ik). Having an affinity for opsonins.

opsonophoric (op'so-no-for'ik). Bearing opsonin; the term applied to that group of an opsonin which acts on the bacterium to render it subject to phagocytosis.

opsonotherapy (op-son-o-ther'ap-e). Treatment by the use of bacterial vaccines to increase the opsonic index of the blood.

optarson (op-tar'son). A proprietary tonic. It is an amino salt of heptinchlorarsenic acid containing about 30 per cent of arsenic and some strychnine.

optesthesia (op-tes-the'zhe-ah) [ὀπτικός pertaining to the eye + αἰσθησις sensation]. Visual sensibility; ability to perceive visual stimuli.

optic, optical (op'tik, op'tik-al) [L. *opticus*; ὀπτικός]. Pertaining to the sight or to the eye; subserving vision.

optician (op-tish'an). A maker of optical instruments or glasses.

opticociliary (op'tik-o-sil'e-a-re). Pertaining to the optic and ciliary nerves.

optocinerea (op'tik-o-sin'e-re-ah) [optic + cinerea]. The gray matter of the optic tract.

opticonasion (op'tik-o-na'se-on). The distance from the posterior edge of the optic foramen to the nasion.

opticopupillary (op'tik-o-pu'pil-a-re). Pertaining to the optic nerve and the pupil.

optics (op'tiks) [ὀπτική]. The science which treats of light and of vision.

optimal (op'tim-al). The best; the most favorable.

optimeter (op-tim'et-er). Same as *optometer*.

optimism (op'tim-izm) [L. *optimus* best]. Insane exaltation of mind; amnesia.

optimum (op'tim-um). 1. That condition of surroundings which is conducive to the most favorable activity of function. 2. Pirquet's term for the amount of food most desirable under given circumstances.

optist (op'tist). A person skilled in optometry.

optoblast (op'to-blast) [ὀπτικός optic + βλάστος germ]. One of the large ganglion cells of the retina.

optocle (op'to-sel) [ὀπτός seen + κωλή cavity]. See *aqueduct* of Sylvius.

optochine (op'to-kin). See *hydrocupreine*, *ethyl hydrochloride*.

optogram (op'to-gram) [ὀπτός seen + γράμμα mark]. The retinal image formed by the bleaching of the visual purple under the influence of light. **epithelial o.**, an optogram in which the pigment epithelium clings to the exposed locality.

optomeninx (op-to-me'ninks) [ὀπτικός optic + μήνιγξ membrane]. The retina.

optometer (op-tom'et-er) [ὀπτός seen + μέτρον measure]. A device for measuring the power and range of vision.

optometrist (op-tom'et-rist). One who practises optometry.

optometry (op-tom'et-re). The measurement of visual acuity and the fitting of glasses to correct visual defects. A term adopted by opticians who prescribe and fit glasses.

optomyometer (op'to-mi-om'et-er) [ὀπτός seen + μῦς muscle + μέτρον measure]. A device used in measuring the power of the ocular muscles.

optone (op'ton). A proprietary organic product, deprived of anaphylaxis-producing elements: used by injection in nonspecific protein therapy.

optophone (op'to-fon) [ὀπτός seen + φωνή voice]. An instrument by means of which light and darkness are made discernible to the blind through their sense of hearing, the light waves being transformed into sound waves.

optostriate (op-to-stri'at). Pertaining to the thalamus opticus and the corpus striatum.

optotype (op'to-tip) [ὀπτός seen + τύπη]. The test types used by an oculist.

Opuntia (o-pun'she-ah). A genus of cacti. *O. vulgaria*, the prickly pear; is used as a remedy in homeopathic practice. **O. dillenii**. See *nagbani*.

ora serrata (o'rah ser-a'tah) [L. "zigzag border"]. The zigzag anterior edge of the retina (*ora serrata retinalis*) [B N A].

oral (o'rad) [L. *os, oris* mouth + *ad* toward]. Toward the mouth.

oral (o'ral) [L. *ora/lis*; *os* mouth]. Pertaining to the mouth.

orale (o-ra'le). The point of the end of the incisive suture on the inner surface of the alveolar process.

oralogy (o-ra'l-o-je) [L. *ora/lis* pertaining to the mouth + λόγος treatise]. The practice of medical and dental cooperation for health; health dentistry; mouth science.

orange (or'anj) [L. *auran'tius*]. The rutaceous tree, *Citrus aurantium*, and its yellow, edible fruit (*aurantii fructus*). There are two varieties: **bitter o.**, or *aurantii amara*, and **sweet o.**, or *aurantii dulcis*. The rind, or peel, of bitter orange (*aurantii amari cortex*) and of sweet orange (*aurantii dulcis cortex*) furnishes a volatile oil (*oleum auran'tii cortex*) which is narcotic and irritant. The flowers of orange furnish a fragrant volatile oil (*oleum auran'tii florum*, or oil of *neroli*). Orange peel is carminative and stimulant, its use being chiefly as a flavoring agent. Dose of fluidextract of bitter orange peel, 1 fluidrachm (4 cc.); of syrup, 1-2 fl.oz. (30-60 cc.); of compound elixir of orange (containing also wormwood, gentian, cascarella, and buckbean), 1-2 fluidrachm (4-8 cc.); of *elixir amara*, 15-30 minims (1-2 cc.); of tincture, 1 fluidrachm (4 cc.); of tincture of sweet orange, 1 fluidrachm (4 cc.); of syrup, 1-2 fl.oz. (30-60 cc.); of *spiritus auran'tii*, 1 fluidrachm (4 cc.); of *elixir aromalicum*, 1-4 fluidrachms (4-16 cc.); of orange flower water, 1 fl.oz. (30 cc.); of syrup of orange flowers, 4-8 fluidrachms (16-32 cc.). **acridine o.**, tetramethyl-acridine, $\text{CH}[\text{N}(\text{CH}_3)_2\text{C}_6\text{H}_3]_2\text{N}$. **ethyl o.**, an indicator with a ϕ_{H} range of 2-4. **o. G.**, an acid azo dye used as a cytoplasmic stain, $\text{C}_6\text{H}_5\text{N}:\text{N}:\text{C}_6\text{H}_4(\text{SO}_2\text{ONa})_2\text{OH}$. **gold o.**, helianthin. **o. III.**, helianthin. **o. IV.**, Same as *tropeolin OO*. **methyl o.**, Poirier's o. Same as *helianthin*. **o. N.**, Same as *tropeolin OO*. **naphthol o.**, tropeolin *OOO*. **wool o.**, orange G.

orargol (or'ar-gol). A proprietary gold-silver colloid for general antiseptics.

orbicular (or-bik'u-lar) [L. *orbicula'ris*]. Circular or rounded.

orbiculare (or'bik-u-la're) [L.]. The orbicular bone; an ossicle of the ear that usually becomes attached to the incus at the head of its long process.

orbicularis (or'bik-u-la'ris) [L.]. See *muscles*, *table of*.

orbiculus cilia'ris [B N A]. Annulus ciliaris; a thin annular membrane on the inside of the eyeball between the ora serrata and the corona ciliaris.

orbit (or'bit) [L. *orbita* track]. The bony socket which contains the eye.

orbita (or'bit-ah). Latin for *orbit*.

orbital (or'bit-al) [L. *orbita/lis*]. Pertaining to the orbit.

orbitale (or-bit-a'le). The lowest point of the inferior edge of the orbit.

orbitonasal (or'bit-o-na'zal). Pertaining to the orbit and the nose.

orbitopagus (or-bit-op-ag-us) [L. *orbita* orbit + πάγος fixed]. A twin monster composed of a small fetus attached to the orbit of the autosite.

orbitotomy (or-bit-ot-o-me) [L. *orbita* orbit + τομή a cut]. The operation of opening into the body orbit.

orcein (or-se'in). A brown coloring matter, $\text{C}_{22}\text{H}_{24}\text{N}_2\text{O}_7$, from orcin: used as a stain.

Orchectomy, orchietomy (or-kek'to-me, or-kek'to-me) [ὄρχις testicle + ἐκτομή excision]. Excision of a testicle.

orchella (or-shel'ah). A histologic stain composed of 5 cc. of acetic acid and 40 cc. each of alcohol and water, colored to a dark red with orchil from which excess of NH_3 has been driven off.

orcheopexy (or'ke-o-pek-se). Same as *orchiopexy*.

orcheoplasty (or'ke-o-plas-te) [ὄρχεα scrotum + πλάσσειν to mold]. Plastic surgery of the scrotum.

orchialgia (or-ke-al'jē-ah) [*ὄρχις testis* + *ἄλγος* pain]. Pain in a testicle.

orchichorea (or'ke-ko-re'ah) [*ὄρχις testis* + *chorea*]. The twitching or jerking movement of a testicle.

orchicithin (or-ke-sith'in). A therapeutical preparation made from testes, used in sexual neurosthenia.

orchidalgia (or-kid-al'jē-ah) [*ὄρχις testicle* + *ἄλγος* pain]. Pain in the testicle.

orchidectomy (or-kid-ek'to-me). See *orchectomy*.

orchidin (or'kid-in) [*ὄρχις testicle*]. A therapeutic fluid preparation of testicles of animals.

orchiditis (or-kid-i'tis). Orchitis.

orchidocelioplasty (or'kid-o-se'le-o-plas-te) [*ὄρχις testicle* + *κοιλία* belly + *πλάσσειν* to form]. The operation of transplanting an undescended testicle to the abdominal cavity.

orchidoncus (or-ki-dong'kus) [*ὄρχις testicle* + *δγκος* tumor]. A tumor of a testicle.

orchidopexy (or-kid-o-peks-e) [*ὄρχις testis* + *πηγνύναι* to fix]. 1. The operation of fixing or suturing the undescended testicle into the scrotum. 2. Prematural fixity of a testis.

orchidoplasty (or'kid-o-plas-te) [*ὄρχις testicle* + *πλάσσειν* to form]. The operation of transplanting an undescended testicle to its proper place in the scrotum.

orchidoptosis (or-kid-op-to'sis) [*ὄρχις testicle* + *πτῶσις* falling]. Falling of the testicle: a condition due to varicocele or relaxation of the scrotum.

orchidorrhaphy (or-kid-or'af-e). Same as *orchiorrhaphy*.

orchidotherapy (or-kid-o-ther'ap-e) [*ὄρχις testicle* + *θεραπεία* treatment]. Use of a testicular extract in treating diseases.

orchidotomy (or-kid-ot'o-me). Same as *orchotomy*.

orchietomy (or-ke-ek'to-me) [*ὄρχις testicle* + *ἐκτομή* excision]. Excision of a testicle.

orchiencephaloma (or'ke-en-sef-al-o'mah) [*ὄρχις testicle* + *encephaloma*]. Encephaloma of the testicle.

orchiepididymitis (or'ke-ep-id-id-im-i'tis) [*ὄρχις testis* + *epididymitis*]. Inflammation of a testicle and an epididymis.

orchilytic (or-ke-lit'ik) [*ὄρχις testicle* + *λυτικός* dissolving]. Splitting up testicular tissue.

orchilocatabasis (or'ke-o-kat-ab'as-is) [*ὄρχις testis* + *κατάβασις* descent]. The descent of the testicles.

orchiocele (or'ke-o-sēl) [*ὄρχις testis* + *κῆλη* hernia]. 1. Hernial protrusion of a testis. 2. Scrotal hernia. 3. Tumor of a testicle.

orchiococcus (or'ke-o-kok'us) [*ὄρχις testis* + *κόκκος* berry]. A diplococcus from gonorrheal orchitis.

orchiodynia (or'ke-o-din'e-ah) [*ὄρχις testis* + *δύνη* pain]. Sharp pain in a testicle.

orchionyeloma (or'ke-o-mi-el-o'mah) [*ὄρχις testicle* + *myeloma*]. Myeloma of the testicle.

orchioncus (or-ke-ong'kus) [*ὄρχις testicle* + *δγκος* tumor]. Tumor of the testicle.

orchioneuralgia (or'ke-o-nu-ral'jē-ah) [*ὄρχις testicle* + *neuralgia*]. Pain in the testicle.

orchiopexy (or-ke-o-pek'se) [*ὄρχις testicle* + *πηξύνειν* fixation]. The operation of fixing in the scrotum an undescended testicle.

orchiopeasty (or'ke-o-plas-te) [*ὄρχις testicle* + *πλάσσειν* to form]. Plastic surgery of the testicle.

orchiorrhaphy (or-ke-or'af-e) [*ὄρχις testis* + *ραφή* suture]. The stitching of a testis to a neighboring tissue, particularly the suturing of an imperfectly descended testicle into the scrotum.

orchioscheocele (or-ke-os'ke-o-sēl) [*ὄρχις testicle* + *κῆλη* hernia]. Scrotal tumor with scrotal hernia.

orchioscirrhus (or'ke-o-skir'us) [*ὄρχις testicle* + *σκιρῶς* hard]. Scirrhous, or hardening of the testicle.

orchiotomy (or-ke-ot'o-me). Same as *orchidotomy*.

orchis (or'kis) [*ὄρχις testis*]. The testis.

Orchis (or'kis). The typical genus of orchidaceous plants. *O. mas'cula* affords salep: various species are medicinal.

orchitic (or-kit'ik). Pertaining to or caused by orchitis.

orchitin (or'kit-in) [*ὄρχις testis*]. A proprietary testicular extract.

orchitis (or-ki'tis) [*ὄρχις testis* + *itis* inflammation]. Inflammation of a testis. The disease is marked by pain, swelling, and a feeling of weight. It may occur idiopathically, but is usually due to gonorrhea, syphilis, or tuberculosis. **o. parotid'ea**, orchitis occurring in mumps. **o. variolo'sa**, orchitis occurring in smallpox.

orchitolytic (or-kit-o-lit'ik) [*ὄρχις testicle* + *λύσις* dissolution]. Destroying the testicular tissue.

orchotomy (or-kot'o-me) [*ὄρχις testis* + *τέμνειν* to cut]. 1. Surgical incision of a testicle. 2. Less correctly, castration, or semicastration; orchectomy.

orcine, **orcinol** (or'sin, or'sin-ol). An antiseptic principle, $\text{CH}_2\text{C}_6\text{H}_3(\text{OH})_2$, or dihydroxytoluene, mainly derived from various lichens. It is a cardiac poison and an antiseptic, and is used like resorcinol in skin diseases.

Ord's operation [William Miller Ord, English surgeon, 1834-1902]. See *operation*.

ordeal bark (or-de'al). The poisonous bark of various trees and shrubs, used by savages in trial by ordeal.

order (or'der). In classification, the main subdivision of a class. See *family*.

orderly (or'der-le). A male nurse or attendant in a hospital.

ordinate (or'din-āt). See under *abscissa*.

ordure (or'dür). Excrement.

oreoselinum (o're-o-se-lin'um) [L.]. An umbelliferous plant of the old world, *Peucedanum oreoselinum*: used in homeopathic practice.

oresol (o-re'sol). An antitubercular preparation of glycerin, guaiacol, and ether.

orexigenic (o-rek-sij-en'ik) [*ὄρεξις* appetite + *γεννᾶν* to produce]. Increasing or stimulating the appetite.

oreximania (o-rek-sim-a-ne-ah) [*ὄρεξις* appetite + *μανία* madness]. Enormous increase in appetite and food intake due to fear of becoming thin.

orexin (o-reks'in). Phenylidihydroquinazolin, a patented quinoline derivative, $\text{C}_8\text{H}_4\text{CH}_2\text{N} \cdot \text{CH} \cdot \text{NC}_6\text{H}_5$, a white, tasteless powder: antiemetic, stomachic, and a stimulant of the appetite. Dose, 2-6 grains (0.13-0.4 Gm.). **o. hydrochloride**, a salt in colorless, bitter crystals. Dose, 2-6 grains (0.13-0.4 Gm.). **o. tannate**, a yellow-white powder insoluble in water: used as a stomachic, appetizer, and antiemetic in anorexia due to general disease, and in the vomiting of pregnancy. Dose, 4-8 grains (0.25-0.5 Gm.).

orexoid (o-reks'oid). A proprietary tablet of orexin tannate.

organ (or'gan) [L. *organum*; *ὄργανον*]. Any part of the body having a special function. **acoustic o.** Same as *o. of Corti*. **cell o.**, a structural part of a cell having some definite function in its life or reproduction, as a nucleus or a centrosome. **cement o.**, the embryonic tissue which develops into the cement layer of the tooth. **o. of Corti**, the terminal acoustic apparatus within the scala media, including the rods of Corti and the auditory cells, with their supporting elements. See *ear*. **enamel o.**, a process of epithelium forming a cap over a dental papilla: from it the enamel

is developed. **end-o.**, any distal nerve structure; an end-bulb, -brush, -bud, -plate, -corpuscle, or other terminus of a nerve branch. **endocrine o's**, the organs of the body which yield internal secretions. See under *secretion*. **o. of Giralde's**, the paradidymus. **Golgi's o's**, neuromuscular spindles. See under *spindle*. **Gye-Barnard o.**, a filtrable virus asserted by Gye and Barnard to be the cause of cancer. **incretory o's**. Same as *endocrine o's*. **Jacobson's o.**, a short rudimentary canal just above the vomeronasal cartilage opening in the side of the nasal septum and passing from there blindly upward and backward. **lateral line o's**, sense organs in the skin of fishes and amphibians, intermediate in type between tactile and auditory organs. **Meyer's o.**, an area of circumvallate papillae on either side of the posterior part of the tongue. **o. of Rosenmüller**, the parovarium or epophoron. **o. of Ruffini**, an end-organ peculiar to the fingertips. **segmental o.**, the pronephros, mesonephros, and metanephros together. **sense o.**, an organ consisting of a nerve and its termination, by which a stimulus is converted into a sensation. **vomeronasal o.** Same as *Jacobson's o.* **Webber's o.**, the sinus parietalis. **o's of Zuckerkandl**, large paraganglia (chromaffin tissue) found in late fetal life and a short time after birth at the origin of the inferior mesenteric artery.

organacidia (or-gan-as-id'e-ah). The presence of an organic acid, especially in the stomach.

organella, organelles (or-gan-el'ah, or-gan-elz'). The minute organs of protozoa concerned in the functions of metabolism, locomotion, etc.

organic (or-gan'ik) [L. *organicus*; *ὀργανικός*]. 1. Pertaining to an organ or the organs. 2. Having an organized structure. 3. Arising from an organism. 4. Pertaining to substances derived from living organisms. **o. chemistry**. See under *chemistry*.

organicism (or-gan'is-izm). The theory that the various organs of the body each has its own special constitution.

organism (or-gan-izm). Any organized body or living economy; any individual animal or plant. **Ricketts' o.** See *Rickettsia*. **Siegel's o.**, a coccus-like organism from the blood and tissues of a calf affected with vaccinia; called by Siegel *Cytorrhyctes cocci*.

organization (or'gan-iz-a'shun). 1. The process of organizing or of becoming organized. 2. Any organism or organized body.

organize (or'gan-iz). To provide with an organic structure; to form into organs.

organocalie (or'gan-no-ka'le). Elective localization.

organofaction (or'gan-o-fak'shun). The formation and development of an organ.

organoferric (or-gan-o-fer'ik). Containing iron and some organic compound.

organogel (or-gan-o-jel). A gel in which an organic liquid takes the place of water.

organogen (or-gan'o-jen). Any one of the chemical elements—carbon, hydrogen, oxygen, nitrogen, sulphur, phosphorus, and chlorine—characteristic of organic substances.

organogenesis, organogeny (or'gan-o-jen'es-is, or-gan-o-j'en-e) [*ὀργανογεν* organ + *γένεσις* generation]. The development or growth of organs.

organogenetic (or'gan-o-jen-et'ik). Pertaining to organogenesis.

organogenic (or-gan-o-jen'ik). Organogenetic.

organography (or-gan-og'rag-e) [*ὀργανογραφία* organ + *γράφειν* to write]. A description of the organs of a living body.

organoid (or-gan-oid) [*ὀργανοειδής* organ + *εἶδος* form]. Resembling an organ.

organolectic (or-gan-o-lep'tik) [*ὀργανολεπτικός* organ + *λαμβάνειν* to seize]. 1. Making an impression

on an organ of special sense. 2. Capable of receiving a sense impression. **o. test**. See under *tests*.

organology (or-gan-ol'o-je) [*ὀργανολογία* organ + *λόγος* word]. The sum of what is known regarding the organs of the body.

organoma (or-gan-o'mah). A tumor composed of organs or definite portions of an organ, or characterized by the presence in it of definite organs, as a dermoid cyst.

organometallic (or-gan-o-met-al'ik). Consisting of a metal in combination with an organic radical.

organon (or-gan-on) [L.]. An organ. **o. auditus** [B N A], the organ of hearing. **o. gustus** [B N A], the organ of taste. **o. olfactus** [B N A], the organ of smell. **o. parenchymatosum**, a parenchymatous organ. **o. spirale** [corti] [B N A], the organ of Corti. **o. visus** [B N A], the organ of vision. **o. vomeronasale** [jacobsoni] [B N A]. See *Jacobson's organ*, under *organ*.

organonomy (or-gan-on'o-me) [*ὀργανονομία* organ + *νόμος* law]. The laws of organic life and of living organisms.

organonymy (or-gan-on'im-e) [*ὀργανονομία* organ + *ὄνομα* name]. The nomenclature of the bodily organs.

organopathy (or-gan-op'ath-e) [*ὀργανοπάθεια* disease]. 1. Organic disease. 2. Organotherapy.

organopexia, organopexy (or'gan-o-peks'e-ah, or-gan-o-peks-e) [*ὀργανοπέξη* organ + *πηνύναμι* to fix]. The surgical fixation of an organ, especially of the uterus after excision of a fibroid.

organopexil (or'gan-o-peks'il). A method of enucleating fibroid growths.

organophil, organophilic (or-gan'o-fil, or-gan-o-fil'ik) [*ὀργανοφιλή* organ + *φιλέειν* to love]. Having or manifesting organophilism.

organophilism (or-gan-of'il-izm). Having an affinity for certain organs or tissues of the body.

organoscopy (or-gan-os'ko-pe) [*ὀργανοσκοπία* organ + *σκοπεῖν* to examine]. Examination of the abdominal viscera by means of a cystoscope inserted through an epigastric incision.

organosol (or-gan'o-sol). 1. A colloidal solution in which the continuous phase is an organic solvent, as alcohol, ether, benzene, etc. 2. A proprietary agent said to be an alcoholic solution of colloidal silver: used for gonorrhea.

organotaxis (or'gan-o-tax'is) [*ὀργανοτάξις* arrangement]. A tendency to elective migration to some particular organ.

organotherapy (or'gan-o-ther'ap-e) [*ὀργανοθεραπεία* therapy]. The treatment of disease by the administration of animal organs or their extracts. See *opotherapy*. **heterologous o.**, organotherapy with substances that have no relation to the diseased organ of the patient. **homologous o.**, organotherapy by extractives of the organs of animals corresponding to the diseased organ of the patient.

organotrope, organotropic (or-gan'o-tröp, or-gan-o-trop'ik) [*ὀργανοτρόπος* organ + *τρόπος* turning]. Having an affinity for certain tissues of the body. See *parasitotrope* and *chemotherapy*.

organotrophic (or-gan-o-trof'ik). Relating to the nutrition of organs of the body.

organotropism (or-gan-ot'ro-pizm). Organotropy.

organotropy (or-gan-ot'ro-pe) [see *organotrope*]. The chemical affinity of substances for certain organs or tissues of the body.

orgasm (or'gazzm) [*ὀργασμός* swelling, or *ὀργάνωσις* to swell, to be lustful]. The crisis of venereal excitement.

orgeat (or'zhat). An emulsion of almonds, used as a cooling nutritious drink.

Oribasius (or-e-ba'se-us). A celebrated physician, born about 325 A. D., at Pergamos. He was physician to the Emperor Julian. He wrote a work in seventy books entitled "Medicinalia Collecta," which is chiefly a compilation from Galen and other writers. Died about 400 A. D.

oridine (or'id-in). The trade name of the calcium salt of the iodized fatty acids of cottonseed oil: used like the inorganic iodides, the iodine content of 1 Gm. oridine being equivalent to sodium iodide 0.28 Gm. and to potassium iodide, 0.31 Gm.

oriental boil (o-re-en'tal). See *Furunculus orientalis*.

orientalism (o-re-en'tal-izm). The condition of taking on the appearance of an oriental.

orientation (o're-en-ta'shun) [L. *oriens* arising]. The determination of the east point; hence, the determination of one's position with respect to surrounding objects.

orifice (or-if-is) [L. *orificium*]. 1. The entrance or outlet of any bodily cavity. 2. Any foramen, meatus, or opening. **cardiac o.**, the opening of the esophagus into the stomach. **mitral o.**, the left auriculoventricular opening.

orificial (or-if-ish'al). Pertaining to an orifice.

orificialist (or-if-ish'al-ist). One who treats disease by dilating or otherwise operating upon the external orifices of the body.

orificium (or-if-ish'e-um). Latin for *orifice*. **o. externum uteri** [B N A], the external os, or vaginal opening of the uterus. **o. internum uteri** [B N A], the internal os uteri. **o. ureteris** [B N A], the opening of the ureter in the bladder. **o. urethrae externum** [B N A], the urinary meatus of the penis. **o. urethrae internum** [B N A], the internal opening of the urethra. **o. vaginæ** [B N A], the narrowest portion of the vagina.

Origanum (o-rig'an-um) [L.; *ὀρίγανον*]. A genus of labiate plants. *O. vulgare*, wild marjoram, affords a stimulant volatile oil (*o'leum origani*): used mainly in veterinary practice and in liniments. *O. majorana*, sweet marjoram, also affords a similar oil (*o'leum majoranae*).

origin (or'i-j-in) [L. *origo* beginning]. The source or beginning of anything, especially the more fixed end or attachment of a muscle, as distinguished from its insertion. **apparent o.**, **ectal o.**, **superficial o.**, the point at which a cranial nerve emerges from the surface of the brain. **deep o.**, **ental o.**, the true beginning of the brain fibers of a nerve within the substance of the brain.

orinasal (or-in-a'zal). See *aromasal*.

orinotherapy (o-ri-no-ther'ap-e) [*ὀρενός* pertaining to mountains + *θεραπεία* treatment]. Treatment by living in high, mountainous regions.

ormizet (or-miz-et'). A proprietary astringent preparation of clay saturated with formic acid.

ormosine (or'mo-sin). A white, crystalline alkaloid, $C_{29}H_{23}N_3$, from the seeds of *Ormosia dasycarpa*, a leguminous tree of South America. Its hydrochloride is narcotic and sedative.

ornithin (or'nith-in) [*ὄρνις* bird]. An amino-acid, diamino-valerianic acid, $NH_2(CH_2)_3.CH(NH_2).CO_2H$, obtained from arginine by splitting off urea; it is found in the urine and excrement of fowls. On decomposition it gives rise to putrescine and with urea it forms arginine.

Ornithodorus (or'nith-o-do'rus). A genus of ticks. **O. coriaceus**, the pajaroello of California which is greatly feared because of its bite. The bite is painful, slow to heal, and usually leaves an ugly scar. **O. megnini**, the spinous ear tick of southern California and Mexico. It produces great annoyance to man and to the domestic animals. Called also *Otobius megnini*. **O. moubata**, the tamping tick of South Africa. It is the transmitter of *Spirochaeta duttoni* and possibly also of *Filaria persiana*. It is called also *Cara-*

patos. **O. savignii**, a species found in Abyssinia, Arabia, and India in human habitations. It is thought to transmit a form of relapsing fever found there.

O. talaje, a species found in Mexico and Central America on both human beings and rats. It carries the relapsing fever spirochete found in Panama. **O. tholosaui**, a species found in Persia and thought to transmit African relapsing fever. **O. turicata**, a species common in Mexico and in Central America. It carries the relapsing fever found in Columbia. Called also *caropato*. **O. venezuelensis**, a species prevalent in northern South America which attacks man and may transmit relapsing fever.

Ornithodorus moubata (after Chandler).

orodiagnostics (or'o-di-ag-no'sis). Serum diagnosis. See under *diagnosis*.

oro-immunity (o'ro-im-u'nit-e) [*ὄρος* serum + *immunity*]. Passive immunity.

orokinase (o-ro-kin'as) [L. *os*, *oris* mouth + *kinase*]. A kinase produced by the buccal glands of certain animals which converts inactive ptyalin into active ptyalin.

orolingual (o-ro-lin'gwal) [L. *os* mouth + *lin'gua* tongue]. Pertaining to the mouth and tongue.

oromeningitis. See *orrhomeningitis*.

oronasal (o-ro-na'zal) [L. *os* mouth + *na'sus* nose]. Pertaining to the mouth and nose.

oronol (o'ro-nol). A proprietary liquid antiseptic soap containing formaldehyde, glycerin, and eucalyptus oil.

oropharynx (o-ro-far'inks) [L. *os* mouth + *pharynx*]. 1. The mouth and pharynx regarded as one cavity. 2. The space between the faucial arches. 3. The pharynx proper as distinguished from the nasopharynx.

orotherapy (o-ro-ther'ap-e) [*ὄρός* whey + *θεραπεία* treatment]. 1. Whey cure; the treatment of disease by administering whey. 2. Serum therapy. See *serotherapy*.

oroxylin (o-roks'il-in). An antirheumatic agent in bright yellow crystals.

Oroya fever (o-ro'yah). See under *fever*.

orphol (or'fol). Bismuth beta-naphtholate.

orpiment (or'pim-ent) [L. *auri pigmentum*]. Arsenic trisulphide, As_2S_3 ; king's yellow: used mainly as a depilatory.

orrhodiagnostics (or'o-di-ag-no'sis). See *orodiagnostics*.

orrhho-immunity (or'o-im-u'nit-e) [*ὀρρῆς* serum + *immunity*]. Passive immunity.

orrhology (or-ol'o-je) [*ὀρρῆς* serum + *λόγος* treatise]. The scientific study of serums; serology.

orrhomeningitis (or'o-men-in-jit'is) [*ὀρρῆς* serum + *meningitis*]. Inflammation of a serous membrane.

orrhoreaction (or'o-re-ak'shun) [*ὀρρῆς* serum + *reaction*]. Seroreaction.

orrhorrhea, **orrhorrhoea** (or-ro-re'ah) [*ὀρρῆς* serum + *ῥεῖν* to flow]. A watery or serous discharge.

orrhotherapeutic (or'o-ther-ah-pu'tik). Pertaining to or of the nature of orrhoterapy.

orrhotherapy (or-ro-ther'ap-e) [*ὀρρῆς* serum + *therapy*]. The therapeutic use of serums.

orris (or'is). The rhizome or root of Florentine iris, *Iris florentina*: used in dentifrices, perfumes, etc. See *Iris*.

Orsi-Grocco method (or-se-grok'o) [Francesco Orsi; Pietro Grocco, Italian physicians]. Palpatory percussion of the heart.

Orskov method (ors'kov) [J. Orskov]. See under *method*.

orsudan (or'su-dan). A proprietary preparation, sodium 3-methyl-4-acetyl-amino-phenylarsionate: used in all protozoan diseases. Dose, by injection into the muscles, 10 grains (0.6 Gm.).

orthin (or'thin). Orthohydrazineparaoxybenzoic acid, $\text{NH}_2\cdot\text{NH}\cdot\text{C}_6\text{H}_3(\text{OH})\cdot\text{COOH}$. Its hydrochloride, a salt in colorless crystals, is a dangerous antipyretic. Dose, 5-8 grains (0.3-0.52 Gm.).

Orth's stains (orths) [Johannes Orth, pathologist in Berlin, 1847-1923]. See under *stains*, table of.

ortho- [örthós straight]. A prefix meaning straight or normal. In chemistry, this prefix indicates an isomer; also a cyclic derivative which has two substituents in adjacent positions.

ortho-acid (or-tho-as'id). An acid containing as many hydroxyl groups as the valence of the acidulous element.

ortho-arteriotomy (or''tho-ar-te-re-ot'o-ne) [örthós straight + ἀρτηρία artery + τόμος tone]. Normal arterial pressure.

orthobiosis (or''tho-bi-o'sis) [örthós straight + βίος life]. Proper living; living in accordance with all the laws of health.

orthocephalic, orthocephalous (or''tho-sef-al'ik, or-tho-sef'al-us) [örthós straight + κεφαλή head]. Having a head with a height-length index of from 70 to 75.

orthochlorophenol (or''tho-klo-ro-fe'no'l). An agent, $\text{C}_6\text{H}_4(\text{Cl})\text{OH}$, employed in the treatment of lupus.

orthochlorosalol (or''tho-klo-ro-sal'ol). A strongly fragrant substance, $\text{OH}\cdot\text{C}_6\text{H}_4\cdot\text{CO}\cdot\text{OC}_6\text{H}_4\cdot\text{Cl}$, isomeric with chlorosalol.

orthochorea (or''tho-ko-re'ah) [örthós straight + chorea]. Chorea movements in the erect posture.

orthochromatic (or''tho-kro-mat'ik). Normally colored or stained.

orthochromophil (or-tho-kro'mo-fil) [örthós correct + χρώμα color + φιλέω to love]. Staining normally with neutral stains.

orthocol (or'tho-kol). See *thiocol*.

orthocrasia (or-tho-kra'se-ah) [örthós correct + κράσις temperament]. A state in which the body reacts normally to ingested or injected drugs, proteins, etc.

orthocresalol (or-tho-kre'sal-ol). See *cresalol*.

orthocresol (or-tho-kre'sol). One of the three isomeric forms of cresol.

orthocytosis (or''tho-si-to'sis) [örthós correct + κύτος cell]. Presence of mature cells only in the blood.

orthodontist (or-tho-den'tist). Orthodontist.

orthodiagram (or-tho-di'ag-ram). The print or record made by an orthodiagraph.

orthodiagraph (or-tho-di'ag-raf) [örthós straight + διά through + γράφειν to write]. A radiographic apparatus for recording accurately the form and size of structures inside the body, doing away with the distortion of the ordinary roentgen-ray plate.

orthodiagraphy (or''tho-di-ag'raf-e). The use of the orthodiagraph.

orthodinitrocresol (or''tho-di'ni-tro-kre'sol). Same as *antionnin*.

orthodont (or'tho-dont). Having normal teeth.

orthodontia (or-tho-don'she-ah) [örthós straight + ὀδούς tooth]. The department of dentistry which deals with the prevention and correction of irregularities of the teeth and malocclusion.

orthodontic (or-tho-don'tik). Pertaining to orthodontia.

orthodontics (or'tho-don'tiks). Same as *orthodontia*.

orthodontist (or-tho-don'tist). A dentist who specializes in orthodontia.

orthodontology (or-tho-don-to'l-o-je). Same as *orthodontia*.

orthodonture (or-tho-don'tshur). Same as *orthodontia*.

orthoform (or'tho-form). A white crystalline powder, methyl-*m*-amino-*p*-oxybenzoate, $\text{NH}_2\cdot\text{C}_6\text{H}_3(\text{OH})\cdot\text{CO}\cdot\text{OCH}_3$, odorless and tasteless—a kind of synthetic cocaine. It is soluble in alcohol and ether, but only slightly so in water: it is a local anesthetic and antiseptic, free from toxic effects. It is used internally in ulcer and cancer of the stomach, and in wounds, burns, and ulcers in the form of an ointment. Dose, $7\frac{1}{2}$ -15 grains (0.5-1 Gm.). **o. hydrochloride**, a crystalline salt: a local anesthetic.

orthogenesis (or-tho-jen'es-is) [örthós straight + γένεσις descent]. 1. Progressive evolution in a given direction, in contrast with variations in several directions. 2. The theory that the course of evolution is fixed and predetermined; monogenesis.

orthogenics (or-tho-jen'iks) [örthós correct + γενικός concerning reproduction]. Eugenics.

orthoglycemic (or''tho-gli-se'mic) [örthós correct + γλυκός sweet + αἷμα blood]. Having the normal amount of sugar in the blood. **o. glycosuria**. See *glycosuria*.

orthognathous (or-thog'na-thus) [örthós straight + γνάθος jaw]. Having a gnathic index of less than 98 degrees.

orthograde (or'tho-gräd) [örthós straight + ἰ. grad' to walk]. Carrying the body upright in walking.

ortho-iodoxybenzoic (or''tho-i'o-dox'e-ben-zo'ik). See *iodoxybenzoic acid*, under *acid*.

ortholiposis (or''tho-lip-o'sis) [örthós straight + ἵψις]. The normal proportion of liposin in the serum of the blood.

orthomelic (or-tho-me'lik) [örthós straight + μέλος limb]. Correcting deformities of the limbs.

orthometer (or-thom-et-er) [örthós straight + μέτρον measure]. An instrument for finding the relative protrusion of the two eyeballs.

orthomethylacetanilid (or-tho-meth-il-as-et-an'il-id). Exalgin.

orthomonochlorphenol (or''tho-mo'no-klor-fe'no'l). A compound, $\text{Cl}\cdot\text{C}_6\text{H}_4\cdot\text{OH}$, recommended in the treatment of nasal diseases. It is locally anesthetic.

orthomorphia (or-tho-mor'fe-ah) [örthós straight + μορφή form]. The surgical and mechanical correction of deformities.

orthonal (or'tho-nal). A dental anesthetic containing cocaine hydrochloride, alypin, epinephrine hydrochlorate and physiologic solution of sodium chloride.

orthoneutrophil, orthoneutrophile (or-tho-nu'tro-fil, -fil). Same as *orthochromophil*.

orthopedia (or-tho-pe'de-ah). Orthopedics.

orthopedic (or-tho-pe'dik) [örthós straight + παῖς child]. Pertaining to the correction of deformities; pertaining to orthopedics.

orthopedics (or-tho-pe'diks) [örthós straight + παῖς child]. That branch of surgery which deals with the correction of deformities and with the treatment of chronic diseases of the joints and spine. **dental o.**, correction of deformities or irregularities of teeth; orthodontia of children's teeth.

orthopedist (or-tho-pe'dist). An orthopedic surgeon.

orthopercussion (or''tho-per-kush'un) [örthós straight + percussio]. Percussion in which the distal phalanx of the pleximeter finger is held perpendicularly to the chest wall.

Orthopercussion (Külbs).

orthophony (or-thof'o-ne) [ὀρθός straight + φωνή voice]. The direct and correct production of sound.

orthophoria (or-tho-fō're-ah) [ὀρθός straight + φέρειν to bear]. The normal or proper placement of organs; normal adjustment and equilibrium of eye muscles. **asthenic o.**, general weakness of the eye muscles.

orthoplastocyte (or-tho-plas'to-sīt) [ὀρθός straight + πλαστοκύττε]. A normal blood plate.

orthoplessimeter (or-tho-ples-im'tet-er). An instrument to take the place of the pleximeter finger in orthopercussion.

orthopnea, orthopnoea (or-thop-ne'ah) [ὀρθός straight + πνέω, πνέω breathe]. Inability to breathe except in an upright position.

orthopneic (or-thop-ne'ik). Pertaining to or marked by orthopnea.

orthopraxy, orthopraxis (or'tho-praks-e, or-tho-praks'is) [ὀρθός straight + πράσσειν to make]. The mechanical correction of deformities.

orthopsychiatry (or-tho-si-ki'at-re) [ὀρθός straight + ψυχιατρική]. The study and treatment of disorders of behavior.

Orthoptera (or-thop'ter-ah) [ὀρθός straight + πτέρω wing]. An order of biting insects which do not undergo metamorphosis. They include the grasshoppers, locusts, crickets, and cockroaches.

orthoptic (or-thop'tik) [ὀρθός straight + ὀπτικός optic]. Correcting obliquity of one or both visual axes.

orthorhombic (or-tho-rom'bik). Having three unequal axes intersected at right angles.

orthoroentgenography (or''tho-rent-gen-og'-raf-e). Same as *orthodiagraphy*.

orthoscope (or'tho-skōp) [ὀρθός straight + σκοπεῖν to view]. An apparatus which neutralizes the corneal refraction by means of a layer of water; it is used in examining the eye.

orthoscopic (or'tho-skōp'ik). Affording a correct and undistorted view.

orthoscopy (or-thos'ko-pe). Examination of the eye by means of the orthoscope.

orthosis (or-tho'sis) [ὀρθωσις; 'ὀρθός straight]. The straightening of a distorted part.

orthoskiagraph (or-tho-ski'ag-raf). Orthodiagraph.

orthoskiagraphy (or'tho-ski-ag'raf-e). Orthodiagraphy.

orthostatic (or-tho-stat'ik) [ὀρθός straight + στατικός causing to stand]. Pertaining to or caused by standing erect.

orthostatism (or'tho-stat-izm). An erect standing position of the body.

orthotast (or'tho-tast) [ὀρθός straight + τάσσειν to arrange]. An apparatus for straightening curvatures of bones.

orthoterion (or-tho-te're-on) [ὀρθωτήρ straightener]. A device for use in straightening crooked limbs.

orthotherapy (or-tho-ther'ap-e) [ὀρθός straight + θεραπεία]. Treatment of disorders by correction of posture.

orthotic (or-thot'ik). 1. Pertaining to orthosis. 2. Orthostatic.

orthotonos (or-thot'o-nus). Orthotonus.

orthotonus (or-thot'o-nus) [ὀρθός straight + τόνος tension]. A spasm which fixes the head, body, and limbs in a rigid straight line.

orthotropic (or-tho-trop'ik) [ὀρθός straight + τρέπειν to turn]. Ascending into the abdominal or other cavity.

orthotypoid (or-tho-ti'foid). Normal typhoid fever as distinguished from paratyphoid.

orthuria (or-thu're-ah) [ὀρθός straight + οὐρὸν urine]. Normal frequency of urination.

ortizon (or'tiz-on). A proprietary solid hydrogen peroxide, consisting of hydrogen peroxide and carbamide prepared in the form of pencils. The pencils are to be inserted into a wound, in which they give off oxygen.

orypan (or'i-pan) [ὀρυζα a rice + L. pa'nis bread]. A proprietary rice bread preparation

Oryza (o-ri'zah) [L.; ὀρυζα rice]. A genus of cereal plants. *O. sativa* produces rice.

oryzanin (o-ri'zan-in) [ὀρυζα rice]. An extractive from rice bran.

O. S., o. s. Abbreviation for *L. oculus sinis'ter*, left eye.

Os. The chemical symbol of *osmium*.

os (os), gen. *os'ris*, pl. *o'ra*. Latin for *mouth* [B N A].

o. exter'num, the orifice of the vagina. **granular o.**, an os uteri covered with granulation due to chronic endometritis. **o. uteri exter'num**, **o. tin'cae**, the lower or distal extremity of the canal of the cervix uteri. **o. uteri inter'nun**, the internal or upper orifice of the canal of the cervix uteri. **o. ventric'uli**, the cardiac or esophageal orifice of the stomach.

os (os), gen. *os'sis*, pl. *os'sa*. Latin for *bone*. **o.**

acetab'uli, the fetal bone which becomes the pubic portion of the acetabulum. **o. basila're** [B N A], the basilar process of the occipital bone. **o. bre've**, a short bone. **o. cal'cis**, the calcaneus or heel bone. **o. capita'tum** [B N A], the os magnum. **o. centra'le**, an accessory bone sometimes found on the back of the carpus. **o. coc'cygis** [B N A], the coccyx. **o. coro'nae**, the small paster bone of the horse. **o. costa'le**, a rib bone. **o. cor'ae** [B N A], **o. innomina'tum**, the innominate bone. **o. cuboi'deum** [B N A], a cuboid bone. **o. cuneifor'me**, the cuneiform bone. **o. cuneifor'me prim'um** [B N A], the internal cuneiform bone of the tarsus. **o. epi'tympan'icum**, a bone of very early fetal life which becomes the posterior portion of the squama that aids in forming the mastoid cells. **o. eth-moida'le** [B N A], the ethmoid bone. **o. fron-ta'le** [B N A], the frontal bone. **o. hama'tum** [B N A], the unciform bone. **o. hmoi'deum** [B N A], the hyoid bone. **o. il'i**, the ilium. **o. in'cae**, the interparietal bone. **o. incisi'vum** [B N A], the intermaxillary bone. **o. is'chi** [B N A], the ischium. **o. lacrima'le** [B N A], the lacrimal bone. **o. lon'gum**, a long bone. **o. luna'tum** [B N A], the semilunar bone. **o. mag'num**, the third bone in the second or distal row of the carpus. **o. mastoi'deum**, the mastoid bone. **o. metacarpa'le** [B N A], a metacarpal bone. **o. metatarsa'le** [B N A], a metatarsal bone. **o. multan'gulum maj'us** [B N A], the trapezium. **o. multan'gulum mi'nus** [B N A], the trapezoid bone. **o. nasa'le** [B N A], the nasal bone. **o. navicula're**, the scaphoid bone. **o. navicula're pe'dis retar-da'tum**. See *Kohler's disease*, under *disease*. **o. occipita'le** [B N A], the occipital bone. **o. orbicula're**, a bonelet of the ear which usually becomes joined to the incus. **o. palati-num** [B N A], the palate bone. **o. parieta'le** [B N A], the parietal bone. **o. pe'dis**, the coffin bone of the horse. **o. pe'nis**, a bony structure in the glans penis of many mammals. Such a structure is occasionally found in man. **o. pisifor'me** [B N A], the pisiform bone. **o. pla'num**. 1. A flat bone. 2. The orbital plate of the ethmoid bone. **o. pneumat'icum** [B N A], a hollow bone. **o. pri'api**. Same as *o. penis*. **o. pu'bis** [B N A], the pubis or pubic bone. **o. sa'crum** [B N A], the sacrum. **o. sedenta'rium**, the ischium. **o. sphenoida'le** [B N A], the sphenoid bone. **o. tempora'le** [B N A], temporal bone. **o. tibia'le exter'nun**, a small anomalous bone situated in the angle between the navicular bone and the head of the talus. **o. trigo'nium** [B N A], an external tubercle at the back of the astragalus, sometimes occurring as a

- separate bone. **o. triquetrum** [B N A], the cuneiform bone. **o. unguis**, the lacrimal bone. **o. vesalianum pedis**, the proximal and external part of the tuberosity of the fifth metatarsal. **o. zygomaticum** [B N A], the malar bone.
- osazone** (os'a-zōn). Any one of a series of compounds obtained by heating a sugar with phenylhydrazine and acetic acid.
- oscedo** (os-se'do) [L.]. An act of yawning.
- oscheal** (os'ke-al) [δσχεον scrotum]. Pertaining to the scrotum.
- oscheitis** (os-ke-i'tis) [δσχεον scrotum + -itis inflammation]. Inflammation of the scrotum.
- oscheocele** (os'ke-o-sēl) [δσχεον scrotum + κήλη tumor]. Tumor or swelling of the scrotum; also scrotal hernia.
- oscheohydrocele** (os'ke-o-hi'dro-sēl) [δσχεον scrotum + hydrocele]. Hydrocele in the sac of a scrotal hernia.
- oscheolith** (os'ke-o-lith) [δσχεον scrotum + λίθος stone]. A concretion in the sebaceous glands of the scrotum.
- oscheoma** (os-ke-o'mah) [δσχεον scrotum + -ωμα tumor]. A tumor of the scrotum.
- oscheoncus** (os-ke-on'g'kus) [δσχεον scrotum + γκος tumor]. Same as *oscheoma*.
- oscheoplasty** (os'ke-o-plas-te) [δσχεον scrotum + πλάσσειν to mold]. Plastic surgery of the scrotum.
- oschitis** (os-ki'tis). Same as *oscheitis*.
- Oscillaria** (os-il-a're-ah). A genus of *Algae*. **O. mala'riae**, the plasmodium of malaria.
- oscillator** (os'il-a-tor). An instrument used in the mechanical treatment of disease.
- oscillogram** (os'il-o-gram). The graphic record made by an oscillograph.
- oscillograph** (os'il-o-graf) [L. *oscilla're* to swing + γράφειν to write]. An instrument for recording electric oscillations. Such an instrument, working on the plan of a string galvanometer, is used in recording the action of the heart.
- oscillometer** (os-il-om'et-er). An instrument for measuring oscillations of any kind, especially those of the blood stream. Same as *sphygmo-oscillometer*.
- oscillometry** (os-il-om'et-re). The use of the string galvanometer or similar apparatus.
- oscin** (os'in). A substance, $\text{CH}_2\text{C}_6\text{H}_5\text{O}(\text{OH})\text{N}.\text{CH}_3$, formed by the decomposition of hyoscine.
- Os'cinis pal'lipes**. A fly that transmits yaws.
- oscite** (os'it-āt). To yawn.
- oscitation** (os-it-a'shun) [L. *oscula'tio*]. The act of yawning.
- oscodal** (os'ko-dal). A proprietary preparation of a cod liver oil extract stated to contain the vitamin A and vitamin D elements.
- osculum** (os'ku-lum), pl. *os'cula* [L.]. Any small aperture or minute opening.
- öse** (a'ze) [Ger.]. A loop at the end of a platinum wire inserted into a glass handle. Same as *oesce*.
- ose**. A suffix indicating that the substance is a sugar.
- osis**. A termination denoting a disease or morbid process; sometimes a process not morbid.
- Osgood's disease** (os'goodz) [Robert Bayley Osgood, Boston orthopedist, born 1873]. See *Schlatter's disease*, under *disease*.
- Osler's disease, phenomenon, sign** (ös'lerz) [Sir William Osler, Regius professor of medicine in the University of Oxford, 1849-1919]. See *erythremia, phenomenon*, and *sign*.
- osmatic** (os-mat'ik) [δσμάειν to smell]. Having the sense of smell.
- osmazome** (os'maz-ōm) [δσμή odor + ζωμός broth]. A principle derivable from muscular fiber which gives the peculiar flavor and odor to roast meats and gravies.
- osmesthesia** (os-mes-the'zhe-ah) [δσμή odor + αἴσθησις sensation]. Olfactory sensibility; ability to perceive and distinguish odors.
- osmic** (os'mik). Containing osmium. See *acid*.
- osmicate** (oz'mik-āt). To stain or impregnate with osmic acid.
- osmics** (oz'miks) [δσμή odor]. The science of smell.
- osmidrosis** (os-mid-ro'sis) [δσμή odor + ιδρώς sweat]. A condition in which the sweat has an abnormally strong odor.
- osmium** (os'me-um) [δσμή odor: one of its oxides has a very strong smell]. 1. A very hard, gray, and nearly infusible metal; atomic weight, 190.9; symbol, Os. See *acid*, *osmic*. 2. A homeopathic trituration of metallic osmium. **o. tetroxide**, a crystalline compound used for staining histologic preparations.
- osmodyspshoria** (os'mo-dis-fo're-ah) [δσμή smell + δυο-ῖλ + φέρειν to bear]. An intense and abnormal dislike of certain odors.
- osmogen** (os'mo-jen) [ὠσμός impulse + γεννᾶν to produce]. An embryo ferment, or one from which an active ferment is developed.
- osmolagnia, osmolagny** (oz-mo-lag'ne-ah, oz-mo-lag'ne) [δσμή smell + λαγνεία lust]. Sexual excitation produced by odor.
- osmology** (os-mol'o-je) [δσμή smell + λόγος treatise]. 1. Same as *osphresiology*. 2. That branch of physics that treats of osmosis.
- osmometer** (os-mom'et-er). 1. [ὠσμός impulse + μέτρον measure]. A device for testing or exhibiting osmotic force. 2. [δσμή smell + μέτρον measure]. An instrument for measuring the acuteness of the sense of smell.
- osmonosology** (os'mo-nos-ol'o-je) [δσμή smell + nosology]. The study of disorders of the sense of smell.
- osmophilic** (os-mo-fil'ik) [osmosis + φιλεῖν to love]. Readily subject to osmosis.
- osmoregulator** (os-mo-reg'u-la-tor). An instrument for regulating the penetrating power of roentgen rays.
- osmose** (os'mōs). See *osmosis*.
- osmosis** (os-mo'sis) [ὠσμός impulsion]. The passage of pure solvent from the lesser to the greater concentration when two solutions are separated by a membrane which selectively prevents the passage of solute molecules, but is permeable to the solvent.
- osmosum** (os-mo'sum). A proprietary antiphlogistic and anodyne preparation of aluminum silicate, glycerin, and antiseptics; used externally.
- osmotaxis** (os-mo-tak'sis) [osmosis + τάξις arrangement]. The movement of cells as affected by the density of the liquid containing them.
- osmotherapy** (oz-mo-ther'ap-e) [osmosis + therapy]. Treatment by the intravenous injection of hypertonic solutions.
- osmotic** (os-mot'ik). Pertaining to or of the nature of osmosis. **o. pressure**. See under *pressure*.
- osone** (o'sōn). A compound formed by the action of hydrochloric acid on osazone, and capable of being converted into a ketone.
- osphresiology** (os'fre-ze-ol'o-je) [δσφρησις smell + λόγος treatise]. The sum of knowledge regarding odors and the sense of smell.
- osphresimeter** (os'fre-ze-om'et-er) [δσφρησις smell + μέτρον measure]. An instrument for measuring the acuteness of the sense of smell.
- osphresis** (os-fre'sis) [δσφρησις smell]. The sense of smell.
- osphretic** (os-fret'ik). Pertaining to the sense of smell.
- osphyalgia** (os-fe-al'je-ah) [δσφύς loin + ἄλγος pain]. Pain in the loins and hips.
- osphyitis** (os-fe-i'tis) [δσφύς loin + -itis inflammation]. Inflammation of the loins.

osphyomyelitis (os''fe-o-mi-el-i'tis) [ὄσφυς loin + myelitis]. Myelitis of the lumbar region of the cord.

ossa (os'ah). Latin plural of *os*, bone. **o. carpi**, the bones of the wrist. **o. cranii**, the cranial bones. **o. extremitatis inferioris**, the bones of the lower limb. **o. extremitatis superioris**, bones of the upper limb. **o. longa**, long bones. **o. metacarpalia I-V**, metacarpal bones. **o. metatarsalia I-V**, the metatarsal bones. **o. plana**, flat bones. **o. sesamoidea**, sesamoid bones. **o. supersternalia**, episternal bones. **o. suturatum**, wormian bones. **o. tarsi**, the tarsal bones.

ossagen (os'aj-en). A white, therapeutical powder prepared from red bone marrow and containing the calcium salts of its fatty acids: used in rickets, etc. Dose, 30-60 grains (2-4 Gm.).

ossaline (os'al-in). A greenish-white fat said to be derived from the spinal cords of neat cattle: used as an ointment base.

osseine (os'e-in). The animal matter of bone; ostein.

osseo-albumoid (os''e-o-al'bu-moid). A protein derived from bone after hydration of the collagen.

osseo-aponeurotic (os''e-o-ap-o-nu-rot'ik). Pertaining to bone and the aponeurosis of a muscle.

osseo-cartilaginous (os''e-o-kar-til-aj'in-us). Pertaining to or composed of bone and cartilage.

osseo-fibrous (os''e-o-fi'brus). Made up of fibrous tissue and bone.

osseomucin (os''e-o-mu'sin). The homogeneous ground substance which binds together the collagen and elastic fibrils of bony tissue.

osseomucoid (os-e-o-mu'koid). A mucin existing in bone.

osseous (os'e-us) [L. *os'seus*]. Of the nature or quality of bone; bony.

ossicle (os'ik-l) [L. *ossic'ulum*]. Any bonelet or small bone. **Andernach's's**, the wormian bones. **auditory o's**, the malleus, incus, and stapes, the bonelets of the cavity of the tympanum. A fourth ossicle, the orbicular, usually becomes joined to the incus. **o's of Bertin**, the sphenoturbinal bones. **epactal o.**, a wormian bone. **Kerkring's o.**, a small bone of early life which becomes the basilar process of the occipital bone. **Riolan's o's**, small bones occasionally seen in the suture between the mastoid portion of the temporal bone and the occipital bone.

ossiculectomy (os'ik-u-lek'to-me) [L. *ossic'ulum* bonelet + ἐκτομή excision]. Surgical removal of an ossicle, or of the ossicles, of the ear.

ossiculotomy (os'ik-u-lot'o-me) [L. *ossic'ulum* bonelet + τέμνω to cut]. Surgical incision of the bonelets of the ear.

ossiculum (os-ik'u-lum), pl. *ossic'ula*. Latin for *ossicle*, or little bone. **o. auditus** [B N A]. See *auditory ossicles*, under *ossicle*.

ossiferous (os-if'er-us) [L. *os* bone + *fer're* to bear]. Producing bone.

ossific (os-if'ik) [L. *os* bone + *fa'cere* to make]. Forming or becoming bone.

ossification (os''if-ik-a'shun) [L. *ossifica'tio*]. 1. The formation of bone or of a bony substance. 2. Conversion into bone or a bony substance. **metaplastic o.**, the development of bone matter in soft structures.

ossifluence (os-if'lu-ens). Softening of bony tissue.

ossifluent abscess (os-if'lu-ent). See *abscess*.

ossiform (os-if-orm). Resembling bone.

ossifying (os-if-i-ing). Changing or developing into bone.

ossin (os'in). A therapeutical liquid prepared from beef bones: said to be serviceable in diabetes.

ossiphone (os-if-on) [L. *os, ossa* bone + *φωνή* voice]. An apparatus for enabling deaf persons to hear by transmitting the sound from the instrument through the bony structure of the body.

ostalgia (os-tal'je-ah) [ὀστέον bone + ἄλγος pain]. Pain in a bone or in the bones.

ostarthrititis (os-tar-thri'tis). Same as *ostearthrititis*.

ostauxin (os-tawk'sin). Calcium paranucleinate, a tasteless powder, soluble in water: used in rachitis. Dose, 15-30 grains (1-2 Gm.) three times a day.

osteal (os'te-al). Bony; osseous.

ostealbumoid (os-te-al'bu-moid). Same as *osseo-albumoid*.

ostealgia (os-te-al'je-ah) [ὀστέον bone + ἄλγος pain]. Pain in a bone.

osteameba (os-te-am-e'bah). A bone corpuscle.

osteanabrosis (os'te-an-ab-ro'sis) [ὀστέον bone + ἀνάβρωσις eating up]. Atrophy of bone.

osteanogenesis (os'te-an-aj-en-es-is) [ὀστέον bone + ἀναγένεσις reproduction]. Reproduction of bone.

osteanaaphysis (os'te-an-af'is-is) [ὀστέον bone + ἀναφύειν to reproduce]. Reproduction of bone.

ostearthrititis (os'te-ar-thri'tis) [ὀστέον bone + ἄρθρον joint]. Inflammation of the bones and joints. See also *hyperthrophic arthritis*, under *arthrititis*. **o. deformans, endemic o.**, a condition endemic in portions of Russia, marked by thickening of the joints and softening of the articular ends of bones. **hyperplastic o.**, pulmonary osteoarthropathy.

ostearthrotomy (os'te-ar-throt'o-me) [ὀστέον bone + ἄρθρον joint + τέμνω to cut]. Excision of an articular end of a bone.

ostectomy, osteectomy (os-tek'to-me, os-te-ek'to-me) [ὀστέον bone + ἐκτομή excision]. The excision of a bone.

osteectopia, osteectomy (os'te-ek-to'pe-ah, os-te-ek-to-pe) [ὀστέον bone + ἔκτοπος out of place]. Displacement of a bone.

ostein (os'te-in) [ὀστέον bone]. Same as *osseine*.

osteite (os'te-it). An independent bony element or center of ossification.

osteitis (os-te-i'tis) [ὀστέον bone]. Inflammation of a bone; inflammation of the haversian spaces, canals, and their branches, and generally of the medullary cavity. The disease is marked by enlargement of the bone, tenderness, and a dull, aching pain. **acute o.**, osteomyelitis, usually of septic origin. See *osteomyelitis*. **o. albuminosa**, osteitis with accumulation of a sticky, albuminous liquid. **o. carno'sa**, osteitis fungosa. **caseous o.**, tuberculous caries of bone. **central o.** Same as *endosteitis*. **chronic o.**, central caries or bone abscess; often due to tuberculosis, sometimes syphilitic. **o. condensans generalisata**. See *osteosclerosis fragilis generalisata*. **condensing o.**, osteitis with hard deposits of earthy salts; osteosclerosis; eburnation. Called also *formative o.* and *sclerosing o.* **cortical o.** Same as *periosteitis*. **o. deformans**, rarefying osteitis with distortion of the bones affected. **o. fibro'sa**, a disease characterized by defective ossification of bones which leads to thickening, weakening, and deformity, the bone tissue being replaced by cellular fibrous tissue. It occurs chiefly in children, where it has been termed *osteodystrophia juvenilis*. **o. fibro'sa osteoplas'tica**, rarefying osteitis with fibrous degeneration and formation of cysts. **formative o.** See *condensing o.* **fungo'sa**, chronic osteitis in which the haversian canals are dilated and filled with granulation tissue. **gummatous o.**, a chronic form associated with syphilis. **o. ossificans**, condensing osteitis. **rarefying o.**, a bone disease in which the inorganic matter is lessened and the hard bone becomes cancellated. **sarcomatous o.**, myelomatosis. **sclerosing o.** See *condensing o.* **secondary hyperplastic o.**, hypertrophic pulmonary osteoarthropathy. **vascular o.**, rarefying osteitis in which the spaces formed become occupied by blood vessels.

ostelin (os'tel-in). A proprietary preparation of the unsaponifiable portion of cod liver oil: used in vitamin D deficiency.

ostembryon (os-tem'b're-on) [ὀστέον bone + ἔμβρυον fetus]. Ossification of a fetus.

ostemia (os-te-me-ah) [ὀστέον bone + αἷμα blood]. Morbid congestion of blood in a bone.

ostempyiesis (os'tem-pi-e'sis) [ὀστέον bone + ἐμπύησις suppuration]. Suppuration within a bone.

osteo-aneurysm (os'te-o-an'u-rizm). Aneurysm in a bone.

osteo-arthritis (os'te-o-ar-thri'tis). Same as *ostearthrititis*.

osteo-arthropathy (os'te-o-ar-throp'ath-e) [ὀστέον bone + αρθροπάθεια]. Any disease of the joints and bones. **hyperthrophic pneumatic o., hypertrophic pulmonary.** 1. Acromegaly. 2. A disease characterized by enlargement of the terminal phalanges of the fingers and toes, thickening of the distal ends of bones, enlargement of the lower jaw, and peculiar curving of the nails. It is believed to be due to disease of the lungs in which toxic matters are absorbed from diseased areas. Called also *osteo-arthropathie hypertrophique pneumique, toxicogenic osteopneustitis ossificans, and Bamberger-Marie disease, pulmonary o.* See *hypertrophic pneumatic o.*

osteo-arthrotomy (os'te-o-ar-throt'o-me). Same as *ostearthrotomy*.

osteoblast (os'te-o-blast) [ὀστέον bone + βλαστός germ]. Any one of the cells that are developed into bone or that are directly active in the production of bony structures.

osteoblastic (os'te-o-blas'tik). Pertaining to or composed of osteoblasts.

osteoblastoma (os'te-o-blas-to'mah) [osteoblast + -ωμα tumor]. A tumor, the cells of which tend to differentiate into bone cells. The term includes osteoma and osteosarcoma.

osteocachectic (os'te-o-kak-ek'tik). Relating to or affected with osteocachexia.

osteocachexia (os'te-o-kak-ek'se-ah). Cachexia due to chronic bone disease; also chronic disease of bone.

osteocampsia (os'te-o-kamp'se-ah) [ὀστέον bone + κάμπτω to bend]. Curvature or bending of a bone.

osteocarcinoma (os'te-o-kar-sin-o'mah). 1. Osteoma combined with carcinoma. 2. Carcinoma of a bone.

osteocartilaginous (os'te-o-kar-til-aj'in-us). Pertaining to or composed of bone and cartilage.

osteocoele (os'te-o-sēl) [ὀστέον bone + κήλη tumor]. 1. Bony tumor of the testis or scrotum. 2. A hernia containing bone.

osteoccephaloma (os'te-o-sef-al-o'mah) [ὀστέον bone + ἐνκεφαλον]. An encephaloid tumor of a bone.

osteocondral (os'te-o-kon'dral). Pertaining to bone and cartilage; pertaining to a bone and its articular cartilage.

osteocondritis (os'te-o-kon-dri'tis) [ὀστέον bone + χόνδρος cartilage]. Inflammation of both bone and cartilage. **o. deformans juvenilis**, a disease characterized by atrophy and rarefaction of the head of the femur during the age of growth, resulting in a shortened and thickened femoral neck and a broad, flat femoral head. Called also *Perthes' disease, Calvé-Perthes' disease, Legg's disease, pseudocoaxalgia, and coxa plana*. **o. disseicans**, osteochondritis resulting in the splitting of pieces of cartilage into the joint, particularly the knee joint.

osteocondrofibroma (os'te-o-kon'dro-fi-bro'mah). A tumor containing the elements of osteoma, chondroma, and fibroma.

osteocondroma (os'te-o-kon-dro'mah) [ὀστέον bone + χόνδρος cartilage]. Osteoma blended

with chondroma; a tumor that is partly bone and partly cartilaginous.

osteocondromatosis (os'te-o-kon-dro-mat-o'sis). A condition marked by the presence of multiple osteochondromas.

osteochoñdrophyte (os'te-o-kon'dro-fit) [ὀστέον bone + χόνδρος cartilage + φυτόν growth]. A tumor made up of cartilaginous and bony tissue.

osteocondrosarcoma (os'te-o-kon'dro-sar-ko'mah). Sarcoma blended with osteoma and chondroma.

osteocondrous (os'te-o-kon'drus) [ὀστέον bone + χόνδρος cartilage]. Composed of bone and cartilage.

osteoclasia, osteoclasia (os-te-ok'las-is, os'te-o-klaz'e-ah) [ὀστέον bone + κλάσις a breaking]. 1. The surgical fracture or refracture of bones. 2. The absorption and destruction of bony tissue by osteoclastic cells.

osteoclast (os'te-o-klast) [ὀστέον bone + κλᾶν to break]. 1. An instrument for use in the surgical fracture or refracture of bones. 2. Any large multinuclear cell concerned in the absorption and removal of bone. **Rizzoli's o.**, an osteoclast consisting of a rod on which are two sliding padded rings, and between these a padded plate that can be screwed down upon the part, thus fracturing the bone.

osteoclastic (os'te-o-klas'tik). Pertaining to or of the nature of an osteoclast; destructive to bone.

osteoclastoma (os'te-o-klas-to'mah). A tumor the cells of which are giant cells analogous to osteoclasts; malignant myeloid sarcoma.

osteoclasty (os'te-o-klas-te). Same as *osteoclasia*.

osteocomma (os'te-o-kom'ah) [ὀστέον bone + κόμμα fragment]. Any one of the pieces or members of a series of bony structures, as a vertebra.

osteocope (os'te-o-kōp) [ὀστέον bone + κόπος pain]. A severe pain in a bone or in the bones; generally a symptom of syphilitic bone disease.

osteoscopic (os'te-o-kop'ik). Of the nature of an osteoscope.

osteocranium (os'te-o-kra-ne-um) [ὀστέον bone + κρανίον cranium]. The fetal cranium after its ossification.

osteocystoma (os'te-o-sis-to'mah) [ὀστέον bone + κύστωμα]. A cystic tumor in a bone.

osteodentin (os'te-o-den'tin) [ὀστέον bone + δέντιν]. Dentin that resembles bone.

osteodermis (os'te-o-der-me-ah) [ὀστέον bone + δέρμα skin]. A bony formation in the skin.

osteodiastasis (os'te-o-di-as'tas-is) [ὀστέον bone + διάστασις separation]. The separation of a bone or of two bones.

osteodynia (os'te-o-din'e-ah) [ὀστέον bone + δόνην pain]. Pain in a bone.

osteodystrophia (os'te-o-dis-tro'phi-ah). Defective bone formation. **o. juvenilis**. See under *osteitis fibrosa*.

osteo-encephaloma (os'te-o-en-sef-al-o'mah) [ὀστέον bone + ἐγκέφαλος brain + -ωμα tumor]. Encephaloid tumor of bone.

osteo-enchondroma (os'te-o-en-kon-dro'mah). Same as *osteocondroma*.

osteo-epiphysis (os'te-o-ep-if'is-is) [ὀστέον bone + ἐπιφύσις]. Any bony epiphysis.

osteofibroma (os'te-o-fi-bro'mah) [osteoma + φιβρόμα]. A tumor containing both osseous and fibrous elements.

osteogen (os'te-o-jen) [ὀστέον bone + γεννᾶν to produce]. 1. The soft material from which bone is formed. 2. A proprietary syrup of iron and calcium phosphate.

osteogenesis, osteogeny (os'te-o-jen'es-is, os-te-o-jen'e) [ὀστέον bone + γεννᾶν to beget]. The development of the bones. **o. imperfecta**, a congenital disease marked by fragility of the

- bones, with resulting fractures, due to lack of formative power of the bony tissues.
- osteogenic, osteogenetic** (os'te-o-jen'ik, os'te-o-jen-et'ik) [ὀστέον bone + γεννᾶν to produce]. Pertaining to the development or growth of the bones.
- osteogenous** (os-te-oj'en-us). Osteogenic.
- osteogram** (os'te-o-gram). A semidiagram of the spine used as a record sheet for the charting of osteopathic lesions.
- osteography** (os-te-og'raf-e) [ὀστέον bone + γράφειν to write]. A description of the bones.
- osteohalisteresis** (os'te-o-hal-is-ter-e'sis) [ὀστέον bone + ἅλς salt + στερεῖν to deprive]. Loss or deficiency of the mineral elements of bones.
- osteohemachromatosis** (os'te-o-hem'ah-kro-mat-o'sis) [ὀστέον bone + αἷμα blood + χρώμα color]. A disease of animals marked by discoloration of the bone by blood pigment.
- osteoid** (os'te-oid) [ὀστέον bone + εἶδος form]. Resembling bone.
- osteolipochondroma** (os'te-o-li-po-kon-dro'mah). Chondroma with bony and fatty elements.
- osteology** (os-te-ol'o-je) [ὀστέον bone + λόγος treatise]. The sum of what is known regarding the bones; the study of the bones.
- osteolysis** (os-te-ol'is-is) [ὀστέον bone + λύσις solution]. Decay, absorption, or soft necrosis of bone.
- osteolytic** (os'te-o-lit'ik). Relating to or affected with osteolysis.
- osteoma** (os-te-o'mah), pl. *osteomas* or *osteomata*. A bony tumor; a hard tumor of bone-like structure developing on a bone (*homoplastic o.*) and sometimes on other structures (*heteroplastic o.*). **cavalryman's o.**, osteoma at the insertion of the adductor femoris longus. **o. dentale**, a dental exostosis. **o. durum, o. eburneum**, a tumor made of up hard bony tissue. **o. medullare**, an osteoma containing marrow spaces. **o. sarcomatousum**, osteosarcoma. **o. spongiosum**, osteoma containing cancellated bone.
- osteomalacia** (os'te-o-mal-a'se-ah) [ὀστέον bone + μαλακία softness]. Softening of the bones; molities ossium, or malacosteon: a disease marked by increasing softness of the bones, so that they become flexible and brittle. It is attended with rheumatic pains; the patient becomes weak, and finally dies from exhaustion. It occurs chiefly in adults.
- osteomalacic** (os'te-o-mal-a'sik) [ὀστέον bone + μαλακία softness]. Pertaining to or of the nature of osteomalacia.
- osteomalacosis** (os'te-o-mal-ak-o'sis). Same as *osteomalacia*.
- osteomatoid** (os-te-o'ma-toid). Resembling an osteoma.
- osteomere** (os'te-o-mēr) [ὀστέον bone + μέρος part]. One of a series of similar bony structures, such as the vertebrae.
- osteomyelitis** (os'te-o-mi-el-i'tis) [ὀστέον bone + μυελός marrow]. Inflammation of the bone marrow, or of the bone and marrow; inflammation of the medullary cavity of a bone. It may be either acute or chronic. The *acute* form, which is usually a septic condition, is marked by fever, chills, and depression, and is attended with supuration of the medullary cavity, with extension to the neighboring parts and the development of pyemic abscesses. The *chronic* form occurs after injury, or from rheumatism, syphilis, or tuberculosis. It results in rarefaction, condensation, or abscess of the bone. **Garré's o.**, sclerosing, nonsuppurative osteomyelitis. **hunger o.**, a condition with symptoms resembling those of the early stages of osteomalacia, occurring among those who have suffered from food deprivation. **malignant o.**, myelomatosis. **o. variolosa**, osteomyelitis due to, or occurring as a complication of, smallpox.
- osteoncus** (os-te-ong'kus) [ὀστέον bone + ὄγκος mass]. Tumor of a bone.
- osteonecrosis** (os'te-o-nek-ro'sis) [ὀστέον bone + νεκρώσις death]. Death, or necrosis, of bone.
- osteoneuralgia** (os'te-o-nu-ral'je-ah) [ὀστέον bone + νεύρον nerve + ἄλγος pain]. Neuralgia of a bone.
- osteopath** (os'te-o-path). A practitioner of or a believer in osteopathy.
- osteopathic** (os-te-o-path'ik). Pertaining to osteopathy.
- osteopathy** (os-te-op'ath-e) [ὀστέον bone + πάθος disease]. 1. Any disease of a bone. 2. A system of therapy in which diseases are treated by manipulating the bones and by other manual manipulations intended to restore the deranged mechanism of the body. The official definition of osteopathy adopted by the American Osteopathic Association is: "That system of the healing art which places the chief emphasis on the structural integrity of the body mechanism, as being the most important single factor to maintain the well-being of the organism in health and disease." **disseminated condensing o.** See *osteosclerosis fragilis generalisata*.
- osteopedion** (os'te-o-pe'de-on) [ὀστέον bone + παιδίον child]. Same as *lithopedion*.
- osteoperiosteal** (os'te-o-per-e-os'te-al). Pertaining to bone and its periosteum.
- osteoperiostitis** (os'te-o-per-e-os-ti'tis) [*osteitis* + *periostitis*]. Inflammation of a bone and its periosteum.
- osteophagē** (os'te-o-fāj) [ὀστέον bone + φαγείν to eat]. Same as *osteoclast*.
- osteophagia** (os'te-o-fa'je-ah) [ὀστέον bone + φαγείν to eat]. The eating of bone due to a craving for phosphorus.
- osteophlebitis** (os'te-o-fle-bi'tis) [ὀστέον bone + φλέψ vein + -itis inflammation]. Inflammation of the veins of a bone.
- osteophone** (os'te-o-fōn) [ὀστέον bone + φωνή voice]. Same as *audiophone*.
- osteophony** (os-te-oi'f-o-ne) [ὀστέον bone + φωνή voice]. The conduction of sounds by bone; bone conduction.
- osteophore** (os'te-o-fōr) [ὀστέον bone + φέρειν to carry]. A bone-crushing forceps.
- osteophyma** (os'te-o-fī'mah) [ὀστέον bone + ὥμα growth]. A tumor or outgrowth of a bone.
- osteophyte** (os'te-o-fit) [ὀστέον bone + φυτόν plant]. A bony excrescence or osseous outgrowth.
- osteoplaque** (os'te-o-plak). A layer of bone.
- osteoplast** (os'te-o-plast) [ὀστέον bone + πλαστός formed]. Same as *osteoblast*.
- osteoplastic** (os'te-o-plas'tik). 1. Osteogenic. 2. Pertaining to osteoplasty.
- osteoplasty** (os'te-o-plas-te) [ὀστέον bone + πλάσσειν to form]. Plastic surgery of the bones.
- osteopokikilosis** (os'te-o-poi-kil-o'sis) [ὀστέον bone + ποικίλος mottled]. See *osteosclerosis fragilis generalisata*.
- osteoporosis** (os'te-o-po-ro'sis) [ὀστέον bone + πόρος passage]. Abnormal porousness or rarefaction of bone by the enlargement of its canals or the formation of abnormal spaces.
- osteoporotic** (os'te-o-po-rot'ik). Relating to osteoporosis.
- osteopsathyrosis** (os'te-op-sath-ir-o'sis) [ὀστέον bone + ψαθυρός friable]. Fragility of the bones; fragilitas ossium.
- osteorrhaphy** (os-te-or'ah-fe) [ὀστέον bone + ραφή suture]. The suturing or wiring of bones.
- osteosarcoma** (os'te-o-sar-ko'mah) [ὀστέον bone + sarcoma]. A sarcoma of bone, or a sarcoma containing osseous tissue.
- osteosarcomatous** (os'te-o-sar-ko'mat-us). Of the nature of osteosarcoma.

osteosclerosis (os'te-o-skle-ro'sis) [ὀστέον bone + σκλήρσις hardening]. The hardening or abnormal denseness of bone. **o. congenita**, achondroplasia. **o. fragilis generalisata**, excessive calcification of the whole skeleton, characterized by a marble-like appearance of the bones in the roentgenogram. Called also *Albers-Schönberg disease*, *osteitis condensans generalisata*, and *osteopoiikilosis*.

osteoscope (os'te-o-skōp) [ὀστέον bone + σκοπεῖν to view]. An instrument for testing a roentgen-ray apparatus by examining a standard preparation of the bones of the forearm.

osteoseptum (os'te-o-sep'tum) [ὀστέον bone + σέπτον]. The bony part of the nasal septum.

osteosis (os-te-o'sis). The formation of bony tissue, especially the infiltration of connective tissue with bone.

osteospongioma (os'te-o-spon-je-o'mah) [ὀστέον bone + σπόγγος sponge + -ωμα tumor]. A spongy tumor of bone.

osteosteoma (os'te-o-ste-at-o'mah) [ὀστέον bone + στέατωμα sebaceous tumor]. A suet-like tumor with bony elements.

osteostixis (os'te-o-stik'sis) [ὀστέον bone + στίξις puncture]. Surgical puncture of a bone.

osteosuture (os'te-o-sūt-ūr) [ὀστέον bone + L. *sutūra* suture]. Same as *osteorrhaphy*.

osteosynovitis (os'te-o-si-no-vi'tis). Synovitis together with osteitis of the neighboring bones.

osteosynthesis (os'te-o-sin'the-sis) [ὀστέον bone + σύνθεσις a putting together]. Operative fastening of the ends of a fractured bone by sutures, rings, plates, or other mechanical means.

osteotabes (os-te-o-ta'bēz) [ὀστέον bone + L. *tabes* wasting]. A disease, chiefly of infants, in which the cells of the bone marrow are destroyed and the marrow disappears.

osteotelangiectasia (os'te-o-tel-an-je-ek-ta'se-ah) [ὀστέον bone + *telangiectasia*]. A sarcoma of bone containing dilated capillaries.

osteothrombosis (os'te-o-throm-bo'sis) [ὀστέον bone + *thrombosis*]. Thrombosis of the veins of a bone.

osteotome (os'te-o-tōm) [ὀστέον bone + τέμνειν to cut]. A knife or chisel for cutting bone.

Osteotome (DaCosta).

osteotomoclasia (os'te-o-to-mo-kla'se-ah). Osteotomoclasia.

osteotomoclasia (os'te-o-to-mok'la-sis) [ὀστέον bone + τόμος section + κλάσις breaking]. Correction of curvature of bone by partial division with the osteotome, followed by forcible fracture.

osteotomy (os-te-o'to-me) [ὀστέον bone + τέμνειν to cut]. The surgical cutting of a bone. **cuneiform o.**, the removal of a wedge of bone. **hinge o.**, curvilinear cutting of a bone. **linear o.**, the sawing or linear cutting of a bone. **MacEwen's o.**, supracondylar cuneiform section of the femur for genu valgum. **subtrochanteric o.**, Gant's operation. See under *operation*. **trans-trochanteric o.**, division of the femur through the lesser trochanter for deformity about the hip joint.

osteotribe, osteotrite (os'te-o-trib, os'te-o-trīt) [ὀστέον bone + τρίβειν to rub]. An instrument for rasping carious bone.

osteotrophy (os-te-o't-ro-fe) [ὀστέον bone + τροφή nutrition]. Nutrition of bone.

osteoylus (os-te-o'til-us) [ὀστέον bone + ὕλος callus]. The callus enclosing the end of a broken bone.

osteotympanic (os'te-o-tim-pan'ik). Same as *craniotympanic*.

osthemia, osthexy (os-thek'se-ah, os'thek-se) [ὀστέον bone + ἔξις condition]. Abnormal ossification.

ostia (os'te-ah). Plural of *ostium*.

ostial, ostiary (os'te-al, os'te-a-re) [L. *ostia-rius* pertaining to a door]. Pertaining to an orifice.

ostitis (os-ti'tis). Same as *osteitis*.

ostium (os'te-um), pl. *os'tia* [L.]. A mouth or orifice.

o. abdomina'le, o. abdomina'le tu'bae uteri'nae [B N A], the fimbriated end of an oviduct. **o. arterio'sum** [B N A], the auriculoventricular opening. **o. atrioventricu-lar'e**. Same as *o. veno'sum*. **o. inter'num**, the uterine end of an oviduct. **o. pharyn'-geum tu'bae auditiv'ae** [B N A], the nasopharyngeal end of a eustachian tube. **o. tympan'icum**, the tympanic orifice of a eustachian tube. **o. tympan'icum tu'bae auditiv'ae** [B N A], the tympanic opening of the eustachian tube. **o. uteri'num tu'bae uteri'nae** [B N A], the uterine opening of the fallopian tube. **o. vagi'nae**, the external orifice of the vagina. **o. veno'sum** [B N A], the venous orifice of the ventricles of the heart.

ostosis (os-to'sis). Osteogenesis.

ostreotoxismus (os'tre-o-toks-iz'mus) [ὀστρεον oyster + τοξικόν poisoning]. Poisoning that follows the eating of diseased or unwholesome oysters.

Ostrya (os'tre-ah) [L.; ὀστρά hornbeam]. A genus of cupuliferous trees. *O. virgin'ica*, the leverwood of North America is used in homeopathic practice.

Oswaldocruzia (oz-wal-do-kru'ze-ah). A genus of trichostrongyline parasites inhabiting the lungs and intestines of reptiles and batrachians.

OT. An abbreviation for old term in anatomy as distinguished from the B N A term.

otacoustic (o-tah-koo'stik) [ὠτακουστέιν to listen]. Assisting the hearing.

otalgia (o-tal'je-ah) [ὠταλγία]. Pain in the ear; earache. **geniculate o.**, geniculate neuralgia. See under *neuralgia*. **o. intermit'tens**, otalgia of an intermittent type. **reflex o.**, otalgia dependent upon some lesion of the buccal cavity or nasopharynx. **secondary o.**, otalgia dependent on inflammation of the geniculate ganglion. **tabetic o.**, otalgia in tabes dorsalis due to degeneration of the nerve of Wrisberg.

otalgic (o-tal'jik). Pertaining to earache; also an earache remedy.

Otani's test (o-tah'nēz) [Morisuke *Otani*, contemporary Japanese physician]. See under *tests*.

otaphone (o'taf-ōn). Same as *otophone*.

otectomy (o-tek'to-me) [οὖς ear + ἐκτομή excision]. Excision of tissues of the internal and middle ear.

othelcosis (o-thel-co'sis) [οὖς ear + ἔλκος ulceration]. Suppuration of the ear.

othematoma (o'them-at-o'mah) [οὖς ear + *hematoma*]. Same as *haematoma auris*.

othemorrhœa (o'them-o-re'ah) [οὖς ear + αἷμα blood + ῥοία flow]. Hemorrhage from the ear.

othernometer (o-then-om'et-er). An instrument for measuring the variations of the nervous force.

othygroma (oth-i-gro'mah) [οὖς ear + *hygroma*]. A condition in which the lobes of the ear is distended with fluid.

otiatric (o-te-at'rik). Pertaining to the treatment of ear diseases.

otiatrics (o-te-at'riks) [οὖς ear + *ιατρικός* healing]. The therapeutics of ear diseases.

otiatry (o-ti'at-re). Otiatics.

otic (o'tik) [ὠτικός]. Pertaining to the ear; aural.

otocodinia (o'tik-o-din'e-ah) [ὠτικός aural + δίνη whirl]. Vertigo from ear disease.

otioibiosis (o'te-o-bi-o'sis). Any disease caused by *Otiobius* (*Ornithodoros*); especially the presence in the ear of the *O. megnini*.

Otiobius (o-te-o'be-us). Same as *Ornithodoros*.

otitic (o-tit'ik). Pertaining to otitis.

otitis (o-ti'tis) [oŷ ear + -itis inflammation]. Inflammation of the ear. It is distinguished as *o. exter'na*, *inter'na*, or *me'dia*, according as it affects the external, internal, or middle ear. The disease is marked by pain, fever, abnormalities of hearing, deafness, tinnitus, and vertigo. *o. croupo'sa*, that which is associated with the formation of a fibrinous membrane. *o. desquamati'va*, external or medial otitis in which there are overdevelopment and desquamation of the cutaneous or mucous epithelium. *o. diphtheriti'ca*. Same as *o. croupo'sa*. *o. exter'na*, inflammation of the external ear. *o. exter'na circumscript'a*, that which affects a limited area or areas. *o. exter'na diffu'sa*, that which affects the greater part of the meatus. *o. exter'na furunculo'sa*. See *furuncular o. furuncular o.*, the formation of furuncles in the external meatus. *o. haemorrhagi'ca*, that which is caused by or attended with hemorrhage. *o. inter'na*, inflammation of the internal ear: it may be due to syphilis, diphtheria, scarlatina, or to various other causes. *o. labyrinthi'ca* affects chiefly the labyrinth. *o. mastoi'dea*, otitis which involves the mastoid spaces. *o. me'dia*, inflammation of the middle ear. *o. me'dia catarrhalis acu'ta*, an acute catarrhal form. *o. me'dia catarrhalis chroni'ca*, a chronic catarrhal form of several subvarieties. *o. me'dia purulen'ta acu'ta*, an acute suppurative form affecting the middle ear. *o. me'dia purulen'ta chroni'ca*, otorrhea. *o. me'dia sclerot'ica*, dry catarrh of the middle ear. *o. me'dia sero'sa*, one marked by a copious serous exudation. *o. me'dia suppurati'va*, suppurative inflammation of the middle ear. *mucositis o.*, *mucosus o.*, otitis media caused by *Streptococcus mucosus*. *o. mycoti'ca*, *o. parasiti'ca*, that which is due to parasitic fungi. *o. sclerot'ica*, that which is marked by hardening of the ear structures.

oto-acariasis (o'to-ak-ar-i'as-is) [oŷ ear + *acariasis*]. Infection of the ears of cats, dogs, and domestic rabbits with the mite *Otodectes*. Called also *parasitic otitis*.

oto-antritis (o'to-an-tri'tis). Otitis involving the attic of the tympanum and the mastoid antrum.

otobiosis (o'to-bi-e'sis). See *otioibiosis*.

Otobius (o-to'be-us). Same as *Ornithodoros*.

otoblenorrhoea (o'to-blen-o-re'ah) [oŷ ear + *βλέννα* mucus + *ῥοια* flow]. Mucous discharge from the ear.

otocariasis (o'to-kar-i'as-is). See *oto-acariasis*.

otocephalus (o-to-sef'al-us) [oŷ ear + *κεφαλή* head]. A monster fetus lacking the lower jaw and having ears united below the face.

otocerebritis (o'to-ser-e-bri'tis) [oŷ ear + *cerebritis*]. Inflammation of the brain dependent upon disease of the middle ear.

otocleisis (o-to-kli'sis) [oŷ ear + *κλείσις* closure]. Closure of the auditory passages.

otoconia (o-to-ko'ne-ah) [oŷ ear + *κόνις* dust].
1. A dustlike substance made up of minute six-sided prisms of calcium carbonate arranged in a single layer in the gelatinous film which covers the maculae acusticae of the membranous labyrinth of the inner ear. Called also *otoliths* and *ear dust*.
2. Plural of *otoconium*.

otoconite (o-tok'o-nit). Same as *otoconium*.

otoconium (o-to-ko'ne-um); pl. *otoconi'a* [oŷ ear + *κόνις* dust]. See *otoconia*.

otocrane, otocranium (o'to-krān, o-to-krā-ne-um) [oŷ ear + *κρανίον* skull]. 1. The chamber in the petrous bone that lodges the internal ear. 2. The petromastoid; the auditory portion of the cranium.

otocranial (o-to-krā-ne-al). Pertaining to the otocranium.

otocyst (o'to-sist) [oŷ ear + *κύστις* bladder].
1. The auditory vesicle of the embryo. See under *vesicle*. 2. The auditory sac of some of the lower animals.

Otodectes (o-to-dek'tēz). A genus of mites. See *oto-acariasis*.

otodynia (o-to-din'e-ah) [oŷ ear + *δύνη* pain]. Pain in the ear; earache.

oto-encephalitis (o'to-en-sef-al-i'tis) [oŷ ear + *encephalitis*]. Inflammation of the brain due to an extension from an inflamed middle ear.

otoganglion (o-to-gang'le-on) [oŷ ear + *γάγγλιον* ganglion]. The otic ganglion; Arnold's ganglion.

otogenic (o-to-jen'ik). Same as *otogenous*.

otogenous (o-toj'en-us) [oŷ ear + *γεννᾶν* to produce]. Originating within the ear.

otography (o-tog'raf-e) [oŷ ear + *γράφειν* to write]. A description of the ear.

otohemineurasthenia (o'to-hem-e-nu-ras-the'-ne-ah) [oŷ ear + *ἡμι-* half + *neurasthenia*]. Nervous defect of hearing in one ear.

otolaryngology (o'to-lar-in-gol'o-je). Otology and laryngology considered as a single specialty.

otolite (o'to-lit). Otolith.

otolith (o'to-lith) [oŷ ear + *λίθος* stone]. An ear-stone; one of the small calcareous masses within the membranous vestibule, near the terminations of the auditory nerve.

otologic (o-to-loj'ik). Pertaining to otology.

otologist (o-tol'o-jist). A physician versed in otology.

otology (o-tol'o-je) [oŷ ear + *λόγος* discourse]. The sum of what is known regarding the ear.

otomassage (o'to-ma-sahzh') [oŷ ear + *μάσσειν* to knead]. The massage of the tympanic cavity and ossicles.

otomucormycosis (o'to-mu-kor-mi-ko'sis). Mucormycosis affecting the ear.

otomyasthenia (o'to-mi-as-the'ne-ah) [oŷ ear + *μῦς* muscle + *ἀσθένεια* weakness]. A debilitated state of the ear muscles, interfering with the normal selection and amplification of sounds.

Otomyces (o-tom'is-ez) [oŷ ear + *μύκης* fungus]. A genus of fungi which infest the ear. *O. hage'ni* and *O. purpu'reus* have been found in the human ear.

otomycosis (o'to-mi-ko'sis) [oŷ ear + *μύκης* fungus]. Any disease of the ear caused by the presence of fungi in the meatus. *o. aspergilli'na*, any ear disease caused by the presence of an aspergillus. See *myringomycosis*.

otonecrectomy, otonecrotomy (o'to-nek-ek'to-me, o'to-nek-ron-ek'to-me) [oŷ ear + *necrectomy*]. The surgical removal of necrosed structures from the ear.

otoneuralgia (o'to-nu-ral'je-ah) [oŷ ear + *neuralgia*]. Neuralgic pain in the ear.

otoneurasthenia (o'to-nu-ras-the'ne-ah) [oŷ ear + *neurasthenia*]. Neurasthenia due to ear disease.

otoneurology (o'to-nu-rol'o-je). Same as *neurotology*.

otopathy (o-top'ath-e) [oŷ ear + *πάθος* suffering]. Any disease of the ear.

otopharyngeal (o'to-far-in'je-al). Pertaining to the ear and pharynx.

otophone (o'to-fōn) [oŷ ear + *φωνή* sound].
1. An ear trumpet or other external appliance to aid the hearing. 2. A tube used in the auscultation of the ear.

otopiesis (o-to-pi'e-sis) [oŷ ear + *πίεσις* pressing]. 1. The sinking in or depression of the membrana tympani. 2. Pressure upon the labyrinth, producing deafness.

otoplasty (o'to-plas-te) [oŷ ear + *πλάσσειν* to form]. Plastic surgery of the ear; the surgical correction of ear deformities and defects.

otopolypus (o-to-pol'ip-us) [oŭs ear + *polypus*]. A polypus of the ear.

otorrhoea (o'to-pi-or-e'ah) [oŭs ear + *ῥέειν* to flow]. A copious purulent discharge from the ear.

otosyosis (o'to-pi-o'sis) [oŭs ear + *πύωσις* supuration]. A suppurative disease of the ear.

otor (o'tor) [oŭs ear]. Pertaining to the ear; aural.

otorhinolaryngology (o'to-rí-'no-lar-in-gol'o-je) [oŭs ear + *ῥίς* nose + *λάρυγξ* larynx + *λόγος* discourse]. The sum of knowledge regarding the ear, nose, and larynx and their diseases.

otorhinology (o'to-rí-nol'o-je) [oŭs ear + *ῥίς* nose]. That branch of medicine which treats of the nose and ear and their diseases.

otorrhagia (o-tor-a'je-ah) [oŭs ear + *ῥηγνύναι* to burst forth]. Hemorrhage from the ear.

otorrhea, **otorrhoea** (o-to-re'ah) [oŭs ear + *ῥοία* to flow]. A discharge from the ear, especially a purulent one.

otosalpinx (o-to-sal'pinks) [oŭs ear + *σάλπιγξ* trumpet]. The eustachian tube.

otosclerectomy (o'to-skle-rek'to-me). Otosclerectomy.

otoscleronectomy (o'to-skle-ro-nek'to-me) [oŭs ear + *σκληρός* hard + *ἐκτομή* excision]. Excision of the ankylosed sound-conducting apparatus of the middle ear.

otosclerosis (o'to-skle-ro'sis) [oŭs ear + *σκληρός* hard]. The formation of spongy bone in the capsule of the labyrinth of the ear.

otoscope (o'to-skōp) [oŭs ear + *σκοπεῖν* to inspect]. An instrument for inspecting or for auscultating the ear. **Brunton's o.**, an otoscope lighted by means of a funnel attached to the side. **Siegle's o.**, an otoscope which gives a view of the drum membrane when subjected to condensed or rarefied air. **Toynbee's o.**, a tube for insertion into the ear of the patient and of the observer for the purpose of auscultating the patient's ear during politization.

otoscopy (o-tos'ko-pe). Examination of the ear by means of the otoscope.

otosis (o-to'sis) [oŭs ear]. A mishearing; a false impression as to sounds uttered by others.

otosteal (o-tos'te-al) [oŭs ear + *ὀστέον* bone]. Pertaining to the ear bones.

otosteon (o-tos'te-on) [oŭs ear + *ὀστέον* bone]. 1. An otolith. 2. Any one of the auditory ossicles.

ototomy (o-tot'o-me) [oŭs ear + *τέμνειν* to cut]. The dissection or anatomy of the ear.

Ott's test (ots) [Isaac A. Ott, American physiologist, 1847-1916]. See under *tests*.

oturia (o-tu're-ah) [oŭs ear + *οὔρον* urine]. A metastatic urinous discharge from the ear.

O. U. An abbreviation for *L. ocululus ulcer'que*, each eye.

ouabain (wah-ba'in). A very poisonous glycoside, $C_{29}H_{48}O_{12} + 6H_2O$, from ouabaio. It is a powerful local anesthetic and cardiac stimulant. Dose, $\frac{1}{1000}$ to $\frac{1}{500}$ grain (0.000066-0.000132 Gm.).

ouabaio (wah-bah'yo). An African arrow poison derived from the root of *Acokanthe'ra schim'peri*, an apocynaceous plant.

Oudin current, resonator (or-daa') [Paul Oudin, French electrotherapeutist and roentgenologist, 1851-1923]. See *current* and *resonator*.

oulectomy (oo-lek'to-me). Same as *ulectomy*.

oulitis (oo-li'tis). Same as *ulitis*.

oulonitis (oo-lo-ni'tis). Pulpitis.

ounce (owns) [L. *un'cia*]. A measure of weight. The ounce *avoirdupois* is one sixteenth of a pound avoirdupois, or 37.5 grains (28.349 Gm.); the *troy* ounce is one twelfth of a pound troy, or 480 grains (31.103 Gm.). See *weights and measures, table of*.

ourang-outan (o-ran'o-tan). One of the anthro-

poid apes, *Simia satyrus*: used for experimental purposes because susceptible to some diseases of man.

urology, uroscopy, etc. (oo-ro'l'o-je, oo-ro's'ko-pe). See *urology, uroscopy*, etc.

Ouronparia (oo-ron-pa're-ah). See *catechu*.

outlay, epithelial. An epithelial inlay in which the edges of the wound are not completely approximated, permitting new epithelium to grow out around the wound margin. See *inlay, epithelial*.

outlet of the pelvis (owt'let). The inferior opening of the pelvis.

outlimb (owt'lim). The distal part or segment of an extremity.

outpatient (owt'pa-shent). A hospital patient not treated within the wards.

outpocketing (owt-pok'et-ing). Inclosure of a pedicle or other part within the edges of the external wound.

Ov. Abbreviation for *L. ovum*, egg.

ova (o'vah). Latin, plural of *ovum*, egg.

ovacoids (o'vak-oids). A proprietary preparation said to be ovarian hormones.

ovadin (o'vad-in). A therapeutical preparation of the ovaries of cows and swine, containing traces of iodine.

ovagol (o'va-gol). A combination of bile acids with albumin: said to exert a cholagogue action in the intestine.

oval (o'val) [L. *ova'lis*]. 1. Egg shaped. 2. Having the outline of the long section of an egg.

ovalbumin (o-val-bu'min) [L. *ovum* egg + *albumin*]. An albumin obtainable from the whites of eggs.

ovaltine (o-val'tin). A proprietary food preparation composed of malt extract, dried milk, eggs, and cocoa.

ovamammoid (o-vam-am'oid). A proprietary preparation of ovarian extract and mammary gland extract.

ovaraden (o-var'ad-en). A dry, therapeutical powder prepared from animal ovaries. Dose, 15-30 grains (1-2 Gm.); used in amenorrhea, chlorosis, and hysteria. **O. triferrin**, a combination of ovaraden with triferrin: used in diseases of the female reproductive organs.

ovaradentriferrin (o-var-ad''en-tri-ferr'in). A preparation of ovaraden and triferrin.

ovaralgia, ovarialgia (o-va-ral'je-ah, o'va-re-al'je-ah). Same as *oophoralgia*.

ovarial hormon folliculin menoformon. See *menoformon*.

ovarian (o-va're-an). Pertaining to an ovary or to the ovaries.

ovariectomy (o'va-re-ek'to-me). Same as *oophorectomy*.

ovarin (o'var-in). 1. An ovarian hormone, present in both graafian follicle and corpus luteum, concerned in decidual development. 2. Trade name of a preparation from the ovaries of animals.

ovariocèle (o-va're-o-sēl) [L. *ovarium* ovary + *κῆλη* hernia]. Hernial protrusion of an ovary.

ovariocentesis (o-va're-o-sen-te'sis) [L. *ovarium* ovary + *κέντησις* puncture]. Surgical puncture of an ovary.

ovariocyesis (o-va're-o-si-e'sis) [L. *ovarium* ovary + *κύσις* pregnancy]. Ovarian pregnancy.

ovariodynesia (o-va're-o-dis-nu're-ah) [L. *ovarium* ovary + *δυσ-* ill + *νῆρον* nerve]. Neuralgic pain in the ovary.

ovario-epilepsy (o-va're-o-ep'il'ep-se). Hystero-epilepsy.

ovariohysterectomy (o-va're-o-his-ter-ek'to-me). Same as *oophoro-hysterectomy*.

ovariolytic (o-va're-o-lit'ik) [ovary + *λυτικός* dissolving]. Destroying ovarian cells or tissue.

ovarioncus (o-va-re-ong'kus) [ovary + ὄγκος mass]. A tumor of the ovary.

ovariorrhexis (o-va're-o-reks'is) [L. *ovarium* ovary + ῥήξις rupture]. Rupture of an ovary.

ovariosalpingectomy (o-va're-o-sal-pin-jek'-to-me). Surgical removal of an ovary and oviduct.

ovariosteresis (o-va're-o-ste-re'sis) [L. *ovarium* ovary + στέρεσις loss]. The extirpation of an ovary.

ovariostomy (o'va-re-os'to-me). Same as *oophorostomy*.

ovariotomist (o'va-re-ot'o-mist). A surgeon who practices ovariectomy.

ovariotomy (o'va-re-ot'o-me) [L. *ovarium* ovary + τομή cut]. Surgical removal of an ovary (oophorectomy); or, more commonly, the removal of an ovarian tumor. **abdominal o.**, ovariectomy performed through the abdominal wall. **normal o.**, the removal of a healthy ovary. **vaginal o.**, ovariectomy performed through the vagina.

ovariotubal (o-va're-o-tu'bal). Pertaining to the ovary and oviducts.

ovaritis (o-va-ri'tis). Inflammation of an ovary.

ovarium (o-va're-um) [L.]. Ovary. **o. masculinum**, the appendix of the testicle.

ovary (o-va-re) [L. *ovarium*]. The female sexual gland in which the ova are formed. It is a flat, oval body connected with the posterior surface of the broad ligament. It is lined by peritoneum, and is made up of a layer of fibrous tissue (*unica albuginea*) enclosing a mass of vascular fibrous tissue which contains a number of graafian vesicles, each enclosing an ovum.

ovaserum (o-vah-se'rum). An antiserum found on immunizing with egg albumin.

ovatherapy (o-vah-ther'ap-e). See *ootherapy*.

ovazyl (o'vaz-il). A proprietary preparation of ovary, corpus luteum, pituitary, suprarenal, thyroid, and thymus.

overbite (o'ver-bit). The overlapping of upper incisor teeth over the lower.

overcorrection (o'ver-kor-ek'shun). The use of too powerful lenses in correcting defect of vision.

overdetermination (o'ver-de-ter-min-a'shun). In psychoanalysis, the assigning of too many meanings to the elements of a dream or symptom.

overextension (o'ver-eks-ten'shun). Extension beyond the normal limit.

overfeeding (o-ver-fe'ding). See *superalimentation*.

overflow (o-ver-flo). The continuous escape of a fluid, as of the tears or the urine. **o. of the gall**, a popular name for jaundice.

overgrowth (o-ver-grōth). Hypertrophy; hyperplasia.

overhang (o'ver-hang). A filling on the proximal surface of a tooth at the cervical margin, making a protruding shoulder.

overlying (o-ver-li'ing). Suffocation of an infant from one of the parents lying upon it.

overmaximal (o-ver-max'im-al). Over the normal maximum.

overproduction theory. See *Weigert's law*, under *law*.

overproductivity (o-ver-pro-duk-tiv'it-e). Mental activity characterized by volubility, psychomotor activity, flights of ideas, incoherence, destructiveness, noisiness, etc.

overreaching (o-ver-re'tshing). An error of gait in the horse, in which the toe of the hind hoof strikes the heel of the forefoot.

overriding (o-ver-ri'ding). The slipping of either part of a fractured bone past the other.

overstain (o-ver-stān). To stain a tissue excessively, so that certain elements may be properly stained when the excess of stain is washed out.

overstrain (o'ver-strān). An abnormal degree of fatigue brought about by activity. It is intermediate between fatigue and actual exhaustion.

overstress (o'ver-stres). Excessive activity resulting in overstrain.

overtoe (o'ver-to). Hallux varus in which the great toe overlies its fellows.

overtone (o'ver-tōn). Any one of the tones into which a clang can be resolved other than the lowest or fundamental tone. **psychic o.**, the consciousness of a fringe or halo of associated relations which surrounds every image presented to the mind.

ovi albumin (o'vi al-bu'min). Latin for *white of egg*; the white of hens' eggs: used in pharmacy. **o. vitellum**, yolk of egg.

ovicapsule (o'vi-kap-sul). The internal coat of a graafian follicle.

oviducal (o'vi-du-kal). Pertaining to the oviducts.

oviduct (o've-duk't) [L. *ovum* egg + *ductus* duct]. The duct passing from either uterine cornu to the ovary, and serving to convey the ovum from the ovary to the uterus and spermatozoa to the ovary; a fallopian tube.

oviferous (o-vif'er-us) [L. *ovum* egg + *ferre* to bear]. Producing ova.

ovification (o-vif-ik-a'shun) [L. *ovum* egg + *facere* to make]. The formation of the ovum in the ovary; ovulation.

oviform (o'vif-orm) [L. *ovum* egg + *forma* shape]. Egg shaped; ovoid.

ovigenesis (o-vij-en'es-is) [L. *ovum* egg + γεννᾶν to produce]. Oogenesis.

ovigenetic, ovigenic, ovigenous (o'vij-en-et'-ik, o-vij-en'tik, o-vij'en-us). Producing ova.

ovigerum (o've-jerm) [L. *ovum* egg + *germen* germ]. A cell which develops into an ovum.

ovigerous (o'vij'er-us) [L. *ovum* egg + *gerere* to bear]. Producing or containing ova.

ovination (o-vin-a'shun) [L. *ovinus* of a sheep]. Inoculation with the virus of sheep pox.

ovinia (o-vin'e-ah) [L. *ovis* sheep]. A disease of sheep resembling and perhaps identical with smallpox; sheep pox.

oviparous (o-vip'ar-us) [L. *ovum* egg + *parere* to produce]. Producing ova or eggs which are hatched outside the body; producing young from an egg.

oviposition (o'vi-po-zish'un) [L. *ovum* egg + *ponere* to place]. The act of laying eggs.

oviprotogen (o-vi-pro'to-jen). A proprietary food for infants and for the sick: said to be a preparation of albumin.

ovisac (o'vis-ak) [L. *ovum* egg + *sacus* bag]. A graafian vesicle; the structure which holds an ovum while still within the ovary.

ovist (o'vist). One who believes that the undeveloped embryo exists preformed in the ovum. Cf. *animalculist*.

ovium (o've-um). The mature ovum.

ovi vitellus (o'vi vi-tel'lus). Latin for *yolk of egg*: used in pharmacy in preparing emulsions.

ovocenter (o'vo-sen-ter). The centrosome of the ovum during fertilization.

ovocyte (o'vo-sit). Same as *oocyte*.

ovoferrin (o-vo-fer'in). A liquid preparation of a salt of organic iron. Dose, 2-4 fluidrachms (8-16 cc.).

ovogal (o'vo-gal). A proprietary cholagogue remedy, being a combination of bile acids with egg albumin. Dose, 8-15 grains (0.5-1 Gm.).

ovogenesis (o-vo-jen'es-is). Same as *oogenesis*.

ovoglobulin (o-vo-glob'u-lin). The globulin of white of egg.

ovogonium (o-vo-go'ne-um). Same as *oogonium*.

oid (o'void) [ovum + *ēdos* form]. A nonflagellated or female malarial microparasite.

ovol (o'vol). Purified and medicated mutton suet for cosmetic and lubricating purposes.

ovolecithin (o-vo-les'ith-in). A lecithin from eggs: used in tuberculosis, pancreatic diabetes, kidney diseases, etc.

ovoly sine (o-vo-lis'in) [L. *o'vum* egg + *lysine*]. A cytotoxin which acts on egg cells.

ovolytic (o-vo-lit'ik). Splitting up egg albumin.

ovomucin (o-vo-mu'sin). A glycoprotein from the white of egg.

ovomucoid (o-vo-mu'koid) [L. *o'vum* egg + *mucoid*]. A mucus-like principle derivable from egg white.

ovoplasm (o'vo-plazm) [L. *o'vum* egg + *plasma*]. The substance or protoplasm of an unfecundated ovule.

Ovoplasma orientale. Same as *Leishmania tropica*.

ovoprecipitin (o'vo-pre-sip'et-in). A precipitin specific for the white of egg.

ovoprogen (o-vo-pro'to-jen). Proto-gen.

ovoserum (o-vo-se'rum). The serum of an animal into which egg albumin has been injected. This serum will precipitate the albumin from eggs of the same species as those from which the injection was made.

ovotherapy (o-vo-ther'ap-e). Therapeutical use of ovarian extract, especially extract from the corpus luteum.

ovovitelin (o-vo-vi-tel'in). The vitellin of egg yolk.

ovoviviparous (o'vo-viv-ip'ar-us) [L. *o'vum* ovum + *vivip'arus* bringing forth alive]. Reproduction by eggs which are hatched within the body.

ov'ula nabo'thi. See *Naboth's ovules*, under *ovule*.

ovular (o'vu-lar). Pertaining to an ovule or an ovum.

ovulase (o'vu-lās). An enzyme thought to be present in living eggs and to stimulate karyokinesis.

ovulation (o-vu-la'shun). The formation and discharge of an unimpregnated ovum from the ovary.

ovule (o'vūl) [L. *ovulum*]. 1. The ovum within the graafian vesicle. 2. Any small, egglike structure. **o. of de Graaf**, a graafian vesicle. **Naboth's o's**, glands or follicles within the os uteri and cervical canal, often distended with mucus. **primitive o.**, **primordial o.**, a rudimentary ovum within the ovary.

ovulin (ov'u-lin). An internal secretion of the ovary.

ovulogenous (o-vu-loj'en-us). Producing or developing from an ovule or ovum.

ovum (o'vum) [Latin for egg]. 1. An egg. 2. The female reproductive cell which, after fertilization, develops into a new member of the same species (von Baer, 1827). The human ovum is a round cell about $\frac{1}{120}$ inch in diameter. It consists of protoplasm (*vitellus*, or *yolk*) enclosed by a

(*germinal spot*). **alecithal o.**, one which has very little or no food yolk. **apoplectic o.**, one which is the seat of an extravasation of blood. **blighted o.**, one in which development becomes arrested after impregnation. **centrolecithal o.**, one in which the formative yolk is arranged in a regular manner around the entire ovum. **holoblastic o.**, one in which the food yolk is scanty and is blended with the formative yolk. **lecithal o.** Same as *meroblastic o.* **male o.**, a cell form seen in the diverticula of the seminiferous tubules: supposed to be an imperfect spermatozoon. **Mall's o.**, an impregnated ovum about thirteen days old; also one twenty-six days old. **meroblastic o.**, one with a large and nearly inactive food yolk. **permanent o.**, a complete ovum ready for fertilization. **Peters' o.**, an ovum which was obtained five or six days after impregnation. **primitive o.**, **primordial o.**, any egg cell which eventually becomes an ovule within the graafian vesicle. **telelecithal o.**, one in which the food yolk and formative yolk each form a hemisphere.

Ox. Abbreviation for *oxymel*.

oxacid (oks'as-id). Any acid that contains oxygen.

oxalate (oks'al-āt) Any salt of oxalic acid.

oxalemia, **oxalaemia** (ok-sal-e'me-ah) [*oxalate* + *aima* blood]. The presence of an excess of oxalates in the blood.

oxalethylin (oks-al-eth'il-in). A poisonous aromatic liquid, $C_6H_5ON_2$: a heart stimulant.

oxalic acid (oks-al'ik). See under *acid*.

oxalism (oks-al-izm). Poisoning by oxalic acid or an oxalate.

oxaluria (oks-al-u're-ah) [L. *ox'alas* oxalate + *uri'na* urine]. The presence of an excessive amount of oxalic acid or of oxalates in the urine.

oxaluric acid (oks-al-u'rik). See under *acid*.

oxaly (ok'sal-il). The divalent group, (C:O), from oxalic acid by the loss of two hydroxyl groups.

oxalylurea (oks'al-il-u're-ah). Parabanic acid, $(CO.NH)_2CO$, obtainable from uric acid by oxidation; oxalylureid.

oxamide (oks-am'id). The diamide of oxalic acid, $NH_2.CO.CO.NH_2$. It will give the biuret reaction.

oxaphor (oks'af-or). A 50 per cent solution of oxycamphor.

oxbile (ox'bil). See *fel bovis*.

ox bot (oks bot). The insect, *Hypoder'ma linearis*, whose larvae infest horned cattle.

oxgall (ox'gawl). See *fel bovis*.

oxidase (oks'id-ās). See *oxydase*.

oxidation (oks-id-a'shun). The act of oxidizing or state of being oxidized. Chemically it consists in the increase of positive charges on an atom or the loss of negative charges.

oxide (oks'id) [L. *ox'idum*]. Any compound of oxygen with an element or radical.

oxidization (oks-id-iz-a'shun). Oxidation.

oxidize (oks'id-iz). To combine or cause to combine with oxygen. See *oxidation*.

oxidosis (oks-id-o'sis). Same as *acidosis*.

oxim, **oxime** (oks'im). Any one of a series of compounds formed by the action of hydroxylamine upon an aldehyde or a ketone.

oxin (oks'in). A proprietary saccharated beef extract.

oxo-ate (oks'o-āt). A proprietary name for ammonium *o*-iodoxybenzoate (a.-o. A) or ammonium *o*-iodoxybenzoate (a.-o. B).

oxol (oks'ol). Any member of the series of bodies to which menthoxol, campkoxol, and naphtoxol belong.

oxone (oks'ōn). A proprietary hydrogen peroxide preparation.

oxonemia (oks-o-ne'me-ah) [L. *oxone* acetone]. Acetonemia.

Ovum of monkey (Prentiss).

cell wall, which consists of two layers, an inner one (*zona pellucida*, *zona radiata*) and an outer, thin one (*vitelline membrane*). There is a large nucleus (*germinal vesicle*), within which is a nucleolus

- oxonium** (oks-o'-ne-um). Containing tetraivalent basic oxygen.
- oxonuria** (oks-o-nu're-ah). Acetonuria.
- oxozone** (ox'o-zōn). A hypothetical allotropic form of oxygen, O₄, supposed to be present in ozone.
- oxpara** (oks'par-ah). A proprietary preparation for treating putrescent teeth.
- ox warble**. Same as *ox bot*.
- oxy-** [ôxûs keen]. A prefix meaning sharp, quick, or sour; also denoting the presence of oxygen in a compound; very frequently used erroneously for hydroxy-.
- oxyacanthine** (oks'e-ak-an'thin). An alkaloid, C₁₈H₁₉NO₄, from berberis. It causes cerebrosplinal paralysis. Called also *berbine*.
- oxyacid** (oks'e-as-id). Same as *oxacid*.
- oxyacosa, oxyacoia, oxyakoia** (oks'e-ak-o'ah, oks'e-ak-o'i'ah). Same as *oxyecoia*.
- oxyblepsia** (oks-e-blep'se-ah) [ôxûs sharp + βλεψ vision]. Unusual acuity of vision.
- oxyburserasin** (oks-e-bur-ser-az'in). A volatile substance from the resin of myrrh, claimed to be useful in internal wounded surfaces, tuberculous lesions, etc. It is injected and is said to unite with the blood to form a protective membrane.
- oxybutyria** (oks'e-bu-tir'e-ah) [oxybutyric acid + ουρον urine]. The presence of hydroxybutyric acid in urine.
- oxybutyric acid** (oks'e-bu-tir'ik). See *hydroxybutyric acid*, under *acid*.
- oxybutyricacidemia** (oks'e-bu-tir-ik-as-id-e'me-ah). Same as *oxybutyria*.
- oxycamphor** (oks-e-kam'for). Hydroxycamphor; a colorless, crystalline powder, C₈H₁₄CHOH.CO, obtained by the oxidation of camphor. It is used in dyspnea to allay respiratory irritability. Dose, 4 grains (0.26 Gm.).
- oxycannabin** (oks-e-kan'ab-in). A derivative of cannabinol, C₁₁H₁₁NO₄; nearly inactive.
- oxycanthine** (oks-e-kan'thin). A white alkaloid, C₁₅H₂₁NO₃, from the root of *Berberis vulgaris*, the barberry; said to paralyze and irritate the brain and spinal cord.
- oxycephalia, oxycephaly** (oks'e-sef-a'le-ah, oks-e-sef-al-e) [ôxûs sharp + κεφαλή head]. The

Oxycephalia (Church and Peterson).

- possession of an unusually high vertical index. Called also *acrocephaly*, *hypsiccephaly*, *turricephaly*, *steeple head*, and *tower head*.
- oxycephalic** (oks'e-sef-al'ik). Having a steeple-shaped head.
- oxycephalous** (oks-e-sef'al-us) [ôxûs sharp + κεφαλή head]. Having a high vertical index.
- oxychinolin** (oks-e-kin'o-lin). A disinfecting principle developed in wounds on the application of chinosol.
- oxychloride** (oks-e-klo'rid). A metallic chloride containing oxygen.
- oxychlorine** (oks-e-klo'rin). A proprietary wound dressing, reported as consisting essentially of potassium chlorate, sodium nitrate, borax, and boric acid.
- oxycholesterin** (oks-e-ko-les'ter-in). An oxidized form of cholesterol, C₂₆H₄₅O, found in wool fat.
- oxycholine** (oks-e-ko'lin). Muscarine.
- oxychromatic** (oks'e-kro-mat'ik) [ôxûs sour + χρώμα color]. Staining with acid dyes; acidophile.

- oxychromatin** (oks-e-kro'mat-in) [ôxûs sour + χρωμαtin]. That part of the chromatin that stains with acid aniline dyes; called also *lanthanin*.
- oxycinesia** (oks'e-sin-e'ze-ah) [ôxûs sour + κίνησις movement]. Pain on motion.
- oxydase** (oks'id-ās). Any enzyme that produces oxidation; any one of a group of enzymes which cause oxidation processes. **direct o.**, an oxydase which causes the direct transference of oxygen from the air. **indirect o.**, an oxydase which acts only along with a peroxide. **primary o.** Same as *direct o.*
- oxydasic** (oks-id-a'sik). Of or relating to an oxydase.
- oxydasis** (oks-id-a'sis). The oxidizing action produced by oxydase.
- oxydendron** (oks-e-den'dron) [ôxûs sour + δένδρον tree]. A homeopathic remedy prepared from the leaves of *Oxyden'drum arbo'reum*, an ericaceous tree of North America.
- oxydesis** (oks-e-de'sis) [ôxûs sour + δέσις binding]. The acid binding power, especially of the blood. In the latter it represents the greatest amount of HCl (one hundredth normal) that can be added to oxalated blood without clumping the erythrocytes.
- oxydetic** 'oks-id-et'ik). Pertaining to the acid binding power.
- oxydimorphine** (ok-se-di-mor'fin). Dehydromorphine.
- oxydum** (oks'id-um). Latin for *oxide*.
- oxyecoia** (oks'e-e-ko'i'ah) [ôxûs sharp + ἀκοή hearing]. Morbid acuteness of the sense of hearing.
- oxyesthesia** (oks-e-es-the'ze-ah) [ôxûs keen + αἰσθησις feeling]. Morbid or abnormal acuteness of the senses.
- oxyethylamine** (oks-e-eth-il-am'in). Same as *hydroxyethylamine*.
- oxygar** (oks'e-gar). Agar-agar hydrogen dioxide compound. It is claimed that it liberates oxygen in the intestines, checking fermentation and reducing the bacterial content of the tract.
- oxygen** (oks'ij-en) [ôxûs sour + γεννάν to produce]. A gaseous element existing free in the air and in combination in most nonelementary solids, liquids, and gases; atomic weight, 16; symbol, O. Oxygen constitutes 20 per cent by weight of the atmospheric air; it is the essential agent in the respiration of plants and animals, and is necessary to support combustion. It forms the characteristic constituent of most acids. It is administered chiefly in pulmonary diseases and anemia, mainly by inhalation. **excess o.**, the excess of oxygen used over and above the resting requirements of the body. **o. want**. See *anoxemia*.
- oxygenase** (oks'e-jen-ās). An enzyme that acts by the direct transference of the molecular oxygen of the air. Oxygenases are converted into peroxides.
- oxygenate** (oks'e-jen-āt). To saturate with oxygen.
- oxygenation** (oks'e-jen-a'shun). Saturation with oxygen.
- oxygenic** (oks-e-jen'ik). Containing oxygen.
- oxygenium** (oks-e-jen'e-um). Oxygen.
- oxygenize** (oks'e-jen-iz). Same as *oxidize*.
- oxygeusia** (oks-e-gu'se-ah) [ôxûs sharp + γεύσις taste]. Unusual acuteness of the sense of taste.
- oxyhematoporphyrin** (oks'e-hem-at-o-por'fir-in). A pigment sometimes found in the urine, nearly allied to hematoporphyrin.
- oxyhemocyanine** (oks'e-hem-o-si'an-in). Hemocyanine charged with oxygen.
- oxyhemoglobin** (oks'e-hem-o-glo'bin). Hemoglobin charged with oxygen as in the arterial blood.
- oxyhemoglobinometer** (oks'e-hem-o-glo-bin-om'eter). An instrument for measuring the oxygen content of the blood.

oxyhydrocephalus (oks''e-hi-dro-sef'al-us). Hydrocephalus in which the top of the head assumes a pointed shape.

oxyiodide (oks-e-i'ō-did). An oxide combined with its iodide, as, for example, $R- \overset{\text{O}}{\underset{\text{O}}{\text{I}}}$.

oxykrinin (oks-e-krin'in). Same as *secretin*.

oxylalia (oks-e-la'le-ah) [ὀξύς swift + λαλεῖν to talk]. Swiftness of speech.

oxyleucotin (oks-e-lu'ko-tin). A compound, C₃₄H₃₀O₁₂, from paracoto bark.

oxyl iodide (oks-il-i'ō-did). A proprietary preparation of cinchophen hydroiodide: used in myositis, arthritis, and neuritis. Dose, 6 grains (0.4 Gm.) t. i. d.

oxyluciferin (oks-e-lu-sif'er-in). The product of the oxidation of luciferin by luciferase.

oxymandelic acid (oks''e-man-del'ik). See *acid*.

oxymel (oks'e-mel) [ὀξύς sour + μέλι honey]. A medicated syrup of vinegar and honey.

oxymethylcresoltannin (oks''e-meth''il-kre''sol-tan'in). Cretaform.

oxymorphone (oks-e-mor'fin). See *dehydromorphine*.

oxymyohematin (oks''e-mi-o-hem'at-in). Oxidized myohematin from muscle.

oxynaphthoic acid (oks''e-naf-tho'ik). See *acid*.

oxynarcotine (oks-e-nar'ko-tin). An alkaloid, C₂₂H₂₃O₈N, from opium.

oxyneurine (oks-e-nu'rin). Same as *betaine*.

oxyntic (oks-in'tik) [ὀξύειν to make acid]. Secreting an acid substance. See under *cell*.

oxynitin (oks-in'tin). A combination of hydrochloric acid with albumin, containing 5 per cent by weight of absolute hydrochloric acid.

oxypopia (oks-e-o'pe-ah). Acuteness of vision.

oxypter (oks-e-o'pter) [ὀξύς sharp + ὥψ vision]. A unit of measurement of visual acuity, being the reciprocal value of the visual angle expressed in degrees. An oxypter (1 degree) is equivalent to 60 Snellen units (60') and corresponds to the counting of fingers at 1 meter (De Blaskovics).

oxyzosis (oks-e-o'sis) [ὀξύς acid]. Acidosis.

oxynosmia (ok-se-os'me-ah) [ὀξύς sharp + ὀσμή odor]. Acuteness of the sense of smell.

oxysphresia (oks'e-os-fre'ze-ah) [ὀξύς sharp + ὀσφρησις smell]. Unusual acuteness of the sense of smell.

oxyparaplastin (oks''e-par-ah-plas'tin). The oxyphil part of paraplastin.

oxypathia (oks-e-pa'the-ah) [ὀξύς sharp + πάθος feeling]. Acuteness of sensation.

oxypathic (oks-e-path'ik). Pertaining to or characterized by oxypathy.

oxypathy (oks-ip'at-e) [ὀξύς acid + πάθος disease]. Acid poisoning; inability of the body to eliminate unoxidizable acids which injure the organism by uniting with the fixed alkalis of the tissues. The term includes arthritism, lithemia, etc.

oxyperitoneum (oks''e-per-it-o-ne'um). Injection of oxygen into the abdominal cavity.

oxyphenacetin salicylate (oks''if-e-nas'et-in). A salt: antirheumatic and antipyretic.

oxyphenylethylamine (oks-e-fen-il-eth-il-am'in). Tyramine.

oxyphil (oks'fif-il). 1. Same as *oxyphilous*. 2. An oxyphilous cell or histologic element.

oxyphilic (oks-e-fil'ik). Oxyphilous.

oxyphilous (oks-if'il-us) [ὀξύς acid + φιλεῖν to love]. Stainable with an acid dye.

oxyphonia (oks-if-o'ne-ah) [ὀξυφωνία]. An abnormally sharp quality or pitch of the voice.

oxyphor (oks'e-for). Same as *oxycamphor*.

oxypinene (oks-e-pi'nēn). A gaseous substance formed by the union of the vapor of pinene with ozonized air: used by inhalation in the treatment of pulmonary tuberculosis.

oxyplasm (oks'e-plazm). The oxyphil part of the cytoplasm.

oxyprolin (oks-e-pro'lin). Same as *hydroxyprolin*.

oxypropylene diisocamylamine. A colorless liquid principle: a cardiac tonic and stimulant.

oxyproteic acid (oks''e-pro-te-in'ik). See *acid*.

oxypurinase (oks-e-pu'rin-ās). A ferment which oxidizes oxypurines.

oxypurine (oks-e-pu'rin). A purine containing oxygen. The oxypurines include hypoxanthine or monoxypurine, xanthine or dioxypurine, and uric acid or trioxypurine.

oxyquinaseptol (oks''e-kwin-as-ep'tol). Same as *daphtherin*.

oxyquinoline (oks-e-kwin'o-lin). A substance, OH.C₆H₃(CH₃)₂N, derived from quinoline. It is excreted in the urine paired with glycuronic acid. **o. sulphate**. See *chinosol*.

oxyrhine (oks'e-rin) [ὀξύς sharp + ῥίς nose]. Having a sharp-pointed nose.

oxyrygmia (oks-e-rig'me-ah) [ὀξύς sharp + ἐρρυγμός eructation]. Acid eructation.

oxysalt (oks'e-sawlt). Any salt of an oxacid.

oxysantonin (oks-e-san'to-nin). A compound formed in the body from ingested santonin.

oxysepsin (oks-e-sep'sin). A toxin derived from a culture of bacteria from cases of tuberculosis with persistent high fever. In the treatment of tuberculosis with added infection from cocci it is injected in connection with oxytuberculin.

oxysparteine (oks-e-spar'te-in). A white, crystalline substance, C₁₃H₂₄N₂O, derived from sparteine. It is soluble in water and alcohol, and is used as a heart stimulant, but slows the pulse. Hypodermic dose, $\frac{3}{4}$ -1½ grains (0.04-0.1 Gm.). **o. hydrochloride**, sometimes administered before general anesthetization. Dose, $\frac{3}{4}$ -2 grain (0.03-0.04 Gm.).

oxyspore (oks'e-spōr) [ὀξύς sharp + σπόρος spore]. See *exotospore*.

oxytocic (oks-e-to'sik) [ὀξύς swift + τόκος birth]. 1. Hastening the process of childbirth. 2. A medicine which accelerates delivery.

oxytocin (ok-se-to'sin) [see *oxytocic*]. The trade name for a substance, alpha-hypophamine, isolated from the posterior lobe of the pituitary gland: it has the property of stimulating the musculature of the uterus. Cf. *vasopressin*.

oxytoxin (oks-e-tok'sin). Any substance produced by the oxidation of a toxin.

oxytrimethylbutyrobetaine (oks''e-tri-meth''il-bu-ti''ro-be-ta'in). See *carminin*.

oxytropism (oks-it'ro-piz-m) [oxygen + τρεπεῖν to turn]. Response of living cells to the stimulus of oxygen.

oxytuberculin (oks''e-tu-ber'ku-lin). A tuberculin from cultures of an extremely virulent bacillus, modified by oxidation with hydrogen dioxide: it is injected in relatively large amounts.

oxyuriasis (oks-e-u-ri-as-is). Infection with the oxyuris; pinworm or seatworm infection.

oxyuricide (oks-e-u'ris-id) [oxyuris + L. cae'dere to kill]. A medicine which destroys the oxyuris.

oxyurid (oks-e-u'rid). A seatworm or threadworm.

oxyurifuge (oks-e-u'rif-ūj). Same as *oxyuricide*.

Oxyuris (oks-e-u'ris) [ὀξύς sharp + οὐρά tail]. A genus of nematode, intestinal worms of the family Ascaridae. **O. vermicularis**, the seatworm or pinworm, a minute threadlike worm, found in the cecum and in the rectum of children, and causing itching and reflex disturbances. They are characterized by two cuticular ridges along the ventral and dorsal surfaces of the body. Infection occurs through the direct transfer of

eggs; no intermediate host is necessary. *O. appendiculata* and *O. diresingi* are found in the cockroach (*Periplaneta orientalis*). *O. incognita*, a name given to certain ova found in human stools; possibly *Heterodera radiculicola*.

oxyvaselin (oks-e-vas'e-lin). Same as *vasogen*.

oxyzymol (oks-e-zi'mol). Same as *carvacrol*.

oyster-shuckers' keratitis (oi'ster-shuk-erz). See *keratitis*.

oz. An abbreviation for *ounce*.

ozalin (o'zal-in). A proprietary disinfectant mixture.

ozena, ozaena (o-ze'nah) [δζην stench]. A disease of the nose with an offensive discharge. It is due to caries, rhinitis, and syphilitic disease.

o. laryngis, the bad odor of atrophic rhinitis.

ozenous, ozaenous (o-ze-nus). Pertaining to or of the nature of *ozena*.

ozocerite, ozokerit (o-zo-se'rit, o-zok-e'rit) [δζην to smell + κηρός wax]. Ceresin.

ozochrota (o-zo-kro'she-ah) [δζην to smell + χρώς skin]. Strong odor of the skin.

ozogen (o'zo-jen). A proprietary solution of hydrogen dioxide.

ozomulsion (o-zo-mul'shun). A proprietary preparation of ozonized cod liver oil and guaiacol: used in tuberculosis and wasting diseases.

ozonator (o'zo-na-tor). An instrument for generating ozone.

ozone (o'zön) [δζην to smell]. An allotropic and more active form of oxygen, O₃: antiseptic and disinfectant. It is formed when oxygen is exposed to the silent discharge of electricity. **o.-ether**, a mixture of ethylic ether, hydrogen peroxide, and alcohol: used as an antiseptic and for whooping cough and diabetes. Dose, 30-60 grains (2-4 Gm.).

ozonide (o'zo-nid). A compound of an olefin and ozone; the union taking place at the double bond.

ozonize (o'zo-niz). To impregnate with ozone.

ozonized (o'zon-izd). Containing ozone.

ozonizer (o'zo-ni-ser). An apparatus for applying ozone to wounds, sinuses, etc.

ozonoform (o-zo'no-form). A proprietary antiseptic mouth wash.

ozonol (o'zo-nol). A proprietary remedy for diseases of the mucous membranes.

ozonometer (o-zo-nom'et-er) [ozone + μέτρον measure]. An instrument for estimating the ozone in the air.

ozonophore (o-zo'no-för) [ozone + φέρειν to bear]. 1. One of the granular elements of cell protoplasm. 2. A red blood corpuscle.

ozonoscope (o-zo'no-sköp) [ozone + σκοπεῖν to view]. An instrument for studying ozone and its effects.

ozophene (o'zo-fën). An alkaline antiseptic coal tar preparation.

ozostomia (o-zo-sto'me-ah) [δζην stench + στόμα mouth]. Foulness of the breath

P

P. The symbol for *phosphorus*; an abbreviation for *presbyopia*, *pulse*, *pupil*, and *L. pon'dere*, by weight.

p. An abbreviation for *papa*.

P. A. Abbreviation for *pulpo-axial*.

paaj (pah'aj). A dermatitis caused by contact with the leaves of red quehacho, *Schinopsis lorenzii*, in Argentina. Called also *mal de quehacho*.

P. wave. See under *wave*.

pabular (pab'u-lar). Pertaining to, or of the nature of, *pabulum*.

pabulin (pab'u-lin) [*L. pab'ulum* food]. An albuminous substance found in blood just after digestion.

pabulum (pab'u-lum). Latin for *food*, or *aliment*.

pachionian bodies, depression (pak-ke-o'-ne-an) [named from Antonio *Pachioni*, an Italian anatomist, 1665-1726]. See *body*, *depression*.

pacemaker of the heart. See *sino-auricular node*, under *node*.

pachemia (pak-e'me-ah). Same as *pachyemia*.

pachometer (pak-om'et-er). Same as *pachymeter*.

Pachon's method (pash-awns') [Michel Victor *Pachon*, French physician, born 1867]. See under *method*.

pachulosis (pak-u-lo'sis). Same as *pachylosis*.

pachy- (pak'e-) [παχύς thick]. A prefix signifying thick.

pachyacria, pachyakria (pak-e-a'kre-ah) [παχύς thick + ακρον end]. 1. Same as *acromegaly*. 2. A condition characterized by enlargement of the soft parts of the extremities, but not of the bones.

pachyaemia (pak-e-e'me-ah). See *pachyemia*.

pachyblepharon (pak-e-blef'ar-on) [παχύς thick + βλέφαρον eyelid]. A thickening of the eyelid, chiefly near the border.

pachycephalia, pachycephaly (pak''is-ef-a'le-ah, pak-is-ef'al-e). Abnormal thickness of the walls of the skull.

pachycephalic, pachycephalous (pak''e-se-fal'ik, pak-e-sef'al-us) [παχύς thick + κεφαλή head]. Having an abnormally thick skull.

pachychilia (pak-e-ki'le-ah) [παχύς thick + χείλος lip]. Thickness of the lips.

pachycholia (pak-e-ko'le-ah) [παχύς thick + χολή bile]. Abnormal thickness of the bile.

pachychromatic (pak''e-kro-mat'ik) [παχύς thick + χρώμα color]. Having thick chromatin threads.

pachychymia (pak-e-kim'e-ah) [παχύς thick + χυμός juice]. Undue thickness of the chyme.

pachycolpismus (pak''e-kol-piz'mus) [παχύς thick + κόλπος vaginal]. Pachyvaginitis.

pachydactyly (pak-e-dak'til-e) [παχύς thick + δάκτυλος finger]. Enlargement of the fingers and toes.

pachyderma, pachydermia (pak-e-der'mah, pak-e-der'me-ah) [παχύς thick + δέρμα skin]. Abnormal thickness of the skin.

pachydermatocoele (pak''id-er-mat'o-sēl) [παχύς thick + δέρμα skin + κύλη tumor]. 1. Same as *dermatolysis*. 2. Same as *plexiform neuroma*. See under *neuroma*.

pachydermatosis (pak''e-der-mat-o'sis) [παχύς thick + dermatolysis]. Chronic pachydermia, or rosacea hypertrophica.

pachydermatous (pak-e-der'mat-us). Having a thick skin.

pachydermia (pak-e-der'me-ah) [παχύς thick + δέρμα skin]. Hypertrophy, or thickening, of the skin. **p. laryngis**, that condition in which the laryngeal epithelium assumes an epidermoid character, due to chronic catarrhal laryngitis.

p. vesica, a dry, thickened condition of the mucous membrane of the bladder.

pachydermic (pak-e-der'mik). Characterized by abnormal thickness of the skin.

pachyemia, pachyaemia (pak-e-e'me-ah) [*παχύς* thick + *αἷμα* blood]. Thickening of the blood; a thick condition of the blood.

pachyglossia (pak-e-glos'e-ah) [*παχύς* thick + *γλῶσσα* tongue]. Abnormal thickness of the tongue.

pachygnathous (pak-ig'nath-us) [*παχύς* thick + *γνάθος* jaw]. Having a large jaw.

pachyhematous (pak-e-hem'at-us). Pertaining to or possessing thickened blood.

pachyhemia (pak-e-he'me-ah) [*παχύς* thick + *αἷμα* blood]. Thickening of the blood.

pachyhymenic (pak'e-hi-men'ik) [*παχύς* thick + *ὕμην* membrane]. Having an abnormally thick skin.

pachyloptomeningitis (pak'e-lep-to-mem-in-jī'tis) [*παχύς* thick + *λεπτός* thin + *μηνιγξ* membrane + *-itis* inflammation]. Inflammation of the dura and pia together.

pachylosis (pak-il-o'sis) [*παχύλος* thick]. A chronic disease in which the skin, particularly that of the legs, becomes dry, thick, and harsh.

pachymenia (pak-im'e-ne-ah) [*παχύς* thick + *μῆν* membrane]. A thickening of the skin or of a membrane.

pachymenic (pak-e-men'ik). Having an abnormally thick skin or membrane.

pachymeningitis (pak'e-men-in-jī'tis) [*παχύς* thick + *μηνιγξ* membrane + *-itis* inflammation]. Inflammation of the dura mater. The symptoms of the disease resemble those of meningitis. **cerebral p.**, inflammation of the dura of the brain. **external p.**, inflammation of the outer layers of the dura. **hemorrhagic internal p.**, dural hematoma. **internal p.**, that which affects the inner layer of the dura. **serous internal p.**, the so-called external hydrocephalus. **spinal p.**, inflammation of the dura of the spinal column. **syphilitic p.**, that which is caused by syphilis.

pachymeninx (pak-e-me'ninks) [*παχύς* thick + *μηνιγξ* membrane]. The dura matter.

pachymeter (pak-im'e-ter) [*παχύς* thick + *μέτρον* measure]. An instrument for measuring the thickness of objects.

pachynema (pak-e-ne'mah) [*παχύς* thick + *νήμα* thread]. A postsynaptic stage of mitosis in which the chromatin is in the form of thick spireme threads.

pachynsis (pak-in'sis) [*πάχυνσις*]. Thickening; especially, abnormal thickening.

pachyntic (pak-in'tik). Marked by unusual thickening.

pachyostosis (pak'e-os-to'sis) [*παχύς* thick + *ὀστέον* bone]. A benign form of hypertrophy of the bones; found particularly in aquatic animals.

pachyotia (pak-e-o'she-ah) [*παχύς* thick + *οὖς* ear]. Marked thickness of the ears.

pachypelvipertonitis (pak'e-pe'l've-per-it-o-nī'tis) [*παχύς* thick + *pelvic* + *peritonitis*]. Pelvic peritonitis with thickening of the affected parts.

pachyperitonitis (pak'e-per-it-o-nī'tis) [*παχύς* thick + *peritonitis*]. Peritonitis with thickening of the affected membrane.

pachypleuritis (pak'e-plu-rī'tis) [*παχύς* thick + *πλευρίτις*]. Inflammation of the pleura, with thickening.

pachypodous (pak-ip'od-us) [*παχύς* thick + *πούς* foot]. Having abnormally thick feet.

pachyrhizid (pak-ir-i'zid). A poisonous glucoside from *Pachyrhizus angulatus*, a plant of various tropical regions.

pachysalpingitis (pak'e-sal-pin-jī'tis) [*παχύς* thick + *σάλπιγγξ* tube + *-itis* inflammation]. Chronic interstitial inflammation of the muscular coat of the oviduct producing thickening. Called also *mural salpingitis* and *parenchymatous salpingitis*.

pachysalpingo-oothecitis (pak-e-sal'pin-go-o'-

o-the-si'tis) [*παχύς* thick + *σάλπιγγξ* tube + *οὐθήκη* ovary + *-itis*]. Chronic parenchymatous inflammation of the ovary and oviduct.

pachysalpingo-ovaritis (pak'e-sal-pin'go-o-var-i'tis) [*παχύς* thick + *σάλπιγγξ* tube + *L. ovarium* ovary]. Inflammation of the ovary and oviduct in which the parts have become hardened and atrophic.

pachysomia (pak-e-so'me-ah) [*παχύς* thick + *σῶμα* body]. Abnormal thickening of parts of the body.

pachytene (pak'it-en) [*παχύτης* thickness]. In cytology, the stage following synapsis in which the chromosomes are seen as a few thick threads.

pachytrichous (pak-it'rik-us) [*παχύς* thick + *θρίξ* hair]. Having thick hair.

pachyvaginitis (pak'e-vaj-in-al-i'tis) [*παχύς* thick + *vaginitis*]. Inflammatory thickening of the tunica vaginalis.

pachyvaginitis (pak'e-vaj-in-i'tis) [*παχύς* thick + *vaginitis*]. Chronic vaginitis with thickening of the vaginal walls.

pacinian (pa-sin'e-an). Described by or named for Filippo *Pacini*, Italian anatomist, 1812-1883. **p. corpuscles**. See *corpuscle*.

pacinitis (pas-in-i'tis). Inflammation of the pacinian corpuscles.

pack (pak). Treatment by wrapping a patient in blankets, wet or dry; also the blankets in which a patient is packed. **cold p.**, the wrapping of a patient in blankets or sheets dipped in cold water. **dry p.**, the wrappings of a patient in dry, hot blankets. **hot p.**, the wrapping of a patient in hot blankets, wet or dry. **wet p.**, the packing of a patient in wet blankets or sheets, hot or cold.

packer (pak'er). An instrument for introducing dressing into the vagina.

packing (pak'ing). 1. The act of filling a wound or cavity with gauze, sponge, or other material. 2. The substance used for filling a cavity. 3. Treatment with the pack.

pad, dinner (pad). A pad placed over the stomach before a plaster jacket is applied. The pad is then removed, leaving space under the jacket to take care of expansion of the stomach after eating. **knuckle p's**, nodules about the size of a split pea on the dorsal surfaces of the fingers. They are slightly movable and consist of new growths of fibrous tissue. **Malgaigne's p's**, adipose pads in the knee joint immediately above the articular surface of the femur and on either side of the upper end of the patella. **Mikulicz's p.**, a pad composed of folded gauze; used in surgical work. **occlusal p.**, a pad which covers the occlusal surface of a tooth. **sucking or suctional p.**, a lobulated mass of fat which occupies the space between the masseter and the external surface of the buccinator. It is well developed in infants. Called also *fatty ball of Bichat* and *corpus adiposum buccae*.

P. æ. Abbreviation for *L. par'ies aequal'es*, in equal parts.

paed-, paedo-, etc. For words thus beginning, see those beginning *ped-, pedo-, etc.*

pageism (pa'jizm). Sexual perversion in which the pervers imagines himself a page to a beautiful woman.

Pagenstecher's circle, ointment (pahg'en-stek-erz) [Alexander *Pagenstecher*, German ophthalmologist, 1828-1879]. See *circle* and *ointment*.

pageol (pahj'e-ol). A proprietary urinary antiseptic.

Paget's abscess, disease, etc. (pahj'ets) [Sir James *Paget*, English surgeon, 1814-1899]. See *abscess, disease, etc.*

pagoplexia (pa-go-pleks'e-ah) [*πάγος* frost + *πληγή* stroke]. Frost bite or chilblain.

Pahvant valley plague (pah'vant). See *hularemia*.

paidology (pi-dol'ō-jē) [παῖς child + λόγος treatise]. The sum of what is known regarding childhood.

pain (pān) [L. *pae'na*; *do'lor*]. 1. Distress or suffering. 2. A rhythmical contraction of the uterus in labor. **after-p's**, the expulsive contractions of the uterus which follow childbirth. **bearing-down p.**, a variety of pain in the female reproductive organs occurring in various local diseases or in childbirth. **boring p.**, a sensation as of being pierced with a gimlet. Called also *terebrant p.* **Brodie's p.**, pain induced by folding the skin near a joint affected with neuralgia. **Charcot's p's**, rheumatism of a testicle. **dilat-**

- = Ulcer. ⊙ = Appendicitis.
 △ = Biliary Colic. ■ = Renal Colic (Anterior Point of Pressure).
 ▲ = Pancreatic Colic. ◆ = Disease of Urinary Bladder.
 ⊗ = Tumor of Spleen. ✕ = Intestinal Colic.
 ✕ = Intestinal Colic. ○ = Disease of Genitalia.

Topography of pain due to pressure (Cemach).

ing p's, those of the first stage of labor. **expulsive p's**, those of the second and final stages of labor. **false p's**, ineffective pains which resemble labor pains, but which do not indicate the beginning of real labor. **fulgurant p's**, intense momentary pains, coming and going with swiftness like that of lightning: they are especially characteristic of tabes dorsalis. Called also *shooting p.* **girdle p.**, a painful sensation as of a cord about the waist. **growing p's**, quasirheumatic pains peculiar to early youth. **hunger p.**, pain coming on at the time for feeling hunger for the next meal: a symptom of gastric disorder. **ideogenous p.**, pain caused by an erroneous idea; mentally produced pain. **imperative p.**, a persisting painful sensation felt in psychasthenia. **intermenstrual p.**, a pain occurring during the period between the menses. **p. joy**, the hysterical enjoyment of pain. **jumping p.**, a peculiar pain in joint diseases when the bone is laid bare by ulceration of the cartilage. **lancinating p.**, a sharp, darting pain. **lightning p's**, the cutting and intense darting pains of locomotor ataxia. See also *fulgurant p's*. **midpain, middle p.**, intermenstrual pain. **mind p.**, psychalgia. **niggling p's**, the earliest pains of puerperal labor. **osteoepic p.** Same as *osteoepic*. **parenchymatous p.**, pain at the peripheral end of a nerve. **premonitory p's**, ineffective uterine contractions before the beginning of true labor. **referred p.**, pain in a part other than that in which the cause that produced it is situated. **p. sense**, the sense by which the pain is perceived. **shooting p.**, a fulgurant pain. **soul p.**, psychalgia. **spot p's**, pains which seem like patches on the integument. **starting p's**, pain and muscular spasm in the early stages of sleep. **terebrant p.**, *terebrating p.* Same as *boring p.* **wandering p.**, a pain which repeatedly changes its location.

painters' colic (pān'terz). See *colic*.

Pajot's hook (pazh-oz') [Charles Pajot, French obstetrician, 1816-1896]. See under *hook*.

pala (pa'lah) [L. "spade"]. A thin, spadicle layer connecting the fimbriae with the cerebrum.

palaeencephalon. See *paleencephalon*.

palaeogen'esis. See *palingenesis* (2d def.).

palaeopathology. See *paleopathology*.

palaeothalamus. See *paleothalamus*.

palatal (pal'at-al). Pertaining to the palate.

palate (pal'at) [L. *palat'um*]. 1. The roof of the mouth. 2. A popular designation for the uvula, or pendulum of the palate. **artificial p.**, a plate to close a cleft of the palate. **cleft p.**, a palate having a congenital fissure in the median line. **falling p.**, an elongated uvula. **hard p.**, the anterior part of the roof of the mouth; the bony palate. **p. hook**, a hook for raising the palate in rhinoscopy. **pendulous p.**, the uvula. **soft p.**, the part of the palate near the uvula.

palatograph (pal'at-graf) [*palate* + γράφειν to record]. An apparatus for registering motions of the soft palate.

palatiform (pal'at'if-orm) [L. *palat'um* palate + *for'ma* form]. Resembling the palate.

palatine (pal'a-tin) [L. *palat'inus*]. Pertaining to the palate.

palatinoid (pal-at'īn-oid). A form of vehicle for the administration of volatile or unpalatable medicines.

palatitis (pal-at-i'tis). Inflammation of the palate.

palatoglossal (pal'at-o-glos'al). Pertaining to the palate and tongue.

palatoglossus (pal'at-o-glos'us) [L. *palat'um* palate + γλῶσσα tongue]. See *muscles, table of*.

palatognathous (pal-at-og'na-thus) [L. *palat'um* palate + γνάθος jaw]. Having a congenitally cleft palate.

palatograph (pal'at-o-graf) [L. *palat'um* palate + γράφειν to write]. An instrument to record the movements of the palate in speech.

palatography (pal-at-og'raf-e). The making of graphic records of the movements of the palate in speech.

palatomaxillary (pal'at-o-mak'sil-a-re). Pertaining to the palate and the superior maxillary bone.

palatomyograph (pal'at-o-mi'o-graf) [L. *palat'um* palate + μῦς muscle + γράφειν to write]. An instrument used in registering palatal movements.

palatonasal (pal'at-o-na'zal) [L. *palat'um* palate + *nas'us* nose]. Pertaining to the palate and nose.

palatopharyngeal (pal'at-o-far-in'je-al) [L. *palat'um* palate + φάρυγξ pharynx]. Pertaining to the palate and pharynx.

palatopharyngeus (pal'at-o-far-in-je'us). See *muscles, table of*.

palatoplasty (pal'at-o-plas-te) [L. *palat'um* palate + πλάσσειν to form]. Plastic surgery of the roof of the mouth.

palatoplegia (pal'at-o-ple'je-ah) [L. *palat'um* palate + πληγή stroke]. Paralysis of the palate.

palatorrhaphy (pal-at-or'af-e) [L. *palat'um* palate + ραφή suture]. Staphylorrhaphy; the suturation of a cleft palate.

palatosalpingeus (pal'at-o-sal-pin'je-us) [L. *palat'um* palate + σάλπιγξ tube]. The tensor palati muscle.

palatoschisis (pal-at-os'kis-is) [L. *palat'um* palate + σχίσσις cleft]. Fissure of the palate.

palatostaphylinus (pal'at-o-staf-il'i-nus) [L. *palat'um* palate + σταφυλή uvula]. A muscular slip going to the uvula.

palato-uvularis (pal'at-o-u-vu-la'ris) [L. *palat'um* palate + *uvula* uvula]. The zygus uvulae muscle.

palatum (pal-at'um) [L.]. The palate. **p. du'rūm** [B N A], the hard palate. **p. mol'le** [B N A], the soft palate.

paleencephalon (pa'le-en-sef'al-on) [παλαιός old + ἐγκέφαλον brain]. The old brain; all of the

- brain except the cerebral cortex and its dependencies.
- paleocerebellum** (pal'le-o-ser-e-bel'um). The earlier formed part of the cerebellum, comprising the vermis and flocculus. Cf. *neocerebellum*.
- paleocinetic** (pa'le-o-sin-et'ik). See *paleokinetic*.
- paleo-encephalon** (pa'le-o-en-sef'al-on). Pale-encephalon.
- paleogenesis** (pa'le-o-jen'es-is). Same as *palingenesis* (2d def.).
- paleogenetic, paleoagenetic** (pa'le-o-jen-et'ik) [*παλαιός* old + *γενᾶν* to produce]. Originated in the past; not newly acquired.
- paleokinetic** (pa'le-o-kin-et'ik) [*παλαιός* old + *κινητικός* pertaining to motion]. The nervous motor mechanism concerned in automatic associated movements. It is under the control of the corpus striatum and represents a primitive (that is, early developed) type of motor control. Cf. *neokinetic*.
- paleontology, palaeontology** (pa'le-on-tol'o-je) [*παλαιός* old + *λόγος* treatise]. The sum of knowledge regarding the early forms of life upon the earth.
- paleopathology** (pa'le-o-path-ol'o-je) [*παλαιός* old + *pathology*]. The study of disease in bodies preserved from ancient times, such as mummies.
- paleostriatal** (pa'le-o-stri-a'tal). Pertaining to the paleostriatum. **p. syndrome**, juvenile paralysis agitans. See *paralysis agitans*.
- paleostriatum** (pa'le-o-stri-a'tum) [*παλαιός* old + *striatum*]. The primordial or more early formed portion of the corpus striatum represented by the globus pallidus. Cf. *neostriatum*.
- paleothalamus** (pa'le-o-thal'am-us) [*παλαιός* old + *thalamus*]. Old thalamus; the phylogenetically older part of the thalamus, *i. e.*, the medial (non-cortical) portion of the thalamus.
- palicinesia** (pal-e-sin-e'se-ah). Palikinesia.
- palikinesia** (pal-e-kin-e'se-ah) [*πάλιν* backward + *κίνησις* movement]. Pathologic repetition of movements.
- palilalia** (pal-il-al'e-ah) [*πάλιν* backward + *λαλέιν* to babble]. Pathologic repetition of words.
- palinal** (pal'in-al) [*πάλιν* backward]. Directed or moved backward.
- palindromia** (pal-in-dro'me-ah) [*παλινδρομία* a running back]. The recurrence of a disease.
- palindromic** (pal-in-dro'mik). Returning; recurrent.
- palinfromic** (pal-in-from'ik). Recurring or relapsing.
- palingenesis** (pal-in-jen'es-is) [*πάλιν* again + *γένεσις* birth]. 1. The regeneration or restoration of a lost part. 2. The appearance of ancestral characters in successive generations.
- palingraphia** (pal-in-gra'fe-ah) [*πάλιν* again + *γράφειν* to write]. Pathologic repetition of letters, words, or parts of words in writing.
- palinmnesis** (pal-in-ne'sis) [*πάλιν* again + *μνήσις* memory]. Memory for past events or experiences.
- palinphrasia** (pal-in-fra'ze-ah) [*πάλιν* again + *φράσις* speech]. Pathologic repetition, in speaking, of words or phrases.
- paliphrasia** (pal-if-ra'ze-ah). Palinphrasia.
- palirrhoea, palirrhoea** (pal-ir'e-ah) [*παλirrhoia*]. 1. Regurgitation. 2. The recurrence of a discharge.
- palisade layer** (pal-is-äd'). See under *layer*.
- palistrophia** (pal-is-tro'fe-ah) [*πάλιν* again + *στρέφειν* to turn]. Twisting of the spine upon itself (F. Massa, 1900).
- palite** (pal'it). A war gas. See *chloromethylchloroformate*.
- palladium** (pal-a'de-um) [L.]. 1. A rare, hard metal resembling platinum; symbol, Pd; specific gravity, 11.8; atomic weight, 106.7. 2. A homeopathic preparation of the same metal. **p. chloride**, PdCl₂, an agent recommended for use in tuberculosis.
- pallanesthesia, pallanaesthesia** (pal'an-es-the'ze-ah) [*πάλλειν* to quiver + *anesthesia*]. Loss of vibration senses; insensibility to the vibrations of a tuning-fork.
- pallescence** (pal-es'ens) [L. *pallescere* to grow pale]. Pallor, or paleness; a pale appearance.
- pallesthesia** (pal-es-the'ze-ah) [*πάλλειν* to shake + *αίσθησις* feeling]. Sensibility to vibrations; the peculiar vibrating sensation felt when a vibrating tuning-fork is placed against a subcutaneous bony prominence of the body. Called also *bone sensibility*.
- pallial** (pal'e-al). Pertaining to the pallium.
- palliate** (pal'e-ät). To reduce the severity of; to relieve.
- palliative** (pal'e-a-tiv) [L. *palliativus* cloaked]. 1. Affording relief, but not cure. 2. An alleviating medicine.
- pallidal** (pal'id-al). Pertaining to the globus pallidus. **p. syndrome, p. system**. See *syndrome and system*.
- pallidin** (pal'id-in). A suspension made from the lungs of congenital syphilitics rich in *Spirochaeta pallida*: used in cutaneous test for syphilis.
- pallidum** (pal'id-um) [L. "pale"]. The globus pallidus of the brain.
- pallium** (pal'e-um) [L. "cloak"]. The cortex of the cerebrum with its underlying white substance; called also *manile* and *brain manile*.
- pallography** (pal-og'raf-e). See *paleography*.
- pallor** (pal'or) [L.]. Paleness; absence of the skin coloration.
- palm** (pahm) [L. *palma*]. 1. The hollow, or flexor surface, of the hand. 2. Any tree of the order *Palmaeaceae*. **p. oil**. See *oil*.
- palmae plicatae** (pal'me pli-ka'te). The branching folds of the interior of the vagina.
- palmar** (pah'mar) [L. *pal'maris*; *pal'ma* palm]. Pertaining to the palm.
- palmaris** (pal-ma'ris). See *muscles, table of*.
- palmatore** (pal'mät-ür) [L. *pal'ma* palm]. A webbed state of the fingers.
- palmellin** (pal-mel'in). A red pigment from a fresh water alga called *Palmella cruenta*.
- palmetto, saw** (pal-met'o). See *Screwmo*.
- palmiacol** (pal-mi'ak-ol). A compound, pyrocatechin methyl ether, C₂₃H₄₀O₂, from creosote: used in pulmonary disorders.
- palmic** (pal'mik) [*παλμικός*]. 1. Pertaining to palmus, or muscular twitchings. 2. Pertaining to the pulse.
- palmin** (pal'min). Same as *palmitin*. **p. test**. See under *tests*.
- palmitic acid** (pal-mit'ik). See *acid*.
- palmitin** (pal'mit-in). A crystallizable and saponifiable fat, C₃H₅(C₁₆H₃₁O₂)₂, from various fats and oils; glyceryl tripalmitate.
- palmitone** (pal'mit-on). A crystalline compound; a ketone of palmitic acid, CH₃(CH₂)₁₄.CO.(CH₂)₁₄.CH₃, obtained when palmitic acid is distilled with lime.
- palmodic** (pal-mod'ik). Pertaining to or affected with palmus.
- palmiform** (pal'mo-form). Same as *guaiiform*.
- palmoscopy** (pal-mos'ko-pe) [*παλμός* beat + *σκοπεῖν* to examine]. The observation and study of the heart beat.
- palmus** (pal'mus); [*παλμός*]. 1. A throb or leap. 2. Saltatory spasm; jumpers' disease; myriachit, or lata.
- palograph** (pal'o-graf) [*πάλλειν* to oscillate + *γράφειν* to record]. An instrument for sphyg-

mographic recording in which the impulses are transmitted to a column of mobile fluid in a U-shaped tube, the movements of the liquid surface in the open area of the tube being recorded photographically on a moving sheet of sensitized paper.

palography (pal-og'raf-e). Sphygmography with the palograph.

palp (palp). A feeler; one of the pointed sense organs attached to the mouth of arthropods.

palpable (pal'pa-bl). Perceptible by touch.

palpate (pal'pāt) [L. *palpā're* to touch]. To examine by the hand; to feel.

palpation (pal-pa'shun) [L. *palpā'tio*]. The act of feeling with the hand; the application of the fingers with light pressure to the surface of the body for the purpose of determining the consistency of the parts beneath in physical diagnosis. **bimanual p.**, examination with both hands. **light touch p.**, light palpation of the surface of the abdomen and thorax with the tip of a finger for the purpose of finding the outlines of the organs.

palpatometry (pal-pa-tom'et-re) [palpation + μέτρον measure]. The measurement of the amount of pressure that can be borne without causing pain.

palpatopercussion (pal'pa-to-per-kush'un). Palpation combined with percussion.

palpatorium (pal-pa-to're-um). An instrument for palpating the abdomen to locate tender spots.

palpebra (pal-pe'brah, pal'pe-brah, pl. *palpe'brae*. Latin for eyelid. **p. inferior**, the lower lid. **p. superior**, the upper lid.

palpebral (pal-pe'bral) [L. *palpebra'lis*]. Pertaining to an eyelid.

palpebralis (pal-pe-bra'lis) [L.]. See *muscles, table of*.

palpebrate (pal'pe-brāt) [L. *palpebra're* to wink]. 1. To wink. 2. Having eyelids.

palpebration (pal-pe-bra'shun) [L. *palpebra'tio*]. 1. The act of winking. 2. Abnormally frequent winking.

palpebrine (pal'pe-brin). A proprietary antiseptic containing boric acid, corrosive mercuric bichloride, zinc sulphate and glycerin: used in conjunctivitis and other eye inflammations.

palpebritis (pal-pe-bri'tis). Same as *blepharitis*.

palpitation (pal-pit-a'shun) [L. *palpitā'tio*]. Unduly rapid action of the heart; rapid pulsation of the heart.

Pal's stain (pahlz) [physician in Vienna, born 1863]. See under *stains, table of*.

palsy (paw'ze). See *paralysis*. **Bell's p.**, facial paralysis. **birth p.**, palsy due to injury received at birth. **creeping p.**, progressive muscular atrophy. **crutch p.**, that which is due to the pressure of a crutch in the axilla. **diver's p.**, caisson disease. **drummer's p.**, paralysis of the ungual phalanx of the thumb from rupture of the extensor pollicis longus tendon: often seen in drummers. **Erb's p.**, paralysis due to degenerative changes in the pyramidal tract of the spinal cord. **Férrol-Graux type of ocular p.**, associated paralysis of the internal rectus muscles of one side and the external rectus of the other. **hammer p.**, a variety caused by hard work with the hammer. **Landry's p.** See under *paralysis*. **lead p.**, paralysis of the arm muscles from lead poisoning. **night p.**, acroparesthesia; paresthesia of the hands, worse at night. **pseudobulbar p.**, pseudobulbar paralysis. **scrivener's p.** Same as *writers' cramp*. **shaking p.**, paralysis agitans. **transverse p.** See *crossed paralysis*, under *paralysis*. **wasting p.**, progressive muscular atrophy.

Paltauf's dwarfism or **nanism** (pahl'tow'fz) [Arnold Paltanf, German physician, 1860-1893]. See *nanism*.

Paltauf-Sternberg disease [Pauläuf; Karl Sternberg, German pathologist, born 1872]. Lymphogranulomatosis.

paludal (pal'u-dal) [L. *pal'us* marsh]. Pertaining to or arising from marshes.

paludide (pal'u-did) [L. *pal'us* swamp]. A cutaneous eruption of malarial origin.

paludism (pal'u-dizm) [L. *pal'us* swamp]. Malarial poisoning; impaludism.

palustral (pal-us'tral) [L. *palus'ter* marshy]. 1. Paludal; pertaining to marshes. 2. Malarial.

pambotano, panbotano (pam-bo-tah'no, pan-bo-tah'no) [Sp.]. The root bark of *Callianthra houstoni*, a leguminous tree of Mexico: antiperiodic. Dose, 18 drachms (70 Gm.).

pampiniform (pam-pin'if-orm) [L. *pam'pinus* tendril + *for'ma* form]. Shaped like a tendril. See *plexus*.

pampinocoele (pam-pin'o-sēl) [L. *pam'pinus* tendril + κήλη tumor]. Same as *varicocele*.

pampegia (pam-pe'je-ah) [πᾶν all + πληγή stroke]. Total paralysis.

pan- (pās, πᾶν all). A prefix signifying "all."

panacea (pan-as-e'ah) [πανακεία]. 1. A cure-all, or remedy for all diseases. 2. An ancient name for various plants.

panaesthesia, panaesthetic. See *panesthesia, panesthetic*.

panagglutinin (pan-ag-lu'tin-in) [πᾶν all + agglutinin]. An agglutinin which agglutinates the corpuscles of all blood groups.

Panama fever (pan-am-ah'). See *fever, Chagres*.

panaris, panaritium (pan'ah-ris, pan-ah-ris'e-um) [L.]. A whitlow or felon; paronychia. See *paronychia*. **p. analgicum, analgesic p.** See *Morvan's disease, under disease*.

panarteritis (pan'ar-te-ri'tis). Inflammation of all the coats of an artery; also inflammation of most of the arteries of the body.

panarthrititis (pan-ar-thri'tis) [πᾶς all + ἄρθρον joint]. Inflammation of all the joints or of all the structures of a joint.

panase (pan'ās). A combination of the digestive ferments of the pancreas of the pig: used in cases where the enzymes of the pancreas are deficient. Dose, 2-5 grains (0.13-0.33 Gm.).

panasthenia (pan-as-the-ne-ah) [πᾶν all + α neg. + σθένος strength]. A term suggested as a substitute for *neurasthenia*.

panatroph (pan-at-ro-fe) [πᾶς all + atrophy]. Atrophy affecting several parts; general atrophy.

Panax (pan'aks) [πᾶς all + ἄκος cure]. 1. A genus of araliaceous plants. 2. The root of *P. quinquefolium*, true or Chinese ginseng. See *ginseng*.

panblastic (pan-blas'tik) [πᾶς all + βλαστός germ]. Pertaining to each of the layers of the blastoderm.

pancarditis (pan-kar-di'tis) [πᾶς all + καρδία heart]. General inflammation of the heart.

panchontee (pan-shon-te'). A gum from *Bas'ia elliptica*, a tree of India: it resembles gutta-percha.

panchrest (pan'krest) [πάγχρηστος useful for everything]. A panacea, or remedy, for every disease.

Panocratium (pan-kra'she-um) [L.; παγράτιον powerful]. An extensive genus of amaryllidaceous plants common in most warm regions: reputed to have medicinal qualities.

pancreaden (pan'kre-ad-en). A therapeutical preparation of the pancreas.

pancreas (pan'kre-as) [πᾶς all + κρέας flesh]. A large, elongated, racemose gland below the stomach and in relation with the spleen and the duodenum. Its right extremity, the *head*, is the larger, and directed downward; the left extremity, or *tail*, is transverse, and terminates close to

- the spleen. The secretion or juice of the pancreas, which passes into the duodenum through the pancreatic duct, is concerned in digestion, and contains four principal ferments—*amylase*, *trypsin*, *steapsin*, and *rennin*. **Aselli's p.**, an assemblage of lymphatic glands at the root of the mesentery. **lesser p.**, the small, partially detached portion of the pancreas lying dorsad of its head. Called also *uncinate process* and *Winslow's p.* **ventral p.**, an outgrowth on the ventral side of the embryonic intestine. **Willis' p.**, the lesser pancreas. **Winslow's p.** See *lesser p.*
- pancreatalgia** (pan-'kre-at-al'je-ah) [πάγκρεας pancreas + άλγος pain]. Pain in the pancreas.
- pancreatotomy** (pan-'kre-at-ek'to-me) [πάγκρεας pancreas + ἐκτομή excision]. Surgical removal of the pancreas.
- pancreatempyria** (pan-'kre-at-em-'frak'sis) [πάγκρεας pancreas + ἐμψυρία stoppage]. Congestion or enlargement of the pancreas from obstruction of the pancreatic duct.
- pancreathelcosis** (pan-'kre-ath-el-ko'sis) [pancreas + ἑλκωσις ulceration]. Ulceration of the pancreas.
- pancreatic** (pan-'kre-at'ik) [L. *pancreaticus*]. Pertaining to the pancreas.
- pancreaticocholecystostomy** (pan-'kre-at'ik-o-ko-le-sis-tos'to-me). The operation of implanting a pancreatic fistula into the gallbladder.
- pancreaticoduodenal** (pan-'kre-at'ik-o-du-'od'e-nal). Pertaining to the pancreas and duodenum.
- pancreaticoduodenostomy** (pan-'kre-at'ik-o-du-o-de-nos'to-me). The operation of anastomosing a pancreatic fistula into the duodenum.
- pancreaticogastrostomy** (pan-'kre-at'ik-o-gas-tros'to-me). The operation of anastomosing a pancreatic fistula into the stomach.
- pancreaticosplenic** (pan-'kre-at'ik-o-splen'ik). Pertaining to the pancreas and spleen.
- pancreatin** (pan-'kre-at-in). 1. A ferment from the pancreas. 2. A commercial extract of the pancreas; used as a digestant. Dose, 10–20 grains (0.666–1.333 Gm.).
- pancreatic activity** (pan-'kre-at-izm). Activity of the pancreas.
- pancreatitis** (pan-'kre-at-i'tis). Inflammation of the pancreas. It is usually a fatal disease, and is attended by abdominal pain, tenderness of the abdomen, tympanites, and vomiting. **acute hemorrhagic p.**, a form due to hemorrhage into the gland. **centrilobar p.**, pancreatitis located around the branches of the pancreatic duct. **chronic p.**, a condition of fibrosis of the pancreas. **perilobar p.**, fibrosis of the pancreas surrounding collections of atrophic acini. **purulent p.**, purulent disease of the pancreas.
- pancreatoduodenectomy** (pan-'kre-at-o-du-'o-de-nek'to-me). The operation of removing the head of the pancreas along with the encircling loop of the duodenum.
- pancreato-enterostomy** (pan-'kre-at-o-en-ter-os'to-me). The operation of forming a communication between the pancreatic duct and the intestine.
- pancreatogenic, pancreatogenous** (pan-'kre-at-o-jen'ik, pan-'kre-at-o-jen-us). Arising in the pancreas.
- pancreatokinase** (pan-'kre-at-o-kin'ās). A compound of pancreatin and eukinase; a powerful digestant.
- pancreatolipase** (pan-'kre-at-o-lip'ās). A lipase occurring in the pancreatic juice.
- pancreatolith** (pan-'kre-at-o-lith) [pancreas + λίθος stone]. A pancreatic calculus.
- pancreatotomy, pancreatotomy** (pan-'kre-at-o-me, pan-'kre-at-o'to-me) [πάγκρεας pancreas + τέμνω to cut]. Surgical incision of the pancreas.
- pancreatocyst** (pan-'kre-at-on'kus) [πάγκρεας pancreas + κύστις mass]. A tumor of the pancreas.
- pancreatopathy** (pan-'kre-at-op'ath-e) [pancreas + πάθος disease]. Any disease of the pancreas.
- pancreatotomy** (pan-'kre-ek'to-me). Same as *pancreatotomy*.
- pancreobismuth** (pan-'kre-o-biz'muth). A proprietary combination of pancreatic ferments and bismuth.
- pancreodigestin** (pan-'kre-o-di-jes'tin). A proprietary digestant powder containing pepsin, ptalain, pancreatin, lactic and hydrochloric acids, etc. Dose, 1–5 grains (0.066–0.333 Gm.).
- pancreolithotomy** (pan-'kre-o-lith-o'to-me) [pancreas + λίθος stone + τομή cutting]. Incision into the pancreas for the removal of calculi.
- pancreols** (pan-'kre-olz). Proprietary rectal suppositories said to contain the active principles of the islands of Langerhans.
- pancreolytic** (pan-'kre-o-lit'ik) [pancreas + λύσις dissolution]. Destroying pancreatic tissue.
- pancreone** (pan-'kre-on). A grayish powder, derived from pancreatin (2) by the action of tannin. It is an active digestant. Dose, 5–10 grains (0.3–0.6 Gm.).
- pancreatopathy** (pan-'kre-op'ath-e) [pancreas + πάθος disease]. Any disease of the pancreas.
- pancreopepsin** (pan-'kre-o-pep'sin). A proprietary digestant remedy.
- pancrobilin** (pan-'kro-bi'lin). A proprietary pancreatic and bile preparation for stimulating peristalsis.
- pandemic** (pan-'dem'ik) [πᾶς all + δῆμος people]. 1. Widely epidemic. 2. A widespread epidemic.
- pandemicity** (pan-'dem-is'it-e). The state of being epidemic and widely spread.
- Pander's nucleus** (pan-'derz) [Heinrich Christian von Pander, German anatomist, 1794–1865]. See under *nucleus*.
- pandiculation** (pan-'dik-u-la'shun) [L. *pandicula'ri* to stretch one's self]. The act of stretching and yawning.
- pandigal** (pan-'dig-al). A proprietary preparation of the glucosides of digitalis.
- Pandy's test** (pan-'dēz) [K. Pandy, contemporary Hungarian pathologist]. See under *tests*.
- panelectroscope** (pan-'lek-'tro-skōp). An instrument for examining by electric light the various organs of the body, as the stomach, rectum, urethra, etc.
- panesthesia** (pan-es-the'ze-ah) [πᾶς all + αἴσθησις sensation]. The sum of the sensations experienced.
- panesthetic** (pan-es-thet'ik). Relating to panesthesia.
- pagadauin** (pan-'gad'u-in). A crystalline solid representing the basic principles contained in cod liver oil.
- pangen** (pan-'jen) [πᾶς all + γένεσις producing]. One of the hypothetical units of idioplasm. See *micelle*.
- pangenesis** (pan-'jen-es-is) [πᾶς all + γένεσις begetting]. The doctrine that in reproduction each cell of the parent body is represented by a particle; the hypothesis that all the units or cells of the body reside in the blood as gemmules, multiply by division, and throw off atoms which are transmitted to the offspring, accounting for the hereditary transmission of acquired mental habits and other phenomena of heredity; the theory implying that the whole organism, in the sense of every atom or unit, reproduces itself.
- pangermism** (pan-'jer'mism). The theory that all diseases are caused by germs.
- paglossia** (pan-'glos-'e-ah) [παγλωσσία]. Abnormal or insane garrulity.
- panhidrosis** (pan-'hid-ro'sis) [πᾶς all + ἰδρῶς sweat]. Perspiration of the whole surface of the body.

panhydrometer (pan-hi-drom'e-ter) [*πᾱs* all + *hydrometer*]. An instrument for ascertaining the specific gravity of any liquid.

panhygrous (pan-hi'grus) [*πᾱs* all + *ὕγρὸς* moist]. Moist or damp in all parts.

panhyperemia (pan''hi-per-e-ma-ah) [*πᾱs* all + *hyperemia*]. General plethora.

panhysterectomy (pan''his-ter-ek'-to-me) [*πᾱs* all + *ὕστερα* uterus + *ἐκτομή* excision]. Complete extirpation of the uterus.

panhysterokolpectomy (pan-his''ter-o-kol-pek'-to-me) [*πᾱs* all + *ὕστερα* uterus + *κόλπος* vagina + *ἐκτομή* excision]. Complete removal of the uterus and vagina, with obliteration of the cavity made thereby: done for prolapse of the uterus.

panidrosis (pan-id-ro'sis). See *panhidrosis*.

panighao (pan-e-ga'o). See *ground iich*, under *iich*.

panis (pa'nis). Latin for *bread*.

panitrin (pan-i'trin). A proprietary form of papaverine nitrate.

pankreon (pan'kre-on). A proprietary preparation of pancreatin with tannic acid: used in disorders dependent on functional insufficiency of the pancreas.

panmeristic (pan-mer-is'tik) [*πᾱs* all + *μέρος* part]. Pertaining to a protoplasmic structure made up of independent units or pangens.

panmixia (pan-miks'e-ah) [*πᾱs* all + *μυγνῖναι* to mix]. Promiscuous sexual association.

panmyelophthisis (pan-mi''el-of-thi'sis) [*πᾱn* all + *μύελος* marrow + *φθίσις* wasting]. Atrophy of the bone marrow.

panmyelosis (pan-mi-el-o'sis) [*πᾱn* all + *μύελος* marrow]. Proliferation of all the elements of the bone marrow.

panneuritis (pan-u-ri'tis) [*πᾱs* all + *νεῦρον* nerve + *-itis* inflammation]. Multiple or general neuritis. **p. epidem'ica**, beriberi.

panniculitis (pan-ik-u-li'tis). Inflammation of the panniculus adiposus of the abdominal wall, a condition marked by stiffness of the abdominal wall, and by severe pain on movement or on pressure.

panniculus (pan-ik'u-lus) [L. dim. of *pan'nus* cloth]. A layer of membrane. **p. adipo'sus**, the subcutaneous layer of fat. **p. carno'sus**, a muscular layer within the superficial fascia of many animals; in man it is represented mainly by the platysma myoides.

pannus (pan'us) [L. "cloth"]. An abnormal membrane-like vascularization of the cornea, mainly due to the presence of trachomatous granulations. **p. carate'us**, pinta. **p. cras'sus**, pannus in which the opacity is extremely dense. **phlyctenular p.**, pannus along with phlyctenular conjunctivitis. **p. sic'cus**, pannus with xerophthalmia. **p. ten'uis**, pannus with very slight opacity.

panodic (pan-od'ik). See *panthodic*.

panopteon (pan-o-pep'tōn) [L. *pa'nis* bread + *peptōn*]. A proprietary food for invalids containing bread and peptonized beef.

panophobia (pan-o-fo'be-ah) [*πᾱs* all + *φόβος* fear]. A vague and persistent morbid dread of some unknown evil.

panophthalmia, **panophthalmitis** (pan-of-thal'me-ah, pan''of-thal-mi'tis) [*πᾱs* all + *ὀφθαλμός* eye]. Inflammation of all the structures or tissues of the eye.

panoptic (pan-op'tik) [*πᾱn* all + *ὄψις* vision]. Rendering everything visible: said of a stain which differentiates all the tissues of a specimen. See *Giemsa's stain*, under *stain*.

panoptosis (pan-op-to'sis) [*πᾱs* all + *πτῶσις* falling]. General ptosis of the abdominal organs.

panosteitis (pan''os-te-i'tis) [*πᾱs* all + *ὀστέον* bone]. Inflammation of every part of a bone.

panostitis (pan-os-ti'tis). Panosteitis.

panotitis (pan-o-ti'tis) [*πᾱs* all + *ὄψ* ear]. An inflammation of all the parts or structures of the ear.

panpeptin (pan-pep'tin). A proprietary remedy containing pancreatin, trypsin, diastase, sodium cholate, duodenal juice, carica papaya, etc.

panphagin (pan-faj'in). A preparation resembling mycolysine in composition and properties, but used only in veterinary practice.

panphobia (pan-fo'be-ah). Same as *panophobia*.

panplegia (pan-ple'je-ah). Pamplegia.

Pansch's fissure (pantsh'e'z) [Adolf Pansch, German anatomist, 1841-1887]. See *fissure*.

pan scleriosis (pan-skle-ro'sis) [*πᾱs* all + *σκληρώσις* hardening]. Complete induration of a part or organ.

panseptum (pan-sep'tum). The entire nasal septum, including bony and cartilaginous parts.

pansinuitis (pan''si-nu-i'tis). Pansinuitis.

pansinusitis (pan''si-nus-i'tis) [*πᾱs* all + *sinus* + *-itis* inflammation]. Inflammation of all the sinuses, as of the facial bones.

panspemia, **panspERMATISM** (pan-sper'me-ah, pan-sper'mat-izm) [*πᾱs* all + *σπέρμα* seed]. 1. The doctrine that disease germs and bacteria are everywhere present. 2. Same as *biogenesis*.

pansygmograph (pan-sig'mo-graf) [*πᾱs* all + *σφυγμός* pulse + *γράφειν* to record]. A device for recording cardiac, pulse, and chest movements at the same time.

pansporoblast (pan-spo'ro-blast) [*πᾱs* all + *σπόρος* spore + *βλαστός* germ]. A mother cell of certain sporozoa, giving rise to two or more sporoblasts, from each of which a single spore is formed.

pansy (pan'ze). A violaceous herb, *Vio'la tri-color*: expectorant and aperient. Dose of fluid-extract, 2-10 minims (0.13-0.66 cc.).

pantachromatic (pan''tak-ro-mat'ik) [*πᾱs* all + *αχρωματικ*]. Entirely achromatic.

pantalgia (pan-tal'je-ah) [*πᾱn* all + *ἄλγος* pain]. Pain over the whole body.

panamorphia (pan-tah-mor'fe-ah) [*πᾱs* all + *ἀμορφη* shapelessness]. Complete or general deformity.

panamorphic (pan-tah-mor'fik). Formless.

pananencephalia (pan''tan-en-sef-a'le-ah) [*πᾱs* all + *αν-* priv. + *ἐγκέφαλος* brain]. Complete absence of the brain in a fetal monster.

panankyloblepharon (pan-tang''kil-o-blef'ah-ron) [*πᾱs* all + *ἀγκύλη* noose + *βλέφαρον* lid]. General adhesion of the eyelids to the eyeball and to each other.

panaphobia (pan-ta-fo'be-ah) [*πᾱs* all + *ἀφοβία* fearlessness]. Absence of fear.

panatrophia, **panatrophY** (pan-tat-ro'fe-ah, pan-tat-ro'fe) [*πᾱs* all + *ἀτροφία* atrophy]. General or complete malnutrition.

pantherapist (pan-ther'ap-ist) [*πᾱs* all + *θεραπεία* treatment]. A practitioner who is ready to draw his information from any and every source.

panthodic (pan-thod'ik) [*πᾱs* all + *ὁδός* way]. Radiating in every direction: said of nervous impulses.

panting (pant'ing). Swift and labored breathing; anhelation.

panchromism (pan-to-kro'mizm) [*πᾱs* all + *χρῶμα* color]. The phenomenon of existing in two or more differently colored forms.

panograph (pan'to-graf) [*πᾱs* all + *γράφειν* to write]. An instrument for recording graphically the contour of the chest.

panomorphia (pan-to-mor'fe-ah) [*πᾱs* all + *μορφή* form]. General or perfect symmetry.

panomorphic (pan-to-mor'fik). Able to assume any shape.

pantophobia (pan-to-fo'be-ah). Panophobia.

pantopon (pan'top-on) [$\pi\acute{\alpha}\varsigma$ all + *opium*]. An opium preparation containing the total opium alkaloids in the form of soluble hydrochlorides. It is said to be about double the strength of morphine.

pantoscopic (pan-to-skop'ik) [$\pi\acute{\alpha}\varsigma$ all + *σκοπεῖν* to view]. Adapted to view both near and distant objects: a term applied to bifocal spectacles.

pantothermia (pan-to-ther'me-ah) [$\pi\acute{\alpha}\nu$ all + *θερμῆν* heat]. A condition marked by variations of bodily temperature without apparent cause.

panturbinat (pan-ter'bin-ät). The entire turbinate structure, including bone and soft tissue.

Panum's casein (pah'noomz) [Peter Ludwig Panum, Swedish physiologist, 1820-1885]. Serum globulin.

panus (pan'us) [L. "swelling"]. A lymphatic gland inflamed but not suppurating.

panzootic (pan-zo-ot'ik) [$\pi\acute{\alpha}\nu$ all + *ζῷον* animal]. Occurring pandemically among animals.

panzyme (pan'zim) [$\pi\acute{\alpha}\varsigma$ all + *ζύμη* leaven]. A proprietary preparation of diastase, pepsin, rennin, and pancreatin.

pao-ferro (pah-o-fer'o). The ironwood tree of Brazil. The inner bark is said to have antidiabetic properties.

paopereira (pah'o-pah-ra'e-rah) [Portuguese *pao* tree + *pereira* briar]. The Brazilian tree *Geissospermum vello'sii*, and its febrifugal bark.

pap (pap). Any soft food, as bread soaked in milk.

papain (pah'pa-in). A digestive ferment from the juice of the fruit of the papaw, *Carica papaya*. See *papaw*. It is a grayish powder, soluble in water and glycerin, and insoluble in alcohol, ether, and chloroform. It is used in dyspepsia, and as an application to warts, false membranes, etc. Dose, 1-5 grains (0.066-0.333 Gm.). As an application, a 5-15 per cent solution in equal parts of water and glycerin is used.

Papaver (pah-pa'ver) [L. for poppy]. A genus of papaveraceous plants. *P. somniferum* affords *opium* (q. v.).

papaveramine (pap-av-er'am-in). An opium alkaloid, $C_2H_2NO_6$, obtained from commercial papaverine.

papaverine (pap-av'er-in) [L. *papa'ver* poppy]. A white, hypnotic alkaloid, tetramethylethyl-isoquinoline, $(CH_3O)_2C_6H_5 \cdot CH_2C_9H_7N(O \cdot CH_3)_2$, from opium. Dose, $\frac{1}{4}$ - $\frac{1}{2}$ grain (0.008-0.016 Gm.).

papaverolin (pap-av'er-o'lin). A crystalline substance, $C_{19}H_{13}NO_4 + 2H_2O$, derived from papaverine by the loss of four CH_2 groups.

papaverone (pap-av'er-on). A preparation of opium containing all of its alkaloids.

papaverosine (pap-av'er'o-sin). A crystalline alkaloid from the dry seed capsules of poppy.

papaw (pap-aw'). The tree *Carica papaya*, of tropical America; also its digestant and anthelmintic fruit. The fruit contains papain and papayotin. Dose, 2-8 grains (0.13-0.5 cc.).

papaya (pap-a'yah). The juice of the papaw fruit.

papayotin (pap-ah-yo'tin). A digestive ferment from *Carica papaya*: more active than papain. Dose, $\frac{1}{4}$ -1 grain (0.016-0.065 Gm.) (Merck).

paper (pa'per). See *charta*. **alkalin p.**, filter paper dipped in an alcoholic solution of alkalin: alkalis turn it blue; acids, red. **amboceptor p.**, filter paper saturated with amboceptor serum: used in the Noguchi test for syphilis. **aniline acetate p.**, mix equal volumes of aniline, water, and glacial acetic acid. Strips of filter paper are dipped into this mixture and then dried. **antigen p.**, filter paper saturated with antigen solution: used in the Noguchi test for syphilis. **articulating p.**, a carbon paper to be laid between the upper and lower teeth and bitten upon in order to record the contact relationships of the teeth. **asthma p.** See *niter p.* **azolitimn p.**, filter paper saturated with a solution of azolitimn. Acids turn it

from purple to bright red, alkalis turn it blue. **biuret p.**, filter paper dipped in Gies' biuret reagent, dried, and cut into strips. **blistering p.**, **cantharidal p.** See *charta cantharidis*. **blue litmus p.** See *litmus p.* **Congo red p.**, wet filter paper with a 0.2 per cent solution of Congo red in water, dry, and cut in strips. **filter p.**, a porous, unsized paper used in filtering. **gutta-percha p.**, *charta guttae-perchae*; gutta-percha tissue. **lacomoid p.**, blotting paper impregnated with lacmoid: used in testing for alkalinity or acidity. **litmus p.**, bibulous paper impregnated with a solution of litmus, dried, and cut into strips. If slightly alkaline the paper is blue, and is used as a test for acids, which turn it red; if slightly acid it is red and alkalis turn it blue. **mustard p.**, *charta sinapis*: used as a counter-irritant. **niter p.**, paper impregnated with potassium nitrate: burned in order to give off fumes which are inhaled in asthma. **potassium nitrate p.**, paper impregnated with potassium nitrate. It is ignited and used as a moxa or by inhalation in asthma. Called also *salt peter p.* **red litmus p.**, *charta exploratoria rubra*. See *litmus p.* **salt peter p.** Same as *niter p.* **test p.**, paper that is impregnated with litmus or other indicator. **turmeric p.**, *charta exploratoria lutea*; paper dyed yellow with turmeric: alkalis turn it brown. **wax p.**, *charta cerata*; paper treated with beeswax.

paper skin (pa'per skin). See under *skin*.

papescent (pap-es'ent). Having the consistence of pap.

papilla (pap-il'ah) [L.]. Any small, nipple-shaped elevation. **acoustic p.**, the organ of Corti. **bile p.** Same as *duodenal p.* **circumvallate p.** Same as *vallate p.* **clavate p.** See *fungiform p.* **conic p.**, the larger and longer of the filiform papillae. **dental p.**, **dental p.**, the enlargement at the base of a dental follicle whence the dentin of a tooth is developed; the enamel organ. **duodenal p.**, an elevation near the point where the ductus choledochus communis enters the duodenum. **p. filia'ria**, a papilla at the inner side of the descending portion of the duodenum, at the apex of which is the opening of the common bile duct. **filiform p.**, any one of the slender papillae of the tongue, being the smallest and most numerous of the papillae of the tongue. They cover the anterior two thirds of the dorsum and give it its velvety appearance. Called also *conic p.* **foliate p.**, one of the projections (rudimentary in man) arranged in folds along the lateral margins of the tongue in front of the anterior pillars of the fauces. **fungiform p.**, any one of the low, broad papillae found on the surface of the tongue and covered by secondary papillae. Called also *clavate p.* **fusiform p.**, the slender papillae of the anterior two thirds of the tongue. **hair p.**, the mass within the corium upon which each hair bulb rests. **incisive p.**, a rounded projection at the anterior end of the raphe of the palate. **interdental p.**, the triangular pad of gum which fills the space between the necks of the teeth. **p. lacrima'lis**, a papilla at the inner canthus pierced by a lacrimal punctum. **lenticular p.**, one of a series of papillae of the tongue resembling, but less elevated than, the fungiform papillae. **lingual p.**, any one of the papillae of the tongue. **p. mam'mae** [B N A], the nipple. **p. ner'vi opt'ici** [B N A], **optic p.**, the optic disk; a round white disk in the fundus oculi medial to the posterior pole of the eyes; it corresponds to the entrance of the optic nerve and retinal blood vessels. **palatine p.**, the incisive papilla. **p. pi'li** [B N A], a hair papilla. **renal p.**, the summit of any one of the renal pyramids. **p. of Santorini**, the duodenal papilla. **p. spira'lis**, the spiral edge formed by Corti's organ. **tactile p's**, papillae on the true skin enclosing tactile corpuscles. **urethral p.**, a slight elevation in the vestibule of the vagina on which is situated the

external orifice of the urethra. **vallate p.**, the largest papillae of the tongue, 8-12 in number, and arranged in the form of a V in front of the sulcus terminalis of the tongue. **Vater's p.** Same as *duodenal p.*

papillary (pap'il-a-re). Pertaining to a nipple or papilla.

papillectomy (pap-il-ek'to-me) [*papilla* + *ἐκτομή* excision]. Removal of one or more engorged papillae from a kidney for the cure of hematuria.

papilledema (pap-il-e-de'mah). Edema of the optic papilla; choked disk; optic neuritis due to intracranial pressure and without inflammatory manifestations.

papilliferous (pap-il-if'er-us) [*papilla* + *L. fer're* to bear]. Bearing papillae.

papilliform (pap-il'if-orm) [*papilla* + *L. for'ma* shape]. Shaped like a papilla.

papillitis (pap-il-i'tis) [*papilla* + *-itis* inflammation]. Inflammation of the optic papilla.

papillo-adenocystoma (pap-il'o-ad'en-o-sis-to'-mah). Papilloma blended with adenoma and cystoma.

papilocarcinoma (pap-il'o-kar-sin-o'mah). 1. A carcinoma in which there are papillary excrescences. 2. A malignant papilloma.

papilloedema (pap-il-e-de'mah). See *papilledema*.

papilloma (pap-il-o'mah), pl. *papillo'mata* [*papilla* + *-ωμα* tumor]. An epithelial tumor in which the cells cover finger-like processes or ridges of stroma. Papillomas include warts, condylomas, cutaneous horns, polypi, etc. **p. diffu'sum**, papillomas occurring in numbers on the legs and buttocks. **hard p.**, one growing from the squamous epithelium. **Hoffmann's p.**, a papillomatous growth of the nasal mucous membrane. **p. inguina'le trop'icum**, a disease of Colombo marked by the formation of filiform pinkish vegetations in the inguinal region; called also *acanthoma tropicum*. **intra-canalicular p.**, a warty, nonmalignant growth within the substance of certain glands, especially of the breast. **intracystic p.**, a papilloma formed within a cystic adenoma. **p. linea're**, linear ichthyosis. **p. neuropath'icum**, **p. neurot'icum**, a papillomatous growth or tumor along the course of a nerve. **soft p.**, one developed from the columnar epithelium. **villous p.** 1. A persistent chorionic villus, usually found in the bladder; sometimes in a renal pelvis. 2. A villous outgrowth from the choroid plexus in a lateral ventricle of the brain. 3. A mammary tumor liable to be confounded with villous cancer.

papillomatosis (pap'il-o-mat-o'sis). A morbid condition characterized by the development of a crop of papillomas.

papillomatous (pap-il-o'mat-us). Of the nature of a papilloma.

papilloretinitis (pap-il'o-ret-in-i'tis). Inflammation of the optic nerve and disk.

papillosarcoma (pap-il'o-sar-ko'mah). A malignant papilloma.

papin (pa'pin). A proprietary preparation of catechu, quinine, and dextrin.

Papin's digester (pap-az') [Denis *Papin*, French physicist, 1647-1714]. An apparatus for subjecting substances to the action of water at a heat greater than the boiling point.

papine (pa'pin). A proprietary anodyne opium preparation. Dose, 15-60 minims (1-4 cc.).

papoid (pa'poid). A ferment and digestant from pawpaw fruit. See *papau*.

pappataci fever (pap-at-a'ke). See *sandfly fever*, under *fever*.

Pappenheim's staining (pahp'en-himz) [Artur *Pappenheim*, German physician, 1870-1917]. See under *stains*, table of.

pappose (pap'pōs). Having a downy surface or pappus.

pappus (pap'pus) [L.; *πάππος*]. 1. The first downy growth of the beard. 2. The lanugo.

papular (pap'u-lar) [L. *papula'ris*]. Consisting of, characterized by, or pertaining to, a papule.

papulation (pap-u-la'shun). The production of papules.

papule (pap'ul) [L. *pap'ula* pimple]. A small circumscribed, solid elevation of the skin. **Celsus' p's**, lichen agrius. **dry p.**, the papule of chancre. **moist p.**, **mucous p.**, a syphilitic condyloma.

papuliferous (pap-u-lif'er-us) [*papule* + *L. fer're* to bear]. Having or covered with papules.

papulo-erythematous (pap'u-lo-er-ith-em'at-us). Marked by papules on an erythematous surface.

papuloid (pap'u-loid). Resembling a papule.

papulopustular (pap'u-lo-pus'tu-lar). Marked by the presence of papules and pustules.

papulosquamous (pap'u-lo-skwa'mus). Both papular and scaly.

papulovesicular (pap'u-lo-ves-ik'u-lar). Marked by the presence of papules and vesicles.

pyraceous (pap-ir-a'shus) [L. *pyra'ceus*]. Like paper; chartaceous.

Faouelin's cautery (pah-ke-lanz') [Claude André *Faouelin*, French physician, 1836-1905]. See *cautery*.

par (par). Latin for *pair*. **p. va'gum**, the vagus nerves.

para- [παρά beyond]. A prefix meaning beside, beyond, accessory to, apart from, against, etc.

para-aceratosis (par'ah-ah-ser-at-o'sis). Parakeratosis.

para-acetophenolethyl carbonate. A colorless, crystalline powder: hypnotic, analgesic, an antipyretic. Dose, 8 grains (0.5 Gm.).

para-acetphenetidin (par'ah-as-et-fe-net'id-in). Acetphenetidin.

para-amidophenetol (par'ah-am'id-o-fen'et-ol). A substance used in preparing pyrantin, $\text{NH}_2\text{C}_6\text{H}_4\text{OC}_2\text{H}_5$.

para-analgesia (par'ah-an-al-je'ze-ah). Analgesia of the lower part of the body, including the lower limbs.

para-anesthesia (par'ah-an-es-the'ze-ah). Anesthesia of the lower part of the body and of the legs.

para-appendicitis (par'ah-ap-en-dis-i'tis). Appendicitis involving the nearby structures.

parabanic acid (par-ab-an'ik). See *acid*.

parabiosis (par'ah-bi-o'sis) [*para* beside + *βίωσις* living]. 1. The union of two individuals, as of joined twins, or by surgical operation. 2. Temporary suppression of conductivity and excitability in a nerve. **vascular p.**, the crossing of the circulation between two individuals.

parabiotic (par'ah-bi-ot'ik). Pertaining to or marked by parabiosis.

parabismuth (par-ah-biz'muth). A preparation of ostauxin and bismuth containing 50 per cent of bismuth.

parablast (par'ah-blast) [*para* beside + *βλάστος* germ]. That part of the mesoblast from which the blood vessels, lymphatics, etc., are developed.

parablasic (par-ah-blas'tik). Pertaining to the parablast.

parablastoma (par'ah-blas-to'mah) [*parablast* + *-ωμα* tumor]. Any tumor made up of parablasic tissue.

parablepsia, parablepsis (par-ah-blep'se-ah, par-ah-blep'sis) [*para* amiss + *βλέψω* vision]. False or perverted vision.

parabolus (par-ab'o-lus), pl. *parab'olē* [*παράβολος* venturesome]. In medieval medicine, an agent of the church who sought out the indigent sick for care and treatment.

parabulia (par-ah-bu'le-ah) [*para* beside + *βουλή* will]. Perversion of the will.

paracaine (par'ak-a-in). A local anesthetic, the hydrochloride of paramino-benzoyl-diethyl-amino-ethanol; used as a substitute for novocain.

paracanthoma (par'ah-kan-tho'mah). Same as *paracanthosis*.

paracanthosis (par'ah-kan-tho'sis) [*παρά* beside + *κανθα* prickle]. A skin cancer or other perversion of growth in the prickle layer of the skin.

paracarmine (par-ah-kar'min). A staining medium consisting of 1 part of carminic acid, 4 parts of calcium chloride, and 100 parts of 70 per cent alcohol. It stains quickly, does not overstain, and is adapted for staining large objects.

paracasein (par-ak-a'se-in). The insoluble curd formed from casein by the enzyme, rennin.

paracele (par'as-ēl). Same as *paracoele*.

paracellulose (par-ah-sel'u-lōs). A kind of cellulose found in the pith of plants.

paracelsian (par-ah-sel'se-an). Pertaining to or called after Paracelsus.

Paracelsus (par-ah-sel'sus). A famous Swiss physician and alchemist, born 1493. His medical importance is due to the impetus which he gave to the development of pharmaceutical chemistry. Died, 1541.

paracenesesthesia, paracoenesthesia (par'ah-se-ne's-the'-ze-ah) [*παρά* beside + *cenesthesia*]. Any abnormality of the general sense of well being; it includes demonopathies, zoopathies, etc. Cf. *cenesthopathia*.

paracentesis (par'ah-sen-te'sis) [*παρά* beside + *κέντησις* puncture]. Surgical puncture of a cavity; tapping. **p. abdom'inis**, paracentesis by tapping of the abdomen. **p. capi'tis**, tapping of the cranium for the removal of effusion in hydrocephalus. **p. cor'dis**, surgical puncture of the heart. **p. pericar'dii**, puncture or tapping of the pericardial sac. **p. pulmo'nis**, tapping of the lung. **p. thora'cis**, tapping of the chest; thoracocentesis. **p. tu'nicae vagina'lis**, tapping of the tunica vaginalis. **p. tym'pani**, incision of the tympanic membrane for drainage or irrigation. **p. ves'i'cae**, puncture of the bladder wall.

paracentetic (par'ah-sen-tet'ik). Pertaining to or accomplished by a paracentesis.

paracental (par-ah-sen'tral). Situated near a center.

paracephalus (par-ah-sef'al-us) [*παρά* beside + *κεφαλή* head]. A fetus with a rudimentary or misshapen head, imperfect sense organs, and defective trunk or limbs.

paracerebellar (par'ah-ser-e-bel'ar). Pertaining to the lateral part of the cerebellum.

parachloralose (par-ah-klo'ral-ōs). A substance, $C_8H_{12}Cl_3O_6$, in iridescent plates, formed by a combination of dextrose and chloral. It is isomeric with chloralose.

parachlorophenol (par'ah-klo-ro-fe'no'l). See *parachlorophenol*.

parachlorosalol (par'ah-klo-ro-sal'ol). A crystalline combination of chlorine and phenyl salicylate, $OH.C_6H_4.CO.OCH_4.Cl$; used like salol. Daily dose, 60-90 grains (4-6 Gm.).

parachlorophenol (par'ah-klor-fe'no'l). A crystalline substance, $Cl.C_6H_4.OH$, a safe and strong disinfectant and antiseptic; used in lupus and erysipelas. **p. salicylate** is used as an intestinal antiseptic. Dose, 15-20 grains (1-1.3 Gm.).

paracholera (par-ah-kol'er-ah). A disease resembling Asiatic cholera, but caused by an organism other than the *Vibrio cholerae*.

paracholesterin (par'ah-ko-les'ter-in). A form of cholesterol occurring in vegetable tissue.

paracholia (par-ah-ko'le-ah) [*παρά* beside + *χολή* bile]. Disordered bile secretion.

parachordal (par-ah-kor'dal) [*παρά* beside + *χορδή* cord]. 1. Situated beside the notochord. 2. Any

one of a set of bars of fetal cartilage which appear to mark the growth of centers of chondrification for the occipital vertebrae.

Parachordodes (par'ah-kor-do'dēs). A genus of Gordiacea. A few cases of infection with this worm have been reported. *P. pustulo'sus*, from Italy. *P. tolosa'nus*, from France and from Italy. *P. viola'ceus*, from Italy, one specimen taken from the throat.

parachroea (par-ah-kre'ah). Same as *parachroia*.

parachroia (par-ah-kroi'ah) [*παρά* beside + *χρoιά* color]. Abnormality of coloration.

parachroma (par-ah-kro'mah) [*παρά* beside + *χρōμα* color]. Change in the color of the skin; abnormal coloration of the skin.

parachromatin (par-ah-kro'mat-in). A chromophil substance contained in the finer part of the nuclear substance, as in the nucleoplasm of the spindle in karyokinesis.

parachromatism (par-ah-kro'mat-izm) [*παρά* beside + *χρōμα* color]. Color blindness; incorrect perception of colors.

parachromatopsia (par'ah-kro-mat-op'se-ah) [*παρά* beside + *χρōμα* color + *ὄψις* vision]. Color blindness.

parachromatosis (par'ah-kro-mat-o'sis). Same as *parachromatoma*.

parachrome (par'ah-krōm). Same as *parachromophoric*.

parachromophore (par-ah-kro'mo-fōr) [*παρά* beside + *χρōμα* color + *φορῶς* bearing]. A bacterium which secretes a pigment and retains it within its own body.

parachromophoric (par'ah-kro-mo-for'ik) [*παρά* beside + *chromophoric*]. Pervertly chromophoric; both chromophoric and chromoparic; secreting coloring matter, but retaining it in the organism.

parachymosin (par'ah-ki-mo'sin) [*παρά* beside + *chymosin*]. The variety of lab ferment found in the human stomach and in that of the pig.

paracinesia, paracinesis (par'ah-sin-e'se-ah, par'ah-sin-e'sis) [*παρά* beside + *κίνησις* motion]. Any disease characterized by perversion of the motor powers.

paracastic (par-ak-mas'tik). Declining.

paracme (par-ak'me) [*παρά* beyond + *ἀκμή* point]. The stage of decline or remission.

paracnemis, paracnemidion (par-ak-ne'mis, par'ak-ne-mid'e-on) [*παρά* beside + *κνήμη* shin]. The fibula.

paracoele (par'as-ēl) [*παρά* beside + *κοῖλος* hollow]. A lateral ventricle of the brain.

paracolitis (par'ah-ko-li'tis). Inflammation of the outer coat of the colon.

paracolon bacillus (par-ah-ko'lon). See under *bacillus*.

paracolpitis (par'ah-kol-pi'tis) [*παρά* near + *κόλπος* vagina + *-itis* inflammation]. Inflammation of the tissues around the vagina.

paracolpium (par-ah-kol'pe-um) [*παρά* near + *κόλπος* vagina]. The connective and other tissues that surround the vagina.

paracone (par'ah-kōn) [*παρά* beside + *χῶνος* cone]. The mesiobuccal cusp of any upper molar.

paraconid (par-ah-ko'nid). The mesiobuccal cusp of a lower molar.

paraconin, paraconiin (par-ah-ko'nin, par-ah-ko'ne-in). A poisonous yellow liquid, $C_8H_{16}N$, obtained by heating butyric aldehyde with ammonia.

paracoto (par-ah-ko'to). A South American bark much resembling coto, but better and less pungent.

paracotoin (par'ah-ko-to'in). A crystalline substance from paracoto; useful in diarrhea and in night sweats. Dose, $\frac{1}{2}$ -3 grains (0.033-0.194 Gm.).

paracousis (par-ak-o'o'sis). Same as *paracousis*.

paracresosotic acid (par'ah-kre-o-so'tik). See *cresotic acid*, under *acid*.

paracresolol (par-ah-kres'al-ol). A white, crystalline, antiseptic substance; isomeric with the other cresols. See *cresolol*. Dose, 3-30 grains (0.2-2 Gm.).

paracresol (par-ah-kre'sol). 1. One of the three isomeric forms or recognized varieties of cresol. See *cresol*. 2. A patented soluble and nearly odorless preparation of cresol: disinfectant.

paracresylol (par-ah-kres'il-ol). Cresolol.

paracrisis (par-ah-kri'sis, par-ak'ris-is) [*παρά* beside + *κρίνω* to secrete]. Any disorder of the secretions.

paracurarine (par'ah-ku-rar'in). An alkaloid, $C_{19}H_{21}NO_4$, from curare, which has the characteristic physiologic action of curare.

paraculis, paracusia (par-ah-ku'sis, par-ah-ku'se-ah) [*παρά* beside + *ἀκούω* to hear]. Any perversion of the sense of hearing. **p. a'cris**, intense and incessant acuity of hearing. **p. duplicata**. Same as *diplacusis*. **p. lo'ci**, inability to locate correctly the origin of sounds. **p. willisia'na**, ability to hear best in a loud din (Thomas Willis, 1672).

paracysis (par'ah-si-e'sis) [*παρά* beside + *κύω* to be pregnant]. Extra-uterine pregnancy.

paracystic (par-ah-sis'tik) [*παρά* near + *κύστις* bladder]. Situated near the bladder.

paracystitis (par'ah-sis-ti'tis) [*παρά* near + *κύστις* bladder + *-itis* inflammation]. Inflammation of the tissues around the bladder.

paracystium (par-ah-sis'te-um) [*παρά* near + *κύστις* bladder]. The connective and other tissues around the bladder.

paracytic (par-ah-sit'ik) [*παρά* beside + *κύτος* cell]. Noting cell elements present in the blood or other part of the organism, but enthetic or not normal to it.

paradenitis (par'ad-en-i'tis) [*παρά* beside + *ἀδὴν* gland + *-itis* inflammation]. Inflammation of the tissues around a gland.

paradental (par-ah-den'tal). Near a tooth; alongside of a tooth.

paradentitis (par'ah-den-ti'tis). Same as *parodontitis*.

paraderm (par'ah-derm) [*παρά* beside + *δέρμα* skin]. The part of the vitellus of the ovum whence the cells are formed which enter the body of the embryo.

paradiabetes (par-ah-di-ab-e'tēz). A condition marked by many of the manifestations of diabetes, but without polyuria or glycosuria.

paradiagnosis (par'ah-di-ag-no'sis) [*παρά* beside + *diagnosis*]. A diagnosis that is almost, but not quite, correct.

paradidymal (par-ah-did'im-al). 1. Pertaining to the paradidymis. 2. Beside the testicle.

paradidymis (par-ah-did'im-is) [*παρά* beside + *δίδυμος* testicle] [BNA]. A body on the spermatic cord above the epididymis. It consists of closed tubes, and represents the remains of the posterior part of the wolffian body. Called also *organ of Giralde's*, *parepididymis*, and *massa innominata*.

paradimethylaminobenzaldehyde (par'ah-dimeth'il-am'in-o-ben-zal'de-hid). A substance, $CHO.C_6H_4.N(CH_3)_2$: used in testing for tryptophan or other indole derivative.

paradiphenylbiuret (par'ah-di-fen-il-bi-u'ret). A substance, $NH(CO.NH.C_6H_4OH)_2$, transformed into benzoic acid in the body.

paradiphtherial, paradiaphtheritic (par'ah-dif-the're-al, par'ah-dif-the-rit'ik). Having a remote or indirect relation to diphtheria.

paradox (par'ad-oks) [*παράδοξος* incredible]. A statement which seems to be, though it may not be, absurd or self-contradictory. **p. of Kretz**,

while the injection of an accurately neutralized toxin-antitoxin mixture produces no bad effects in a normal animal, the reverse is the case in an animal that has previously been actively immunized with a toxin. **Weber's p.**, the elongation of a muscle which has been so stretched that it cannot contract.

paradoxical (par-ah-doks'ik-al) [*παράδοξος* incredible]. Occurring at variance with the normal rule.

paradysentery (par-ah-dis'in-ter-e). A diarrhea resembling mild dysentery.

para-eccrisis (par-ah-ek'ris-is) [*παρά* beside + *ἐκκρίσις* excretion]. Disordered secretion or excretion.

para-enteric (par'ah-en-ter'ik). Paratyphoid.

para-epilepsy (par-ah-ep'il-ep-se). An epileptic attack consisting only of the aura without convulsions.

para-equilibrium (par'ah-e-kwil-b're-um). Vertigo due to disturbance of the vestibular apparatus of the ear.

paraesthesia (par-es-the'zhe-ah). Same as *pares-thesia*.

Par. aff. Abbreviation for *L. pars affecta*, the part affected.

paraffin (par'af-in) [*L. parum* little + *af'finis* akin]. 1. A white, waxy hydrocarbon distilled from coal tar, shale, or from wood. It occurs in several varieties. All varieties are used as excipients and emollients. 2. Any saturated hydrocarbon of the marsh gas series. **chlorinated p.** See *chlorosane*. **hard p.**, a white transparent crystalline waxlike solid melting above 45 C. **liquid p.**, liquid petrolatum or paraffin oil, an oily liquid. **plastic p.** See *surgical p.* **soft p.** Same as *hard p.* **solid p.**, petrolatum or petroleum jelly; a white or yellow butter-like substance melting between 30 and 40 C. **surgical p.**, paraffin intended to be applied as a film in the surgical dressing of burns. It is more ductile and pliable than the official paraffin.

paraffinal (par-af'in-al). A stable emulsion of paraffin employed as a laxative (Weil).

parafinoma (par-ah-fin-o'mah). A chronic granuloma produced by prolonged continuous exposure to the irritation of paraffin.

paraffinum (par-af-i-num). Paraffin.

parafibrinogen (par'ah-f-brin'o-jen). A compound resembling fibrin, obtained by repeated precipitation of fibrinogen with salt.

paraflagellate (par-ah-flaj-el-at). Having paraflagella.

paraflagellum (par'ah-flaj-el'um), pl. *paraflagella*. A small accessory flagellum.

parafoeculus (par-ah-flok-u-lus). Same as *accessory flocculus*. See *flocculus*.

paraform, paraformaldehyde (par'ah-form, par'ah-for-mal'de-hid). Oxymethylene, $(CH_2O)_n$, a white, crystalline polymer of formaldehyde. It is an internal and external antiseptic. Dose, 7½-15 grains (0.5-1 Gm.). 2. A white powder, formalin, $C_6H_5O_3$, an internal antiseptic. Dose, 7½-15 grains (0.5-1 Gm.).

parafuchsin (par-ah-fook'sin). A dye of the triphenylmethane series, triaminotriphenyl-methane chloride, $(C_6H_4.NH_2)_3Cl$: used in the treatment of trypanosomiasis.

parafunction (par'ah-funk-shun). A disordered or perverted function.

parafunctional (par-ah-funk'shun-al). Characterized by perverted or abnormal function.

paragammacism (par-ah-gam'mah-sizm) [*παρά* aside + *γάμμα* the Greek letter G]. The faulty utterance of *g*, *k*, and *ch* sounds.

paraganglina, paraganglin (par'ah-gang-li'nah, par-ah-gang'lin). A preparation from the medullary substance of the suprarenal capsule of oxen: used as a stomachic and intestinal stimulant.

paranglioma (par'ah-gang-le-o'mah). A tumor of the chromaffin tissue.

paranglion (par-ah-gang'le-on), pl. *paragan'glia*. 1. Any one of the chromaffin bodies forming masses of chromaffin tissue scattered along the entire sympathetic nervous system and in various parts of the body. 2. One of the oval masses of cells in the medullary substance of the adrenal bodies.

p. carot'icum. See *carotid gland*, under *gland*.

paragelatose (par-ah-jel'at-ös). A substance obtained by boiling gelatin.

parageusia (par-ah-ju'se-ah) [*παρά* beside + *γεῦσις* taste]. 1. Perversion of the sense of taste. 2. A bad taste in the mouth.

parageusic (par-ah-ju'sik). Having a perverted sense of taste.

paragglutination (par-ag-lu-tin-a'shun). See *paraserum reflex*, under *reflex*.

paraglobulin (par-ah-glob'u-lin). A globulin from blood serum, blood cells, lymph, and various connective tissues. Called also *fibroplastin*, *fibrinoplastin*, and *serum globulin*.

paraglobulinuria (par-ah-glob'u-lin-u're-ah) [*παρά* beside + *οὐρον* urine]. The discharge of paraglobulin in the urine.

paraglossa (par-ah-glos'sah) [*παρά* beside + *γλῶσσα* tongue]. Swelling of the tongue.

paraglossia (par-ah-glos'e-ah) [*παρά* beside + *γλῶσσα* tongue]. Inflammation of the tissues under the tongue.

paraglossitis (par-ah-glos-i'tis). Same as *paraglossia*.

paragnathus (par-ag'nath-us) [*παρά* beside + *γνάθος* jaw]. A fetal monster with a supernumerary jaw.

paragnosis (par-ah-gno'sis) [*παρά* beside + *γνῶσις* knowledge]. Diagnosis, after death, by means of contemporaneous accounts of the diseases which have affected historical characters.

paragomphosis (par'ah-gom-fo'sis) [*παρά* beside + *γομφῶν* to fasten]. Impaction of the head of the fetus in the pelvic canal.

paragonimiasis (par-ah-go-nim-i-as-is). Infection by the lung fluke, *Paragonimus westermani*.

Paragonimus (par-ah-gon'im-us). A genus of trematode parasites. They have two invertebrate hosts, the first is a mollusk (*Melania*) and the second a crustacean (*Polamon* or *Eriocheris*). **P. hellicot'iti**, a species closely allied to *P. westermani*, found in hogs in the United States. **P. ringeri**. Same as *P. westermani*. **P. westermani**, the lung fluke, an oval or pear-shaped fluke of a pinkish or reddish-brown color, found in cysts in the lungs and sometimes in the pleura, liver, abdominal cavity, and elsewhere. It causes the disease known as parasitic or oriental hemoptysis. It occurs especially in Asiatic countries, and infests the lower animals as well as man. In Venezuela, the crab, *Pseudohelphusa inarbei*, probably transmits the parasite to man. Called also *Distoma westermani*, *D. ringeri*, and *D. pulmonale*.

paragonorrhoeal (par'ah-gon-o-re'al). Having a remote or indirect relation to gonorrhea.

Paragordius (par-ah-gor'de-us). A genus of the Gordiacea. **P. cin'tus**, one case has been reported from Africa. **P. tricuspidatus**, in one case in France this worm was extracted from the throat. **P. varius**, several cases of infection with this worm have been reported in North America.

paragraphia (par-ah-gra'fe-ah) [*παρά* beside + *γράφειν* to write]. A disorder in which the patient writes one word in place of another.

Paraguay tea (par'ah-gwi). See *mate*.

parahemoglobin (par'ah-hemo-o-glo'bin). 1. A dark form of hemoglobin occurring in crystalline form in the tissue in conditions marked by consid-

erable blood destruction. 2. A proprietary therapeutic blood preparation said to contain 5 per cent of iron.

parahepatic (par'ah-he-pat'ik) [*παρά* beside + *ήπαρ* liver]. Beside the liver.

parahepatitis (par'ah-hep-at-i'tis). Inflammation of parts around the liver.

parahormone (par-ah-hor'mön) [*παρά* beside + *hormone*]. A substance, not a true hormone, which has a hormone-like action in controlling the action of some distant organ.

parahydriopin (par-ah-hi'dro-pin) [*παρά* beside + *ὕδρωψ* dropsy]. A proprietary diuretic containing theobromine.

parahydroxyphenylethylamine (par-ah-hi-drok-se-phen-il-eth-il-am'in). Tyramine.

parahypnosis (par'ah-hip-no'sis) [*παρά* beside *ύπνος* sleep]. Abnormal or perverted sleep.

parahypophysis (par'ah-hi-pof'i-sis). An accessory pituitary body.

parainfection (par-ah-in-fek'shun). The condition of being affected with a disease whose symptoms resemble those of an infectious disease, but which is not due to the germs of the infectious disease.

parainfectious (par-ah-in-fek'shus). Due indirectly to infection; due to the conditions produced by infection rather than by the infection itself.

para-influenzal (par'ah-in-flu-en'zal). Due indirectly to influenza; due to the conditions produced by influenza.

para-insulin (par-ah-in-su-lin). A hypothetical substance in tuberculous tissue having an action on the body similar to that of insulin.

para-iodoxyanisol (par-ah-i'o-dox-e-an'is-ol). Same as *isoforn*.

parakeratosis (par'ah-ker-at-o'sis). Any abnormality in the horny layer of the skin. **p. ostracea**. Same as *p. scutularis*. **p. psoriasiformis**, a condition characterized by the formation of scabs like those of psoriasis. **p. scutularis**, a disease of the scalp marked by the formation of crusts which envelop the hairs and send up incrustations around the hairs. **p. variegata**, a disease characterized by a red, scaly eruption in the form of a network enclosing patches of normal skin.

parakinesia (par-ah-kin-e'se-ah). Parakinesis.

parakinesis (par'ah-kin-e'sis) [*παρά* beside + *κίνησις* motion]. Perversion of motor function resulting in strange and unnatural movements.

parakinetic (par'ah-kin-et'ik). Relating to or affected by parakinesis.

paral (par'al). A proprietary preparation of lanolin, paraffin, and water.

paralactic acid (par-ah-lak'tik). Sarcocollactic acid. See under *acid*.

paralalia (par-ah-la'le-ah) [*παρά* beside + *λαλέω* speech]. Any disturbance of the faculty of speech. **p. litera'lis**, impairment of the power to utter the sounds of certain letters.

paralambdacism (par-ah-lam'dah-sizm) [*παρά* beside + *λάμβδα* letter L]. An improper utterance of L-sounds.

paralbumin (par-al-bu'min) [*παρά* near + *albumin*]. An albumin or protein substance found in ovarian cysts.

paraldehyde (par-al'de-hid) [*παρά* beside + *aldehyde*]. A derivative, C₆H₁₂O₃, of aldehyde. It is a clear liquid, of disagreeable taste and smell; soluble in water, alcohol, and ether. It has hypnotic and anodyne properties, and is used in mania, delirium tremens, tetanus, and other nervous disorders, and as an antidote to morphine. Dose, 30-60 minims (2-4 cc.).

paraldehydism (par-al'de-hi-dizm). A condition produced by excessive use of paraldehyde; paraldehyde poisoning.

paraleprosis (par'ah-lep-ro'sis). Paraleprosy.

paraleprosy (par-ah-lep'ros-e). A mild or aborted form of leprosy.

paralepsy (par'ah-lep-se). Same as *psycholepsy*.

paralexia (par-ah-leks'e-ah) [*παρά* almost + *alexia*]. Impairment of the power of reading, marked by the transposition of words and syllables into meaningless combinations.

paralexic (par-ah-el'sik). Pertaining to or affected with paralexia.

paralgesia, paralgia (par-al-je'se-ah, par-al'je-ah) [*παρά* beside + *ἄλγος* pain]. Any condition marked by abnormal and painful sensations; a painful paresthesia.

paralgesic (par-al-je'sik). Pertaining to or affected with paralgesia.

paralinin (par-ah-li'nin) [*παρά* beside + *linin*]. Karyolymphe.

paralipophobia (par'ah-li-po-fō'be-ah) [*παρά* beside + *λεπν* to neglect + *φόβος* fear]. Morbid apprehension of neglecting something.

parallactic (par-al-ak'tik). Pertaining to parallax.

parallagma (par-al-ag'mah) [*παράλλαγμα*]. Displacement of a bone or of the fragments of a broken bone.

parallax (par'al-aks) [*παράλλαξις* in turn]. An apparent displacement of an object due to a change in the patient's position. **binocular p.**, the seeming difference in position of an object as seen separately by one eye and then by the other, the head remaining stationary. **crossed p.**, **heteronymous p.**, that in which the thing observed seems to move away from the open eye, one of the eyes being closed or covered. **direct p.**, **homonymous p.**, that in which the thing seen appears to move toward the uncovered or open eye. **vertical p.**, that in which the thing observed appears to move upward or downward.

parallelism (par'al-el-izm). The doctrine that mental processes and brain processes run side by side and that they do not interact. See *automatism*.

parallelometer (par-al-el-om'et-er) [*parallel* + *μέτρον* measure]. An instrument used in artificial denture work to determine the exactness of the parallel relationship of lines and surfaces.

paralodion (par-ah-lo'de-on). Collodion in shredded form, used in the preparation of an embedding medium for microscopical work.

paralogia (par-al-o'je-ah) [*παρά* beside + *λόγος* reason]. A disordered state of the reason; impairment of the reasoning power marked by illogical or delusional speech. **thematic p.**, a perversion of the mind in which the patient dwells unduly upon one subject.

paralogism (par-al'oj-izm). The use of meaningless or illogical language by the insane.

paralysine (par-al'is-in). See *agglutinin*.

paralysis (par-al'is-is) [*παρά* beside + *λύνειν* to loosen]. A loss of motion or sensation in a living part or member. **p. of accommodation**, paralysis of the ciliary muscles so as to prevent accommodation of the eye. **acoustic p.**, nervous deafness. **acute ascending p.**, a rapidly progressing and often fatal ascending paralysis of unknown cause. It begins in the muscles of the feet and gradually ascends to the other muscles of the body. There are no discoverable lesions, and the disease runs its course in from two days to four weeks. Called also *Landry's p.* **acute atrophic p.**, **infantile p.**, the acute anterior poliomyelitis of childhood. See *anterior poliomyelitis*. **acute infectious p.**, acute anterior poliomyelitis. **acute wasting p.** See *poliomyelitis*. **p. ag- itans**, shaking palsy, or Parkinson's disease: a disease of late life, progressive in its course, and marked by a characteristic tremor of the muscles, weakness, delay of voluntary motion, a peculiar festinating gait, and muscular contraction, causing peculiar and characteristic positions of the limbs and head. The disease is at-

tended with excessive sweating and feelings of heat and cold. **p. ag- itans, juvenile**, a condition developing in early life, marked by increased muscle tone with the characteristic attitude and facies of paralysis agitans, due to a progressive degeneration of the globus pallidus. Called also *syndrome of globus pallidus* and *paleostriatal syndrome of Hunt*. **alcoholic p.**, paralysis caused by habitual drunkenness. **anapeiratic p.**, occupation neurosis. **anesthesia p.**, paralysis following anesthesia. **anterior spinal p.**, poliomyelitis anterior. **arsenical p.**, paralysis due to arsenical poisoning. **ascending p.**, spinal paralysis that progresses cephalad. **association p.** Same as *bulbar p.* **asthenic bulbar p.**, myasthenia gravis pseudoparalytica. **asthenobulbospinal p.**, myasthenia gravis. **atrophic spinal p.**, poliomyelitis anterior. **Bell's p.**, **facial p.**, paralysis of the face due to lesion of the facial nerve or of its nucleus. **Bernhardt's p.**, pain and hyperesthesia on the outer surface of the thigh, due to disease of the external cutaneous nerve of the thigh. **birth p.**, that which is due to injury received at birth. **brachial p.**, paralysis of an arm. **brachiofacial p.**, that which affects the face and an arm. **Brown-Séquard's p.**, paralysis of motion on one side and of sensation on the other after hemisection of the spinal cord. **bulbar p.**, paralysis due to changes in the motor centers of the oblongata: especially chronic or progressive bulbar paralysis, a chronic, usually fatal, disease, marked by progressive paralysis and atrophy of the muscles of the lips, tongue, mouth, pharynx, and larynx, and due to degeneration of the nerve nuclei of the floor of the fourth ventricle. Death results in from one to several years from extension to the cardiac or respiratory centers, from atrophy of the muscles of respiration, or from entrance of food into the air passages. It is called also *labioglossopharyngeal p.*, *labioglossolaryngeal p.*, and *Duchenne's p.* **bulbospinal p.**, myasthenia gravis. **central p.**, any paralysis due to a lesion of the brain or spinal cord. **centrocapsular p.**, that which is due to disease of the internal capsule. **centrocortical p.**, that which is due to disease of the cerebral cortex. **cerebral p.**, any paralysis due to an intracranial lesion. **chlorotic p.**, paralysis from chlorosis. **circumflex p.**, paralysis of the circumflex nerve. **complete p.**, entire loss of motion, sensation, and function. **compression p.**, paralysis caused by pressure on a nerve, as by a crutch or during sleep. **cortical p.**, paralysis dependent upon a lesion of the brain cortex. **creeping p.**, locomotor ataxia. **crossed p.**, that which affects one side of the face and the other side of the body. **crural p.**, that which chiefly affects the thigh or thighs. **crutch p.**, paralysis of an arm or of the arms, due to pressure of the crutch in the axilla. **Cruveilhier's p.**, progressive muscular atrophy. **decubitus p.**, paralysis due to pressure on a nerve from lying for a long time in one position. **dental p.**, poliomyelitis anterior, occurring in teething children. See *anterior poliomyelitis*. **diphtheric p.**, **diphtheritic p.**, a partial paralysis which often follows diphtheria, chiefly affecting the soft palate and throat muscles. **diver's p.**, caisson disease. **drummer's p.**, an extensor paralysis of the distal phalanx of the thumb of the left side occurring in drummers. **drunkards' arm p.**, a variety of musculospiral paralysis. **Duchenne's p.** Same as *bulbar p.* **emotional p.**, paralysis with emotional excitement occurring in hysterical subjects. **epidemic infantile p.** See *acute anterior poliomyelitis*, under *poliomyelitis*. **Erb's p.** 1. Same as *birth palsy*. 2. Partial paralysis of the brachial plexus affecting various muscles of the arm and chest wall. **Erb-Duchenne p.**, paralysis of the upper roots of brachial plexus due to destruction of the fifth and sixth cervical roots and characterized by absence of involvement of the small hand muscles. **essen-**

tial p., acute anterior poliomyelitis. **exhaustion p.**, paralysis from overwork. **facial p.** See *Bell's p.* **Féréol-Graux p.**, paralysis affecting the internal rectus of one eye and the external rectus of the other, caused by lesion of the abducens nucleus. **flaccid p.**, paralysis with loss of tonus of the muscles of the paralyzed part and absence of reflexes. **functional p.**, a temporary paralysis which is apparently not caused by a nerve lesion. **galloping p.**, a rapidly progressive form of general paresis. **general p.**, **general p. of the insane**, general paresis. See *paresis*. **glossolabial p.** See *bulbar p.* **Gubler's p.**, crossed hemiplegia. **histrionic p.**, paralysis of certain muscles of the face, producing a facial expression of some emotion. **hysterical p.**, apparent loss of power of movement in a part seen in hysteria: it appears to have no adequate causative lesion. **incomplete p.**, partial paralysis or paresis. **Indian bow p.**, paralysis of the thyro-arytenoid muscles. **infantile p.**, poliomyelitis anterior. See *poliomyelitis*. **infantile spastic p.**, the cerebral palsy of childhood. **infantile spinal p.** See *acute anterior poliomyelitis*, under *poliomyelitis*. **intermittent p.**, paralysis due to malaria. **intrapuduncular p.**, paralysis of the eye muscles caused by a lesion located between the cerebral peduncles. **ischemic p.**, local paralysis due to a stoppage of the circulation, as in certain cases of embolism or thrombosis; called also *Volkmann's ischemic paralysis*. **juvenile p.**, **agitans**. See *p. agilians, juvenile*. **Klumpke's p.**, atrophic paralysis of the muscles of the arm and hand, from lesion of the brachial plexus and the eighth cervical and first dorsal nerves. **Kussmaul's p.**, ascending spinal paralysis. **labial p.**, **labioglossolaryngeal p.**, **labioglossopharyngeal p.**, a form of bulbar paralysis. **Landry's p.**, acute ascending spinal paralysis. **laryngeal p.**, paralysis of one of the laryngeal muscles. **lead p.**, that which is due to lead poisoning. It is marked by wrist drop, and is due to a peripheral neuritis. **lenticular p.**, that which is due to a lesion of the lenticular nucleus. **lingual p.**, paralysis of the tongue. **Little's p.**, anterior poliomyelitis; the cerebral spastic paralysis of childhood. **local p.**, paralysis of one muscle or of a group of muscles. **masticatory p.**, paralysis of the muscles of mastication. **motor p.**, paralysis of voluntary muscles. **multiple p.**, a complication of local paralyses. **musculospiral p.**, paralysis of the wrist muscles, due to lesion or injury of the musculospiral nerve: sometimes to a toxic influence or to an alcoholic debauch. **myogenic p.**, acute anterior poliomyelitis. **myopathic p.**, paralysis due to disease of the muscle itself. **narcosis p.**, paralysis caused by pressure during anesthesia. **neural p.**, paralysis originating in the nerves. **p. notario-rum**, writers' cramp. **nuclear p.**, any paralysis due to a lesion in a nucleus of origin. **obstetric p.**, a birth palsy; paralysis due to injuries received at birth. **ocular p.** See *amaurosis, cycloplegia, and ophthalmoplegia*. **oculomotor p.**, paralysis of the oculomotor nerve. **organic p.**, paralysis due to lesion of nerve tissue. **parturient p.**, a form of paralysis following delivery in cows, and thought to be due to poisons formed in the udder. Called also *milk fever*. **periodic p.**, a recurrent neurosis, often due to malarial disease. **peripheral p.**, loss of power due to some lesion of the nervous mechanism between the nucleus of origin and the periphery. **phonetic p.**, paralysis of the muscles of speech. **post-diphtheric p.** Same as *diphtheric p.* **posticus p.**, paralysis of the posterior cricothyroid muscle in locomotor ataxia. **Pott's p.**, the paralysis that may accompany Pott's disease. **pressure p.**, paralysis, generally temporary, caused by pressure on a nerve trunk. **progressive bulbar p.** See *bulbar p.* **pseudobulbar p.**, a disease affecting especially the facial muscles; simulating bulbar paralysis, but due to supranuclear lesions;

supranuclear paralysis. It is marked especially by spasmodic laughing and crying. **pseudo-hypertrophic muscular p.**, a chronic disease characterized by enlargement without true hypertrophy of the muscles, with paralysis due to disturbance of nutrition, producing atrophy of the muscle fibers with hypertrophy of the connective tissue and fatty infiltration. The disease occurs usually late in childhood, and is marked by various deformities, lordosis, and a peculiar swaying gait with the legs kept wide apart. The paralysis progressively increases, ending in death, which is usually due to respiratory weakness. **psychic p.** Same as *hysterical p.* **reflex p.**, one ascribable to peripheral irritation. In some cases secondary changes occur in the spinal cord, and the paralysis ceases to be truly reflex. **Saturday night p.** Same as *Sunday morning p.* **segmental p.**, hypnotic paralysis affecting only a segment of a limb. **sensory p.**, anesthesia resulting from a morbid process. **spastic p.**, paralysis marked by rigidity of the muscles and heightened tendon reflexes. **spastic spinal p.**, lateral sclerosis of the spinal cord. **spinal p.**, paralysis dependent on a lesion of the spinal cord. **spinomuscular p.**, paralysis due to lesion of the gray matter of the spinal cord, or the nerves springing therefrom. **spinoneural p.** See *atrophy, spinoneural*. **Sunday morning p.**, musculospiral paralysis caused by pressure in persons who have fallen asleep after a debauch. **supranuclear p.**, paralysis of the facial nerve due to lesion of the cortex or of the facial fibers in the corona radiata or capsule. **temporary p.**, paralysis which passes away after a short time, and which is usually due to the action of a drug or to hypnotic or hysterical condition. **tic p.** See *tic*. **tick p.**, a paralysis which follows the bite of certain ticks (*Dermacentor venustus*) in children and in domestic animals in Oregon, British Columbia, and other parts of the world. The cause is not known. **p. va'cillans**, chorea. **vasomotor p.**, paralysis of a vasomotor apparatus, resulting in dilatation of blood vessels. **Volkmann's p.** Same as *ischemic p.* **wasting p.**, progressive muscular atrophy. **Werdnig-Hoffmann p.**, a type of familial progressive spinal muscular atrophy, beginning in early life and ending fatally in from a few months to four years. **writers' p.** Same as *writers' cramp*. **Zenker's p.**, partial paralysis of the parts supplied by the external popliteal nerve, due to a prolonged squatting or kneeling posture. Paralysis is further distinguished as *traumatic, syphilitic, toxic*, etc., according to its cause; or as *obstructor, ulnar*, etc., according to the nerve, part, or muscle specially affected. For other varieties see under *hemiplegia, palsy, paraplegia*, and *paresis*.

paralysol (par-ah-li'sol). A cresol preparation used for disinfecting utensils.

paralysor (par'al-i-zor). A substance which hinders or prevents a chemical reaction.

paralytic (par-al-it'ik) [παράλυτικός]. 1. Affected with or pertaining to paralysis. 2. A person affected with paralysis.

paralyzant (par'al'iz-ant). 1. Causing paralysis. 2. A drug that paralyzes.

paralyze (par'al-iz). To put into a state of paralysis.

paralyzer (par'al-i-zer). A substance which hinders or prevents a chemical reaction.

paramagenta (par'ah-maj-en'tah). Parafuchsin.

paramagnetic (par'ah-mag-net'ik). Characterized by or exhibiting paramagnetism.

paramagnetism (par-ah-mag-net-izm) [παρά beside + μάγνης magnet]. The property of being attracted by a magnet, and of assuming a position parallel to that of a magnetic force.

paramastigote (par-am-as'tig-öt) [παρά beside + μαστίγ lash]. Having an accessory flagellum by the side of a larger one.

paramastitis (par''ah-mas-ti'tis) [παρά near + μαστός mamma]. Inflammation of the tissues around the mammary gland.

paramastoid (par-ah-mas'toid). Near the mastoid process.

paramastoiditis (par''ah-mas-toi-di'tis). Inflammation of the temporal bone in mastoiditis.

Paramaecium (par-ah-me''se-um). A genus of holotrichous ciliate protozoans of elongated form. Certain strains of this organism have been employed in the protozoan test. See under *tests*. **P. coli**. Same as *Balantidium coli*.

paramedian (par-ah-me'de-an). Same as *paramesial*.

parameliten'sis fever. See under *fever*.

paramenia (par-ah-me-ne-ah) [παρά beside + μήνες menses]. Disordered or difficult menstruation.

parameningococcus (par''ah-me-ning-go-kok'us). A micro-organism resembling the meningococcus, differing only in its serum reactions.

paramesial (par-ah-me'se-al) [παρά near + μέσος middle]. Situated near the mesial line.

parameter (par-am'et-er) [παρά beside + μέτρον measure]. An arbitrary constant, the values of which characterize the mathematical expressions into which it enters; e. g., rheobasis and chronaxia as parameters of the excitability of nerves (Lapicque).

parametric (par-ah-met'rik) [παρά beside + μήτρα uterus]. Situated near the uterus.

parametrisms (par''ah-me-triz'mus) [*parametrium* + *trismus*]. Pain and spasm of the muscle fibers in the broad ligament: observed in cellulitis between the broad ligaments.

parametritis (par''ah-me-tri'tis). Inflammation of the parametrium or cellular tissue about the uterus; pelvic cellulitis. **posterior p.**, inflammation of the cellular tissue around the uterosacral ligaments.

parametrium (par-ah-me'tre-um) [παρά near + μήτρα womb]. The tissues that surround the uterus.

paramido-acetophenone (par-am''id-o-as-e-to-fe-nōn). $\text{NH}_2\text{C}_6\text{H}_4\text{CO.CH}_3$: used in Ehrlich's diazo test.

paramimia (par-ah-mim'e-ah) [παρά beside + μῖμια mockery]. Loss of power to make natural or expressive gestures and movements.

paramitome (par-ah-mi'tōm) [παρά near + μέτρον thread]. See *hyaloplasm*.

paramnesia (par-am-ne''ze-ah) [παρά almost + ἀμnesia]. 1. Perversion of memory in which the person believes that he remembers events or circumstances which never happened; called also *retrospective falsification*. 2. A state in which words are remembered, but are used without a comprehension of their meaning.

Paramoeba (par-am-e'ba). Same as *Craigia*.

Paramoecium (par-ah-me'se-um). An incorrect spelling of *Paramecium*.

paramonochlorophenol (par''ah-mo''no-klo-ro-fe-nol). A crystalline body, $\text{C}_6\text{H}_4(\text{Cl}).\text{OH}$ (1 : 4), produced by the chlorination of phenol: an antiseptic, used in ointments for the treatment of erysipelas. Cf. *chlorophenol*.

paramorphia (par-ah-mor'fe-ah) [παρά beside + μορφή form]. Abnormality of form.

paramorphine (par-ah-mor'fin). Same as *thebaine*.

paramphistomiasis (par-am''fe-sto-mi'as-is). Invasion of the body by trematode parasites of the family Paramphistomidae, namely, *Watsonius watsoni* and *Gastrodiscus hominis*.

Paramphistomum cervi. A fluke found in the stomach of cattle and sheep in Egypt and also in the United States.

paramucin (par-ah-mu'sin). A mucoid substance sometimes occurring in ovarian cysts.

paramusia (par-ah-mu'ze-ah) [παρά almost + ἀμusia]. Perversion or partial loss of the power of correct musical expression.

paramyelin (par-ah-mi'el-in). A mono-amino-monophosphatid obtained from brain substance.

paramyoclonus multiplex (par''ah-mi-ok'lo-nus) [παρά beside + μύς muscle + κλόνος disturbance]. An affection marked by clonic paroxysmal contractions of the muscles of the extremities: it is sometimes due to an organic central lesion, and sometimes hysterical or choreic.

paramyosinogen (par''ah-mi-o-sin'o-jen) [παρά beside + μύς muscle + γενᾶν [to beget]. A protein resembling myosinogen derived from muscle plasma.

paramyotone (par-ah-mi'o-tōn). Same as *paramyotonus*.

paramyotonia (par''ah-mi-o-to'ne-ah) [παρά beside + μύς muscle + τόνος tension]. A disease marked by tonic spasms due to disorder of muscular tonicity; especially a hereditary and congenital affection. **ataxia p.**, muscular spasm with slight ataxia on attempting to move. **p. congenita**, or Thomsen's disease, is marked by tonic spasm of the muscles and weakness, and is due to exposure to cold. See *Thomsen's disease*, under *disease*. **symptomatic p.**, temporary stiffness on starting to walk, seen in paralysis agitans.

paramyotonus (par''ah-mi-ot'o-nus). A condition marked by tonic muscular spasm.

paranalgesia (par-an-al-je'se-ah). Analgesia of the lower extremities.

paranea (par-ah-ne'ah). Paranoia.

paranephric (par-ah-nef'rik). 1. Near the kidney. 2. Pertaining to the suprarenal capsule.

paranephrine (par-ah-nef'rin). A hemostatic preparation from the suprarenal glands: used in 1 : 1000 solution. See *epinephrine*.

paranephritis (par''ah-nef-ri'tis) [παρά near + νεφρός kidney]. 1. Inflammation of the paranephros. 2. Inflammation of the connective tissue around and near the kidney.

paranephros, paranephrus (par-ah-nef'ros, par-ah-nef'rus), pl. *parane-phri* [παρά near + νεφρός kidney]. A suprarenal capsule.

paranesthesia (par''an-es-the'ze-ah). Same as *para-anesthesia*.

paraneural (par-ah-nu'ral) [παρά [beside + νευρον nerve]. Beside or alongside of a nerve.

parangi (pah-ran'je). Ceylonese name for a disease resembling yaws. It is probably a form of syphilis.

paranoia (par-ah-noi'ah) [παρά beside + νοῦς mind]. A chronic, slowly progressive mental disease marked by the presence of systematized delusions which are built up in a logical form. **acute hallucinatory p.**, paranoia in which hallucinations are combined with the delusions. **alcoholic p.**, a paranoic condition developing in chronic alcoholism. **p. hallucinatory**, acute hallucinatory paranoia. **heboid p.**, dementia paranoides. **p. origina'ria**, a form of paranoia in children. **querulous p.**, paranoia marked by querulousness. **p. sim'plex**, a form in which the delusions are related to the actual perceptions of the patient.

paranoiac (par-ah-noi'ak). 1. Affected with paranoia. 2. A person affected with paranoia; a crank; an erratic person with a tendency to insanity.

paranoic (par-ah-no'ic). 1. Pertaining to paranoia. 2. A person affected with paranoia.

paranoid (par-an'oid). Resembling paranoia.

paranoidism (par-ah-noi'dizm). The state of being affected with paranoia.

paranomia (par-ah-no'me-ah) [παρά beside + νόμος name]. Aphasia in which the names of objects felt (**myotactic p.**) or seen (**visual p.**) are not recollected, wrong names being given to them.

paranaval (par-an-o'val). A soluble, tasteless additive compound of barbitol sodium and disodium phosphate. It is used as a hypnotic in doses of 4-8 grains.

paranuclear (par-ah-nu'kle-ar). Pertaining to a paranucleus.

paranucleate (par-ah-nu'kle-ät). Any salt of paranucleic acid.

paranuclein (par-ah-nu'kle-in). 1. The essential substance of true nucleoli. 2. A nuclein derived from cytoplasm.

paranucleo-albumin (par-ah-nu'kle-o-al-bu'-min). A compound of paranuclein with protein.

paranucleolus (par'ah-nu-kle'o-lus). A small basophil body in the enclosing sac of the nucleus.

paranucleoprotein (par'ah-nu'kle-o-pro'te-in). Any phosphorus-containing protein which, by digestion with acid pepsin, affords soluble peptones and proteoses and an insoluble paranuclein.

paranucleus (par-ah-nu'kle-us) [*παρά* near + *νucleus*]. A body resembling the nucleus sometimes seen in the cell protoplasm near the nucleus.

para-omphalic (par'ah-om-fal'ik) [*παρά* beside + *ομφαλός* navel]. Near the umbilicus.

para-operative (par-ah-op'er-a-tiv). Pertaining to the accessories of an operation, such as care of instruments, asepsis, etc.

paraosteorthropathy (par'ah-os-te-o-ar-throp'-ath-e). Paraplegia with osteo-arthropathy.

parapancreatic (par'ah-pan-kre-ät'ik). Situated near the pancreas. **p. abscess**, an abscess in the tissue around the pancreas.

paraparesis (par-ah-par'es-is) [*παρά* almost + *πάρεσις* paralysis]. A partial paralysis, especially of the lower extremities.

parapathie (par-ap'ath-e). Parapathy.

parapathy (par-ap'ath-e). Any disease of the lower part of the body.

parapedesis (par-ah-pe-de'sis) [*παρά* beyond + *πέδησις* a bending]. Passage of the bile pigments into the blood capillaries instead of into the bile capillaries.

parapeptone (par-ah-pep'tōn). Same as *anti-albumate*.

paraperitoneal (par'ah-per-it-o-ne'al). Near the peritoneum.

parapestis (par-ah-pes'tis). Pestis minor.

paraphasia (par-ah-fa'zhe-ah) [*παρά* near + *aphasia*]. Partial aphasia in which the patient employs wrong words, or uses words in wrong and senseless combinations (**choraic p.**).

paraphasic (par-ah-fa'sik). Characterized by paraphasia.

paraphasis (par-af'as-is). An evagination of the membranous roof of the telencephalon in front of the velum transversum in certain vertebrate brains.

paraphemia (par-ah-fe'me-ah) [*παρά* beside + *φήμη* speech]. Aphasia marked by the employment of the wrong words.

paraphenetidin (par'ah-fe-net'id-in). A substance, amidophenetol, $\text{NH}_2\cdot\text{C}_6\text{H}_4\cdot\text{OC}_2\text{H}_5$; used in preparing acetphenetidin.

paraphenylenediamine (par'ah-fen-il-en-di-am'-in). An agent, $\text{C}_6\text{H}_4(\text{NH}_2)_2$, whose hydrochloride dyes the hair black, but is liable to cause a dermatitis.

paraphia (par-a'fe-ah) [*παρά* beside + *ἄφή* touch]. A perversion of the sense of touch.

paraphimosis (par'ah-fi-mo'sis) [*παρά* amiss + *φίμειν* to muzzle]. Retraction of a narrow or inflamed foreskin which cannot be replaced.

paraphobia (par-ah-fō-be-ah) [*παρά* beside + *φόβος* fear]. A mild phobia.

paraphonia (par-ah-fō-ne-ah) [*παρά* near + *aphonia*]. Morbid alteration of the voice; partial aphonia.

paraphora (par-af'o-rah) [*παρά* aside + *φέρειν* to bear]. A slight mental disorder.

paraphrasia (par-ah-fra'ze-ah) [*παρά* near + *aphrasia*]. Partial aphrasia; speech defect marked by disorderly arrangement of spoken words.

paraphrenia (par-ah-fre'ne-ah) [*παρά* aside + *φρήν* mind]. 1. Intellectual insanity; insanity marked especially by intellectual disturbance. 2. Paraphrenitis. **p. confab'ulans**, a form of paraphrenia distinguished by falsifications of memory. **p. expan'siva**, a form of paraphrenia marked by delusions of grandeur, an exalted mood, and mild excitement. **p. phantas'tica**, a form of paraphrenia marked by phantastic, changeable, and unsystematized delusion. **p. systematic'a**, a form of paraphrenia marked by the gradual development of progressive delusions of persecution, with later appearance of delusions of grandeur without deterioration of personality.

paraphrenitis (par'ah-fre-nit'is) [*παρά* near + *φρήν* diaphragm]. Inflammation of the diaphragm, or, more correctly, of the parts around it.

paraphronia (par-af-ro'ne-ah). A condition of abnormal mentality marked by change in disposition and character.

paraphysis (par-af'is-is) [*παράφυσις* offshoot]. A sterile thread alongside the spore sac or sexual organs of cryptogamous plants.

paraphyte (par'af-it) [*παρά* aside + *φυτόν* plant]. A proliferate or excrecent vegetation.

paraphyton (par-af-it'on). A vegetable parasite.

parapineal (par-ah-pi'ne-al). Noting the visual part of the pineal body of certain lizards.

paraplastm (par'ah-plazm) [*παρά* near + *πλάσμα* plasm]. 1. See *hyaloplastm*. 2. Any abnormality or malformation.

Paraplas'ma flavig'enum. See *Seidelin bodies*, under *body*.

paraplastmic (par-ah-plaz'mik). Pertaining to paraplastm.

paraplast (par'ah-plast). A plaster base of caoutchouc, lanolin, rosin, and dammar.

paraplastic (par-ah-plas'tik) [*παρά* beside + *πλάσσειν* to mold]. Exhibiting a perverted formative power; of the nature of a paraplastm.

paraplastin (par-ah-plas'tin). A substance resembling parachromatin in the cytoplasm and nucleus of a cell.

paraplectic (par-ah-plek'tik) [*παραπληκτικός*]. Same as *paraplegic*.

paraplegia (par-ah-ple'je-ah) [*παρά* across + *πληγή* stroke]. Paralysis of the legs and lower part of the body. The paralysis affects both motion and sensation, and the condition is caused by disease or injury of the spine, locomotor ataxia, transverse myelitis, chronic alcoholism, malaria, anemia, and lesion of the brain. **alcoholic p.**, paraplegia due to chronic alcoholism, and probably dependent upon peripheral neuritis. **ataxic p.**, a disease characterized by slowly developing paraplegia and incoordination, with exaggeration of the tendon reflexes, and due to lateral and posterior sclerosis of the spinal cord. **cerebral p.**, that which is due to a bilateral cerebral lesion. **cervical p.**, that which affects especially both arms, due to high spinal pressure. **congenital spastic p.**, infantile spastic paraplegia. **p. doloro'sa**, a variety attended with severe pains, due to the pressure of neoplasms on the spinal cord and nerves. **flaccid p.** See *flaccid paralysis*, under *paralysis*. **ideal p.**, a reflex paraplegia due to emotional excitement. **infantile spastic p.**, spastic paralysis occurring in early childhood, and due to injuries in birth, cerebral hemorrhage before birth, or abnormal development of the brain. **p. infe'rior**, paralysis of both legs. **peripheral p.**, that which is due to pressure on the nerves. **Pott's p.**, that which is due to vertebral caries. **reflex p.**, paralysis of the lower limbs

due to peripheral irritation of the nerve centers. **senile p.**, **spastic p.**, a form marked by tonic spasm of the paralyzed muscles, with increased reflex irritability. It is usually caused by transverse lesions of the spinal cord or by anterolateral sclerosis. Called also *tetanioid p.* **spastic p.**, **primary**, a form of spastic paraplegia said to be due to primary degeneration in the pyramidal tracts. **p. superior**, paralysis of both arms. **tetanioid p.** See *spastic p.* **toxic p.**, paraplegia due to poisons in the blood.

paraplegic (par-ah-plej'ik) [παράπληγικός]. Pertaining to or of the nature of paraplegia.

paraplegiform (par-ah-plej'if-orm). Resembling paraplegia.

paraplejiapyrine (par-ah-plej-ah-pi'rin). An antipyretic and analgesic compound of antipyrine and paratoluenesulphamine.

parapleuritis (par'ah-plu-ri'tis) [παρά beside + πλευρόν side]. Inflammation in the wall of the chest.

paraplexus (par-ah-plek'sus) [παρά beside + πlexus]. The choroid plexus of the lateral ventricle.

parapneumonia (par-ah-nu-mo'ne-ah). A disease resembling pneumonia clinically, but not due to infection with its germ.

parapophysis (par-ah-pof'is-is) [παρά near + apophysis]. The lower transverse process of a vertebra or its homologue.

parapoplexy (par-ap'o-pleks-e) [παρά near + apoplexy]. Slight apoplexy; also an attack resembling apoplexy, but of a different nature.

parapraxia (par-ah-prak'se-ah) [παρά beside + πράξις doing]. 1. Irrational behavior. 2. Inability to perform purposive movements properly.

paraproctitis (par'ah-prok-ti'tis) [see *paraproctium*]. Inflammation of the paraproctium.

paraproctum (par-ah-prok'she-um) [παρά beside + πρωκτός anus]. The tissues that surround the rectum and the anus.

paraprostatitis (par'ah-pros-tat-i'tis). Inflammation of the tissues near the prostate gland.

parapsia (par-ap'se-ah). Parapsis.

parapsis (par-ap'sis) [παρά beside + ἅψις touch]. Morbid sense of touch; paraphia.

parapsoriasis (par-ah-so-ri'as-is). A chronic skin disease resembling psoriasis and lichen. It is marked by persistent red, scaling patches with lichen-like lesions, and is without subjective sensations.

parapsychosis (par'ah-si-ko'sis). Perversion of the thought function resulting in unnatural and abnormal thinking.

parapyknomorphous (par'ah-pik-no-mor'fus) [παρά near + πυκνός thick + μορφή form]. Neither pyknomorphous nor apyknomorphous, but between the two. "Staining moderately well.

parapyramidal (par'ah-pi-ram'id-al). Beside or near a pyramid.

paraqueduct (par-ak'we-dukt). A lateral extension of the cerebral aqueduct.

pararabin (par-ar'ab-in). A carbohydrate residuum identified by Reichardt (1875) and obtained by depriving agar-agar of its nitrogen (Bordet-Zung, 1914).

pararectal (par-ah-rek'tal). Beside the rectum.

parareducin (par'ah-re-du'sin) [παρά near + reducin]. A leukomaine found in the urine.

parareflexia (par'ah-re-flek'se-ah). Any disorder or derangement of the reflexes.

pararegulin (par-ah-reg-u-lin). A proprietary laxative said to contain paraffin and cascara sagrada.

pararenal (par-ah-re'nal). Alongside of the kidney.

pararhotacism (par-ah-ro'tas-izm) [παρά beside + ῥῶ the letter ρ]. Faulty enunciation of the sound of the letter *r*.

pararoello (par-ar-o-el'o). Ornithodoros coriaceus. **pararosanine** (par'ah-ro-zan'il-in). Same as *parafuchsin*.

pararrhythmia (par-ar-ith'me-ah). Cardiac arrhythmia in which two separate rhythms are going on at the same time.

pararthria (par-ar'thre-ah) [παρά beside + ἄρθρον articulation]. Disordered or imperfect utterance of speech.

Parasaccharom'ycetes ashfor'di. Same as *Monilia psilosis*.

parasacral (par-ah-as'kral). Situated or occurring near the sacrum. **p. anesthesia**. See *anesthesia*.

parasagittal (par-ah-saj'it-al). Parallel with the median plane.

parasalpingitis (par'ah-sal-pin-jit'is) [παρά near + σάλπιγξ tube + -itis inflammation]. Inflammation of the tissues around an oviduct.

parascarlet (par-ah-skar'let). See *fourth disease*, under *disease*.

parasecretion (par'ah-se-kre'shun). Perversion of the secretions; also hypersecretion.

paraserum reflex (par-ah-se'rum). See *reflex*.

parasigmatism (par-ah-sig'mat-izm) [παρά beside + σίγμα letter S]. Imperfect pronunciation of *s*-sounds.

parasinoidal (par'ah-si-noi'dal) [παρά near + sinus]. Situated along the course of a sinus.

Parasita (par-as'it-ah). An order of nematodes living as parasites in the open cavities or in the tissues of animals, but also capable of free life during part of their existence.

parasite (par'ah-sit) [παράσιτος]. 1. A plant or animal which lives upon or within another living organism at whose expense it obtains some advantage without compensation. 2. A fetus, or part of a fetus, that takes its sustenance from an autotite, or twin fetus. **accidental p.**, an organism which is only occasionally parasitic. **allantoic p.**, a twin embryonic parasite in which the weaker member takes its blood supply from the stronger through its allantoic circulation. **commensal p.**, a parasite which derives its sustenance from the food of its host. **estivo-autumnal p.** See *Plasmodium falciparum*. **facultative p.**, an organism, normally or usually saprophytic, which is capable of living as a parasite. **half p.**, an organism able to produce disease if assisted in some way, but lacking some of the powers of a full pathogen. **incidental p.**, a parasite in a host which normally it does not inhabit. **inquiline p.** See *inquiline*. **intermittent p.**, a parasite which lives in its host only at times, being free living during the interval. **Leishman-Donovan p.** See *Leishman-Donovan body*, under *body*. **malarial p.** See *Plasmodium*. **obligatory p.**, a parasite which cannot live apart from its host. **partial p.** Same as *half p.* **quartan p.**, **tertian p.** See *Plasmodium malariae*. **specific p.**, one normal to its present host. **tertian p.**, *Plasmodium vivax*. **true p.**, a parasite which derives its sustenance from the tissue of its host.

parasitic (par-ah-sit'ik) [παράσιτικός]. Pertaining to or of the nature of a parasite.

parasiticide (par-ah-sit'is-id) [L. *parasitus* a parasite + *caedere* to kill]. Destructive to parasites; also an agent destructive to parasites. The principal parasitocides are corrosive sublimate, sulphurous acid, the sulphates, acetic acid, carbolic acid, sulphur, cocculus indicus, staphisagria, and mercurial ointment.

parasitifer (par-ah-sit'if-er) [parasite + L. *ferre* to bear]. An organism which serves as the host of a parasite.

parasitism (par'ah-sit-izm). 1. The state of being a parasite. See *parasite*. 2. Infestation with parasites.

parasitocidal (par-ah-si-to-si'dal). Destructive to a parasite.

parasitogenic (par''ah-si-to-jen'ik) [*παράσιτος* parasite + *γεννάν* to beget]. Caused by parasites.

parasitologist (par-ah-si-to'l'o-jist). A student of parasitology.

parasitology (par''ah-si-to'l'o-je) [*παράσιτος* parasite + *λόγος* treatise]. The sum of what is known in regard to parasites.

parasitophobia (par''ah-si-to-f'o-be-ah) [*parasite* + *φόβος* fear]. Insane dread of parasites; morbid imagination that one is infested with parasites.

parasitotrope, parasitotropic (par-ah-si-to-trop, par''ah-si-to-trop'ik) [*parasite* + *τρέπεν* to turn]. Having special affinity for parasites. See *organotrope* and *chemotherapy*.

parasitotropism, parasitotropy (par''ah-si-to't-ro-pizm, par''ah-si-to't-ro-pe). The affinity of a drug for infective parasites.

para-smallpox. Same as *amaas*.

parasol insertion. See under *insertion*.

paraspadia (par-ah-spa-de-ah) [*παρασπάειν* to draw aside]. A condition in which the urethra opens upon one side of the penis.

paraspasm (par''ah-spazm) [*L. paraspas'mus; παρασπασμός*]. Spasm of both lower extremities; having a relation to paraplegia.

paraspecific (par''ah-spe-sif'ik). Having curative properties in addition to the specific one.

parasteatosis (par''ah-ste-at-o'sis) [*παρά* beside + *στέαρ* suet]. Disorder of sebaceous secretions.

parasternal (par-ah-ster'nal) [*παρά* beside + *στέρνον* sternum]. Situated beside the sternum.

parasthenia (par-as-the'ne-ah) [*παρά* beside + *σθένος* strength]. A condition of organic tissue causing it to function at abnormal intervals.

parastruma (par-ah-stru'mah). Goiter due to enlargement of a parathyroid gland.

parasympathetic (par''ah-sin-path-et'ik). A term applied to that part of the autonomic nervous system which is made up of the ocular division, the bulbar division, and the sacral division. **p. bodies.** See under *body*.

parasympnache (par-ah-sin'an-ke) [*παρασύνγχη*]. Inflammation of a parotid gland or of the throat muscles.

parasygnapsis (par-ah-sin-ap'sis) [*παρά* beside + *σύναψις* conjugation]. The conjunction of chromosomes side by side. Cf. *telosynapsis*.

parasyndesis (par''ah-sin-de'sis). Same as *parasygnapsis*.

parosynovitis (par''ah-sin-o-vi'tis) [*παρά* near + *συνovitis*]. Inflammation of the tissues about a synovial sac.

parasyphilis (par-ah-sif'il-is). Parasyphilosis.

parasyphilitic (par''ah-sif-il-it'ik). Pertaining to a sequel or result of syphilis, but not to syphilis itself.

parasyphilosis (par''ah-sif-il-o'sis). A disease condition following and partly due to syphilis, but not itself syphilitic.

parasytostole (par-ah-sis'to-le) [*παρά* near + *συστολή* contraction]. An abnormally prolonged interval between the systole and the diastole.

paratarsium (par-ah-tar'se-um) [*παρά* near + *tarsus*]. The side of the tarsus of the foot.

paratenon (par-ah-ten'on) [*παρά* beside + *τενών* tendon]. The fatty areolar tissue filling the interstices of the fascial compartment in which a tendon is situated.

paratereseomania (par''ah-ter-e''se-o-ma-ne-ah) [*παράτηρησις* observation + *μανία* madness]. A mania for seeing new sights.

paraterminal body (par-ah-ter'min-al). See under *body*.

parathesin (par-ath'e-sin). A brand name for ethyl aminobenzoate.

para-thor-mone (par-ah-thor'mon). A brand of parathyroid extract-Collip.

parathymia (par-ah-thi'me-ah) [*παρά* beside + *θυμός* mind]. Disordered emotion; emotional insanity.

parathyrin (par-ah-thi'rin). A name which has been applied to the active principle of the parathyroids.

parathyroid (par-ah-thi'roid) [*παρά* near + *thyroid*]. 1. Situated beside the thyroid gland. 2. Any one of four small glands, one on the lateral and one on the mesial surface of each lateral lobe of the thyroid. They are quite distinct from the accessory thyroids. **p. extract-Collip**, a stable aqueous solution containing the active principle or principles of the parathyroid gland, generally of cattle. It relieves the symptoms of parathyroid tetany, and increases the calcium content of the blood.

parathyroidal (par''ah-thi-roi'dal). Pertaining to the parathyroids.

parathyroidectomize (par''ah-thi-roi-dek'to-miz). To remove the parathyroids from.

parathyroidectomy (par''ah-thi-roid-ek'to-me) [*parathyroid* + *ἐκτομή* excision]. The excision of a parathyroid.

parathyroidin (par-ah-thi-roi'din). An extract of the parathyroids.

parathyroprival (par''ah-thi-ro-pri'val). Deprived of the parathyroids.

parathyroprivia (par''ah-thi-ro-pri've-ah). The condition resulting from the removal of the parathyroid glands.

parathyroprivic, parathyroprivous. Same as *parathyroprival*.

paratoloid, paratoloidin (par-ah-to'loid, par-ah-to-loi'din). Koch's lymph, or tuberculin.

paratonia (par-ah-to'ne-ah) [*παρά* beside + *τόνος* tension]. Excessive extension; hyperextension.

paratophan (par-at'o-fan). A methyl derivative of cinchophen: used like the latter.

paratoxin (par-ah-toks'in). A preparation of bile containing cholesterol, but deprived of bile pigments. It is used in tuberculosis, and is supposed to act by neutralizing the tuberculous toxins.

paratrachosis (par''ah-trik-o'sis) [*παρά* beside + *τρίχωνος* hairiness]. Any abnormality in the character or situation of the hair.

paratrimma (par-ah-trim'ah) [*παρά* beside + *τρίβειν* to rub]. 1. Irritation; chafing. 2. Intertrigo, especially between the nates.

paratripsis (par-ah-trip'sis) [see *paratrimma*]. 1. Irritation or chafing. 2. Suppression of tissue waste.

paratriptic (par-ah-trip'tik). 1. Preventing bodily waste. 2. An agent that prevents the waste of nervous or other tissue.

paratrophic (par-ah-trof'ik) [*παρά* beside + *τροφή* nutrition]. Requiring living material or complex protein matter for food.

paratrophy (par-at'ro-fe) [*παρά* beside + *τροφή* nutrition]. 1. Perverted nutrition. 2. Adiposis dolorosa.

paratuberculosis (par''ah-tu-ber-ku-lo'sis). Any disease not tuberculous, but flourishing in a tuberculous constitution.

paratuberculous (par''ah-tu-ber-ku-lus). Having an indirect relation to tuberculosis; due to conditions produced by tuberculosis.

paratudo (par-ah-tu'do). The tuberous roots of *Gomphre'na officinalis* and *G. macrophylla*, of South America: a polychrest native remedy.

paratyphilitis (par''ah-tif-li'tis) [*παρά* beside + *τυφλός* blind + *-itis* inflammation]. Inflammation of the postperitoneal tissue of the cecum: it originates in an appendicitis.

paratyphoid (par-ah-ti'foid). Resembling typhoid fever or the typhoid bacterium. **p. bacillus.** See under *bacterium*. **p. fever.** See under *fever*.

- paratypic, paratypical** (par-ah-tip'ik, -tip'ik-al). Differing from the type.
- para-umbilical** (par'ah-um-bil'ik-al). Near the umbilicus.
- para-urethral** (par'ah-u-re'thral). Situated or occurring near the urethra.
- para-uterine** (par-ah-u'ter-in). Situated close to the uterus.
- paravaginal** (par-ah-vaj'in-al). Beside or alongside of the vagina.
- paravaginitis** (par'ah-vaj-in-i'tis). Inflammation of the tissue about the vagina.
- paravariola** (par'ah-var-i'o-lah). See *amaas*.
- paravertebral** (par-ah-ver'te-bral). Beside the vertebral column. **p. anesthesia**. See *anesthesia*.
- paravesical pouch** (par-ah-ves'ik-al). See *pouch*.
- paraxanthine** (par-aks-an'thin). Dimethyl xanthine, $C_7H_8N_4O_2$, or 1, 7-dimethyl-2, 6-dioxypurine, a crystalline substance found in urine. It is isomeric with theobromine which it resembles in physiologic action. It is poisonous, and produces rigidity and loss of mobility in the muscles, dyspnea and reflex excitability. It is one of the causes of gout.
- paraxial** (par-aks'e-al) [*παρά* beside + *axis*]. Situated alongside an axis.
- paraxin** (par-aks'in). A white, crystalline substance, dimethylaminoparaxanthine: used as a diuretic. Dose, 8 grains (0.5 Gm.).
- paraxon** (par-aks'on) [*para* + *axon*]. A collateral branch of a neuron or axis-cylinder process.
- parazoon** (par-ah-zo'on) [*παρά* on + *ζῶον* animal]. An animal organism parasitic upon or within an animal.
- Pardanthus chinensis** (par-dan'thus). An iridaceous plant of Asia of high repute as an aperient.
- Paré** (par-ā'), **Ambroise**. A French surgeon, born in 1509, and sometimes called the father of French surgery. He reformed the treatment of gunshot wounds, substituting the ligation of arteries for cauterization. Died in 1590.
- parectasia** (par-ek-ta'se-ah). Parectasis.
- parectasis** (par-ek'ta-sis) [*παρά* beside + *εκτασις* extension]. Excessive stretching or distention of a part or organ.
- parectropia** (par-ek-tro'pe-ah) [*παρά* beside + *εκ* out + *τροπος* turning]. Same as *apraxia*.
- paregoric** (par-e-gor'ik) [*παρηγορικός* consoling]. 1. Anodyne. 2. Paregoric elixir, or the camphorated tincture of opium: anodyne. Dose, 5-75 minims (0.333-5 cc.).
- pareira** (par-a'rah) [Port. "brier"]. The root of *Chondrodendron tomentosum*, a South American plant. It contains the alkaloid pelosine, is diuretic and tonic, and is used in cystitis, pyelitis, rheumatism, dropsy, and leukorrhea. Dose of fluidextract, 30-60 minims (2-4 cc.); of extract, 15 grains (1 Gm.); of decoction, 1 fl.oz. (30 cc.). Called also *pareira brava*.
- parelectronomic** (par'e-lek-tro-nom'ik). Giving no response to electromotive stimuli.
- parelectronomy** (par-e-lek-tron'o-me) [*παρά* against + *electric* + *νόμος* law]. A condition in which there is a decrease in strength of an electric current passed through a muscle.
- parencephalia** (par'en-se-fa'le-ah) [*παρά* beside + *ἐγκέφαλος* brain]. Congenital defect of the brain.
- parencephalitis** (par'en-sef-ah-li'tis). Inflammation of the cerebellum.
- parencephalocoele** (par-en-sef'al-o-sē) [*parencephalon* + *κῆλη* hernia]. Hernial protrusion of the cerebellum.
- parencephalon** (par-en-sef'al-on) [*παρά* near + *ἐγκέφαλος* brain]. The cerebellum.
- parencephalous** (par-en-sef'al-us) [*παρά* aside + *ἐγκέφαλος* brain]. Having a congenital deformity of the brain.
- parenchyma** (par-en'kim-ah) [*παρέγχυμα*]. The essential or functional elements of an organ as distinguished from its stroma, or framework.
- parenchymal** (par-en'kim-al). Pertaining to or of the nature of parenchyma.
- parenchymatitis** (par'en-kim-at-i'tis). Inflammation of a parenchyma.
- parenchymatous** (par-en-kim'at-us). Pertaining to or of the nature of a parenchyma.
- parenchymula** (par-en-kim'u-lah). The embryonic stage next succeeding that called the closed blastula.
- parental** (par-en'tal). Pertaining to or derived from the parents.
- parenteral** (par-en'ter-al) [*παρά* beside + *ἐντερον* intestine]. Not through the alimentary canal, i. e., either subcutaneous or intravenous.
- parepicoele** (par-ep'e-sēl). The lateral recess of the epicoele, or fourth ventricle.
- parepididymis** (par'ep-id-id'im-is). Same as *paradidymis*.
- parepigastic** (par-ep-e-gas'trik). Near the epigastrium.
- parepithymia** (par'ep-e-thim'e-ah) [*παρά* amiss + *ἐπιθυμία* longing]. Morbid or abnormal desires or appetites; morbid craving.
- parergastic** (par-er-gas'tik) [*παρά* amiss + *ἐργον* work]. Meyer's term for psychic disorders marked by twist reactions, i. e., incongruities, oddities, mannerisms, or fantastic or passivity projections.
- paresis** (par'es-is) [*πάρεσις* relaxation]. 1. General paresis. 2. Slight or incomplete paralysis. **general p.**, a chronic disease of the brain characterized by degeneration of the cortical neurons and marked by progressive loss of mental and physical power. It results from antecedent syphilitic infection. The disease lasts from several months to three or four years. Called also *general paralysis of the insane*, *paretic dementia*, *dementia paralytica*, *cerebral tabes*, and *chronic meningo-encephalitis*.
- pareso-analgasia** (par'es-o-an-al-je'ze-ah). Incomplete paralysis with analgesia.
- paresthesia, paraesthesia** (par-es-the'ze-ah) [*παρά* beside + *αἰσθησις* sensation]. Morbid or depraved sensation; an abnormal sensation, as burning, pricking, formication, etc. **Berger's p.**, paresthesia in young persons of one or both lower limbs, accompanied by weakness, but without objective symptoms. **Bernhardt's p.**, numbness, pain on exertion, and hyperesthesia of the part of the thigh supplied by the external cutaneous nerve. **visceral p.**, an abnormal sensation referred to some viscus; not a mere excess or defect of a normal visceral sensation.
- paresthetic** (par-es-thet'ik). Pertaining to or marked by paresthesia.
- paretic** (par-et'ik). Pertaining to or affected with paresis.
- pareunia** (par-u'ne-ah) [*παρά* beside + *εὐνή* couch]. Coitus; sexual intercourse.
- parhedonia** (par-he-do'ne-ah). Freud's name for the abnormalities of sexuality, such as morbid desire to see, to exhibit, or to touch the sexual organs of one's self or another.
- parhemoglobin** (par-hem-o-glo'bin). A form of hemoglobin insoluble in alcohol.
- parhormone** (par-hor'mōn). A substance, primarily a waste product in the body, which nevertheless functions more or less as an autocoid in controlling certain processes in the body.
- parica** (par-e-kah'). A narcotic snuff prepared from the seeds of *Piptadenia nirops*, a tree of Brazil. See *niopo*.

paricine (pah'ris-in). An alkaloid from the bark of *Cinchona succirubra*.

paridrosis (par-id-ro'sis) [παρά beside + ἰδρωσις perspiration]. Any disorder or perverted state of the perspiration.

paries (pa're-ēz), pl. *pari'etes* [L.]. The wall of an organ or cavity. **p. anterior**, an anterior wall, as of the stomach or vagina. **p. carotica tym'pani** [B N A], the anterior wall of the tympanum. **p. inferior**, the inferior wall of the orbit. **p. jugula'ris** [B N A], the floor of the cavity of the tympanum. **p. labyrin'thica** [B N A], the inner wall of the cavity of the tympanum. **p. latera'lis**, the lateral wall of the orbit. **p. mastoi'dea tym'pani** [B N A], the posterior wall of the cavity of the tympanum. **p. media'lis**, the medial wall of the orbit. **p. membrana'cea tym'pani** [B N A], the outer wall of the cavity of the tympanum. **p. poste'rior**, the posterior wall, as of the stomach or vagina. **p. supe'rior**, the superior wall of the orbit. **p. tegmenta'lis tym'pani** [B N A], the tegmental wall of the cavity of the tympanum.

parietal (par-i'et-al) [L. *parieta'lis*; *pa'ries* a wall]. Of or pertaining to the walls of a cavity.

Parietaria (par-i-e-ta're-ah). See *pellitory*.

parietes (par-i'et-ēz) [L. "walls"]. The walls of an organ or cavity.

parietofrontal (par-i'et-o-fron'tal). Pertaining to the parietal and frontal bones, gyri, or fissures.

parieto-occipital (par-i'et-o-ok-sip'it-al). Pertaining to the parietal and occipital bones or lobes.

parietosphenoid (par-i'et-o-sfe'noid). Pertaining to the parietal and sphenoid bones.

parietosplanchnic (par-i'et-o-splank'nik). Parietovisceral.

parietosquamosal (par-i'et-o-skwa-mo'sal). Pertaining to the parietal bone and the squamous portion of the temporal bone.

parietotemporal (par-i'et-o-tem'po-ral). Pertaining to the parietal and temporal bones or lobes.

parietovisceral (par-i'et-o-vis'er-al). Both parietal and visceral; pertaining to the walls of a cavity and the viscera within it.

parigenine (par-ij-e'nin). An alkaloid derived from parillin by the action of sulphuric acid.

parillin (par-il'in) [Spanish *parilla* vine]. A crystalline glucoside, $C_{40}H_{70}O_{19}$, the active principle of sarsaparilla root. It slows the heart's action. Called also *parillic acid*, *saliseparin*, and *salseparisin*.

Parinaud's conjunctivitis, ophthalmoplegia (pah-rin-ōz') [Henri Parinaud, French ophthalmologist, 1844-1905]. See *conjunctivitis* and *ophthalmoplegia*.

Paris green (par'is). A double salt of copper acetate and copper meta-arsenite, $Cu(C_2H_3O_2)_2 \cdot 3Cu(AsO_2)_2$. Called also *Schweinfurt green*.

parisol (par-i'sol). An antiseptic preparation of formaldehyde and saponified naphthoquinone.

paristhmie (par-ist'mik). Pertaining to the tonsils.

paristhmion (par-isth'me-on) [παρά beside + ἱσθμός isthmus]. A tonsil.

paristhmitis (par-ist-mi'tis). Tonsillitis.

parity (par'it-e). 1. [L. *parere* to give birth]. The condition of a woman with respect to her having borne children. 2. [L. *par* equal]. Equality; close correspondence or similarity.

Park's aneurysm [Henry Park, English surgeon, 1744-1831]. See *aneurysm*.

Park-Williams bacillus [William H. Park, American bacteriologist, born 1863; Anna W. Williams, American bacteriologist]. See under *bacillus*.

Parker's fluid (George A. Parker, American zoologist, born 1864). See under *fluid*.

Parker's incision [Willard Parker, New York surgeon, 1800-1884]. See *incision*.

Parkinson's disease, facies, syndrome (par'-kin-sunz) [James Parkinson, English physician, 1775-1824]. See *disease*, *facies*, *syndrome*.

parkinsonism (par'kin-sun-izm). See *Parkinson's syndrome*, under *syndrome*.

paroarium (par-o-a're-um). Same as *parovarium*.

paroccipital (par-ok-sip'it-al) [παρά near + L. *oc'ciput* occiput]. Near the occipital bone.

parodontid (par-o-don'tid) [παρά beside + ὀδούς tooth]. A tumor upon the gum.

parodontitis (par''o-don-ti'tis) [see *parodontid*]. Inflammation of tissues about a tooth.

parodynia (par-o-din'e-ah) [παρά amiss + δόλην pain]. Dystocia, or morbid labor.

parogen (par-o-jen). Oxygenated paraffin, a preparation containing liquid petrolatum, 40 parts, oleic acid, 40 parts, and ammoniated alcohol (5 per cent), 20 parts: used as a basis for liniments.

paroidin (par-oi'din). A proprietary solution containing the active principles of the parathyroid gland of cattle: used in parathyroid tetany. Dose, 0.2-0.4 cc. every twelve hours.

paroleine (par-o-le'in). A proprietary liquid petrolatum preparation.

paroliva (par-ol'iv-ah). An accessory part of the olivary body.

parolivary (par-ol'iv-ar-e) [παρά near + *olivary*]. Situated near the olivary body.

paromphalocoele (par-om-fal'o-sēl) [παρά near + ὀμφαλός navel + κήλη hernia]. Hernia situated near the navel.

paroniria (par-o-nir'e-ah) [παρά near + ὄνειρος dream]. Morbid dreaming.

paronychia (par-o-nik'e-ah) [παρά near + ὄνυξ nail]. A felon or whitlow; abscess and suppuration of the terminal phalanx of the finger. It may be superficial and confined to the structures about the nails, or deep seated, in which case the periosteum and bone are affected, and there are pain, necrosis, and marked constitutional disturbance. **p. tendino'sa**, septic inflammation of the sheath of the tendon of a finger.

paronychial (par-o-nik'e-al). Of or pertaining to paronychia.

paronychosis (par-on-ik-o'sis). The formation of a nail in some abnormal place.

paroophoric (par-o-of-o'rik). Pertaining to the paroophoron.

paroophoritis (par''o-of-o-ri'tis). 1. Inflammation of the paroophoron. 2. Inflammation of the tissues about the ovary.

paroophoron (par-o-of-o-ron) [παρά near + ὤν egg + φέρειν to bear]. A relic in the broad ligament of the urinary portion of a wolfian body. It is a tubular body corresponding to the organ of Girdaldes in the male.

parophthalmia (par-of-thal'me-ah) [παρά beside + ὀφθαλμός eye]. Inflammation of the connective tissue around the eye.

parophthalmonecus (par''ōf-thal-mong'kus) [παρά beside + ὀφθαλμός eye + ὄγκος tumor]. A tumor situated near the eye.

parophysoxia (par-o-fiz-ok'se-ah). A proprietary veterinary antiseptic, purgative, and carminative: used in colitis and irritative affections of the alimentary canal. Dose, 4-5 fl.oz. (118-148 cc.).

paropsis (par-op'sis) [παρά beside + ὄψις vision]. Disorder of the sense of vision.

parorchidium (par-or-kid'e-um) [παρά beside + ὄρχις testicle]. Misplacement of a testicle or testicles.

parorchis (par-or'kis). The epididymis.

parorexia (par-o-reks'e-ah) [παρά aside + ὄρεξις appetite]. Nervous perversion of the appetite, with craving for special articles of diet or for articles that are not fit for food.

parosmia (par-oz'me-ah) [*παρά* aside + *ὀσμή* smell]. Any disease or perversion of the sense of smell.

parosphresia, parosphresis (par-os-fre'ze-ah, par-os-fre'sis) [*παρά* near + *ὀσφρῆσις* smelling]. Disorder or perversion of the sense of smell.

parosteal (par-os'te-al). Pertaining to the outer surface of the periosteum.

parosteitis, parostitis (par'os-te-i'tis, par-os-ti'tis) [*παρά* near + *osteitis*]. Inflammation of the tissues around a bone.

parosteosis, parostosis (par-os-te-o'sis, par-os-to'sis) [*παρά* near + *ὀστέον* bone]. Ossification of the tissues outside of the periosteum.

parotic (par-ot'ik) [*παρά* near + *ὤς* ear]. Situated or occurring near the ear.

parotid (par-ot'id) [*παρά* near + *ὤς* ear]. 1. Situated near the ear. 2. The parotid gland.

parotidean (par-ot-id'e-an). Pertaining to the parotid gland.

parotidectomy (par-ot-id-ek'to-me) [*parotid* + *ἐκτομή* excision]. Excision of the parotid gland.

parotiditis (par-ot-id-i'tis). Same as *parotitis*.

parotido-auricularis (par-ot'id-o-aw'rik-u-la-ris). A muscle, somewhat rare in man, arising on the fascia over the parotid gland and inserted in the deep surface of the concha.

parotidoscirrhosis (par-ot'id-o-skir'us) [*parotid gland* + *σκληρότης* hardness]. Hardening of the parotid gland.

parotidosclerosis (par-ot'id-o-skle-ro'sis). Sclerosis of the parotid gland.

parotitis (par-ot-i'tis). Inflammation of the parotid gland; mumps. See *mumps*. **celiac p.**, inflammation of the parotid gland following abdominal disease or injury.

parous (pa'rus) [L. *parere* to bear]. Puerperal.

parovarian (par-o-va're-an). Pertaining to the parovarium.

parovariotomy (par'o-va-re-ot'o-me) [*parovarium* + *τέμνειν* to cut]. The removal of a cyst of the parovarium by cutting.

parovaritis (par'o-va-r'i'tis). Inflammation of the parovarium.

parovarium (par-o-va're-um) [*παρά* near + L. *ovarium* ovary]. A tubular structure of the broad ligament; the body of Rosenmüller. With the paroophoron, it represents the embryonic wolffian body. Called also *epioophoron*.

paroxia (par-oks'e-ah). Same as *pica*.

paroxysm (par'oks-izm) [*παροξυσμός*]. A sudden recurrence or intensification of symptoms.

paroxysmal (par-oks-iz'mal). Recurring in paroxysms.

parresine (par'es-in). A proprietary mixture of paraffin, gum alum, Japan wax, asphalt, and eucalyptol: used as a surgical film to wounds and burns.

parrot beak nail. See *nail*.

parrot jaw. The condition produced by protrusion of the upper jaw.

parrot mouth. Retraction of the lower jaw in the horse.

Parrot's disease, node, sign, ulcer (par-ōz') [Jules Marie Parrot, a French physician, 1829-1883]. See *disease, node, sign, ulcer*.

Parry's disease (par'ēz) [Caleb Hillier Parry, English physician, 1756-1822]. Exophthalmic goiter.

pars (parz), pl. *par'tes*. Latin for *part*. **p. basilaris os/sis occipitalis**, the basilar process of the occipital bone. **p. calcaneocuboid/ea**, the internal calcaneocuboid ligament. **p. calcaneonavicularis**, the superior calcaneoscaphoid ligament. **p. cavernosa** [B N A], the cavernous portion of the urethra. **p. centralis** [B N A]. See *cella media*. **p. convoluta**, the labyrinth of the kidney. **p. flaccida** [B N A], Shrapnell's

membrane. **p. horizontalis** [B N A], the horizontal plate of the palate bone. **p. inflexa**, the bar of a horse's hoof. **p. infundibularis**, the orifice of the duct of the mammary gland. **p. intercartilagin/ea**, the respiratory glottis. **p. intermedia fos/sae rhomboid/ea** [B N A], the middle part of the rhomboid fossa. **p. intermembrana/cea**, the true glottis. **p. iridica retinae**, the uveal tract. **p. laryngea**, the laryngopharynx. **p. mamillaris hypothalam/ami**, the mamillary bodies and their surroundings. **p. mastoid/ea** [B N A], the mastoid portion of the temporal bone. **p. membrana/cea** [B N A], the membranous portion of the urethra. **p. membrana/cea sep'ti** [B N A], the area at the base of the intraventricular septum of the heart where the tissue is extremely thin. **p. nasalis laryngis**, the nasopharynx. **p. optica hypothalam/ami**, the optic chiasm and its surroundings. **p. oralis pharyngis**, the oropharynx. **p. orbitalis** [B N A], the orbital portion of the frontal bone. **p. perpendicularis** [B N A], the vertical plate of the palate bone. **p. petrosa** [B N A], the petrous portion of the temporal bone. **p. prima**, the first portion of the root of the facial nerve. **p. prostat/ica** [B N A], the prostatic portion of the urethra. **p. pylor/ica**, the pyloric portion of the stomach. **p. radia'ta** [*proces/sus ferrei* ni], Ferrein's pyramids. See under *pyramid*. **p. spongiosa**. Same as *p. cavernosa*. **p. squamosa**, the squamous portion of the temporal bone. **p. superior duode/ni**. See *pileus ventriculi*. **p. ten'sa** [B N A], the main, tense portion of the tympanic membrane. **p. triangula-ris**, the preoperculum. **p. tympanica** [B N A], the tympanic portion of the temporal bone.

parsley (pars'le). The umbelliferous plant, *Petroselinum sativum*. The root and fruit or seeds are antiperiodic, stimulant, aperient, and diuretic. The root is given in dropsy and kidney disease; the leaves furnish *apiol*. Dose of fluidextract, 20-30 minims (1.33-2 cc.). **p. camphor**, *apiol*.

Parsons' disease (par'sunz) [James Parsons, English physician, 1705-1770]. Exophthalmic goiter.

Part. aeq. Abbreviation for L. *par'tes aequales*, equal parts.

parthenicine (par-then'is-in). An antipyretic alkaloid from *Parthe'nium hystero-ph/orus*, a plant of tropical America. Dose, 7-15 grain (0.5-1 Gm.).

parthenine (par-then-in). A bitter, crystalline, analgesic and febrifugal alkaloid from *Parthe'nium hystero-ph/orus*. Antiperiodic dose, 7-15 grains (0.5-1 Gm.); analgesic dose, $\frac{1}{2}$ grain (0.05 Gm.).

Parthenium (par-the'ne-um). A genus of composite plants. *P. hystero-ph/orus* contains parthenicine and parthenine. *P. integrifolium*, the prairie dock, is antiperiodic.

parthenogenesis (par'then-o-jen'es-is) [*παρθένος* virgin + *γένεσις* production]. 1. Asexual reproduction. 2. Same as *alternation of generations*. 3. The development of an egg without fertilization.

parthenoplasty (par-then'o-plas-te) [*παρθένος* virgin + *πλάσσειν* to form]. Production of a spurious virginity by suturing the ruptured hymen.

parthogenesis (par-tho-jen'es-is). Same as *parthenogenesis*.

particles, alpha. A particle ejected from the nucleus of a radioactive atom. A stream of these particles constitutes alpha rays. The alpha particle is simply the nucleus of a helium atom. **colloid p.**, in colloid chemistry the ultimate particles of a disperse phase. In lyophilic colloids the particles are larger than a single molecule, being from 1 to 100 micromicrons in diameter, but not large enough to settle out by gravity; in a lyophilic colloid they may consist of one or more large organic molecules, as of starch or protein. **Zimmermann's elementary p's**, small, irregular

bodies found in the blood, apparently masses derived from the breaking down of blood plates or other elements.

particulate (par-tik'u-lät). Composed of separate particles.

partigen (par'te-jen). One of the hypothetical constituents of an antigen, which is considered as a mixture of antigens or partial antigens.

partimute (par'te-müt). A deaf-mute.

partimutism (par-te-mu'tizm). Deaf-mutism.

partinium (par-tin'e-um). An alloy of aluminum and tungsten.

parturient (par-tu're-ent) [L. *parturiens*]. 1. Giving birth. 2. Pertaining to childbirth.

parturifacient (par'tu-re-fa'shent) [L. *parturi're* to travail + *facere* to cause]. 1. Inducing or facilitating childbirth. 2. A medicine that induces or facilitates childbirth.

parturiometer (par'tu-re-om'et-er) [L. *parturi'tio* childbirth + *me'trum* measure]. A device used in measuring the expulsive power of the uterus.

parturition (par-tu-rish'un) [L. *parturi'tio*]. The act or process of giving birth to a child.

partus (par'tus) [L.]. 1. Labor; childbirth, or parturition. 2. The young when brought forth.

p. agrippinus, breech delivery. **p. caesareus**, delivery by cesarean section. **p. immaturus**, premature labor. **p. maturus**, labor at full term. **p. serotinus**, delayed labor, prolongation of pregnancy. **p. siccus**, dry labor.

Part. vic. Abbreviation for L. *partibus vicibus*, in divided doses.

parulis (par'u-lis) [*pará* near + *οἶλον* gum]. A gum-boil; abscess of a gum.

parumbilical (par-um-bil'ik-al). Near the navel.

paruria (par-u're-ah) [*pará* beside + *οὐρον* urine]. Discharge of urine from an unusual part.

parvicellular (par-vis-el'u-lar) [L. *par'vus* small + *cel'lula* cell]. Composed of small cells.

parvoline (par'vo-lin). An amber-colored liquid ptomaine, $C_8H_{13}N$, from decaying fish or horse flesh. See *ptomaines*, table of.

parvule (par'vül) [L. *par'vulus* very small]. A very small pill, pellet, or granule.

pasadyne (pas'ad-in). The trade name for what is claimed to be a preparation of passion flower.

Pascal's law (pas-kahlz') [Blaise Pascal, French scientist, 1623-1662]. See *law*.

paschachurda (pas-kah-koor'dah). Same as *Tashkend ulcer*. See under *ulcer*.

paspalism (pas'pal-izm). Poisoning due to the seeds of a grass, *Paspalum scrobiculatum*, of India.

passage (pas'ej) [L. *passa'gium*]. 1. A channel or meatus. 2. The act of moving from place to place. 3. The introduction of a catheter, probe, or sound. 4. An evacuation of the bowels. **false p.**, a hole made in the walls of a canal, as the urethra, mainly by the misuse of the catheter.
